-3E190 GPS Billing Systems: when object goes in / out of range / desired uip = monitor (begins) "analysis".

-3E210 GPS Satellite Obstruction Compensator: when object goes in / out of range / desired uip = monitor (begins) "analysis".

-3G010 T Ring Delayer: when object (T) goes in / out of range / desired uip = monitor (begins) "analysis".

-3G050 Router: when object goes in / out of range / desired uip = monitor (begins) "analysis".
-4E020 Registered Electronic Media Communication: when object goes in / out of range / desired uip = monitor (begins) "analysis".
-5E020 Remote Control Stick with Switch: when object (this or any (standard) r) goes in / out of range / desired uip = monitor (begins) "analysis".
-5E040 Recording prompted upon presence of certain sounds: when object goes in / out of range / desired uip = monitor (begins) "analysis".

OTD DIAGRAM #2: This N Sys (2E251) ~ C =
BALANCE (mic controlled to get accurate recording on multiple audio tracks); BA / BVA (certain behavior is/isn't monitored); EDUC (for research applications); GPS (monitor controlled by any/lack of pd); MOUSE (u/guard controls (panning, other movement): camera, mic); MQ ("brain"); MULTI-USER (differs between: pd, u (their characteristics: bva, "brain")); Q ("brain"); SOUND ANALYZER (); SOUND VISUAL ANALYZER (interprets occurrences into codes/text); SPEECH (u (in zone near monitor's sensors (might have "access"/R/"brain" to) control 2E251 sys, solves problem of sys misdiagnosing security guards as potential villains); STEREO (sensors pick up information and replay it into Stereo/Synth; TDS (); UQ (); + VR (allows u (wearer of vr sys) to walk about w VR sys interpreting environment for u (as pr). Example: walk around Palo Alto and U experiences the walk as a walk in Paris, u doesn't fall down, sys seeks necessary information to assist u as u requests (via their VR sw). System in similar manner guides robots to do whatever tasks they are wanted to do. "Brain" for robot or VR); WA (VR; Security/U controls sys via R).

1G040 AUTOMATIC REMOTE CONTROL MICROPHONE AND CAMERA: Sensor follows designated individual(s) via: their visual pixels, and or, sound created, and or, remote control device held by director or actor, and or transmitter worn by actor. Cheaper and less obvious than live surveillance system.
-Remote control "mic" / camera allows user to pick up more on the desired elements.
-this N copied to G\GE (G Excellent) or G\GG (G Good) 8.94. See it for updates.
-maybe spoke about vaguely at convention (with Shure)?
-D for "mic" option: sound = "sensor" = c = "mic" = recording process = c~memory = osc
-D for camera: (Changing location of) person or object to be photographed noticed via their "tr" / sound created % / their image (body's shape, size, weight, color (of clothing, hair, *eyes...) = "sensor" = c (controls: which camera shoots / changing angles of 1 or more applicable cameras to follow person) = recording = tape / c (memory) = playback / s
-system follows any taggable (moving) element
--other tagging modes: wire connected to object of interest gives its location (by how the wire is bent = "sensor" = c (analyzer).
-OTD:

ACCESS:(); ARTIST *:(use the sound/visual effects stored for creating audio/visual show); CAMERA:(); CART *:(tagging (system follows particular characteristics: color, sounds of female voices or particular person...); COMPOSITION *:(); ENTERTAIN:(); M:(); MULTI-USER*:(); NOTIFIER:(); OSC:(); PR:(); PRINTER *:(); PS:(locates user); Q *:(); R:(); S:(); SCORE:(tds, shows where person/object being followed / tagged is, how they are changing (location, type sound or motion); SYNTH:(); UIP:(tagging (system better prepared to follow object based on its known / likely movement characteristics); WA:(person can listen to person being captioned (while listener is in another room))*.

-this N merged with 3E-220 SYSTEMS UTILIZING "POSITIONING SYSTEMS" / "REMOTE" in 1.95, and copied to better N file then.

5E040 RECORDING PROMPTED UPON PRESENCE OF CERTAIN SOUNDS: Microphone and camera activated when desired. Saves time, permitting less review time later by employee. Applications: Security monitoring, eg: upon breaking of glass, voices outside normal hours, dogs barking. Research - upon programmed occurrences, eg when organisms: scream, clank toys around. Miscellaneous: recording can be ongoing, though designated portions are tagged according to type occurrence, for easy play back.

-In other words: Sys Responds To Certain Sounds: Program system to seek certain sounds, then when they are heard by system, system will:

1] record / synthesize as programmed.

2] "notify" (emergencies)

-D1: (Step 1: shake coins in pocket(s); Step 2: memorized; 3: user "pp" how #1 is to be "synthesized"; 4: user shakes coins in nearly any manner within mic's range; 5: "mic" records; 6: playback.

-D2: externally generated sound -> mic = sound analyzer = c (cart/m) = notifier/mic (recording system/synth).

-"sound analyzer" is "pp" to only seek sounds similar to the original inputting of the desired sound to be selected. System should ignore other sounds.

Sound = "mic" = Sound Analyzer = Memory = Function

-incorporates functions of Roland's "Hanauta" system (rhythm from humming creates tempo for guitar or other sounds)

-OTD: access; security applications (breaking glass / dog barking / crash sounds -> mic -> 5E-04 ("sound "analyzer"")=c=notifier/r (user can ^:listen in on action / control (el) in remote location (scene of perceived crime) / contact security (guards). Sought after sounds can also be from ^: cart / m, in this way the breadth of sound spectrums might be broader / more carefully selected to avoid misinterpretation with other sounds.

INTELLIGENT MONITOR. But can be done?

-harder to explain in mk: need to show p they need it.

-much time: to do market search, and patent application.

-Reduce mf costs: limited function "sensors" [for guiding monitor] cut costs, eg: sensor = sound analyzer (seeking any sound). Large int'l companies seeking to reduce payroll expenses can use this system, and pay for cruder monitors versus being without.

-guards watching multiple cameras will have difficult time hearing multiple sounds (simultaneously) / identifying which sound comes from which location.

-this N dates back to "visual analyzer" too

-for ideas see file: E\3E.

MISCELLANEOUS:

-never seen camera controlled. Nat'l Geographic type pictures of flowers growing, did something trigger the camera in its stages?

-machine vision is a big area: eg it detects cracks in bottles. Transducer is what this concept.

-vibration "analyzer": seeks certain types of vibration modes (similar to "sound or visual analyzer" in mode). Trucks have a particular vibration characteristic (monitor trucks other than ours).

-people characteristics for sys to catch/notice: height - easy to do; facial characteristics - hard to do - very complex for non-human.

. Pat search: visual recognition systems.

-patentability: Maybe exists, some sensor tripped then activates camera, mic. Exists: mic activated by sound above certain threshold. Focusing on "sound analyzer" activating sys - makes it more likely this would be patentable.

--Obvious?: tripping light to activate monitor might.

--Not Obvious?: heat sensor, vibration sensor, smell analyzer, because less common, less off the shelf. Visual analyzer.

--Exists: point camera at bin of parts, steering robot hand for type part, eg: nut or bolt. Maybe not more complex sys.

-Note: the term "Intelligent Monitor" 2E251 is basically replaceable with "Tracker". The former was used wo the term tracker in diverse occasions.

2E250 VCR CAMERA: An improvement of Sony's miniaturized camera.

1 Camera = 2 base/3 recorder = 4 tr/5 editing/6 play back/ 7 other.

OTD: 2 image converter; 2tr air pad (viewer/control camera); artist (edit images recorded, eg: add graphics); basic; 2 cart (editing); cc; 2clap; 2composition (combine edited visual effects with composed/edited/synthesized audio); cp; 2date; 2display; 2 distancer (activates/deactivates camera/system); entertain; 2 "C"; 123 float; 1 camera works (under water 5000 meters below sea level, and in all weather conditions); 2fs (fs out images made); %game; 7 satellite; 2gps (system will state/show the location in which view was made, help analyze correlations between location and audio/visual data collected for/from such locations); satellite controls w5 images are shot/recorded/"tr"; interactive (camera shoots in certain instances:

when 3"visual analyzer" is triggered in any way like a motion being sensed, type of image made is automatically 3routed/edited according to how "visual analyzer" analyzed image); 2"locator" seeks desired object/situation needing to be shot, and directs camera; md; 7 M; 2microphone; 2mouse (editing A/V); 2mp; 2mq; 7notifier; 7 osc; portable; 2pp; 7 printer (prints images copied; 2remote; 2sound analyzer; speaker; 7 %stereo (enjoy images made with tv/vcr/vtr/stereo system; 1tilt; 2uk; 2uq; 2vc; 2visual analyzer; %vr; %wa.

. Exists: R27 Locates and tracks objects. Analyzes movements. * Tracks movements via: detecting brightness of image. Applications: tracks activities of customers, patients, athletes.

.-[Toshiba Corp 1-1-1 Shibaura, Minato-ku, Tokyo 105-01 Tel: (81) 03 3456 4511. Published article in 14 Mar 92]

+ Used in "locator", * "ps" codes. See IMI file.

-see my N from A, B, C directories

US PATENTS = "TRACK"

PATENT SEARCH Strategy & some related US patent numbers:

2E251 Intelligent Monitor: ()

-BIB CD pat #: 5229850

-RM: 2e251 has diversified N, and this field is crowded, so have others do searches.

-US Patents for BA / "Track" - from 12.95 Bib disk:

5465115 Video traffic monitor for retail establishments & the like; 5433612 Electronic accountability system - "tracks" u and equipment = "ps-zone" / "track" / "uip" (develops uip-db); 5428392; 5426425 Intelligent locator system = track / ba / ps; 5424745 Detection method and system = track / ba / ps; 5386990; + 5250941 Customer activity monitor / 5245314 Location monitoring system = ps / ps-zone / track / ba.

. Improvement on US Patent:

5377258 Method and apparatus for an automated and interactive behavioral guidance system: u receives motivational messages (osc) to improve behavioral patterns; includes client db (uip); voice stress "analyzer"; client response required] =

-OTD D: U = This N Sys (BA / 5377258) ~ C =

ACCESS () // ANALYZER () // EDIT (sys edits out less needed input from: u, uip-db) // NR (penalizes u when u acts poorly (undesirable behavior) = electric shock to body / "entertainment" sys N usage is limited (see KN)) // OSC (penalizes via harsh sounds = synth) // PR () // PS-Zone (u trained where its safe / u is not needed for work, eg: home, coffee room, recreation room, tv room) // Q (to build uip-db = needed by sys to

train u) // R () // SCORE (how well u's behavior is altering) // STATUS (of u's behavior) // TDS (w5 u behaved -> builds up UIP-DB) // TRACK () // UIP ().

TRACK - ANALYZE

Analyzes for what is best to track:

Formulae generation systems:

Software used in developing / analyzing / evaluating formulae for food, chemistry, indicators, etc.

-uip of desired function is matched= w uip of differing elements / ingredients / chemicals / food elements = resulting in formulae of ingredients that may (best) achieve desired goal.

--the characteristics of goal are tied= via uip = to characteristics of available / known ingredients or * (KN) sys.

+ Important parts: UIP-Tailor, 7G050, PR, Track-Analyze (analyzes for what is best to track = db), Brainstorming SW, 2E010 20 30 40 50 Recipe Softwares.

. Examples:

1] develop an nr = alerting presence of salts / acids / hazardous elements = in/for: liquids / powders / surface contact.

2] Other 7G050.

3] SW sys may simply help u by offering suggested possibilities: formulae / equipment / sources of information (reference material, on-line sources) / type experiments.

4] UIP-Tailor = UIP-DB: adjusts to u's needs.

5] Constitution needed in plastic resins / metals / product casing ("cm", "cp") or parts, for = tolerating designated levels of: stretching, bending, pulling = within designated environments of varying (extreme): temperatures, light, abuse, excessive wear, time period of element's use (age of N).

6] Patent search strategy: software* and (formulae* or recipe* or ingredient*)

7] Pharmaceutical: developing ingredients for drugs; ideas for research.

8] Software simultaneously designed to help researchers increase their (sociologically, psychologically related) creativity: KN

DIAGRAM: "PR": sw (re)programs itself = as controlled by UIP; programmer can help guide / control sw.

. OTD D: U = This N Sys (sw suggesting formulae) ~ C =

ACCESS (); ANALYZER (); BILL (); CART (); EDIT (); EDUC (); MULTI-USER (); PR (); Q (); ROUTER (); +SCORE (given to each aspect = attached to each element of: goal & potential ingredients); SENSOR (7G050); STATUS (); TDS (scores time delay in getting NR effect); TRACK (history of previous (chemical/food) experiments conducted by: u, organizational body, db, m); U (researcher, student = "educ"); UIP ().

* TAG'S LESS IMPORTANT SECTION MAYBE:

ACCESS (potential hackers) // ARTIST ("images"= "tagged" for how they are= "edited" W5) // ANALYZER (analyzes elements as "designated" by their= tag) // BA (access=ba: interpretation of behavior is "tagged"= then system "reacts" accordingly) // BILL* (different tags= are billed as "designated") // CART (receives / places tags) // EDUC (uip-tailor decides= W5 needs "tagging"= to maximize the "educational" process) // MULTI-USER (each user is "tagged" differently) // "tagged" occurrences trigger: nr / osc / synth / etc // PR (controls W5 is "tagged"; interprets tags; "correlates" "tag" w= "designated" "reactions") // PS-Zone (pd = "tag") // Q (q are posed / answered= according to "tag") // R (result of each key stroke= interpreted according to how that key stroke's "tag" states it should be interpreted) // ROUTER ("tag" effects W5 elements are routed / manner of "routing"= effects type tagging (of what's routed)) // SCORE (a type of "tag") // SEEKS & REACTS (seeks "designated" tags= then reacts to the "tag" according to: type of tag it is / the type (w5) of occurrence) // SENSOR ("seeks" / "reacts" to "designated" "tags") // SOUND ANALYZER ("tag" can be in form of (additional added-on) sounds) ("reacts" to "designated" sounds= according to how such sounds are= "tagged") // TDS (particular time (durations / points) are tagged = (nr / access) // T (CID = tag / "tag" attached to= material transmitted over telephone) // TRACK ("tag" controls W5 something is "tagged") // UIP / Visual Analyzer / Sound Analyzer = uip-db development= certain circumstances can be weighed as "designated" by the type "tag" // VR (occurrence -> "analyzer" interprets occurrence= then matches against db of potential "tags"= "reacts"= (creating "designated" "experience")).

Values include:

-"Tracking". System better knows what to monitor= W5.

-Giving less or more preferential handling: 1] the presence of certain wa N can= trigger the "notifier". 2] in uip-db development= certain circumstances can be weighed as "designated" by the type "tag". 3] "tag" = type "score" for what's tagged.

-The tag might be concealed (from user), especially for ("access') "tracking" purposes.

. Construction of (sw) "tag":

-can include one or multiple variables / scores / sw instructions for how system should "react" to the tag / what tag is attached to.

-Tag has "seek" and "react" parts: One part is on the material being tagged, the other that "reacts" to the "tag". Eg: functions also like a human anti-body= triggering= "reactions" according to type "tag" present.

. OTD D: U = "Tagging" (W5) ~ C

END OF THIS SECTION OF TRACK*, FOR THIS PAT APPLICATION

TRACK'S BURGLAR SUB-FEATURE

INTRO: Systems that deal with (human) burglars, and which don't exactly belong in the 'Track files. See related: Recent USPTO Class/Subclass 348/169 TV: Object tracking. Parts:

CATCH =

Helps catch illicit people. Also see 'track.

-

1C252 Villain Pinpointer: Helps guard pinpoint where villain is.

+ shows direction of sound(s)/'images= via direction finder

.--D: person = mic/camera = sound analyzer/visual analyzer = c ['track / 'burglar / ba] = nr.

-systems are controllable fully by person in remote ("R") location / on premises / c.

.-pinpoints past/presence/ %future possible occurrences.

.-was cut from, not developed after 1C250.

+ o Security Viewer: While watching the television set, human watcher is notified whenever a change in the scene of the camera viewer occurs.

+-if multiple screens or windows are being viewed simultaneously by guard= that (portion of) "s" that needs attention is marked / 'edited.

--what needs attention: movement; or ba ('behavior analyzer [for 'adapting]) determines type of change may be indicative of illicit activity or other 'designated activity system is 'programmed to catch / 'track.

.-programmed to alert watcher when a certain percentage of the screen changes, avoids the problem of alerting viewer when a bird flies into view.

.-changes in "lens'" "analyzed" via changes in its pixels.

.-at this stage, the view is depicted onto part (user can still watch show) or all of the screen.

-can take pictures in the direction of the sound source: sound -> sound analyzer -> C ('computer and 'software) -> mechanically moves "camera" / "lens" zooms or adjusts electronically to desired location (w or wo (without) moving external camera (in tern drawing attention to itself -> notifying villain(s))

--zoom lens or microscope can hone more into designated occurrences.

.-uses the many patents used to mark or 'track intruders or moving objects.

NOTIFIER =

status of any burglars given to occupant

3A632 Motion "sensor": an elderly person will know if anyone is walking around the room. Compensates for user's own movements.

-they are alerted via beeps [etc] in headphone; small speakers located in designated areas

-for indoor use, whenever a person walks into a room, a beep [etc] sounds when a laser light is tripped (exists yet great for indoor consumer use for this type of elderly market! People don't like the feeling of not knowing what is happening around them)

5A600 PUBLIC MACHINE VANDAL CATCHER: alarms police if any device is being tampered with. For telephones, vending machines, [ticket machines, street lights, elevators, (exists?: toll booths, cash machines)], public transportation, waiting lounges

-receiver senses for: excessive vibration, unusual activity on key pad, excessive heat (sensing fire vandalism)

-(this element might be unique: phony alarm receivers can also help thwart off vandals)

INTERACT =

System 'reacts by 'interacting w/ intruder when it 'analyzes their presence. Forms of 'interaction:

-Trips up burglar: locks up systems, eg: access requirements become tighter; doors lock; guards 'notified.

--Audio 'interactive.

3A180 PARANOIA ALARM SYSTEM:

sends out the cynical laughter of a clever "clown" upon illegal entry. Other messages: sirens then "come out with your hands on head"; breaking glass as if there is another nut on premises; dogs; "hey you come here", "hands up you're under arrest"; weird non verbal sounds; weird cosmic dogs; anything (sounds, etc) especially psychologically geared to scaring either the semi-paranoid and or those on drugs during the burglary; etc. Audio/visual effects proven to deter burglars: laser displays, statements in light appearing on wall(s), televisions turning on with a film/video.

-display may select to show to the burglar: information system has picked up info on burglar eg: their height, weight, race, face picture, etc. Burglar told information is stored in distant, irretrievable, or secret source, or police "C". Burglar may or may not see their own face. Maybe camera/sensors hidden in any number of ways. Output to burglar select audio/visual proven to often psychologically scare/deter or reduce the time burglar wanders on premises.

3A115 FAKE SIREN & ALARM:

if intruder enters, they hear via osc distant siren getting louder (as if from outside, or maybe from water proof speakers just outside window).

Meanwhile the real police might be called in.

3A370 BARKING DOG:

sound [osc] of barking dog upon ringing or person walking up walkway (when laser line(s) is crossed). The realistic sound gets louder in seconds signifying dog is closer to front door.

-as person walks around outside of dwelling the dog barking follows them by sounds emitting from different speakers.

-type of dog barking changes (eg: gets more angry, with or without sound volume getting louder)

-great for people who want the protection of homes, but without the problems of caring for the animal.

-user can have small empty dog house in back of large American yard, to the side (so possibly visible from garden side entrance door)

5A220 SOUND REFLECTOR: each of intruder's sounds (eg: steps, opening of closets, breaking of glass...) are recorded and played back to spook and help deter burglar.
-have the karaoke option convert their sounds into others

TAMPERER NOTIFIER =

PLAY BACK =

1C251 Security System Plays back past incidents: If user heard a strange sound in another part of dwelling, system will play back occurrence. "mic" and or camera focus in direction of sound source.
Applications: for elderly; reduces number of needed patrolling guards; etc. Patentable area appears to be the sound analyzer alarm. Good possibility some visual type analyzer exists.
.-was cut from, not developed after 1C250.
+-a strange sound in some region of home, warehouse (at night), then user can request "mic" and or camera (still or moving picture) to pick up and or replay back sounds (letting user better judge what happened) from the general location of original sound that caused user to be alerted. + See 'track.

General Info On Our Burglar Systems:

+ 4E020 Content & Date Verifier: of (any said) occurrences
-'Burglar systems are very tied to the part 'Track.

3A206 FINGERPRINT MEMORIZER: electronically or chemically remembers fingerprint. Helps preserve prints if outer part of touched object gets mildly changed. Eg: give a pen/glass to someone and its easier to pocket the touched item into a bag without fear of losing their prints.

+ <3, 3, 3, 3> 1C250 VILLAIN IDENTIFIER: 'Analyzer uses wide array of 'sensors in combination with the 'behavior analyzer, to establish presence of any villain.
+ System 'seeks then "analyzes" one or more occurrences (sound, visual changes) then 'reacts.
.-System is better able to make decisions by having a wider array of signals to analyze from, eg: breaking glass followed by someone walking in prohibited area.
+ KN (invention) 'Sensors: any of them are utilized to monitor occurrences.
+ Patentable area appears to be the sound analyzer alarm.

.-Cheaper models simply "notify" (wo analyzing) upon hearing any occurrence within certain frequency ranges (glass breaking).

.-A/V Auditor. Allows user to 'track burglar

-

Misc:

-also alerts if any motion (or only strange) occurs via changes in the camera's viewer; thereby also for scientific use too, eg: quiet changes in a laboratory experiment.

.-video camera(s) can also be activated in similar and or simultaneous modes as with "mic". When replayed, the screen also has displayed "replay".

.-Whenever signals are sent to device, the "mic" for appropriate location transmits and or records the sounds for designating time periods

.-upon ringing of doorbell, user's inside speaker lets them hear what occurs outside door until it is opened and or the first 2-8 minutes, whichever comes first.

.-ap: warehouses, offices (during day and or night); banks; electronic bank cash machine rooms; other areas where this information can use to catch criminals...; for situations where there is a low budget for security staff (makes people more willing to work for less money by having tv to watch, etc; less walking in cold; etc.). Backs up security, eg: a secondary security layer (one layer, live person walking around / second layer, el (w live monitor individual). uip for general research (developing/expanding of database for uip).

-

*o-Incorporates parts of 1C251. Was no. 1C330: Revolving Tape Recorder:

[this is related to another product # which also included use of this system with video security cameras] - hence not opened for public yet

.-Consumer Advertising Slogans: Ever hear a sound and not sure what you heard? Advertising targeted to certain people, such as elderly, slightly paranoid mother in laws, etc.

.-microchips~)(video) tape)=c (memory) keep sounds for certain time, "loop system" can continue recording and erasing older sounds

.-play it back in higher volume if desired; those who want more elaborate systems can later go back to the store and buy additional microphones or other options which can record from different locations to get better sound. During/after the occurrence, sys/u can also dissect / in tern "analyze" past occurrences.

Miscellaneous:

-complex model variations have memorized (sound analyzer) the commonly generated sound in environment = (via uip/cart/learns via m) = and ignore them fully/partially.

.--Eg: unimportant sounds are coded = c (security sys). When unimportant sounds occur -> sound analyzer converts incoming sounds to signals representing type sound -> sound analyzer -> discards/ignores (unless there is a composite of multiple such unimportant sounds per pr in which case sys (electronic system) nr (notifies when 'designated) guard.

-Many additional l occurances/elements can trigger the (audio/visual/other "sensor" recording/"analyzing" functions:

.--upon one or more limited situations/occurancesl -> a signal is created. -> This signal intern can: activate nearest "lens" / "mic" (for tr/replay to (guard on duty)/sound analyzer/visual analyzer/m/c/etc.

---Eg: 1 = 2 opening of any door / 3 *window / 4 safe / 5 [entry into certain zone (via motion detector / tripping laser light / heat sensor)] / 6 chemical accident (sensor (chemical interaction at sensor) -> signals c (analyzer) -> nr/"lens"/"mic" (lens/mic can help: "analyze" / guard, ascertain what is happening (level/type of danger, how to handle emergency) / 7 earthquake / 8 (el) power failure / 9 vibrations (breaking and entry) / 10 doorbells / 11 tel ringing / 12 verbal calls of help (from anyone w/in "mice's" range / 13 dog barking (see el dog barking security KN) / unusual el (electronic) equipment activity (improper / malfunctioning sounds / function / operation)

+ UIP: memorizes unimportant signal ranges / occurrences = so sys (electronic system) bypasses them in future: --eg: the standard sound and environment, being able to distinguish to the level possible, what appears strange). Unimportant stimuli which may be ignored can cover thousands of types of occurrences, eg: any listed herein. Sample applications, ignores: 50% of certain sounds or visuals / human entries if during working hours, these 50% are determined via pr and likelihood of occurrence / distraction for security versus relative risks (for organization, eg theft/damage).

--eg: 'analyzer determined past occurrences which it thought required 'notification weren't actually important (as determined by guard)= in future such real life occurrences play little or no importance in determining if 'notification to guard is warranted.

.-multi-user: sys may react differently to different people (walking about), according to uip/access of person = sys (electronic system) ignores/seeks certain occurrences = in tern analyzing (via the pr that matches the uip of person). Two different people may make same actions, yet: sys seeks differing occurrences / even if sys seeks same occurrences for both = the "analysis" of their occurrences = could be processed differently.

.--sys develops uip on: u (people, strangers) / lab experiments or their equipment / environmental "analysis" / other research gathering needs.

-

* OTD:

display ("S"): u (user or prospective 'licensee) can analyze situation; pp; mp; date (states the time and date something occurred): timing(s) within certain parameters can be a more/less crucial factor, eg: after 5pm; works as part of other security ("analyzing"/"censoring") systems; all; "mic"; mfh; bp (back up electrical source); alerter; uip; distancer (when any specific items have been moved beyond pr number of meters); access (illegal entry causes signal to sys); basic; cart (type security pr to be in operation, eg: type signals to seek / ignore, [how "analyzer" should function (in determining / 'reacting to trouble, and suggestions sys may give to (u/guard/el device) to help remedy situation)]; "C"=security sys; % interactive (analyzer->determined existence of trouble->fools villain (see KN (invention) which scare villains after security sys notices them) / communicates w (with) guard (guard may ask "Q" about situation); "M" = uip: learn/identify what is and is not a normal sound and or vision / helps "analyzer"; c="mic"/"lens"; contacts security or police via tel ("T"), tr,

mo, m (m=t/mo/tr=police/guard); %morning (wakes up guard (if (w5) it "senses"/"analyzes" guard isn't making their rounds (date/score); motion sounder ?(part B of locator); mp; notifier; osc; uip; pp; printer; * remote ("R") (deactivate system, play back previous occurrence(s)); score; sound analyzer; speech; * played back sounds/visions are synth; tds; uk; uq; vc; visual analyzer is important too.

-D: 1 occurrence -> 2 sensor (3mic/4lens/5chemical sensor/6el impulse = 7 analyzer = 8 C ('computer and 'software) ~9 m = 10 tr: t/mo/fax/wireless tr (transmitter) = 11 nr (notifies when 'designated) guard / 12 sys (electronic system) fools villain / 13 sys fights trouble / 14 sys replays scenario / 15 m.

--1 = 'track: see description; certain people are identifiable via their: access/tr (broadcasts code of their identity) / alert k in by guard / person is followed electronically (once sys knows who (w5) to follow (sys unlikely to lose them). 2 = can use non listed sensors. 6 = opening of door/window -> sensor -> analyzer; 6 = Other el (electronic) device notices = nr (main) analyzer/c. 7 = pr / pp / q / cart / uip / score / date / bva / visual analyzer / sound analyzer (1C251 Sound Identifier). 7 analyzer: incoming 7a signals matched against 7b files of (potential incoming) occurrences. 7c = how 7b is tagged, eg: nr (notifies when 'designated) occurs when person w (with) certain uip triggers occurrence 7a->7b. 7=sys seeks specific volume sounds/those from certain directions (determined by: which "mic" is closer (c=direction analyzer; existing "mic" can pick up sounds according to their location in relation to the "mic". 13 = doors lock (trapping potential villain(s) / sys stops fire or chemical problem (leakage) via: spraying retardant(s) / nr (notifies when 'designated) guard. 14 = replays via: osc (stereo)/video/tv/"entertain"%. 15 = 1st or 2nd m needed for additional "analysis" / m = nr (notifies when 'designated) guard / develops uip.

-End of 1C250

Misc:

* 2G18-C52 Anti-theft system: When "uk" into user's transmitter after the theft, an alarm sounds in stolen car, etc. July 93 X NK

C52 = "tel"/tr = mfh = user calls to get W5 on product (pd)

*2G21-C84 Anti-theft Car Alarm memorizes car's position [eg: get N (invention) for distancer used for cars] 29 Aug 92 NK

C84 = "tel" = "notifies" owner if car is (illegally) moved (plus W5 (via C84/PS/GPS)

PATENT SEARCH:

Strategies & Patents via www.qpat.com '74 - 2.97: strategy: (villain burglar thief intruder sensor personality psychology interact) and: class/subclasses (348169/pcl 340571/pcl 340540/pcl 340572/pcl 340568/pcl)

Key words for patent searches. 1C250:

-topic: security, alarm, alert, notify, notice
-reactions of system: alarm, notify, alert, guard
-who: villain, burglar, person, human, thief, intruder
-illicit actions: steal, theft, break in, hack, access, entry, illicit, move*, tamper, unlock, pick (lock), presence (of villain), strange
-locks: password, lock, code, gate, door
-symptoms of occurrences: (unusual/strange) occurrence, sound, glass break, hear, notice
-analyzing methods: multiple sensors, study, compares, combination, database, behavior characteristics, sound analyzer, identify, memor*

1C252 Villain Pinpointer:
-pinpoint: focus, direction (of sound / activity), isolate, seeks (changes)

Misc:
-monitor: observe, view, see, play back, record, film, camera, microphone, sensor
-track: catch, capture, tag, track, follow
-UIP: (learns to) ignore (certain occurrences/sounds/incidents), adjusts
US Patents:

US Patent Classifications search on www.qpat.com '74 - 2.97:
* Class 340, subclass in 500's is good, but didn't search whole subclass. 340 covers: Communications: Electrical
. 340/540 Subclass 540 covers specific condition
-str: 340540/pcl and (security burglar villain hack):
0 patents

. 340571/pcl and (security burglar villain hack);
4123749 tag placed on store merchandise 4498076 4222517 magnetic marker
There are other diverse patents using `markers' and `tags' 5032823 U is 'tagged [their marker is 'tracked]

. 340572/pcl and (security burglar villain hack)
4337462
5099226 Intelligent security system: this patent 'tracks the presence of objects and limits their access, but it's probably not unique in this crowded field.

. 340568/pcl and (security burglar villain hack sensor)
0

Below I had trouble w (with) keying into patent search db:

. 70/57.1

. 250/206.1 * = "distancer"

Copied to file 8/match:

+ 348169/pcl TV: Object tracking

++5473368 Interactive surveillance device: infrared locates intruder, then better allows camera to focus.

+ 5389967 Object tracking apparatus and method of camcorder

5559551 ++5521634 Automatic detection and prioritized image transmission system.

+5570177 Camera lens controlled by distance of object

+5530771 Image tracking device

+5414474 Moving body recognition apparatus

+++ major portion of patents in this sub class are related!

This whole field is very new.

Didn't read below patents:

US Patents General: 5528354 Picture detecting sensor unit.

5601188 Security package w (with) internal pocket for a surveillance tag

5432597 5418368 Wide angle motion detector w (with) close-in reflector

END OF THIS BURGLAR SECTION & TRACKER FOLDER

File: Feature Intro / User

USER – Entity Using Our System

+ All inventions and their users importantly are also depicted in software and or virtual reality form. The software simulates ALL occurrences to the degree possible in mimicking the (idealized) real life example. When a human or user is depicted in the invention: This can be either a real person, or the virtual reality depiction of the user.

--Virtual Reality version of User. When a human or user is depicted: Represents a real living human or other organism. Also represents the virtual reality or simpler software function representing as many functions of the user as possible. Internal (thoughts and feelings) are represented. Ways it can be shown:

--One can click on an 'icon to see what the internal functions are.

--Text and or 'mm is used to describe.

--One can place themselves in a virtual reality suit or other environmental effect with all or some of the human senses and 'mm so that one can closely experience what the depicted user would experience.

. (Human) who are interfacing with the product / system. Person or other party 'licensed to use the features. User generating 'billable 'royalties. User(s) also includes^: multiple people, "accessors" (see "access"). Rarely %animals or subjects of laboratory/scientific study (animals, plants, micro-organisms). *The user machine being served / assisted by the main system, eg: user (c=modem) = Internet; in most cases a person may be the co-user and or replace the machine. Client%, Human observers%, standby %. user may require "Access" to "interact" with product. "Billing": User can choose form different payment / pricing plans.

. User can ask invention questions. Examples: device offers help system showing how to use specific product features; how to reprogram product's features, current time and or date; other needed information; etc.

-Drawing: uk (user keys in) = tr (transmission) = "C" = display/printer/M

.-4E020 Content Date Stamper: Registers and organizes previous occurrences.

-See "Brain": system' feature 'adapts according to circumstances.

-A code (access, electronic `water mark') encoded in sw/data* limits how + feature / system / program can be: utilized (to operate (other) device(s)) / "edited" / copied. See: "Access", "Edit".

-"Billing": charges per question or per minute.

VISUAL ANALYZER FEATURE

Visual Recognition Systems. Very related to 'Analyzer, 'BA, 'Content Analyzer, 'Tracker, 'Sound Analyzer.

3C-140 OVEN CAMERA: Cook can enjoy the company of her husband or friends in or out of the kitchen without having to go and look at the oven window. Camera shows the state of the item inside. Other camera eyes can also view the kitchen's stove.

-D: camera = visual analyzer (for when elements have changed as designated (via pr)) = c = nr.

-Footnotes: "R"; "S"; pp; mp; uk; date; all; "mic"; alerter; score; "T"; tr; uq; mq.

+2D-270 MICROSCOPE SEARCHER: Have microscope locate the desired element or activity in sample. A visual analyzer seeks for particular objects. System also monitors type visual activity over time automatically, storing information in database.

.-saves the scientist's time looking around

-Display item being viewed onto screen ("S").

-D: c's uip seeks particular stimuli = C ('computer and 'analyzer) = 2D-260's manipulator = 2D-260's microscope

-compiles uip database on desired objects/studies.

-2D-200 Medical Scanner

+ 2E210 IMAGE SEARCHER: Seeks designated images in SW ('computer's 'software ['analyzes]) database or real world. Applications: "Tracking"; Medical diagnosis; Database collection for UIP; Guides robot / vr movements. Many related patents exist.

-Tracking visual images of objects is well-documented field. Eg: US Pat 5473369 Object tracking apparatus.

-functions like software word searches. Except, user requests type image desired, within certain parameters, eg: colors, shapes.

-"Artist" Organizer: "access" all images with designated ("uip") style/type ("score').

-C's (sw): data=analyzer=output (s/printer)

-Elements sought or matched: recognizing faces (is in research now by some other companies); colors; geography; terrain US Pat 5457639; how elements move / change (velocity, grow, degenerate); patterns of (behavior, movement, change, usage, "track"); waves (acoustics - US Pat 5479375); medicine: matches images / symptoms picked up by sys w/ db ('database info to help adapt to 'associated need(s)) -> determines possible disease name, helps doctor determine possible natures of disease by studying symptoms, see related KN, US Pat 5417210; 3 - dimensional imaging, US Pat 5390112; texture "analysis" (fabrics, natural materials) US Pat 5230039

-Applications: db ('database info to help adapt to 'associated needs) for uip or "analyzer"; "track"; vehicle movement / landing (US Pat 5235513); merge w/ other image generating sys, eg: X-Rays, Sonograms, Digitalized images or cameras, "track" sys (electronic system) (seeks villains / characteristics associated with villain behavior).

. Technical:

--not patentable: click on screen picture of rising sun, then system searches database for rising sun. If multiple factors: do part A and part B in each picture match or not?

--maybe patentable: picking multiple attributes, square, circle, rising sun, then search database. Requires algorithm.

--sys identifies what is an eye, next compares eyes.

--image searcher field is old and crowded

--exists? US Patent Office probably is working on developing this N (invention) for their use.

-Comparison of image shapes based on near neighbor data. US pat 5255354.

-Pat Search Str 12.95:

-(image* or imaging* or diagram*) and (search* or locat* or find*) and (computer* or software*)

-(image* or imaging* or diagram*) and analyz* and (compare* or comparison*)

-(image* or imaging* or diagram*) and track*: have many related inventions.

. OTD D: u (user like a client) = This N (invention) Sys () ~ C ('computer and 'analyzer) = ACCESS (designated (chain of) images needed before accessing); ANALYZER (w5 of image; applicability for uip); BILL (); CART (); EDIT (); EDUC (utilizes needed images and associated text; teaches u (user like a client) how to move (for sports, US pat 5390927); MULTI-USER (); PR (type images desired); SCORE (value of

images); STATUS (of image (collecting, availability)); TDS (w5 of images); T (); TRACK (sys knows better how to follow designated element / occurence = because sys gives more clues as to what needs to be tracked as designate element changes (location, characteristics), eg: following red head lady with certain style purse as she travels from airport to airport, or all people with German Shepard dogs of designated size range in metropolitan area shopping malls during January); UIP (); VISUAL ANALYZER (); VR (sys finds elements in real environment (room, outdoors) that meet the criteria for creating the desired effect/situation/occurence/presence (and sys directs u there), eg: u (user like a client) needs place to sit, rest, eat, make t call, stop vehicle safely, stop in geographical position to better (communicate via satellite/cellular t/ avoid rain drops / avoid or get sun rays); WA (vr guides u).

-2E240

-Tracking visual images of objects is well-documented field. Eg: US Pat 5473369 Object tracking apparatus.

Were items [mistakenly] inserted herein for a "voice analyzer"? Such belonging also/more in "sound analyzer"?

MISCELLANEOUS:

-See: 4E-030 Access KN.

+ "Track": Visual analyzer well described in "Track" (Intelligent Monitor 2E251).

-See "Brain": sys' part adapts according to circumstances.

.-2D-050 Locates Direction of Object via: Sound / Camera.

.-A code (access, el (electronic) 'water mark') encoded in sw/data* limits how + part / sys (electronic system) / program can be: utilized (to operate (other) device(s)) / "edited" / copied. See: "Access", "Edit".

-2E210 Image searcher

-US Patent No 4875432: color on "score" board changes when the score is tied in (volleyball) "game". ("Visual Analyzer" seeks out such changes in color and "analyzes" them accordingly. The level of "score" / "status" effects the type of color change found on s ('interactive 'screen with 'adapted menu) / nr (notifies when 'designated) of any product / sys; eg: 7G).

-Existing technology called "Vitale": Combines closely related frames of video by borrowing minute elements from one image to enhance the second images. The result is an increase in the number of pixels, which improves clarity. Uses automated visual inspection with semiconductors too. "Vitale" enables a computer to compare to compare multiple images. See "Popular Sciences" magazine issue May 1999 page 53.

2E210 Image searcher: Functions like software word searches. Except, user requests type image desired, within certain parameters, eg: colors, shapes, settings (eg: rising/setting sun).

-recognizing faces is becoming a crowded field.

--not patentable aspect: click on screen picture of rising sun, then system searches database for rising sun. If multiple factors: do part A and part B in each picture match or not?

--maybe patentable: picking multiple attributes, square, circle, rising sun, then search database. Requires algorithm.

---sys identifies what is an eye, next compares eyes.

-image searcher field is old and crowded

-* <3, 2.5, $, $, $-3> Crowded field (many related inventions).

Other Techie Details:

-Patentability issues: when C ('computer and 'analyzer) based color or images represent something in = the VA ('visual analyzer 'seeks & 'reacts to designated 'images) is another (though less efficient) way of sys' knowing / tabulating ("artist's generations) wo (without) the codes. [Copied from "Artist's"="VA" 8.96].

. See: * "access=ba"

-How it analyzes: via the different pixels depicting shape, size, color, distance, type of motion if any.

-D: viewed element -> 'camera = creates 'image w (with) its pixels = 'analyzes 'image's characteristics against a 'database of other images or image parts or characteristics = VA ('visual analyzer 'seeks & 'reacts to designated 'images) concludes on the nature of the viewed element = controls any 'designated function in 'reaction to va's interpretation of viewed image.

-What it can 'analyze: the two or three-dimensional objects in real world or such objects in cyberspace [db, sw, internet, 'tracking db]

. Can be "Visual Analyzer" or *"Voice Analyzer". If not sure, it's "visual analyzer".

"Analyzes" images. Sys determines what images are present, then "react" (to images) as programmed (pr).

-D: camera/scanner/s (interactive touch screen) = data converter = c ("analyzer") = tr (transmitter) = function

-+ US Pat No's: search str: (visual or image*) adj analyz* - many related N (invention) in this search. Color image production control 5194891; Detects imperfect seal 5260766; 5140988 Detection of abnormal bone structure in animals and carcasses with (ultrasound); 5164992 Face recognition sys.

-"Edit": Determines how / what (w5) images are "analyzed" ~ processed.

.-Alerts when camera sees a change in its view. Works via pixel analyzing system. Differences in pixels triggers signals. System may have a storage of all visual effects it is comparing against.

.-images from paper / written onto tablet ("interactive" touch screen) / images stored electronically (cart/c's memory) = image converter = c ("analyzer").

. OTD D: "Visual Analyzer" ~ C ('computer and 'analyzer) =

*ACCESS (to utilize sys); ANALYZER (); %ARTIST (); %BA (); BRAIN (); C ('computer and 'analyzer) (); CAMERA ("tracks" targeted image/object, "lens"); CART (how sys (electronic system) seeks / processes images); M (db of images); %MULTI-USER (each user may have differing uses for "visual analyzer"); NR (when particular (group of) images found); PR (controlling "visual analyzer"); Q (); *R (); ROUTER (sys seeks and tr designated (uip-tailor, "visual analyzer") images); SCORE (how closely each 'image (sys can "analyze") comes within desired image's paradigm); % SOUND ANALYZER (visual analyzer integrates with sound analyzer to: better "analyze" what is occurring (in real life situations, a/v programs, "entertainment" programs));

SOUND VISUAL ANALYZER (); STATUS ("tracks" how images are changing & gives "status" for (how important) changes (are)); SYNTH (); TDS (registers each (file of) sound(s)); T (tr digitized images (after alteration/"editing"/"analyzing")); TR (t, mo, fax); +TRACK (); U (person controlling how visual analyzer works; person being viewed/studied); UIP (uip-tailor: seeks designated images, and alters them via uip-tailor); VR* (converts images as programmed).

-D: camera/scanner/s (interactive touch screen) = data converter = c ("analyzer") = tr (transmitter) = function

-Image db ('database info to help adapt to 'associated need(s)) Searcher: VA ('visual analyzer 'seeks & 'reacts to designated 'images) scans db ('database info to help adapt to 'associated need(s)) / world wide web for "designated" images ("routes" it and any attached text / page / web sight text / other images) to= "designated" file.

. US Patents. Boolean search parameters:

-str: (visual* or image* or picture*) adj9 (analys* or analyz*).

-US Patents: 5471252 estimating motion vector fields.

. Optical Character Recognition SW: "analyzes" handwritten text / % other "images" (via enhanced VA ('visual analyzer 'seeks & 'reacts to designated 'images) sw).

-"Billing": bills for time used / "accessed".

END OF THIS VISUAL ANALYZER FILE, FOR THIS PAT APPLICATION

File: Features Intro / VR

VIRTUAL REALITY FEATURE:

6B630 Virtual Reality Voyager: Child experiences his movements in new ways. Body movements are converted into creative audiovisual effects. Example: each leg's movement sounds like steps made in the forest, while the scenery on the screen changes according to how he walks.

-Walk Thing: amplify and alter the sounds created by your walking around.

+-sound like you are walking: on a beach; through forest; on pile of tin cans (for humor); through water; etc. 83

-you can walk around the room, yet it sounds like you might be walking on: sand, snow, autumn leaves, sloshing in shallow water by seashore or lake...

-each leg movement triggers the sound making mechanism

-the speakers can be for the air, or via portable stereo headphones

-makes walking to work, etc more interesting

-user can create different sound effects of many of the choices listed herein

-uses the existing pedometer technology as part of the system (pedometer counts the number of steps a person makes when walking), plus additional technology
-this is an early type of "virtual reality" product
-other titles for product: Virtual Reality Walk, Heaven Walk, Walking Sounds, Walk Maker, Jogger Companion
-additional uses: for jogging (makes it more interesting)
-uses the electronic kaleidoscope (explained in another of our product no's)
.-movements for any other part of body can make corresponding "synth" sounds, eg from movements of: arms (hands, fingers, forearm, biceps, head, upper and or lower legs, etc.)
-OTD:
-different cartridges allow different sound making options; all; "C"; pp (type of sound effect desired); mp; uk; interactive; toy; game; entertainment; "mic" (determines type sound made by user, then synthesizes sound accordingly); exercise; portable; sst; waste strap; bp; osc; vc; score; acts as pedometer too; cart; rpc; cp.
-"Tilt": controls sys' functions: u's objects are R
-copied to 5E020 in 8.95.

3C-230 Magical Virtual Reality: Look around the room and experience all the visions and sounds differently. The camera changes the images like a kaleidoscope. Your headphones alter the room's sounds according to the program you select or the vision you are experiencing. Form of 'Virtual Reality.
-Interactive Kaleidoscope:
Generate different visual effects while looking at the outside world.
.-can do all the standard things non electronic kaleidoscopes can: look out into the real world and see it cut into pieces and moved around (like with glass); develops its own graphics without looking into outside world; etc
.-Select color or black & white options. (Famous photographers prefer picture taking in black & white because it induces greater creativity from viewer - it may have such an interesting effect for some kaleidoscope users too).
.-make alterations in visual effects by: rotating buttons or dials, pressing buttons, moving small levers...
-insert pictures (cartridges, slides, etc) of interesting graphics (eg: abstract art), or pictures of real life. These can be changed to look interesting.

More Multi-dimensional Interactive Kaleidoscope: Activate changing images in kaleidoscope by external sound, motion, temperature
-may be viewed through eye piece, CRT screen, projected onto wall
-if projected onto wall, then unit acts as a device to create an interesting atmosphere in the room
-complex: kaleidoscope works on still and moving images (video, cinema), and can store both types of images; can be edited and programmed to create all types of effects, eg: inserting visual clips into other visual "S" shows
*-may generate sounds according to the images it creates

-AP: people of all ages; can accompany music systems;

OTD: "S"; "C"; pp; mp; uk; mouse; interactive; educ; toy; all; game; entertainment; "mic"; synthesizes incoming sounds; portable; sst; prints graphics created; "M"; bp; osc; vc; egh; score; tgh; md; cart; cp; uq; mq; uip; character.

. PATENTS: didn't do search.

-same as maybe done for "virtual reality".

OTD (Other Techie Details): *5A-610 Invention Store Software; 5A-620 Virtual Reality Invention Laboratory.

-See "Brain": sys' part adapts according to circumstances.

-US Pat No's %: 5310349 5227985 5214615 5185561 5172313 5130794.

-"Edit": Determines how u (user like a client) experiences VR.

.-A code (access, el (electronic) 'water mark') encoded in sw/data* limits how + part / sys (electronic system) / program can be: utilized (to operate (other) device(s)) / "edited" / copied. See: "Access", "Edit".

-"Billing": bills for how system used; time used / "accessed".

El meeting place:

Improvement on US Patent 5347306: "C" ~ Animated electronic meeting place for: business / "education" / "interactive" meetings / "games" / "entertainment" =

ACCESS (needed for each participant (u) to join) // ANALYZER (how / w5 sys (electronic system) functions as desired (according to uip-tailor/pr/k)) // EDIT (actions/statements/responses from u) // NR (when u is asked to respond or should notice designated occurrence(s)) // OSC (verbal communication) // PR (how each u "interacts" w/ each other / sys) // Q (answered differently according to u) // R ('remote control via 'accessible 'interaction) (u's control / communication device) // ROUTER (each participant / their communications, routed differently to others = according to: who (u) the sending / receiving u (user like a client) are / w5 of situation) // SCORE (of each u) // STATUS (of: each u / their actions) // TDS () // T (how each u "interacts" w: other u (user like a client) / m) // TRACK (progress/changes of each u) // [UIP / "Multi-user" = (each u = experiences / handles sys differently = according to u's unique uip-tailored sw)] // "artist" // "composition" // "educ": each u = "interacts" = learns from or teaches other = u (in different manner = uip) // "cart" // "M".

* 5E130 Virtual Reality With Music:

-System increases your creativity

-Music made by user can be incorporated into virtual reality systems tailored for specific customers.

-Dance to your favorite music artists. In tern see them dance in rhythm/style to your dance and the music.

-Select the type background and other elements to accompany the famous music artists. Eg: scenes, instruments (& how they're played)

-The music instrument user is holding/nearby will sound according to the famous artist's music.

-VR: Interacting With Famous Music Artists (FMA)

-FMA are video taped and played back for each branching in the interactive computer ("C") program. User is moved down the branching via: his selection from menu / his behavior and or response is analyzed by system and hence moves him down the branching.
-D: vr/osc = composer/k

* 5A240 Karaoke Video: alters the audio and or visual signals as programmed by user. Makes depiction look different from the real thing. Make people appear as if they are: in another land; of another tribe, country, culture; in a musical band (maybe even with band members in the back); in nature, jungle, beach, large balloon, space, spacesuit; with the body of beautiful model or star actress/actor in clothes or bathing suit (body can be moving or stationary); with other friends in bar, house, etc and they are all happy or prancing around.
*-Additional feature for current sing along system. Camera catches user's image and alters it.
-Applications: entertainment, creates group spirit, shows people what it would be like to take on new job - eg: movie director shows how they want actor to act in movie script, dance, succeeding ins school, graduating, success in business, etc helping with positive behavioral enforcement.

* 5A250 Scene Selector: take shots of people, animals, plants, etc and change the scene to whatever, eg: jungle, foreign country, etc. User simply selects from desired scene before or after taking shot or during development of film.
*-All done electronically. Selection of scenery just before shot is of greater marketing interest.

* 5A620 Virtual Reality Invention Laboratory: Discover new ways of using and designing inventions. Programmable by manufacturer and user. Studies prove this boosts research and development results. "C" software versions have much lower development costs.

Software Version: select type product and see how it can be played with, eg - "robot" for: walking up stairs, cutting food, etc; "massage machine" for: massaging futons (Japanese bedding which needs to be beaten to be kept flat), massage people, pets, etc.
-Virtual reality version later
-OTD: "R"; "S"; "C"; pp; mp; uk; mouse; interactive; educ; toy; basic; game; enter; portable%; printer; "M"; osc; vc; egh; score; tgh%; md; cart; tr; mo; cm; uq; mq; uip; character; clap.
.-4E020 Content & Date Verifier: of (any said) occurrences, eg: "tracks" occurrences; "analyzes" occurrences (for uip).

. What: "uk"; MQ; adapt (system can know/guess from past experience in related situations).

.-4E020 Content Date Stamper: Registers and organizes previous occurrences.

-The importance given to any of the W5 (what, where, why, when and how)'s (via "status") determined via: "Brain".

%-"Billing": billing by: When] for time used; different times of day are charged differently; bills by the time of day "accessed" (eg: business hours more expensive (and length of usage becomes immaterial)). How] how system used. Who] "access", "multi-user", some users pay more than others. What] What was utilized. Why] adapt: for why users utilized system influences / effects: pricing / free offers to users in future for trial utilizations so they utilize again and pay money.

-ADAPT: collects data from= what is "sought"= by use of the W5 (what, where, why, when and how) criteria.

Applications: adapt-tailor; "track"; "access' ba (Behavior Analyzer)".

File: Features Intro / WA

WA (WALK ABOUT) FEATURE

IN GENERAL: Transmit and receive data (entertainment, useful information) via wireless.

D: 1 base (output) = 2 [transmitter/receiver] = 3base (output) / 4 M / 5 Output/function

Notes on D (drawing of a variation) (Diagram): 1/3/*4: there can be one, two, three or more of each -OTD: access; 13 air pad; artist; 35 balance; basic; 1345 cart; cc; 135 character; 1235 clap; cm; 1234 color; composition (its output is in 35); cp; 1345 date; 1345 display ("S"); distancer (1 interacts with 3, 1 & 3 interact w (with) 4; output in 135; satellite might be 134); educ; educ; entertain; 1345 "C"; 1-5 float; game (3 is portable unit; 3 interactive w (with) one or more 1, 3; cart for 1/3); 1-4 interactive (output useful for human user 135); locator (1 interacts with 3, 1 & 3 interact w (with) 4; output in 135; satellite might be 134); md; M 135 interact w (with) 4 via 2 (5 may give feedback and require data from 4); 135 "mic"; 2 mo; 35 morning; 3 motion sounder; 12345 mouse; 1345 mp; 1345 mq; 134 multi-user; 12345 notifier; 135 osc; 134 uip; 123 **4 *5 portable; 1345 pp; 135 printer; rcp; 135 remote ("R"); 1345 score; 34 sound (outputting results: 12345); 1345 speech; 13 *4 5 sp tel; 3 5 stereo; 134 *synth; 134 tds; 13 *4 tel ("T"); tgh; 13 tilt; toy; 134 tr; 1345 uk; 1345 uq; 135 vc; 135 visual analyzer*; vr.

Additional Features

-Tel: earphone/microphone (pull out/pull down) for radio/cellular tel ("T")

-Entertainment systems: stereo

%-Controlling oven: system can tell you food/oven will be ready in __ minutes, [*and what else needs to be prepared/done]

-Interactive games (video games)

-Alarm clock/organizer (has any of Casio's organizer functions) (states (hear your/system's voice)/displays what needs to be done w5.

-Pager: (mom speaks into intercom telling son: come home/dinner is ready)

<>-"Remote"

.-Using Distancer: know where user of WA is; system automatically tells user not to go beyond boundary / cuts off function(s) if they go out of bounds.

%-any other function in "remote"

-MK: easy one piece system lets you get absorbed in whatever you're doing without forgetting what else needs minding. Never miss hearing the tel ("T"), door bell, oven alarm... again. System is as simple or complex as you want to make it, with 1 to 1,000,000+ features.

-OTD 1: System has one or more of these listed features. Instructions/warnings/alarms given in audio/display/*print out/lights/*[other notifier mode]. Simply program which functions you want the WA to handle/help.

MISCELLANEOUS: Mini Disk: Sony, Sharp. DAT. Sharp Projector. Portable Fax - memorizes - cellular tel ("T") from Sony. Data Disk Man. Electronic Book Player. Electric dictionary: print tiger and makes sound of animal, from Sony.

-Portable Waterproof TV:

D: 1 uk = 2 base = 3 display/4 function

OTD: 2 air pad; basic; 2 cart; cc; 2 color (the color changes according to the water temperature, eg: a part of the base, or entire base; the portion that changes color can be changed if the chemicals loose their effectiveness later); cp; cr; educ; entertain; 2 "C"; 123 float; 4 game (play games in bath tub or shower!); interactive; md; 2 "mic"; 2 morning; 1 mouse; 2 mp; 2 osc; 123portable; 2pp; 2speach; 2speaker; 2sp tel; 4stereo ("uk" controls stereo which is separate or attached system); 2synth; 2**tds; tgh; toy; uk; wa.

o-Watch Remote ("R") Control

-watch display ("S") shows: programs available on TV/Cable/Radio

-additional data is available by using cellular tel ("T") technology. [up to here moved 3.95] >>

>>

-"Billing"

-See 3E061 Motion Tutor: 'Guides users to improve their movements. Device used as a 'remote control.

* Exists: Portable type notebooks. Keyboard is strapped about waist and placed at about belly button level. Have earphones and 'microphone for ['telecommunication/osc/nr].

-Not known to exist yet: attach creative forms of 'remote control.

--Eg like Yamaha's dance Miburi, whereby 'designated body motions trigger corresponding commands. This can help reduce need for keystrokes, especially where having a bulky keyboard is an obstacle. As a keyboard becomes less integral to daily operation it may be placed elsewhere on body in less obstructive location.

Other Techie Details:

-Transmissions/Receptions from "remote" can be to/from nearly anywhere in world. If the initial transmission can't travel far enough, then it is re-transmitted: transmission = reception = retransmission = reception = "C" = function.

-D1: Cordless Headphones/Microphone = sound (re)-transmission(s) -> [headphone/speaker/memory] operate on similar system. Can walk about anywhere and hear/make or collect and transmit sounds. -D2: headphones/*display (eye goggles) = "C"

-OTD #1: -General: Re-transmission is only an option: transmission can be without re-transmission, hence there are either no boundaries, or there is a limited distance. One type of re-transmission is the existing reflection

system that allows transmission of infrared light around corners. WA may utilized these "remote" and or audio functions. "Remote" and audio may be connected by wire and or radio/light transmission/reception.
Instructions/warnings/alarms given in audio/display/*print out/lights/*[other notifier mode]
-Audio: Switch allows audio mode played into: headphones; speakers; %re-transmitted to another audio system/part. vc *-Headphone may utilize one or more headphones for one or more people simultaneously or for broadcast of same/different sounds at different times. Microphone can pull out from headphone (pull out can be solid/only or mostly wire with microphone ("mic") at end); or flip the headphone down from top of head (ear phones stay over ears and the mike is near the chin [instead of being on crown of head at other times].
Automatic Speaker Balancing System 8B-140: "remote" tells sound system via its transmission (tr), the "remote's" location, in tern speakers balance their sound so person w/ "remote" hears sounds from all directions in near-balance.
-"Edit": Determines how u experiences WA.
.-A code (access, el `water mark') encoded in sw/data* limits how + part / sys (electronic system) / program can be: utilized (to operate (other) device(s)) / "edited" / copied. See: "Access", "Edit".

FILE 3E

3E210 INDOOR GPS EXTENDER:
<4, 3.5, 2, 1*-knows little of GPS>
GPS Satellite Obstruction Compensator. An indoor GPS system. Know the location when transmission to satellite is blocked. Location between multiple ground parts determined via "distancer". Distancer is system of three transmitters which determines location of specific transmitter under obstruction from GPS, vis a vis the three points. These three point's central computer determines global positioning via satellite communication, and communication with mobile units.

Applications: 1] Functions indoors, since GPS signals don't travel through walls. 2] Multiple units used close to the three transmitters can be manufactured without satellite receivers, saving manufacturing costs. Entire system can be moved with the mobile central computer. 3] Helps handle interference of different types: cloud cover, within a mountain. 4] Track missing items. GPS prices dropping, product sizes of all products dropping, hence more applications for tracking. 5] Track and monitor (via "sensors") animals, people.

Tells system where user is, in tern, system responds or routes signals accordingly:
-Pages person (KN (invention)) without needing to disturb entire building.
-Games: locate players.
-Tel rings only in room or building where user is. Doesn't require call forwarding or receptionists forwarding calls. (See: KN (invention)).

Localized tracking systems. This invention combines with one or more of the following:
1] Heat sensors. 2] Loran system: quadruple (plus) system for shipping. Yet this system is broader scoped. 3] Pseudo Lights: transmitters identify location indoors with use of number crunching. Like an indoor satellite tracking system. 4] "Distancer" alerting mother when child walks away. 5] What computer shows for unit's location, and or * activity type.

Problems: GPS is crowded field. Mobile GPS satellite is still bulky. If outdoors, GPS needs to be pointed upward, impairing certain applications. Expensive, but off the shelf parts?

Miscellaneous:

-Tells system unit is in which building; then where within that bldg, eg: floor; room number; * who is using it how (via: "access", uip; w5).

-Trimble Navigation in CA: doesn't know of anyone able to track indoors. (408) 481-8000.

Comments From:

. Saunders: doesn't see need; limited market; expensive.

. Bob Asher: he did much work in GPS, would have hard time staying ahead of market since very crowded already.

. Conrad: each building has types of transmitters, hence u (user) know which buildings they are in without needing a GPS.

-Patentability: combining GPS w/ localized locators, since each exist separately.

-tr in building in same fq (frequency) as with satellites. An extra signal shows which building u (user) is in. U's receiver does the triangulation to determine where it is (vis a vis the building's tr).

