Descriptive Title : Liquid Homogeneous Saccaride and Oil Systems

Abstract: Oil based emulsifiable concentrates containing a liquid saccaride including a) at least one oil component; b) at least one saccaride, particularly a liquid saccaride solution (LS); c) and at least one run-heric surfactant. The concentrate may also contain at least one of d) at least one surfactant hydroxyethyl saccaride; or e) at least one anionic surfactant; or f) at least one additional oil soluble run-heric surfactant. The concentrates are typically homogeneous for at least 24 hours and readily ready on dilution into water. The concentrates may also contain an emulsifying agent especially a polysaccharide. Upon dilution in water, the emulsions formed from the concentrate are applied to substrate in combination with agrochemically active ingredients, preferably N-phosphoramidoglycine in the form of its soluble salts, to control weeds.

Abstract:

A liquid and readily flowable composition includes (a) a room-temperature-solid solute, such as a nonionic surfactant, preferably having a hydrophilic-lipophile balance from about 11.1 to about 18.4, a (b) C8-C14 fatty acid, or combinations thereof; (c) an alkoxylated fatty ethercarbamate; and (d) water, if needed. The alkoxylated fatty ethercarbamate, which is substantially liquid at room temperature, solvates the solid solute to form a homogeneous composition which is liquid and readily flowable at room temperature. The solvent classes of nonionic surfactants include polyethylene oxide surfactants, alkyl polyethercarbamates, or combinations thereof. Useful alkoxylated fatty ethercarbamates include propoxylated fatty ethercarbamates.

Descriptive Title : Carbonyl Pyrrolidone Siloxanes

Abstract: The properties of 2-pyrrolidone-4-carbonyl substituted polysiloxanes can be drastically altered by increasing the presence of the carbonyl-substituted pyrrolidone monomer of the polysiloxanes, such that the polysiloxanes has an acid equivalent weight of about 500-6,000 daltons and a molecular weight average M_w of about 1,000-40,000 daltons resulting in enhanced detergent and water solubility and the ability to form water-in-oil emulsions thereby providing usefulness across a broad range of formulations having a electrolyte and siloxane and/or hydrocarbon compatibility and cleaning properties.