--Indoor version is same as outside GPS sys, hence this alone not patentable. However, when indoors, don't know where in relation to rest of globe. Building doesn't move, so building constantly transmits its location to receiver (u) - bldg doesn't need to communicate with satellite.

-FCC?

-Sys also transmits where u (user) (rc) is located. Rc encodes its location and tr it.

-MK: paging sys; receptionist knows to whether they should page or trigger beeper.

-LoJack: car locator, helps identify where stolen. Maybe built mid-1980's.

-Guessing likely exists: u (user) tr their location.

-Time delays from satellite are (artificially) duplicated by sys (system) (via building's tr) to portable receiver (gps). Rc believes transmissions are coming from satellite.

-User might go in and out of several buildings, hence value in linking with global GPS.

-This sys (system) can be used outdoors. Purpose: improve accuracy of locating position. Though many companies are trying to figure how to get around the military's block already.

-Use for getting stolen cars kept in (public) garages. sys (system) states car is in/somewhere in garage. Yet, moment signal was lost sys (system) knows where car is.

Pandescio:

-Type localized locator depends on type application.

-Tracking person.

-Exists Maybe: Stanford Univ's Astro Physics Lab is researching creating greater pinpoint accuracy (for airplane landing).

-System useful especially to: reduce costs (each separate part can more cheaply determine distance elements than via gps); eases situations where a roof or other obstruction can limit communication / * access with satellite (gps).

-"Locator" and "Distancer". Eg:

-Studies number of u (user) / people / animals, for research, adjustment of HVAC (see Mitsubishi's related product as written up in one of Japan's English newspapers about '92-'93).

-Location(s) of [people, animals and heat generating items (machines, black colored objects heating up more than environment in the sun)] identified by heat sensors (any ever made by Takenaka Engineering Co, Japan). Exact location(s) can be determined by analysis of multiple sensors in like manner of: multiple radio frequency receivers identifying objects as explained in these papers.

* 3E-020 GPS Record Keeper: Automated record keeping system records where user was when and for what purposes. GPS and clock record time and places. User keys in their activities. System is portable, and or attachable to vehicle. Applications: business and IRS record keeping; out in the field scientific record keeping. Time saver.

-"Analyzer": system studies the "score", "status" of objects, in terms of their w5, uip, etc.

D1: user or unit = tr(s) ~ analyzer ~ C ('computer) = gps = m.

D2: determining whether portable tr is indoors/out: portable tr = transmits (ongoing) signal (whether indoors or out) = (indoor) receiver receives = then knows the object to be monitored is or isn't nearby.

* D3: playing indoor/outdoor games: players / system knows where other players are -> players / sys (system) responds accordingly.

File: I Misc / 3G

FILE 3G

<2.75, 3, (2-Saunders), 4>

3G010 Tel Ring Delayer: For situations where it may take time for one to answer the tel, the caller may not hear ringing for a while (during which the receiver's tel will begin to alert the receiver of the incoming call). Callers will in tern wait longer for tel to be picked up.

Important Applications:

-Answering machines: program tel to have callers wait until person can get to telephone. Tel answering machine knows when owner is home or not: automatically has two answering modes.
-Intercoms: gives owner more time to answer.
-If caller gets a busy, tel company can still put them on hold. Caller knows their cue position without disturbing receiving party.

Miscellaneous Functions:
-Callers while kept on hold can hear / *read: music; number of people or calls ahead; target person's future schedule so caller might retry attempting communication.
-All existing voice mail functions apply, eg: Callers may opt to leave a message rather than wait.
-Times of poor connections can inform parties on other ends: wait; nature of problem, eg: poor transmission quality. User or system can select or self-determine nature of problem, in tern give (nr, osc) applicable "status".
-Incoming calls routed by: caller ID, extension number requested.

System knows owner's/user's location via:
1] 3E210 GPS Satellite Obstruction Compensator; 2] localized location determinators (KN (invention)) at: garage driveway, garden, bathroom (shower), noisy workbench; 3] "sensors" "analyzing" for activity in the dwelling, eg: human vibrations, speaking; front door opening - analyzed with combination of other sensors; 4] owner selects from ten plus outgoing messages, eg: "I'm in back yard, leave message or call back in an hour", "I'm driving to/from work/home"; 5] incoming calls are (already being) forwarded. 6] User triggers small portable device (couples as: pager, door opener, remote control, watch, *organizer) which activates type outgoing announcement.

Problems: Need to probably license to phone monopoly. But cheap to just get patent then license? Need to do public relations to get phone company to adopt system. Likely someone thought of this in the crowded telephony industry with powerful players.

Delayors also for:
-Door bells
-Street lights (for ambulances, mass transport vehicles getting priority, eg: Dutch buses for which lights change to green).
-Oven temperature reduces temperature when "brain" knows/"senses" u (user) is going to be late/going out of house. Intern, food can cook for longer and be ready hot later without burning.

-OTD D2: This N (invention)sys (system) (t ring delayer) ~ C ('computer) =

Fax (sys picks up fax later); ACCESS (); ANALYZER (); AP (); ARTIST (); BALANCE (); BRAIN (); BVA (); C (); CAMERA (); CART (); COMPOSITION (); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MO (); MOUSE (); MQ (); MULTI-USER (); nr (notifier) (); OSC (); PR (); PS (); Q (); R (u controls sys: ring delay when u (user) is away from t); SCORE (); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); TR (); U (); UIP (); UQ (); VISUAL ANALYZER (); VR (); WA ().

-caller doesn't hear rings during first (two) rings.
.-signals generated from handset or switching matrix.
-if can do from handset: don't need to worry about the tel monopoly. Easy to find out.
--difficult to find out if: Tel Co switching matrix would dump the call if it didn't get a ring back signal w/in certain time. Ask phone co.

-caller can get sound/osc that says wait (initiated after certain # rings).

-all software implemented regardless of where signal of t being picked up is generated from).
-give more time between rings.

H:

-Drawing #1: caller = t ~ C ('computer) / intercom = tel company C ('computer) processing network (analyzer) = t ~ tel ans ~ C ('computer) = [poor/type connection analyzer] / owner's location analyzer
-Drawing #2: caller dials up = c (pr by receiver's t) = caller hears delayed ringing / receiver hears ringing immediately
-works with fax/answering machines too
-the term 'caller' can be replaced with 'one who is making the initial contact'; 'owner' with 'one who receives communication'; 'call' or 'incoming call' with 'sender's action'.
-GPS tells tel sys (system) where u (user) is, hence t sys (system) reacts accordingly.
-problem: signal generated by switching network? Will tel co alter it for you? Switching station receives on/off hook signal from tel (DC signals?). Hold patent until tel co opens their mind?
-OTD D (drawing): T / This N (invention)sys (system) / C =
ACCESS (status of call owner limited to certain parties); ANALYZER (nature of problem/status: where owner is, who caller is (via latter's uip or access)); *CART (owner's location, type osc or vm options); *M (uip, owner's whereabouts, gps); MIC (t, intercom, paging systems); MULTI-USER (each telephony number can: route / distinguish between different incoming calls (via caller ID, access; distinguish who incoming call is for,

via: extension number, voice recognizer); NOTIFIER (tel rings; counts time or number rings made by caller - simultaneously or *after they quit (hung-up)); OSC (tel ring, status for caller, owner); PR (); PS (); Q (how caller* / owner can better use/ alter sys); S (); SCORE (number of messages); SENSOR (); *SOUND ANALYZER (helps determine level of quality transmission); STATUS (); TDS (vm); T (); UIP (); WA (t).

-OTD D (drawing): This N (invention)(T Ring Delayer) / C (*computer) [line drawn to each below N#] =
-2E251 Remote Controlled Camera: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.
-3E010 Mobile Tel Location Notifier: Goes into effect when this N#'s "analyzer" determines so as: pr, uip. Eg: when u (user) is about to enter poor reception area, system allows for extra long ringing (receiver, may or may not know this).
-3E040 Telephone with Selected Noise Canceled when Beyond Designated Distance: -3E041 Telephone with Selected Noise Canceled when Environmental Sounds Are of Unwanted Frequencies:
-3E151 GPS Circumstance Correlator and Controller: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.
-3E210 GPS Satellite Obstruction Compensator: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.
-5E020 Remote Control Stick with Switch: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.
+-5E040 Recording prompted upon presence of certain sounds: Goes into effect when this N#'s "analyzer" determines so as: pr, uip. Eg: user is washing dishes, taking shower, already on tel, snoring, sleeping.
-9G220 Channel Scanner Skips Stations Having Commericials: system lets incoming communication (t) come in more so during commericials.

<3.5, 3-MarkP, 2-Saunders>
3G050 Call Rerouter: If person gets disconnected and redials back, system will (via caller ID) route call to same extension number within large telephone system if extension line is free. Caller got routed around via receptionists, then doesn't know extension they got connected to. Then got disconnected, they can redial. For any subscriber or within mammoth organizations, eg: governments, G.M.

Problems: See 3G010 Tel Ring Delayer. Cooperation with tel co may better allow tracking between most type of tel systems?
Can be done?

* Exists: Recipients can return calls to numbers they missed; caller ID.

Miscellaneous:

-Recipient might keep their line free from incoming calls by keying into computer that they feel they were disconnected.

==

-Saunders: tiny incremental benefit; there are 700 #'s, e-mail.
-Asher: how does sys (system) know caller got disconnected: either the caller or receiver has to press some buttons, eg: "got cut off". Can be marketed since helpful to already be in the tel business.
--if receiver presses button, this (better) allows caller to get back.

-PBX type memory function. How know who it is if caller not via PBX - integrate w/ caller id (CID).
-the caller initiates the return call.

Conrad:
-receiver's tel sends signal (to caller / tel co's m) stating its extension number.
--might need to control all PBX tel systems w/in sys.
--wouldn't need (all this) w/in one telephone network, eg: each call is to an extension number.

-redial: even if not disconnected.

Pandescio:
-easily implemented. Hardware records how patching was done, then this can replicated.

H:

-OTD D (drawing): T / C ('computer) =
*ACCESS (); ANALYZER (caller ID; sys (system) knows how incoming call was rerouted, hence redialing made possible (via memory too)); CART (receiver's location, extension); M (call routing); *MIC (); MULTI-USER (distinguishes between different extensions, tel #'s of recipients); NOTIFIER (t rings); OSC (); PR (routing); Q (allows user or programist to: reroute call; study call patterns (within) organizations); S (); SOUND ANALYZER (converts sounds via synth to make more appealing); STATUS (); SYNTH (); TDS (w5 of calls); T (); UIP (call routing behavior for each caller, each recipient); WA (t)*.
-Drawing #1: caller = t / c= telephone company = (t switchboard at recipient's co.) / c = t.

FILE 4E

< (Conrad: 2.75-pat, 4-mk), 4, 3, 3 > Cheap mf?

4E010 Motion Powered Batteries: Insert rechargeable battery in charging device strapped to human body. Charger gets its energy from movement. Good excuse for exercise while saving environment and electric bill. Joggers induced to keep steady pace by the powering of their walkman radio (wa).

Also Add Converter To:

*1] Doors: outer part w greatest swing motion, or at or with the hinge.

2] Exercise equipment: Treadmills (in tern system requires less/no electricity to run); Muscle building equipment: level or resistance is alterable, and the greater resistance pushed against, the greater the energy developed, eg: bar bells, Nautilus type equipment

*3] Tennis rackets: or any such object receiving banging pressure.

4] Balls: tennis, basketballs, golf, baseball*, etc. 5] Shoes, Pogo stick, walking stick: also harnesses the energy from downward pressure. Teenager can power up their walkman batteries with designer tennis shoes.

*6] Vibration converter attached to: automobiles, trains, earthquake zones lighting up entire cities without power (joke).

*7] Office equipment: keyboards, staplers, drawers, pens.

*8] Toys: autos (exist?); dolls (energy from their appendage movements); race & train tracks; yo-yo's (KN)

9] Rollers, wheels: bikes, autos, carts (shopping).

10] Stair steps, walkways*: as one steps down, the energy created gives some upward boost to human walker, resulting in less total human energy exertion.

-Safer Applications: Exercise step-mills (type treadmill) with hold bars. Lights up stairway. The pressure needed is great to push down a few millimeters, hence more stable ground surface like carpet padding.

11] Pet Dogs. 'Rover' name for trade mark. Battery used to power sys accompanying animal. Eg: powers (monitoring) sys attached to animals (in wild, under study). Reduces need to replace batteries.

*12] Sound converter: converts sound energy into electricity? No clue if talkative managers could push for any research needed. Attach to: microphones, tel, sound "sensors". Joke?

13] Yo Yo's gyration and snap when reaching string end. Kids can power up their toy, video game batteries. Get's traditional parents to purchase a non-crt toy, since kid will need to yo yo before he can play game?

"Score": The more or harder the item pushed, moved, hit, the higher the "score". Let's user's feel: better, more masculine, stronger, productive. Also shows level of exercise (force), number calories burned.

-Screen shows how much energy is being generated by which type action. Software compares results (calories burned, energy generated) for differing activities.

* How Attach: place on object where there is greatest movement potential, eg: farthest out (with widest swing); point where greatest energy can be created, sometimes trading off for the easiest way in which it all can be used, eg: safer, less pressure required by user, product functions closer to how it would normally function

without the energy converter such as with less obstruction, and less bulk or matter (wires, plugs, converter, battery) sticking out.

Miscellaneous:

-type recharger (mode) used depends on type motion most anticipated. In tern, sys can better harness movement energy by: (self) adjusting its moving parts.

-cheap to manufacture?; can see many buyers.

-Harnessed energy can also: -> light up built in lamp, make sounds (osc) which last for certain duration after movement, reduce energy consumption to operate a system (simultaneously).

-Body movements: jogging, walking, hiking, aerobics, swimming (waterproof), chopping (food, wood), working (house construction, farming), dancing.

Problems: Would require much exercise to power battery. Can develop a good motion to trapped energy conversion ratio? Likely somebody already conceived it?

Exists: rewindable spring based watches. Alternator (car).
If questionably patentable, argue need for product.

H:

-osc sounds (buzzes nicely) (louder) according to type/level/intensity of exercise.

-extends battery life. Accompanies other battery life extender sys, eg: solar power.

-Shake battery and its system around in 1,000's of manners and energizes battery, eg:
strap to ankle and job (while losing weight); attach to wheel of bike/car.

-gives extra excuse to exercise; maybe the mechanics are slightly improved upon such similar battery system previously used for watches in 1970's, 1980's*.

-D1: gyrating (wheel) = turns as moved = causes friction = surface area of contact point = converter (friction to electricity) = tr = battery~c~s (score: battery life level)

-Attach to any moving object, sys: things that rotate/gyrate (tires), things that vibrate (excessively, eg: factory machines).

-Adapts to each type exercise. Either different devices or device adjusts its way of harnessing the type motion as its happening.

-Batteries usually rechargeable.

-OTD D: This N Sys (Battery charging sys) / C =

**ACCESS (); ANALYZER (how battery is (better) getting its energy supply; how its being used *); CART (the battery itself is cart which slots/attaches to sys that taps movement and converts to energy for storage into battery); EDUC (s shows how much energy is being generated by which type action (w5 shows up

simultaneously/later (via memory=c))); M (analyzer)*; MIC (convert sound energy -> battery power)*; MULTI-USER (sys shows/memorizes (c) who & w5 energy was obtained and via what means (activity, rate of energy generation)); NOTIFIER (u told when battery life is near end / battery storage at maximum capacity); Excess energy generation (beyond max storage) (can) activates: osc (music), heat, cooler, other pr sys/function); PR (w5 battery recharging to take place; u can take out converter from system when (w5) they choose); Q (sys asks u w5 re sys; u asks w5 q); S (score); SCORE (w5 battery recharging: when, where%, how (type, rate, duration of activity), what (was charged, for what application will/was battery used (dev uip); SENSOR (is mechanical/el; sys (automatically, manually (via u making mechanical adjustment) adjusts itself to better tap into type movement); STATUS (battery level); TDS (amount of energy collected when (w5*)); *UIP (); WA (battery sys attaches to wa).

=

-OTD D2: (Body / Machine generated) Motion = This N Sys (Motion Powered Battery) ~ C = ANALYZER (pr for how sys will better convert (movement) energy controlled by: "brain"/k/(motion) "sensor").); AP (energy is ideally not stored but immediatly used inorder to reduce energy loss -> applications: powers up: lights / osc / the el sys itself); CAMERA (); CART (); DISTANCER (); EDUC (); GPS (); K (); MQ (type of movement); MULTI-USER (each u moves differently; different u determined via: k/access); NR (when maximum (usable) energy isn't being generated, or when u is doing too little / *much energy. "Score" knows needed energy level for exercise); Q*; R (); SCORE (); STATUS (energy level (needed) being generated); TDS (w5 energy made = score); T (powers up t); TR (el, *t); U (humans, animals); UIP (analyzer to maximise energy); UQ (); WA ((helps) power any portable el N).

-Asher: exists: tennis shoes lighting up as it walks, maybe motion powered.

Conrad:

-Life Cycle: made exercise bike w led screen powered by cranking pedals.

Pandiscio:

.-Seiko has quartz watch: wrist watch not to wind main spring (not to wind main movement). Electric currents go through (quartz). Converts motion to electric energy. Differs from Rolex. This might make it less likely to patet this invention.

.--Rolex watches, get kinetic motion -> physically tightens spring of mechanical watch.

<(Conrad: 2.5-pat, 4-mk), 3.5, 3, 3, mf-cheap>

4E020 Content & Date Verifier: Basically any event in the universe which can be recorded then digitalized is stored. System then time date stamps the data while making the occurrence's contents unalterable. Registers: electronically sent documents, verbal telecommunication, events captured via a/v camera, etc. "Sensors" and "Analyzers" seek then register certain occurrences which match software's criteria via 2E251 Intelligent Monitor, simpler software.

-Value: this system helps prove what contents were sent versus just, eg: competes with Federal Express' overnight service; even taking to a notary doesn't prove that item was sent.

Applications:

Documents: Send electronically and have such transmissions and their contents registered. The post office's certified mail system doesn't easily enable senders to prove contents of mailing. Central main frame computer stores transmission time, contents, and time received or file opened. Send via e-mail, fax, etc.

-Printed communication verification: From banking to buying houses to general contract law related matters. In business, contract terms specify how notices are to be sent or received. If the post office is the market, obtaining a supply contract could be difficult, but don't need post office. One can have this verification system even for most of a business' semi-routine communication.

*-Money wire transfers (Exists?), airline tickets, passport visas.

*-News reporters sending information: receivers want to be sure pranks aren't sending incorrect data for world publication.

-Signature verification:

Audio / Visual Occurrence Verification:

All events that can be converted to digital form are recorded, then stored for unalterable registration.

-Type functions:

1] Shoot still/moving film which is transmitted (via modem) for registration.

2] A/V and technical (chemical reactions) results from scientific experiments registered. Eg: for FDA.

3] All events that are taking place, eg: at court trial, research actions related to 'first to invent', banking, laboratory procedures, street monitoring. Also utilizes 2E251 Intelligent Monitor.

4] Verbal communication (with or without the visual mode): phones (t); live speaking recorded onto microphone.

-"sound analyzer" converts spoken words into text [as is technically feasible]. Applications: allows key word searches for text; reading text is faster/easier than hearing extended conversations.

Organizing, Processing Data:

-Reduces human error factor for mislabeling occurrences for: time, type activity (w5), uip. Computers can more readily: locate, utilize, understand, alter, "analyze", "score", "status" data.
-Helps develop: databases; uip; status.

Marketing: Customers simply send data to our company via fax, e-mail, airmail, delivery, etc. We then store data electronically and in paper form.
* -Retransmitting to final addressee: 1] Air mail registered: our clerk takes to post office, gets some certification of mailing. 2] E-Mail: Use existing verification modes. 3] Fax: Use existing verification modes, namely have witnesses state they watched the transmission verified as transmitted by fax machine.

Proving who created material and W5: Verifying data was actually sent from, and or created by particular u/clients/(client) sys (c, camera, mic, intelligent monitor 2E251)/w5.
-Sys (at registration service organization (c)) verfies that particular documents were received from sender via: 1] caller ID (CID, mo); 2] "access" (password: identifies sender / allows sender particular type (uip) "access" into service provider's computer (c). All actions by sender (c) are = tracked = c = memory. Tag (label, code, access) (automatically) sent with (all) sender's communication (to service provider).
-verifying the signature/"access" (password, identifying code of sender): was with the document (from time of transmission -> service provider rc and giving tds). Contents are difficult to tamper. Tracking shows w5 data was: sent (by whom, when (tds), how (modem, fax, e-mail), what (contents of data: text, a/v), where (from sending point, CID, access (only works when sent from particular: locations (gps) / c / sw (which can't be duplicated/copied (wo special permission, access), and if copied such copies are tracked)).
O - (if) signature created/signed (el): u = c. The speed / pauses of signature are "analyzed" (matched w uip of u, *access) for how the manners of writing the signature match w how u signed documents before: when signing up w service, how their signature styles/speeds have changed over time while u used this / other (c) sys.

UIP *
Determining Authenticity of Sender's Identity:
UIP of U: sys "analyzes" / matches as much data about u (their behavior - uip) for all phases during which data is created = stored = sent = to service provider. "Score" for how well uip of u matches service provider's db of u's uip is generated.

Anti-tampering: Make it difficult to alter in electronic memory, and or filed papers what was sent (w5). Each user's own computer might record messages sent / received as well. Any tampering made shows tampering was done (w5).
-This sent/received info stored at sender's/receiver's sight/c useful: u subscribe to sys, in which case they can't tamper w incoming text, but can copy from it. Stays in memory, to help serve as evidence (they received or sent).

-makes it cheaper to record huge numbers of messages.
-client sends message via user of this patent.
-an internet recording system.
-Patentable? Conrad: local computers (networks) record w5, then just add a security system to this to avoid tampering of: dates sent, received, contents.
+-develop node on internet via which messages past through to us, then we send out via airmail (MCI Mail) and or internet or fax, or combinations there of. The air mail letters registered at post office (via human assistant employee) while contents are stored in service company.
-Cut and paste signatures via computer: replaces need to redo signatures. * Same signature always used for sending in particular mediums, or circumstances, helping reduce fraud, and any subsequent study or backtracking.

* Preventing Registration: Beyond legislation.
-Like blocking caller id (CID), certain users can request (electronically) that their actions (sent messages, verbal communication) can't be registered (as having been received).

Problems:
*-Confidentiality: Lose confidentiality because info gets stored somewhere. Data might be patentable if stored and kept confidential at same time.
-Miscellaneous: What's the 'how'? Its the great need that would make this patentable, versus obviousness of solution.
-The On-line services and military have message verifications systems, yet do they verify content without risk of tampering? On-line show if right person got message, or whole message?

H: 4E020 Content & Date Verifier

Preventing Registration - Continued from above:
-Blocking done by: keying in code (access%), maybe at any time before, during or after action or transmission.
-Limited elements might be recorded as programmed by sender or receiver, or type situation (uip).
-Sender or receiver knows if communication is/was being registered. Can trace who (w5) registered data. A code is generated in order to instigate registration mode, hence catching this code, then allows tracer to follow how the data with its code (which is designed to leave a trackable computer trail) moved about; * or was altered and in what form (w5, *uip).

* Software for mass marketing documents via electronic means: Result: is ability to send large numbers of documents via fax or e-mail with signatures in faster mode than doing individually, eg: via standard fax. No

known single software easily gets signatures onto the documents and does the software mail merge function, resulting in excessive time wasted by world, printing to fax a signed letter.

-Details on how this might be done: 1] getting signature into computer easily, via: scanner, *mouse, receiving a faxed signature. 2] Insert the signature into the primary document. 3] Have the fax number in a particular field of the addressee files. 4] Mail merge, creating multiple form letters with differing addressee information. 5] Software seeks the particular field for fax number, and sends documents automatically at designated times.

-We've been told this can be done by altering existing software, but haven't seen this relatively easy task worked out.

-Organizing & Processing Data D:

OTD D1: This N Sys (C=SW for organizing & processing data. / Action Verifier) / C / 2E251 Intelligent Monitor =

ACCESS (better determine who can gain access, working w: uip, visual, sound and behavioral analyzers); ANALYZER (how to file w5); CART (data to be registered); EDUC (); M (storage for: registration, db); MIC (); MULTI-USER (processes differently); NOTIFIER (when one or more w5 elements of a (previously stored) occurrence as pr are met as requested by u); *OSC (); PR (how to process, organize, register, nr data; controlling what to even record and how (w5)); Q (); S (); SCORE (differing scores determine how data/files organized/processed, eg: by uip, db or pr requirements); SOUND ANALYZER (if certain occurrences happen -> (records ->) registered); STATUS (); TDS (); T (tr data via modem, fax, e-mail, pagers, etc); UIP (); VISUAL ANALYZER (if certain occurrences happen -> (records ->) registered); WA (controls sys).

-Utlizes "Tracker" (new IMI part).

-OTD D2: U (send/retrieve info; access) = This N Sys (Registration Verifier) / C =

ACCESS (records w5, eg: a/v data on who walked by); ANALYZER (1] determines which files are more important for memory. 2] Sys isolates particular activities for "analysis". Isolation via: uip / visual analyzer / sound analyzer / comments from live observers (k) / key words. 3] this limited pool of data after isolation gives less data for studying); AP (ba); BRAIN (decides (automatically / as pr) what needs registration / "analysis" based on: key words / access (u/material) / uip (u/material); reduces manpower costs; compiles data for uip/analyzer as needed for purposes other than registration (eg: patent searches, strategic "game".); C (); CAMERA (2E251); CART (see tracking system section); DISTANCER (Tracking (cart in this OTD section)); EDUC (study of information management/security); GPS (); K (access - who can use sys); M (cart of this OTD); MIC (); MO (non central c = m/source c); MOUSE (); MQ (); MULTI-USER (anti-hacking sw); NR (when brain determines likely (score) that hacker is into co sys); OSC (); PR (); PS (); Q (); R (); SCORE (); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); TR (); U (); UIP (); UQ (); VISUAL ANALYZER (); VR* (); WA ().

-synergizes with Intelligent Monitor 2E-251.
-this sys tds every type of monitored activity: e-mail, intelligent monitor.

UIP Continued ** For 4E020

Note: this UIP feature too complex.
-UIP also used to: keep out people/u from illicitly entering ("accessing") sys, eg: controlling computer hackers; tracks who is developing data (w5) from idea conception to last registration (w service provider).
-1] "access"; 2%] congruence of type data / A/V u is generating w their past activities (sent to service provider); 3] sw used by u / u's sys; 4] 4E020 Content Date Stamper: Registers and organizes previous occurances that led to current data filed. Via: kew word search / matching images before w after (analyzes for similarities in same/other images w/in sets of text/(visual)data.).
-D: data input = analyzer = memory (mfh, cart, recognizes multi-user) = analyzer = data output = function
-OTD #1:
5A-810-042003 Advisor: compiles and analyzes user's information.
-OTD #2: c; both pp and mp program how they want the system to collect, retrieve and analyze the data in database; uk; tds (when and how elements occurred); m (db); score (score information can be processed for the pi database; and pi can help generate desired scores); cart (for additional data for the database; and or softwares for processing the database); uq (pi database is used to help generate answers about, eg: about user's past preferences and or activities); mp (the database and or software can help prompt questions, eg: to expand the database, guide the user in the right question if the system first gets the right information); access (limits access to sensitive information within all or part of the database (re: uip) to people with the right password).
-Article in "Scientific American", p.64, April 1995. Article title: "Machines that learn from hints" ("analyzer"). Its about: Machine learning improves significantly by taking advantage of information available from intelligent hints; discusses the algorythm process in general terms; gives differing examples, eg: computers judging how much credit to give to credit card applications based on other similar people's past histories.
-OTD Part #1: Electronic device obtains information about the user by one or more of the following: remembering user's previous performance, eg: their abilities on this, or related devices (which transmit uip data to other units via wire, or %wireless); asking questions from user, or "M"; Device recognizes more than one user by multi-user, eg: their codes used to gain access into device. Personal information is stored in memory and used by device to more intelligently tailor itself to user's particular needs.
-OTD Part #2: user can take their cart (their personalized uip for all identical or related products) from machine to machine - intern sys knows who sender is, or limits "access" othewise; different cart effects user's uip differently with the correlated changes in functions; type character changes according to uip (if a display ("S") is used); date; uip data (material being registered) can be viewed on display ("S") and or printed out; uip is used to increase the user satisfaction quotient, eg: entertain, (^possibly by: way in which function operates,

sounds, lights, words are used to better create the type of electronic effect uip indicates is more likely to increase user's positive reaction to using product [test studies are conducted to see the reactions of people in test case studies of 50 - 1000 people]); "C"; % uip can support interactive (by giving the additional data needed to better tailor invention to user; % data obtained for uip's memory from microphone ("mic") (voice recognizer); mouse; mp (how material registered); multi-user (who sent/received/registered material); uip's database guides system's functions (determines the type (how material registered), manner (registration), timing (registration), whether or not to notify, mq, osc, synth; pp (registration); uip database influences printer's print out parameters, score, speech, vc, it prompts - accepts - processes uq; tds (registration); uk. Data (registered material) is also obtained via^: "uk", "cart", "tel", "mo", scanner; UIP (of: material / u (those who deveoped, used , saw info) can be programmed/understood with the help of: psychologists (behavioral analyzer), sociologists, marketing experts; U's city (tel area code/zip code) / caller id (tracks w5 of any occurence).

-D: data input (registration)/output = for "analyzer": tr/rc=c

-utilizes fuzzy logic

.-Sys analyzes u's actions -> database (behavior). Eg, Ubiquitous computing: u carries (tiny) "c" that communicate with other "c" embedded in: appliances, t, cars, walls, KN. Eg: Xerox's Parc Tab, and other products mentioned in "Popular Science" Feb 95 from p.47.

2D-021 Sys reacts (intelligent monitor 2E251, decides what is to be registered automatically) to external products according to w5 they are:

Eg:

-Incoming-Call Identifier - Screener / External Element Identifier: "access".

-Calls from desired tel numbers have a different ring. Hereby caller knows whether to pick up the call or not.

-(Designating different type connections / (incoming) calls related to another of our ideas?): sys responds differently depending on which other N/sys/existing product wants to "interact" with it.

--sys knows identity of other part/sys via its: "access" / code / tel # / uip (behavioral characteristics of N, or U: how it moves / functions / responds (to stimulae from central "C" or "M") / visual analyzer / sound analyzer.

-D: Central Product / Sys = C = sensor / analyzer / uip analyzer / caller ID sys part = tr/rc = External Product / Sys.

-OTD: ACCESS *(); CID (); CAMERA (LENSE) (intelligent monitor 2E251); CART (type uip or senses or data (registration) sought); INFORMATION RETREIVAL (registration); K (); MFH (registration); MIC (); MOUSE (registration); MP (); MULTI-USER (); NOTIFIER (when desired contact has been made with (registration)); PR (registration); PS (location of external product (registered material) is a determining factor in deciding if any/type connection/contact/registration/"access" is to be made); R (); ROUTER (routes external product by their type nature); S (shows status); *SCORE (type registration); SOUND ANALYZER (registered material analysis: a/v material); TDS (registration); TRANSFERING INTER-SYSTEM TELEPHONY (registration of t communication); UIP *(); UK (); VISUAL ANALYZER (registration); VOICE MAIL (registration)

.-A sensor that connects to u (human body, eg: finger wrap; animal*) to read electromagnetic signals generated by the skin. Proprietary software interprets those signals and translates them into actions. Being researched by company: Other 90% Technologies Inc., Sausalito - See Wall St. Journal 1995 (maybe 6.95) article titled: Mind Games: Soon You'll Be zapping Bad Guys Without Lifting a Finger. Finger wrap ver will sell for $100-$200.

-End of UIP - Sub-section. 4E020 Content & Date Verifier

"ACCESS" ** For 4E020

-"Access" has many applications: restricting who has access to view/review/check.

ACCESS (4E020) = OTD: 1 gain access via keying in alpha-numeric combination; 1 or, key insertion; or, 1 with remote ("R"); 2 access can be changed via pp, mp, cart; 25 character; 1 clap; 24 tds (scores w5: when, *how, *what, %why, who gained "access" into system - [may also be used for uip [database]]; 25 "S"; 23 %distancer activates/deactivates lock; 123 access lock can be a physical and or software barrier; 245 "C"; 245 %interactive (activates/deactivates access).

13 signals for activation/deactivation of access can be received and or activated via: microphone ("mic") (sound signals activate/deactivate access); tel ("T"); mo; tr; %fs (correct image eg: signature); remote ("R"); 2*tilt; 2 *distancer (eg: clapper); 245 mp; 24 mq (prior to activation/deactivation; for uip database upgrade); 24 multi-user (individual requires own password or other activator/deactivator to gain access); 245* notifier (who, what, when, %where, why gained access, and or is using system); 25 osc (if password or other activator/deactivator effected desired function, eg: gained access); 24 * uip (access draws on pi's database to mq prior to allowing user access to user; 24 questions for access change according to user's uip (mq an action user made on system in one of [important] previous activities); 24 pp; 24%score.

2 the necessity for the access feature is normally trivial, but assists in marketing, and helps organize differences between multi-user; uip.

1 the type code used in the password (a series of sounds, lights, letter or number combinations, etc) activates and or deactivates the corresponding function reserved for individuals equipped with the password.

24tds of user's past access is used develop his uip. Excessive or insufficient usage can exclude him the uses from some/all functions, trigger "notifier", and inform the user's supervisor via tel ("T"), mo, e-mail.

24 the type of uq can consequently (according to system's uip, mp, pp) affect/control the type of password/manner needed to activate/deactivate; 5 speaker.

.-1R-45 'Dynamic Signature Verification': Write in your password. The system also identifies user's handwriting style. [Developed by: Communication Intelligence Corp, Redwood Shores, California / Riley Design Associates, San Mateo, CA 4.94 PS]

-4C-020 Transmission Lock, w/ other diverse "access" modes.

EXPANDING INVENTION:

-Service provider can be: company which receives / stores / registers+ material; software and or m which does the registration automatically on or off sight / on u's c (sw).

==

-Saunders: <1> 4e020: content verifier. Maybe saw it in NYT, but doesn't know if it handled content. So why was this a 1 score, maybe marketability: narrow markets, need to teach buyers re something they never were wanting before.

-Asher: its doing what computers already know how to do; might exist inside companies somewhere; could be put onto internet as a service (technically possible, or something interesting to make it patentable).

--maybe making more patentable: putting onto internet; making contents unalterable impossible - somebody on internet might learn how to break into code - hence unalterable impossible probably -> then hard copy is notarized (hence improves safety);

--patent search: look more in computer literature than patent database.

--improve how to make material unalterable. Happens automatically. Eg: hard copy is tds, then bound (so can't replace pages). Put material onto cd-rom, tape, or hard disk - back up at each time, or once daily; keep track of who gains access into sys - catching hackers).

--method of access: preventing access to hackers. "Access" for legitamate users.

Conrad:

-Patentability: this is automation of known manual/mechanical task. Need neat twist working w e-mail. America On-Line stores past messages that were sent, but questions of privacy are there.

Key card access systems exist which keep records of who came in through doors. Cameras put date onto picture (probably not done by film developer).

-How can we narrow down this and 2E251.

-world is going e-mail.

-in physical world hard to verify anything. In electronic communication world, verification easier.

-when receiving data, letter states it was also sent to the verification service.

Pandiscio:

-Legal issue could be nightmare for service co.

-Patentability: Nobody else doing it? Retransmitting data helps patentability. Argue real need for it. Since nobody thought of it and there is such a need for this, shows its not obvious.

-services which scrub the message, sender's identity. He is in Switzerland, doing it for free. But he doesn't archive it. Opposite somewhat of this N.

4G280 – Frisbee Type Inventions

FROM NATHAN FOSTER: There currently are illuminated flying disks on the market for sale. The typically use OLED or photon pumps for a light source.

Things to keep in mind. Sensors that contain moving parts will affect the flight of the disk. Recommend using optical sensors instead. Also consider using "persistence of image" technology to display text and other messages.

Nothing found re: current high tech flying discs. This appears to be a fairly open area.

People in Michigan play disc golf. The game came be played with only one disc but serious plays will often have several discs that have different weights and balances much like golf clubs. These will drop serious amounts of cash for a set of discs. Consider developing an automatic scoring system for this game. This could easily be done using RFID and should not be cost probative. END FOSTER.

FILE 5E

<3, 4-pat, 3, 4>

5E020 Remote Control Stick with Switch: Control any device via stick's position in air. Innovative command signals created by simple switch settings, and or each general position in the air (determined by level sensor). Can control: mobile toys, game functions, virtual reality, etc. Especially useful when controlling any device requiring degrees of alteration, eg: opening windows slightly, adjusting positions of remote objects. Allows greater freedom than remote controls and joy sticks. Construction of device in other words: Each switch position allows for different function effect. Eg: stick can be held in 5 different recognizable positions, and there are three switches, in tern there are 5 X 3 is 15, so 15 different types of signals which can be created, hence 15 functions. Stick is wired or wireless.

. Exists:

-Pat Sheehan: things which function according to relative positioning.

. Misc:

-Marketing: Star wars like - ng; has sex appeal.

-see 5E120

. Puppet Version: how controlling puppet is controlled -> desired function in controlled elements (parts).

--electronic puppet control; stick could be in form of puppet (move hand in remote control, in tern control toy).
--D: each controlling puppet's (movable) appendages / parts = half of "distancer" = puppet to be controlled - its alterable parts = "distancer". D2: distancer = C ('computer) = k/causes desired function (osc, moves (via mechanical mode)).
--puppet can be replaced with any 3-D object (w multiple (movable) parts).

. Functions:
-sound generation, "remote" commands, etc.
-also control by: where/how stick is held/w5
-manner in which this R ('remote control) is bent -> triggers associated control signals.

Mechanics:
-different part of stick (w each's own k) can control different products / portions of products, eg: top controls landing/wings, bottom controls speed.

Stick also comes in forms of:
Donut; ball; disk; pliable thick wire; doll.
-Any object, whereby how it is altered/moved generates a signal which is interpreted in programmed manner, eg: whenever toy car's wheels turn the lights of car automatically go on - 5E021.

Depending on stick's angle in the air, controls any electronic product. There may be over 20 air 3-D positions, coupled with three or more switch settings, allowing for (20 times 3 equaling 60 different type signals).
-virtually same N is 5E020.

. Applications. Things stick controls:
-Stick controls music (composing) eg: Yamaha's Miburi.
-(Toy) airplanes, boats, dolls, robots.
+ video games application: player represents his / opponent's / other player's position(s) via stick (s).
-acts as C ('computer) "mouse"
-the control of any (el) device as might be generated via (rather simple) electronic signals/controls, such as via switches/keyboards/etc. Eg:
-output - levels of light (the brightness of light changes while hand moves its distance), sound (decibels), etc.
-music playing (play drums / %key(board)s in air without touching anything). *(Have this N earlier?)
-water temperature (from faucet) - move hand to right for cooler water
-volume control (of T, audio/visual unit, "stereo").
-turning anything on/off
-altering the angle of (crt) display ("S")

+-adjusting sound (balance; "balancer"; treble; bass...)
-changing tv/cable stations; acts as "remote" control.
-Pointer: stick acts like compass, its position is intern transmitted/reflected onto: board / clock (reset time, alarm time).
-opening/closing/raising of: windows, curtains, doors, hoists.

+-Position of (stick) generates a signal.
+--Each position, coupled with positioning of switches ("k") increases number of potential signals from each position (its held in the air).
+-Signal generator: position of hand (object (held by hand)) in relation to the "sensor" determines the signal. This signal can then be interpreted in any desired manner.
-this N (invention)copied to G\GE (G Excellent) or G\GG (G Good) 8.94. See it for updates.
--can have 100+ positions recognizable.
-more than one hand / object can be used. Different objects can reflect signals (light) from tr differently to receiver, hence creating different resulting signals.
--some signals might only be created using two or more hands/objects/el sticks.
-Adjust/alter/control the type/level (of desired output) according to hand's position in relation to the "sensor".

-to determine at which point the hand/object reaching "sensor", should trigger "sensor", options include: "sensor" responses to the closet point hand/object comes; another simultaneous signal (foot pedal) determines at which point and how the (moving) hand/object should be triggering signal.
-activate/deactivate this sys' remote functions via: switch (k) / remote control function, eg: shake three times at 45 degree by 45 degree (clock's hour hand at 2:30pm) angles, 30 cm away.
-osc/nr lets u (user) know (which command) sys (system) recognized input of (and will in tern carry out) (upon any needed additional commands from user/steps/processes)
-stick / other object may be wired / wireless
-D: hand/object = "sensor" = c (analyzer) = output (light)
.-trade marks: Wish Control.
.-included in IMI& (R)
-copied to better N (invention)file 1.95

<3, (Bob Green 4-Pat, 3-mk), 1>
5E080 System self analyzes best synthesis for acoustics of room/hall. Only nice idea, without having methodology.

How works:
-Drawing #1: different microphones -> sound analyzer = osc (c)

-Drawing #2: osc -> sound reflects back to "mic" = C ('computer) (sound analyzer1) = osc (adjusted by c; synth).

--Notes: 1: sound analyzer tries broadcasting in different frequencies -> intern analyzing which results best meet requirements as controlled by: (manufacturer's) pr, uip.

-"Analyzer" adjusts system according to: "multi-user" / type music / uip / type application, eg: sounds to boost sales, or make people feel at home.

-how technically possible? The method extra important for determining patentability. -Sys modifies itself via whatever feedback it gets from room. Auto frequency control. Like a standard dolby feature built into products.

-maybe cheap mf once chip developed

-User can also (complement) osc's sound alteration via sys's k.

-OTD D (drawing): This N (invention) sys (system) (Room Sound Analyzer) / C ('computer) = ANALYZER (); CART (); M (); MIC (); MULTI-USER (); OSC (); PR (); SOUND ANALYZER (); SYNTH (); UIP ().

Additional functions:

-"Analyzer": to reduce noise (for neighbors) sys (system) will automatically alter the more penetrative sounds, eg: stronger bass, by taking out the harsher elements (cutting down bass).

-Do a key word search for INVENTION(S) with "synth". Eg: for applications.

-works with 5E090 Wireless Music Band.

-OTD D2: This N (invention) sys (system) () ~ C ('computer) = *ACCESS (); ANALYZER (where to place speakers, how to set osc's el (electronic) settings (as determined by analyzer)); AP (stereo); BALANCE (); CAMERA (); CART (); COMPOSITION (manner of: 1] pre-recorded manufacturer's recorded music (CD, tape, memory) / 2] u's using their composing sys, = determines how osc's sound adjustment sys (system) should be analyzed); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (osc's speakers = mic = sound analyzer = sys (system) adjusts how osc can better make outgoing goind); MQ (for user's tastes (more or less bass, uip)); MULTI-USER (each u (user) has own preferred settings); nr (notifier) (when sound can be improved further); OSC (); PR (); Q (); R (); SCORE (sound analyzer studies how good sound is via differenting circumstances: w5); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (analyzer); SPEECH (); STATUS (analyzer); STEREO (); SYNTH (); UIP (); UQ (); VR* (); WA* ().

<(3.5-pat, 2.5-mk), 3.5> 5E090 Wireless terminals connect to central system.

Wireless Music Band: Each user's device inputs music into central system. In tern central system synthesizes sounds as programmed. System gives cues to players. Targets less experienced users during patent life. Benefits: Reduces costs for multiple portable units relying on single system. Helps music quality, and group's frayed nerves. Greater portability, freedom, sound making experimentation, cheaper recording.

-Limited market: targets juveniles - big market, "wanna be performers", professionals don't need or use professional sound staff.

-sys can also be an accompaniement (need fewer players); not limited to fixing/altering their poor music.

-signal processing feature is what would make this patentable

-can cut down volume of particular players.

-"air pad"

Other applications: any portable N (invention) / feature of N sys.

-"game": each player connected via (wireless) tr to central C.

-portable "c": notebooks

-t = main t sys (system) (w (automatic) receptionist, related KN (invention))

Terminology:

-external units: the mobile/portable units that are connected to central sys (system) (c=brain) via (wireless) tr.

-OTD D2: (Multiple) U = External Unit / This N (invention) sys (system) (5E090) ~ C ('computer) = ACCESS (); ANALYZER (how each external unit interacts with eachother and or central c); ARTIST (group art making - each u (user) has own unit which adds to the group art, eg: 1] each player given only certain colors / shapes / writing modes / time periods - in which to do whatever (art, compose%) they wish.); BALANCE (sys averages/considers each u/player's location.); BRAIN (determines which external parts are: comparatively more important for designated functions considering (w5); to be communicating with which parts of sys, eg: external units #2 & #99 & central c; audio volume to be heard by each u; audio volume that should be generated (to other u) by each external unit); C ('computer) (each external unit can take over (many of) the functions of central C ('computer) via: access, consensus from other external unit (their u), tds (that unit's time slot), uip/score = "game": who is winning game); CAMERA (); COMPOSITION (stick 5E020, Yamaha Miburi); DISTANCER (); *EDUC (learning terminal); K (); M (); MQ (); MULTI-USER (central C ('computer) differentiates between different external units via: access/uip/analyzer); SCORE (game, developing uip); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); TR (wireless, cellular, infrared); U (players, receivers of services/transmissions (external unit can be (fairly) passive)); UIP (); UQ (); VISUAL ANALYZER (); VR* (); WA ().

.-OTD D3: [(Each) external unit has such functions) (effecting the entire sys) as listed in following parts]: C ('computer) (5E090) =

ACCESS (); %ANALYZER (); ARTIST (); BVA (); BALANCE (); CAMERA (); CART (); COMPOSITION (); EDUC (); GPS (); K (); M (); MIC (); MO (); MOUSE (); MQ (); MULTI-USER (); nr (notifier) (); OSC (); PR (); PS (); Q (); R (); SCORE (); SENSOR (); SOUND ANALYZER (); SPEECH (); *STATUS (); STEREO (); SYNTH (); TDS (); T (); UIP (); UQ (); *VISUAL ANALYZER (); VR* (); WA ().

<4, 3, 4, 2-Martin> 5E120 Display shows how remote control device or joy stick is controlling device. Example: how air stick is being moved and in which mode, and in tern functions its controlling. Uses 5E020.

-Martin: "seems like standard sw ('software) (software) function".

-5E090 Wireless terminals connect to central system = s / brain / tracker / pr / score / status / uip / wa.

FILE 5G

<Scores for 5G061 higher than 5G060>

5G060 Dyslexia Guiding Window: Adjustable sized mechanical square window lets reader limit the amount of printed material they see at once. Reason: excessive printed material over indulges senses of dyslectic individual.

Misc:

-see thru plastic w or wo border can have different colors w/in the window itself. Eg: white cardboard border and left side of window w/in is yellow, while right side is red.

--other window color combinations: stripes of 2+ colors, each stripe width one letter or wider; shapes (solid big dots, peripheral lines of other shapes) all w/ clear or colored background.

-color background changes over time (because): eyes getting tired need boost or change of color.

-functions can be in sw too, see 5G061.

-many features explained in 5G061.

<3, 3, 4-pat-sw-version, 1.5-mk, 3>

5G061 Dyslexia Software: People with dyslexia need new ways to have letter images inputted into their brain, each letter can be shown in three dimension, eg: the 3-D letter "b" has light shed on it from the left, and "d" has light shown from the right. Software alters letters and colors according to type problem user experiences, eg: different letters have different colors. Optional feature voices text, while user reads improving comprehension while encouraging dyslectics not to easily give up reading.

Search and Replace / Alterations / Adustments:

-User programs (pr) how software will make the desired alterations (nr).

-Software searches then alters particular words causing problems.

-Additional alteration modes:

-since people with dyslexia need new ways to have the images inputted into their brain, each letter can be shown in three dimension, eg: the letter "b" has light shed on it from the left, and "d" has light shown from the right (or opposite lighting).

-certain letters can be altered according to "UIP". Eg: user has difficulty deciphering "b" and "d", hence such letters are treated differently:

--"b" and "d" have different coloring; difficult letters are all highlighted/colored differently from the remaining text.

--those people who can improve their reading can then slowly have the designations of the difficult letters/words be made less and less distinct so gradually all text is the same. On difficult days the distinctions can be made again.

--construction^: software searches for designated letters/words (according to UIP / PP), then alters targeted images accordingly.

-(background) images controlled by: uip / pr / what came w cart/el text. Eg: read jungle fiction and see/hear lions roar and monkeys swinging from trees.

OSC mode while reading:

-Sys knows letter*/word/line/paragraph u is reading at moment. In tern, sys will read out those words (that cause reader problems via pr/uip).

Patentability: (60-70% chance either sw or pvc version). Software signal processing is the patentable issue to some degree.

-Simple ver (Mechanical): placed over printed text. Can scan by hand over written text by hand or el. By hand version less patentable?

.-Pat Search: need to check the modem capabilities of devices available for assisting the partially sighted to read.

Misc:

-sw version: info given electronically: scanned / on-line / cart (floppy disks, cd) -> sw converts text -> s / printer.

-Software uses simple version (5G060) too. Combine with product 5G070.

Software/Plastic versions of Guiding window 5G060:

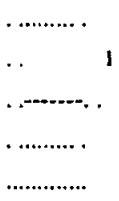
-Examples: see just one or more letters, words, sentences, paragraphs at a time.
-window can have clear and or changeable colored see through plastic. Certain colors backgrounds can enhance reading and or increase comfort
-certain shapes and or letters in the cut-out areas can be shown, if helpful. Eg: user has trouble differentiating between "b" and "d", so the top of cut out (blank) area has one or more "b" letters and the bottom has one or more "d" letters. User can refer to them whenever they need to better remember their distinctions.
*-construction of plastic and or cardboard. Square's window size created by adjust from one to three of the sides.

Sys Analyzes Reader's Speed Via:
-eyeball "analyzer": watch eye movement, each movement represents: a letter, syllable, word, word group; mathematically calculates via (triangular) configuration what eye is seeing, via its position to the shown text (s).
-reader hits key as they progress by: *letter, word, sentence, paragraph*.
-user scrolls text

Misc:
-teaches people to focus; acts like training wheels for bicycle learners, user sees a little at a time, increasing the amount shown, so they don't get overwhelmed.
-SW's images can also be shown in between lines, with or without a special colored backing for these implanted images.
-makes user feel more secure in the swirls of print
-system can have timer and or other electronic analyses for how user's reading skills are improving, eg: speed of reading; increases in sizes of windows.
--system may force/suggest user to speed up reading / increase window size

H:
-this N# changed from 5G060 to 5G061 7.95.
-Software version too. D: sw = c = display (desired effects and 2D (or 3D) images). Has same and more functions than the mechanical version.

-D1: flat (on electronic) version:



The graphics printed onto the card is on the outer perimeter. The inner perimeter is the see thru area. The bars across the middle show a possible position at which the window is partially closed with colored opaque material (can maybe still readily read thru it). The sliding door (comes from the bottom).
-colors used in the opaque shutter / any window (1) cover; plus the colors for the outer perimeter can be chosen by psychologists/dyslexia experts/u, according to the color(s) (combinations) that show best results / preferred by u.

-D2: .....
: b d :
: ..... :
: : 1 : :
: ..... :
:.....:

Notes: The diagram has big square, with smaller square within - labeled 1. 1=cut out window; letters b & d are printed onto outer (non-cut) area, above/below/to side of (reading) window.

.-Epilepsy and Parkinson's have similar symptoms to Dyslexia. Hence these products mentioned as helping any one of these problems can be applied to helping the other illnesses. Eg: via altering the way in which they focus their minds.

-OTD D: This N Sys (dyslectic's sw) ~ C =
ACCESS ("behavior analyzer" studies (reading behavior) intern: only allows those w (dyslectic/unusual) reading style to gain access); ANALYZER (sys adjusts its modifications according to u's needs/behaviors/uip/pr); CART (reading text, sw, multi-media effects, uip, access); EDUC (improves reading, study habits, speed reading); M (text, uip, access*); MULTI-USER (each u's differing reading needs met); NOTIFIER (when reader not reading fast enough / as needed); OSC (); PR (how alter text); Q (); S (); SCORE (speed, tests memory retention of read material); SENSOR (u's reading speed); STATUS (); SYNTH (adjust osc according to: uip, behavioral analyzer, pr, text); TDS (reading speed, score); T (mo); UIP (sys studies reader's (reading) style, eg: speed, comprehension = offering better training / assistance programs (sw)); VISUAL ANALYZER (reader's eye movements).

=

-OTD D2: This N Sys () ~ C =
ACCESS (password shows needed sw / current uip and score of u); ANALYZER (tailoring uip to how data best presented); ARTIST (); BALANCE (osc adjusts sounds according to u's uip for any type hearing problem/needed assistance, eg: sound always louder in u's left ear); CAMERA (scanner); CART (art, tutorial

sw); EDUC (tgh); K (joy stick); M (uip db); MO (); MOUSE (); MQ (); MULTI-USER (); NR (); OSC (); PR (); PS (); Q (); R (); SCORE (studies level of situation (dyslectic problem, u's interest in material, marketability of material) via: asking (dyslectic) u questions to determine: memory retension, speed of reading), uses existing dyslectic / reading tests (sw)); SPEECH (); STATUS (compares u's scores over time, graphs u's improvement curve; analyzer = suggests future types of actions/sw u can use to better achieve desired aims); TDS (); U (dyslectic, general target audience of non impared people); UIP (reading / personal (interest) habits); UQ ().

Additional Applications for 5G061 Dyslexia Software:
-sys tailors presentation of material (sw (text, images)) according to: uip. Purposes: improve marketing / appeal to reader / readability (for non-dyslectic u) / reduces bordom (in reading material via same style/manner)
-U only sees/experiences (via: osc, a/v modes) data that they need/want. Screening of data via: uip, key word, visual analyzer, score (of U matched w level of difficulty of differing available text).

O - System tutors artists in improving their image making:
-D: Artist = Analyzer = C = U (human artist). U draws onto C / material scanned by C / cart (of art work) / tr from other C = C = sought after parameters (as pr) are selected = compared w parameters of tutorial sw (pr) = score/analyzer = suggestions made = visual examples / written commentary / score sheet / suggested books to read (selected via matching of book's UIP w artist's uip (at that scoring time)).
-This an old KN?
-similar to music instructor, yet this is more on the visual mode.

<3, 3, 2-pnt, 1.5-mk> 5G070 Speed Reading Software: System helps slow (dyslectice) readers increase reading speed. Each word (or group of words) is highlighted, with or without the surrounding text shown. Optional feature voices text, while user reads. Other applications: learning second languages (pronunciation, speed), normal readers seeking to increase speed, psychological testing (eg: effect verbal mode has on reading comprehension and speed). Combine with product 5A060.

-for patentability (60-70% chance for sw).
-the software signal processing is the patentable issue.
-Dyslexics have slow reading speeds, hence this complements 5G060.

Special handling of particular word:
-long words are (automatically) hyphenated / broken up to reduce word length.
-other words u continually has trouble w/ are marked (colored/underlined) or delineated in some manner (to catch reader's attention). Find such words via: sw search and replace/alter.

-Longer words can receive more time. This feature can be turned on/off, since giving longer time can encourage readers to slow down.

OSC gives a beep sound helping reader w reading tempo: one beat per word/line/paragraph/page. Speed of beep can be pr.

-OTD D: This N Sys (speed reading sw) / C =
ACCESS (readers unable to read / respond to c sw's prompts fast enough can't gain access, this makes it more difficult for computer hackers to gain access when/where (w5*) they are less initiated into sys' functions; those trying to gain access (then failing on initial trials) are more closely tagged (2E251 Intelligent monitor) during any subsequent access attempts they may attempt); ANALYZER (speed of reader determined by sw via: cursor position, rolling of screen [up-down], page turning, how u rates their own speed); CART (text to be read, sw); EDUC (improves reading speed, comprehension (special training sw)); M (); MULTI-USER (adjusts to each reader's needs, uip); NOTIFIER (when reader isn't doing well, eg: too slow); OSC (); PR (); Q (); S (); SCORE (speed, comprehension*); STATUS (); TDS (); T (modem to tr data to be read/converted); +UIP (sys adjusts to user's unique needs: speed, type reading/behavioral disorder); VISUAL ANALYZER (sw's optical recognition alters images (words, pictures) to suit u's uip's needs); WA (s on portable units).

Each word is highlighted / boxed (with or without other surrounding text shown) in a timed manner. User / system selects the speed of movement, allowing user to better focus on one word at a time.
.-user can alter speed, and or press button for system to continue to next word
-related to 5A-060
.-more time can be given to words which are longer, or which are designated by the database as harder to read (based on entire population or from studies with dyslectic peoples).

+-Dyslectic Phonetics Reader:
System highlights / shows each letter/word/sentence/*paragraph at a time. Highlighted material is then spoken out. Also useful in initial learning stages, helping readers use phonetics to read. Reduces needed time for live instructor.

-related to 5A-060.
FILE 7G

PVC ALERTER
<3, 3.5, 3.5, 4, 3>

7G050 PVC (eg, gloves, condoms) alerts user when it has been perforated or come into contact with certain chemicals:

Chemical version: inner layer is of different color in tern exposing itself, or inner layer emits colored substance when punctured. Electronic version: sensor notifies if any contact has been made with specific chemicals on inner, outer or upper surface. Both versions analyze type of occurence in terms of when, and how a particular type chemical contact was made. Biggest benefit is the safety feature for mankind.

WHAT'S SHOWN

Any type of occurence user wants "notified" is shown. Examples of type occurences:

-Conditions of PVC's quality shown: hole; tear; (minor) stretching which could lead later to real tear due to increased weak area; if came into contact with corrosive substance (which could weaken (thinnen) pvc), may have already corroded outer layer of pvc; if pvc is being stretched beyond (desired / pr) capacity, eg: hand too big for glove, or excess pressure.

-Age (of use): if pvc is too old, or been exposed to air/chemical (too long / beyond pr/tds time period).

-Temperatures shown: changes in temperature for contents (tubing, containers, lids) / environment. Different colors represenent different temperatures.

--if temperature has exceeded both a minimum and maximum temperature.

-Biological changes shown: Minute changes in temperature resulting from micro-organism behavior. Type organisms and or what they are doing (w5) shown -> their measurable activities cause "nr" effect (chemicals excreted by type organism's activity, temperature, motion level (amount of friction/vibration) pvc receives, etc.) -> (chemical) reaction in (pvc) -> nr.

--friction level results -> changes in chemical condition of pvc / chemical changes resulting from mixture of studied (moving) substance w/ pvc.

-Chemical type contact shown: different colors represent type contact w: air (quality), Ph level, specific chemical wanted (to be avoided). Percentage of particular chemical content: how dehydrated, sulferic.

-different sides of pvc have differing nr (notifier) according to what that side comes into contact w/ what (w5).

. Identifying type contact made by PVC:

Check PVC later: PVC has miniscule pockets which hold / interact with type condition sought = u's eye / el (electronic) "analyzer" = status on type(s) of contacts made w5.

-pvc includes chemicals designed to interact with targetted substances. Chemical reaction can be seen immediatly / later / how pr - w5.

.--any needed elasticity is still found in pvc.

-certain types of contact whose nr (notifier) isn't readily lendable to inspection by unaided human eye can have glove: held under microscope (w/: certain "lens" filters / see in certain fq, eg: ultraviolet light).

-Eg: sulferic contact made 5 hours ago for 8 minutes, level of sulferic contact / percentage of substance that was sulferic at that time (w5*) was 40-50%.

2] pvc = el (electronic) "sensors" = C ('computer) (analyzer / memory / status) attacheable to pvc = s / C ('computer) / m / cart / gloves / pvc

3] put pvc into situations which will cause subsequent chemical reactions -> see / "analyze" type contact pvc had w5.

-Eg: place glove into chemical solutions / specific type light / certain heat level.

--In other words: a] specially designed pvc comes into contact with potential substances its designed for -> b] pvc then is altered / effected in some manner to create chemical reaction upon which the type occurence (if any) is readily seen via: unaided eye / additional chemical process / microscope / etc. Reason for additional step(s) are: cost or level of sophistication doesn't permit an instant reading for type contact w5; greater accuracy (status, level, w5) for type contact; companies can collect all gloves (w u's name) end of each time period and process them in larger batches -> then nr (notifier) / tell u (user) of any type exposure or use for research study, eg: like semi-geiger counter tablets worn by people in nuclear reactors.

3] Batches: to better acertain w5 type exposure, different batches of chemicals used in pvc are designed for a semi-time capsule effect (each batch becomes effective at differing times, hence the more batches triggered to react / not react, a more precide reading as to type events (when, how much of what, w5).

-different batches can nr (notifier) (seek to show): multiple type contact by chemical type / w5.

-different batches can be attached onto pvc / taken or peeled off / activatable by: pulling tab / color / placing pvc earlier into type solution (pvc designed to hold or work effectively so previous step made is useful for any future identifying for type contact.

-combination of different batches and how they are activated can paint a better picture for: type chemical contact / w5. Eg: substance with two chemicals can be identified when each tab designed for each substance has been effected / nr.

-tabs / batches placed onto pvc are: absorbant for one or multiple stages for determining type contact. Can purchase tabs seperately from pvc. PVC designed to better hold / work with tab/batches by: better sticking w/ tab (so it stays on / can come off); batches don't touch eachother: (markers placed on pvc where any/certain tabs can be placed, markers for tabs set in locations less likely to touch eachother based on what the pvc is designed for, eg: glove (avoiding points where fingers touch other parts of glove.

N EXPANSION

--Expanding NR: color change is "nr". "Nr" can also be via: change of physical (surface) PVC, eg: bubbles, get harder/softer/ more or less pliable / excretes substances (liquid, *powder, smell. Each type of situation can be represented in differing type of "nr" action, eg: blue versus red for temperature, stink smell for danger, and perfume for safer situation.

--Expanding PVC: This n can be applied to virtually any material, eg: glass, metal, *wood, *stone, cement+. PVC can be inter-replaced with one or more of other substances. nr (notifier) simply is shown on such substances.

---Tabs can be placed into material (being studied). Existing products that measure changes of any type related to what's described in this N, are applicable to this general N. Eg: tabs which measure (changes in) temperature, Ph, etc.

---Cement / Paint: nr (notifier) alters via color change; changing of surface texture (corrosive (look), bubbles up)

---Glass / See thru PVC: level of (colored) opacity = nr

APPLICATIONS

-Hazards material handling, plumbing in chemical plants & refineries, municipal wastes, dentist/researcher gloves. Huge market.

-when gets to danger level, "nr" needs to be very identifiable, eg: very bright versus non noticeable colors. Problem: u (user) might be encouraged to rely on n, even if they are forwarned about the danger.

-Gloves / Condom / PVC: shows level of usage / rubbing / friction. Outer layer of glove wears out showing its time to change glove. If using for long time / minor tear, stretch.

-those parts of pvc which got greater usage already -> nr, can let u (user) use other parts to spread the area of usage/wear.

-covering material shows "nr". Covering material / pvc wrap for: seating, table cloths, apron, hats, cover over clothes, pen's handle (exists: pen which kills germs on contact). Acts also like the badges people wear showing what chemicals they have come into contact with.

-PVC kills germs: on contact / upon (semi) penetration (since outer protective layer covers (possibly dangerous) chemicals to anesthetize.

NR: How Shown

-Multiple symptoms are nr: (non-conflicting) differing nr (notifier) are shown, eg: 1] two different colored stripes; 2] C ('computer) = nr; 3] particular digits/visual effects show up on pvc (in differing places).

-U feels something (sting, prickle, acid) upon/after piercing/breakage. Helps incase u (user) not looking at glove.

--D: piercing/breakage of pvc -> sensor / chemical reaction (air exposure / contact between previously isolated (layers)) -> chemical release (acid) / osc

MISC

-Similarities in existing products: there are many two layer things in world, eg: when bending one layer, expose other layers; credit cards which change color after pressing in typed name. Hence, 7G052 might be more patentable because its more complex.

-Label on pvc (glove, condom) explains:

the "nr" is not to be relied upon; "nr" may give hard to identify notice to u; no warning might be given.

--idea is the nr (notifier) effect is better than having no such nr.

-MK: Many people are quite fearful of contamination, the number of such people probably grows annually due to increasing sophistication of population. Reduces chance of: spreading newly engineered micro-organisms, illness (HIV, cancer, (chemical) burns). Salaries for risky chemical / biotech / medical workers is higher, using such gloves reduces risks and save on payrolls. With advertising, employees will demand the gloves. Shipping, handling and manufacturing costs may be low.

-Patent search key words: pvc, poly vynle cloride, rubber-, glove-, safe-, germ-, penetrat-, warn-, hospital, research, break-, tear-, multiple layers.

-wire / other "sensors" on/within PVC when disturbed/altered/effected in any manner described w/in this N, triggers signal (nr) showing level/type situation/problem.

-users seeking to keep down (glove) costs, might wear clear glove above this N's glove. Hence: make wearing gloves over this glove difficult via: ineffectiveness of nr (notifier) in such circumstances (needs air into perforation -> nr); friction getting second glove over this N's glove; nr (notifier) function reduces in effectiveness after glove worn certain time period (have nr (notifier) showing age of glove); will government allow all these sales inducement factors which compromise safety for budget cutters?

-each pvc's section (eg: glove's finger) has different color. Applications: helps identify which section of pvc had which type (w5) occurence.

-OTD D1: This N (invention) (Sys (PVC)) ~ C ('computer) ~ (7G051 / 7G052) =

ACCESS (limited u (user) can know: status, nr; or use sys); ANALYZER (w5 condition/status of pvc condition); CART (sw; plug pvc = wires = el (electronic) elements = c); EDUC (for educational research; lab use); M (analyzer, db); *MULTI-USER (); NOTIFIER (); PR (how analyze data); Q (u asks re condition of pvc); SCORE (# times pvc was: penetrated, damaged, and w5); SENSOR shows current / past / %anticipated (analyzer, uip): (pressure, vibration, puncture, tear, stretch, heat, cold, moisture level, age of pvc (kn) shows change in coloration, other chemical contact, level of corrosion); STATUS (); TDS (occurence of any w5 element); UIP (what el (electronic) sys (system) should watch out for (type problem / situation / activity); VR Glove (VR "Educ" / research tool, "interact" with chemicals / micro-organisms while using VR (visual analyzer)).

-any contaminents / chemicals (not washed off) material (pvc) causes nr. Helps u (user) know cleanliness of surface / work area. This nr (notifier) function applies to: paints, varnishes, formica, *paper (board), pvc (rubber, vynl, bags, (lid) containers...

-OTD D2: This N (invention) sys (system) (glove) ~ C ('computer) =
ACCESS (before (hand) can begin work/enter into (tank), sys' "sensor" = "analyzer" senses if correct type safety glove is being used via reading of glove: ultra violet light reflection, bar code reader); ANALYZER ();
ARTIST (each finger creates different color ink (onto: paper / interactive s) via: ink dispenser on each finger / chemical reaction from surface area touched with differing chemicals per finger, and *parts of surface contacted / differing el (electronic) charge or chemical from each finger and how interactive s or other advanced surface interacts/reads each finger); C ('computer) (); CAMERA (2E251 Intelligent monitor only follows particular glove, because glove has: tr (ps), certain color); CART (c / microchip = "analyzes type (chemical) occurence differently. Ink. Chemicals to cause differing chemical reactions (per finger)); COMPOSITION (music glove KN (invention)); K (like music glove, except no keyboard necessary since sys (system) analyzes how finger touches different surface areas - KN (invention)); M (analyzer, db); MO (c); MOUSE (c); MQ (w5 occurences sought); MULTI-USER (); NR (); OSC (); PR (); R (k); SCORE (); SENSOR (); SOUND ANALYZER (); STATUS (); SYNTH (); TDS (); T (); UIP (); UQ (); VISUAL ANALYZER (); VR* ();
WA ().

NR: how type occurence notifies U:
-scratch surface / pull off tab to see: color / texture change, printed wording (that shows up depending upon type occurence).

-End 7G050 PVC Notifier.

<3, 3.5, 3.5, 4, 3>
7G051 PVC alerts user when it has cracked, or bent beyond desired amount, in tern releasing colored substance. See 7G050. Inner substance's exposure to air induces discoloration.
-THIS N IS SUBSET OF 7G050.
-Applications: PVC piping. Huge market.
-analogy: cut in skin, causes bleeding, due to air exposure -> chemical change -> color change (in nearby area / lines throughout pvc / (nr = osc)).
-Similarity: Martin - "similar to one-use gauges for determining the stress a package has been subjected to when shipping."
-Shows how far it: has already stretched, and or how much further it might stretch before: breaking, splitting, being unable to give anymore. Each stage of stretch can cause applicable changes in coloration.

<1, 3, (3-mk, 4-pat), 3.5>

7G052 Flexed Level Notifier: User is made aware the number of excessive times and degree of bending material undertook beyond desirable levels. Applications: wire, hinges (exists?), flexible sheeting (vinyl). Electronic sensor analyzes situation: when, where, what, how something was flexed. Useful in R&D labs, eg: testing new product prototypes, specifics applications not identified. Expensive or dangerous equipment feature replacements: airplanes.

-analogy: cut in skin, causes bleeding, due to air exposure -> chemical change -> color change.

-mf for this higher than 7G050 or 7G051

-utilizes invention(s)for pvc parts that change color when: in need of repair, beyond certain age, etc.

+-system valuable when (pvc, rubber) materials used aren't type to readily show excessive wear and tear, or other sufferings.

-R260 "Sensor" judging w5 of flexible nature of element, not ES.

-sys judges w5 object (wire / other pliable material) was bent. Eg: # of times bent (beyond designated parameter) -> nr.

-applications: useful in determining possible future/current* sys (system) failures (due to faulty (broken) wires / pliable elements).

-sensor also seeks for other characteristics that may be watched for (in such potentially faulty scenarios), eg: excessive high/low temperature; (designated) chemical contact; over exposure to weather (elements) / etc. # times element was used or not used correctly/incorrectly/at all.

-El DRAWING: sensor = analyzer = C ('computer) = s/osc/data tr to database (m)/sw holds or analyzes data / score.

.-Chemical DRAWING: (excessive) flexing = chemical reaction (each time) = with build up of residue from chemical reaction = color / substance changes (appearance).

Applications: important / valuable machines where safety is major concern; airplanes; power plants; tel and cable co networks; autos.

How problems identifiedrawing: use special color light (ultra violet) to see for problems - keeps it harder for people to copy/steal invention.

-OTD D1: This N (invention) (Sys, pvc, wire, u) ~ C ('computer) ~ 7G050 PVC Damage Alerter = ACCESS (); ANALYZER (); CART (); EDUC (); M (); NOTIFIER (); SCORE (); SENSOR (); SOUND ANALYZER (sys seeks sounds which might imply (negative) alteration of material in question, eg: sounds of tearing, burning, popping, ripping); STATUS (); SYNTH (sound analyzer (2e010 intelligent monitor) = synth -

Audio Inventions

Innovation Institute

Sound Canceling

MS01: Sound Selection Methods:

Decides what sounds to cancel.

-Invention helps decipher important sounds from background noises.

-'Notifier: To help designate what happened, external unrelated sounds are canceled out. Let's someone better know what happened (W5) when there are many different sounds. EG: Can focus on where sound comes from too.

-can play back sounds.

-with less sound clutter, 'sound recognizer / human(s) ears can (better) decipher nature/type of sound (being) generated.

*

.-Office Cubical Sound Canceling device exists. Avlelec.com

.-this invention might be in one of Steven Kays' older invention databases.

-

Issues MS01:

-slowness in 'reacting to (instant made) sounds.

-connected to MSA02

Jumbling Technical Details (see designated parts file for abbreviated parts).

. OTD DRAWING: U = This N (invention) sys (system) [MS01 sound selection methods] ~ C ('computer) = ACCESS [] // (Musical) ARTIST [] /CART [stored sounds in MP3, etc] // EDIT [text correlated with sounds] // EDUC [learn the make up of different sounds, eg: different sounds of (car) engine (that can be canceled)] // MULTI-USER [each user/system seeks to cancel/seek designated sounds] // nr (notifier) [] // OSC [Form of sound to communicate may (not) be heard by designated parties (with their own sound canceling (shields),]// PR [] // PS-Zone [] // Q [] // R [] // // SCORE [similarity of sound to designated pattern is scored] // SEEKS & REACTS [system responds to any sound that's converted to a designated signal, eg: turn on lights when hearing certain foot steps] // SENSOR [sensors used in helping determine what sounds to (un)select, eg: sounds outside designated phases are however selected when visual recognizer catches a (moving) red (shirt)] // SOUND ANALYZER [] // TDS [all occurrences are TDS stamped and stored in 'database] // T [telephony related sounds apply] // TRACK [follow objects/people with designated sounds - KN (invention)] // UIP [learns what designated sounds (might) be] // VISUAL ANALYZER [] // VR [uses/converts designated (environmental) sounds] // WA [mobile sound selection system].

MS02 Sound Access:

User's transmitter sends multiple sounds to gain access, but only certain frequencies camouflaged within are needed – minimizing chance for others to copy sound; the (unnecessary) sounds can periodically be altered. Should an omitted sound be used to gain 'access, a 'notifier can be triggered.

-connected to MSA01

MS03: Selected Sound Monitoring:

Monitoring/Security/'Access: system can monitor diverse types of sounds, isolating each one, and 'reacting as designated. EXISTS.

--eg: parent can hear their baby cries, while drowning out (most) other sounds, they trained system to 'seek and react / cancel.

--helps combat against situations/villains trying to fool 'sound analyzers by making extraneous/conflicting sounds designed to sound camouflage an action.

-an enhanced feature of 'sound recognition.

-related to selected visual monitoring KN (invention) (earlier invention). MS0

MS04 Selective Morning Alarms:

-Pulsations (sound and vibrational) used to awaken someone, can be of less disturbance to others via pulsation cancellation devices. TOO SIMILAR TO MS03

.--In other words: Form of sound to communicate may (not) be heard by designated parties (with their own sound canceling (shields), eg: get awoken in AM by sounds/pulsations that another has canceled out.]

-(Future technology) lets person on right side of bed/room/house hear (alarm) sounds, that can be canceled/muffled in other 'zones.

-Creates better relationships. Eg: the man who might have to wake up earlier might set alarm earlier, for intimately hugging his spouse (who was not jarred by an alarm, but gently awoken).

MS05: V-Room Practice Improvement:

-create a suitable sonic signature (time it takes for sound to bounce off a wall in a room). EXISTS.

-make room sound like a cathedral, theater, bathroom (V-Room Practice (product name) exists from wengercorp.com look under their acoustical products). Cancel unwanted sounds to better improve sound effect.

--V Room being sold is a constructed room, versus stereo type system alone.

MS06: Hearing Impaired's Sound Conversion:

-Convert high frequencies to low frequencies. Hearing impaired hears base better. EXISTS.

-May ignore low frequencies (which can be heard already).

-Pitch shifter used.

-Let person know what the sounds heard are, eg: Morse code becoming a signal implementer.

MS07: Selected Sound Canceler:

(UIP) knows how to cancel what unwanted sounds to cancel: DID PATENT SEARCH.
-Teach system to recognize specific sounds eg: neighbor's dog.
-by frequency
-by location (via multiple microphones, ps).
-duration
-sound patterns: time, frequency and volume
-user teaches system to learn (un)wanted sounds
-sample out background sound, during more quiet times.
-SonicStudio.com has product for canceling selected sounds from pre-recorded material.

MS08: Window Sound Canceling:
Sounds that hit it are (semi) canceled. DID PATENT SEARCH: reverse of this exists (window is a speaker exists.)
-apply a visually clear speaker; or sound pads (is a speaker itself that transfers sound onto the attached to surface).
-Matt Stamos' invention (only his).
-program to designate out certain sounds, eg: neighbor's dog, but can hear kids in back yard.
-Whisper Glass: use window as speaker – exists.

Miscellaneous

Question - Waves:
-Many of the audio and pulsating inventions simply need to incorporate both the audio and pulsating invention qualities described, if only audio or pulsations were listed. This applies but less so to color waves in Visual Recognition systems.
-How expand inventions taking this into account? Maybe incorporate audio and vibrations into "Pulsations" which is an energizing marketable word for inventions as well. Then only use the narrower "audio" and "vibration" terms when both don't apply?
-Visual can often apply so maybe have terms like: P = audio, vibration, visual; and P>Visual = audio, vibration but not visual? Or "P" might be "W" for wave?
-codes help when it comes time for doing diagrams and writing lengthy ideas – otherwise – this might save 10%+ of the unnecessary wordage.
-Maybe square this before choosing on a numbering/filing system?

Note: without getting alarmed, best not to take security related inventions out of the US, until six months after patent application has been filed, unless the patent office states otherwise.

Many of the inventions incorporated have older invention numbers, and Steve's not sure what they are. So we'll really have to clearly specify via abstract what inventions will go into our agreement, to avoid conflicts with other inventions to be licensed. It's often too difficult to find where/what these inventions might be in the KN database.

New Audio Parts
Added To Other Parts Files

Gate: knocks out sounds below a certain decibel. Exits.

Ducker: turns down sound of others when a designated person is speaking/making sound. Exists.

Butt Shaker: Base Shaker. transfers low frequencies onto a surface area. Exists. "Butt Shaker – TM". Uses (off the shelf audio) amplifiers.

Vibration Code: communicates via vibrations, eg: Morse code.

Intelligability: meter states how comprehensible a sound/vibration is, eg: for a large stadium - exists. Will suggest how to fix it.

Sound Analyzers: measures the sound. Meyer Sound in Berkeley has *Sim system. Steve Kays' inventions' part "SA – Sound Analyzer" doesn't necessarily distinguish between sound recognizers and analyzers.

Sound Recognizers: tells what the sound is, eg: speech recognition.

Pitch Shifter: shifts sounds to another pitch.

Transducer: turning a sound into electrical current; or electrical current into sound, eg: microphone, loud speaker, vibrational communicator.

Anti Phase: phase is the curve of sound/vibration set overtime. Anti-phase is the opposite that cancels out a phase.

See Other Applicable (Audio) Parts – Please Add to Main List.

Creatively Combine Parts!

Pulsating Inventions
Innovation Institute

Pulsating Communication

Exists: patent which communicates by vibration code.

MS20: Vibrations/Sound Morse Code Combinations:
-Let person know what the sounds heard are, eg: Morse code becoming a signal implementer. EXISTS.
--simple codes for (ten)
-cell phone vibrates for Morse code; caller ID and blocked calls have different code.
--multiple vibrations (smooth, jagged, deep, shallow, etc) can be used like an alphabetic template.
-different types of vibrations signify if Morse or other code is being used.
-find ways to reduce learning curves, to increase market shares for inventions.
-Words converted to text (SA), that's converted into vibration code.

MS21: Vibration Language:
Words converted to vibration. Non transferable sounds like letters: c, d, f, h, k, s, x could be converted to another sound (that the user could learn). EXISTS.
-like learning a new handwriting style for palm pilots.
-place vibrational transducer on (human) body, on (skull at lower right of ear(s).
-

Vibration Language Applications MSP02:
-hearing impaired: translate. Use something other than lights that hearing impaired often use.
-warning system: NR
-people visually occupied, eg: drivers.
-wrist watch vibrations
-get communications others wouldn't know about.

-vibrate on the hour
-pet communication, put under sleep mat
-alarm clock shakes bed – exists
-send text message, "hi honey I love you". Maybe only one person has 'access to send message. "Love Tap – TM". Cellular Wave (a one way communication). Receive quietly.
-email's subject line is vibrated onto cell phone
-door bell
-'notifier: cooking alarm; fire/emergency alarm
-all other electronic forms of communication to humans/animals/organisms: what else???

MS22 Vibration Language:
Different diodes placed (on body). Each diode can have (four) types of vibration patterns, with each pattern representing an alpha-numerical digit, or term. EXISTS.
-Elephants communicate greatly in base. Study ample research here.
-Linguists study ways people communicate, they might like to explore these novel inventions; and suggest ways humans might best learn/adapt to the communication possibilities, and what those better forms of communication might be.

Notes on MS22:
-Possible Trademarks: V-Comm; Vication; Vimunation (play off communication); Vimmunation; MS Communicator [multiple signal].

Vibration Applications:
-massage
-acupressure and related therapies

MS23Vibration Reader:
Recognizes vibrations, and 'reacts.
-Exists: Bone conduction actuator.
-Medical uses: 'senses heart beats / (obstructed) breathing of lungs.
-Machine/auto diagnostics: identifies problems.
-(Manufacturer might) teach vibration sensor how to 'seek and react.

Vibration Relayer:

-Like existing remote control relayer, it can continue on the vibrational signals (received electronically/vibrationally to other places/'zones.

-Toy (for kids / pets): responds back to how pet plays/pushes/vibrates (what covers/is connected to) the vibration 'sensor. System replays or alters what the vibration reader reads; and can alter response via UIP (of pet, teacher, user).

Pulsating Inventions - Others

MS30: Convert Visual Recognizer's Signals to Vibration Code:

-'notifies for emergencies. DID PATENT SEARCH.

-each color/shape/object has a different code

-scan 'image into vibration

-convert vibration into visual 'image

MS31: Vibration Canceler:

Can reduce vibration from constantly existing vibrations from a machine. Reduces manufacturing costs for the machine. EXISTS.

-functions like sound canceler. Sound is a type of wave/vibration.

-putting something out of phase; reversing the polarity

-senses then cancels the vibration(s).

-Exists: Pressure sensing active control: patent pending. Microphone measures and controls vibrations through pressure.

-Base Shaker: would receive opposite signals from vibrating source (connected to it).

-Measure: vibration source, and vibration being felt. Fluctuation between the two is what anti-phase (may) not get. Put 'sensor on all applicable parts; then combines the two

-select which (of many) vibration(s) are canceled. User can use/focus on remaining vibrations.

.-may use but not required: springs, cushioning devices. Helps achieve results (where invention may not work fully).

Speaker stand Anti-vibrator: reduces sounds sent to neighbors.

-Look Ahead (exists): (sound) reader knows what will be heard ahead of time.

-uses Vibration Analyzer: datastick.com. Knows what vibrations (to cancel) are.

6J040 CORD NOTIFIER

Abstract:
Invention alerts user when electric power cord approaches maximum length of extension available. Another version notifies when cords strapping something down are getting to loose.

In other words: when cord (for power) comes close to its maximum length it "notifies" u. Applications: vacuum cleaner; electric lawn mower; outdoor electric cutting devices, eg: hedge clippers, other saws; etc.

Notifies when (straps, rope, wires, %screws, other %fasteners) used to secure down a device get too loose. Notifications also available when cord is in: dangerous situation whereby it may get severed, or frayed.

This invention seems so obviously needed and is maybe too simple. No previous inventor?

Applications - Type cords:
-vacuum cleaners
-electric lawn mowers
-outdoor electric cutting devices, eg: hedge clippers, other saws; etc.
-cord telephones

Disconnect Notifications - Ways User is told available cord length is nearing the end:
-computer notebooks: system may 'notify user if cord came out, since notebook's battery may die without user's being aware.
-the degree to which it can be pulled becomes more strained. In other words it gets harder to pull further (the less cord there is).
--one method is to use some type of mechanical device that puts more pressure on the cord [releasing mechanism] the less cord is left to pull out.

Ways system identifies when straps are getting loose:
-sensor' analyzes' the level of tension for strap/fastener; then notifies when it gets too loose or tight (something may snap/break). Other ways!

Electronic version D (drawing): electric device = sensor = cord = electric outlet.

Cord Tripping Notifier - System 'notifies when ever a cord may be about to be:
-tripped upon
-when a moving body (person, robot) is about to pull cord so far that either the cord will pull out from the wall or device (automatically designed to do so in such circumstances)
-there is a risk of something falling (which is attached to the cord, or near the corded device)

Sensors' which alert moving parties to dangers:
-Laser light tripper 'notifier: this is placed near the cord(s) and 'notifiers people going by to be cautious (of the cord, or work or other dangers in progress).

Types of cords:
-power cords
-security / anti theft devices [with electronic 'notifiers (activated upon release of a cord or gadget)].
-cords for transmitting or receiving [data, other frequencies].
-pipes for: any liquid; wires; travel (as in tunnels).
-anything to help establish stability
-Miscellaneous: straps; string; rope; wire
-data transmission cords: optical, copper, cable, etc.

Fastening Cords & Other Implements:
-straps; string; rope; wire; etc
-Notifies when ever their 'designated desired function(s) are not a peak operability. Eg:
--[about to get] loose
--cut or fraying or weakening
--unable to take on the [changed level of] strain [to device it is securing].
--% [non flexible] straps or strong implements [placed outside the device being secured]. Eg: wood, metal, plastic bars, strips, pillars or other structures.

What is 'notified:
-cords designed to help establish stability, such as ropes. System may alter when 'sensor notes these cords are unfastening, getting frayed, or simply cut.
--an electrical wire may need to run through [such] cords [as or feature of 'sensors].
-when coiled cords are getting more taut, in other words getting closer to losing their elasticity by becoming straighter.
-when wrong cord is utilized: not designed for 'designated power usage, or type [data] 'transmission.
-when cord is no longer at peak operability: poor transmission; frayed cord
-when [power] cords get too loose and are laying about. This might be a dangerous situation. 'Sensor simply 'scores the taut level; and if too loose [though 'sensor may not know how much extra cord is laying about]; the 'analyzer instructs the retention device to pull in more cord up to the 'designated taut level.

How tautness is 'analyzed and 'scored:

-the level of pull from the cord or its internal wire must remain [constant]. Any increase/decrease indicates change which needs to be 'analyzed. Such 'analysis in tern decides how to 'react, and if a 'notification is warranted, such as based on the 'score (for how bad the occurrence is) of the incidence.
-the 'sensor into which the cord(s) go into is 'programmed to notify when ever the taut level falls outside the 'designated parameter.
--% the level of tolerance to the taut level may vary according to the 'UIP, wind, time of day (when system is more likely to get agitated), or other security related criteria ('access).

Miscellaneous:
-Device can automatically tighten cord to desired tautness [upon user pressing lever or button]. Eg: extra slack [power] cord can be taken up, but the differing taut level desired for this function is such that it won't cause a disconnection [by taking the cord out of the wall] [since the cord is retracted slowly] in this type circumstance.
-A special code is needed before disconnection. Exists: devices that alert when power cord is taken out of outlet, as an anti theft device; to deactivate alarm the user must use a certain password.

US Patent Search:
-key words: cord*, pull, retract*, retention, notify, warn, alert, taut, wind*
-search strategy on Retractable Cords: cord* and retract* and (pull* or retract* or retain* or retention or notif* or warn* or alert* or taut)
-search strategy on altered cords:
cord* and taut*
--other key words: react* or respond* or alert* or notif*
-US Patents:
* Cord winding apparatus 4177963; *4326339.

. OTD D (drawing): U = This N (invention) sys (system) [occurrence effecting the cord = 'analyzer/'reaction = cord] ~ C ('computer) =
ACCESS [] // BA ('behavior analyzer) [] // CART [] // EDIT [] // MULTI-USER [] // nr (notifier) [] // OSC [] // PR [] // PS-Zone [] // Q [] // R [] // SCORE [] // SEEKS & REACTS [] // SENSOR [] // TDS [] // T [] // TRACK [] // UIP [].

Diagram #1:
person pulling = cord = coil of remaining cord = 'sensor or other reactive mechanical device that 'reacts to the change in remaining cord = 'reaction: 'notification or ability to pull cord gets harder as there is less cord remaining.

Diagram #2:

occurrence that alters condition of cord or strap = (metal wire) 'sensor analyzes that there is trouble = 'notification made or the cord is automatically tightened further by system's 'analyzer to 'designated taut level [per 'program].

6J040 CORD NOTIFIER

This could actually be two separate technologies.

1st) Many materials exhibit a change in resistance when under pressure or strain. A rope could be made that exhibits one level of resistance when taunt and a different level when not. A small electrical charge would be applied to rope an monitored at other end. A change in resistance could indicate that the rope is no longer secure. Other factors could change resistance as well.

2cd) Safety device to prevent over extension of cords. I've seen this done as follows. A 9.5" rope is attached to a 10" extension cord. The shorter rope keeps the longer cord from being over extended. Other methods include adhering a larger ball or stop to the cord. The ball which is internal do the device prevents the cord from being over extended by being to large to pass thru the opening for the cord.

Most likely applications for this would be in hazmat situations where the overextension of the cord would could have serious results.

Invention 3E061 - Human Body Motion Tutor

Don't know how feasible this would be. The technology for this has already been developed much as described here by Hollywood. It is used to capture human motions for more realistic animations.

Have not heard of any therapeutic uses. Most likely would be rather cost prohibitive for the next four or five years. Full body motion suits can be 100k+. Gloves which capture hand and wrist motions are around $100 - $1000 depending on number of sensors etc...

Perhaps developing alternate way of capturing data could lead to more affordable technology.

Also perhaps the technology could be licensed to develop physical therapy applications. Medical technology has traditionally always had larger price tags. May not be feasible for home use but could be for clinical use. Money would be made off of the application of the motion capture system rather than the system itself.

See http://www.vicon.com/applications/life_sciences.html

Vicon Peak motion measurement systems have been used in hundreds of clinical and research laboratories, sports performance centers, universities and other institutions in more than 50 countries worldwide.

Combining the high quality Vicon MX 3D optical marker-based technology with the long-established digital video-based 2D and 3D technology of Peak Performance, Vicon Peak offers a unique range of hardware and software to suit your needs as well as your budget.

Whether you want the world's most accurate and powerful optical marker-based solution or the unrivalled flexibility of a digital video solution, Vicon Peak will deliver quality measurements that make sense and software that lets you make sense of them.

If you have any questions or need further information on the application of Vicon Peak systems in Life Sciences, please contact your nearest Vicon Peak office - just click here for information on how to contact us.

File: I Misc / Jet Lag Adjuster 5J07

5J07 Jet Lag Adjuster:

Affordable to manufacture invention acclimates travelers going to and coming from new time zones. Helps users gradually adjust sleeping schedules to better adapt to time zone changes. The bed side lamp, and time alarms are altered accordingly.

-Adjusting Times: It prepares users before taking their trips by better acclimating their wake/sleep cycles to the newly destined location. It also eases the user back to their nature wake/sleep cycles upon returning home.

-Lighting: Studies show exposure to light in the correct pattern more quickly helps adjust the user to different time zones. The [portable] light for user is considerably brighter during 'designated hours, and adjusts the times of greater brightness according to the daily regimen of the day.

-User keys in their home's time zone= sys (system) then gradually adjusts its suggestions for user's changed behavior over time (day by day)= 'nr adjusts suggested bed time and wake up time correspondingly (by one hour a day towards their new time zone). u (user) can 'program system to speed up or slow down the adjustment mode.

-People generally either are too lazy or forgetful to force themselves into an altered regimen. The invention is their 'guide.

-Invention hooks into electronic devices by controlling their functions [to turn on/off/alter] to help alter the user's [time zone based] behavior. These devices include:

--eating times: avoid going to bed with full stomach resulting in a more difficult sleep; and such is less healthy.

--playing calming music when approaching bed time. Connects to stereo.

--other past & future studies [found on web] that show [proven] factors which assist in time zone adjustment.

-Gradual light 'morning alarm:

[15 minutes] before the alarm, the light gradually comes on so as to minimize the shock of adjusting to waking at a time that is out of rhythm with the body. This gradual light awakening aspect exists as a stand alone, but it can be connected to this invention for added benefit.

-% Works with people who have physical or mental problems with of a time adjustment nature, eg: sleeping disorders.

-Adjusts before/during/after trip.

=

Details:

-%See: 6B310 World Time Calculator: The most accurate system for knowing the time for each world region. Solves the trouble international businessmen had with each country starting and ending their day light saving time programs on different dates.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-(time near/3 zone) and (sleep adjust teach gradual)

-US Patents: 4995020 4901296 4956829 3828546 4620797 4332020 5524102 5068838-Allows watch to know the real time of where user is [a kn invention?, But this patent dated 11.91]

POS – Point Of Purchase Systems:

Invention Being Developed By Nathan Foster and Steven Kays

Repetitive Password Systems:

System generated easy to remember passwords. Repetitive numeric/alpha passwords are easier/better to remember / type / prevent "shoulder surfing".

. They're harder to crack, because:

1. hackers may not know the repetitive password system is in operation.
2. it's harder to guess what digits are repetitive
3. the more digits in a password the harder to crack; but repetition has it's benefits.
4. human memory compatible.
5. shoulder surfing is harder on touch screens because there's less finger movement.

Drumming Method:

. form of movement/touch is a password.

UIP: Suggests what sales transactions might be useful/needed.

Access: how finger is moved w/ or without additional passwords needed.

D: u (user) (cashier) = This N (invention) sys (system) [] ~ C ('computer) = ACCESS [senior employees get more access, and what they're seeing is shown in different colors – helps catch hackers working at system who lack seniority (others can see they're getting a manager's colors for same data)] // ANALYZER [] // BA ('behavior analyzer) [] // CART [] // EDIT [cashier's info is selected for what's most pertinent (for client)] // EDUC [] // MULTI-USER [] // nr (notifier) [when something inputted incorrectly, or purchased item/service can't be offered] // OSC [] // PR [] // Q [] // R [] // ROUTER [cashier to available stock] // SCORE [popularity of items with clients] // SEEKS & REACTS [locating stocked items] // TDS [for each transaction] // T [connect different POS systems with eachother and "M"] // TRACK [1. steps in sales process; 2. cashier behavior] // UIP [preferred colors viewed by cashier] // VR [] // WA [portable wireless version (for beach/pool resorts)].

File: 'R-List' 6.96
(Improvement) Inventions: Electronics, Plastics

Introduction:

The sample existing product listed for each of our product numbers, is only one of the points of reference from which invention(s) are made. That developed product can be^: wholly / partially, incorporated / merged; altered; and or dropped completely, depending on the variation of our invention.

.-Cited are also the technologies known to be used in said product categories. The existing product also helps classify corresponding product categories.

-There may be multiple manufacturers, the one listed is not restrictive.

-Layout of N: First the existing product, followed by information on manufacturer, followed by KN (invention). KN follows the square brackets with journal article identifier. * Note: its KN, not to be mistaken with NK, which is "Nikkei Weekly".

.-N numbering system:

the first three to four digits, eg: R22 can have an offshoot N, eg: R22-1. R22-1 utilizes all or any of R22. There is minor possibility of error in a creation of two different N (invention) labeled R22-1. At any rate, all such N are the same R22 immediate N family. Many such subdivisions can be created from N # but aren't.

.-This file started in Nov 1993, since expanded and renamed.

Journal Abbreviations:

Codes for periodicals giving details and how to get more information on the products:

-General: PS = "Popular Science", USA; NK = "Nikkei Weekly", Tokyo; DY = "Daily Yomiuri", Tokyo.

-ES = Edmund Scientific Catalog, 101 E. Glucester Pike, Barrington, NJ 08007. Tel 609 547-8880, Customer Service 609 573-6260, Fax 609 573-6295. Eg: ES 95 is their 1995 catalog

--Products mentioned in the Edmund Scientific 1995 Catalog are one example which may be incorporated in all or some of the inventions. ** There are occasionally multiple examples of such products in this catalog. Cover of this catalog has `15C1A' imprinted.
-Fid, or Fidelity = Fidelity Products Co (Mail Order Co's Winter 95 Catalog - On File), 5601 Int'l Parkway, Minneapolis, MN 5540. 800 326-7555 Fax 800 842-2725]

R56 Run customized background sounds on computer while working. Choose from ten audio libraries. [Digital Eclipse, 5515 Doyle St., Suite 1, Emeryville, CA 94608 PS 10.93]
-OTD:
ACCESS*:(); ARTIST:(type osc's sound matches user's task to help achieve desired effect (according to uip of user, and %uip of task (loose music for non quality control tasks). Desired results can be: increasing creativity; narrower thinking for accounting tasks (hear Tchaikovsky versus Rolling Stones)); CAMERA**:(visual analyzer helps determine uip of user (their behavioral analyzer)/uip of task %)); CART:(music pieces; synthesizing options of osc); COMPOSITION:(uip of "artist" applications apply here too); ENTERTAIN:(); K:(r); MFH**:(stored sounds; uip database); MORNING:(user's behavioral analyzer->type osc's sound); MULTI-USER*:(); NOTIFIER**:(); OSC:(); PR:(role uip plays; synth; score keeping); PRINTER*:(); PS:(different sounds according to location); Q*:(); S:(); SCORE:(tds); SYNTH:(); TEL:(tr); UIP*:(osc' sound based on uip of user/task); WA:().
-9G220 Channel Scanner skips stations with commericials: u (user) pr type a/v entertainment during commericials.

> R57 "My Magic Diary" creates drawings from preprogrammed images to store along with phone numbers. Helps user remember people. -moved to "artist" 6.96

> R57-1 Facial Image Generator: User selects adjective words to alter type face on software. Merges multiple characteristics. -moved to "artist" 6.96

> R57-2 System synthesizes in new moods to voice recordings: From menu, select what feelings you want expressed. Existing sound track of person's voice is synthesized accordingly.
-moved to "synth" 6.96

> +++ R58-1 GPS Task Reminder: System prompts user what to do when user has reached desired destination. System then prompts where user should go next. Example: 1] user drives by supermarket, and is prompted every Monday to buy eggs.
-moved to "ps" 6.96

R58 "Water Tracker" measures water consumption by showers, washing machines... [Muir Products, 1260-B Pear Ave, Mountain View, CA 94043 PS 10.93]

++ R58-1 Rationer:
System measures how much water each person used. Useful within families living in arid regions, where some hog more water than others. Access codes can be changed. Provides spread sheet of usage for personal or common use, eg: kitchen and garden faucets.
-measures by user ("multi-user"): usage=multi-user (access)=c
-k in access code prior to getting water. Applies to any product using water, eg: shower, bath, toilet, kitchen faucet, garden hose, dishwasher. Though commonly used items might not need a meter, or if its a common item, then C ('computer) can take the code, but then apply usage on spread sheet for common usage, eg: the person who does most cooking uses more kitchen water without that running down their monthly allotment of water, though people who try to use kitchen sink though rarely cook for others as way to circumvent water rationing are caught.
--can change "access" code for each person, so other family members might not use another's access code.

-sys nr/alarms u (user) when they go over their limit (determined via "score"). sys (system) can shut down water faster/completely for certain u, eg: they exceed(ed) ration, require less water.
-pr: who gets water when/where/why/how and for what (w5); controller can alter / override any function (of sw).
-D: water meters / water valves controllers = score (per valve, per u)/ access = c

R59 Wall light goes on when electricity goes off. [Black & Decker PS 10.93]
-Also Exists: and or light goes on automatically when it gets dark: light instrument = "sensor".
-Security system. Supplements complex "access" sys.

R60 "Indiglo" watch's face is also an activatable lamp. [Timex PS 8.93]
-OTD:
CART:(sw/hardware*: alters watch's/clock's face (shows Arabic or roman numerals)); ENTERTAIN:(); K:(r*); MORNING:(); MULTI-USER**:(); NOTIFIER:(); OSC:(); PR:(); PS:(); Q*:(); S:(); SCORE:(tds); UIP*:(); WA:().

R61 Make Your Own Tofu At Home [NK 24 Jan 94]
-Make into shapes user desires (molded; waffles; cookie cutter)
-Uses food color dies to change outer/inner color of material
-Maker can work with substances other than tofu too

R62 Rice Preparer and Cooker [NK 24 Jan 94]
-takes multiple types of grains, beans, vegetables (fresh, dried; chopped or not)
.--chops/grates/pulverizes foods: vegetables, and anything else to desired size bits
.--cleans all foods
--"pp"/"mp" percentages of each food item to be used in serving(s)
---"uk" "date": knows when/how much to prepare for next 100 servings "uip"
O-combines with 1R-61 Tofu Maker:
system converts the dry / wet foods into pulverized food and its then formed into desired shape. Also into ^: noodles, crackers.
--can coat, color die foods with other substances

R63 Noise Buster [DY 14 Feb 94]
.-see directories in: E / G / K for the product ideas relating to masking unwanted sounds, since they are extension of R63.

-user while playing music making instrument (computer music, electronic music, eg: any such instrument made by Yamaha, Casio, Korg, Roland)
+-designate which type sounds are unwanted via: "uip"/*"pp"

* Miscellaneous Note:
From this point onward - 21 Feb 94: did not make xerox copies of DY (Daily Yomiuri). The N described following are only the existing product's description prior to the Mf's contact info.

R64 Container Keeps Sake Bottles Hot or Cold. At bottom of container is removable material that can be either frozen or heated. The removable material is kept in freezer or microwave prior to use. [Disero KK, 766-1, Kamikochi, Itsu-kaichi, Saeki-ku, Hiroshima 731-51. Tel 0829027-7207. NK 21 Feb 94]

R65 Time Clock: LCD provides users with information on how to input data, such as shift and hourly wage. Detailed instructions given on how to use system. Can be preset for 10 different shifts. Calculates commuting times, etc. Targeted to big companies with many part time employees. [Max Co: 6-6, Nihonbashi-Hakozaki-cho, Chuo-ku, Tokyo 103. Tel 03-3669-0311. NK 28 Feb 94]

R66 Electric brush sprays vaporized water, or special liquid on hair while brushing. Replaces need for hair conditioners. [Matsushita Electric Works Ltd. NK 28 Feb 94]

R67 Walkie-Talkies: Use of repeater stations allows communication between skiers separated by mountains. [Manufacturers: Kenwood's TH78; Icom Inc's IC-W21T; Yaesu Musen's FT-41. 7 Mar 94]
-3E010 Mobile Tel Location Notifier: lets u (user) know when walkie-talkie is nearing it reception limit.

R68 Hair Brush Emitter: Different brushes eliminate split ends and static (due to constitution of brush). Other brushes protect against U-V light; make hair more lustrous; protects against blow drying; anti-static. Harasawa Pharmaceutical; Ikemoto Brush Ind. Co; Kao Corp; Kai Corp, Tokyo; Shiseiko. 14 Mar 94 NK]

R69 Wrist Band Removes Static Electricity. [Manufacturer: Hisanaga. Marketer: Ing Corp: 2-12-5-204, Shiba-Daimon, Minato-ku, Tokyo 105. Tel 03-3459-4342. NK 21 Mar 94]

R70 TV Shaped Like Beverage Can. For desktop, bedside, pluggable into car's lighter. Can't fade in sunlight. [Casio: 2-6-1, Nishi-Shinjuku, Shinjuku-ku, Tokyo 163-02. Tel 03-3347-4811]

R71 Water Cutoff Device For Bathtubs: automatically cuts of water when desired level has been reached. Contains a "hydrodynamic" valve to shut off water. Hisonic took out US, European, Japanese patents. [Hisonic KK: 3-21-9, Toyotamanka, Nerima-ku, Tokyo 176. Tel 03-3994-0760. NK 21 Mar 94]

R72 Printer Makes Still Images From TV. Prints also from TV games, videos, PC. [Fuji Photo Film, Tokyo]
-OTD D (drawing): U = This N (invention) sys (system) () ~ C ('computer) =
VISUAL ANALYZER (prints out / records images/audio that matches certain criteria (uip, db)).

R73 Magnetic drawing board permits greater control: Lines only 1mm wide can be drawn via magnetic powder capsules. Erase by rubbing back of boards with magnetic eraser. Tomy Co: 7-9-10, Tateishi, Katsushika-ku, Tokyo 124. Tel 03-3693-8630 NK 21 Mar 94]

R74 Boots circulate air around feet via air pumping system. Descente Ltd: 1-11-3, Dogashiba, Tennoji-ku, Osaka 543. Tel 06-774-0365 NK 28 Mar 94]

R75 Auto anti-theft system detects movement: Senses for when door is tampered with, or vehicle is jolted. Smaller bumps only produce a warning sound. Remote control can activate/deactivate alarm. [Kato Electronics: 55-2, Nishi-morimae Odakacho, Midori-ku, Nagoya, Aichi Prefecture 459. Tel 052-622-3937. NK 28 Mar 94]

R76 Camera captures both still and motion pictures. Still pictures converted later from motion version. [Bronica Co's Camphoto VX3000 NK 28 Mar 94]

R77 Stuffed toy moves, delivers message when person walks by its optical sensor: Wall mounted deer head moves mouth and head and speaks messages recorded by users onto IC. Product targeted to people in 20's, 30's. [Bandai Co - toy manufacturer]
-5E020 Remote Control Stick with Switch: controls sys.
-OTD D (drawing): This N (invention) sys (system) () ~ C ('computer) =
CART (music, (movement) functions sw); EDUC (spouts info for human memory/learning); MIC (record = playback u's voice (parent scolding kid) = activated by "analyzer" = analyzer determines when (w5) any of following happen: open refrigerator outside programmed hours - for dieting; villain gains "access" (outside standard hours); kid watching excessive tv/video game (playing); food in stove ready; door bell; any nr (notifier) function of KN (invention)); MULTI-USER (functions differently for different u (user) (via their tr/access)); NOTIFIER (emits light(s), osc); OSC (); PR (); PS (multi-user, ps-zone effects function); Q (); S (); SCORE (); SENSOR (); SOUND ANALYZER (); STATUS (); SYNTH (); TDS (); T (); UIP (); VISUAL ANALYZER (); WA ().

R80 Walkie-Talkie also sends written messages. [Sharp Corp: 22-22, Nagaikecho, Abeno-ku, Osaka 545. Tel 06-621-1221. NK 2 May 94]

R81 Device allows rudimentary communication between sea divers. Press one of 16 pre-recorded verbal recordings, eg: "dive deeper". Can hear within 5-10 meters. [Fathom Co.'s Sea Buddy, in Hyogo Prefecture NK 9 May 94]
-send / receive (standard pre-worded) messages on: pagers, beepers, t.
-UIP determines what the standard message should be.
-("Game"): standard osc/messages/images sent/rc used w/in game rules.
-use c = 'windows' type sw (software) to select desired options

R82 Digital still camera has built-in transmitter: pictures taken transmittable via tel lines.
-moved to "camera" 6.96

R83 Copied ? Pedometer suggests target pulse rate for exercisers. Users input age and resting pulse prior to starting out. [Omron Corp: Nanajo-Sagaru, Karasuma-dori, Shimogyo-ku, Kyoto 600. Tel 075-344-7000 NK 23 May 94]
-KN (invention): (exercise) motion powered battery

R84 Pen's scented ink: color tells user type smell when ink is scratched. [Manufacturer is Tomy. NK 23 May 94]

R85 Key holder sounds alarm when dropped: sound triggered by certain level of acceleration; remains silent when placed in bag. [Mitsuwa Resin Co: 1-16-12 Tneri Adachi-ku, Tokyo. Tel 03-3899-1477. NK 13 June 94]

R86 Head band emits low frequency pulses that help fall asleep. Headband also contains isotonic sodium chloride solution which enhances the effect. Set timer for 30-60 minutes at bed time. [Osaka Nishikawa Co: 1-3-15 Honmachi, Chuo-ko, Osaka. Tel 06-262-1171 NK 20 June 94]

R87 Orchestral accompaniment for practicing musicians. Users play along with entire orchestra, or isolate specific instruments. Pace is controllable. Computerized floppy disk player. $863. [Roland Corp: 1-4-16 Dojimahama, Kita-ku, Osaka. Tel 06-345-9521. NK 20 June 94]

R88 Whispers turn on lamp. [Koizumi Market Development Co: 6 Tomiyamacho, Chiyoda-ku, Tokyo Tel 03-3256-3466 NK 27 June 94]
-OTD D (drawing): U = This N sys (system) () ~ C ('computer) =
COMPOSITION (); MQ (); MULTI-USER (); OSC (); PR (); Q (); R (); SOUND ANALYZER (); STEREO (); SYNTH (); WA ().

R89 Germ free pens: anti-bacterial material used. [Pentel Co: 7-2 Koamicho, Nihonbashi, Chuo-ku, Tokyo Tel 03-3667-3333 NK 4 July 94]

R90 Copied ?? Portable Battery Charger: Charges standard rechargeable batteries. Intended for those outdoor enthusiasts who don't have access to electrical outlet. Case is covered by solar panels. Case can be attached to backpack for sun exposure. Can revitalize four AA batteries two hours on clear day. Another model recharges camcorder battery in equal speed. [Mont Bell Co: 1-6-17 Itachibori, Nishi-ku, Osaka. Tel: 06-531-4761. NK 4 July 94]

R91 Nurse call system: via radio frequency; transmitter and pocket-size receiver. [Nihon Ryutsu System KK: 3-7-16, Furukawanishi, Matsuyama, Ehime Prefecture Tel 0899-57-6722 NK 18 July 94] Note: there are many KN (invention) developed on this theme in '92, '93.

R92 Watch measures surface temperature of land, water. Called "Thermo Scanner" [Casio. NK 1 Aug 94]

R93 Waterproof radio: suction cups hold in place within kitchen. [Sony NK 15 Aug 94]

R94 Measuring device: Fits into microscope. Helped by laser interferometry. 500,000 yen ($50,000). [Nikon Technologies. NK [Science and Tech Section of paper] 5 Sept 94]

R95 Copied ?? Electronic Dog Barker: electric eye surveys 5-6 meters. There are some older varieties mentioned in paper, but not clear if they utilized dog barking. This one uses German Shepard. [Dindon Co: 4-2-1 Rinkaicho, Edogawa-ku, Tokyo. Tel 03-3680-9010 NK 5 Sept 94]

R96 Retrofit traditional pianos into silent ones using earphones. [Kawai Musical Instruments Mfg Co: 200 Terajimacho, Hamamatsu, Shizuoka. Tel 053-457-1213 NK 5 Sept 94]

R97 Clock counts down to the big day: displays number of days before a big event, eg: vacation, exam, retirement. [Rhythm Watch Co: 2-27-7 Taito, Taito-ku, Tokyo NK 5 Sept 94]

R98 Taking alarm clock counts down minutes. [Casio NK 12 Sept 94]

R99 Ultrasonic waves measure interiors. [Bosch KK: 3-9-1 Ushikubo, Kohoku-ku, Yokohama Tel 045-912-8046 NK 5 Sept 94]

R100 Headphone turns heartbeat into concentration mantra: reads then converts pulse into compound sound, and in tern effects brain waves. [Hayashibara Biochemical Laboratories Inc: 1-2-3 Shimoishii, Okayama. Tel 0862-24-4311 NK 5 Sept 94]

> R101 Surveillance VCR records over 24 hours: by taking fewer shots per minute. [Sanyo, Tel 06-991-1181. NK 5 Sept 94].
-moved to "track" 6.96

R102 Scissors cut just about anything. Also has separate functions based on design of metal to: open bottles, cans, screw top jars, cut and peel fruit, open sealed packages. [Sanko KK: 2-17-24 Higashi-Uradate, Sanjo, Niigata Tel 0256-32-4071 NK 5 Sept 94]

R103 Eye relaxing exerciser: users follow a track made by blinking lights from the light emitting diode. Another method: close eyes and feel flickering lights. Voiced directions. [Matsukyu Co: 4-6-7 Nishi Shinkoiwa, Katsushika-ku, Tokyo Tel 03-3694-1213 NK 10 Oct 94]

R104 Clip holds documents without leaving marks. [Bunpodo Co: 1-21-1 Kanda, Jimbo-cho, Chiyoda-ku, Tokyo Tel 03-3634-1461. NK 17 Oct 94]

// On the reasonably large flat surface area, one can invent additional features, eg: place to write notes....

R105 Laser pointer with adjustable beam: indicate dot, circle or line, sections of figures, graphs, text. Choose shape by pressing button, and size via dial. [Plus Corp: 1-20-11 Otowa, Bunkyo-ku, Tokyo Tel 03-3942-3045 NK 17 Oct 94]

+ R105-1 Anti-Vibrational Laser Pen: tremor from hand held laser is reduced.
-invent anti hand vibrating laser (click when user wants item marked to be stable, then unclick for deactivation...)
-D: hand's vibration = vibration sensor = motion of laser emitting device (encapsulated within the anti-motion device) is counter acted via its opposite motion.
-uses similar systems as with anti motion in cameras, etc.
-too expensive to manufacture? In which case, use future existing technology to cheapen production costs.

R106 Walking stick has alarm that yells for "help" thermometer, light. [A&C International: 7-26 Hiroshiba-cho, Suita, Osaka Tel 06-384-2843 NK 24 Oct 94]

R107 Copied ?? Laser detects block in train track. [Aviation Electronics Industry Ltd working with East Japan Railway Co. 1km range costs 5 million yen [$50,000]

R108 Rubber cap prevents umbrellas from slipping: also suitable for ski poles. [Yokota Ryohan Co: 960-1 Shimoyasumatsu, Tokorozawa, Saitama Tel 0429-45-9550 NK 31 Oct 94].

* Misc Note: following N (invention) were transferred from 2R file: these N previously had N #'s beginning with a "c" ("c" is for: Copied, not Computer)

R109 Tel ("T") tallies phone charges, display ("S") shows how much the call costs. before 92 MF.
-5A-72 monitors number of calls and lengths of conversation between certain departments. A computer ("C") database can show all types of graphs for diverse purposes, eg: which departments might need to move closer to another (during or without any corporate re-structuring), future plans, seeing the values and flows of departments, etc.
-OTD:

ACCESS **: "score" for charges according to^: which access code was uk (to make: long distance calls, calls to particular #'s / departments), charges differ according to type access uk (different long distance carriers have differing charges, and tel ("T") instrument (w or wo: cart, mfh) calculates charges accordingly; BALANCE **:; CLAP: to activate, engage, deactivate communication; Display ("S"): the country, area code, co, department or other zone user calls results in differing elements on display ("S") (the determination/selection of what goes on display ("S") caused via^: type access uk by user, caller id of # being called, # being called (mfh) sending this data; FLOAT **:; FS **:; GAME **:; MD *:; "M":; "mic":; MORNING *:; MQ/UQ *:; MULTI-USER*:; NOTIFIER:; OSC:; PRINTER *:; REMOTE ("R"):; SCORE:; STEREO:; SYNTH:; TDS *:; Tel ("T"):; UIP *:; UK:.

R110 Electronic Blackboard: Participants share documents, images and presentations. Shared via tel ("T") lines for simultaneous viewing and editing by distant users. Graphics can be retrieved and put on board from a file or electronically scanned on. Can display ("S") video too. [Sept 92? MF: Fuji, Xerox].
-OTD:

R111 Automatic pet door opens when identifies pet's transmitter. Nov 93 X.
(related-C)-8B-010-083004 Pet Locator: Know where your pet is, and how to find it.
-(certain products from this feature number are Not Electronic) user knows if pet is inside or out, based on whether they past through their special door or not.
-The way the door was opened, either going in or out, results in door shutting in certain manner and easily seen by owner whether they look at door from inside or outside.
-pet's collar has transmitter which shows if animal went in or out of door (based on direction in which pet's transmitter got weaker); transmitter shows what part of house or garden they are in, by owner looking on special display ("S");
- + owner's receiver can be used to find animal's collar transmitter. Receiver signals if owner is getting closer or farther from animal.
-useful for locating children. Animals in large zoos; nature areas; etc.
83
-way door was opened also can trigger electronic signal showing if animal past in or out of the doorway
-pet's collar also has a receiver...analyzer...speaker. This makes the sound(s) designed to call dog, eg: "whistle", or animal hears its name.
Footnote:

This locality concept applies to any moving element other than pets too, eg: vehicles going in and out of a walled in zone; locator
-OTD:
ACCESS **:; CART *:; CLAP: (for animal to make sound: meow, bark...; Display ("S"): (score on animal (their location)); "M": score; "mic":; PD: worn by animal; PP/MP:; MQ/UQ *:; MULTI-USER*: (multi-animal(each wears different pd w own type code being transmitted); NOTIFIER:; OSC:; REMOTE ("R"):; SCORE:; TDS *:; UIP *: (user being animal, eg: for laboratory study of animal movements/behavior); UK; %WA worn by animal (makes sound if they walk too far; makes interesting sounds (wild animals to excite pet).

> + R111-1 Pet Finder:
Know where pet is located. Need not worry if pet is lost. Location of pet known via one or more of following modes: pet's collar transmitter sends signals to receiver inside house, if its home; pet door's receiver knows if pet last went in or out; a non-electronic version of the pet door is such that the way it closes is so it shows which way pet went out (latter not patentable?).
-moved to "ps" 6.96

> + R127 Commuter's train ticket credit card: circuit emits frequency read by device in the ticket gate. [Jan 93 X (saw printed before too, date unknown). JR (Japan Railway) stated research started some years back. Jan 94 YD]
-moved to "track". Abstract of existing N copied to: access, ps, track, bill. 6.96

R128 Beeper can send written messages via wireless; wireless portable terminal. [29 Dec 93 MF, YD 21 DEC 93 MF - Japan City Media.]

R129 Speaker tel ("T") answers when recipient says "hello". [1 Nov 93, the "Haudy Tel" Manufactured by NTT, Tokyo.]
D: c22 = c~remote~tel

> R130 Distancer. Taiyo Elecs Co: REMOTE ("R") sounds if child is 2 - 7 meters away. Dec 92. KN (invention) Russian Pat Application Number: 045892 23 Sept 93 for "Distancer", KN filed by Professor Tsibin.
-moved to "distancer" 6.96

R131 Keeps user awake: "sensor" sets of alarm if finger doesn't move. 6.92 X.
-"sensor" analyzes for when^: finger/hand/body part (head, neck, wrist, arm, *leg) dozes off (loses posture: tilts/falls asleep); gets too energetic (moves too much); moves in non desired manner (too far/much/little/not far enough)
-D: sensor=analyzer~c~notifier
-"notifies" user as described in R131-10 Rhythm Guide
-user: human/animal/*insect
=
* KN (invention) moved from: 2G12-C24 Keeps user awake: "sensor" sets off alarm if finger doesn't move. 6.92 X.
---
tel ("T") rings when user falls asleep; mfh gives recording (UIP) to wake them up/alert them
D: c24 = tel~remote

R131-10 Rhythm Guide:
o applications: playing (electronic) instrument^:
--musical (key board; piano; (laser) harp [see my N from A/B/C dir]
-c / typewriter k (standard keyboard)

-benefits ^: better control (sounds better (music)), fewer mistakes (psychologically proven to reduce number of errors); increases overall speed (typing / *music)

.-rhythm of typing is interpreted into type behavior of typist: "behavior analyzer"~sensor=c=notifier/osc. (Increases/decreases creativity as described in `Inter-cultural Engineering' (ups creativity, quality control behavior). System correlates body's movement/position in helping arrive at conclusion from "behavior analyzer", uip.

--body movement/position helps develop uip. UIP can be a constantly changing (database/score) for (egh)

-D: k="sensor"~c~analyzer~clock~s~uip=printer/"composer"/music device/other desired product application

-OTD for Notifier aspect of this system:

CART*:(); MFH:(uip); MULTI-USER:(each user gets differing effect according to their "access"/uip); NOTIFIER:(); OSC:(); PR:(user/facilitator programs type notifier effect(s)); PRINTER:(what can show up on s); PS:(each location has differing notifier effects); Q*:(user can ask system to clarify what they are doing wrong/*good); S:(); SCORE:(tds; clock; past performances; egh); SYNTH:(effects osc); UIP:(); WA:(ps).

General OTD:

-OTD:

ACCESS**:(); ARTIST:(visual analyzer/behavioral analyzer studies^: images made by user; their rhythm; manner (order/speed) in which images are made (penned in/brushed on (electronically)/cut and pasted) = in tern system will "notify" user = achieving desired effect in user. Results: ups creativity, and other desired results explained in `intercultural engineering'); CAMERA:(visual analyzer: studies electronic/printed text/* 3-Dimensional objects (art)=behavioral analyzer=uip=notifier); CART:(); COMPOSITION:(); ENTERTAIN:(); K:(r); MFH:(behavioral/visual analyzers; uip); NOTIFIER:(); OSC:(); PR:(); PRINTER**:(); Q*:(); S:(); SCORE:(tds; egh); SYNTH:(uip/egh/notifier's analyzer control synth); UIP:(); WA:(r).

+++ R131-1-1 Typing Flow Trainer: Users are trained to type with even flow of fingers, because such typing habit is proven to reduce typographical errors and increases speed. Computer software program.

o Teaches user to move (hands on key/key board; * body (part(s))) with desired rhythm / pressure.

-D: k="sensor"~c~analyzer~clock~s~uip=printer/"composer"/music device/other desired product application

+-analyzer (C) determines the desired task (rhythm/right key strokes for musical instrument/body positioning)=(via uip/pr/cart. As user's situation changes (egh/differing applications/*uip), system compensates (egh). Example: to increase quality control behavior, the rhythm and speed of typing needs to be at 300 key strokes per minute at a speed with no deviation greater than 8% in time between (conclusion of) each key stroke/strike. To up creativity, system will require opposite: (key strokes must be over 8% different in time between each space from previous one or more key stroke (patterns) - patterns of keys (a word on typewriter is one type pattern) must change in non repetitive modes - the greater the changes the greater the "notifier" reward, and difficulty of egh.

---useful in training on any machinery where the timing between or sequence of signals created by user is to be "analyzed" then "scored".

-UIP: "egh" (education gets harder): as student's ability increases, system will increasingly "notify"/respond to narrower parameters to alterations in desired: tempo/*speed.

-"Notifier" (when (*w5) user is being **favorable / unfavorable): buzzes / (mildly) shocks user (via k (c=vibrator/electric shocker=key(s)). Transmits to user via pad placed at^: part of arm or lower hand touching table; seat; **pad placed on body part(s). Notifier works via one or more modes (simultaneously/consecutively).

--osc (negative (screeching/piercing sound/alarm)/positive sound)

--"s": system's display gives images to help mold user's behavior

-user: human/animal/*insect

MORNING:(appropriate body movement (key strokes turn off alarm; see A/B/C dir); MULTI-USER:(each user has different uip/*access/desired goal (favored behavior/pattern));PS:(different locations of pd effect how pr effects user, eg: in zone #4, user must be more cautious (quality control behavior));

R132 Portable cardiograph, has memory (stores data onto cassette tape). 30 Dec 93 X.

-stores memory digitally (c)

> + R132-1 Behavior - Medical Symptom Analyzer: System correlates patient's behavioral with their medical symptoms. Patient's graph for changing emotional state is matched with body symptom graphs, giving researchers additional needed analysis. Invention is the software's merging of data.

-moved to "ba" 6.96

> + R132-1-5 Biofeedback - Body function analyzer: User can look at their medical analyzers and see how they are/were performing (psychologically).

-moved to "ba" 6.96

R133 Feel vibrations of music in seat.

[Pioneer had before '92, Yupiteru 92 MF, 23 Aug 92]

R134 Pager integrated with pocket organizer. (Check air pad, remote) Casio? 5 Jan 94 X & MF.

---

integrate "tel". Exists in some format (but without all my codes), eg: AT&T

D: c27 = tel/c27/mfh~remote

R135 Yamaha's Miburi functions: sensors on both wrists, elbows and shoulders. Wrist: controls volume, by turning wrist in - changes vol. July 93 MF.

R136 Calculator with alarm clock. 22 Nov 93 X.

R137 Notebook computer ("C") with bar code reader. 9.93 X, released 10.93 X.

R138 VIDEO camera which prints photo onto regular paper. 28 Jan 93 MF. (OTD check for "printer" in combination with camera).

R139 Notebook computer ("C") with built in printer ("air pad" ok too, but make sure its built-in). IBM Think Pad 550BJ... Jan 93 release date X.

R140 Voice activated wheel chair. 18 Oct 93 X.

R141 Remote Control Video Camera - moves camera into desired angle. 20 Dec 93 X.

R142 Stapler punches wedge shaped hole then stitches, no metal needed. (Ur prod # is B not A). Nov 93 X.

R143 Rocking sings infant to sleep, senses when baby cries, then switches on prerecorded sounds, or mom's pre-recorded voice, and rocks cradle. 5.93 X.

R144 Watch/clock gets its time checked via transmission from radio. Radio has perfect time & fixes watch's time if wrong.

R145 Casio's wrist REMOTE ("R") controller. Controls TV, VCR, has watch.

R146 System cleans the bath water (maybe we filed a patent on this, was #28) Waterproof Calculator (check OTD). Jan 94 X & MF.

R147 Fuji-Xerox: Handheld translator speaks sentences. X Dec 93.

R148 Tel ("T") Audio Adjuster: When the tel ("T") rings, the entertainment products being used at the time automatically lower in volume.

R149 Tel ("T") Lie Detector: Judge via person's voice's stress on the tel ("T"), if they are honest or lying.

R150 Auto Tuning Stereo: key in tel area code and system will automatically tune into radio stations in area. Victor Co. 03-5684-9311. Yomiuri 4 July 93 issue. No art. clipping.

R151 Organizer - Walkie Talkie: using infra-red light, can communicate between two organizers up to 8 meters. 'Super Denshi Techo Jr'. Casio. Sales started Nov 92. Yomiuri 20 Oct 93 issue. No art. clipping.

R152 Massage machine: place its small pads on parts of body. May 93 X NK

R153 Window opens/closes due to weather changes. (there are 2 N (invention) with this function, maybe C46 or C47) X NK May 93

=

KN (invention) moved from: $ 2G17-C48 Control the opening and closing of windows via: remote control, or modem, or mainframe computer. Appears to exist: Window opens/closes automatically (via sensor) due to weather changes (eg: keeping out rain, unwanted sudden changes in temperature).

-(there are 2 N (invention) with this function, maybe C46 or C47) X NK May 93

---c48 = "tel"/tr = control from other location

-copied to: 5E020 9/95

R154 Computer ("C") becomes videophone too (see and talk with person on tel). May 93 X NK

R155 Prints transparencies for overhead light projector. Ricoh. Aug 93 X NK .

R156 Decomposes trash for use as fertilizer. Aug 93 X NK

R157 Anti-theft system: When "uk" into user's transmitter after the theft, an alarm sounds in stolen car, etc. July 93 X NK

R158 PC Display ("S") is enlarged via: big magnifying cover; and or a separate LCD or bigger CRT. Sanyo July 93 X NK

R159 Window closes in case of fire. Sept 93 X NK

R160 Solar powered lamp turns on when person comes by. Oct 93 X NK

R161 Device shouts warnings to illegal parkers. Dec 93 X NK

R162 Personalized story books. Kid can be character in his specially printed book. Maybe we have software version? Dec 93 X NK

R163 Driverless Electric Cart: it follows line on floor. Feb 94 X NK

System brings tel ("T") (tel call) to designated person: c58 = "tel". One was needed in very late June 96 fiasco of sports star driving cart at SF Int'l Airport.

R164 Noise Buster: active noise cancellation system reduces unwanted noise, eg: traffic. Original aspects - 1: use headphones, 2: use while listening to music system/walkman.

> R165 Smells/incense said to alter stress/behavior. 17 May 93 NK
-moved to "tgh" 6.96

R166 Electronic sign runs on solar power. 5 May 93 NK

R167 Fighting robot which punches. 21 Jun 93 NK

R168 Video Tel ("T") dating service 21 Jun 93 NK

R169 Spherical Speaker System: broadcasts in all directions. 7 Jun 93 NK

R170 Electronic soccer game, control defensive and offensive players. 7 Jun 93 NK

R171 Infrared automatic door "sensor" "Released Jun 92" . 19 Jul 93 NK

R172 Water purifier for coffee maker. 26 Jul 93 NK

* R173 Zoom function on overhead projectors (eg: check for any ability to manipulate images). 26 Jul 93 NK

> R174 Computer ("C") checks person's fingerprint before allowing "access" 2 Aug 93 NK
-moved to "access" 6.96

R175 Device emits frequencies, helps user sleep. 16 Aug 93 NK

> R176 Laser gun game: user's vest reacts to laser when they get hit. 30 Aug 93 NK

-moved to "game" 6.96

R177 Portable light goes on automatically when approached. 6 Sept 93 NK

R178 Clock says the weather. 31 Sept 93 NK

R179 Car lasers spot pedestrians and other cars. 4 Oct 93 NK

R180 Computer ("C") converts "uk" into sign language display ("S") for deaf people. Hitachi. 4 Oct 93 NK
**see 5A-800

> R181 Alarm clock bites hand which pushes button to turn it off. -moved to "morning" 6.96

R182 Converts Car's electric current to house current, so can use more products from car battery. 13 Dec 93

R183 Device warns user if they forgot to lock up when leaving. Door is blue when locked, red when unlocked. 20 Dec 93

R184 System converts spoken words into readable words on computer ("C"). 14 Mar 92 NK

R185 Portable Tel ("T") Video Conferencing. NEC 11 Apr 92 NK

R186 Camera stores photos on floppy disk. Cannon. 25 Apr 92 NK

R187 Bathtub shoots water & bubbles in sync with music. 2 May 92 NK

R188 Piggy Bank counts your money. 23 May 92 NK

Toy: c83 = "tel" = mfh = "tel"/caller/letter creating machine. Kid is sent letters stating the balance of their piggy bank (kept at home).

> R189 Anti-theft Car Alarm memorizes car's position [eg: get N for distancer used for cars].
-moved to "ps" 6.96

R190 Electronic translator speaks out desired words/phrases. Fuji/Xerox 29 Aug 92 NK

R191 Electronic Camera records still & moving images. Ricoh 3 Oct 92 NK & 8 Mar 93

R192 Camcorder's viewfinder picks up TV programs if an optional adaptor is used. Sharp 5 Oct 92 NK

> R193 GPS Car navigator gives verbal commands to direct driver. 2 Nov 92 NK
-moved to "PS" 6.96

R194 Waterproof books for bath (not electronic) 30 Nov 92 NK

> R195 Fingerprint operated entry system. 25 Jan 93 NK
-moved to "access" 6.96

R196 Vending machine microwaves its frozen food, then dispenses the food. 25 Jan 93 NK

R197 Scents are emitted to match scenes in movies. 22 Feb 93 NK

R199 Helium balloon flies around room without cord; adjust the weights to alter the height. 8 Mar 93 NK

R200 Fax machine screens out unwanted messages. See fax on display ("S"), print desired faxes. NTT 29 Mar 93 NK

* R201 Video Game: shoot while driving. 22 Mar 93 NK

R203 Walkman's retractable earphone cord. Sony 14 Mar 92 NK

R206 Goggles contain miniature TV screens. Sony 23 Nov 92 NK

R207 Airbag for auto back-seat passengers. Nissan 23 Nov 92 NK

R208 TV transmits audio to stereos without wires. Sony 7 Dec 92 NK

R209 Vending machine's robot decides which type product to give; a type of gambling. MF=Kokoro. 1 Feb 93 NK

R210 Calculator calculates units of time. Casio. 15 Feb 93 NK

R211 Deleted due to being same idea as R202.

R212 Lighting system changes to create desired atmosphere. Mitsubishi Electric. 26 April 93 NK

R213 moved from: 2G22-C107 TV: small & waterproof. Sony 20 Oct 93 Also includes other functions. D1: S=C. *D2: uk/remote = c~c107 = tel/stereo/kitchen appliances (oven, coffee maker)/ door opener/other products

R214 Projector projects images of solid objects on a display ("S"). Fuji-Xerox. 8 Sept 92 (JT) Japan Times, Tokyo

=

moved from: 2G23-C108 Projector projects images of solid objects on a display ("S"). Fuji-Xerox. 8 Sept 92 YD (Yomiuri Daily Newspaper, Tokyo).

D: c~c108=tel=c~c108. Transmit desired element wanted to be projected via tel ("T").

R215 Clock displays ("S") local time for major cities in world. Seiko. 10 Dec 92 YD

> R216 Video games linked to tel ("T"). AT&T, Sega. June 93 YD

.-moved to "game" 6.96

R218 Silent Piano: Keyboard has earphone. Yamaha Aug 93 YD

R219 Wristwatch cordless tel ("T"). Similar to Casio's CMD10 except this is tiny tel ("T"). [Panasonic 5 June 93 YD]

R220 Cable TV lets users select when they want program to start. AT&T 3 June 92 YD

R221 Cable TV over tel line. AT&T 20 Jan 93

> R222 Computer's handwritten input image tablet pulls out on top the keyboard. Sharp 27 May 93 JT

.-moved to "k" 6.96

> R223 Self-aiming "osc" rotate automatically according to the music and room size. Victor 29 July 92 JT

-moved to "osc" 6.96

R224 moved to R205.

R225 Strap for laptop. Straps to leg while sitting. "Brutus" (Japanese magazine) 15 Mar 94, p. 53

* R226 Moved to R216.

R227 Remote control device controlled by signals from human nervous system. Use in video games. [2 July 95 S.F. Chronicle, p. B1]

-this is already a KN (invention) dating before 1995. Following info might duplicate earlier filings.

-how sys (system) differentiates between sweat (w its chemicals) caused by stress / adrenaline gland / changes in sweat from room temperature = "analyzes" for multiple other signals (uip, other chemicals, other el pulsed picked up from body).

-OTD D (drawing): This N (invention) sys (system) (R controlled by nervous system) ~ C ('computer) (R / status / score / signals from organism's body (electrical, chemical excretions, behavioral analyzer, sound analyzer)~ UIP =

ACCESS (); ANALYZER (score); + BA; CART (operates differently by user: multi-user, uip, k, access); EDUC (uip / tgh = sys (system) adjusts to "mood" of u); M (db); MIC (voice analyzer); MULTI-USER (); *NOTIFIER (); OSC (video game); PR (how process signals picked up from u); *PS (); Q (); *S (images altered by state of u's mind); SCORE (games); SENSOR (); SOUND ANALYZER (); STATUS (); SYNTH (); + R; TDS (); T (mo = m);

UIP (sw mode influenced by mental/physical state of u (user)

--(color background; aggressiveness level (of video game players) synth; how interact with cart)); VISUAL ANALYZER (intelligent monitor 2E251); WA ().

End of R List Inventions

Seafood Poisoning Tag 7J01

Sensor-Tags placed on (sea) food have 'indicators 'notifying the following:

-food deteriation level is 'scored.

-age of food item

-if temperature ever exceeded a certain point (and for how long).

Multiple tags for large fish. Consolidated tags attached to fish (fin/head), the pieces (break/peel) off for individual parts (placed with (plastic trays)). All have same start (tds, sensors, score).

UIP: characteristics of food item are analyzed for what will help determine possible food spoilage, eg: chemicals emitted for type of fish or pig – so applicable indicators/sensors can be used. Spoilage tolerance level for humans or other animals eating the food.

For all types of food: especially animal products. Chemical and electronic versions.

Diagram: food = 'indicator. Parts: 'sensors, 'tds, 'notifiers.

File: I Misc / VA Outsourcers

Language 'Guide & Voice Analyzer:

Teaches language learners how to pronounce new words. A Voice Accent Trainer 7J02

Abstract: Educates users to improve their accents, through the voice analyzer. Helps learners of new languages perfect their pronunciation; and those who are speech impared.

Something related exists – per Michelle C. Royal Software – distributes. Clear Speech Works – product name. SunburstMedia.com/CSW.html Developed in 1994.

Background:

. Users = scored according to how close their accents are similar to the designated pronunciation.

. Designated pronunciation: can allow for difficulties particular types of people have in speaking a foreign language. For example, French native speakers may tend to have a greater nasal sound in their speech = hence a designated level of nasal is analyzed as being part of a good sound score.

. Score: the level of deviation from the user's accent, is scored. A simple version may have green, yellow and red lights. Users rewarded/punished (financially) when average scores go beyond a designated average level = as determined by the behavioral analyzer.

. Behavior Analyzer Adjusts VA To U: BA's VA = Analyzes user's voice = then: 1. Scores accordingly (scoring gets tougher as u (user) progresses in education) / 2. VA adjusts for all types of speakers based on their (regional) accents / speech or hearing impairments.

. Guide: U can hear the correct versus incorrect accent (they spoke).

* Playback: u (user) can get educated after they were speaking (and when the tel lines aren't busy).

. Target ideal accents: Bavarian versus northern German accents (Hoche) are different, hence Africans hired to speak German are educated/scored according to the designated regional accent of the target language.

Term "Accent":

used to mean the standardized accent spoken in particular geographical region of a language group, eg: Scot versus Welsh English. "Accent" also means the "foreign accent" often heard when one speaks the target language as a non-native speaker. Bavarians and Northern Germans learning to speak Brooklyn English, can have a different scoring system as Bavarians may mispronounce in a slightly (score) different fashion than northern Germans.

Scoring Accent Methods: Levels of differentiation from ideal accent are scored via:
1. recording variant degrees of accents = scoring them (by human) at different levels from the ideal accent.
2. VA can analyze accents that don't exactly match each variation according to: level at which the accent is between one or another deviant accent, eg: a negative score of 2.5 implies the accent heard is between a bad variation of 2 and 3; and a score of 2.3 suggests the accent is closer to 2 than 3.
3. Most important words: Record the most commonly spoken words, with special emphasis on the words more likely to be miss pronounced, and or frequently used. Such words may have a greater variety of different accents, by which the VA will arrive at a more accurate score.

D: Users = Corrected by VA = educating = how to improve user's pronunciation.

"J" INVENTIONS DIRECTORY FOLDERS
File: J / J Folder KN

"J FOLDER" FILES: 2J&, 6J, 7J, CD MARKABLE.

FILE 1J

1J082 Ice Poppers: Upon ice melting to its core, the ice 'reacts by: making a popping sound; or emitting a tasty / colorful substance, making the drinking fun until the end.
. Non ice based version can do this. See 7G Ice Hot Balls.

FILE: 2J - GENERAL ELECTRONIC

2J-01 AUTOMATIC MUSIC CHANGER:
System changes type of music when the uip of the sound's profile is not being met.
-Appl: radio; sound cartridges; verbalized information: analyzed= via uip = C ('computer) alters / "edits" = osc

2J-04 'COMPUTERS' WINDOWS' OPEN AND CLOSE BUTTONS which are made larger. User can select the size of these buttons and or icons. These points can have all the same features as available now or in the future; increased size being more functional.
-D: u (user) = 'interactive icon ~ sw (software) = C ('computer) / desired 'reaction in system to u's commands.

END File 2J

File 6J

++ 6J010 INK COLOR CHANGERS: Signs use ink that changes color at Designated temperatures. Is this an older kn?

. Applications:

-Warnings appear when temperatures exceed high or low thresholds, Or enter within another Designated zone. Value in that readers May get used to seeing same sign when temperatures are in normal zone and not pay attention when most needed.

-Sample printed statements:

--Warnings for contents in container or environment when temperatures exceed designated levels. For example foods or chemicals may needs special precautions or can't exist in remain in certain temperatures.

-Sign may have ink visible in all/most temperatures as well.

. Patent Search: ink and color* and (alter* or chang*)

-Searching market for existence of product: contact sign companies [by e-mail too...?]

. Technical: see 1J080 Ice Cube Color Changer

-Perhaps the text is visible in all temperatures, but the change of temperature highlights and or occurs in only portions of the sign, for example as flashy borders to get special attention.

6J020 PEN INK COLOR CHANGER: Pen with color changing ink due to differing temperatures:

. write letters whose ink:

-Is visible only within certain temperature parameters.

-Changes colors when temperature changes

--Eg: put near incandescent light (for warmth) and watch change to [red]; put in refrigerator and changes to [green].

6J050 CALL WAITING STATUS INDICATOR: When getting an incoming call the type of beep designates the level of importance for such caller.

. Recipient cans forward/handle incoming call, as they like.

Examples: unimportant calls go to voice mail; there is a range of voice mail boxes into which recipient can key their phone (upon receipt of call)= according to type caller.

. D (drawing): caller = tag showing their caller ID = recipient's caller ID Analyzer = status analyzer = osc designates type beep = listener hears and responds as they desire

6J060 HAND MARK ABLE CD FOR DESIRED SONGS: Mark onto CD to show system which songs are desired. Existing systems require the CD to be programmed per specific location on the rack.

-Option 1: CD sellers leave a place on the CD (center) for markings: fill in small circles for (non) desired songs.

-Option 2: CD player manufacturer offers way to imprint desirability onto CD. Examples:

--User manually applies sticker ((precisely) centered in middle), then user or system marks designation.

--system will etch in the code directly onto the CD (outer rim, Center) in (small) readable markings. The etcher can be a different or same system from the CD player.

-Improvement upon existing system: Should user want to take the CD to another location, reprogramming will be needed. Also it's easier to move CD around within the CD's storage rack.

-Use on CD for: music, data, games, etc.

-'Edit out/in designated elements ['images, songs, forms of 'synthesized sounds].

7J FILE:

7J02 LANGUAGE TRAINER & VOICE ANALYZER:

Teaches language learners how to pronounce new words. A Voice Accent Trainer. 'Tailored to user's type of pronunciation, then 'guides accordingly.

7J03 PRE-ACCESS NOTIFICATION: As a handicapped individual may require more time to get to the rest room, they can send a signal. See Handicap section.

7J04 HALLWAY PRE-ACCESS ANALYZER - "CAT WHISKERS": The invention will analyze availability of space for wheel chairs or other disabled assistance equipment. See Handicap section.

7J05 ADA LOCATOR: 'Location's ADA Accessibility 'Score system. See Handicap section. ['PS] 'database helps 'customize people's travel for whatever travel limitations they may have, eg: sight / hearing impaired facilities, etc.

7J07: UIP SHOPPING ASSISTANCE: suggests what user may want to buy. A shopping agent. Useful on places like EBay.com and Amazon.com. See our related 'GPS inventions.
-Create a public and (more) private profile.

7J08 TAGGED CASCADE EFFECT: System hones in on a frequency (sound), and cancels out other sounds to make tagged sound is clearer. System 'reacts when the clear 'tagged action occurs. Hones in on anything effecting man's five senses: Color [shines lights to drown out [non] desired color(s); other 'images; Touch / Vibration [cancels unwanted vibrational [patterns]]; Odors
-Step #1: Identify frequency: 'analyzer identifies occurrence of 'designated frequency.
-Step #2: Cancel Unwanted Interfering Frequencies: system hones in on a sound, color or other frequency. It drowns other related frequencies by emitting opposite frequencies for what might interfere with the tagging process. All or parts of this general step can be skipped. It's more needed to compensate for frequency 'analyzer/'sensor difficulties in distinguishing from ambient stimuli.
-Step #3: 'React per 'Tailoring.
-Idea first came to Steven Kays in a dream March 30, 2006 morning.
. 'Tailor occurrence [trigger] any way programmable. Examples:
-Chirping: Pet girl bird chirps seeking mate. 'Sound recognizer cancels ambient [traffic, household, other bird%, appliance] noises. Automated boy bird chirping 'reacts by chirping ['osc]. Can be programmed to emit boy bird chipping after 'designate related occurrences [5-10 gaps in chirping (each gap/chirping period lasting over 5 minutes)].
-'Games: when 'designated 'entity acts in 'designated fashion; it can [help] differentiate do 'tagged 'entity; then 'react when 'tagged 'entity does something. A (cat jumps), B (door opens) and or C ('computer) (door remains open over a minute); or drawing (main player has a 'designated 'score level at that time) and E (game has exceeded 8 minutes); or A if not F (over three players [with average 'scores exceeding set level]); or every third occurrence of B if F is absent; etc.

--'Taggable and identifiable actions include: [changing] 'images or sounds with 'designated 'editable traits; story plots / scenes [when 'entity A comes near 'entity B [for 5+ seconds] [then A either jumps or climbs tree] [then B's face/eyes follow A's actions].

-UIP Input: honed in on actions/occurrence are less confusable with external stimuli; so provide more reliable traits info.

. This is sub-set for parts: 'analyzer, 'sound recognizer, 'content analyzer, 'edit, 'order & timing, 'positioning device, 'seek and or react, 'route, 'tag, 'tailor, 'track, 'visual analyzer.

. D (drawing): U = This N~C~ANALYZER = ACCESS [makes clearer what signals can determine 'access] [] // BA (Behavior Analyzer) [hones in on signals related to behavior, eg; happy laughing kid // EDIT [drown out what's 'designated; alter what was honed in on // ROUTER [routes 'designated 'entity or function] // SA (Sound Analyzer/Sound Recognizer) // SCORE ['designated 'score is one element considered when deciding what to hone in on] // SEEKS & REACTS [] // SENSOR ['seeking device] // TDS [sought action must have/be occurring at 'designated time(s)].

6J060 HAND MARK ABLE CD FOR DESIRED SONGS / DATA:

. Mark onto CD to show system which songs or types of data are desired. Existing systems require the CD to be programmed per specific location on the rack.

-Option 1: CD sellers leave a place on the CD (center) for markings: fill in small circles for (non) desired songs.

-Option 2: CD player manufacturer offers way to imprint desirability onto CD. Examples:

--user manually applies sticker ((precisely) centered in middle), then user or system marks 'designation.

--system will etch in the code directly onto the CD (outer rim, center) in (small) readable markings. The etcher can be a different or same system from the CD player.

-Improvement upon existing system: Should user want to take the CD to another location, reprogramming will be needed. Also it's easier to move CD around within the CD's storage rack.

-Use on CD for: music, data, games, etc.

-'Edit out/in 'designated elements ['images, songs, forms of synthesized sounds].

. Issues For Market Acceptance:

-For less sophisticated buyers, plus 2nd and 3rd world countries.

-Those who copy CD's could buy special CD players for this function. Such buyers though might just as easily take digitized music?

-Music publishers won't easily start this; CD copiers could more easily.

. What user can select from disk:

.-In other words: What user can 'edit from [any type of] disk [like a C.D. or other related [optically readable] [future] diskette.

-certain aspects of software can be [de]activated.

-scenes from videodisk

. Floppy and tape type [non optical disks]:

-data can be selected by marking encryptions on the [outer] coating of the data storage casing.

-the system reader may check to see if anything is posted in a commonly 'designated location on the casing and use this to help guide system as to how system should 'edit or otherwise alter how ('W5) the data is to be utilized.

. US Patent Search On Simple CD-ROM Claim Only:

KW: CD, C.D., compact disk, mark*, etch*, ?write, select, choose, chosen, pen, scratch, desir*, saving, save*

-and not: copy, portable, ?writ*, medic*, dental, patient, ?manufactur*, ?TV, ?television, ?VCR, ?radio, theft, vehicle, car, record* [recording]

-very narrow search strategy: (cd-rom or "compact disk") and (mark* or etch* or select* or choos* or chosen or pen or pencil or writ* or scratch or scratching or desir*) andnot (portable or medic* or patient* or radio or theft or vehicle or record*)

-STR: "fill$ in", pen, mark (mark able, markable)

+ . Benefits in encrypting codes outside main data - in other words, why codes may be stored separately from the main data files:

-the value here is that one need not encrypt such info onto the data storage [tape] itself. Such may be impractical to enter such as it requires a special [unavailable] device; security ['access] limitations.

-Anti computer virus protection:

fear of upsetting the pure raw data; protection against viruses [eg: the user might have just been able to read the files but feared to enter any info/change onto the actual files].

--Enough of the needed information can be provided without the risk of upsetting other data by virtue of viruses, human error, computer error, etc.

-'Access: software and data requiring a lower security clearance can make this more practical.

--makes it harder for computer hackers to access other confidential sections of data

* Types of walls between data fields:

-invention is from a limited perspective like data on two or more separate disks; should one disk get corrupted, the other disk(s) hopefully remain in tact [unless...].

-pancake disks: to keep information together, multiple [recordable] disks can be kept in the same [plastic (detachable)] casing. Eg: different disks of the same size on top the other separated by [plastic] with the ability for system to read each disk, eg: by 1] being able to [partially] eject out the desired disk(s), or 2] having enough room for reader to fit in through the gap between different disks.

-simpler readable only data [taped / etched / written] onto the casing or surface of data.

% multiple fields of data needing separation might be stored in the exact same medium, with the barrier only being software / computer code related; eg: different file names, or data in different forms requiring differing software to read/use them are the form of separation. This aspect exists?, but maybe this can be tied with some of the other unique aspects.

-the type of reader needed to read one or other type data [defined by physical form of storage, or file name, etc] might differ according to the type data desired.

--Value: each form of computer 'access/retrieval/usage of such data is [hopefully] different enough so that one corrupted form of retrieval won't result in corrupting the other retrieval modes. Eg:

---Viruses can't readily spread from one retrieval mode to another

---'Access in limited to one form of retrieval per 'designated user[s].

. Types of data / usages in the separated field:

-instructions as to what sections of the data are available for 'access, eg: which musical pieces are 'designated as desirable [regardless of which CD player is used, as long as the differing players use similar technology]

-strictly acts as a barrier for security 'access purposes, eg: where user puts in their password

-visually some of the data [hand written elements, codes, marks] may tell user the 'status, eg: which / how many songs are desired.

END OF 6J060 HAND MARK ABLE CD

Improvements On Filed Inventions & New Inventions

(SOCCER) BALL WITH SCORE KEEPING DEVICE:

-Transparent case/cover over scoring' piece. Can change manually or by remote control (without needing a flip open cover).

-Flip / snap / *slide open top

6J080 Snow Related Inventions *

Snow Boarding, Skiing, Etc.

Snow 1 - Movement Tutor:

Guides' user as to what body movements can improve snowboarding, skiing, and any other body motion techniques. Sensors on body are used to analyze body movements.

Details:

-Related to earlier body motion tutor.

Parts:

-Sensor Types:

--RF: image of each projectile shows/analyzes body movement.

--Distancers: measures/analyzes changing distances between each distancer properly placed on body (such as elbows and other fixed body spots).

-Order & Timing: analyzes changes in body movement, for each body part, and designated' function being analyzed.

Snow 2 – One Hand Photo Taking:

Click switch(es) to take photos of the great outdoors. Be saved from needing two hands.

Mounted Camera Locations:

-Ski Plank: attached directly to plank, or raised above it via pole (keeping more snow out of lense).

-Helmet:

-Pole – Hand Held:

-Goggles / Eye glasses

-Belt (buckle)

Lense Snow Wiper:

-closing device removes snow and water.

-avoid scratching lense from debris by: stronger glass; easily replaced lense or lense cover (by user)

-can only open for a few seconds during shooting time, then closes.

Details: Camera' includes: digital video; audio recorder*

Snow 3 – Turn Signal Alerter:

Let skiers behind you know the direction you intend on taking. Will reduce being accidentally hid by novice skiers needing more time to adjust their ski patterns. Especially useful on crowded slopes during weekends. Ha ha.

Visual display options:

-helmet's rear and sides

-back of jacket has lit arrow (using electronics)

-lights showing on any exterior clothing – if lights on the right side, then user is turning right.

Control Mechanism: (Remote) control on glove/jacket sleeve; in pocket; side of pants on or below hip. Small portable Remote control device. One or more buttons. Different signals created from same button, based on number of times pressed. VA. See "K", and "R", and *"UIP".

File: GG / 1G 2G 8G 9G

G SECTION

SUB-SECTION 1G

* 1G080 'CUSTOMIZED DOOR SAFETY: In case of emergency, doors automatically close sealing off fire, chemical, bacterial or other unwanted manifestations from spreading.
-Applications^: libraries, hospitals, and laboratories. Exists?
-D: "sensor" = c = mechanical (closing) device = function (closes door, opens/closes windows, alerts humans on premise/fire dept.

* 1G10 ROBOT: moves in manner like all the ways children play, eg: playing with balls (throwing, catching, kicking in desired direction(s)); climbing jungle gyms... Has commercial and toy applications.
-D: robot = (c = (cart, uip, pr))

* 1G11 WATERPROOF and electric shock resistant system(s) - an additional feature:
KN System for use in or near water^: bath, bathroom, pool, lake, ocean, stream, water sprinklers, rain, swamps. One or more of the following can be merged into a single product and or system:
- Answering machines; * Broadcasting equipment accessories; Calculators: plus products that also act as calculators; Camcorders; Cameras; Card Systems; CD player; Clock alarms; Coffee makers; Dictating machines; Direction Finders; Remote control door opener (eg: open front door for friend while your in bath); * Electronic drums; Electronic entertainment; Electronic jewelry; Electronic translators; Facsimile; Food/drink Dispensers; Electronic Games; Guitars electric; Hair curlers - driers; Hand written image input tablets; Headphones; Hearing aids; Inhalers; Interactive products: television, computer ("C") training devices, virtual

reality; Intercoms; Joystick Controller; Light pens / pens which write though it and writing surface (paper) are wet; Lighter clocks (table clocks with cigarette lighters); Marking equip; Massage machines; Microphones; Mouse - computer ("C") pointing device; Musical accompaniment systems - karaoke; Music centers; Music computers - synthesizers; Nurse call systems; Paging systems: personal / public; Projectors; Radios - novelty; Radio communication equipment; Refrigerators; Remote control; Robots (for toys, hobby enthusiasts; excludes assembly work); Speech input systems; Speaker - public address; Speakers; Stop watches; Studio equip; Tape machines: micro-cassette, voice sensing; Telecommunications; Television sets; Thermometers; Timing devices: clocks, master clocks, table clocks, travel clocks, watches, game watches; Touch sensing panels; Translation systems electronic; TV - Interactive: conference systems; tel ("T") systems; Video games; Video: camera accessories, editing machines, video effect generators; Voice synthesizing equip; Walky-talkies.

-D: waterproof casing of plastic / * plastic and or metal and or rubber = product = functions of product transfer through casing eg: uk; osc; s.

* 1G18 WALL GROWING IVY: Similar patent exists. Planters are built into walls, intern allowing a new wall to more quickly cover itself with ivy. Ivy grows from cavities in the sides and very top of wall. Made of cement or clay bricks. Soil fills portions of entire wall allowing roots to reach soil surrounding wall's base. Wall also has cords which more readily absorb moisture to upper walls cavities; these cords are plastic coated only in lower wall regions. Watering can also be done via below surface pipes with small holes. For strength, wall can also be in differing overall designs, eg: wider at bottom, or have creative buttress designs.

-also has some terracing helping ivy establish itself. Other plants can grow upwardly from top (if gov't zoning restrictions on heights of walls doesn't including growth from the wall).

-this N copied to G\GE (G Excellent) or G\GG (G Good) 8.94. See it for updates.

-Watering helped by inserting absorbing material which takes moisture from ground down below up to wall. Soil may be in all/part of inner wall. Run hose on top of wall with many small holes to water therein too. Special small canyon to hold this hose (in disguise), this hose is replaceable.

-holes in wall allow ivy to grow through to other side, while the holes are so when one looks in from outside the hole is slanted towards ground (they can't look horizontally inward)

-reservoir used to automatically water plants

.--(when soil is dry - using existing tube water feeders w/ absorption plugs placed in soil - when soil dry, absorption plug draws water from reservoir to soil its in contact with.)

.-tech: material made from: cement / clay / plastic - based material (weather proof, sun proof (wont discolor, crack)). Blocks held together w cement (like building brick wall), or plastic adhesives.

-other life forms living in / by% wall: flowers, shrubs, trees*, cacti; aquatic life (fish, plants, snails) with windows built into walls.

-other uses for wall: dividers for: indoor rooms, highways; empty lots, wind breakers.

-Miscellaneous: windows in wall may permit wind, easier visibility - seeing what is on other side of wall.

-Growing apparatuses can be (portable) made of: cement, brick, plastics, stone, (treated) wood).
-portable versions: moisture is released / absorbed from earth on which N may lie. N can also keep excess water / have self-watering system which stores water.
-Patent search strategy: (wall+ or walls+) and (plant or plants or ivy) and (cavit* or hole* or pot* or container*)
-US Patent No's: 5213857+ Wall material for growing plants - but not cavities; 5099009 D323133 D258255 plant pot's wick 4932159 5042197 5044120 D323133
-+4658541 Interlocking planters, for use in erecting decorative walls (KN parts can be inter-locking / replaceable; water drains down to lower regions; KN of made of more sturdy material; * KN also used where sturdy material is needed to: keep out intruders / support building structures)
-Utilizes Plant container KN in G directory.
-exists: lattices put against wall; plant pots with holes on side used for growing strawberries.
-MK N To MF (marketing to manufacturers): press releases; architectural organizations
-use in any [walled surfaces]: desks; bureaus; indoor / outdoor building's wall paneling; buttressed walls; privacy walls; fences of wood / metal / plastic.

> * 1G21: 'SOUND ANALYZER & 'WA: Walkman permits selected sounds to be heard by user. KN: 2D-170, also E Dir?
Either system is designed for wearer to hear all environmental sounds plus music without disturbing others. Or, system via noise canceling technology permits selected sound frequencies to be heard by wearer. Also, particular shape of air passage to ear better permits certain frequency sounds using known methods, the unique factor being the combination with the walkman. Exists: Noise canceler connected to walkman.
-cut and moved to 3E041 Telephone Noise Canceler 7.95: hence more info is missing for this N? The T N appears obvious, so need this data back.
% Lollipop and Popsicle stick holder: enables people with their busy hands to enjoy diverse foods on sticks without using hands. Users might be: on telephone and writing; using both hands for keyboard (k); invalids: have hands in cast; lazy; seeking adventure.
-Foods: shish kabob, chicken (leg), sugar cane (natural form).

Concludes This File 1G

FILE 2G ** MISCELLANEOUS

All (or most) N here are in R-List file.

NOTES: Some movement made 6.96 to file: c:\r\r-list. Simply moved about a dozen N expansions that weren't in r-list. This file is of products investigated as possibly having been copied. The existing N were located in

Tokyo during 12.93 - 3.94. The only meat here is possibly a few bits that were missed. This 2G file is more messed up than probably any other B - E directory of N.

ENHANCEMENTS ON PRODUCTS FOUND FROM FILE 2R

Later Additions to This File in R\R-List (from 12.94)

** INTRO:

Below codes describe where to locate manufacturers of the existing products.

Codes: The C# is the # assigned to the N from the process in which we checked to see if the product was a copy. Hence this additional C# segment (C here does not mean Computer) helps locate the source of printed material on the manufactured product.

Date of product. MF = manufacturer claims they were the first with this product at such date. X = date article was found about the new product in publication (eg: newspaper). Yet we aren't certain 1] if manufacturer publicized product before, 2] if there was another related product before. The reliability of MF & X is not absolute until further investigation. 3] NK - "Nikkei Weekly" Newspaper from Tokyo. YD - "Daily Yomiuri" Newspaper from Tokyo. 4] Products are normally from the new product sections of the periodicals. (YD usually published on Sun, then on Mondays from about 1993). If no publication code was printed, assume it is either "Daily Yomiuri" or "Japan Times".

-The #, eg: C1 is marked on my copy of the article pertaining to this existing product technology.

- "---" Some dashes separate the existing prod above from my N below

MISCELLANOUS:

$ 2G5-C3 Open electronic door opener via remote control. Exists: door opens upon receiving transmitter from pet's collar.

-Automatic pet door opens when identifies pet's transmitter. Nov 93 X.

User activates via "remote".

D: 2G5-c3 (door)=tel/tr = remote ("R").

* 2G6-C7 Computer ("C") gives speech training to hearing-impaired. A computer-likeness of lips and a tongue mimic the corresponding movements of a trainee's lips and tongue. To practice singing, the musical notes of song scores, are shaped like birds. If a trainee's vocal pitch is correct, the bird opens its mouth. $400. Mar 93 X. . Training can be conducted over "tel" (user's c = mfh). D: c7=tel~remote

* 2G9-C19. Stuns/shocks people who make harassing calls to you. Jan 93 MF & X.

D: c19 = remote~tel

* 2G10-C22. Speaker tel answers when recipient says "hello". 1 Nov 93 MF.
D: c22 = c~remote~tel

* 2G11-C23. Distancer. Taiyo Elecs Co: remote ("R") sounds if child is 2 - 7 meters away. Dec 92. II Russian Pat Appl: 045892 23 Sept 93.
. System (mfh/ps) calls user (parent) on "tel" giving "score" on person/item (which walked too far/user seeks "score" on). Here the "score" includes: their distance from some other point (PS central unit); the W5's of the person's activities.
D: c23 = tel~remote

* 2G12-C24 Keeps user awake: "sensor" sets off alarm if finger doesn't move. 6.92 X.
. Tel ("T") rings when user falls asleep; mfh gives recording (UIP) to wake them up/alert them D: c24 = tel~remote

* 2G13-C27 Pager integrated with pocket organizer. (Check air pad, remote) Casio? 5 Jan 94 X & MF.
. Integrate "tel". Exists in some format (but wo all my codes), eg: AT&T. D: c27 = tel/c27/mfh~remote

* 2G14-C29 Calculator with alarm clock. 22 Nov 93 X. C29 = "tel"~remote

* 2G15-C30 Notebook computer ("C") with bar code reader. 9.93 X, released 10.93 X. C30 = "tel"~remote

* 2G16-C33 Voice activated wheel chair. 18 Oct 93 X. Wheel chair (c33) = "tel"~remote

* 2G19-C58 Driverless Electric Cart: it follows line on floor. Feb 94 X NK. System brings tel ("T") (tel call) to designated person: c58 = "tel"

* 2G20-C83 Piggy Bank counts your money. 23 May 92 NK. Toy: c83 = "tel" = mfh = "tel"/caller/letter creating machine. Kid is sent letters stating the balance of their piggy bank (kept at home).

* 2G22-C107 TV: small & waterproof. Sony 20 Oct 93 Also includes other functions. D1: S=C. *D2: uk/remote = c~c107 = tel/stereo/kitchen appliances (oven, coffee maker)/ door opener/other products

CONCLUDES FILE 2G*

FILE 8G: PVC / ELECTRONICS / MECHANICAL

INTRODUCTION: Inventions are originally from the "R Files".

* 8G010 UTILIZED R261 Eye Inspection Mirror, ES 95
-combine this (small circular) mirror w: magnifying glass (each are same size on top of each other, each fold out from the other, eg: like an eclipse w/ one point where the two are held together.) One or more magnifying glasses in unit.
-Multiple things in one are handier.

* 8G020 BELLS (jingle/osc) if/when automobile hits bump. Teaches drivers to drive better. Attach bell to any stationary part of (inner) car. D: motion-"sensor" = C = osc

8G040 INTERESTING (PVC) objects coated in (PVC) (like nut in shell), can't necessarily know what's inside, until outer part comes off via: dissolving in (H20, chemicals) / taking off via:
snapping/pulling/tearing/eating/sucking (sweet candy); via: putting into rock polishing like tumbler (this gives an extra use to existing rock tumblers).
-play game' guessing inside. There may be clues to contents by outside, eg: size, color, shape, etc.

8G060 R244 LAVA LITE: W/ clock; el sys adjusts according to: uip; "mood"; pr; m*. ES 95

8G070 R245 TANGLE SCULPTURE ™: 3-D movable structure made of rotating connected links, easily twistable, turned, bent. ES 95
-alters shape according to: uip; m*; pr
-when shape altered: generates electricity
-altering of shape is a sys via which to control (R) el products. Each (total) positioning of one or all of its parts corresponds with particular signal -> controls object (toy, robot, antenna's movement.
-collapsible Tangle can become small (for key chain)
-parts can be extended / stretched*

$ 8G080 R247 SPINNING TOPS: Generates signals as it spins / according to how spun (speed, curvatures, surface on which it spins, eg: rough/smooth). 1signals = osc (stereo; music); %r commands; scientific applications: (w5/how long spins according to w5 of situation), tr signals (via r) to c/m.
-signals also generated via aerodynamics (only): how air rushes through contraption creating (whistle like) sounds.
-place differing (balanceable) contraptions onto (top of) tops -> creating differing corresponding (aerodynamic / osc) sounds.

-tops can spin within grooves (spots (holes) / tiny etched in ditches (of sorts)) = the (type) contact with holes/ditches = ("analyzer" / "sensor") = OSC . The holes have = have "sensors" built within them.
--grooves / holes can be made into "portable" boards which can be connected to = C.
-manufacturing: recall non-electronic versions are cheaper to produce. Consider having non-electronic version upon which manufacturer can add electronic versions.

$ 8G090 8R249 GEODESIC DOME KITS: Knex System Construction ES p23
-when pieces are fitted together into one or more designated (via instructions) designs, sys will: light up / activate osc / other function. Type reaction depends on type of interlocking design constructed.
-designs creatable into: animals, Christmas tree, trademark or company signs *, flat or three-dimensional signs, (toy, doll) houses, vehicles*, airplanes*, jungle gyms.
--D: energy source -> sticks / pieces used to construct structure (geo dome, house, car, doll, robot, roller coaster (ES), furniture) -> rc~'analyzer = "c" (cart, sw) ~ control of desired function or object.

* 8G100 R250 STATIC STICK: Part of 5E020. ES 95. Signals created according to (moving) (non horizontal) positioning of stick.

* 8G110 R251 MAGIC TRICK KITS: Part of 5E020. ES 95. Signals created according to (moving) (non horizontal) positioning of stick.

8G120 R253 (HAND) CRANK ELECTRICAL GENERATOR: (Hand) Pump Powered ((Flash) Light): now exists from at least mid 1995 [perhaps this was filed before competitor? Saw in saved clipping from catalog.] ES 95
-4E010: movement of object (toy, vehicle) activates: light / nr / osc. Energy source: battery / pump -> electricity/battery charging

END 8G FILE

FILE 9G: PVC / ELECTRONICS / MECHANICAL

* 9G010 DOLL: Shoots out part of itself. Obvious and or exists - sw aty.
(fore)arm shoots outwards, and is kept attached to doll via cord. Makes it less likely part will be lost.
D: dool = ejecting device (button) / cord = arm / bullet.
-suction cup can be at end of projectile. Play a game: hitting target.

-manage product liability issues.
-element shooting out: arm, *leg, *head, *hair, *eyes, *nose, arrow, *gun, bullets (big size), ball, other tool or toy.

9G020 DOLL MOVEMENT FEATURES ALTERATOR: replicates human / *animal expressions/movements. Facial: eye (lids), cheeks, mouth, crying.
-Walking, talking, bending...
-D: [k=c] / manual controls (levers, knobs) = mechanical facial movements = covered by (pvc) skin / clothing / fur.
-S = shows images of changing facial expressions, etc.
-have sw version, eg: mimicking of human lips - exists probably.

* 9G030 TWIN DOLLS: function in unison, eg: shake hands, walk, talk, and cry. Probably not patentable. Both start simultaneously, or when one starts it sends signal causing other doll to follow or reciprocate.
-Gen: Shaking Hands Robot / Dolls act in unison:
Hands (move to) clasp other doll's/person's hand (via "sensors").
-also walks; (holding hands helps prop up doll(s)).
-tr/rc at hand contact points used to communicate between dolls to coordinate: (walking / talking / crying) movements.
-D: dool=hand=rc/tr=hand=doll=hand=rc/tr; multiple dolls = c (pr, cart)
-movement effected by: music/sound -> sensor; c; k; joystick; mechanical (lever).
-when one doll talks -> sensor = next doll responds: talks, moves...
-simultaneously they also: talk or make sounds (osc), eg: cry; play or respond to ("games").

9G040 SPIDER: have multiple legs (of differing lengths). The bend (in one or more points) with suction cups at the end. All legs join at central point like an asterisk. Walking spider.
--depending on distance suction cup of particular leg is from body, the height of that leg (its knee...) is higher or lower, intern creating artistic effects.
.--place spider onto frig, desk, etc.
-it lights (according to) when it walks
-might walk down refrigerator door, via: gravity and suction cups at end of legs.

$$ 9G050 MEASURE ANGLES OF ECCENTRIC SURFACES: Measure the angle of unusual surfaces. Multiple prongs are placed on a rough rock granite stepping stone. This solves the difficulty of placing a carpenter's balance measuring device requiring a flat surface.
-The top of the surface area being measured is the average deviation of the rough surface formations.
. Creative Expansions Include:

-Electronic and non-electronic applications.

-Applications for the invention that might benefit by altering the invention idea. Examples: Can help an artist position pieces of their sculpture into desired angles. Another way to help determine the gravity mid point of an invention that might be otherwise difficult to balance on one's hand or other device. Setting up chairs or other devices on a beach.

-What portable products might benefit from having some version of the invention built into it?

* In other words: Determine the relative flatness of an unusual surface area like that of the carpenter's balance measuring device with a little bubble in a tube; when the bubble is in the middle of the tube, the device is considered flat. Other tubes are positioned to show if device is perfectly at a 45-degree angle. This invention is better in that it applies to non flat surfaces as well by using prongs to know the average position of the device being measured.

-Method for robots to navigate [without] tumbling.

-On a ship or other situation where the [horizontal] position [can be changed], system 'analyzes for the average / 'predicted [average] horizontal position(s) [over a graph of time]

-Each leg reaches to a different point 'analyzing for:

#1: How level surface is. Designed especially for non flat surfaces (have multiple curves, bumps). #2: Also checks for degree to which surface is horizontal / vertical (vis a vis desired perspective, eg: diagonal column, gravity pull). #3: Measures accuracy for degree to which desired angle is what it should be.

.-consistency level at designated points.

-D1: leg(s) = central point (c, sensor).

-electronic version: lights and angles are 'tailored to [demonstrate].

-D2: multiple existing levelers meeting together (like letter X or star shape)

-Patent search strategy: level+ and (measure or measures or measuring) and (carpent* or hous* or wood*).

-US Patent No's [from before 1990]: 4850491 4182046

-Technical - how KN looks: possibly a circular bubble (with flat-(is) top) = air pocket inside plastic bubble holding the liquid = moves to point opposite where there is the most dip/angle.

-Used for standard level measuring, eg: left to right and or front to back or other.

+ measures degree to which angle is at desired degree, eg: u wants 45 degree angle: place level on the (flat) surface then= rotate= then click into place the plastic bubble at the 45 degree point= resulting in plastic bubble being perfectly horizontal if the main contraption is at 45 degrees (in terms of earth gravity). Set level to measure accuracy of angle to any (five degree increment).

-claims: old levels used vials instead of rounder plastic bubbles which measure front to North to South or West to East or NW to SE...., while KN also can handle designated angles vis a vis up to down while also checking for other angles (incongruence), eg: (flat surface) being crooked in any other way from manner desired.

-Related to Invention 3E061 Human Body Motion 'Guide. That invention measures the angles at which body limbs are moving. It suggests alternative angles at which limbs may be held such as to avoid carpal tunnel syndrome.

.--An adaptation can be in that the 9G050 Surface Angle Measuring Device, will be able to gauge the angle at which a human limb is placed, since there are no flat positions on the human body.

+ 9G060 COLOR FILTERING EYEWEAR

Glasses filter out certain colors, making it easier to see through the clutter. The Visual Analyzer ™ connected to the eyewear identifies what needs filtering or enhancing.

-Pep up one's mood by selecting what colors are to be altered, with which favorite colors.

-Filters and or Enhances: Smoke is (somewhat) filtered out, while people and the physical environment are enhanced. 'Designated objects are enhanced, making it easier to search through clutter for keys, a specific part like a 2" screw.

-An application for virtual reality eyewear.

-UIP: 'guides/controls 'images being 'edited [via eyewear].

-Another form of Visual Analyzer ™ for: robots, people who are color blind or otherwise sight impaired.

-Any audio/visual signals can be 'edited [(in live form) for the user(s)] using 'VA and 'SA.

OTD: Environment: Indoor or outdoor light (may have differing colors if indoor or outdoor (eg: indirect light) even if the light levels are same / similar. Applies for any non or semi opaque material, like glass [window]. % colors of what lenses looking at effect its color. Polaroid sunglasses technology utilized. also as toy/gag (for kids). Difference is type color, not (necessarily) opacity. Expensive to produce.

-In other words: (Sun) Glasses change color (type color / shades of any such color) according to light level, eg: goes from yellow to green.

. Pat Search Strategy: glass and (color* near5 change*)

-US Patent Numbers *: 5184156 Glasses with color-switchable, multi-layered lenses - for added protection when radiation level rises.

-'Virtual Reality related: color of shading is designed to let 'designated elements in visible area [not] stand out.

$ 9G070 SELF-CLEANING SINKS, TOILET BOWLS. Electrically charge the surface area to: kill organisms (helps sanitize), *clean surfaces (el charges helps free substances from staying attached), helps eliminate dirty colors / odors.

-el or other fq applied to surface area can be constant (helps inhibit dirt, etc from attaching itself), or turned on when wanted by u (user).

9G080 SPLASH DESIGNER: Creates desired splashes. Program type splash / bubbles desired. System then creates such shapes or effects.

--water / air* movement controlled via sw. U uses windows like sw / interactive screen to pick / create desired effect.

--effects include: splashing, bubbles, osc, lights (into water), kn: water magic (converts water sounds via synth).

-excerciser: moving them requires energy; strap/place onto each hand, *arm, *foot, *leg, *elbow. The farther the water squirts the more excercise is being conducted (with force).
--D1: c = mechanicle controlling device = mechanicle movable device

* 9G090 PLASTIC SPLASHERS: Kit of plastic parts, each making designated type splashes / bubbles (effects how air blown in (via mouth, machine) comes out (into water).

* 9G110 INFLATABLE SWIMSUIT: <Pat: several aty gave low scores for pat & marketing & product liability>. Self inflates by pulling tab. Acts as life preserver skipping unnecessary bulk. Can also wrap around objects below water and bring to surface by pumping down air. Maybe easy inflating device functions like airline vests, and might keep out water? Kept in places where whole life vests are feasible, eg: risk of drowning too limited. Government approval likely?
-Helps user float. Product can accompany (inflatable) life vest too, helping user keep balanced in water. Torso's worn part can be one of any lady's swimwear designs: bra or one piece suit - also wearable by man.
-emergencies: inflate yourself / has tube reaching mouth user blows into.
-automatically inflates when u flips/turns on: lid/switch/device. Sucks in air by itself (w or without u blowing/pumping (additional) air). Can use airline type easily inflatable devices. Might help keep water out if/when u inflates while in water.
-such swim suit can be an under / over garment worn by people at risk of drowning.
-advantages: utilizes ease of body movement; thin material (until filled with air).
o-non life saving applications: surround / wrap around objects that one may not want sunk into water, inflate when needed; inflate via air pump to sunken objects, which intern rise to surface when have enough air.
--doesn't get in the way (as much) while uninflated.
-D: two layers of material, air goes in-between, eg: two parallel lines like: ll, though longer/wider flat parallel planes, cut and sealed into shapes of: swim suits (men, women), pants, vests, pants, hats (with head straps).
-maybe exists; would US gov't approve it?

* 9G120 WATER MASK ANTI-HUMIDITY BUILD UP MECHANISMS: utilizes one or more of following.
-Glass wipers (car windshield wipers) on inside (outside) of mask
-blows (warm) air onto (inside) of glass, like in car
-glass surface area coated with anti fog build up substance
-glass temperature kept above water's temperature, reducing any steam build up.
-D: glass = inside surface = wipers / air blower / coating / temperature controller.
-many people studied this field?

* 9G130 'CUSTOMIZED SEARCH LIGHTING: Search light attached to (under water) mask. Frees user's hands.

-multiple lights possible (one on each end of mask). 'Seeks 'designated shapes/'images = 'visual analyzer.
-D: mask=light=switch

* 9G140 BINOCULAR / MAGNIFIER WATER MASKS: u can toggle between or simultaneously be able to view via different visual modes with one mask. Additional Functions: microscope, zoom, normal.
-done via: mechanical / electronic (cart screen shows how el sys converts "camera's" images). U can see via multiple modes simultaneously: different parts of mask/screen have differing modes.
-D: mask = glass = binoculars / magnifiers = controls

9G150 GETTING INFO DURING TV COMMERCIALS: The normal TV mode is put into a small window w/in the s, and u can view other a/v programs during this time.
-sys will automatically place bookmarker from where u leaves program to return back to main program (after the commercials are finished).
-otd: u / sys% decides when commercials ended.
--% sys knows commercials ended upon rc tr from 3rd private company designating when a particular channel has changed (see kn).
-D: antenna/cable channel/satellite dish = c (k) = crt/tv = s
-reference made to "Editor".

$ 9G200 PLASTICS: Plastic contraptions attached to outside of "mic" effect incoming sound, in tern cheaply creating desired sound effects. Target market: kids, budget minded hobbyists. Eg: wind/other sounds are accentuated / muffled.
-D: any (changeable) shapes (with air passage to microphone) = snaps onto microphone = mic.
-sounds generated / how sounds altered (synth): wind sounds accentuated (opposite of existing mufflers which help reduce wind sounds); warped; sounds like sound coming from within blanket or box or tank (with water - causing echoes); highway noises; voices of women sound like men, and visa versa [popular existing consumer electronic tel product] %.
-attach device to following type mic: stand alone, tel receiver, mic = C, toy ("entertain"), "game" device.

* 9G220 CHANNEL SCANNER SKIPS STATIONS HAVING COMMERCIALS:
Dissemination of codes from 3rd source constantly states which channels are in commercial mode at any one time. This N is a major section of the "Editor" part, taking up maybe over 20 pages.
-The receiver for this information is connected to the remote control / channel selector (scanner).
-company separate from the entertainment channel / cable co can broadcast via air / cable.
-what is blocked: commercials / credits given at beginning and end of films / whatever else u wants omitted, eg: sports / news in general / type programs (horror, particular TV series, etc). Since this information is constantly changing in time - u can't simply block particular channels which can later have what they want.

-D: human monitors watch / listen to all types of entertainment (cable, TV, radio, information highway, etc) = code is k for type programming at that time = work station = m = tr (via air, modem, cable, etc.) = rc (at home) = k (channel selector) = item being watched (interacted w): cable, TV, radio.

-advertising for this product can state: "__% of your watching time is being wasted", "if you watch TV and hour a day, then we'll save you 5 hours a month...".

-also see: 9G150 Getting info during TV commercials

. Moved from 1G070:

-During interruption user can be free of their entertainment system (TV, other info highway program). A service company audits all programs, and sends these signals to subscribing customers. System will copy program until user returns, then user fast forwards what they missed until user is caught up and then enjoys at standard speed. Remotely possible that entertainment companies might buy this invention to keep it off the market.

-This signal comes from auditor who audits all television, cable, radio and so forth entertainment broadcasts.

-auditor can be human (or maybe computerized?) who presses button saying when commercials start and end. This signal -> user's system. Commerical starts -> Signal -> "notifies"/changes program user is experiencing -> end of commercial (signal) -> returns back to main program being watched/"notifies" user.

-Auditor can be a (separate) service which "transmits" its signals via -> radio frequency/cable/tel line... The auditor could even be handled by group effort say: neighborhood/students at major university taking turns watching/enjoying program while auditing as well.

-this product held off so as not to anger advertisers.

-U clicks certain button(s) -> Then sys can copy program if u doesn't return in time after commercials. -> Then u can play back (at faster speed) (meanwhile sys still copying). -> Then u can resume to watch (and or interact) in the normal speed.

-D: auditor determines when commercials start and stop / commercial has codes determining when they start and stop = signal transmitted = c = signal converter = transmitted to watcher (of TV) = osc (notifier of when commercials start and or stop and or are running / manipulates entertainment system (TV, radio...) by ((tuning into) another program made available (during commercials)

* 2E-230 Character Organizer: "uk" type of character needed according to: type image wanted (type situation, w5, uip of viewer). Edit/create images of people, animals, figures...

Concludes File 2E

* 3E-090 MINIATURIZED SOUND RECORDINGS: A type of "Cart".
Picture someone putting into their pocket devices the size of money coins, which are pre-recorded music. Easily carry these around. They don't scratch and the title of the piece is on the outside. For details on contents, eg: on the titles and playing times for each piece, stick the piece into the player and see the "display".
-can be in all types of shapes: flat disks, donuts, cubes, balls %-such can also hold memory for software, databases, tel numbers, instructions, maps and data for GPS.
-devices also hold software, database information.

SUB-FILE 4E

MOVED FILES:
>+4E010 Motion Powered Re-Chargeable Batteries:
-copied to better N file 1.95, see expanded version from 6.95. Moved to directory "I"

> 4E020 Registered Electronic Media Communication: Moved to own file.
> * 4E-050 Immediate Tel ("T") Response

* 4E-040 VR (create images desired for your virtual reality experience during / before use, eg: have a virtual reality type experience painting - this can inspire your creativity);

* 4E-060 ENGLISH INTO JAPANESE PROGRAM:
English words adopted into Japanese use `katakana' letters. Katakana is pronounced similar to English or other foreign languages but different. Different people will interpret the katakana spelling of imported words differently. Hence the software becomes the authority on the correct spelling.
-applies to all importations of words from any language into any other language, eg:
English/French/Russian/Latin/Italian -> Chinese/Korean/Arabic
-user types in foreign spelling and gets correct katakana, or types in katakana to get the correct imported word
-if the wrong katakana spelling is typed in then system will show the possible errors by stringing wrong katakana spellings to the right spelling.
--since different foreign words frequently have the same katakana spelling, user must select from many possible interpretations of the katakana word. System will first show the list of most likely words, if not found, user presses key and seeks next batch of possible words, and so forth.
-D: uk = computer ("C") = display/print out/speech/mfh

* 4E070: WALKMAN WITH MICROPHONE TO ENVIRONMENT:
User hears what is going on around them, while at same time, not disturbing others who can't hear user's music. Patentable? Similar older KN. See 2D-170 also.
-Application: have a walkman without the problems associated with being unable to hear what goes on around user, eg: door bell, tel ring, alarm. Sys for u who want to hear music/sounds/news/TV shows/etc without disturbing others.
-this is probably an NK before '95 (and before 4E070) in different N #.
-sound in room -> mic ("sound analyzer"*; existing noise canceler (sound buster)) -> 'WalkAbout (stereo, walkman, m (osc), TV or radio or VCR or other broadcast)~c.
-this KN also in early G directory.
-Patent search strategy: headphone and (select* or audit* or cancel*)
KW: walkman, headphone.
-US Patent No's: +5138663 sound canceling headphones +5134659 sound canceling headphones

CONCLUDES THIS FILE 4E * AND FOLDER "E"

"D" INVENTIONS DIRECTORY FOLDERS

Table of Contents For "D" Invention Files:

. Files 1D and 2D could not be opened at this time.

. 2D

File: DD / 2D

FILE 2D

(Formerly File 2C)

Introduction: All products are electronic, or as the second option, electro-mechanical unless otherwise specified, or obvious. Other versions of the product may be developed without electronics where possible with current technology. Abbreviations for descriptions are in the file titled "Product Specification Codes". - Diagrams first developed 6.95

-This file is not much part of the "D" directory since it was formerly file 2C. Hence any comments about "D" directory in general, namely the unity of different product numbers, refers to file 1D in D dir.

ANSWERING MACHINES:

- All the inventions get people more interested in leaving a message, and leaves less of the impersonal feeling. Markets creative adults. Incorporates all standard answering machine functions: date/time stamp...
- All reasonably available answering machine features can be options for each invention
- All inventions applicable for voice mail and tel "T" answering machines

* 2D-01: EASY LISTENING FEATURE:

Press a button to initiate the listening of the incoming message(s). The term within this product description for "transmitting" means to: clap or whistle or use remote control to handle the incoming messages without having to be right at the answering machine. User can return calls via use of transmitter. Conversation is on speaker tel "T".

-Perhaps when person returns home, the first thing they do is get undressed from business suits, begin cooking, etc; meanwhile people are eager to listen to messages. This invention lets users listen to calls with greater ease.

-Each transmission can be: a code for number of claps or whistles to equal one message, eg: three claps means, play last message again.

-After hearing wanted message, user can store by transmitting. Such messages are then kept in separate memory bank so listener then can listen again more carefully; or remember which calls they wish to return

-Other transmissions can be to: fast-forward the message (so fast that it can or can't be understood), at user's choice

-Device is sold with a picture that can be posted onto the inside of the closet door (is opened while user is changing into home clothes,,,,)

Footnotes:

Pieces of jewelry can also be transmitters;

-D: clap/r = sensor = answering machine/t/c

* 2D-02: FUTURE VOICE RECOGNIZER: Caller asks for desired person, or speaks out the extension number. If system can't understand, then it asks user to type the tel number into their tel "T" keypad.

--It is a user-friendlier product.

-If caller mentions their name, system knows whom to rush through without going thru an operator.

-D: mic = sound analyzer = t

* 2D-021 SYSTEM REACTS TO EXTERNAL PRODUCTS ACCORDING TO W5 THEY ARE:

Eg: Incoming-Call Identifier - Screener / External Element Identifier.

Calls from desired tel numbers have a different ring. Hereby caller knows whether to pick up the call or not.

-(Designating different type connections / (incoming) calls related to another of our ideas?): sys responds differently depending on which other N/sys/existing product wants to "interact" with it.

--sys knows identity of other part/sys via its: "access" / code / tel # / uip (behavioral characteristics of N, or U: how it moves / functions / responds (to stimuli from central "C" or "M") / visual analyzer / sound analyzer.

-this N (invention) is a type of UIP, "Router".

-If user walks over to device, the caller's tel number and or name... appears on screen ("S").

-D: Central Product / Sys = C ('computer) = sensor / analyzer / uip analyzer / caller ID sys part = tr/rc = External Product / Sys.

-OTD: ACCESS *(); BVA (); CID (); CAMERA (LENS) (); CART (type uip or senses or data sought); CLAP (); INFORMATION RETRIEVAL (); K (); MFH (); MIC (); MOUSE (); MP (); MULTI-USER (); NOTIFIER (when desired contact has been made with part or organism); PR (); PS (location of external product is a determining factor in deciding if any/type connection/contact is to be made); R (); ROUTER (routes external product by their type nature); s (screen) (shows status); *SCORE (); SOUND ANALYZER (); TDS *(); TRANSFERRING INTER-SYSTEM TELEPHONY (); UIP *(); UK (); VISUAL ANALYZER %(); VOICE MAIL ().

CAMERAS 2

-all options adaptable for still life operations are applicable for still life cameras too

* 2D-030 KEY CHAIN EMERGENCY CAMERA:

Tiny and crude pictures can be taken for emergency situations.

May not look readily like a camera, might even take pictures in infrared, or have option in way in which pictures are taken according to light level.... D (Drawing):"camera" = key chain / k
-similar KN (invention) exists in A or B or C directory.

+2D070 DIRECTION IDENTIFIER & RESPONDER ™:
Know the direction from which airborne and or water born particles, and sounds are coming: pollution, fire. Automatic pollution monitoring device. User Information Programming ™ 'predicts: needed 'seek & react functions; how to tailor system for user's tastes; who needs to be 'notified [based on UIP].
-Environmental protection: targets problematic pollutants faster, e.g.: oil spills, uncontrolled forest fires.
-Locate anything being emitted that can be traced back by 'sensors, e.g.: where mom hid the fresh cookies.
. Creative Expansions:
-Explore in your mind, what knowledge gained from an automated attendant might be useful and why.
-'Tracks [past] occurrences for W5.
-"sensor": judges direction of wind. Three or more sensors can tell direction much like having two ears in that the first sensor to receive stimuli identifies which direction, based on when/*how subsequent sensor(s) sense an occurrence.
.--the more such sensors the greater the accuracy in determining direction.
--combination with smell analyzer [existing and maybe KN (invention) versions]
-"analyzer": works w other information sources to (better) determine direction / nature of smell emission(s).
Eg sys (system) "coordinates" information from current / future weather M information sources to determine direction.
.-tells the quantity of airborne particles; and or type substance; rate at which particles are arriving; logs (scores: w5 of rates of particles arriving).
-seeks: dust, humanly generated (body) smells...
-D: smell "analyzer" = C ('computer) = tds / wind direction determinator
-OTD: ACCESS**:(to activate sys, or read results, or pr); CAMERA:(visual analyzer: direction of visible particles (in wind), via microscope looking at air being blown by); CART*:(types of smell analyzers); K:(r*); MFH:(smells database); MULTI-USER*:(develops uip on different (potential) polluter's habits); NOTIFIER:(for excess pollution, fire); OSC:(); PR:(); Q*:(); S:(); SCORE:(tds; pollution levels (uip of targeted polluter)).
-Applications: catch / monitor (2E251) (illegal) polluters; identify source of (hazardous) pollution / waste / accident.
-For suggestions on types of hazardous substances also see 7G050, and manuals covering air borne (pollutants) (from factories / labs).
. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:
-(pollution odor smell) and (air flow) and direction.

* 2D-090 TAKES PERSON'S PHOTO, then you draw from the photo as a base. System can also take picture of people's shadow, silhouette, etc
-D: (electronic) photo = interactive s

* 2D-120 ANIMATED STORY MAKER & Electronic language trainer and translator: Develop story with text and graphics. The text can be (automatically / manually) translated into multiple languages.
-Uses visual (animated) characters for short or long stories. Use with written and verbal portions of communication in own and or foreign language.
-D: k = C ('computer) (sw)

++ 2D-140 SEND NEEDED PRINTINGS via fax or other electronic means. Each color group is via different transmission. This then can be produced into color.
-Same as older KN (invention) - Color Fax (B or C dir), though don't if it described transferring color via el (electronic) (non fax mode), eg: Email, C ('computer) = C ('computer) (but not fax).
-So simple and valuable it must exist?
-Possible applications/methods:
--if there are four (basic) colors: fax / TR (transmitter) (electronically (via modem)) four different transmissions for each color (group).
---pixel color sys (system) when there are multiple colors within same space: multiple transmissions have the same shape but differing pixels designated within said shape(s).
-functions like a printing plant, u (user) simply can transmit versus carry pages / data of what is to be printed.
-D: sw conversion process = (el) data of images developed = TR (transmitter) = rc = C ('computer) (graphics sw, cart) = printer
-Patent Search Strategy: fax+ color

MISCELLANEOUS:
. 2D-230 Remote Control Microphone: Controller selects which microphone(s) to activate and deactivate. (Another N?) D (Drawing):r=c=mic
* 2D-210 Portable Weather Predictor: By radio waves, you can call into computer "C" to get up to date weather, news... D (Drawing):r = m
. 2D-250 Detective Scientist: Game lets user find the villain via all the clues & tools provided in the game -includes microscope. Related to above game.
-option: one person, eg: mother can lay around the house all the clues according to the game's instructions. Eg: instructions say designate what is room 1, 2...
. 2D-260 Microscope Mouse: exists?
With computer "C" type mouse do following applications at desired location(s):

Slice; Cut out; insert; inject substances; eject substances on the surface; stretch; take samples; send desired electrical signals; alter type/quantity of light; change temperature;
-mouse with computer "C" lets user select the type of activity at the desired location
-Display item being viewed onto screen ("S").
-D: k/r (control via distant location (via t/modem tr)/mouse = s/eye piece viewer/magnifier/c = manipulator of studied object (cutter/mover/blotter)
. 2D-270; 2D-200 Medical Scanner
. 2D-290 Microscope attractor - Repeller:
Ap: attracting or repelling organisms, cells via: making sexual sounds, chemicals, sounds, movements, vibrations, temperatures, etc.

* 2D-310 DIVERSE AUDIO / VISUAL / COMPOSE SYSTEMS.
Standard Optional Features for each Electronic Invention:
-synthesizer, ability to transfer signal to audio or videotape, recordable CD.
-Signals created can be synthesized into video images. Device can print out the musical and or video creations in color / black & white photographs, images or codes.
-has display "S" showing signals being received, how they are being converted, stored, sent.
-system synthesize, file in memory, and edit all signals in any way technology now permits
-signals can be converted to also control lights according to corresponding sounds, rhythms, etc. (eg: flashing, moving, alterations of color via rotating translucent multi-colored pie sheet, or usage of desired colored light bulbs, alteration of light color by change in transmitters electronic signals generating different light frequencies from same general source - eg: same screen ("S") or bulb or bulb part
-signals can create vibrations corresponding to sound, rhythm, etc, effecting: any standard portable or stationary massager, eg: hand controlled massager for all or any part of body, seat, bed, whirl pool water massage, etc. These massagers emit in bursts, speeds, cycles, rotations, etc.
-signals to alert user of any external stimuli via any of the resulting effects described in this product category, eg: notified of person entering dwelling, room; fire; burglar; problem with child - crying, woke up, time alarm, tel ringing, door bell, any one or thing activating any call for communication or help w/ or w/o user knowing type of situation with a code for type situation. Such signals can be the sole purpose of product, or be a feature, which interrupts any other system described herein or other (eg: entertainment system, tv, video game, etc). Also applicable for physically disabled people, helping them know what' happening, or used as physical/psychological rehabilitation/therapy.
-play with laser percussion instrument (laser only replaces stick), "drum pads" respond to lasers (each laser "stick" having different effect). Frees player from being in set location
-alternatively, device can be made into manually driven instrument with an optional "mic" and without a synthesizer

* 2D-250 PRIVACY SYSTEM: The speakers can be put near the watcher, in this way user is able to listen at a lower sound volume, without having to sit too close to the mildly radioactive screen ("S").
-tv/stereo -> wireless TR (transmitter) -> osc (speakers).

1C-100 ENVIRONMENTAL HAZARD REMOTE CONTROL SYSTEM: <3, 2, 2, 2 Mk?>
For items that need to be activated in the extreme cold and or hot environments, and or those where there is high dust and or sand and or humidity or other items that may interfere with a normal switch mechanism, eg: in Sauna, desert storm regions, Siberia.
Applies to existing products:
(Usage of switches means there is a way for bad elements eg: sand to get inside)
Applies to existing versions of this product:
.-Patent Development Directions: find the existing patents for the basic products and attach the remote ("R") control feature. Then demonstrate how this remote ("R") control mechanism might be considered patentable. This remote ("R") control addition does the following: turns on/off; effects the level of operations like (intensity [such as volume, brightness...])
-Uses 1C-260

-Footnotes: remote ("R"); display ("S"); "C"; pp; mp; uk; date; all; bp; alerter; osc. See 1C-26. PATENTS: key words - via www.qpat of US pat 1977-1.97:

-(danger* or hazard*) and (remote adj control*)

1C-160 MOBILE UNIT'S LASER 'NOTIFIER: <4, 3, 2, 2> Train is alerted when upcoming track is blocked. Laser emission is reflected back to train signifying the way is clear. Operates during day and night.

-Trains are notified of a block up ahead when several of the train/vehicle track's laser light reflector's are blocked. Also applies to all other automated vehicles.

-If laser transmission is not returned from several reflectors know of a blockage.

-Train Laser Notifier: Oncoming train transmits laser to receptors up ahead the track. When there is an interference blocking the return of the laser, the driver is notified by sound alarm that something is blocking the receptor, either a car, etc. System may increase the response time of conductor during the day or night.

.-there are at least two types of receptors, those closer up; and those at the end of a bend (curve) in the train tracks signifying to the laser receiver that this should be the last laser within reach for the train

.--the way in which light is reflected determines.

.-naturally there may be pranksters (vandals) who switch, change the lasers, as a result:

--conductor needs to make final decision as to any actual obstacles on track

--the reflectors need to be attached to the track and or rail in such manner that it is nearly impossible to take off, and if taken off the reflector is damaged (eg: the reflector gets bent out of shape and then looses its reflecting ability)

--one remembers that garbage may cover reflectors, as a result reflector might also be a little on the outside of each rail as well

.-the height of train's transmitter needs to be neither too low nor too high...

-also applicable for cars and other automobiles. They can seek a special strip on the road and alert when it is blocked by: another automobile, stone on road, etc. (beware of garbage - so maybe system will only alert if blockage covers a large enough of an area)

--the reflector can be special paint (eg: with many tiny reflectors within the paint)

-other applications: items traveling down conveyor belts; toy train tracks and race car sets (includes plastic road-speedway

-OTD: display ("S"); C; pp (adjust levels of sensitivity and other matters); mp; uk; date% (keeps record of when traveled and where (eg: with our other Satellite locator product); basic; bp; alerter; osc; score (system shows how good a driver you are by how far driver deviates from designated line).

New from 5.96:

-Pat search str 12.95:

-((radar adj3 waves) or laser*) and (warn* or alert* or notif*) and (motion* or move* or moves* or moving or train* or vehicle* or car* or cart or carts)

Acts as a movement guide for robots and other automatically controlled movements.

-Prevents tripping: objects (not normally) on ground = are noticed by laser = "notifies" = u (user) walking by. C ('computer) = UIP "analyzed" ("visual analyzer" = what objects are normally there, eg: furnishings, plants; but notifies about tools and garbage left lying around.

--applications: manufacturing / research and other sights with many tools and objects moved around; homes with children or aged.

--tells u (user) when it is safe / not safe to walk: US pat: Cross-walk warning system 5406276.

-US Patents: 5465142 5406276 5371581 5314037 5293162 5388048 5467283

Movement is altered according to presence of other (moving) objects: potentially obstructive object = "visual analyzer" ("sensor" = this laser KN) = movement controlling "analyzer" = movement controller = mobile object's motion altered.

--motion alterations: speeders or slows down (not necessarily complete stop) in relation to: other object's speed (and what's predicted to avoid collision); giving enough time so perceived object (pedestrian, moving object, car) can get out of way on its own; give enough time for human riding in automatically controlled vehicle to take over and steer clear of obstacle, eg: driver woken from nap when vehicle's safety level ("score") gets high.

<3, 2, 2> 1C-180 'INTERACTIVE 'ENTERTAINMENT SELECTOR FOR COACH POTATOES: When you get down to it, the process of inventing is often much more challenging than being put into the passive situation of observing pre-recorded entertainment. Entertainment studios need help capturing non-coach potatoes to and pay cable fees, or get their ads with our User Information Programming ™ functions. 'Customized 'entertainment.

. Radio, film broadcasts and other entertainment is scored according to your tastes. Your preferences are determined both by how you answer the software's questionnaire, and or the actual programs you decided to observe. Viewers can also rate programs.

. Menu Options:

-Stations are 'scored for 'multi-users on: interest level per 'designated criteria like 'educational value; adult level content; violence; percent of content spent on ads; conservative to liberal thought levels; amount of interest it will have for inventive thinkers based on its subject matter and or novel way of approaching the topic. A list can be obvious.

-System notes the moment user switches to something more interesting. It 'analyzes why they choose which new station. Each segment of ['entertainment] program can be 'scored on over 1000 variable elements [effecting user interest/pleasure/'education, etc].

. Creative Expansions Include. Focus:

-Boosting broadcaster's profits.

-Help people learn, e.g.: system compares the informational level of the show, with what the scores viewers received from taking tests on "facts about the world" and such.

-Scoring non-entertainment media.

-How scoring can nurture creative thinking.

. More:

Selective Station Menu: Easily select desired cable or broadcast program according to your taste requirements.

-When watching tv, listening to radio, "interacting" w/ "entertainment", etc. the preferences for other stations (based on the type style, mode preferred by user) which when available will show up on screen (states the type programs/songs/pieces available.

--tv: a bar on bottom of screen

--radio: display ("S") shows the station numbers of interest

-does it exist?: auto radio system, which lets user select types of music, desired according to region. As they travel to new areas, system will select the type radio stations user wants, saving them time from hunting around.

-UIP: memorizes user's preferences in the system and used in selection process. Time of day / external events influence station/music/movie/news/info sourcing/'routing.

+ O -the order in which stations are offered for choice places priority on the preferred styles, rather than the numerical order of the channels.

--function: user hops from station to station (sampling until they choose to stay or hop to next station).

---In time user will go to the end of the channel options (end channels are the least favorite).

.----If the selection of channels is too great for user, then they can limit the number of channels within the loop of stations. Such limiting may be done via set number of maximum channels (can be changed from minute to minute); and or in combination with a numerical preference factor - whereby there is a balance between those shows with high ratings according to "PI" and an excessive number of stations. If there are too many stations at a good hour; then the preference rating will need to be higher and there will also be more stations to select from. At poor hours, the preference score is dropped as well as the total number of stations.

-since it is difficult to judge exact "uip" for each user: film maker and or broadcaster code the "uip" elements for their films, radio shows.... Hence when user is found to prefer certain shows, though they didn't mark it in their "uip" database; invention will accordingly ad and or delete preferences. Eg: User states they like comedy films, and dislikes romances. In reality, they don't favor the type of humor producers are developing and or broadcasting, and hence user doesn't really know their preferences according to culture's menu options. User might however perceive romance as only being X rated, and in actuality was found watching such romance stations (eg: romance was at the end of their station option loop).

-providers of entertainment shows tabulate changes in watcher's preferences for future upcoming productions of theirs. Rather like the Safeway store program in Maryland, USA judging what products users are selecting, when, and in what combination with other products, and how current events effect their selections. System notes when the preference selection was made by both the user and or system - such being useful for producers, and in judging changing habits of user as well.

-D: broadcast station sends out additional code labeling its type program, eg: classical or country music -> receiver -> "analyzer" -> sys (system) selects and stays with desired program.

-Footnotes: display ("S"); pp; mp; uk; date (of shows); all; vc; uq; mq.

1C-181: CHANNEL SELECTOR RATING SERVICE:

From 5.96: Private parties rate broadcasters and other data providers by any criteria. Ratings in turn influence channel selection / screening by subscribers to rating service.

-D: rater codes channels / broadcasters / publishers / transmitters = tr/rc = subscriber merges rater's codes w (with) program(s) = selecting / screening sys (system) (1C-180) = u (user) views material.

-earlier KN?

-applications: rating value of (business / educational / scientific) data on: internet / broadcast (especially if there is no self monitoring for its quality);

--ratings can be given for each aspect within each channel or sight on internet: selects aspects of movie or game / selects different articles w/in said sight on internet.

--rater's comments = can be viewed (s) by = u

. For Techies: "route", "edit", "score", %tds, analyzer.

+ <3, 3, 4, 4 Not$> 1C-290-083004 AUTOMATIC AUDIO BALANCER: Speakers' volume adjusts according to where person sits. System uses central point for two or more people. Example: home or car stereo. Details moved.

+ 1C290 AUDIO FOLLOWER & BALANCER: The output of speakers adjusts and is balanced according to your location with the remote control device. Wherever you are, it sounds like you're in the middle of the sound system. Walk to your desk and enjoy similar same surround sound effects as you had while in front of a TV (broadcasters of opiates to the masses - might not like this).

. Designated audio visual signals follow according to UIP (User Information Programming ™), e.g.:

-Segments tagged as commercials are 'edited out.

-Adjusts for the hearing impaired, or the type of hearing device being used in one or both ears.

. Applies to any audio communication function. Examples: educational 'video games, 'virtual reality training systems teaching compassion to hard core criminals, stereos, TV, pod casts. A list can be obvious.

. Creative Expansions Include:

-When and or how system selectively chooses to function, based on automated criteria. For toys, games, etc.

-Nurture creative thinking.

-Extra features to generate greater impact or experience in listeners.

. According to user's location, the speakers balance their sounds accordingly.

-user's transmitter; or systems motion detector determine locality of person(s) and decides which speakers need more or less sound.

--if there are more than one people, then system balances sounds according to the rough center of the multiple people

-ap: television, radio, any other music or sound generating device

The following was product number 1C-050: Sound Walk About:

continue to hear the sound of what you are listening to regardless of where you go in the house or other premise.

-when on speaker tel ("T"), you can continue to speak to person throughout your room/premise since the covered area has multiple microphones and speakers

-when watching television or listening to sound system, you can hear almost equally as well regardless of where you go. Even different c/tv/"notifier" screens (s) can automatically go on when you enter a different location. (Ecologically minded people don't want multiple tv's on at same time).

Ap: theater where certain sounds may wish to be activated from different regions of stage

*-games

*-getting information while walking down hallways

*-speakers may be portable, as well as microphones

-couples as paging system in large buildings: sys (system) knows where u (user) is, hence^: broadcasts only in u's area; "notifies" u (user) there via (osc, flashing lights)

-television screen's position adjusts to best position by where person(s) are.
-system identifies person's, animal's location via movement sensors; then can announce statements via speakers nearest their location
*-same product might also be used to broadcast via the speakers according to product's central control (not based on positioning of human(s)
Related to product 1C-291
-person walking around has transmitter identifying their location and or transmitting their outgoing voice via their "mic". As person walks, the speakers near them are activated.
-related to product No 1C-110
. For Techies: remote ("R") control of balancer; pp; mp; date (at certain times the balancer is programmed to over-ride where people are and has a set balance that is needed); interactive%; basic; vc; score%; md; cp; mq; access; uip; clap; distancer.
(see diagram in "Product Specifications" paper)
-Pat str 6.96 Bib Disk: (sound* or audi*) and (balanc* or (follow* near8 (listener* or person* or user*))
-US Patents: 5386478 sound system remote control with acoustic sensor.

END OF 1CE FILE
File: A B C / IC1
FILE: 1C1

1C030 CRITTER CATCHER - Cockroach Slick:
Slippery chemical formulae used for inner lining of garbage cans. Keeps bugs from crawling out of the can if it is not completely full. This solves the problems of having to frequently take out garbage, especially in the evening.
-Similar in idea to the Pitcher Plant which has hairs that trap insects into its pit which is usually filled with water and chemical to digest the bugs.
-The non-electronic product version was tested, it really works.
-'Customized sounds ['osc], smells attract [sexually related] 'designated insects. 'Customization can be based on what its 'sensor's 'track/'analyze are the type/number/size/behaviors of the organisms.

1C-040 SOUND ADJUSTER:
-Amplify the following doorbell; microwave and or other cooker or coffee maker's buzzer signifying food is ready; premise's burglar and or fire alarm: when only the hearing impaired person is at home, or when there is a large party, or when people are in the house's backyard, etc.
-Each device's audio volume goes up when programmed such individually, or when the central command is so programmed, in tern all connected devices up and lower their volume accordingly

-Additional ap: tel ("T")

-For Techies: display; pp; mp; uk; date; all; "mic"; bp; alerter; osc; score; access.

1C-070 VIDEO MESSENGERS:

-Leave messages for person onto video tape or stored in "C". The CRT will announce messages verbally and visually at a pre-programmed time

Applications: eg: when mom wants her kid to do something at designated time, eg: tell her daughter to put pie in oven before mom comes home from work; tell spouse when you'll be back home; leave message for employee at work; president can send same message to many people at once - saving president's time and getting good impact

--Intercom system

-* View the activity of the office from your device (also acts as type of security), can see who is at front door too

-User can also request to get their messages

-For Techies: display; "C"; pp; mp; uk; date; states the time and date of incoming/outgoing messages automatically; interactive; toy; all; entertainment; "mic"; synth; mfh; bp; alerter; osc; vc; score (number of messages); cart; tel ("T"); sp tel ("T"); tr; mo; fs; cp; mq; access; character; clapper (recording activates other items, eg: microwave stove)

1C-071 VIDEO ANSWERING MACHINE:

Leave video messages for people in your office or home. Also has interactive video feature, whereby user can ask questions and get more information.

Like a tel ("T") answering machine, leave audio/visual messages on another's machine by transferring data via wire or airwaves.

-All operations are basically similar. Eg: outgoing announcement can be received both via audio, or audio/visually on caller's device; receiving device prompts caller to send their a/v signals (though only audio can be accepted as well if caller's system is more limited).

-Can work with the cruder current video telephones, and with more sophisticated future models.

Footnotes:

Also acts like a fax receiving machine.

.-if caller's device doesn't allow visual transmission, or if there is technical failure, system will work just in audio mode

.-additional ap: receive video clips at any time of (shows, instructional nature [user can request from manufacturer detailed instructions on how to operate, repair, etc their product])

. For Techies: display; "C"; pp; mp; uk; date; states the time and date of incoming/outgoing messages automatically; interactive; toy; all; entertainment; "mic"; synth; mfh; bp; alerter; osc; vc; score (number of messages); cart; tel ("T"); sp tel ("T"); tr; mo; fs; cp; mq; access; character.

1C-101 THEATER LIGHT CONTROL:
-related to an AX product
-walk about the stage and w/o public's knowing trigger different lighting - saves on costs of human labor to move and turn off lights. Also applies to normal light switches.
Applies to existing versions of this product:
-Patent Development Directions: find the existing patents for the basic products and attach the remote ("R") control feature. Then demonstrate how this remote ("R") control mechanism might be considered patentable. This remote ("R") control addition does the following: turns on/off; effects the level of operations like (intensity [such as volume, brightness...])
. For Techies: remote ("R"); display; "C"; pp; mp; uk; date; all; bp; alerter; osc.

1C-102 TEL ("T") CONTROL FUNCTIONS: activating: speaker phone, volume control for incoming or outgoing voice, hold button
Applies to existing versions of this product:
-Patent Development Directions: find the existing patents for the basic products and attach the remote ("R") control feature. Then demonstrate how this remote ("R") control mechanism might be considered patentable. This remote ("R") control addition does the following: turns on/off; effects the level of operations like (intensity [such as volume, brightness...])
. For Techies: remote ("R"); display; "C"; pp; mp; uk; date; all; bp; alerter; osc.

1C-103 MOTION ACTIVATED SOUNDS: Opening drawers, boxes, windows, doors w/ or w/o an additional/optional lock system with a combination needed
Applies to existing versions of this product:
-Patent Development Directions: find the existing patents for the basic products and attach the remote ("R") control feature. Then demonstrate how this remote ("R") control mechanism might be considered patentable. This remote ("R") control addition does the following: turns on/off; effects the level of operations like (intensity [such as volume, brightness...])
. For Techies: remote ("R"); display; "C"; pp; mp; uk; date; all; bp; alerter; osc.

1C-104 HANDICAP ASSISTANCE: Turning pages in book for the invalid or hospital patient with broken arm; people with certain types of arthritis...
Applies to existing versions of this product:
-Applications for our related inventions: find the existing patents for the basic products and attach the remote ("R") control feature. Then demonstrate how this remote ("R") control mechanism might be considered patentable.

This remote ("R") control addition does the following: turns on/off; effects the level of operations like (intensity [such as volume, brightness...])

-For Techies: remote ("R"); display; "C"; pp; mp; uk; date; all; bp; alerter; osc.

1C-161-083007 THE "C" EYE: Product memorizes environment and knows how to move or function within it.

-Mobile unit (eg: train, automobiles, airplanes, ships (according to stars, when docking into designated harbor and dock number, etc) may also use infrared cameras (when the actual vision differs from the pre-programmed vision [what camera system has been inputted to expect to see] an alarm goes off; heat sensing cameras sensing for cars, deer, etc.

.-multiple concurrent systems reduce the possibilities of error, hence this and other systems can accompany 1C-160 in limited circumstances.

*-future: cars traveling down highways, etc will know if something is amiss if the visual is different: usages: common travel; street maintenance that checks for missing signs, lights, faulty safety barricading, etc

--use for automobiles on roadways in future for: autos ahead, rocks on road...

--system can guide itself in forests, jungles, dirt roads, space, buildings, etc. Analyzes any unknown visions by asking its "C" to compare the strange vision with all its memory, then system knows how to act accordingly

—system can move itself in completely new territory when its "brain" (computer) can act like a human and know how to respond to each vision, eg: it knows the different movement requirements for a street puddle from a dirt road's puddle; or a comet from another known flying object; or short wet grass, from tall dry grass; types soil; etc.

-requires extensive "C" memory

O-If the analyzer is stationary, is used to analyze what it sees and then act accordingly. Many applications!

-Eg: identifies people as they enter, if person isn't recognized can't enter; catches incorrectly made products, parts; seeks and finds items; does manufacturing by being able to see; etc.

1C-200 ENTERTAINMENT SYSTEM ALERTER:

Program user's tv/cable/music system(s) to alarm user when: time hits designate time; tel ("T") rings; person at door (doorbell goes on)

-the product we develop would be sold as part of a larger system

-exists: entertainment product whose volume drops when tel ("T") rings

Footnote: pp; mp; date; entertainment; alerter; osc; vc; score; UIP.

1C-280 CRT ACTIVATOR:

TV screen is activated when person is standing in front and or coming towards screen. The "C" may/may not stay on. Saves energy in the ecological conscious times.

-Screens can be for the home, public display terminals - eg: airplane schedules

-system(s) may go off if there isn't anyone there over 2-8 minutes
-reduces wear and tear on the screen
-similar to the idea that the screen goes on at the touch of a button
-sensor sensing presence of person activates screen via: standard -motion detectors
-ap: gets people's attentions when turned on, useful for sales...; personalizes the feel of computers for the public; directions telling people where something is (somewhat replaces the personal feeling of having expensive receptionists)
O-can verbalize information; *has speech recognition function which guides "C".
-For Techies: display; "C"; pp; mp; uk; date; all; "mic"; mfh; alerter; osc; vc; score; tel ("T"); mo; fs; cp; cm; uq; mq; access; uip.

1C-320 MEASURING OF TEMPERATURE:
Coffee/tea cup, glass changes color(s) and or its display shows the temperature - all in accordance with the temperature of contents.
-Good for containers serving baby food; the elderly who may not wish to risk burning (especially the senile); those invalids in hospital, etc.
*-Does not apply to spoons measuring temperature: this product was already researched, results not clear.
-For Techies: display; portable; bp; sp; cp.

END FILE 1CI
File: A B C / ICQ

FILE 1CQ:

* 1C-060 ACTIVATOR ALARM:
Central unit activates desired products according to the time set by user. Alarm time is alterable without resetting alarms for these products.
.-eg: Wake up in morning to electronic product, eg: television going on.
.-can alarm activate the products individually or via central unit (this unit can let user select which items are desired and at what times)
--items can automatically go on or be ready the certain number of minutes after the alarm used to wake up user
-the following products can be activated accordingly:
--microwave (put wanted item in there night before, waking up to hot breakfast...); ready when coming home
--hot bathtub water is ready at the desired temperature
--electric drier (because permanent clothing, especially permanent press needs to be taken out right away when completed to reduce wrinkles.) The setting here can be activated to start and finish any time the user is expected to return home (from shopping, work...).

--computer: system can even have the desired software and printer up and ready.
-*ap: the following are also activated to their desired state: saunas
FOR TECHIES: remote ("R"); display ("S"); pp; mp; uk; date; all; entertainment; osc; vc; cp

1C-050 & *1C-120 QUIET NEIGHBORHOOD: Silences noisy animals in vicinity via sound waves inaudible to human ear. Device's sounds induce animals to leave the area and or reduce their aggressive emotions. .
-Peace - Animal Silencer: Quiet down noisy dogs, cats and birds in your garden or neighborhood.
-cause unwanted organisms to either become quieter and or leave the area by emitting air frequencies that cause them to quiet down and or leave. Such frequencies can be designed to influence any other possible effect, eg:
--be more relaxed, more or less hungry, more or less sexually aggressive, die or live longer, improve health...
-does your neighbor have a noisy dog, or do you wish to reduce their noisiness? Simply emit sounds that teach dog to reduce their barking
+-dogs barking automatically results in: 1] system generating the outgoing response, since its receiver hears the barking; or 2] user manually chooses to activate system
-emissions may be: sounds in and out of a human's hearing range such as barking of certain varieties and or "C" generated sounds of monotone, multiple tones/frequencies, etc which are unpleasant for animals.
-need scientific data establishing: which sounds deter dog barking and are "probably with good reason" not a hazard to common pets, humans or plants.
-neighbors with their noisy dogs need not know the system is in operation
-of use in scientific laboratories too
-applies to any other organisms: animals (unwanted birds, fighting cats, etc), insects (crickets - unless you like their sound), etc.
-first system emits sounds to reduce their aggressiveness, if this fails (system's "mic" -> sound analyzer) determines if noises have stopped, and if not tries the following optional sound mode: induces animal to leave area. Type sounds are automatic or controlled by user.
+ told verbally technology exists, but application might be unique.
. For Techies: remote ("R"); display ("S") (shows type of sound by decibels, etc); pp; mp; uk; date (records when the sounds are made, as evidence for police, courts to complain about noisy animal); all; "mic"; portable; bp; alerter; osc; vc; score; tgh (makes sounds to drown out type of bad noise); cart; cp; uq; uip.

1C-170 'NOTIFIER - Video Alarm: A visual and or audio response goes into effect when the following ring: door, tel, clock alarm, food timer, party goes up the dwelling's walkway.

1C-210 'SCREEN - Hologram CRT: for television and or computer graphic display, etc.
-accompany with music, eg for graphic - music video

* 1C-230 'OUTGOING SOUND GENERATOR - Voice Generator: Converts keyed in words to voice. And visa versa, should exist: spoken words into text.

-Record the voice of a person making many syllables. Then system will generate the desired sentences based on the voice bits from recorded syllables.

--using a very large vocabulary of over 20,000 words, system can have near natural speech.

*---system's knowledge of grammar will usually let it know where are the correct accents in the sentence, eg: sentence ending in a question is treated differently.

-Record voice of friends and or others, and system can then alter the voices to a large degree so that the recorded person's voice appears to be the generated of the desired speech

.-such inputting of voice may need to be done differently according to the level of technology desired:

.--speaker is required to state any number of syllables, "C" then generates sounds accordingly

--computer estimates the type of voice it receives (according to its software, which classifies voices by type and then once the "type voice(s)" are determined, then can synthesize sounds to meet the different characteristics of speaker's voice

-user selects the type of language, accent or other speech pattern/style, sex or type character (eg: chief, mother, clerk...) desired

O-translates languages: type in text in any language, then designate which language speech should be done in

*-synthesizer: user can speak in the text desired to be outputted into the altered voice

-Footnote: display ("S"); pp; mp; uk; date (when recordings should be played, time length of recordings,...); interactive; educ; toy; all; entertainment; "mic"; synth; portable; sst; printer; mgh; bp; osc; vc; cart (languages, background music/sounds)...; functions with telecommunications devices; fs; uq; mq (eg: which language); access (if audio is for public release)

-ap: portable translating device (key in and it speaks for you); tutoring, guiding, instructional systems; getting audio information over tel ("T") lines; assistance for the deaf

. PATENTS: key words searched via www.qpat of US pat 1977-1.97:

-(voice* or sound* or speech or speak*) and (convert* or translat*) and (computer* or software* or electr*) not foreign*

1C-240 CARICATURE 'SYNTHESIZER:

Enter visual 'image of 'character (human, cartoon, etc) and then command / 'customize the image to act according to desires: smile, laugh, walk, jump, winks eye.

-program in text to be spoken and character then lip sinks (lips move in motion of sounds for any known language [or invented language]). Saves tremendous amounts of time and problems!

-also applies to animals, cartoon caricatures, any other graphics

-numerous uses: cartoon characters giving speeches at disco's; utilizing famous personalities who have consented the copyrights of their images to be used for whatever purposes, especially considering they may be

too busy to do everything in person, eg: they have a standard slogan and insert a particular major store's particular address location's name/address

* 1C-260 'CUSTOMIZED SAFETY: Remote ("R") Control Safety Switch: Dangerous machinery is deactivated by a distant observer, if something is wrong. 'Analyzer 'scores safety levels based on: 'sensor, 'behavior analyzer, and gap in required knowledge to use system with what 'guide has taught user.
-should user be using a device and there is an apparent danger that user may or may not know of, the distanced observer can turn off the machinery and or send any other type of signal to user to be aware of the danger and or need to divert their attention to some other matter which isn't dangerous
--alerting user can be done via: turning off or turning down (reducing/slowing down/etc) user's machine
--flicking of lights in room; a beep on machine; flashing light on machine; etc
Ap: working with electricity; working with dangerous animals; cutting down of large trees and other cutting and drilling devices; using other dangerous machinery; etc
-when system has been used beyond maximum time for particular user, system warns user or another party for that member to stop using device
-Footnotes: remote ("R"); display ("S"); "C"; pp; mp; uk; date; all; "mic"; bp; alerter; vc; score; cm; uq; uip.

END OF FILE 1CQ
File: A B C / 3CE
FILE: 3CE

+ 3C141 Chef's Automated Timers: <4> <2#, 2#>
System analyzes when food items are fully cooked to the desired level. User keys in type food, and size (eg: 5cm thick roast), and desired level of cooking (eg: well done). Thermometer placed in food must reach minimum / maximum temperature over certain time span, in tern food is deemed ready, user notified by alarm or pager. Heat can be [automatically] reduced to warm when food is ready. Cook is paged when food is ready. It is ideal for poultry and large dishes.
-oven can cool down somewhat if the thermometer goes above desired temperature. Use one or more thermometers for this purpose. sys (system) "analyzes" the best temperature for the food throughout the course of the cooking cycle, eg: heat might be higher in beginning (trap in meat juices). sys (system) / u (user) pr (w w5) oven temperature (and what temp at which time in cycle).
-Remote Cooking "Analyzer":
-("Remote" version) when the inside portion of food has cooked up to the required level
-Methods:
+ a thermometer inserted into center of food, signifies when food is fully cooked

-Patentability. Exists: plastic pops out of chicken, user then knows chicken is ready. The pager portion appears patentable, as well as the "analyzing" and "interactive" modes [which alter temperatures for situation automatically].

-oven changes temperature at ideal times, eg: cooking chicken at higher temperature in beginning is a certain method. Eg: u (user) pr = C ('computer) (k type food, size, recipe, etc) = score (timer, tds) = notifier.

.-Each food, eg: chicken cooks differently due to: volume of chicken (bigger takes longer to get hot)

-"Nr": Signal is sent to an alarm near the stove, or to the user with its stationary or portable receiver, and or the cooking device alarms or makes announcement or beeps code for status.

.-program the transmitter to alarm after its temperature has been above a certain minimum temperature beyond a certain time period. If food / oven gets hotter than the minimum, then the time period before alarming is reduced. May get hotter due to: change of temperature by (impatient) u; malfunctioning oven.

.--programming might be done by placing transmitter into: a larger device with its keyboard, "S", etc. D (Drawing):u=k=c (analyzer, s, sw (software) (menu of food choices, food size options, how food wanted cooked, etc)) = TR (transmitter) (transmitter) (wire/wireless)/(oven) temperature controller = thermometer (tr temperature (inside food) to c) / (oven) heater (el, gas)

+ Also: pop out item might be disposable and when it pops, makes a particular sound that activates the alarm. Allows manufacturer to insert such cheap, non-electronic poppers. D (Drawing):popping/other sound or signal creating device = sensor (mic) = analyzer = C ('computer) = pager/nr.

.--consumers might get free alarm after saving "purchase seals" on package of each item. The popping device works with or without (user sees the thing popped out...) alarm.

-heat can automatically be turned off or reduced (to keep food warm) when food is ready.

. For Techies: "R"; "S"; pp; mp; date; tds; all; "mic" (for type sounds which identifies progress of food); "M"; alerter; osc; vc; score; cm; uq; mq.

-D: 3C141 Automatic Cooking Timer =

ACCESS (prevents kids from using sys)/ *CAMERA (visual analyzer judges when food is ready)/ CART (sw for type foods)/ CLAP (turn oven on or off or alter *temperature)/ DATE (timer controls cooking cycle)/ s (screen) ()/ EDUC (teaches how to cook/use sys; q)/ K ()/ M (food recipe database)/ MIC ()/ MO (turn on oven from remote location, via c)/ MQ (prompts user if u's req appears odd/impractical)/ MULTI-USER (memorizes each u's uip (their cooking tastes, eg: person #5 likes chicken cooked longer than person #82). Access determines difference between u.)/ NOTIFIER (time to start/stop cooking)/ OSC ()/ PR ()/ Q ()/ R ('remote control) ()/ SCORE (past foods eaten (for dieting purposes))/ SENSOR (thermometer)/ SOUND ANALYZER (sounds from cooking food (helps) determine when ready, eg: greater splattering of oil by 175% shows its ready)/ SPEECH ()/ STATUS (how far food from ready; what's happening (w5 of food); nutritional information (and how it changes throughout cooking cycle))/TDS ()/ T (calls u when food ready)/ UIP (cart).

-D: changing heat of food -> thermometer -> sensor = analyzer = tr/rc = C ('computer) (sw, uip) = s/pager/osc/[heat controller->heating mechanism]/r/k/*mo/*m

-Other things that need nr when they are ready: chemicals have changed as designated (from experiment), any other required condition has been met inside container as measured by "sensor" / "analyzer".
-pat str: (cook* or oven*) and (analy* or alarm*).
-5341728 US patent
.-what's cooked, and under what circumstances:
any type of: meat, casserole, etc; cook via slow mode [automatically starts earlier [while u is at work]] for low temperature cooking; if u doesn't return home= sys (system) adjusts food automatically when: 1] food is cooked enough; 2] u didn't return 30 minutes before its ready and [u programmed] cooking switched to low temperature mode since u (user) doesn't want ready food switched to warm mode to keep food warm.
+ see "React": system responds and "interacts" with a diverse array of events as programmed.
. PATENTS: key words searched via www.qpat. US pat 1977-1.97:
-pulls too many patents unless narrowed by year of patents search.
(food* or meat*) and (cook* or oven*) and (pages or paging or study* or studies or analyz*)

3C400 Water Fantasy Toys ™: + <3or4, 4, 2>
Children can skim invention along pool water's surface. The water is forced through the invention's tubes, and squishes into the air. Snap the invention into a different shape and create new water forms.
. Interesting sounds are activated according to the invention's current shape and intensity of water squishing through its tubes. Each water sensor plug in module creates its own sounds. Fun way for children to learn how they can control the elements of their environment.
. Expansions Needed Include:
-Use the invention's water force to power water based gadgets. An alternative energy source for toys, more..!
-Water forms created: umbrella like fountain; air bubbles into water. Applications: spinning toys; water force broadcasts fish food or other elements into the air, or under water; more..!
+-Protection devices against kids sending water out too far, as it may land on people or dry objects.
+-Attach to any water moving device or vehicle, eg: surf board, sail boat, or to the back of a snorkeler.
. When water flows or moves, makes interesting sounds due to shape of water tunnels or microphones and synthesizers. Method to squirt water without using hand trigger, coupled with possible synthesizer emitting sounds according to how water is being squirted.
-Microphone (needed if u (user) wishes) to pick up on splashing water, in tern synthesizes the sounds and broadcasts louder than the actual splashing.
. Other methods for generating water sounds:
-blowing air / water via device to produce bubbles.
--devices include: straw; hole; other (water/wind) musical instrument played with water; piped in water or air (under high pressure), eg: from common house water hose or air pump.
.-insert and mix with the water flowing through device: color dies; air (bubbles); water heater...

.-When in bath, creative woman can splash a little, and this makes interesting enchanted sounds.... more interesting and heavenly than a bubble bath

-sounds are also made according to how sounds are generated while taking shower; flowing water; water fountain (in garden, drinking fountain); (nearby) brooks.

.-also "synth" / masks (kn Soundbuster/Noise Canceling devices) sounds of: nature (birds); nuisance sounds (dogs, traffic, indoor sound pollution (refrigerator, voices), most anything else pr (by u/mf)

-D: 3C400 Water Fantasies =

BALANCER ()/ BVA (for characterization: sys (system) identifies via sound analyzer type of sound source, eg: birds)/ C ()/ CART (how sound altered/synth/uip)/ *COMPOSITION ()/ LOCATOR (synth in effect only where u goes/travels w/in dwelling)/ M (sound analyzer)/ MIC ()/ MQ ()/ MULTI-USER (sys judges u (user) identity via sensors: body weight (in bath) and or: access, water temp selected, time of day sys used)/ NOTIFIER ()/ OSC ()/ PR ()/ Q ()/ R ('remote control) ()/ SCORE ()/ SENSOR ()/ SOUND ANALYZER ()/ SPEECH ()/ STEREO ()/ SYNTH ()/ TDS ()/ UIP ()/ VR* ()/ WA ().

. PATENTS: key words searched on www.qpat. US abstracts 1977-1.97:

-water and (sound* or hear* or listen* or audi*) and (squirt* or kim* or push* or drag* or force* or forcing or toy*)

. 9G100 Exercise Water Squirter: Flat plastic being skimmed across water surface forces air into air via small holes. Greater exercise results in more water air flow. <3, (1.5-pat, 3-mk), 1.5-pat> simple version

-wave plastic across surface of water -> water pressure squeezes through then squirts water away -> via funnel. The greater the water pressure (speed plus depth device is below water surface) the farther the water squirts away.

-technically viable?

--D: water <- moving funnel's hole open end = funnel's smaller hole end -> water squirting out. Cheap to produce.

-narrow funnel part can be moved / attached to movable tube -> water squirts into differing directions.

-For Techies: helps for device to be a certain level of depth below surface to maximize amount of water squirted per unit of energy used to push device. N (invention) are "Game" pieces: played between human players. +Attach to water sports toys. This N (invention) can be toy's: boat, hand, feet, flippers, surfboard, paddle, water wheel *.

3C420 SOLAR JEWELRY: <2, 3, 2, $> Heats up in the winter via solar power. More interesting for teenage girls than standard jewelry.

+ manufacturing costs too high for price market would bear.

-heats up in winter and helps keep you, ears, etc warm. Panel on jewelry, clothing, etc. Jewelry might even store energy and make sounds, pre-recorded music, act as musical instrument.

-Microwave version heats up too, patentable?

-item was merged with 4A280*

-Activated by combination of light and cold outside air
-the actual heat level might not be too great, but is interesting non the less; does not require batteries
*-is cool in summer
*-temperature change is activated by contact with human skin's chemical's or other bodily characteristics
-applicable to other items worn by users: shoes, hats; (* pants, shirts, jackets, something worn about neck, eg: type scarf...)
-probably exits: battery powered heating devices for clothing.
. For Techies: date; all; exercise (keeps you cooler); portable; bp; sp; cart.
. PATENTS: key word search of US abstracts 1977-1.97 www.qpat:
-(solar adj power*) and (jewelry or cloth* or hat* or jacket*) and (heat* or warm*)

END FILE 3CE
File: A B C / 3CI

FILE: 3CI

CLAPPER PRODUCTS: The initial following items to deactivate and or activate according to concepts within 'associated inventions including those in the 2-A file which operate by clapping. See 'Clapper feature too. When hands are clapped the following actions can occur. "Clapper" = "R" (remote control device). Sound -> 'Sound Analyzer -> 'Reaction -> Function triggered.
. 3C-010 Speaker telephone (incoming/outgoing calls; dialing (certain claps designate digits of "T" number)
. 3C-020 Doors: physically open and close; their locks
. C-030 Identification: each person who walks buy makes their verbal code and "C" system records who it was. Uses: locates where people might be... Moved to "track"
. 3C-040 Opens pet door for dog or cat seeking in/out to/from garden. Or system might simply respond to animal's bark or meow or scratch or push. System might also not allow operation at certain hours...
. 3C-050 Turn on shower or bath. System already knows at what temperature you want your water by clapping.
-pre-selecting the desired water temperature is not patentable by itself
. 3C-060 Turning on television, VCR, music stereo by clapping

OTHER IDEAS (Some below may use "clapper"):

3C-080 SOLAR BATTERIES:
Leave the device out in the sun, and it automatically charges up via solar energy. Or the powering source has large solar cell(s) and stores power which in tern can be given to portable products when they are connected for the required time (like plugging into electricity); or portable device must be plugged into this solar device and then the devices will collect the sun's energy and transmit to portable product simultaneously.

-batteries themselves when left in sun recharge themselves without the need of any recharging device - everything is one product. Consider over heating in the sun too. This might be good, even if it takes a week or more to recharge.

.--simplifies things for user if they have many such batteries. Such batteries might only fit certain products due to uncommon shape. Great for ecological products too.

-OTD: "S" (shows level of charge in battery); toy; portable; sp; cm.

* 3C-100 RANDOM TOY REMOTE CONTROL SOUND ACTIVATOR:

"R" control activates the following:

+ button when pressed will cause the train track crossing to sound ahead, and close the gate, flash train track's lights; flash train's lights... Different sounds and or actions occur (when R ('remote control) is pressed).

-transmitter can also cause following in receiver's device in a diverse array of toys:

flashing lights; visual "S" showing words or graphics; physical movement, eg: opening/closing door, ball dropping to floor, etc

-transmitter can transmit by pressing of button, or whenever it is moved (inside has a motion detector)

3C-120 TEL TOUCH PAD:

Press soft pad and the manner in which you pressed it is transmitted to receiver. This allows something closer to physical contact while speaking with your friends. Only popular for open minded cultures

-the surface hands touch are designed to maximize human pleasure, and reduce any feel of moisture.

-if the other person presses, you can press at same point too. This pleasant tension allows the stronger of the two people to force back the other person - just like two hands playing together. -Footnote: mp; all; toy; exercise; cr & cp; "T".

3C-150 MOBILE COFFEE MAKER:

Make coffee in car while driving. Drivers love hot coffee. For safety device might only allow opening while: user has stopped car, or if car has more than one passenger.

-can send liquid to lips via tube too for cool or hot liquids

-liquid can be dispensed into device, which is nearly spill proof while container is in held in place receiving the hot liquid. When this container is taken out, it is somewhat spill proof using a special lid.

-the coffee is ready at certain time each morning so user gets it as they enter the car from the cold. 'TDS.

3C-160 MOBILE APPOINTMENT MAKERS:

Salesmen always traveling on the road can get their appointment calendar more easily filled up via the following method. Secretary talks with customer and can quickly make same day appointments (great customer service) by communicating with sales representative's device (via air waves). Salesman's devices store their schedule and approximate time needed at appointment and to and from the location(s).

-if salesman needs to do something different, they ask their device if their schedule allows. The device is reasonable in allotting the needed time. Device works best for certain types of sales people, especially those whose needed time for each appointment is rather predictable. Remember, there is less chaos in the west, and people wait much less in line, etc....

-also saves the required receptionist's & traveling man's time on "T", dealing with receptionist who is busy w/ another call...

Additional Features - valuable for limited business applications:

-traveling man keys in one of the following items needed by customer: quantities for specific supplies; a different person to come out and visit; etc

--this info is stored by device, then transmitted automatically each time traveling person connects in about their schedule

-traveling man puts the device into his car's socket which automatically handles communication with central "C". Doesn't require any extra operation

-has print out of appointments, with addresses, "T" numbers, and maybe even a map of the area, or the page number in the common map book of the area, with the coordinate numbers within the page (eg: B-4) mentioned easing locating the location

-secretary can always notify (beep..:) the traveling man to call her

-traveling men in the type of business that makes it difficult to know exactly how long it will take, can key in their expected completion time, and have schedules that are only one or two appointments ahead of the current appointment

Ap:

-Newspaper delivery customer servicemen who deliver papers to the homes that missed their paper (was stolen from outside door, etc)

-Repair men; those who fill up vending machines when they are told it ran out of supplies; those who simply have to deliver a simple item they keep stored in their truck; etc

OTD: "R"; "S"; c; pp; mp; uk; mouse; date; tds; "mic"; portable; sst; au; "M"; bp; alerter; osc; vc; score; tgh; cart; "T"; sp "T"; tr; mo; fs; rpc; cp; uq; mq; access (to prevent "C" hackers, etc); uip; character. 'Customized.

3C-170 CURIOSITY COLOR SOUNDS:

Converts sounds to visions: another product number?

-According to the sounds one hears from TV, stereo, etc the colors on the special screen will alter. Diverse shapes can also be created with this product, according to the type sounds.

-The graphics created can also be kept in memory, and later printed on printer

3C-190 VISUALS CONVERTED TO SOUNDS: System reads bar codes and makes desired sounds. See related inventions and old part.

One of my old ideas (under bar codes or music)
Can also read, something like a record player reading 2D surfaces

3C-240 HEARING AID CLAPPERS:
Get the attention of an old person just by clapping your hands. No longer need to touch them to get their attention. Hearing aid will then send loud signal to user. Related to product design 2B-12, but clapper mechanism wasn't established yet at the time it was released.

3C-250 VIRTUAL REALITY TOY: (Distancer)
Pen transmits how it is being moved. The separate receiver's speakers transmit sounds according to how pen was moved.
-User controls how the receiver synthesizes the pen's signals. -Eg: one movement can sound like many bells, or sound like the pen is moving in sand, etc.
. Other: Great for kids. Applicable to any device (with or without pen), eg: stick, ball, cube, doll, toy car, toy airplane... Related to 3A-790

* 3C-260 KEYBOARD FUN:
As one types on the keyboard; user hears sounds for each key. User selects type sounds, and when they wish to hear this function.
-definitely an older KN.

3C-280 THEATER STAGE CONTROLLERS: (Clapper)
By clapping and or whistling, actors are able to cause certain functions to happen automatically, eg: drawing of curtains; cause other sounds (rain, driving up of car; tel ring; etc). Reduces the number of people needed to stage a play. Can even be done from home for video camera (one person is needed for this already). (Controlling lights is via another design number).

3C-293 CONTACT GENERATORS:
When item comes into contact with, or loses contact with base, sound is generated.
-Applications: When toy airplane takes off from airport (base) the airplane sounds, can also have different sound as it is running on land strip. When doll touches toy dog's leash, dog barks or moves tail

3C-300 PAPER CLIP CHIRPER TOY: When papers are snapped in or out, makes a friendly chirp. Form of security [assuring they were inserted into a binder/folder/contraption correctly. RFID's or 'sensors on paper / snapping points. Each electronic part – one on sheet the other in binding element might snap/lock into each other, or be within the required distance.

3C-320 FANTASY DOOR KNOB: As it is turned, its colors change into two or more colors.
-In one color when door is opened, in another when closed.
-the color in knob changes, and or in dark the knob shows a little light, and can send light throughout the room too

3C-330 DESIGNER HEAD OR CREATIVE SHAVE: Shave designs onto head according to desired shapes. Popular Afro-American men who wear very short hair.
-Frame is held against head, then the shaver is allowed to move side ways in any directions for which it is programmed to cut out hair to create the desired shape. The user decides how hard to push the shaver in (protects the skin from damage)
-the frame adjusts to the shape of the head, and is moved about the scalp if the design needs to be in more than one general area
-programming function lets user choose a different shape that would be too complicated manually.
-according to Afro-American (Negroes) buying tastes only, this should hopefully prove to be quite popular. Near zero marketability possibilities for other markets, except maybe: punks and that sort of people.
-it should be designed to be as safe to use as a standard electric shaver
-the design is created by: 1. selecting the pre-programmed design in the memory; 2. merging existing designs with user's own created designs; 3. user creates own designs with mouse.

3C-340 TRACKER: Each time a person enters a room, the system knows and sends signal. Eg: user walks through a laser light. Obvious?

3C-350 Seat on which player plays vibrates according to type of activity at scene of game action.
-Can also tilt: when the user is being a driver in a car and turns a corner; etc.

3C-360 SMELL EMISSION PRODUCTS:
+ Designed to create positive feelings in people.
Actual amount of smell is so slight that it might not be consciously noticeable, though the person unconsciously is influenced by it.
-Smell comes from electronic discharge, eg: by heating a chemical and letting it go out; a small fan blows out a little of the stored substance at a time; a trap door opens at certain moments letting out the smell (without need of burning or small fan)

Applications:
-when greeting a customer entering or exiting the store, office, etc.
-when door mat or door bell are pressed
-when cash register is rung up

+-when food items are opened: the actual sensation of a food item is the combination of smell and taste. Sample products: canned, bottled liquids; jars holding foods; dried food packagings; plastic bag packaging that emits smell when certain seams are opened. Another product #?

--the smell source is non-carcinogenic

--samples of possible smell sources are needed for the requested specification. Speak with a chemist.

3C-370 SMELL TELEPHONE:

When the boss speaks with its subordinates, they want the people to be in a state of mind of attention, etc. Emission of certain smells when speaking in certain situations can be desired.

-System may best work within a special "T" network.

-Applications for types of smells being emitted when people are speaking in the following situations, with: clients; accounting; suppliers; mom calls son while she is still at work; etc. Different behaviors are required for each situation.

3C-380 TOUCH SMELL:

By pressing a button, you can choose which smell is desired. User or machine programs length of time smell is emitted. Obvious?

3C-390 TRAFFIC LIGHT CONTROLLERS:

Based on the volume of traffic going each way, the traffic control mechanism decides how much green light time they will give for each direction of traffic.

O-Merged with the following no: 8B-120 Emergency Street Light Changer: ambulances and police cars can change upcoming lights to suit their purposes.

Device is designed to work well ahead of time. This way, there is a chance for the necessary yellow light mode, which then switches to red (blocking traffic which would stop the ambulance type auto)

-Additional applications: for important government cars. In rare cases the following might benefit too: garbage collection; street cleaning.

-Exists?

O-Street lights are changing their color in the middle of night when a car is heading in the direction of light - especially applicable where there are no turn off roads, though turn off road lights could also save gasoline w/ this system.

-OTD: "C"; pp; mp; uk; date; all; mfh; alerter; osc; score; access (to make alterations in programming); "mic".

3C-430 DISGUISED CAR AUDIO SYSTEM: made not to look like what it is, so less likely to be stolen. (Thieves don't see that there is a music system in the car.)

3C-470 KEY INPUT FLOW CORRELATOR: Software makes music / sounds according to flow of letters being keyed in. If there is a certain level of tension, lack of creativity "C" notices and makes sounds to enhance positive behavior/thinking. "C" might also sound to keep typists typing well, making few mistakes - simple or straight sounds (mono frequencies) that keep the mind clear of clutter that causes mistakes).

3C-480 TOY ORCHESTRA:

Plastic devices shaped as musical instruments. Transmits sounds to stereo when activated. Create an orchestra.

-this system allows: not needing frequent battery change; effective sound volume control; many small pieces to play with; lets kids first start playing with the parts and later they discover they can generate audio sounds when activated by parent; less restrictive in having fixed large instruments; give instruments to the dolls

-parent or manufacturer limits the maximum sound volume without fear of young child making sound too loud

Applications:

-child lays out many instruments on floor, and upon touching or pressing its button (one of one or one of many buttons) creates something like an orchestra of sounds

-kids let their dolls play with instruments; often kids can play music together through their dolls

-Additional applications:

+ The different "R" musical instruments around the room are activated when central "R" control device activates them. Be in a room of different musical instruments.

+ Activate items to move (easier if within stationary position) as well as sound: animals, dolls ....

OTD: "R"; "S"; "C"; pp; mp; uk; date; interactive; educ; toy; all; "mic"; portable; "M"; bp; sp; osc; vc; egh; score; tgh; md; cart; cp; uip; character; distancer; motion sounder; float; cc; tilt; composition.

3C-481 TOY SOUND ACTIVATOR: Toy's airwave transmitter activates sounds of other toys. Examples: Toy gun firing causes enemy fire; throwing grenade activates stereo sounds.

-Similar to older KN: toy activates differing sounds according to toy's location. PS-Zone.

-Toy gun when pressed makes its own sound, but then results in: sound of other guns at distance location(s) (from "R" speaker); the sound of person(s) being hit by gun fire; sounds of glass, etc being destroyed.

-toy grenade's "sensor" transmits signal when it hits ground (vibration or motion sensor), or child can press timer prior to throwing which then activates sound from remote stereo.

OTD: "R"; "S"; "C"; pp; mp; uk; date; interactive; educ; toy; all; "mic"; portable; "M"; bp; sp; osc; vc; egh; score; tgh; md; cart; cp; uip; character; distancer; motion sounder; float; cc; tilt; composition.

3C-520 MULTIPLE GARAGE DOOR OPENER: If the garage door you seek to enter has a car, then another door will open for you. Parts: Access, multi-user, sensors (for presence of car in garage).

+ 3C-540 PERSONALIZED PAGING SYSTEM:

The speakers broadcasting for the desired person are only activated if they are near the desired target. Desired target: in hospitals teams of people are near certain mobile carts, machines or other inside use vehicles; transmitter worn by person (in this case there are certain reasons why the standard beeper isn't used to get them, maybe they are a doctor and can't sanitize their hands by touching beeper); company buses.

-ap: if you only need one person in the group; its not cost effective or inconvenient for everyone to wear a beeper since the system might be activated per user too infrequently; person often forgets / loses their beeper

-tel: when it rings for person, it only rings in area where they are. The concept of a special ring is optional in this system. The choice of the system depends on user's tastes, work styles...

. For Techies:: U = This n~c~analyzer = access [only certain u (user) can receive nr (via heuristically or other means)] // ba ('behavior analyzer) [nr adjusts to u's perception style] multi-user [] // nr [] // osc [] // ps-zone [] // score [] // s&r [] // sensor [] // sound analyzer [] // tds [] // t [] // track [user] // uip [] // wa [].

3C-590 HUNGER INHIBITOR:

The following stimuli needs research to determine how they reduce hunger:

-sounds; visions; vibrations from massage machine or chair; smell generations (eg: incense). Parts: ba; uip adjusts stimuli to u (user) for max effect.

PRIMATOLOGY:

Elements in common to all primatology inventions:

-Device attached to primate via: strapping; insertion into body via operation.

. Inventions allow scientists to measure and study the following:

--medicinal effects on primates, and in tern humans;

--how environmental factors, which influence primates, may intern effect humans: population density; type roommates in cage; food intake; temperature; externally generated sound effects.

--other items studied: effects of medical operations

. These inventions are applicable to any type of animal (or maybe human) activity.

. Obvious Technical Details (see the file IMI7 for definitions; these elements are included only for technical feasibility instead of useful applications)

"R"; "S"; "C"; pp; mp; mouse; date; TDS; interactive; toy; basic; "mic" (measures animal's sound generation and correlates with other items being studied); entire systems can be set up outside in nature with wild animals; sst; printer; "M"; BP; alerter (for animal and or scientist); OSC (for animal and or scientist); egh; score; tgh; md; tr; cp; cm; uq; uip (on animal's behavior).

3C-600 MOVEMENT MEASURER:

Strapped to a body part, the movements of primate are measured according to the level agitation incurred to device.

-One of the methods via which to measure agitation: one small ball per cylinder; minimum nine cylinders.
--intensity of movements registered according to how hard ball hits the ends of cylinder [vibration 'sensor].
--primate's transmitter is recorded by "C" through its receiver
-applications: relationship between level of body motion to other phenomena being studied, eg: health, illness, environmental changes. "C" tabulates and correlates bodily motion with other simultaneously occurring phenomena.
-type movements made:
--arm, legs, head, entire body, finger movements
--types of entire body movements: jumping and swinging, and distance of each action
-measures sleeping cycle
Obvious Technical Details:
"C" "S";

3C-610 REMOTE CONTROL PRIMATE EFFECTORS:
Send particular signals to primates' receiver, which in tern results in invention strapped to primate to create the desired effect.
-Menu of possible effects: sends positive or negative behavioral reinforcers, eg: vibrations, electrical charges of pleasure or pain to particular body parts
-This product works in conjunction with our Movement Measurer invention.

3C-620 PRIMATE PREFERENCE IDENTIFIER:
Know which males or females primate prefers, and how often the two are near each other.
-Methodology: uses a distancer to know when monkeys are closer to each other
-Analyzes behavior prior to meeting the other monkey, eg: amount of movement with the Motion Detector. Motion can be measured as "courting" prior to actual meeting, via "C".
-Correlates types of behavior with other female or male primates according to external factors.

3C-630 EXCITEMENT CORRELATOR:
Correlate level of primate's excitement with the other elements being studied.
-One method for measuring excitement: heart beat while the primate is not in major physical motion. Motion detector's inactivity while the heart rate is beating faster than normal signifies primate's excitement.
--system memorizes primate's normal heartbeat while inactive, and while in different levels of activity. Should the level of excitement curve go higher than the normal physical activity's correlated heart beat curve, scientist can see there is an above average level of excitement.
.Applications:
-works with the other inventions
--eg: when "R" control is used to generate effect on primate, able to measure primate's level of excitement

-effect medicines have on levels of excitement, and the corresponding excitement curve

3C-640 BLOOD ANALYZER:

The implant checks for changes in the blood contents.

-Methods: device's chemical "sensor" (miniature chemical laboratory)

sends signals to its transmitter to send signals via wireless

-checks: temperature; red / white blood count; chemicals; antibodies; viruses; Ph balance; etc

. Also analyzes:

temperature (also: frequency and length of any fevers); breathing; urine; feces; sweat; movement of eye lids; frequency of cleaning; muscle activation analyzer; stomach (frequency of eating; length of time contents are in stomach; Ph balances; any stomach upsets...); frequency and time span of chewing.

. Product usage frequency tabulator:

Measure the frequency, time span and method in which product(s) were used.

Products: bells to release anger, or used for fun; food dispensers;

--- END OF PRIMATOLOGY SECTION ---

3C-660 INTERACTIVE PROJECTED DISPLAYS:

"S" is projected onto any flat surface, eg: screen, wall. User can interact with system and its "S" by blocking light, which goes from device to the flat surface.

-Related to older KN (invention) (maybe in C, and this older KN (invention) deals w (with) interactive screen on car's dashboard).

-Device knows a light has been blocked. User sets the distance device is from screen. If the reflecting light (going back to device's visual receiving sensor) notes that the light returning is from a shorter distance (system counts number of waves of light)

O-other interactive signal creating modes: by blocking any other light (our laser keyboard or laser switch ideas) --or the screen can be at an angle which doesn't send light back to the device, and by blocking a light with finger or any other non-opaque device, device gets light back for the particular part of "S" that signifies what the user wants.

---different colored opaque pieces reflect back different light and intern generate different signals

.---screen projector's transmitter, and visual light receiver (analyzing signals of light block...) can be far from each other - so as not to require the screen to be at an angle. Or the projector can be at an angle.

.-screen projector's transmitter might be portable device

.-some limited functions within this over all possible array of features: just be a "S" which is projected onto an outside flat surface. Such "S" may always be in occurrence while device is "on", or may occur only at important moments.

-applications: playing games, eg: any board game - chess, checkers, go, monopoly; card games.

-"Locator": the location of person and or his device(s) activates certain functions, and or initiates certain menus.
-OTD: "S"; "C"; pp; mp; uk; mouse; interactive; educ; toy; basic; game; entertain; exercise%; portable%; printer%; ch; au; "M"; bp; osc; balance%; speech; vc; egh%; score%; md; cart; uq; mq; access; pi%; character; locator; multi-user; "R"; notifier; composition%; air pad.

3C-670 REMOTE ("R") CONTROL MOUSE:
Has all functions of standard mouse, except it works without a wire. Plus has a keyboard with 4 - 70 buttons. Is located in the IMI file.
-this product was probably released publicly after this original patent filing!

END FILE 3CI

File: A B C / 3CQ
FILE: 3CQ:

3C-220 AIRBORNE PARTICLE ANALYZER:
Judges the contents of container or item being studied outside container by smell(s) it emits (quantity, timing, frequency...). For biologists.
-system analyzes for amount of total particles in the air; system is also asked to check for particular type substances
-tds any changes, and records type change
-according to type change in smell, system can act according to program, eg: change temperature, dispense chemicals...
--prints out graphs of changes in smell (airborne particles) and changes in environment, eg: temperature, dispensing of chemicals...
-exists: sniffing machines, seeks human breadth, bombs, quality of food (eg: taste testers). A new booming area.
. . For Techies: "S"; "C"; pp; mp; uk; mouse; date; tds; educ; all; "mic" (changes in sound); alerter; osc; score; cart (of airborne particles to be dispensed by the product); cp; uq.

3C-270-083001 TOUCHLESS MUSIC PLAYER: Make sounds imitating or synthesizing your movements. The movements of small transmitters placed on arms or legs are analyzed by receiver. Example: play drums with both hands without having to touch anything.
-related to existing music glove

-(Distancer) User puts transmitters on their ankles and wrists, dances to music from some stereo or radio, then the device's doll will dance in similar style to the person. Doll's receiver recognizes the positions of the four or more transmitters to each other, and moves accordingly.

.-It might be helpful to have one transmitter at the belt as the central point via which the other transmitters' locations are located.

* For Techies: hand band with such transmitter (wrap over forehead)

.-Exists: devices which move in rhythm to any type of sound. Eg: it can bend each time there is a beat to the drums or piano.

* 3C-580 CAR INTERACTIVE SCREEN: Any semi flat surface in the car can have the functions of an interactive CRT screen. By touching appropriate place, user can make the desired commands.

-Lasers (Laser harp invention) when tripped show where finger touched screen.

.-interactive screen: front or side windows; dash board... when touched in certain place, activate signal (this system exists with Interactive CRT systems)

-clear or faint markings can be on the surfaces designating set or changing menus and choices for that section of the surface area.

--if on window, may use see through ink

--the actual surface area can turn into an "S" system, which changes images according to the screen user are in.

---surfaces: windows (lets people see in and out too); pop up "S" from dashboard...

-Some of the command choices: audio system, heating, air conditioning, locking doors, safe driving options

.-people want many products for driving, yet they are unsafe to use. This is a much safer and user-friendly system. No need to bend down and select complicated keys. The applications will be those, which are desired for and compatible with driving.

--other interactive options are only for those in the passenger seats

-product applicable in other settings: home, office, R&D lab. Eg: control panel is on (wall, table, window, paper, plastic (sheet)) to control^: tv, stereo, kitchen appliances, computer (c), "t". This N (invention) is another version of "r".

-exists: interactive touchscreen in cars on CRT type screen

. For Techies: "R"; "S"; "C"; pp; mp; uk; mouse; date; interactive; educ; toy; all; game entertainment; portable (part or all of product can be taken out of the car); printer; "M"; bp; osc; vc; score; egh; tgh; cart; uq; mq; uip; character.

END 3CQ FILE

File: A B C / 4CI & 4CQ

FILE 4CI & 4CQ

4C-010 EAR RING ADAPTERS:

Converts earrings designed for pierced ears for those without pierced ears. Keep the beauty of the earnings by plugging them into magnets.

-related to 5A-440 Magnet Earnings: (non electronic) Hold earnings onto ear lobe without having to pierce ears by very strong opposite magnets.

*-earrings might flash lights according to

4C080 KEY IN TO IMPROVE CONNECTION:

Recipient of any communication, signals sender to alter how they're transmitting. Goal is to improve reception for receiver. Sender may (not) know receiver asked this – enabling better communication (without disruption).

-Tel option example: Listener controls volume of recorded or live information (that is user's keying in tells sender on tel line to automatically boost their volume) - doesn't require complicated equipment from listener, just punch certain key on "T" key pad

-signals from other call are louder when user presses eg: # on their tel (which doesn't have the capacity for making their t set's incoming sounds louder).

-less need to shout on international calls with poor reception, or when used in the many countries with poor tel lines (when there is a bad connection).

-related to other 4CG N.

-D: t (remote location) = k (punches key(s)) = tr/rc = t (more complex t sys: receives keyed in request from remote t -> increasing/decreasing/altering (voice mail) osc/pr (audio program) as heard by remote t).

. D (Drawing): u (user) = This N~C~ANALYZER = ACCESS [] // MULTI-USER [each user sharing system at different times has non similar preferred connection settings/communication styles)] // NR [receiver silently notifies sender('s transmitter)] // OSC [] // R [] // ROUTER [route communication to better channel] // SCORE [communication type/quality] // S&R [bad communication mode for better] // SOUND ANALYZER [audible sound quality] // WA [cell phone].

-Improves: user's [audio/visual] comprehension; system compatibility.

4C180 'CUSTOMIZE WAY KEYSTROKES ARE ENTERED: According to the software programming, the strength required to initiate a key is altered. That is, user can select how hard they want to hit the keys for computers, calculators, etc.

-program touch sensitivity, program if there would be an outgoing sound at each pressing.

-expensive to produce, but maybe for large scale production

-'score can show intensity of keystroke for 'education: some people hit too hard / too little, upsetting the system, e.g.: causing double hits when only one was meant.

4CQ FILE

4C-040 CALLER ID ACTIVATED SPEAKER TEL:

System automatically puts calls from special people onto the speaker. Answering machine takes call if user is out or doesn't answer.

-When calls come from certain "T" numbers, the speaker "T" automatically picks up the call.

.-works with 4C-041, 4C-042

-OTD: display; pp; mp; uk; date; tds; basic; caller identification system (identifies caller's "T" number); microphone; synth*; portable*; au; bp; osc; balance*; speech*;vc*; score%; cart%; sp "T"; cp; pi*; float (hand set floats); multi-user (different beeps, etc are emitted depending on which receiver is being called; 4C-041 Ring Identifier - if "multi-user" then prior to the speaker activation of caller's voice, there is a coded beep or audio announcement stating for whom call is for; cc*; remote*; notifier.

4C041 RING IDENTIFIER:

If "multi-users" use same tel line; then according to caller's id #, there will be a different ring when the call comes in.

-Known and unknown numbers (via caller ID) are processed differently. Each type of incoming call generates a different type ring, saving owner from having to check if incoming call is from a known number.

-owner programs their "t" for desired tel #'s (sys seeks particular incoming calls). When desired incoming call comes, receiver's system processes such calls (when desired) in different manner from unknown callers / calls from unwanted tel numbers.

--eg: desired caller -> rings on user's handset; unknown call / unwanted caller -> call taken by answering machine (without disturbing receiver)

.-person #1 programs their desired tel #'s and when person #2 hears ring for person #1, person #2 either lets person #1 or the answering machine take the call. Caller is unawares of this system.

+ Exists?:

-did someone say this product exists, and that the usefulness for receptionist is only area maybe patentable?

-second person said: rings differently per type incoming call. Personalized incoming call ringer exists.

-OTD: display; pp; mp; uk; tds; basic; osc; vc; speech (tells who call is for and from whom); vc; score%; sp "T"; cp; uq; pi%; multi-user; notifier.

4C-042 PERSONALIZED OUTGOING RECORDING:

Caller ID states whom call is from. If receiver doesn't want to take the call, they can pretend not to be at home but to have created a special message for this caller. The important point is that a beep follows the spontaneous message spoken by user into microphone, so that caller thinks they received a personalized recording only. Even the audio message heard by caller could lose some of its quality to help caller feel they reached a machine.

.-works with 4c-040, 4C-041

-OTD: s; pp; mp; uk; tds; basic; osc; vc; speech (tells who call is for and from whom); vc; score%; sp "T"; cp; uq; pi%; multi-user; notifier.

END FILE 4CQ

File: A B C / C Misc Charms

MISCELLANEOUS CHARMS FILE:
CONSOLIDATED FORMERLY SEPARATE FILES.

FUN FILE *

SOUND MAKING TRINKETS. Electronic gadgets sounding like:
bells, clippity clap (type sounds) bent pieces of metal, snappers, whistles, diverse percussions.
-Small electronic musical toys with 1 or more buttons, each making own sound upon pushing it (playing them together can make music too, etc. Put all on chain/string for bracelet, necklace, etc and when they touch each other makes sound (including electronic music toys). Each shape has own sound: parrot, even imagine what an orange sounds like, a small school house (saying "let's learn" giving good first impression to kids).
-Game #1: Charm switches sounds of objects, person must remember which object makes which sound. Before next game, select different sound option for each charm.
Game #2: Easter type game. When user finds one piece and presses charm's sound button, the first's sound activates the next charm (which receives the first's sound) should make a sound, person finds next piece and goes to following piece in complete circle until all found.
-Learn Languages: Each charm's shape can resemble the word it makes. For children learning their first or second languages, eg: fruits, animals. Option: can reprogram charms into different words and or sentences
-Misc: sounds in standard or regional dialects or somewhere in between; can buy, borrow from school library, or pay to rent

ALTERNATIVES:
. piece(s) used by inventors for putting parts together, in their combinations they produce an orchestrated sounds, designed to magically interact with each other. Trade Mark: Magical Music Blocks.
. for the woman whose lover or husband forgets to put down toilet seat - the charm alarms after flushing if the seat isn't down
. sounds when two shoes touch
. attach to drawers, sounds when opening. Especially for young girls.

. carpenter's tools: they often leave tools behind. Makes a single short sound if tool is too far from carpenter's waist strap bag.

. for child's play box, sounds whenever opened: drawer, chest, game box, box sold by manufacturer to hold to

. joke: put under carpet so sounds like wood floor is badly creaking

. wedding ceremony sounds: joke for people dating, on honeymoon, valentine's day, etc.

OPTION: have charms create sounds upon their receiving laser. Make music. Sound may continue from one second to several minutes, allowing single or multiple sounds occurring simultaneously. Cheaper option: charms might only be activated manually.

-options: have many little bird charms that can sound simultaneously. Buy a few and enjoy, then go back to store buying more for greater effect. Enjoy having the whole room or house chirping!

*CLOCK FILE

*B4-51 CLOCK TALKER: The user wakes up happier hearing the alarm, time, weather and type news desired, without commercials. Allows the extra precious minutes under the bed covers. Unique product integrates voice clock with on line weather and news selections. Includes: "osc"; "tds"; functions according to: pp; mp; uip; cart. TECHNICAL DETAILS:

WEATHER OPTIONS:

. Hook into telephone line, clock dials in for info. Receives digitalized or verbalized info. Product manufacturer can provide information telephone lines, which the Talking Clock dials into prior to the programmed awakening time.

. states weather before leaving bed and or opening window and or curtains. Know how to dress before leaving house. Weather reader (thermometer) outside is hooked into clock and gives verbal read out of temperature and maybe, humidity.

NEWS INFORMATION OPTIONS:

. The user only hears the type information they need. They can personally select to hear: News; Financial markets: Dow-Jones Average, NYSE [New York Stock Exchange], AMEX [American Metals Exchange], OTC Report, Bond Market, Precious Metals, Commodities Report; Sports; Soap Opera Updates; Local, national and international weather; etc. Select what you want saving self from bombardment of ads and other unwanted info.

STAGE 2 ELEMENTS:

Talks to user in many ways such as when it is time to wake up and even gives the weather outside.

Quotes:

. lunch time, coffee break time

. Getting work done? (programmed to speak every so many hours)

. ( ) minutes until: you have to leave for work / its time to go home/mother in-law comes / deadline (so many days and hours away)

. "Good morning Susan, Mr. and Mrs. Tanaka, its time to get up"

. it is now ( ) : time maybe with day, date and month

. Stage 2: you have the following appointments today

TEL REGIONALIZER FILE

A3 TELEPHONE REGIONALIZER

Callers of major telephone sales outlets, customer service, hotline and related departments get in touch with people who may better fit their personality types. When they get voice mail or are on hold they hear music popular for their region of country.

Telephone receiving switchboards judge probable personality of caller based on their records for that caller's telephone number's previous history with their organization. For telephone numbers with no known history the tel area code (and maybe first three digits of tel # showing region of area code) determine their possible personality types (much like insurance companies judging people by their zip codes).//

Legislation will probably soon allow receivers of telephone calls to know caller's phone number. Currently such is possible only within intra-state calls.//

To alleviate the ideal situation of having tel answered in regional areas nationwide, the accent and or music will slowly convert to the style of the people at the receiving end. (Eg: caller from South Carolina calls Manhattan, first they hear Nashville hits, then accent and music begins to accentuate itself to the Manhattan dialect. Telephone equipment also adjusts voice and music output according to type business receiver is in. If available employee with that accent (or more likely, the personality disposition most suited to caller's area, eg: get New Age person to take calls from West and Southwest; Spanish bilingual to take calls from Miami, Puerto Rico, parts of Texas; warm bubbly personalities to take calls from the south; preppies to take calls from northeast, middle of the way types to take calls from the center of America; ritzy princess or prince types to take calls from New York City metro area, and so forth.//

- target software for all seven Baby Bells in the US. state we developed Supernumber ™ being used by Baby Bells - TM in Illinois in early 1980,s.

- research: does this exist? How did you conduct the research?

Parts: 'BA, 'UIP, 'Router

A3-6 DIET DIARY

After extended use, system tells user how food affects feelings, behavior, performance, thinking, etc. Punch in moods, and foods eaten. Can buy or borrow from doctor, therapist, store to help evaluate foods on emotions, creative thinking ability, performance, and sports ability, sleep problems, etc. Use for several weeks to a year. Machine recommends which prescription/OTC(over the counter) drugs to take, and can be further complimented with therapy machine for greater alterations and input of data for desired changes needed. To select food eaten, key in food category, then user directed via more subcategories to food item (& or common brand in country). For user feelings, select from general category and or then subcategories that best describe feelings. Virtually everyone would like to know the answers. Information is far easier to calculate by machine.

Options:

recommends diets to: negative foods to which there may be a strong preference - regardless of its negative effect; balance poor nutritional intake

AA3-6A DAILY DIARY

Can mix idea with Diet Diary #AA3-6. Measures how user is influenced by:

particular music, entertainment shows, people, ways or times of travel, reading or not reading the newspaper, working on computer, anything and when it's better to avoid, weather, light, room or place user stays, sleeps, reads, or eats in..., colors, indoor or outdoor activities, etc.

Research Uses: good for consumer behavior, psychological, sociological, medical, scientific, organizational behavior, product design research

Helps User by suggesting: what where why when how to do, observe, respond to things in (non) altered ways; time of day when their decision making and or intuition has been most successful (user keys in topic of decision(s) made, approximate time of day. Product can supplement interaction w/ (socio)psychologist/social worker.

Note: Manufacturer must study behavior of mankind well before developing software. Machine can suggest therapies in the areas of art, music, play, gardening, and type hobbies...

Additional Options:

Machine might make scientifically selected sounds/music, which may help user according to their current situation. Eg, music to make them more outgoing, creative, awake, positive....

Recommends which activities, foods to eat (and maybe even when) in general. And or suggestions targeted only for certain activities, eg: creative thinking

Technical Details: requires user to key in all above or any number of influences that are being checked. Before beginning self-analysis, user might be asked questions (eg: history; which do you like more, a, b, c or d?; etc) demonstrating their behavioral - thought styles

The diary type products might be software inserted into home PC's, or even portable w/ built in software! Culturally adapted to dozens of languages and their type diets, activities.

Trademarks: Therapy Machine, Guru, Personal Helper, And Personal Guide

A4-70 DIVIDER FILE

A sound and or light dissection device.

SOUND DIVIDER:

Works like light prism divider for sounds, this divides sound into different parts that are normally heard only simultaneously. Repair people could use to diagnose machine problem. For the fun of it kids can study sounds of: refrigerators, cat meows, engines, music, etc. Divide by fq or time dimension. Identify object or problem of machine --> machine tells user what the result is. Option: an optional feature for sound synthesizer, g. Omit certain frequencies, keeping the others. For personal or, scientific purposes. When writing description, focus on consumer applications.

SOUND DIVIDER USES:

o Repair: engines out of sound alignment, by sound one might catch something wrong as well. Tailor dividers to particular repair functions.

o Behavior analyzer (via voice pitches)

o Contents of matter by how it bangs, shakes

o Music analyzer - how it effects people. Uses: how it influences people during studies, quickly matching appropriate music/tv sounds to ad insertions (the machine's info is another element to influence decision).

LIGHT DIVIDER USES:

- can read colors received, or display the divided spectrum of colors its viewer receives

o from a distance: surface content analyzer (content analyzed according to color and how machines rays, lasers, etc bounce back to machine's receiver

o from a distance: machine sends out sound and receiver analyzes item's internal contents

o locate needle in haystack in commercial applications. Eg: when color of object matches lens's criteria it shoots out laser to object.

RECIPE FILE

AA3-1 ELECTRONIC RECIPE

System develops/suggests needed recipes/elements for your desired foods.

Program type food, # and size of servings or volume/weight, regular - low - no salt diet, allergies, preference for more of certain type herbs, etc. Machine will give user the exact portions of each additional ingredient needed. Save from calculating percentages of teaspoons, tablespoons and other complicated messes. Get the perfect recipe each time regardless of the size serving.

Therapy to touch the right spot according to how you feel. For noodles, dressings (salad, etc.), drinks. Can have liquids too. Can take your own personalized formulas too. Good for stores not selling herbs. Manufacturer can ship herbs directly too. Polaroid concept: client's must buy supply contraption - no self filling; sell machine at low price, make money on hers. Client may or may not be able to add particular spices when they run out. Price for herb supply can rise faster than machine price. Print out or screen shows how much of other things u (user) need, eg: ingredients for salad dressings, pasta mixes, drinks, lasagna, stewed chicken, etc. M also holds: beans, small dried chopped vegetables & mushrooms & meat pieces, soup bases, dried milk, nuts, powdered (artificial butter, pasta bits, etc. Connects with water for dispensing, can also store bottled water. Grows sprouts.

Herb Selector; Chef's Herbs; Just Right; Master Herb(s); Magic Mix, Herb Therapy. TT, LL, E, W2

1A// RECIPE SECRETS: mix with Herb Selector. Upon dispensing food it cooks via microwave or heat. u (user) can call m remotely and pp what to eat. M can hold frozen food in frozen section.

TM: Convenient Cooker/ing

1B// WORLD RECIPES: mi 1 Herb Secrets, 1A Recipe Secrets. uk country & food category & chooses from options. Op: "S" recipe only.

1C// VITAMIN SELECTOR: gives vitamins and or herbs ao (and or) written suggestions according to u's ailment, desire and also a general formulae the basis for normal and all other days

Trademarks: Herb Selector

Hold the paragraph for Stage 2 possible development:

Ingredients come down little shoot from each herb, which is lit when container presses against it; or entire mixture comes down one main shoot (former better). Maybe excess herb sent out for all or small portions for accuracy. Certain herbs of frequent use have larger reserves (boxes). Replace entire herb collection periodically in simple step (save from réplacing each one manually). Holds 12 - 200 items. Option of putting your own herbs for own formulas; soup mix dispenser (chemical free).

. D (Drawing): u (user) = This N~C~ANALYZER = EDUC [healthy diet] // MULTI-USER [users' own recipes] // NR [something not right, eg: u's request, or final recipe] // OSC [] // SCORE [of what's: wanted visa a vis what's available]// UIP [tailored recipes] // WA [shopping list for store].

SCALES FILE

Parts for below: score, tds (when pills dispensed), uip (suggests how much of something is needed (based on time, last time something dispensed). Elements are 'scored and 'analyzed based on their [changing/changeable] weight, that system ['predicts how to] 'customizes accordingly.

Pill Scale: measures approximate number of pills in container. Saves from having to count pills. Of use to people who need to know when its time to get refills (great for those who constantly worry about their taking pills and related matters - invention might focus some of their nervousness more effectively) Great for pharmacies, hospitals, chemical labs, etc.
User weighs one pill and puts weight into scale's memory. Scale then divides number of possible pills from entire bottle on scale. -pour pill contents into scale's or any other container. Don't need to adjust weight if using scales container. Minor adjustments might be necessary for professionals due to wear and tear on container - scale allows such option.
-have system of using certain bottle types and scale knows bottle weight by user's keying in type bottle, or user might guess the weight of bottle to be equal to certain number of pills
-the scale is designed for this particular purpose, easing the number of keystrokes necessary, and be of appropriate size and precision. Change the product a little from the standard type and get more scale sales.

Animal Feed Scale: laboratories studying animal behavior may like to know weight of dry food at any one time. Scale also memorizes animal's eating behavior cycles and can show info on its display, or put scale's disk into computer with appropriately designed software for analysis.
-if animal eats too much or too little during certain time period invention responds by: taking away food for any time duration; giving more food; changing food; making sounds (eg: other or related animals, mating calls, music, human voices, non meaningful sounds giving feelings of good or bad moods or anger, etc); dispensing of liquids, odors, shower of water onto animal; vibrating cage; opening door letting another animal in or caged animal out; turning on/off, or decreasing or increasing light, heat, fan, radio/tv/music/sound; alerting pet researcher/care taker; providing any other substance for test purposes.

Shoe Scale: measures person's approximate weight on their shoe's read out. Read out located outside or inside shoes: great for tennis shoe market.

Toilet Seat Scale: measures person's weight.
-displays or prints out weight onto toilet or regular paper.

Blind Person's Scale: uses Braille

SELECT A/V FILE

AA-B3 SELECT AUDIO VISION (PRE VIRTUAL REALITY MACHINE)

Special Glasses only sees what and how one wants to see something, or blocks undesirable elements from vision.

- changes all or certain colors. Programmed by manufacturer and or user. EG: everything but green turns yellow, this also enables faster search time for a green part.
- gives sound according to the color that falls within the target area of lens. Can also take a general input of all colors for larger area and accordingly output matching sounds. Eg: in a room with only cherry red (walls, carpet, furniture, etc) there would be the pure red ("cherry") sound. Manufacturer or user programs what sounds match colors. Manufacturer can adjust by regional area, age group marketing targets, etc.
- by just listening and sitting, one looks at inside of glasses or depiction onto visual display for colors created by sounds.
- entertainment product versions allow user to select type format by which colors are matched to sounds -- ads variety
- imagine uses in interactive games
- items within target area appear to be floating (surrounding area blocked out, experience item like it is in space)
- view LSD type visions
- add stationary visions that don't exist, eg: flowers, fantasy angels...
- use a switch to view different effects at users control

Converts sound and or music into colors! Creates shapes, lines, bar graphs (w/ dancing circle on top of each bar). Each ball beats simultaneously or in consecutive order to rhythm.

Parts: visual analyzer; VR; artist; uip; educ; tgh

AA4-59 SKY CLOCK FILE

Curious about the natural time, or felt like leaving your watch at home? Learn the natural time of day by sun's angle. Machine has ability of knowing what is horizontal for developing frame of reference. Each kilometer east or west has a different sun rising time and hence different time. Unaffected by day light savings time. Technical: the compass pointing north tells device where sun's peak. On clear nights, it looks for star constellations, coupled with the internal clock that knows what positions stars, moon, etc should be in connection with the northern point. Clock should work on lightly overcast days too. More enhanced models seek other frequencies from the sky and work in any kind of sky condition, day or night.

Marketing: Target elementary and high schools, hobbyists, sailor enthusiasts, hikers.

VIDEO FILE

AA4-67 WORLD APPLICATIONS VIDEO

Visualize how other cultures interact with similar products. See how other peoples interact with, and or design similar things. Watch foreigners using/interacting with item/topic of interest selected by viewer. User selects topic and then sees all cultures in data file automatically, or they can opt for certain cultures only. User experiences video and or audio effects (sounds words music).

Applications: Research & Development and new product departments (get fresh ideas); student school projects; tourist agencies - showing potential travelers how different cultures handle client's interests: hobbies, leisure, cuisine, etc.

For advertisers, academics, new product dept's, etc: Experience the sociological and psychological interactions with given points of focus (eg: uses of products) that help shape-purchasing behavior in countries worldwide.

Trade Statistics: certain viewers (especially those closer to the distribution side of development) may wish to see volume of consumption per cultural market (eg: Arabic sales). Of less interest to those using machine to generate creative flow for original product ideas, which might later be altered by another person selecting the statistics option. Includes: averages for incomes, disposable incomes, competing products, profit margins for related companies in market, etc.

(Small user market) For entertainment managers: learn to integrate your performer's style with that of the targeted culture.

Technical Details: Cultures foreign to the user's culture might be less strange in facial expressions, dress, etc focusing on the novelty of product applications. This helps ease culture shock. For example: The British might be shocked seeing Japanese cheerfully slurp their noodles from the hand raised bowl when selecting the pasta, fast food restaurant or food utensils options.

Advertising: "Man has historically learned from other cultures." "The successful are the fastest to learn from other cultures." "Other countries have large numbers of ideas untapped in our own country." For Americans: "It's a world market." "Think Global"

Trade Marks: 144 Countries, Intercultural Fertilization, Idea, Europe at a Glance..., Hobbies at a Glance..., World at a Glance, Product Applications, Creative Applications, Creative Possibilities

. 1BI, 2BG, 8BG, B7I

1B010 PERSONALIZED ANSWERING MACHINE: receiver programs telephone answering machine to give out different messages, according to caller's tel id number,
-very related product in file A6.
-(Special devices exist which allow the receiver to know the tel number of the caller.)
So the receiver can input the caller's home and work tel numbers, and give just calls from those numbers special treatment.

Special treatment possibilities: different outgoing messages (nicer or more business like, etc); when a call comes from the desired tel number the answering machine's beeper can contact owner of answering machine or the owner might get a call from the answering machine with a recorded or coded voice/sound stating that a message from desired tel number was received, then receiver can call machine and get message, or machine can give message to owner; calls from desired numbers are call forwarded to location of owner (tel #1 calls tel #2, then tel #2 automatically transfers call to tel #3 since this is such an important call).
-for statistical purposes device keeps records of all incoming calls for offices.
-Footnotes: different length of time device may record incoming messages.
. For Techies:: all; displays tel number coming in or being dialed; pp; mp; uk; date; interactive; microphone; synth; portable; mfh; vc; score; tel; uq; pi; character.

1B120 CREATIVITY ENHANCEMENT DEVICE (formerly called, Brain Light): (Was Invention # 1A-6)
Machine measures person's creative brain waves and feeds back information for their development of creative abilities. A clear barometer of their frequency levels allows users to gain greater clarity for control.
-moved to "tgh"

2B-150 CLAP LIGHTER:
Activates with a hand clap or whistle. Use for lighting a cigarette.
-Lighters on tables can also be activated by tapping on the table - (the sounds transmit to the vibration 'sensor).
-Compartment can open up to ashes, etc via another type of clap or sound. Then it closes after the required time to finish smoking the average cigarette. Or can open at push of button.
. OTD: Remote ("R"); all; pp; mp; date; toy; entertainment; "mic"; t; bp; sp; osc; cm; clap.

8B-100 INTERACTIVE SMELL EFFECTS: Interactive devices use smell to create better effects. Examples: Video game emits smells proven to induce excitement; also for

-smell emits when: person or creature is hit; one goes into certain area: mushy swamp, garbage dump, smelly room; one comes close to smelly creature; when danger lurks; opening of package, etc; entering a restaurant; cooking; getting sweaty from activity; getting nervous; etc

-smells can also be very subtle

-the actual amount of smell might be minimal.

-applies to other audio-visual product packages: "C" based training; interactive video (system activated by user touching a scream - key boards may be used, but not required)

-smell the new product user might wish to purchase, eg: inside of new car; smell leather for leather products; smells also for following products being sold: foods, flower delivery service, etc

-product was merged with product 8B-19.

. For Techies:

"S"; pp; mp; uk; mouse; date; interactive; educ; toy; all; game; entertainment; osc; vc; score; tgh; teach; md; cart of smell causing elements; access (if smell device is used in arcades [public places with video games]); uip; character; system alerts user that chemicals needed to cause smells are out or running low in supply.

8B-280 Vending Machine Analyzer: Studies consumer purchasing behavior. Connects the time of item sold with other events happening simultaneously: time of day people prefers to buy, news stories, etc.

-Date stamps each sale. This information is entered into computer(s), which correspond this with weather, current events at time (especially as broadcast/published in mass media). Understand purchasing behavior better.

. For Techies: Some models might also take picture of purchaser; "S"; "C"; pp; mp; "S"; basic; score; cart; access

B7-070 Fish Exciter:

Put something to excite fish in your tank! Sound, minor vibration, odor, food, etc.

Option: can easily change its appearance and or smell creating new curiosities

-Also must feed the fish

-Need not be electronic

-Applies to fish most commonly sold in pet stores

-Should not scare most fish.

Footnotes:

All; "S" (visual effect influences fish); pp; mp; uk; date (when to feed, or stimulate fish - does so periodically); educ; toy; game; entertainment; portable (to other fish tanks, seas, etc); "M" (for complex biological studies); bp; sp; alerter (if fish fails to perform, or is ill); osc (fish hear via water molecule vibration); score; cart (sounds, smells, food).

B7-110 REFRIGERATOR RETARDER:

. Time delayer: can't open for five minutes and then must be there during the 60 second opening. Control yourself (from going to the refrigerator) for these sixty seconds and you can't get into the door without restarting the start option of opening the door. Plus the fact that one has to go through this procedure is an inhibitor. Chronic eaters often eat to avoid a psychological feeling and come a little later, the spontaneity's desire may reduce. Good for Caucasians, which are often over weight (Japanese export to such markets, though they eat healthier than most).

-also for other things one wants to inhibit opening, eg: liquor cabinet, pantry door.

-device makes bad verbal comments or sounds upon opening - designed to reduce the pleasure in opening

-if there is an emergency to open the refrigerator, it can still be opened but with a horrible alarm. And if it is opened before time, a special button or other trigger need to activated.

Footnotes:

This device may be used just for certain sections of refrigerator or other bureaus; all; "R" (door opening); pp; mp; uk (time periods as described in description); exercise; alerter (if door opened too often); score (frequency of opening door...); cart; access; uip; character.

END OF FILE FOR INVENTIONS IN SUB-FILES: 1BI, 2BG, 8BG, B7I

File: A B C / 2BQ

FILE: 2BQ

INTRODUCTION TO FILE 2BQ INVENTIONS: Like in other 'designated files, these products respond to humanly generated clapping, snapping of fingers, whistling, sound generating equipment or objects, etc. The humanly generated sound initiates the desired function. This clap recognizing part is inserted into each product description below.

Our invention number precedes each invention.

-'Sound Analyzer's 'Seeker causes 'Reaction. 'Reactions to Sounds in file 2BQ. 'SA -> 'Reaction -> 'Customized Function. Utilize the basic part of microphone hears certain sound frequencies (clap, whistle...) and the specific frequency of certain duration and or number of occurrences activate or deactivates electronic operation.

2B-1: WHISTLE COFFEE MAKER:
starts brewing at sound of person's natural whistle or clapping hand. People wake at different times and they may like the freedom of having it just when they want it (a little different each morning), also whenever during the day. Receptacle can hold enough water for several brewings. The last time a person gets coffee, they can deposit grinds into catcher.

2A-2: WHISTLE: requires user whistles in particular tone, which requires mental alertness in order for machine to go off.

2A-3: HANDS FREE: your hands tied down with something (or don't have hands)? Whistle and when done in certain Morse codes, can initiate simple mechanisms for robotics, desk computers, artists with hands full, etc.

2A-4: MORSE CODE: according to whistle's Morse code - lamp moves into particular position - ideal for person whose hands are busily engaged too. Also, lets user keep their eye on project without moving.

2A-5: ANNOUNCER: Guest or resident giving whistle Morse code upon entering has their name announced. Great for people who live at home and don't want to mention they are home. Good friends are made to feel like such when given their own personal code - though they wouldn't be given a code for entering since neighbors can learn it.

2A-6: MUSIC MAKING PRODUCTS: Based on type of whistling or percussion instruments, music machine responds with programmable sounds of its own. Have a one man band become a multiple man band. Most of user's music won't deliver commands to music machine. The percussions of only certain provided instruments and or type whistling, etc are what trigger corresponding musical notes or sets. 'Composer.
. Music Memorizer. Records sounds created by user and then 'synthesizer plays back:
a: more quickly
b: more slowly
c: more quickly
d: in different pitches
e: with additional sounds inserted.

2A-8 GAME WATCHES: get time by whistling a code and hearing time in beeps or the verbal equivalent. Great for novelty, blind, people working in photography dark room, etc.

2A-10 ETCHING EQUIPMENT: Same principle as Sound Art, this time the laser or other etching device is directed by user's sound creations.

2A-11 VIRTUAL REALITY HEADPHONES:

Hear the sounds around you in new ways as you walk around. Enjoy the new perception of everyday reality without loss of functions! -Each room entered creates a different sound, eg: new background sound. Upon re=entry to room, a new sound not heard before is possible.

* 2B140 PILL REMINDER: Tells user when to take which pills.

Alerter is deactivated when pill is taken out. Exists.

. Has memorizer, which announces its time to take pill or do necessary task. Great for those losing their memory. Designer models can give the short love messages of loved ones to their parents at pre-programmed times of the day.

-attachable to hearing aid device; life alarm system (aged people who press the necklace which calls for police or ambulance via tel ("T") line, simply by pressing the button).

-Exists? Footnotes: All; display; pp; mp; uk; date; portable; alerter; osc; cp.

. For Techies: All; display ("S"); pp; mp; uk; date; portable; alerter; osc; cp.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-pill and (alert notify remind alarm) and (time clock calendar).

2B-16 WEATHER CLAPPER:

At clap or whistle get the weather outside: just temperature or all the other vitals. Source: from wires to electronic measuring instruments outside; or modem which dials up weather service tel number and replays their announcement onto speaker or gets info in code and translates into verbal type preferred by user or as determined by type product user purchased. Saves time when you're getting dressed to go outdoors.

-Place device near closets where clothes, coats are kept, on the inside near the door.

-Can be activated by pressing button too

2B-17 CLAP REQUEST: clapping is easier for the old than reaching/walking for an intercom's button. The number of claps designates what is wanted, saves on nurse labor and elderly having to explain then be disturbed by nurse again with what was wanted in the first place.

-Each different clap combination (by number of claps, speed, tempo, etc) means a different command

-User may wear device as jewelry, eg: necklace, bracelet; keep in purse, etc.

-Device may also have buttons as a back-up measure (or no audio is used at all); each button represents different request (user or manufacturer decides what each button means); or different combinations of buttons can be used to transmit basic desires (eg: one button represents one clap, etc.)

2A-17-1 MICROPHONES: Programmed to start recording at clap or whistle. Saves from over recording. Stops at a slightly more complex code greatly minimizing chance of stopping recordation in the middle.

2A-18 NOISE METERS: Know when someone is approaching, though they may not know they are being metered. Meter checks for familiar sounds eg: type or any car driving into driveway;
-move to "sound analyzer"

2A-18 PUBLIC ADDRESS SYSTEMS: security is notified after a semi-complex clapping, whistling, "quite" frequency alarm triggered (eg: carried by UK, US high school teachers). System knows room of sound source immediately.

2A-19 ROBOTS: they come when you clap, whistle.

2A-21 MOM: Writes letters to your mom. It has all the juicy things mom's like to hear but for which you are too busy to think of. Allows user to personalize the letter as well. The letters become better than the real thing and mom won't feel left out.

2B-22 TRIPODS & CAMERAS: Still cameras and film cameras point to the direction of the clap or whistle or remote control's trigger. Code claps point it into pre-programmed directions. Ideal for consumers. At clap, camera shoots picture(s). Or director's transmitter (eg: as used by remote control devices for tv...) can cause camera to point. Value: centers picture correctly for still and moving pictures; allows camera to move between first and second shots ....

2B-23 MONITOR: At a clap, whistle, switching of remote control or touch of button w/ possible code for person sought, one can quickly see where wanted person is and see what they are doing within the premises covered by cameras. Each member wears a broach... which is picked up by system.
-Watch your child(ren), old parents, sick people, etc.
-Children need not always know that the jewelry they're wearing contains a transmitter

CONCLUDES FILE 2BQ
File: File: A B C / 6BE

FILE 6BE

6B210 PARKING SPACE GUIDE: Automatically parks car. System judges for distance and instructs car to move wheels correctly. Idea expands on obvious concept.
.-measures the space available for parallel or parking lot parking. Dimensions show up on screen.

.-guides driver as to how far and how they should drive and turn wheel; or better parks for you! System measures distances, so knows how not to touch anything else.

.-some street curbs might be difficult for system to gauge, therefore: 1. system goes in as far near curb as other cars (in front and behind) are parked; 2. driver can input if these other cars

.-it is likely this product may already exist (focus especially on recent inventions from Jan 1990, speak with auto experts if this product exists yet isn't patentable).

+ applies to the parking of: boats, ships ; trucks; buses; airplanes and other vehicles.

. For Techies: "R"; "S"; pp; mp.

+-"Tilt": controls sys' functions

-copied to 5E020 in 8.95.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-(auto car) and guide and (park parking parks)

-US Patents: 5011356 4145681 4641994 410186 3942257

6B270 WINDOW MAGIC: Curtains open and close automatically at desired times. Activated by timer, or light "sensor" for sunrise and sunset.

-opens curtains, blinds, windows (in summer - hear the birds) at designated time. Also has time "S" and alarm sound.

-*turns on lights at designated time

-*outdoor "mic" amplifies sound of birds starting from designated time. Continues according to UP, then shuts off.

-windows open under following conditions: no rain, and temperature is above and below certain levels. Outside meters are needed.

-device is useful in that it lets person sleep during early morning with curtains closed. Getting up is easier with the curtains, and windows opened...its the natural way to wake up.

-the entire electro-mechanical system with cords for the curtains are designed

-other uses: reduces crime by making people think you are home while away on vacation.

-* After this product becomes very popular, it can be designed to close/open at different times each day while user is on vacation.

-* can be designed to open briefly in the evenings when there is a full moon (maybe, when moon is positioned to shed light into the room). Nice for people - who might forget to appreciate the moon.

-* open curtains with "R" control device

-curtains close when it gets dark, or when user programs, or selects to close at any moment's notice

OTD:

"R"; pp; mp; uk; date; entertainment; hotels desk opens curtains at time designated by customer (both alarm and adjusts to the new natural times zones [solving jet lag])

-see KN (invention) in A directory.

. A1-240 Interactive Windows & Curtains: User programs opening and closing times. Examples: automatically closes during rain, opens when sun rises or when morning clock alarms.

-When it rains, or wind blows too hard, the windows automatically close. People can now safely leave windows open for fresh air without fear of rain damage.

-reacts to changes in outside temperature too

-opens to daylight and close to outside darkness, either by light sensors or time piece already programmed for day light saving time transfers and possibly latitudes - helps prevent closing prematurely or not at all on cloudy times. Good for body health, waking up naturally, theft prevention. Can be a prompt for time of day (alarm), break-time (coffee), is in tune with music beat, gives right level of shade for plants. Mix with therapy machine.

Change blinds by button or "R" control (so you can stay in bed, at desk, tv, chair). This "R" is standard feature on tv "R", and or tel; or is a light switch type contraption doing multiple or all windows in dwelling.

-OTD: also activatable are the opening/closing of blinds, windows, doors, heating air conditioning systems.

-"Tilt": controls sys' functions, eg: positions of the windows.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-window and open and close and automatic. 0 pat found.

6B310 WORLD TIME CALCULATOR: The most accurate system for knowing the time for each world region. Solves the trouble international businessmen had with each country starting and ending their day light saving time programs on different dates. Replaces printed time zone charts. Can be combined with calculators, pocket electronic organizers.

.-Different countries go onto day light savings time at different times and others don't even have it, eg: Mexico, Japan, Hawaii...

.-Researchers looked for a device, which calculates the exact versus approximate time, but couldn't find one for sale, nor had anyone else heard of one for sale. Tel operators looking onto printed information on time zones frequently give wrong times - since correct tabulation is slightly complicated and day light information normally isn't printed. This is a very important product since the world is now very small, and westerners are always calling world-wide. Those who do so make the highest salaries too.

.-Tell device to warn you when it is a certain time in the desired country, then calculator converts to your local time, so you can then make the desired call. When setting the calculator in the mode, it will tell you what the local time will be.

.--Can also be set by only giving the local time.

.-Date (see definition paper)

-* system can have the option of setting alarms in any of three different time zones, eg: if the New York time zone is made active, it will alarm at 08:00, but won't alarm at all if this feature is deactivated or if the Tokyo time zone is in operation.

.-this option can be incorporated into electronic organizers (diaries), which are about 0.3 Kg basic computers popular in the west.

-a hardware version of this product is needed for patentability, as with all software related products
.-system tells the time of day where user is
-by typing in the tel number of where you are, first the country area code, the device will tell you the natural time of day it is, eg: Yalta is east of St. Petersburg, but their clocks are one hour behind - yet it is really (by looking at sun's position) later in St. Petersburg. This device is for curious fun.
-OTD:
All; "S"; "C"; pp; mp; uk; educ; entertainment; portable; bp; alerter; osc; vc; score; cart; cp; uq.
-copied later by Seiko and one or more PC software companies. All targeting the consumer market.
-see: 5J07 Jet Lag Adjuster: Helps users adjust sleeping schedules before and after arriving in new time zones.
--If u (user) plans on returning home (within a week) the adjustments to the temporary time zone won't go all the way= resulting in user living on a time zone between both time zones. Helps u begin adjustment prior to departing from home.
. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:
-(time near/6 zone) and (day adj light adj saving adj time)
-US Patent 4102121

+6B780 MOBILE LIGHT: Motion "sensor" directs light to follow person as they move.
-convenient; saves labor costs in theatre; use in garden walkways for dramatic effect.
o How people's whereabouts is identified:
-motion "sensor" may use tripping of laser system
-actors wear transmitters identifying their locality or are identified by other means; reduces need for a camera man and complicated controls that need to be learned and can be broken
.-though may not be for the most sophisticated ballet, will do for high school plays, etc
.-system is very basic and economical: lights come in one of several half open boxes (making easy installations), each box might have one or more lights per actor, depending on how many actors are used
.-also 'tracks: animals; objects (vehicles); carried objects.
OTD:
Activate movement of lights by light person utilizing "R" controls (saves from needing wires); "C"; pp; mp; control lights via mouse or joy stick; entertainment; toy; all (except: #6); game; exercise; portable; iq; "M"; bp; alerter (upon installation, before starting system [for play, etc]), osc; vc; score; teaches acting; md; cart (software and or hardware for effect generation); cp; access.
.-"Tilt": controls sys' functions
-copied to 5E020 in 8.95.
-other factors (influencing how lights are controlled): ba; multi-user (ba) of followed person; uip; type of situation (as determined by ba, uip, multi-user, tds, sensor, (visual) analyzer). .--Eg: if there are many people near person being tracked (determined by va or time of day w (with) many people commonly found)= light is less intense, or doesn't function at all, or uses different system to track person.

.--Eg: type (color of) light depends on person or time segment of theater play.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-(light laser) and (follow track motion) and (person actor theater) -kw: sensor

6B840 SOUND MASKER:

+ synthesizer will tag specified sounds according to their direction, distance, frequency and alter them according to UIP into anything available through state of the art synthesizing.

+ since there may be a small time gap between the beginning of unwanted sounds and the masking sounds, the interim between sounds uses the "uip-db" from previous ten minutes to predict likely future sounds.

-below may all exist:

Develops special background sounds in room, masking unwanted noise. The device develops sounds designed to cover sounds from street, neighbors, "C" printers, etc.

-synthesizer works according to the type sounds coming from environment for maximum effect.

-Background Sounds: Purpose: To Convert and or Elliminate Unwanted Sounds. Convert and or cut out (or reduce) sounds from undesired directions, frequencies, distances.

-synthesizer balances the unwanted sounds; it develops sounds which make unwanted noise appear less obvious, eg: car traffic (engines and tires converted to wind; horns converted to bird sounds); barking dog converted to sounds of the jungle with birds, monkeys, wind and occasional rain or thunderstorms

-sample conversions: outside constructions sounds are converted to sounds of a water fountain; traffic sounds converted to sounds in the forest, including birds, water, wind, sounds walking onto dried leaves;

--Sounds can also be converted into: ocean waves with sea gulls crying a little; gentle Jamaican drums; etc

-there is a huge market for this product if it is good!

-user can select which type of conversion they are seeking

-either masking sounds; or maybe sounds operating on opposite frequencies might be used

-Applications: homes; any place where people want to study but can't get quiet; novel restaurants in the west; mass transit*

. For Techies: "R" control (user can select which options they want operating); "S"; "C"; pp; mp; uk; date; user beh; interactive; toy; all; entertainment; "mic"; t; "M"; osc; vc; score; cart (sound generation possibilities); rpc; uq; mq; uip.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-Set 1 and Set 2. Maybe cant write all in one string due to qpat.

--Set 1: (noise sound) near/6 (previous early earlier preceding)

--Set 2: cancel hide cover mask

-US Pat: 5481192

CONCLUDES FILE 6BE

File: A B C / 6BG

FILE 6BG

6B080 MULTIPLE COUNTER: Hand counter counts 5 multiple tabulations simultaneously. Example: thumb activates the number of people coming in, other fingers count number of people going to particular sections of the building.

-counts quantities within each type category. Eg: device has five modes, and when in any one mode, person counting passengers entering airplane for a study counts number of people with two carry on bags, next mode is for those carrying three things, etc.

.-common manual conventional counters just count the total number regardless of type, eg: one counter for all passengers, regardless of type

.-additional uses: guard at building entrance counts the number of people continuing to walk into the building according to which section they are entering or their type of entrance pass, etc.;

+ electronically, device may be designed to handle up to 100 or more categories. Via: one button selecting mode= enables remaining buttons to have multiple modes.

.-also a mechanical version with five identical counters, each counter has a number imprinted onto the casing to separately identify it. Designed so can be used with one hand and all five fingers. Or if easier, there would be four counters instead.

. Footnote:

.-each count can be time stamped in order to better develop charts and graph.

.-number of categories might be near infinite, if user simply types in a code after each count (in another file within invention, each code can be explained)

Codes: all; "S"; uk; date; portable; t; "M"; bp; osc (when a certain number desired has been reached - either too big, or too big in one category in relation to other category, etc); score; cm. %-"Tilt": number of movements / type positions represent counting mechanism functions.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-(calculator calculate count tabulate) and finger

6B720 ELECTRICAL FLAVOR GENERATOR. Food is served with sound and smell emitting effects. Enhances flavor and experience of food without chemical ingestion. Creates new type tastes not possible before. Previous related patents filed, later ones copied?*

-taste is the combination of sensorial received by tongue (limited to four flavors) and the greater varieties of smells detectable by nose

.-replaces limitations of chemicals in foods (because carcinogens, toxins...); get much greater impact from same/other chemicals emitted in air per grams that are absorbed into body via nose versus eaten.

.-can also be sold to people who lack taste buds; want to experiment with new foods, experiences

.-smells that enhance or reduce appetite (emitted with or without food and or pills)

.-TM: virtual reality food, food virtual reality, smell, smell food

.-must be able to show manufacturer some of the potential smells that can be created and how; must be using no known carcinogens

.-w5 tastes are (automatically) created (for 'multi-user) via: uip; ba; 'mood; 'entertainment*.

--lists of chemicals (with odors) that are known to be tasty to people (or animals) can be used in trials to select feasible chemicals. This list includes: previously used / approved elements, later banned by governments (USA's FDA)

-(taste) effects can be emitted (only when): lips touch glass edge's 'sensor; food utensil (fork, knife, spoon, straw, chopsticks) touch ['designated area] of plate or bowl.

.--D: utensil or lips -> activate 'sensor -> C ('computer) = creates effect 5 seconds after each activation.

. For Techies: Sound emitting effects; all; pp desired effects; mp; uk; entertainment; portable; iq; t; bp; sp; cart (of smell creating elements); (osc replicates) bubbles or sizzling (of meat).

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-(flavor taste) and (sensor electronic) and (artificial emit activate generate)

-US Patents: 5261424 5060671 4947875 4947874 4922901 4735217 4446747 4068672 3881059

6B750 DISTANT TOUCHLESS SWITCH: People at a short or far distance from device, control unit by blocking one or more laser beams.

-send out lasers at great (or very short distance) public and members of group can trip the light creating sound and or music. This is or is similar to the existing copied laser harp invention, and KN's laser keypad telephone.

-each string (laser beam) has different sound

-some buttons or strings can also trigger background sounds, eg: background orchestra

-models can work in the light and or dark

-models for one or more players: the distance between transmitter and receiver might be adjustable

-each string might be of different color: if visibility of light is a problem for some users, then a line might be painted onto the background showing laser beam's location.

-can be designed as a special instrument with choices of 100's of sounds, or designed to represent a: harp, go to (Japanese harp like instrument which is played by plucking each string), etc.

-lasers can be programmed by user to: make a single sound at time beam is broken by finger, etc regardless of how long the light was interrupted; or, sound continues during entire duration of light interruption

. OTD: Additional players can play by utilizing their "R" controlled instruments transmitted into device's receiver, which might be placed away from the main unit blocked by player. Codes: "S"; "C"; pp (desired sound outputs, etc); mp; uk; interactive; toy; all; entertainment; "mic"; synth; portable; iq; "M"; bp; alerter; osc; vc; score; cart (type sound making options); rpc; uq.

.-"Tilt": controls sys' functions

-copied to 5E020 in 8.95.

6B820 TENSION LOCATOR: locates which muscles have more tension and or are tighter.
.-would be of value (though not required) if device could be used by non doctors (though they could have a license to practice massage after one year of training). Hence item must be completely safe to use.
-studies show such a product could be useful since many users don't know how to exactly articulate where the major pains are; also of use to doctors for diagnosis of ailments
* OTD:
Second part of device massages. Codes: "S": shows which muscles are tense; "C"; pp for sections of body wanting to be checked; mp; uk; user beh; educ; all; entertainment; exercise; portable; iq; "M"; alerter; osc; score; tgh.
.-also measures which parts of body (muscles) are more fatigued, over worked; pulled muscles or otherwise not functioning in optimal fashion.
.-method of identification (as exists), eg differences in: chemistry or fatigue or other condition= as seen via any one of existing scanners (CAT, 'va), (existing muscle 'analyzers); etc.
. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:
-muscle and (tense tension) and (identify locate isolate) *US Patents: 5368042 4688581 4236528 4240444 4318301.

6B940 MEDICAL SMELL 'ANALYZER: Device measures patient's bodily changes when smelling particular substances found to cause unusual responses if person is ill. Patient's reaction helps determine type illness. This system in combination with other analyzing systems is used to compile lists of behavioral characteristics in defining the causes of unknown illnesses.
-'analyzer = 'scores = changes in: 'mood; behavior [ba]= when person smells certain odor emissions. Measurement taken via: CAT scan, wires hooked onto body, level and type of sweat (chemical content can change), movement of eyes, blood pressure, and other diverse 'sensors and equipment.
-Eg: user's positive or negative reactions to potential allergy inducing substances. Even (mild) repulsion can be influenced by the subconscious or other body symptoms trying to avoid negative substances.
-Eg: may help identify addictive substances according to ba, such as u's heart beat or neurosis goes up, or body sweats more when user is made to think of or comes into contact w/ mind altering drugs. This has to be balanced against healthy population's excitement= requiring additional ba ('behavior analyzer) (written, psychological) tests and uip- db (database) development.
-all uip- db (database) developed useful for other databases: uip; ba; general medical/scientific research.
.-also test reactions from all living organisms: animals, plants, insects, aquatic organisms (measures effect substances in water have on them).
-'analyzer 'tracks= all the reactions of each substance against type: organism / amount / frequency of contact / timing (pattern, tds) -> developing a scientific graph / db
. For Techies: All; "S"; "C"; pp; mp; user beh
.. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

CONCLUDES FILE 6BG
File: A B C / 6BI

FILE 6BI

6B410 REMOTE FAX: from your portable device, key in code and telephone number or code of receiving fax or device. Your code will in brief form state message desired conveyed, without the complexity of having to find a "T" and then make the call, etc, also saving you time, or maybe there is not "T" around
-transmitting device may be: cellular "T", or any other system transmittable via air, or device which user may put up to regular or public "T" handset
-receiver may be regular fax machine with special receiving abilities; a "C" system which will read out the codes and "S" them or interpret them for the reader in receiving location.
-Pad on transmitter may let user write in messages for transmission.
-The portable device, even about the size of the common pocket pager plus a tiny keyboard, can send messages to a central "C" which then re-transmits the messages to any fax machine.
-Purposes: tell receiving party you are coming late, "hello my love", etc. For short communication. Save from getting to a pay "T".
. For Techies: "S"; "C"; pp; mp; uk; date; "mic"; printer; bp; alerter; osc; vc; cart; cp; access.

6B411 VERBAL PAGER:
Key in a message, or speak a message, then device will transmit to "C". This "C" will then transmit via "T" line the memorized input.
After typing in brief message, transmit via air waves, the central "C" might also call the desired party and speak out a recorded voice statement, eg: "Hello Nancy, this is David, I will be home tomorrow morning" –(this type of outgoing recordings are already common in the west for other types of situations, eg: marketing companies call homes and give recorded sales announcements.
--if "C" doesn't recognize a word from its memory (unlikely), it will say "we shall spell out the following word of the message...."
-transmissions on this system need to be cheaper than via cellular "T".
-The portable verbal patter can receive messages in similar way to.
. For Techies: "S"; "C"; pp; mp; uk; date; "mic"; printer; bp; alerter; osc; vc; cart; cp; access.

6B430 COLOR FAX: transmit each color separately. Each separation is coded for type color (and or part or section of image). Receiving device assigns the color and compiles the multiple images into combinations creating color.

-Similar system for modem transmissions (whether by line or air).

-Be extra cautious: obvious or technologically too difficult? Many are already thinking about how to have color fax.

-to speed a transmission, user can request device to combine more colors than normal per set of images sent, eg: blue and yellow could be separated normally, or combined into one single color, eg a particular shade of grey, or green - thereby speeding and simplifying transmission

. For Techies: "S"; "C"; pp; mp; uk; date; toy; entertainment; portable; t; bp; alerter; osc; vc; cart (other than ink or paper); cp.

6B440 THREE DIMENSIONAL TRANSMISSIONS:

-transmit three dimensional images for business, the blind, etc.

Via modem transmit Braille codes, receiving device creates in Braille onto less expensive material (PVC (plastic), card board type material, or Braille screen (see notes).

Transmit three-dimensional images, eg: tiny sculptures of parts, etc. Or send the codes via which receiving computerized system can then make the same size and dimensions into the desired materials, especially some type of plastic or metal

-can be done by carving out unwanted sections of the block

-for easier transmission, consider only sending images for one side of an item at a time. Eg: you invent a new electronic product and want to show the design from each of the six sides in six different transmissions. This could also be done via using 500 pins, which can go up or down in different positions according to the digital code.

-note, the following product exists:

Imagine putting your hand in the snow, it leaves an imprint. Imagine putting your hand to a towel it leaves an inside and outside imprint. The following exists: put your hands onto a device with many pins (doesn't hurt) and as you press, the other side of the device shows the imprint you left.

OTD:

Games; "S"; "C"; mp; up; uk; date; interactive; educ; entertainment; iq; printer; "M"; egh; score; cart (for types of communication); "T"; tr; mo; fs; rpc; cp; uq; mq; access.

6B530 PORTABLE STEREO: combination of alerts in headphones if: your beeper/pager is going off (alarming); doorbell ringing; external sound is high (system amplifies outside noise if its in certain frequency or volume eg: sounds of standard car horns, screeching of cars coming to quick stop, etc).

-The following already exists: when the "T" rings, the volume of your TV, stereo goes down

-system is an alarm system too, with programmable alarm setting that signals user when it is time

-can be part of walkman, stereo, etc

. For Techies: All; "R"; c; mp; up (to be interrupted for certain sounds or situations); interactive; "mic"; "M"; bp; alerter; osc; vc.

6B590 COLOR CODE:

Scanner picks up only certain colors. Allows user to write down things for certain uses yet not desired for entry into "C".

-each color (aspect of information) can be easily separated once within "C", for editing, etc.

-Similar to the idea about copy machines (eg: Xerox) that don't copy the color blue.

-User can select colors when writing onto paper, and or when it instructs "C" or other device to put down certain colors.

-Many uses, for example:

--user can write in blue (not picked up by scanner) when making notes onto paper it doesn't want picked up

--some data is needed, others aren't for particular occasion (user decides which colors are or aren't wanted for the occasion).

-Pen(s) might be sold with device, making certain that such writing won't be picked up

. For Techies: "S"; all; "C"; pp; mp; uk; educ; toy; game; entertainment; portable; sst; t; "M"; bp; cart (eg: to work with certain colors); cp; uq; character.

6B660 SKUNK ™ SMELL GUARD: emits terrible smell to deter person attacking or wanting to rape. Smell is scientifically designed to turn people off. Not harmful to humans.

-Doesn't stain clothes

-some versions might stay with person it is sprayed at for a time being (like how a skunk works) to help police identify the villain

-smell dispersion might also be with ink (probably red), which also helps label villain (ink can wash out in laundry)

-this is different from tear gas, though the smell might be mixed with tear gas (localities where tear gas is illegal can just have the smell chemicals)

. For Techies: The spray can emit out as far as 5 meters or more, it works so it doesn't get the spray onto the user; All (except this isn't an electronic device, without elements #6, #7, #8, #9 in the "All" section); portable; cm.

User can also press button to release smell onto villain as they are leaving dwelling. Eg: exit door area has motion "sensor" and releases smell or ink when person walks buy...

CONCLUDES FILE 6GI

File: A B C / 6BQ

FILE 6BQ (Was File 6A)

6B010 PHONE MESSAGE RETREIVAL: if caller leaves message, recipient must return call in order to get message. Recipient who wants friends to feel comfortable will have to call back and hence caller might feel more comfortable leaving message. Recipient might then get caller and speak with them directly if original caller is at their tel ("T").

6B070 VOICE RECOGNITION CALCULATOR: verbally announce the numbers you want calculated and how.
-UP: Calculator will verbally repeat back the numbers and method of computation (assures accuracy)
-mathematical answer is announced verbally and or displayed

6B090 INTERACTIVE DRAMA: system asks actors questions; converses with them; plays with them; etc. The acting of the device connected to camera comes on tapes/disks that can be purchased. Put it in, see it on the tv screen, and actors can respond. Final film version shows both the preprogrammed and subsequently developed versions in the desired order.
-this gives people ideas for filming
-buy tapes of people asking users (actors) to make fun; crazy; creative things; exercise. Or practice for: applying for a job; sales; customer service training.
--person who views final version, might be able to judge how good actors are for particular types of work - the person who is most qualified to judge behavior can see more people this way than in person
-good for therapy. psychological: act out behaviors that will help the mind; physical: move to help physical body - the patient's doctor might review the tapes to make sure the body movements are being done in right manner - naturally this interactive system would follow in person practice sessions.
-create well made films with prompts designed for set or flexible number of actors to fill in.
-actors begin acting at the system's prompt, or actor receives the system's prompt then presses a start button when ready. The former is good in that it induces people to act with spontaneity - studies show that when people have to choose when they start, their creativity is more likely to freeze.

* 6B140 REMOTE ("R") CONTROL: turn on camera with remote ("R") control. Advantages: no limitation of wires (limited length, tangles, cord might show in view of camera)
-turn on from another room, without person being viewed being aware

6B150 SMELL STIMULATOR: makes people being photographed more photogenic upon smelling odors emitted. Different odors for different types of desired effect. Smells can also be similar to those of actual

related situations, so as to help a person relive related past experiences which allow for better acting, eg: actors are asked to imagine they are speaking with lovely person and they smell that person's perfume or cologne.

6B190 HIGHWAY DISPLAY ("S"): shows: speed and or density of traffic ahead (for designated number of km ahead); same info for other routes a driver might choose to make ahead; suggested speed of travel (exists)

6B230 TICKETER: if a ticket of any type were issued against the car and or driver, police punches in key(s) to effect on car itself. This government employee may need special key, code, or device via which to gain such access into the recording device (avoids vandals).
-purpose: owner of car knows if driver did something bad, and or is subjecting owner to penalties whether ticket was or wasn't paid; will know if ticket should be paid; government might find such organization on the car itself of interest (record keeping)

* 6B250 'ACCESS CODE IGNITION SYSTEM: Only starts ignition upon keying in correct code, plus use of key. This product might already exist, speak with car experts and do a patent search.
-trade mark: car code. Obvious?

6B290 COLOR LIGHT CLOCK: emits multiple color lights at alarm time and or every hour (or when UP).
-sounds when desired

6B300 'TIME DATE STAMP: obvious feature automatically calls into a tel ("T") number or other source to get the precise time. Does this periodically. Might be easily done simply with a modem's access into a main frame computer ("C")

6B320 COFFEE MAKER ALARM: sounds when is ready, or when nearly drying on top of active burner (latter occurs by judging weight)].
-device automatically turns off without the need for alarm when decanter's weight drops to certain level; or device knows via another better means when the liquid is gone.
--without this system, the decanter either breaks when it gets hot and empty, or the device turns off after having made the coffee and it must all be drunken before getting cold
-decanter's warmer reactivates when new coffee or plane hot water
are made in the system
-* "S" shows the number of cups of liquid left (uses standard size coffee cup as measure). Calculation is made via weight.
- "S" shows when the liquid was last brewed (induces people to brew newer cups of coffee, especially in offices with many people, and when people don't know when it was last brewed.)
- makes a sound when all the complete amount of hot liquid is ready, eg: a cheerful short mono-syllable sound

* 6B321 'CUSTOMIZED COFFEE MAKER: New coffee is automatically made when 6B230 determines coffee has run out.

6B330 'BEHAVIOR ANALYZER & ENVIRONMENTAL FACTORS: SW which 'correlates all grades given in schools, universities, employee performance with external events; changes in hotel and travel reservations; sales of items; medical (physical and or mental health); quality control in employees; etc. eg: new policies, news events, etc. The sociologist, psychologist etc can find this info valuable for the specific organization and or specific industries or types of organizations as a whole.
-UIP-DB. 'BA uses this info for 'customization.

6B360 DIRECTION FINDER: alerts if a section or part of product is not in correct relationship to other parts or main part of the machinery, robot, device.
-H- this is vague, find unique applications (spending minimal time)

6B380 DOOR GREETER: upon entering area near front door (motion detector senses person), or, ringing door chime, system announces something in words, or sounds (eg: music). Can state, name of family, company, hello, etc. Manufacturer or user can record outgoing announcement.
+ can record message from person ringing door bell
-D: person (of minimum weight or height) = sensor (motion / scale) = c = osc / s.

6B381 DOOR ENTRY WAY SURVEILLANCE SYSTEM: seeks and catches villains (sys is pr to seek). Visual analyzer.
-D: person = camera = visual analyzer = analyzer = osc / s / printer / [t = calls = police].

6B400 TIME AND DATE STAMP FAX: records time of fax in and output
-Person from whom received (might know via tel number of sender - in some regions of world, receiver shows their tel #); sender who sent out fax.
-Uses the currently existing technology of caller id (receiver of tel ("T") call can identify caller's tel number): if a fax message was received and yet not transmitted well enough, the system can tell user from where the fax came (maybe the fax is missing the tel number and or fax and or address of the sender due to mechanical failure or the sender's absent mindedness)
-copied to: 4e020 Content & Date Verifier, Registrar, TDS% - 8.95

6B420 FAX TRANSPARENCIES: send and receive images, which can then be shown via a light projector (show light through image and project onto a wall). May require special projector.
-send and receive picture slides (eg: slides of pictures from camera). Project via slide projector.

-similar system for modem transmissions.
-valuable for group presentations

6B450 BRAILLE SCREEN: device which easily pops out pins creating the letters which in tern can be put back down and popped back out again = like a crt screen for the blind, etc.)
-Each point (several or more points make a letter or number) might be created by one or several very thin pins.
-can receive information via modem, computer ("C"), voice recognition, picture taking device (takes pictures of environment or printed words), scanners.
-the screen alone might be separate from electronics and can be carried and or mailed (eg: for personal letters) and or mass produced from one original source. Screen might be reusable (a little like a blank cassette tape).
-For [non] sight impaired people too; see things three-dimensional
-can receive data from computer ("C") disks too (much less bulky way to view things three dimensional)

HAND WRITTEN IMAGE INPUT TABLETS – 'REMOTE CONTROL / 'ACCESS:
. 6B500 Menu Driven: options pop up on screen and user simply touches within square for desired option
. 6B520 Color Selector: by pressing key of color desired, all key strokes, movements, etc are in that color until other color option is selected.
-mono chrome or black/white is the choice if no color is selected earlier
. 6B540 (was 6A-54) m+ Get vibrations converted from sounds. The vibration pads can be placed on any part(s) of body; chair; touch panel on portable or non portable music system, person touches for vibration when they feel like it. Certain percentage of population will further enjoy the music experience, especially for the dance and rock & roll sets.

6B550 HEARING AIDS: emission of particular smells has certain meanings, eg: emergency. 'Communicator, helps replace 'osc.
-Vibration can be given for similar effect, and can be a quicker warning system

6B560 PLANT REMINDER: UP frequency type plant should be watered. At each watering: they press a button; or "sensor" senses when watered (this section for stronger patent protection). System then shows number of days until watering necessary.
-alerts if watering necessary or past due via: flashing light, sound - can be continuous or on and off
. Light shows when watering is necessary. Helpful for areas where drainage is difficult, eg: hotel lobbies with large soil containers

6B570 'IMAGE SCANNER: converts two and three dimensions into: sounds, visuals, [smells, vibrations], hologram (in air or printed). For example, a pebbled walkway would create a nice sound and or abstract art (may or may not be at all similar to pebble walkway.

-output effected by substance's constitution, eg: a photograph of an oil painting will create different effect from image of original oil painting

6B640 KARAOKE VIDEO: preprogrammed video story on film gets clips inserted of users. The clips are inserted by the karaoke inspiring and or giving the people prompts in order to fill up the insertable sections of film. Players may or may not know much or little about film they are making (can make it more interesting, and greater surprise when finished - if less is known)

-prompting methods: asks questions; asks person(s) to say, do, act, feel, show, sound something in some manner; people can be asked to give another person a prompt, here the prompter may or may not be given a hint (requiring a little fun creativity in conveying prompt)

-works well in small spaces, low light, much background noise (microphone is designed and or controlled by user to record mostly only from certain distances

-upon completion, people can view final product and or take a copy of tape home

. "Editing" Capacities [for 'entertainment]:

karaoke's editing, synthesizing features: can alter the images in manners that add creativity and reduce the image of restrained behavior some might have, leading to person wanting to try system again since they came out looking better than anticipated. Altering can be: make images shot look very non-life like, and or semi-animated

-for each insert, actor might make short or long shot involving anything from a particular facial experience up to a long discourse

-user might write own script; insert his actions and words; insert from stock pile of other clips, things like shots of busy streets, crowds of people, nature, a house, driving a car (as if he might be doing it, etc), these clips are available on system's memory, additional clips can be purchased (creating very large library) and or user might create his own clips too. All this can be done at one sitting. An excellent way to be creative.

-clips can only be of those other than user (if so desired)

-system can create voices from words keyed in; user (director) can select type speech pattern too, eg: kind woman, strong woman, waitress voice, mail man, doctor (male or female), etc.

-depictions can all be real life, semi-real life, and or animation (easier and cheaper to develop, and limits user to purchasing clips, though maybe he can make animated clips on more expensive models)

-integrate with video games, where player (person(s)) being shot by camera, enter into game/interaction with their image(s)

-alter standard games into formats desired, eg: play chess whereby the knight is a real horse with knight, or a dragon. All takes place via the screen.

-each frame has a number correlating to the chronological sequence, these numbers helpful for editing and or moving parts around

-User can select from different windows, which can show different actions/directions film can take. Each window can show the action in still or moving fashion, with or without words giving further information about content within choice.

. Applications:

-can be type of therapy by prompting users and possibly guiding and or correcting them. Device can ask users how they would solve another's problem; possibly via a set selection of choices (preventing too crazy of a response)

-certain bars can make themselves into karaoke video bars; have wild hostess, waiters, waitresses, bar help, etc; rent or use costumes, prompts.

-learn foreign and own language(s). System can prompt people in terms of what to say, user then completes sentence(s) and or selects from multiple choice the right answer. This can be coupled with developments of story lines

-install devices in bars; video game arcades; educational places; acting schools; movie studios which would like to see example of film before shooting in higher quality mode; advertising agencies for samples of ads before shooting; places where people are waiting; portable and on-portable units for consumer use

-users can compose their own video games

. Technical:

-this invention is compatible with other karaoke features on market

-device can be placed at each table with screen built into table; users can select type film, game, feature desired. One or more people can do the film process. Camera can come out of table (shooting maybe just face and or upper body), out of wall behind a glass, etc.

-softwares and films can be on computer ("C") disks, laser disks (recordable and non recordable), video and or [film tapes]

-crude visual effects may be found in earlier models; screens portraying visuals might be the same or slightly better quality than current the color computer ("C") CRT.

-has a tutorial

-can print out each and or selected scenes onto paper

JUKEBOXES:

. 6B650 (was 6A-65) Music & Light Selector: select music, announcements, etc; plus type lights (flashing and or moving), which will automatically or UP respond to music, sounds.

. 6B670 to open lock, user must also press button on key chain. This shows the time and frequency of their entering unit, etc. (has person been honest about their activities)

. 6B680 Alerter: emits siren and or lights expressing danger caution

-Amplifies any sounds created, eg: you're screaming, yelling for help, attacker's noise

6B690 COMPOSTING DEVICE: Apartment dwellers can now join the green culture by composting their wastes. Decomposes items that can't be decomposed in a dump. Best affordable system in winter when composting is more difficult for those with gardens. Solar powered.

.-quickly turns food scraps into compost for the garden or for newly potted plants, etc. Good for those who 1. don't want to go outside for the compost pile, 2. want the compost into effect quickly, 3. want to keep out outdoor rats, cockroaches

-special device handles the problem of odors

-might run on solar power

.-realize westerners are prepared to pay uneconomical prices for ecological value (even if it might be silly from an expert's point of view). Look at Germany willing to pay over $1.00 to recycle many of the consumer product packaging, though it could cost about $0.03 to burn or dump it instead. There are many other examples.

.-it is essential this is solar powered. We want an advertisement that says "quickly turn your rubbish into compost with solar energy..."

.-for biodegradable items: vegetable matter; all other non-vegetable matter stated by manufacturer as being bio-degradable, eg: plastics, non-paper packaging.

-OTD:

PP; mp; all; date; entertainment; iq; t; alerter (when compost is ready, etc); cartridges of bacteria to speed process.

.-Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material (of this N) w chemical reagents. NR shows what chemicals present W5. This N copied to 7G050 Aug 95.

6B700 PET FOOD CONVERTER: takes certain food scraps and converts into pet food via:

-adding additional flavors to entice type specie animal kept as pet

-might put into new form, eg: pellets

-might grind the food, changing its texture

-might bake food

-might ad meat, or standard pet food from can or box

6B760 LASER KEYBOARD: type information by tripping laser lights in correct manner. Work from bed.

-by tripping a laser, system turns on quickly. Great for short memos and times when it is too much trouble to turn on computer ("C") or typewriter.

-can be connected to main computer ("C"), or transmit information to it

-can also generate music, act as tel ("T"), pager, etc

MASSAGE MACHINES: 'Communicator via 'Vibration. 'Vibration intensity changes according to 'Therapy Gets Harder.

. 6B800 Massage Glove: massages hands, feet, legs, arms...

. 6B810 Multiple Dimension Massage: emits during massage: sounds, music, vibrations from table or chair, visual display ("S") on CRT screen, subtle or strong smells to make massaging more pleasurable and or effective experience.

. 6B830 Massager: eg: Massage Chair:

-tell machine to continue working on part of body it is at (either prolongs or continues until asked to stop).

-program part of body it is to massage with time period desired

. 6B840 + Pulsing Light: emits lights that improve positive feeling or effectiveness of massage. Light options for desired effects of: relaxation; energy; feeling better inside; passion; etc. Connected to massage function.

-one or more colors

. 6B850 timing device turns off massage machine at designated time. Helps prevent people from over doing it, resulting in their avoiding work, etc.

6B860 PERSONALIZED WEATHER GUARD: Key in what you want system to warn you for according to your agricultural, scientific studies, etc, eg changes in: air pressure, humidity, air ions, temperature, precipitation, light, etc. Key into software what you find important for you. System gets its info from outside source via modem or data tel ("T") line or from its own outside weather station

6B870 WEATHER HISTORY: shows past temperature, humidity, precipitation, wind, etc. Memory goes back from the first day it was used, or manufacturer might build in such information of averages. Person knows when looking at current weather readings, how that day or month compared with other r days in the past. For home, school, office use.

-clock, alarm

6B900 TOY 'REACTOR: toy responds when spoken to. Has one or multiple responses to any or particular sounds

-may be in sound responding more or not

6B910 AIR ART: Computer ("C") senses and records and in tern makes art according to how object is thrown, falling and possibly (with UP) landing on ground.

-Imagine an electronic device that is like a cube or other shape that dents according to how it falls

6B980 FEEDER TIME STAMP: when was last time someone fed animal, baby, child; watered, fertilized plants or other botanical item.

-TDS

END OF FILE 6BQ

File: A B C / 8BI

FILE: 8BI

8B040 COUPON PRINTER: while watching TV, request a coupon to be printed out for you. Great for advertiser, and since they already have a captive audience, why not make it easy for them to make one step towards the purchase?

-request printed info of similar or further matters

-TV or "C" bulletin board, which shows ads or announcements quickly one or several at a time (speed and ad selection controlled by editor/broadcaster or user). Ads might not show enough info in time allotted, also user can request what type of info on announced matter they want.

-crt might "S" further info as requested: broadcast is still or moving life

-user might even touch the screen to choose what they want printed (interactive)

8B060 BEEPER: each person waiting to be called is given a small receiver. When they are ready to be called, transmitter sends signal for particular receiver, then receiver will: beep, light, vibrate, etc to notify holder that they are being called or that what they are waiting for is ready. Saves people from having to: continually read a "S" to see if their number has been called;

stay within visible or hearing range of announcer or "S" showing it is now their time, eg: person can go shopping in mall while they are waiting for tailor to make final adjustments on clothing, or waiting to get a ticket made, or waiting to see doctor, etc. Notice might be made in terms of number of approximate minutes before it is time (receiver's "S" may show the number of minutes, or give a code as to: time is much ahead, medium time, or coming closes, or is now....)

-transmission's distance might also work up to many kilometers

-might use cellular or beeper technology, etc.

-If person goes beyond receivable range, receiver might show this by: light going on or off; beeping in particular way.

Additional Applications: ordering food at restaurant (most restaurants want customers to stay and pay for drinks, yet the unique restaurants with this service (especially those without liquor licenses) will be happy to get extra customers this way. Customers can stroll in the park, shop, etc while waiting. Buzzer tells customer food will be ready in about ___ minutes. Also good for family members with people all over the big house, mom gets people prepared in time - let people finish project they are waking on, wash hands, etc.

. For Techies:

"R"; "S"; "C"; pp; mp; date; interactive; toy; all; entertainment; "mic"; portable; sst for larger more complex models; bp; alerter; osc; vc; score; tr; rpc; access; uip.

8B070 'REACT: When walking into room, automatically turns on all desired or applicable devices, eg: lights, music, speakers (if music from another source), intercom or paging system and or "T" receiving - system identifies where someone (or if personalized "R" control is used, where that individual is), air purifier, heating/air conditioning, "C"

-same result might occur with switching on of light or other switch.

-UP what they want turned on upon entry. May differ from room to room.

-All aspects obvious?

-Transmitter located in: jewelry, bag, etc

-Tripping laser light, activates the desired mechanisms

-Additional items to activate: music; instructional recordings (person hears how to do something, what not to do, eg: be careful of the chemicals, etc...); lights; heating/air conditioning

OTD:

All; "R"; "C"; pp; mp; entertainment.

8B150 SWITCH BOARD'S IDENTIFIER: receptionist receiving call codes applicable respondent's "T" instrument with code or verbalized recording stating information about the caller, eg: their nature (client or supplier); level of importance, urgency; length of time they have been on hold; if its a local or long distance call; person and or organization; type personality (nice...). Receiver of call gets this information on "S" of "T"; or "C" (can then store such information with or without any additional info put in by receiver (person who speaks with and handles call - saves time keying in info, plus receiver might not be able to key everything in time and or forget after the call, especially if there is another call coming soon thereafter). Receiver can hear or read this information before or during the tel call.

-all this information can be relayed on to third (or any subsequent person) taking call (perhaps prior person wasn't right one to handle situation.

. For Techies: "S"; "C"; pp; mp; date; all; "M"; score; uq; mq; uip; character, 'access.

8B250 ESCAPE: insert money and select desired feature (user chooses overall effect, or selects the parts that make the over all effect. Selectable Parts: smells, sounds, music, visual displays, massaging, chair vibration that are related or complimentary to each other)

-good for home use too

-marketing: a pleasant escape from everyday grind

-perhaps especially popular in Japanese market; certainly people will be curious enough to at least try it, why not?

ENDS FILE 8BI

File: A B C / 8BQ*

FILE 8BQ*

8B-02 Smell Printer: Color printer also has certain chemicals that smell upon scratching. User of computer ("C") simply programs where they want specific type smells to be printed.

* 8B-03 Remote ("R") Control Printer: remote ("R") control and or portable receiver prints out information it receives through the air. User might request type information it wants, then this is what is printed. Eg: coupons from television commercial

83

Additional information available: greater details about an advertisement, eg: product descriptions, price lists, maps to dealer, system might even identify person's closes dealer based on the locality of their system, or by user typing in zip code...

8B-08 Porter: carries items (eg: boxes) on a cart, on arms, etc. -follows where transmitting device is going (eg: is carried by person who directs robot)
-robot avoids walls, going too close or too far from person's transmitter
-when called for, goes to desired location and picks up and delivers material

8B-09 Greeter: greets people at door. Programmed by user or manufacturer. Options:
-in shape of human, robot, animal, plant, statue, computer ("C") with display ("S") & speaker
-bows, walks, opens door, closes and locks door(s)
-asks who is at door, then allows them in if they: are right person, have right code, appear not to have much stress, lets everyone in (though entering person may or may not know this)
-outgoing greeting can change according: to day, time of day, user (or owner) of device, person who identifies themselves, control mechanism used by owner: device can be polite, a little rude, humorous, professional sound, etc.
-can play pre-recorded music, radio, tv, cable...
-arm or such device can hold guest's coat, scarf, hat...

8B-13 times things and alerts when time taken deviated beyond a certain parameter from the norm. For scientists.

8B-16 Tel ("T") Switcher:
Device transfers an incoming call from mobile tel to a regular tel ("T"). Purpose: save money. For those who started call on mobile tel. Listener need not know the switch is taking place.

transferring method possibilities: have regular tel ("T") line dial into the cellular tel line at which time the regular tel ("T") line will take over call. The receiving mobile tel ("T") must have special feature to allow this.

8B-180 Voice Recognizer: displays and or prints out words from tv, radio, pre-recorded music or video

8B-200 when temperature changes, the following can be programmed to change automatically as well: smell emissions, sounds, music, vibrations, light, humidity

83

Applications:

8B210 Toothbrush Pleasure: Makes pleasant music and fragrance.

Exists.

-Nice Toothbrush: emits following while being used: smells, sounds, music. Makes brushing of teeth more pleasurable.

-marketing: Japanese market

83

-marketing: other Asian markets possible too, not western markets

.-OTD: basic; entertain; portable; cp; motion sounder

-since 1/1997

-type sounds / odors / vibrations determined by: uip-taylor (user's type teeth, brushing schedule [maybe they need more brushing motivation])

-sound type is coordinatable w (with) hand motion or type vibration from toothbrush, eg: sound mode alters each time hand moves brush, or vibration is magnified by 'synthesizer. D (Drawing):vibration 'sensor -> C ('computer) = synth -> osc.

. PATENTS: key word search of US abstracts 1.74-1.97 www.qpat:

-toothbrush and (sound perfume odor smell fragrance melody music)

8B-220 Plaque Identifier (Non Electronic!): toothpaste has the color die which shows up where the plaque on teeth has yet to be brushed off. Easier to use than the current pill form.

8B-230 Portable Learner: asks questions in foreign or native language(s) and wants user to respond via multiple choice or keying in correct words, or making corrections to poor language.

-learn vocabulary

-can be part of electronic translating system too

8B-240 Current popular words, terms. These go in and out of fashion quickly, so are replaced with disks, etc that are replaced periodically (maybe via subscription). Terms such as: "rationalization" which is currently a

popular term in Japan. Speaker will appear in much better light when they have gone more beyond textbook language (much of which can't be helped, hence the value of this - so people can't as quickly say, "they speak text book English")

8B-260- Challenger: user puts in money to buy what they selected. Then they can be asked a question or do a task (eg: play video game, gamble) and if they win, they get another of same or different item. Those wanting another chance might buy a second item in order to play again.
-average chance of winning might be only 10%, profit margin on additional products sold might be 30%, and sales might increase 50%, resulting in greater profits. Prices for items might be the same or 10% higher than other points of sale.

8B-270 Condom Vending Machine: at time of sale, machine gives advice to men on getting their woman into bed. This encourages men to buy fro the machine and use the rubber so as to come back and buy more. Advice might be of the fortune cookie type (small piece of paper comes with rubber, or information might be displayed before or after sales; or client might ask question and get answer). Advice might be a little serious, or only fun.

8B-310 upon entering dwelling or room, device picks up person's distancer and will alert them if/when: 1. they have a message. The screen there could show and or print out message at that time, if the person requests. 2. show their calendar for the day, week... 3. meetings they are scheduled for 4. events that could be of interest to them
-the response person receives might indicate level of urgency in communication, eg: less urgent; urgent; very important. Person might be busy with something at that moment.
-marketing: get your messages more quickly and easily; be notified when you have important messages instead of having to wade through less urgent messages often. Helps replace need for secretary.
-categories: door chimers, door tv, answering machines, software, computers, pagers, intercoms.....

8B-330 According to type application, person's voice is changed accordingly, eg: their voice for announcing plane is ready for boarding, plane is late (frustration, or anger in voice of speaker who is afraid of being attacked with anger from passengers and who in tern is semi hostile in voice as protection - this is bad), etc.

8B-340 shows direction in which person is walking; rate of speed. Display ("S") might show arrows and or travel pattern on chart.

8B-350 +? Notifier: if person's mobile tel ("T"), tel ("T"), pager, walkie talkie, or like transmission-receiving device is calling them and they are away, their watch or other smaller portable device might alert them via sound, light or quiet vibration.

-device might notify them if there are any messages on answering machine or voice mail, and or number of messages. Such notice might take place with or without user's request for such information.
-user might know caller's tel ("T") or ID number; then maybe user can let an answering device take a message

8B-360 Time Projector: projects time onto wall or ceiling.
-exists?

* 8B-370 Learn Watch: UP to learn words, facts, dates, etc. Display ("S") pops up learning function at will of user. Also, they can use while waiting, taking train, etc.
-good for learning short concepts. For example, learn: vocabulary in own or other languages, abbreviations, terms eg: scientific, trivia (for fun - popular in USA), dates, capitals around the world, famous people, etc.

8B-380 Medical Watch: Patient's name (maybe with address and tel), time, alarm (when UP, for taking medication). For medical use.

8B-390 Art Watch: create designs for the back of watch's dial. Choose from or create own graphics, pictures.
Methods:
-design on computer ("C") system, then transfer graphics via tiny disk and insert into watch. Disk can hold multiple designs. User can then select from selection from watch; designs might change periodically according to user's commands; [user might mail order for disks and have them make desired changes]
-Watch might come with design options built in and user selects and or alters; user might buy desired disks
-if disk is programmed on separate device, user can key in important information to show up on watch's display ("S"), eg: alarm function and what alarm is for; birthdays; tel ("T") and address
-Watch might also be a portable clock/alarm

8B-400 Smell Watch: as alarm or at each hour on the hour emits type smell liked by user. Watch or clock can have different smells, perfumes, etc for each time, occasion
-smells - perfumes come in insertable packets
-entertain friends with your novelty
-have pleasant smells designed to psychologically wake person up in morning
-give as a joke (whereby wearer doesn't know the source of the smells). Later gift giver can say, my, you certainly seem to put out smells (farts) at the anointed hour, "I bet you'll be smelling again in ___ minutes!"
-smell the time: for novelty, those who are deaf and or blind.
-trade mark: Smell the Time

8B-440 Suit Case: (Design Patent - Non Electronic)

Has large area where all types of things can be stored in order to achieve the maximum size allowable for airline check in. In addition, there is a section where user can put in their clothes on hangers (not folded before inserting).

8B-450 Flying Pods: (based on new existing invention by, Mark Litos called "Samara"? - he's marketing towards executives)
When going into the air invention sounds or makes music. Throw up several at a time and create a multiple musical piece. The existing invention is designed to float in the air on the way down - similar to the way the maple tree's seed lands.
- in the dark, lights up when 1. in motion, and or 2. when in air (not touching something)
- label on company advertising
- use in game(s)
- clock alarm: catch it when waking up, or catch and or throw this or other shaped object. When throwing get into a basket, and alarm goes off at this time - user is allowed quiet time between initial alarm and time required to throw a few things into any type basket/pocket
- jewelry, key chain
- ejectable pen, pencil, magic market, flashlight, key, remote ("R") control, toothbrush (outer object has air vents), etc. Naturally, the object must be balanced in manner so as to permit proper air floating ability
- fortune cookie: restaurant, store, karaoke bar, etc can throw them. Alternative inserts: coupons, checks, cash, etc. Can display ("S") information on display ("S") as well (item cased in rubberized material)
- can print out the flight, way in which it circled in air and or the movement of any object's central or average course. Attach to printer/computer. Purpose: create new art.
-shaped into candy, chocolates, gum, cookies, pills, animal biscuits

8B-460 Make Up Case: user keys in type of mood they want to create, and or colors wanted, and or occasion. System or user programs device for locality in which used (make up is worn differently in diverse cultures, or regions of countries too)
-initial programming by user might require them to key in the country and postal code of their address in order to make system functional. User might select from several make up choices after keying in their desires (such selection is done in many manners). *Portable ('W5).
-user of manufacturer might be able to select from typefaces, hair and skin types
-black and white (mono chrome) or color display ("S") also indicates type make up used with or without brand names
-great for young girls and those in their 20's and 30's, plus those who are bored with their looks, and or those who love creative make up. Good for home skits (plays)
-user can apply make up on their friends; good for make up sales people going door to door (system can print out coupons for right make up) or working in a store

-plays music while open; UP type music - gets one into creative mood for putting on make up
-place nr tabs on face to determine chemical constitution before/after applying cosmetics / other chemicals = intern sys (system) "analyzes" / tab nr (no el) what type of ph balance / type cosmetics will work w face.
--Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material (of this N) w (with) chemical reagents. NR shows what chemicals present W5. This N (invention) copied to 7G050 Aug 95.
-"visual analyzer", uip-tailor

8B-470 Toy for children or adults:
when toy has crossed certain line, or entered into a field within a transmitter, it will sound once. Only sounds again when taken out of and then back into the zone.
-moved to "ps" 6.96
File: A B C / B7Q
FILE: B7Q

THIS DIRECTORY COMPRISES CHARMS
* Product numbering system: The "A" in "A7" was changed to "B7"

A7-3 REMOTE CONTROL ROLODEX: telephone numbers of your friends, family, etc pop up on your screen, then user dials the displayed number or just points and shoots for remote device to dial number as well.
Option: Rolodex is built into the handset; or the telephone number(s) wanted are projected onto any wall and most flat surfaces via differing shades of light

A7-5 ENTERTAINMENT SYSTEM ALARM CALENDAR: Entertainment system is automatically programmed by user to make an interruption in program stating it's time to wake up, go to the office, feed the pet, start cooking dinner for family, etc. For TV, Video, Radio, Tape player, Video game...
Option: if unit is off, it will turn itself on automatically, then go right off again on its own or with the user's prompt.

A7-8 PHRASE OF THE MONTH CLUB
What products could integrate insertable messages mailed to their users on a monthly basis, or ones purchasable at stores? For:
. Answering machines
. Electronic slogan buttons

A7-9AA MOVEMENT ACTIVATES SOUND: Shower Rod Bells: as curtain open or closes, sounds! Sounds/music triggered at moment of movement resulting in set sound, or sound created according to how opened/closed. Also applies to: shower door; chest drawers; key in any type buttons: computer, other electronic devices; way a ball of clay is moved within its skin

. For Techies: Vibration 'Sensor, 'OSC, 'React.

A7-9B SOUND MEMORY GAME: Remember which sound correlates with which button / key / etc. Sounds can later be changed to corresponding locator. New type of memory challenger. Selling to people in music field is a sure hit alone? Easier versions can use normal easy everyday sounds / words, more difficult models can have slightly varying sounds. Manufacturer or maybe user according to their improved skills can adjust difficulty level. Buttons can also come on a sphere.

. User can change which buttons belong where. This can be done via a random process done by the machine.

A7-10 ANIMATED STORY: :

Computer ['game] moves 'characters and have them speak. Develop a story line in chronological order. You call up certain characters from a choice of possibilities. Each movement would be stored as a separate unit in machine. User than can divide any number of units into any number of chapters.

Applications: for fun, played by people on computer; for fun and simultaneously a tool in which to learn new languages or difficult words in one's own language, or terms in science, electronics, etc.

. For [English] users, write down each character's quotes (story line).

For foreign language learning: user develops story and writes in the foreign language.

Option: watch the action and computer asks user questions in foreign language, eg: "Yoshiko, what is that?". Mouse points to correct answer or type in response and machine corrects poor grammar, spelling - gives right answer (then option: requests user to type in correct answer, giving user positive usage experience, then computer allows user to proceed to next step).

. Guess what is inside a box, behind a curtain, etc. Receive hints.

. Develop sentences from strings of pictures. Strings of pictures might also accompany sentences being learned - increasing the psychologically proven ability of language absorption

. Send love notes to characters, or read ones being sent

. Guessing game: each box on screen can hold some secret object. Each person must remember which object makes which sound. Before next game, select different sound option for each charm. Hints can be in words, visuals, sounds, smells

File: A B C / BN-MENU1

FILE BN-MENU 1 (Formerly 1BX)

1B-080-032003 Dangly Alarm: The Dangly Alarm is for the creative consumer who needs help waking up in the morning. The innovative alarm wakes you by dangling a creature above your bed. It can make a sound, talk, or even drop bits of water on ____. The only way to deactivate can be by getting up and starting your productive day.

1B-110-032002 Magic Buttons Morning Alarm: The Magic Buttons Alarm helps the consumer begin the workday alert. You have 3 seconds to turn off the alarm by touching the correct combination of buttons. There is a new combination each morning. A small crossword puzzle.

1B-111-032002 Quiz Show Morning Alarm: Instead of your morning coffee, there's a healthier way to jump-start into your day. Answering the questions correctly deactivates the Quiz Show Morning Alarm. A healthy alternative to caffeine.

1B-010-032003 PERSONALIZED ANSWERING MACHINE: For home or office, the Personalized Answering Machine is a useful device that everyone can use. The telephone answering machine can give different messages according to the caller's telephone id number.
is is very convenient and timesaving device for the caller.

1B-050-032006 Happy Morning Alarm: Waking up to happy messages is the best way to start the day. The Happy Morning Alarm sends subliminal sounds and verbal messages at alarm time.

File1BI

1B-120-032008 Creativity Enhancement Device: The Creativity Enhancement Device is a useful device for the innovative consumer. The machine measures the creative brain waves, then feeds back the creative information. This is a great advantage in the
king world.

File 2BX

2B-090-032002 Sound Art: Convert sounds into art? Yes! Sound Art is the perfect device for the artist and innovator. Sound Art can convert sounds into interesting shapes and colors that are printed out.

2B-091-032002 Sound Kaleidoscope: With the new technology, new devices are becoming individualized. This is true for Sound Kaleidoscope. Your view will change according to the sounds you hear. Each sound converts differently according to the differ
buttons pressed.

2B-140-032002 Pill Reminder: When ill, we can't always remember to take our medicine. The Pill Reminder is a vital to your well-being. An alerter is deactivated when a pill is taken out. This simplifies efforts so you can concentrate on getting be
r.

File 2BG

2B-120-032006 Alerter: We are becoming an older society. The elderly are becoming self-sufficient and the alerter can help in this process. It will notify older person of emergencies by hearing beeps. The beeps are part of the hearing aid system.
will hear the telephone or doorbell without too much effort.

2B-150-032003 Clap Lighter: In these busy times, we don't have time to stop working for a minute. When you need a cigarette, but don't have the time to find a lighter, use the Clap Lighter. It is activated with a handclap of whistle. Easy.

File 6BX

6B-020-083002 Call Screener: The efficient telephone answering machine can save time. The Call Screener screens phone calls from certain people. The advance system recognizes certain callers by using caller ID technology. Other calls ring normally.

6B-210-083002 Parking Space Guide: For tight-squeeze parking, the Parking Space Guide automatically parks the car. With more cars on the road and in the parking lot, every space counts. This system judges for distance and instructs the car's wheels

6B-27-083001 Window Magic: Window Magic is a useful device for the home or office. Automatically, the curtains open and close during desired times. This can be a safety or recreational device that is activated by timer or by a light sensor of a sunrise and or
and sunset.

6B-310-083005 World Time Calculator: The World Time Calculator is a must for business people who work domestically or internationally. This innovative system accurately tells the time for each world region. Another timesaving device!

6B-630-083002 Virtual Reality Voyager: A toy that no child will ever turn away. A new adventure every time! The child will experience different movements and audiovisual effects each time.

6B-690-083005 Composter: The environment is something everyone shares. Now, apartment dwellers can take an active part of composting their wastes. The Composter decomposes waste that can't be decomposed in a dump. Every home should have this solar-powered device.

6B-710-083001 Interactive Lid: This safety device protects our families. The Interactive Lid warns when our food or chemical contexts have expired, if dangerous to open, and/or if the lid needs to be fastened better.

6B-740-083004 Laser Gun Game: The new video game, the Laser Gun Game, is the video game of the future. You hit flying objects with a laser gun. It's much more complex than the current video games.

6B-840-083004 Sound Controller: The perfect device that increases work performance. The Sound Controller makes special background sounds to mask unwanted noise. Prevents sounds from the street, neighbors, computer printer, and others. Great for whom you need rest, too!

6B-920-083005 Remote Control Mouse: The Remote Control Mouse is a wireless computer mouse. Prevents Carpal Tunnel Syndrome and other computer-related injuries. Can be used in the house as a remote control device for household appliances. The product of the future.

6B-970-083005 Laser Glove: You can dance and create music all at the same time with Laser Glove! Each finger emits laser light. You create your own sounds with each portable sensor. Great to activate other products at a distance. This is a recreational and productive device of the future. Progress.

File 6BG

6B-080-083003 Multiple Counter: The Multiple Counter is a safety device that leaves very little for error. The Multiple Counter deciphers up to 5 multiple tabulations simultaneously. This is very important in our busy world.

6B-11-032007 Camera Alerter: Film is a profitable industry that needs things done right the first time. The Camera Alerter does just that. It signals the cameraperson when technical difficulties occur during filming. Think of the time and money you have. The Camera Alerter works for still or motion cameras.

6B-24-083005 Driver Identity System: Car theft is at an all-time high. Even car alarms don't seem to work. The Driver Identity System is the solution! The driver is identified by body weight that matches the car's memory. You can program the system to suit more than one driver.

6B-320-083007 Coffee Maker Alarm: No one has time sit and watch the coffee maker. The Coffee Maker Alarm sounds when it is ready or when empty on an active burner. This is a timesaving device for home and office.

6B-580-083003 Voice Scanner: The Voice Scanner is a must for those who don't have time to sit and read. The device scans the word, then reads them from a speaker. A great help for kids and the visually impaired.

6B-720-083003 Virtual Food: Virtual Food is every dieter's dream. Food is served with sound and smell emitting effects. No chemical ingestion, yet Virtual Food enhances the flavor and experiences of food.

6B-750-083003 Distant Touchless Switch: The Distant Touchless Switch is used for convenience. You can control a unit by blocking some of the laser beams. Perfect for stores.

6B-780-083003 Mobile Light: The Mobile Light allows mobility in theater or film without complicated wires or controls. The motion sensor directs light to follow the actor's movements. Great recreational instrument.

6B-820-083006 Tension Locator: Now a device to rid you of aching muscles. The Tension Locator finds the muscles that are extremely tight. A practical instrument that aids in reducing pain and stress.

6B-860-083003 Universal Garage Door Opener: This innovative device will make life easier. No need to get wet or slip on ice while opening the garage. To use the Universal Garage Door Opener, honk several times. Helpful at home or office.

6B-940-083003 Medical Smell Analyzer: Healthcare is a universal problem. Doctors need new devices to help cure patients. The Medical Smell Analyzer measures the patient's bodily changes by smelling substances found to cause unusual responses. The patent's 'reaction determines the illness. This device helps define causes of unknown illnesses.

6B-971-083006 Remote Control Retransmitter: The Remote Control Retransmitter is an innovative device. It allows mobility for the user. You have freedom to sit in a room, yet be mobile. The remote control can send messages to the receiver and the retransmitter.

6B-990-083003 Pet Playmate: Pets are people, too! They need innovative toys to keep their interest. The Pet Playmate is entertainment for your pet and you'll enjoy the fun also. Certain sounds and smells that interest pets are used.

File 6BI

6B-410-083007 Remote Faxer: The invention of the fax increases work performance by allowing information to be transmitted instantly. With the remote faxer, you will increase work performance because of the mobility it allows the user. This portable
ice will save you time and money.

6B-411-083007 Verbal Pager: Better than the cellular phone, the Verbal Pager lets us key-in or speaks a message. Then, the device transmits messages to the computer instantly. Through the airwaves, the computer speaks the recorded voice statement to
e desired party. Technology, personalized.

6B-430-083007 Color Fax: Faxes don't have to be in black and white anymore. The transmission is perfect for marketing purposes and even entertainment. Each color is separately transmitted, having each separation coded for a certain color. The receiving fax assigns the color and compiles the multiple images to create color. This creative device will change marketing.

6B-440-083007 Three Dimensional Transmissions: This innovative device transmits three-dimensional images in business. The Three Dimensional Transmission also aids the visually impaired by transmitting Braille codes through the modem.

6B-530-083009 Portable Stereo: How often have you missed someone at the door because you had your headphones on? The Portable Stereo is unique. It alerts you of external sound by amplifying the outside noise. This also aids in safety.

6B-590-083007 Color Code: The Color Code is convenient for the busy computer user. The unique device allows only particular colors to be scanned into the computer. You write notes to yourself or others, but it doesn't show up through the scanner.

6B-660-08300C Smell Guard: Protection is vital in this growing world. Unfortunately, we need to protect ourselves from unwanted contact. The Smell Guard can save you. It emits a horrible smell that will repel the attacking person. This scientific
designed smell will turn people away, but not harm us.

6B-730-083009 Computer Time Recorder: The Computer Time Recorder increases work performance by recording the time on the computer. Great for when you are on a tight deadline.

6B-830-083009 Voice Analyzer: A unique device that aids in analyzing behavior and personality patterns of people and animals. Listening to voice pronunciation of certain words does this.

File 8BX

8B-010-083004 Pet Locator: You will never worry that your pet has wondered off. This innovative device allows you to know where your pet is at all times. The owner's receiver picks up if the pet is inside or outside.

8B-110-083004 Automatic Speaker Balancing System: The Automatic Speaker Balancing System individualizes your listening enjoyment. Each speaker adjusts according to where you are. It even adjusts to your movements.

8B-140-083001 Interactive Therapy: Need a shoulder to cry on? Or need someone to listen to your problems? The Interactive Therapy is for you. Your personal therapist analyzes your voice to determine the best therapy for you. You are never to far from a sympathetic ear.

8B-170-083001 Advanced Tel ID: No more phony phone calls. No hang-ups. With the Advanced Tel ID, you will have more information about the caller. This also works when you make phone calls.

8B-210-083005 Toothbrush Pleasure: This unique toothbrush makes brushing your teeth more fun. You hear pleasant music and smell a pleasant fragrance as you brush. The Toothbrush Pleasure will have you brushing longer. Your teeth will thank you.

8B-420-083005 X-Ray Scale: The X-Ray Scale is vital for sub-section analysis. This useful device discovers the internal sections of any item by weight, density, and other properties.

File: 8BG

8B-100-083006 Interactive Smell Effects: Interactive Smell Effects is a useful device that is for everyone. The interactive device uses smell to enhance effects, such as in video games or in entering a restaurant.

8B-280-083003 Vending Machine Analyzer: This new marketing device is useful for studying consumer purchasing behavior without a survey. The Vending Machine Analyzer determines the items sold with simultaneously occurring events. Great for understand
the average consumer.

File: 8BI

8B-040-083008 Coupon Printer: In this new interactive world, the consumer has a great advantage. The Coupon Printer aids the consumer. While watching TV, you request a coupon. Easy!

8B-060-083007 Beeper: New technology makes life easier. If you live in a busy world, where time is a gift, the Beeper is for you. This new device transmits signals to a particular receiver who, intern, beeps, lights, or vibrates that a message was received. Can be used in all facets of life.

8B-070-083009 Automatic Remote: The remote isn't just for television. Automatic Remote is a convenient device that activates certain applications without barely lifting a finger. The personalized device is activated by laser light.

8B-100-083006 Video Game Effects: The Video Game Effects is a unique entertainment device. The effect lets the user smell the unusual creatures in the video game. The device can also be used for other audio-visual products, such as computer training 'interactive video.

8B-150-083008 Switch Board's Identifier: The receptionist can be the busiest person in the office. The Switch Board's Identifier can help. This useful device simplifies work by receiving call codes that give various information about the caller. A
at timesaving device.

8B-250-083009 Escape: Need to escape? Find relaxation at office or home? Escape is for you. This device allows you to choose the desired feature: smells, sounds, music, visual displays, massaging, and chair vibration. Relax.

8B-290-083008 The Trainer: This training device is vital in anticipating future situations and activities. The Trainer improves work performance by depicting future situations by suggestions, warnings, or alarm.

8B-410-083008 Scale Alerter: The Scale Alerter is vital for good health. Obesity and anorexia are weight problems that can effect your health. The Scale 'notifies 'w5 it 'predicts weight changes in you. Also, can be used for scientific study, etc.

8B-430-083007 Mixer: The Mixer is a timesaving device for those who frequently use the scale. This device combines multiple chemicals. The Mixer is useful especially when the exact and final weight is not crucial.

File: A B C / 1BX
FILE 1BX *

1B-110-032002 Magic Buttons Morning Alarm: Turn off alarm by touching correct combination of buttons within 3 seconds. Display shows new needed combinations each morning. Helps awaken the sleepy head. . At anointed hour, clock's display shows the combinations needed to be keyed in to deactivate the clock. The process helps make the sleepy head alert.
-was 1A-4) WAKE UP GAME:
Do any of the following or other activities upon waking to turn off alarm. The work required will wake user up. . Different ways instructions are conveyed to sleeper:
-first is sound which alerts user - this sound can intensify in 30 seconds or remain constant, turns off when game is played correctly or well enough (high enough score)
Game #1:
display shows which buttons must be pressed and in which order; then display may repeat instructions over and over until user solves problem (does what is required). Eg:
-the user has 9 [3 rows of 3 keys each (or more)] keys on small key board; display shows which keys must be pressed and in which order by putting a number in the box of each key on the display. The plastic key board remains the same daily, yet the numbers in the display's boxes representing the individual keys and the order in which they are to be pressed changes randomly each day.
-all features of 1B-111 are mergeable with this product.
-Interactive Lock:
Person locks or unlocks device by using the morning alarm deactivation features. Can use for gaining entry, etc.
-the manner in which the buttons must be keyed in to deactivate alarm (pp, mp).
-OTD/: morning alarm; display; pp; mp; uk; date; tds; interactive; basic; game; entertain; exercise; bp; osc; speech; cart; pi.

1B-111-032002 Quiz Show Morning Alarm: Deactivate alarm by answering the questions correctly. The mood of the questions causes alertness.

-Interactive Question Alarm: -device asks questions from user, and user answers typing in information onto key board. The display will show which key needs to be pressed to select, eg: yes, no, white, blue, red, small, big, etc in answer to questions like: "do you see 14 cars on this display now...", or "what is your favorite of these color choices" or "do you prefer small or big dogs", etc.

-the questions are psychologically designed to make sleeper think in pattern to speed their waking state, and get their curiosity

-questions are stored in microchip for next 2 years (replaceable by purchasing additional cartridges with questions)

-other versions can have interactive features: tv screen asks and responds to questions, eg says "wake up sleepy head, the answer is wrong!". The interactive system uses special CD-ROM reader and disks; or uses other computerized systems.

-this and other morning alarms can be developed by or use TM: Morning Alarm(s); Morning Alarm(s), Inc; Creative Morning Alarm(s)

Each key may be different colored yet have no number or letter (reasons: lets user use key board for different choices; keeps size of device small; makes user think), yet other versions have one or more sets of keys with number or letter imprints.

Additional details:

There is a button on the bottom of device which can turn off the alarm if user is unable to deactivate system via the game method.

Naturally the user will want to avoid this and take the challenge of letting the machine wake them up. Probably required by western government electronic standards.

-Key board is a separate unit which communicates to main unit via remote control.

-User has choices over the way the cartridges questions are addressed to him, eg: difficulty, number of questions each morning.

-Codes: date

-Interactive Lock:

Person locks or unlocks device by using the morning alarm deactivation features. Can use for gaining entry, etc.

-if user wakes up then it is unnecessary to deactivate alarm by playing game. Any of the morning alarm clock deactivations may also be used from out other files, eg: the riser.

Footnote for 1B-11:

Device can be part of other product features, eg: radio, standard type alarm options. The alarm sound might vary each morning. Deactivates when weight from bed is reduced. Codes: all; display; pp; mp; uk; interactive; educ; toy; game; entertainment; portable; mfh; osc; vc; egh; score (how well user did in past games, tests.; teach cart (other); rpc; pc; uq; access; pi; character.

File 1BG

1B-010-032003 PERSONALIZED ANSWERING MACHINE: receiver programs "T" answering machine to give out different messages, according to caller's "T" id number,

-very related product in file A6.
-(Special devices exist which allow the receiver to know the tel number of the caller.)
So the receiver can input the caller's home and work tel numbers, and give just calls from those numbers special treatment.
Special treatment possibilities: different outgoing messages (nicer or more business like, etc); when a call comes from the desired tel number the answering machine's beeper can contact owner of answering machine or the owner might get a call from the answering machine with a recorded or coded voice/sound stating that a message from desired tel number was received, then receiver can call machine and get message, or machine can give message to owner; calls from desired numbers are call forwarded to location of owner (tel #1 calls "T" #2, then "T" #2 automatically transfers call to "T" #3 since this is such an important call).
83
-for statistical purposes device keeps records of all incoming calls for offices.

Footnotes:
-different length of time device may record incoming messages.
CODES: all; displays tel number coming in or being dialed; pp; mp; uk; date; interactive; microphone; synth; portable; mfh; vc; score; sp tel; rpc; cp; uq; pi; character.

1B-120-032008 (Was 1A-6) Creativity Enhancement Device (formerly called, Brain Light):
Machine measures person's creative brain waves and feeds back information for their development of creative abilities. A clear barometer of their frequency levels allows users to gain greater clarity for control.

Technical: creativity might be measured by any one of the following: blood pressure, neurological frequency measurements via brain caps, receptors taped onto certain regions of body, eye movements, or other effective means.

-Required would simply be a research project correlating all thousands of body signals with levels of creativity - the above are only some of them proven to be related. A large synthesis of divergent signals may help validate results.

83

Very difficult to truly make operational. There are enough studies to show that certain brain waves are related to creative thinking, other possible measures (frequent dilation of pupils, rapid heart beat while seated). Still the physical characteristics to check for are probably limited. Realize this before taking up this interesting product idea.

-Main Purpose: Increasing creativity by identifying when you are creative. People are often caught up in the moment and forget to know what is going on inside themselves... For example, a green light might go on when the person is acting creatively. By realizing you are creative, it will probably be easier for people to more consciously put themselves back into this state of mind. Controlling one's thought process and guiding them into the creative mode can be somewhat subconsciously directed, and having the light tell you when you have crossed the line or not, makes it maybe easier to cross the line frequently.

-Other Purposes: for scientists studying the creative thinking process; helping people correct mental thought disorders.

Footnotes:

Display; "C"; pp; mp; uk; date; user beh; interactive; educ; toy; game; entertainment; exercise; portable; printer; mfh; alerter; osc; vc; egh; score; tgh; teach; md; cart; rpc; pc; uq; mq; pi.

(Hopefully the above was translated already into Russian in early 8.93)

FILE 4AX

Note: Most inventions in 4A were expanded in file 4AX. Other inventions from 4A were not transferred.

4A050 COFFEE FILTERS AND GRIND COMPACTOR: Makes dispensing easier. Tube from machine goes out releasing grind's squeezed out liquid.
-"Tilt": controls sys' functions

4A060 COFFEE CLEANER: Signals when coffee machine requires cleaning. User activates the easy self-cleaning system. Get better tasting coffee.
-Display/light shows when coffee machine needs to be cleaned. May have self cleaning mechanism activated by user, or cleans after each use.
-Chemical deposits build up in system and need to be dissolved and flushed out
-OTD: "S"; c%; mp; pp%; uk; date; TDS; all; alerter; osc; score; cart (of cleaning chemicals); cp; cc%

* 4A160 TERRARIUM; AQUARIUM: grow little shrimp (size of fleas), aquatic plants, etc in see through jewelry - thick bracelet, big ring...

4A170 PILL INTAKE MONITOR:

Method 1: pill dispenser inserted into mouth, it must remain for duration in which pill would dissolve if not swallowed, and perhaps even a longer time. For patients who are uncooperative in taking their pills - saves money in having to house them and supervise that they are taking prescription. If pills not taken, maybe welfare checks, deserts, etc stopped as punishment. Dispenser's calendar marks when pill taken, and alerts user as to time for taking pill(s). Can dispense multiple prescriptions at each's own allotted time schedule. Device worn around neck, or kept otherwise by patient.
Technical: device must register saliva and or specific body temperature to fully activate fact that pill was swallowed. Device in size/shape that it can't choke patient.

Method 2: Saliva Monitor: Each pill can leave chemicals in saliva; hence, monitor checks saliva at certain times checking for pill intake. Options: Monitor alerts patient at pill taking time, dispenses medication(s), alerts patient for monitoring time.
Technical: device may have easily insertable part applicable for type pill taken. Pills might come with other harmless natural ingredients that will show up easily in saliva helping to insure pill was taken, if main

ingredient registers poorly. Or, device may give placebo required to be taken with real pill, whereby patient is not aware as to which is placebo and which isn't. Or, a chemical drop can be placed onto each pill (for the tagged chemical) noticeable by saliva monitor.

Applications: homeless and mentally ill people outside confinement often have to be kept under supervision; or visited by hospital employee. Product might not be perfect, yet saves Money!
-4E020 Content & Date Verifier: of (any said) occurrences, eg: "tracks" occurrences.

* 4A180 NECKLACE BAROMETER: compact size gives necessary info on future weather changes coming up. May also measure any other standard weather measurement, eg: temperature, humidity. Can be non-jewelry separate piece object.
.-4E020 Content & Date Verifier: of (any said) occurrences, eg: "tracks" occurrences.

4A210 COMPOSTER: chemicals, and or bin and instructions provided so pencil shavings can be made into good topsoil. Compost in/outdoors. Seeds of plants that are particularly well suited to such soil might be mentioned/included. Great for kids - might even make them more eager in using their pencils.
-Good for other garbage items too

* 4A230 JEWELRY: functions as "R" control.
-ear ring, ring, necklace piece(s), belt buckle, watch, head band. Insert standard "R" control device options within for: television, radio, cd, tape, record, VCR.
.-"Tilt": controls sys' functions. "Tilt" is in jewelry form.

4A240 LIFTS GARBAGE CAN LID at whistle or clap of hand for certain number of seconds.
-garbage bin with tight seal designed to keep out small bugs.
O-used by municipal (government) for collecting trash from cans designed to keep out: people, animals, insects. It might be too strong for them to open.
-possible to get garbage in with relative ease.
.-"Tilt": controls sys' functions

4A260 SOLAR JACKET: Outer lining converts light to heat.

-heated by solar energy panels attached to coat. Rest of coat can be any color / material, eg: black nylon/cotton. Panels may be many small hard ones, or of a flexible nature. Acts like an electric blanket.
- option: runs on batteries only/also
-OTD: entertainment; exercise%; thermometer (for inside and outside temperature)%; cart (of heat creating chemicals)%.

4A270 SOLAR HAT: Converts light to heat.
-heats head in cold climates
-cooler via solar energy exists
-OTD: entertainment; exercise%; thermometer (for inside and outside temperature)%; cart (of heat creating chemicals)%

4A290 Tremble Monitor: Getting Old? Measure how much you're trembling with jewelry attached to your finger, wrist, and neck. Learn to identify trembling as a problem and work to reduce symptoms.
.-4E020 Content & Date Verifier: of (any said) occurrences, eg: "tracks" occurrences = "analysis" by doctor.

4A320 DIALECT CONVERTER: (future product) convert person's dialect into your own regardless of whether they are calling from Scotland, Brooklyn, Mississippi, etc. Technicalities might limit extent of conversion. 'SA, 'Tel, 'Adapts sounds.

* 4A340 Disguised Car Phone: mobile "T" made not to look like phone, minimizing theft potential. Eg: in car made to like its a part of auto; for walking made to look like cosmetic case, flashlight, etc. New kind of theft prevention!

4A360 Costume Thermometer: when temperature hits certain points it changes appearance or moves an appendage or sends out a flagger. Especially when it has dropped below freezing, or is about to (for gardeners needing to save plants from frost), hits below zero (F), or goes over certain hot temperatures.

4A390 Sound Camouflager: upon lifting either toilet lid, automatic sound starts so others can't hear person "doing their business" in toilet. Sound possibilities: water rushing (in many frequencies, especially sounds best

at masking desired sounds; wind; jungle; music; etc. More effective than running water, and saves water (especially for dry areas like Saudi Arabia, California, Spain, etc.)

4A480 Water Saver: only runs when mouth is in line with certain area near waterspout.
- Options: Omits need for pressing button. Saves this water for: garden, toilet flushing, etc. Most other water sinks take in soap water hence are problematic. This function workable with new and old idea water fountains.
*4E020 Content & Date Verifier: of (any said) occurrences, eg: "tracks" occurrences; "analyzes" occurrences (for uip). *"Tilt": controls sys' functions

File: Intro To Pat / 5AX
FILE 5AX *

Note: File 5A-Old was later expanded into file 5AX. Some inventions were not transferred.

5A200 Remote Time Clock: Logs hours worked each day. Simplifies salary calculation.
-acts as time punch logging hours worked. Quickly logs who has gained access.
-show your Id/badge's bar codes when going in/out. "C" remembers and tabulates your hours worked.
-saves time and hassle on part of employee being clocked, and employee time needed to tabulate hours worked

5A260 o Personalized Car Horn, and internal sounding alarms and notices (eg: beeps because belt isn't on, or verbal alert that gas is going low, etc): Make the sound you want to hear.
-sounds are within the parameters of government's car design regulations (note different cars have different sounding horns - now choose what you want!)
-sold as option by car company, or by car accessory company

5A280 Auto Karaoke: Sing while driving. Also, version for bus tour groups.
-system for car drivers who sing while they're in car.
*-Special version for Japanese tour bus riders too!
-OTD: "S"; "C"; pp; mp; date; interactive%; toy; basic; "mic"; synth; portable; sst; bp; vc; score%; md; cart (sound generating possibilities); cp; cm; uip.

5A290 Auto's Accident Alerter: Driver hears sound in direction of possible danger if driver's speed and direction are such that it poses high risk it will collide with another automobile at a dangerous speed, direction, and or distance.

*-device calculates turns it or others are making

*-fact that it or other driver might be decelerating is a major indication that they are noticing another vehicle, potential danger

Marketing: even if the cost exceeds a new car, some wealthy people who are so accident prone will buy one, since it might save: 1) having to buy several cars; 2) insurance premiums because of a) lower accidents, b) insurer's discount for having device, 3) some old people simply don't drive for fear of their driving ability, yet sit on millions of dollars and don't want to always have to rely on chauffeur.

-sys "analyzes for any type of potential accident at / w: work place (factory floor); any vehicles.

.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" occurences (for uip); helps show who (w5) was more at fault in accident

* 5A300 Memo: recording device for ideas user gets while driving.

5A301 Car Stereo Car Phone: hear person speaking with you on car's stereo. User can switch between speakers or hand set conversational mode.

5A310 World Clock: Announces the hour in any language.

-verbally announces the hour in any language user selects from "c"'s menu of languages.

*-Great for language enthusiasts and those often thinking of travel. Product lets user feel a little like they are in the foreign country of their selection. Programming keeps verbal sounding in same language until changed by user. Of interest to children too.

=

*-Talking Clock: speaks in diverse accents, types of sounds (domineering, gentle, strange, etc.).

*-UP choice of type sound format, or time given visually and with beep alarm only.

5A340 Hot Plate Scale: turns off burner when scale reads pitcher is near empty. Old models at best: turn off in two or so hours; use thermos that keeps for several hours and can't burn, but can easily break.

-if coffee, tea has been on burner for quite some time, device easily calculates approximate evaporation level and adds water/liquid to counter evaporation level

5A350 Vibration: emits this via keys and or chair, desk in order to:
-enhance quality control (fewer mistakes)
-greater mental ability
-nice feelings

5A360 Computer Page Turner: Software emits the natural paper sounds of changing pages when screen goes to new page. As person progresses to new page, hear the sound of pages turning.
*-louder paper sounds for progressing to different chapters, and even louder when starting or finishing book / directory
*-Application: consumer, commercial, students studying on "C", "C" games, etc.
-OTD: "S"; "C"; mp; pp (type sound wanted, on/off of audio); shows the page number, volume and or file #, directory.

5A370 Microwave Rice Package: pour in water and oven cooks to perfection.
*Non electronic.
*-can have many other ingredients popular in different type cuisines. No messy mixing, cleaning. Get the perfect recipe!
*-any other type food that needs/doesn't need water added

5A390 Smoke Guard: cooking device automatically shuts off upon sensing the required minimum amount of smoke. For microwaves, gas/electric stoves & ovens, toasters, small ovens, electric fry pans, hot plates, etc.

5A420 w (with) light points in direction of heat and or movement and or location of person's portable transmitter and or which seats are being sat in

5A430 Motion "sensor" Floodlights: Light automatically follows person's steps. For a dramatic entry to exclusive night clubs, school plays, etc.
-Follows person's steps as they walk. Ground picks up sensors. Indoor/outdoor.
*-saves labor costs

5A440 Magnet Earrings: Have the pierced earring look without pierced ears.
-(non electronic) Hold earrings onto ear lobe without having to pierce ears by very strong opposite magnets.
-big sales hit for western men. They want the pierced ear look but many refrain because of the permanent ear marking.

5A450 Karaoke Contest:
participants win according to any of a number of categories measurable by frequencies, beats, etc. Also the karaoke controller, or survey of votes of observers and or participants can rate contestants. Often the winner can be the person people want to select for fun, friendly purposes.
. Test criteria: person who laughs most often; highest pitch voice; deepest voice; slowest (with fewest changes in frequency/rhythm); fastest (also measured by how quickly they can complete song words and all); number of drinks drunken during song/game/process; most original; person most likely to have/had most sex partners; most ambitious; most creative; most friendly
*the actual person selected (winner) might be controlled by bar's hostess, or be by random, or rather faulty criteria. Its all for fun.

5A470 Food Laser Designer: For Japanese cook who wants to be creative. Laser burns designs preprogrammed by machine (select from different design options), or cook uses their artistic touch for own designs. Great for Japanese: desert pieces; company logo onto food bits; etc.
-Food manufacturers can use this for food production targeting any cultural eating habits. Might create new sensations in future.
-Optional feature for microwave/conventional ovens.
-Applicable to non-edible foods (don't mail or use this since its another product being handled separately)

5A530 Stress Alarm: when your or another's voice is creating frequencies depicting likely stress, alarms via light or sound or voice. User then can try to reduce their or other's stress
-for research / "behavioral analyzer": 4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" w5 occurences (for uip, via ba)

5A540 A/V Pedometer: according to how the creative purchaser of product walks, jogs, device emits audio and or visual signals in corresponding rhythms, intensities, volumes.
-Audio emissions include: mono and or multiple frequencies, rhythms; songs

-Visual emissions include: Lights, which stay constant, change in intensity, go into rhythm. "S" is an altering of lines, graphs, dots, images, characters, colors, etc.

5A560 Waitress Caller: simply press secret light to get waitress, save the trouble of keeping your eye out for them.

. Fun innovative restaurants can attract clients with this novelty. Could become a new hit. Client simply calls for waitress without having to keep eye out for them. Better than having an embarrassing light above table going off to get waitress. Only the client and waitress know that someone is being asked for.

-H-separate keys for different requests: water, more coffee, the bill, want to order now, etc.

-Remote control

-(call) any u

.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" occurences (for uip)

5A570 Remote Identifier: Know who is coming by picking up on their small portable transmitting device. Each party knows who is in nearby vicinity with or without walls. The receiving portion of invention identifies person's code and displays their code number, type frequency, and perhaps its corresponding name if machine knows. Perhaps transmitter sends code with sender's name and any other info about them, eg: their co affiliation, nationality, etc.

-access through doors, etc might be determined by the code sent through such constantly or occasionally (on user's command) transmitting codes

-D: u (users) (c=distancer=rc) = knows other's = distance; person being "tracked" = portable "tr"/"ps"/"cid" = RC = C (computer) = monitoring person.

5A590 Spray Paint Vandal Catcher: special receiver built into walls, etc sends alarm to police upon receiving spray paint

-receiver senses via paint particles, or chemicals used to deliver the paint (might not even have to be painted on to alarm)

-receiver is easily replaceable, and easily blends in walls that are not completely flat

-phony alarm receivers can also help thwart off vandals

-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" occurences (for uip); police catching villains (serves as court evidence). Sys (adaptive system) "tracks" = motion "sensors" where villains were before/after any/the crime.

-2e251 intelligent monitor

5A610 Invention Store Software: Walk down the store isles within the type company you selected. Get ideas about, new products, new business strategies eg: marketing, packaging.
-develop a fantasy product land
-OTD: "R"; "S"; "C"; pp; mp; uk; mouse; interactive; educ; toy; basic; game; enter; portable%; printer; "M"; osc; vc; egh; score; tgh%; md; cart; tr; mo; cm; uq; mq; uip; character; clap.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" occurences (for uip)

5A650 Dog Trainer: Teaches lazy dogs to bark.
for pet owners with dogs that are poor barkers. Whenever external sound occurs, speakers transmit in frequencies that help cause dog to feel like barking. This is a behavioral change that will usually continue to work after the system is turned off.
-speakers can transmit in sounds audible and not audible to humans
-more expensive models will have microphones that pick up only sounds that are from certain points (eg: avoiding car sounds far off, etc.) which in tern triggers the speakers.
-speaker can also make barking sounds
-OTD: "R"; "C"; pp; mp; uk; date; interactive%; basic; "mic"; alerter; tgh; score%; cart; cp; access; uip.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" occurences (for uip)
-combines with existing systems that cause animals to reduce their negative behaviors (barking) when the bark (too long / too loudly). Added to file 5/96.

5A670 Safety Pedestrian Light: just before school and after school, when laser or other medium sense presence of person coming or standing, light turns green for them to cross. Invention placed within desired parameter on all pedestrian cross lights.
-without invention: kids can play while waiting to cross and maybe fall onto street with ball, etc; since beyond desired parameter - light doesn't automatically turn green child wont assume cross walks to always be green, additionally, traffic lights near school might occasionally have child wait so as not to build assumption that lights will always be green, hence not the need to look at them.
-should anyone cross light when still red, a sound might alarm. Can be used on any cross walk light (even throughout entire city)

5A690 Combination Walkie Talkie - Tel: "T" is with cordless and cord options

5A700 Child Controller: to activate [outgoing call / particular (tv) program) feature, first press a special button (once or any number of repeated times in sequence) which lets you get [dial tone / program]. Caller must dial the numbers/code soon thereafter or dial tone / connection/connectability/"access" is lost and any pressing of other keys on pad are ignored.

-Additionally, there will be a ring/beep(osc) if an incoming (t / %program) call/tr comes and can only be picked up (if handset is off hook) by pressing the same or other special button - this prevents kids from [answering the phone (should they be too young) / watching particular programs].

-parents can't always control their kids from using the sys ("T"), hence this is a valuable feature.

.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" occurences; "analyzes" occurences (for uip)

-Entertainment Program Screener: 9G-220: Sys (adaptive system) screens/selects (any unwanted/wanted) occurences (within program)

-partly moved to "Edit"

5A730 TV synthesizer: convert programs to your preferred sound style. Go beyond traditional base, treble and so forth. Change according to type accents and voice styles preferred.

-moved to 9G220 in 8/95

5A740 TV Guard: Helps students study more by cutting back their television viewing time. Parent restricts times device may be activated.

-cuts of television after certain time period (UP time span allowed to watch). Certain models allow user to turn TV back on, others are not allowing this

-records when TV was watched

-watcher keys in their code to turn on TV. They are allowed limited number minutes/day or month... Amount of allowed time might be determined by: their grades in school, other performance.... Parent who sees more than one person watching TV w/o each of their codes keyed in can have TV not allow them to watch tv for whatever time period as punishment

-OTD: "S"; pp; mp; uk; date; tds (scoring maximum # hours allowed per day, or week/ month; # hours which can be watched ("access") based on person's performance (eg: school scores)); educ; basic; alerter; access.

-Entertainment Program Screener: 9G-220: sys screens/selects (such/designated unwanted/wanted occurences/modes%/programs%)
-copied to 9G220 in 8/95

5A750 Warner: separate or attached device that notes if tv/monitor has become health hazard (excessive radiation, poor image which hurts eyes {decreases eye vision over time}). Best as a separate device sold by someone who doesn't make television sets.
-OTD: "S"; "C"; diverse sensors of radiation, etc; alerter.
-Entertainment Program Screener: 9G-220: sys screens/selects (such/designated unwanted/wanted occurences/modes%/programs%)

5A770 Sound Bites Ticket Vending Machine: hear segments of the show (theater, cinema, etc) and or reviews at the ticket machine(s).
-MP or UP for option for which they wish to listen
-"Entertainment" / Program (sw) Screener: 9G-220: sys screens/selects (such/designated unwanted/wanted occurences/modes%/programs%)

5A781 Automatic Seat Lever: lowers toilet seat and lid upon flushing or exiting bathroom or flick of switch. Raises seat and or lid at flick of switch.
-Related to existing device, which has green or red light, whether seat is up or down.
-D: seat's position = sensor = analyzer = light / osc / nr

5A790 Electric Toothbrush Usage Meter: counts the number of times used-shown on "S" and or alerts user when it is time to change brush attachments
-OTD: basic; tds; alerter; score; works with regular and electric toothbrushes.

5A800 Simultaneous Interpreter: speaker's words translated into desired language: either on screen or verbalized into listener's ear phone.
-converts into language(s) of listener(s)
-can also listen via speakers
-OTD: "S"; "C"; pp; mp; uk; date; educ (teaches language, pronunciation, does language drills, etc); entertain; "mic"; synth (into desired sound effect); portable; printer; "M"; bp; osc; vc; egh; md; cart (languages, sound

synthesizing effects); works with telephones, tr, mo, fs; rpc; uq; mq; uip (preference for certain phrases, styles of speech, etc); character; clap.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" / "analyzes" occurences (for uip (db improvement), intelligent monitor 2E251)

5A870 Voice Mail Music Selector: Listener selects type music desired while waiting on hold.

-listener requests type music they wish to listen (or none at all)
during their being on hold
-OTD: "C"; radio; CD player; satellite receiving and transmissions of any audio based information, eg: news service; database of encyclopedic information accessible by listener; date; tds; basic; game on "T" - interactive; "mic"; synth%; "M"; cart; bp; "T"; sp "T"; tr; mo; fs; cp; uq; mq; access; uip.

5A890 Deaf Speaking to the Blind: as deaf person keys in the words onto device's keyboard, speaker emits the sounds of the words. Applications for other situations too.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" / "analyzes" occurences (for uip (db improvement), intelligent monitor 2E251)

5A1000 Info Pick Up: tune into (diverse mediums) and get precise time, weather, news, any other desired info, etc.
-your watch, clock, "C", electronic game or calculator or notebook picks up codes via: "T", satellite transmission, radio - am, fm, sw, mw, lw or other air frequency. Device converts such signals into info, which can be portrayed, to user via "S", audio or printer

5A1010 calculate the change in weight of anything over a period of time so as to easily show the information via any computerized graphs or other database type software.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" / "analyzes" occurences (for uip (db improvement), intelligent monitor 2E251)

5A1020 measures the additional weight needed to meet requirement

5A1030 Density Calculator: key in type substance and or volume and scale gives density
-can have system for measuring volume easily, eg: the difference in rising of liquid upon insertion of material - device calculates the difference to a minute decimal.

1055

5A1040 Diet Recorder: each food item has own container and corresponding scale. Tabulates all food entered and retrieved so as to make any possible numeric charts, graphs. Great for scientists studying animals, people; for people watching their diets.

-put switch into groove for "food input" when putting in new food, or simply key in that new weight is going in. Enter related command when taking out food for feeding. Scale knows not to record disturbances to scale when agitated while entering or retrieving food - the scale puts new weight into memory when task is completed.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" / "analyzes" occurences (for uip (db improvement), intelligent monitor 2E251)

5A1050 Musical Skateboard: User programs type sounds generated when in motion. Sound like a jet plane, sports car, etc.
-makes sounds, music while wheels are turning. Has on/off feature for turning on sound and releasing wheel locks (if security is wanted, use combination or key lock)
-sounds: roaring engine(s), whizzing car, whizzing skateboard
-microphone amplifies actual sounds created by user while skate boarding

5A1070 Temperature Change Analyzer: as temperature changes it analyzes the resulting changes in any material being studied, how the following change: volume of expanded or contracted chemicals, liquids; changes in color of chemicals, plant or animal growths (system might identify color changes through its eye which analyzes the color and hopefully the small color changes too); activity of animals, insects in their cages (are they more or less active) - might sense for vibration and or note frequencies of movement, etc; frequency in which animals, insects eat, go into certain places, touch certain things. System compares temperature with many other things too. It then can chart the learned information on all types of graphs and tables.
.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" / "analyzes" occurences (for uip (db improvement), intelligent monitor 2E251)

CONCLUDES FILE 5AX

File: Intro To Pat / 6A

FILE 6A

6B-530 PORTABLE STEREO: combination of alerts in headphones if: your beeper/pager is going off (alarming); door bell ringing; external sound is high (system amplifies outside noise if its in certain frequency or volume eg: sounds of standard car horns, screeching of cars coming to quick stop, etc)

-the following already exists: when the tel rings, the volume of your tv, stereo goes down
-system is an alarm system too, with programmable alarm setting that signals user when it is time
-can be part of walkman, stereo, etc
-For Techies: All; remote; "C"; mp; up (to be interrupted for certain sounds or situations); interactive; microphone; mfh; bp; alerter; osc; vc.

6B-58-600 VOICE SCANNER: Scanner views (takes in) words, then reads them out audibly.
-this single product is a combination from designs 1B-58 & 1B-60)
Great for: kids, the blind, those who are too busy to read can just let the scanner read (even by paper sheet feeder) and do what they do without sitting down, eg driving, etc.
- Acts something like a record player from 2D surfaces.
-For Techies: Display; fd-hdd; pp; mp; uk; educ; toy; entertainment; microphone; portable; mfh; bp; osc; vc; cartridge (for type voice desired, eg: select from different personalities, accents...)prc; cp.
. Record Player Option: Another part of our company is working on the idea of reading bar codes or other related codes to generate desired sounds, music, etc. This facet is encouraged for the patent application, yet percentages of profit for this facet are already reserved for another party.
--Even a new type of fun record player with wheel or sheet feeder might be used. Purpose: control the speed in which data is received
--The system might be able to read codes at many high speeds, yet only sound out the data at the desired sound. In this case, the reader must be designed for certain codes.

. Light Emitting Scanner: as scanned one or more light colors, sounds, music are emitted in fashion corresponding to item being scanned. Change item being scanned and get different lights, sounds. Scan paper's words, pictures; leaves; stones; tile; fabric; faces; etc.
-markets: toy, part of product
-displays: different graphics according to item being scanned. Can convert pictures being scanned into something different.
-UP way device makes its changes, eg: into larger simpler shapes, more blue and green, change all pink to orange etc.
-Great for kids! They can walk around their room having magnificent creative fun....how many other products in their room could be so imaginative!
For Techies:
Scanner sends out light and or sound waves (not necessarily audible to human ears) and then depending on how it bounces back to device, the appropriate stimuli (light, sound, music...) for user, is created;
. For Techies: All; display; fd-hdd; mp; pp (types of effects desired from whatever scanner sees, eg: shiny surfaces can create more white or golden light...); uk; interactive; toy; entertainment; exercise; portable; sst; iq; printer (prints out graphics, color, etc according to what was scanned - the print out is the reaction, like light

being the reaction as above); bp; osc; vc; egh; score; cart (types of reactions that can be created and how); rpc (for main part of product); cp; uq.

6B-590 COLOR CODE: Scanner picks up only certain colors. Allows user to write down things for certain uses yet not desired for entry into computer.
-each color (aspect of information) can be easily separated once within computer, for editing, etc.
-similar to the idea about copy machines (eg: Xerox) that don't copy the color blue
-User can select colors when writing onto paper, and or when it instructs computer or other device to put down certain colors.
-Many uses, for example:
--user can write in blue (not picked up by scanner) when making notes onto paper it doesn't want picked up
--some data is needed, others aren't for particular occasion (user decides which colors are or aren't wanted for the occasion).
-Pen(s) might be sold with device, making certain that such writing won't be picked up
. For Techies: Display; all; fd-hdd; pp; mp; uk; educ; toy; game; entertainment; portable; sst; t; mfh; bp; cart (eg: to work with certain colors); cp; uq; character.

6B-630 WALK THING: amplify and alter the sounds created by your walking around.
-sound like you are walking: on a beach; through forest; on pile of tin cans (for humor); through water; etc.
-you can walk around the room, yet it sounds like you might be walking on: sand, snow, autumn leaves, sloshing in shallow water by sea shore or lake...
-each leg movement triggers the sound making mechanism
-the speakers can be for the air, or via portable stereo headphones
-makes walking to work, etc more interesting
-user can create different sound effects of many of the choices listed herein
-uses the existing pedometer technology as part of the system (pedometer counts the number of steps a person makes when walking), plus additional technology
-this is an early type of "virtual reality" product
-other titles for product: Virtual Reality Walk, Heaven Walk, Walking Sounds, Walk Maker, Jogger Companion. Additional uses: for jogging (makes it more interesting)
. . For Techies (OTD – Other Technical Details):
-different cartridges allow different sound making options; all; fd-hdd; pp (type of sound effect desired); mp; uk; interactive; toy; game; entertainment; microphone (determines type sound made by user, then synthesizes sound accordingly); exercise; portable; sst; waste strap; bp; osc; vc; score; acts as pedometer too; cart; rpc; cp.

* 6B-660 SMELL GUARD: emits terrible smell to deter person attacking or wanting to rape. Smell is scientifically design to turn people off. Not harmful to humans.
-Doesn't stain clothes. Some versions might stay with person it is sprayed at for a time being (like how a skunk works) to help police identify the villain
-smell dispersion might also be with ink (probably red), which also helps label villain (ink can wash out in laundry). This is different from tear gas, though the smell might be mixed with tear gas (localities where tear gas is illegal can just have the smell chemicals)
. For Techies: The spray can emit out as far as 5 meters or more, it works so it doesn't get the spray onto the user; All (except this isn't an electronic device, without elements #6, #7, #8, #9 in the "All" section); portable; cm.
User can also press button to release smell onto villain as they are leaving dwelling. Eg: exit door area has motion sensor and releases smell or ink when person walks buy...

6B-690 COMPOSTER: (can be developed?) quickly turns food scraps into compost for the garden or for newly potted plants, etc. Good for those who 1. don't want to go outside for the compost pile, 2. want the compost into effect quickly, 3. want to keep out outdoor rats, cockroaches
-special device handles the problem of odors
-might run on solar power
-realize westerners are prepared to pay uneconomical prices for ecological value (even if it might be silly from an expert's point of view). Look at Germany willing to pay over $1.00 to recycle many of the consumer product packagings, though it could cost about $0.03 to burn or dump it instead. There are many other examples.
-it is essential this is solar powered. We want an advertisement that says "quickly turn your rubbish into compost with solar energy..."
. For Techies: PP; mp; all; date; entertainment; iq; t; alerter (when compost is ready, etc); cartridges of bacteria to speed process.

6B-710 LID CONTROL: container's seal shows all the times it has been opened. To activate, user keys in date at which food was first prepared and or inserted into container. Subsequent times occur automatically.
-purpose: freshness; theft of food; studies on frequency of use and this can also show....; when item is of greater popularity, eg: Mondays, and or evenings.
-alarm if lid is opened beyond date originally programmed for (people may ignore written memo, or think it is still ok - this psychologically causes people to become more wary of using food beyond date. Contents: food for people, animals, botany, etc; chemicals; medicines; industrial supplies; etc.
-gives verbal warning upon opening, eg: "this is a dangerous chemical substance...handle with care"
-to open: lift tab of lid; twist tab of lid; etc
-programming of lid might be done from: outside or inside of lid, or outside the base of the container. Other features: memory, display

-gives warning to put lid, cap, top, seal back on if: not perfectly in place; not put back on after required time (as programmed by user)

-communications, warnings and or alerts can be via: verbal announcement, alarm sound, flashing red light, display message

-lid can give greeting when opened, eg: candy or food store's lid says "hello", "please try one free sample"... when opened

-system may be connected with scale (weighing system), which also tabulates changes in weights with lid opening times

For Techies: All; display; fd-hdd; pp; mp; uk; date; user behavior; educ; toy; microphone; portable; iq; t; mfh; alerter; osc; cart (type software programs); tel & or modem (alerts user); uq; mq; access.

6B-720 VIRTUAL FOOD: food is served with sound and.smell emitting effects. Enhances flavor and experience of food.

-note: taste is the combination of sensory experiences received by tongue (limited to four flavors) and the greater varieties of smells by nose / smell 'analyzer.

-can replace limitations for chemicals in foods (because carcinogenic); get much greater impact from same/other chemicals emitted in air per grams that are absorbed into body via nose versus eaten.

-can also be sold to people who lack taste buds; want to experiment with new foods, experiences

-smells that enhance or reduce appetite (emitted with or without food and or pills)

-TM: virtual reality food, food virtual reality, smell, smell food

-must be able to show manufacturer some of the potential smells creatable and how; must be using no known carcinogens

For Techies: Sound emitting effects; all; pp desired effects; mp; uk; entertainment; portable; iq; t; bp; sp; cart (of smell creating elements).

6B-740 LASER GUN GAME: hit flying object, if no reflection comes back you hit it. Mirror causes reflection. Gun must be pointed from correct position to gain ability of a reflection should shot be missed. Additionally, one can only shoot in the distance during dropping or flying into the air while air born item in between gun and small or large mirror.

- hold gun in right position, or do it from a gun holder

-flying object can be a mirror ball, requiring gun person to hit squarely in middle, causing a reflection

-flying object, if thrown by device (or hand) in right manner, its sensor(s) in middle, when receiving laser can sound: beep; crash; sound bang; etc

-Variant: flying object (probably ball) reflects laser light to gun's receptor, signifying when a hit was made. For use outdoors too. Ball is of non fragile light reflecting material

-user programs the frequency, force and speed in which balls are ejected

-Display shows score of player(s)

-For Techies: All; pp; mp; uk; interactive; educ (teaches shooting practice); toy; game; entertainment; portable; iq; t; bp; osc (eg: when a hit was made); vc; score; cart.

6B-750 LASER STRINGS: send out lasers at great (or very short distance) public and members of group can trip the light creating sound and or music.

-each string (laser beam) has different sound

-some buttons or strings can also trigger background sounds, eg: background orchestra

-models can work in the light and or dark

-models for one or more players: the distance between transmitter and receiver might be adjustable

-each string might be of different color: if visibility of light is a problem for some users, then a line might be painted onto the background showing laser beam's location.

-can be designed as a special instrument with choices of 100's of sounds, or designed to represent a: harp, go to (Japanese harp like instrument which is played by plucking each string), etc.

. lasers can be programmed by user to: make a single sound at time beam is broken by finger, etc regardless of how long the light was interrupted; or, sound continues during entire duration of light interruption

. For Techies: Additional players can play by utilizing their remote controlled instruments transmitted into device's receiver, which might be placed away from the main unit blocked by player. Codes: display; fd-hdd; pp (desired sound outputs, etc); mp; uk; interactive; toy; all; entertainment; microphone; synth; portable; iq; mfh; bp; alerter; osc; vc; score; cart (type sound making options); rpc; uq.

6B-780 MOBILE LIGHT: motion sensor has light following person as they move

-Other: or uses tripping of laser

-actors wear transmitters identifying their locality or are identified by other means; reduces need for a camera man and complicated controls that need to be learned and can be broken

-though may not be for the most sophisticated ballet at Moscow's Bolshoi, will do for high school plays, etc

-system is very basic and economical: lights come in one of several half open boxes (making easy installations), each box might have one or more lights per actor, depending on how many actors are used

. For Techies: Activate movement of lights by light person utilizing remote controls (saves from needing wires); fd-hdd; pp; mp; control lights via mouse or joy stick; entertainment; toy; all (except: #6); game; exercise; portable; iq; mfh; bp; alerter (upon installation, before starting system [for play, etc]), osc; vc; score; teaches acting; md; cart (software and or hardware for effect generation); cp; access.

6B-820 TENSION LOCATOR: locates which muscles have more tension and or are tighter.

-would be of value (though not required) if device could be used by non doctors (though they could have a license to practice massage after one year of training). Hence item must be completely safe to use.

-studies show such a product could be useful since many users don't know how to exactly articulate where the major pains are; also of use to doctors for diagnosis of ailments

. For Techies: Second part of device massages. Codes: Display: shows which muscles are tense; fd-hdd; pp for sections of body wanting to be checked; mp; uk; user behavior; educ; all; entertainment; exercise; portable; IQ; mfh; alerter; osc; score; tgh.

6B-830 VOICE ANALYZER: analyzes a person's or animal's behavior, personality via their voice

-system's voice recognition system identifies the type of pronunciation for particular words, eg: "love", "happiness", "dedication", "my wife"... This enables system to help judge speaker's psychology pertaining to such.

-system might compare user's overall tone(s) and other sound frequencies, using this as a base, then seeing how the important words compare with the base line.

-works in different languages

-voice recognition being quite complex, maybe using block diagrams for existing technology would satisfy the patent office, then later after that section of the technology improves our product could be marketable.

-if better information is needed, person being studied can answer questions about themselves, and take other standard psychological tests. This data is used with the above for greater results.

-some additional applications: solve criminal cases using tel recordings, the stress and type of stress for key words might help; etc.

-For Techies: Display; fd-hdd; pp; mp; uk; date (when conversations took place); user behavior; educ; all; microphone; portable; IQ; printer; au; t; mfh; bp; alerter; osc; vc; score; cart (for desired key words according to type study); cp; uq; mq; access; pi.

6B-840 BACKGROUND SOUNDS:

Purpose: To Convert and or Eliminate Unwanted Sounds. Convert and or cut out (or reduce) sounds from undesired directions, frequencies, distances,

- synthesizer will tag specified sounds according to their direction, distance, frequency and alter them according to UP into anything available through state of the art synthesizing.

-sample conversions: outside constructions sounds are converted to sounds of a water fountain; traffic sounds converted to sounds in the forest, including birds, water, wind, sounds walking onto dried leaves;

--Sounds can also be converted into: ocean waves with sea gulls crying a little; gentle Jamaican drums; etc. there is a huge market for this product if it is good!

-user can select which type of conversion they are seeking

-Applications: homes; any place where people want to study but can't get quiet; novel restaurants in the west; mass transit*

-For Techies: Remote control (user can select which options they want operating); display; fd-hdd; pp; mp; uk; date; user behavior; interactive; toy; all; entertainment; microphone; t; mfh; osc; vc; score; cart (sound generation possibilities); rpc; uq; mq; pi.

MICROPHONES - SOUND GENERATED RESPONSE * Via the interpretation of externally generated sounds, our inventions sends signal for responding device to react. Responding device interprets code and reacts accordingly.
-same invention can listen for any number of different sounds and send codes of different natures to different devices depending on sound heard

6B-860 UNIVERSAL GARAGE DOOR OPENER:
Honk requisite number of times to open: garage door - good for public loading docks in winter where different drivers don't have special transmitter to open garages; [change traffic light in non heavily traveled areas]
-sign outside says in large clear letters how to get garage door opened. Saves on the very high cost of labor in the west too. Applicable for non high security aspects. A guard might be inside though (while this saves them the trouble of opening the door)

6B-880 ELEVATOR DOOR ANALYZER: Upon hearing steps walking toward elevator, elevator may wait before closing doors. Fuzzy logic decides to go or wait based on: time elapsed since first floor number key was pushed; number of floor keys pushed (might show approximate number of people in elevator); additional weight of people in elevator; time of day; the number of elevators versus traffic congestion and best flow patterns; etc.

-knows if steps are approaching or leaving elevator; might know if steps are in line walking past elevators or towards (system might work better where walking past elevators is less likely, depending on this technology ability an cost to produce)
-such invention is especially valuable where land is very expensive and where there is much congestion.
-For Techies: Applies to other types of doors too. See IMI Codes: Remote; fd-hdd; pp; mp; uk; date; all; microphone; mfh; alerter; osc; score; access.

6B-920 REMOTE CONTROL MOUSE: like a mouse except, 1. no wires necessary, 2. can work in the air. Device might have limited functions.
-For Techies: All; fd-hdd; pp; m; uk; mouse; portable; mfh; bp; alerter; cart; cp.

6B-940 SMELL ANALYZER:

measure changes in feelings, behavior when person smells certain odor emissions. Measurement taken via: CAT scan, wires hooked onto body, level and type of sweat (chemical content can change), movement of eyes, blood pressure, etc.

For Techies: All; display; fd-hdd; pp; mp; user behavior

6B-970 MUSIC GLOVE: Laser from finger(s) when striking object(s) (receivers) creates designated sounds. User can synthesize and or alter type of sound created when laser hits receiver. The device via which to get different sounds from the same finger and same receiver can be: separate device; device on outer upper part of glove; another receiver from which it receives code from laser finger in which the code might be on/off lights in certain combinations, eg: three flashes of light is to create bells. Laser device can be an extension from finger(s)

-Each finger's laser can have different effect on same receiver. Certain receiver modes can generate entire musical pieces (eg: for back up).

-marketing: "create an entire musical group all in the privacy of your room ([maybe] without touching a button)"

-product abilities simplified: glove type device sends lasers from each finger. Each finger creates a different sound when it reaches the receiver. In more advanced models, each finger can create more than one sound by transmitting in more than one way.

-instead of being a glove, device could be a box. When light goes out, it transmits to most/all of the room, so the receiver is easily able to receive signals.

-also utilizes design number 6B-971-500000001

-to activate the laser in fingers of glove version: finger touches the thumb, other hard surface, or back of hand or widely opened palm.

6B-971 REMOTE CONTROL RETRANSMITTER: To have more freedom of movement and sitting around a room, the remote control sends messages to the receiver and also the re-transmitter. Re-transmitter is in a different position of the room, so if user blocks passage from remote control transmitter to receiver, the re-transmitter in another location of room can receive and then in tern transmit to the main receiver.

6B-990 PET PLAYMATE: plays with dog, cat, bird, fish, babies, kids, etc. via:

-getting animal to tug at something invention is holding and tugging at while animal is trying to pull it away

-More: making sounds of interest to type animal being played with. Emits smells, eg: the catnip herb (which excites cats); chemicals which resemble the smell of the animals, raw flesh; etc.

-need researched or published information on which sounds and smell emissions will excite cats and dogs - do this maybe towards the end of the patent application process when it appears idea may be patentable.

For Techies: fd-hdd; pp; mp; uk; user behavior (what movements or smells appeared to interest animal most); interactive; educational for animals (especially puppies and kittens); toy; all; entertainment for animal and human owner; microphone (records and plays back pet's voice); exercise for pet; portable (maybe version for garden use to, move from room to room); bp; osc; vc; tgh for pet; cart (smells, sounds).

8B-010 PET 'LOCATOR: (certain products from this feature number are Not Electronic) user knows if pet is inside or out, based on whether they past through their special door or not.

-See 'Pet and 'Positioning System files.

-The way the door was opened, either going in or out, results in door shutting in certain manner and easily seen by owner whether they look at door from inside or outside.

-pet's collar has transmitter, which shows if animal went in or out of door (based on direction in which pet's transmitter got weaker); transmitter shows what part of house or garden they are in, by owner looking on special screen;

- + owner's receiver can be used to find animal's collar transmitter. Receiver signals if owner is getting closer or farther from animal.

-useful for locating children. Animals in large zoos; nature areas; etc.

-way door was opened also can trigger electronic signal showing if animal past in or out of the doorway

-Footnote: This locality concept applies to any moving element other than pets too, eg: vehicles going in and out of a walled in zone; etc.

8B-040 COUPON PRINTER: while watching tv, request a coupon to be printed out for you. Great for advertiser, and since they already have a captive audience, why not make it easy for them to make one step towards the purchase?

-request printed info of similar or further matters

-tv or computer bulletin board which shows ads or announcements quickly one or several at a time (speed and ad selection controlled by editor/broadcaster or user). Ads might not show enough info in time allotted, also user can request what type of info on announced matter they want.

-crt might display further info as requested: broadcast is still or moving life

-user might even touch the screen to choose what they want printed (interactive)

8B-060 BEEPER: each person waiting to be called is given a small receiver. When they are ready to be called, transmitter sends signal for particular receiver, then receiver will: beep, light, vibrate, etc to notify holder that they are being called or that what they are waiting for is ready. Saves people from having to: continually read a display to see if their number has been called;

stay within visible or hearing range of announcer or display showing it is now their time, eg: person can go shopping in mall while they are waiting for tailor to make final adjustments on clothing, or waiting to get a

ticket made, or waiting to see doctor, etc. Notice might be made in terms of number of approximate minutes before it is time (receiver's display may show the number of minutes, or give a code as to: time is much ahead, medium time, or coming closes, or is now....)

-transmission's distance might also work up to many kilometers

-might use cellular or beeper technology, etc.

-if person goes beyond receivable range, receiver might show this by: light going on or off; beeping in particular way

-Additional Applications: ordering food at restaurant (most restaurants want customers to stay and pay for drinks, yet the unique restaurants with this service (especially those without liquor licenses) will be happy to get extra customers this way. Customers can stroll in the park, shop, etc while waiting. Buzzer tells customer food will be ready in about ___ minutes. Also good for family members with people all over the big house, mom gets people prepared in time - let people finish project they are waking on, wash hands, etc

For Techies:

Remote; display; fd-hdd; pp; mp; date; interactive; toy; all; entertainment; microphone; portable; sst for larger more complex models; bp; alerter; osc; vc; score; tr; rpc; access; pi.

8B-070 AUTOMATIC SYSTEM: When walking into room, automatically turns on all desired or applicable devices, eg: lights, music, speakers (if music from another source), intercom or paging system and or tel receiving - system identifies where someone (or if personalized remote control is used, where that individual is), air purifier, heating/air conditioning, computer

-same result might occur with switching on of light or other switch.

-UP what they want turned on upon entry. May differ from room to room.

.-Transmitter located in: jewelry, bag, etc

-Tripping laser light, activates the desired mechanisms

-Additional items to activate: music; instructional recordings (person hears how to do something, what not to do, eg: be careful of the chemicals, etc...); lights; heating/air conditioning

-For Techies: All; remote; fd-hdd; pp; mp; entertainment.

8B-10-8B-19 VIDEO GAME EFFECTS: smell emits when: person or creature is hit; one goes into certain area: mushy swamp, garbage dump, smelly room; one comes close to smelly creature; when danger lurks; opening of package, etc; entering a restaurant; cooking; getting sweaty from activity; getting nervous; etc

-smells can also be very subtle

-the actual amount of smell might be minimal.

-applies to other audio-visual product packages: computer based training; interactive video (system activated by user touching a screen - key boards may be used, but not required)

-smell the new product user might wish to purchase, eg: inside of new car; smell leather for leather products; smells also for following products being sold: foods, flower delivery service, etc

. Fort Techies: Display; pp; mp; uk; mouse; date; interactive; educ; toy; all; game; entertainment; osc; vc; score; tgh; teach; md; cart of smell causing elements; access (if smell device is used in arcades [public places with video games]); pi; character.

-Smell Screen: smells are emitted to accentuate the feelings and experience while: watching television; selecting options from a CRT screen (for example when shopping via computer, certain clothing fashions can have a chic cologne smell emitted to enhance sales); learning something on computer (helps increase memory retention - since material is experienced more intensely, pleasure); advertisements: smell the detergent or coca cola so that you want to go to the refrigerator and gets some

-smell emissions can also be in very minute quantities so as to have the effective subliminal effect

-some smell emissions might be creatable by normal chemicals in the air; blocks of natural chemicals from which a little is used at a time. The most difficult replacement factor might be with home televisions, yet it is in the interest of television and cable companies for people to have these, so they might be given away cheaply or for free

-studies show people enjoy watching programs with the smell dimension added (unless it is too over powering)

8B-110 PERSONALIZED SPEAKER BALANCE:

Sound system automatically compensates for person's location in room. When they are closer to one speaker, the farther speaker gets louder. For home, car, etc. speakers.

-with multiple people, senses where the "averaged" center of all people are and adjusts speaker balance accordingly

-system identifies location of people via: motion sensor, and or laser tripping device, etc.

-identify location of people also by: the portable transmitters they are wearing or carrying; can be attached to a remote control device which also has many other functions; sensors on seats, eg: in automobiles

-Extra fancy choice: If there are more than one persons in the room, and one likes high base while the other prefers it low; they system can make some compensation by adjusting according to each person's locality in their room. Each wears a different transmitting device; or program room so that it stays thus permanently. The option of this working on a transmitter basis is not required.

For Techies:

Remote Control; display; fd-hdd; mp; pp; uk; toy; all; microphone; synth; portable; mfh; bp; osc; vc; score.

8B-120 EMERGENCY STREET LIGHT CHANGER: ambulances and police cars can change upcoming lights to suit their purposes.

Device is designed to work well ahead of time. This way, there is a chance for the necessary yellow light mode, which then switches to red (blocking traffic which would stop the ambulance type auto)

-Additional applications: for important government cars. In rare cases the following might benefit too: garbage collection; street cleaning.
-Exists?
For Techies:
FD-HDD; pp; mp; uk; date; all; mfh; alerter; osc; score; access (to make alterations in programming)

8B-140 INTERACTIVE THERAPY: get sympathy, get rid of your anger, etc. by speaking with computer on other end of telephone. First key in type mode you wish to interact in. Then speak with or without a prompt. Then system will respond in manner to help person achieve desired feeling.
-System prompts user for a wide choice selection. First their are general type categories, eg: happiness; love; sadness; upset; etc. Then when area is selected, eg: upset, user can better pinpoint area they seek, eg: parents, bad traffic, somebody stole your idea, etc...
-System can also be a single device used at home, by psychotherapist for their clients, etc.
-primal therapy: getting out your frustrations by shouting is very popular in the "pop psychology" US market
-also, people often feel better when they hear another person expressing emotions similar to theirs, be it love songs, sad songs, etc. Instead of getting records, this product is able to pinpoint certain feelings maybe in less time and more directly. Though the system might also use music as a form of therapy too.
--many people don't know concretely why one song satisfies a particular emotional need, the machine will be more scientific about it. Plus few people have all the recorded music for each emotional situation, nor do they maybe want to listen to all the many songs for each feeling. With this product they can even experience several different feelings all in a matter of minutes.
-additional applications: the person very interested in psychology, and one who already has purchased other psychologically related products, eg: books, instructional tapes, brain wave machines (available for a few hundred dollars); put into a Walkman like model; great for sales people making many sales calls, after frustrating calls, they can press desired button; place device any place where people may often have frustrations, or include it into products that are near people during frustrations, like telephones.

--tel model: only user might hear the sounds, not speaker. The device will sound out in ear phone or speaker phone while speaker is speaking. Currently speaker phones and microphones don't operate simultaneously - so you can't speak and hear at the same time like with regular telephones.
-combined with information user supplies about itself (PI), plus how user might feel at any given day, moment according to how it inputs current feelings into device - system will generate desired effects. Device also prompts user for the needed information: this can be when user first starts using device, and later as things change too.
For Techies:
Display; fd-hdd; pp; mp; uk; interactive; toy; all; entertainment; microphone; exercise option (prompts user to exercise harder by giving encouragement via speaker); portable; sst; IQ; printer; mfh; bp; alerter; osc; vc; egh;

score; tgh; cartridges (outgoing recorded sound, statement options); rpc; cp; uq; mq; pi; character (changes according to type effect desired).

8B-150 SWITCH BOARD'S IDENTIFIER: receptionist receiving call codes applicable respondent's tel instrument with code or verbalized recording stating information about the caller, eg: their nature (client or supplier); level of importance, urgency; length of time they have been on hold; if its a local or long distance call; person and or organization; type personality (nice...). Receiver of call gets this information on display of tel; or computer (can then store such information with or without any additional info put in by receiver (person who speaks with and handles call - saves time keying in info, plus receiver might not be able to key everything in time and or forget after the call, especially if there is another call coming soon thereafter). Receiver can hear or read this information before or during the tel call.

-all this information can be relayed on to third (or any subsequent person) taking call (perhaps prior person wasn't right one to handle situation.

For Techies:

Display; fd-hdd; pp; mp; date; all; mfh; score; uq; mq; pi; character.

8B-170 RECEIVER'S ID: know if tel you are dialing is a cellular/mobile tel and or if it is being call forwarded and or tel number or type tel line to which call is being call forwarded.

-recipients may opt for such information not to be given out

-H [government regulations may not allow all aspects of the idea, depends on the country]

-also learn above and the following about the tel number you dialed, or the tel number that dialed you: the name in which the tel is listed, their address, when the tel service started, any major complaints against company, status of the company - such as if it has filed for bankruptcy.

-also learn: how many calls they made from that number that day

8B-210 NICE: emits following while being used: smells, sounds, music. Makes tooth brushing more pleasurable.

-marketing: Japanese market. Marketing: other Asian markets possible too, not western markets

8B-250 ESCAPE: insert money and select desired feature (user chooses overall effect, or selects the parts that make the over all effect. Selectable Parts: smells, sounds, music, visual displays, massaging, chair vibration that are related or complimentary to each other)

-good for home use too

-marketing: a pleasant escape from everyday grind

-perhaps especially popular in Japanese market; certainly people will be curious enough to at least try it, why not?

8B-280 VENDING MACHINE ANALYZER: Date stamps each sale. This information is entered into computer(s) which correspond this with weather, current events at time (especially as broadcast/published in mass media). Understand purchasing behavior better.
-For Techies: Some models might also take picture of purchaser

8B-290 FUTURISTIC ™: Play out your future anticipated situation and or activity. Also learn new ideas and strategies about what to do. Excellent training tool. System might or might not give guidance as to best strategies to adopt via: suggestions, warnings, alarm when person is about to or has made a mistake....
. See our related Futuristic & 'Prediction Game(s) descriptions.
. As training device, program situation to depict near life representations requiring skill needed in the future.

8B-410 SCALE ALERTER: anticipated weight changes are programmed into device, any changes in non congruence are alerted
-Weight Alert: when weight is under or over tolerance level, alarms. Applicable for production line, scientific study, notices for changes in weight, etc

8B-420 SCALE FOR SUB-SECTION ANALYSIS: use frequencies eg: sound, X-Ray, etc to judge density and weight of internal or other sub section of an item. This way one is able to get better idea of weight and or density of a section of something of which one is not wishing to cut up.
-scale might be used to weight total item as well. Computer subtracts weight of unwanted parts.

8B-430 MIXER: when combining multiple elements of chemicals, etc, user first selects desired combination whereby the display lists ingredients and % to achieve formulae. User then puts one of the ingredients on the scale with or without the necessary precise weight and scale then states the precise amounts required for all following chemicals. This system can save a good amount of time for those using the scale frequently, and is very applicable to situations where the exact final weight of the combination is not crucial.
-user keys in desired mix and final weight, then each element's exact weight in shown

CONCLUDES FILE 6A

File: Intro To Pat / 7A

FILE 7A

OLD ABBREVIATIONS Used (in this file):

B = within the feature number shows two general feature groups were merged together. If no file number is after the "B", then both were from same file. Part of feature number.

"Tutorial" = built in system with software teaches user to use all/most of product features. Goes from difficult to more complex.

"...." = etc.

7A-010 DOOR CHIMES: hat would you like to know about: visitor, party being visited? System states ['osc] visitor's: approximate height, weight

-stores: visitor description; photo; time entered; time left; any code they might have inputted to gain access; messages (voice mail functions); etc.

7A030 UNIQUE WATCH:

-only one hand, represents the minutes. The hour is shown by the change in color of the background: new color every 24, 12, 6, 4, or 3 hours. To ease memory of what color represents the corresponding hour, there might be several shades of one color, eg: time 00:01 is pink; 01:01 is light red; 02:01 is dark red; 03:01 is light blue.... There could be background color in the order of red, white, blue...

.-inventions can apply to portable clocks with and without alarms, having dial or digital displays

7A040 PHONE: Telephone Device, which is also with a remote control. When tel rings, or you wish to make outgoing call, by pressing appropriate button user is able to decide whether the call is to be made on the cordless tel or from the regular tel (former is more convenient but the quality of the connection is poorer - and westerners don't like even mild static on the line)

7A050 FLOATING GLOBE:

-(this probably exists - seen for sale in mail order) the north and south poles have a magnet. Their opposite charged magnets are found on the end of a bent piece of metal in the shape of a "U". Hence the globe stays in space.

- in space there is no up or down. The names of countries, cities, rivers, etc are displayed electronically, so that when the globe is put with the south side on top, everything can be read easily again (letters switch positions)

-background of dial could show the actual hour via: digital display; dial showing the digit's hour; second hand who's center is in different location

.-"Tilt": controls sys' functions, eg: moving of any floating object.

. See the 'Float part.

CONCLUDES FILE 7A

File: Intro To Pat / A's U-ALL

IMPROVEMENTS TO "A FOLDER" INVENTIONS

The files from the following "U" directory are subsequent enhancements of inventions from the "A" directory, e.g. files: 3AX, 5AX, 6A, 7A.

5A-65 GUARD DOG TRAINER:

-speakers can only transmit certain types of sounds. Can have speakers in each room.

-System has display showing: frequencies that are blocked by incoming sound - microphone system; directions that are blocked and or enhanced; volume; frequencies that are transmitted to dog; if system is in recording mode (record owner's voice, certain dogs barking (even the dog being trained).

. with remote control (or wire used with dog's leash) device sends frequencies to dog at owner's command. The purpose is to train dog. Frequencies can be audio or vibrational causing pleasure, mild pain, and simply stimulate to create result(s). Reason is dogs can react better to such device than man kind. These stimulate would usually accompany human words of commands, the electronic frequencies simply help dog understand more quickly, also without need for owner to punish (causing dog to dislike the person as being the source of the pain). The dog's transmitter worn on it's neck; or main body (above or below)

. Fort Techies: pp mp uk user beh educ game exercise portable cons comm sst mfh bp b vc el (electronic) md LL ep rpc cp uq mq acp v access

5A-59 SPRAY PAINT VANDAL CATCHER:

-psychology is to scare potential vandals, they might not always know if this security system is installed, and or there might be real/phony signs giving warning to the effect.

-upon detecting application of spray paint, security system can: send alarm audible to vandal and or nearby people; send alarm only to designated party, eg: police station, guard on duty, owner (vandal hears nothing and can get caught).

-system has on\off feature in case management conducts actual painting

-large systems can pinpoint the location of the vandalism

. Detector can detect spray paints in general and or governments can require spray paint manufacturers to include certain chemical(s) that enhance easy detection.

. System or related systems can also detect:

-urine (eg from dogs, people)

-excessive vibration that might come from burglar, though there can be the problem of vibration from nearby construction and or trucks, etc, so depending on locality and type situation, the vibration detector can be purchased separately and or turned on or off.

-glue from people putting up illegal poster advertisements

. Fort Techies: tel pp mp uk date microphone (user can decide to listen if detector senses something) sp mfh bp vc LL ep rpc cp uq acp v access

4A-1 WEATHER INFO: Change title maybe to ---> Telephone Information

-is this product obvious? Have person knowledgeable on voice mail and other telecommunications check this first and explain the related products in the west in common usage. If this is not too obvious, show product information to Steven again before doing search.

-for larger systems, device can get exact temperature for different cities around the state (province, country, world. User simply uses their touch tone tel to request desired city, eg: press number 1 for selecting city in this province, then select number 2 for Osaka. The larger system can get information electronically by dialing into another main frame computer. Keeps people waiting a little curious and with something to do if they wish. Such type information selection is also available when searching for news, stocks, sports scores, miscellaneous business information, and anything else users might be interested in, even the company's product information, etc.....

4A-3 SMELL RELEASER:

-release smells at pre-programmed times to confuse people, study animal and or human behavior

-smells released by: animal's or humans actions such as: pressing a button; getting or asking for something (eg: food, entry)

-also, can release smell whenever the smell release button is pressed, even for parties, etc

-can purchase cartridges of different smells

-system can also be connected to the building's internal heating and or air conditioning system and or fans (normal or compact shaped so that one might not even know them to be a fan without closer inspection).

. See Code Definition Paper For The Following:

Display: shows which smells are: available in supply of system or outside stock and or quantity (don't go into detail here on application if too difficult); preprogrammed time and or element/situation that will trigger a particular smell release.

. Fort Techies: User Behavior; AU; T; MFH; BP; MA/FE; TGH; LL; EP; RPC; CP or metal; UQ; MQ; ACP; PG; PI

4A-11 SEASONAL WATCH:

-the designs might also be changed via electronic display means (LCD, etc) in color or black/white.

-certain attachments might be made to the external part of watch, eg: add wings so the outside (and circumference) are in the shape of butterfly - such parts can be of plastic or metal.

-the actual time can be displayed on a dial or digitally

. Fort Techies: pp mp uk date educ portable (and or can be a clock version on table) cons/comm solar powered bp vc (can make sounds related to new designs in the alarm option, or the sounds can be of separate selection menu) md ll (or the throw away variety watch too as commonly seen in west with "Swatch Watch" etc) ep acp v pi

4A-24 LID:

-garbage can may also be lifted by device and or lid opened by: triggering remote control device that emits a light and or type sound (audible or inaudible to humans). Then press button again (if pp this way) to return garbage can to original or other place (as directed by user via: other buttons, using a joy stick, or guiding the actual device returning the empty can, or the system simply leaves the can behind the truck in the same place each time (cheaper system to produce)

-cans made from strong plastic, rubber or metal (non corrosive variety)

. Fort Techies: pp mp uk au ll ep

4A-24-1 MASSAGE VENDING MACHINE:

Pay the necessary amount (via coins, paper money or credit card - exists) then system will massage your: hands, arms, back, back neck, head with instruments that touch the body with rubber ends. Safety is considered in the product design - do all the body parts that can be done safely and pleasurably.

-system has timed shut off (user can pay more money in beginning for longer session)

4A-39 SOUND CAMOUFLAGER (continued):

-background sound may also be triggered by: opening of door, stepping on button (located on floor, wall, etc)

-the single button, or separate button(s) can trigger smell releases.

-speakers and smell releasers are designed to withstand high humidity

-for bathrooms in buildings, automobiles, airplanes

-system may also allow special designing of lighting, eg: for shower taking, bath taking (maybe lower or higher light with different directions), lights directed toward plants.

-watch movies on tape (simply insert black box for audio, video features: radio, cd, tape, record....)

-water pool (fast moving water massages) for those in bathtub, the other systems can compensate and all programmed to interact together, eg: when massage goes on it's beat matches music, and light can even match sounds/music. This feature might be helpful for people who like baths but get a little bored and have too much money.

. Display (for expensive bathrooms of the rich, shows which features are in operation and in which manner, supply of smells, volume control, etc)

May come with or without a tel.

. Fort Techies: pp mp uk date user beh entertainment tgh md ll ep d sd od uq mq acp v access (so kids, etc don't play trick on changing features when the door to room is closed)

pi

4A-39 & 4A-30 REMOTE ALARM (continued) ---> Notifier (new product name):
Note: the complexity of product types within this general product line is quite large. Therefor, perhaps we will only give certain parts at a time, and maybe do the additional patent searches and matching with engineers when the initial patent applications have been sent in good order (by your opinion). Naturally, you may prefer to reserve this invention number for the type engineer who 1. has already finished an invention and is ready for the next, 2. the one who looks most reliable, serious and interested, 3. most qualified. It is more difficult to give this to multiple inventors since there might be some conflict between inventions. After the initial filing, show this invention number again to Steven and he might give additional features at that time. Give new invention numbers for each product type if they need to be in different applications (ask patent agent) - eg: 4A-30-2 for the door opening device.
-know when: the door is opened without a loud sound all must hear (your quite receiver can sound and or light telling a door/the door/which door is opened)
. Fort Techies: display tel pp mp uk date toy microphone sp mfh bp vc b ma/fe ll cp casing of metal acp v access

4A-33 JEWELRY TEL RING ALERTER ---> Jewelry Alerter or Alerter (new name):
-system also transmits: door bell; child, grandparent crying in distress (high volume sound that lasts longer than just a crash of something falling down, or that responds to short bursts of loud sound too);
. OTD: remote pp mp uk user beh toy portable sp mfh bp b vc ll ep cp cm cr acp v access

4A-35 CAR PHONE RING ALERTER:
-note: when it is stated "tel isn't call forwarding" it means that one can command a tel to ring over to another tel number.
-the alerter is cheaper and smaller than having another tel with you as you walk (though some may prefer to have this second mobile tel). The mobile car market is huge and growing quickly, this device is for part of that market.
-speaker on outer part of car that rings (this feature may be activated/deactivated). This may or may not be accompanied by a flashing light (if you hear the ring you might not know if it is your or the next car's)
. Parts: pp mp uk date pb ll ep cp v access

* 5A-47 FOOD LASER DESIGNER:
-designed to gain access into crevices of foods, etc, and those foods, which are difficult to stamp w/ a hot element.
. See abbreviations codes for below:

Display: CRT or other viewing device lets user see the design. Designer might even create design via mouse or regular key board codes on computer, which can be transferred, to laser - system of computerization can involve one or more products.

pp; mp; uk; printer (can show designs to boss, client, etc since sample for study won't easily be shown in food form); t; bp; osc (perhaps when the food is ready to be taken away); cp; cm; cr; acp; v; mem (past designs can be recalled up again); "cart" of designs (eg on disks)

4A-47 WALKIE TALKIE VOICE ALTERNATOR:

Play games, which require the changing of voices, eg: be different characters (games requiring set number of players can be played by fewer w/ each person being several characters; or user uses different characters to facilitate their aims in the real life game).

Display (eg: shows vol, which voice style selected); pp; mp; interactive; future versions can see the visual transmissions of others as well; future device can use this option in virtual reality product options!

. Fort Techies: microphone; portable; sst; cons; comm; iq; bp; sp; crt; osc; vc; egh; tgh; md; LL; cart (eg: voice options on disks); ep; tel; tr; rpc; cp; cm; cr; uq; mq; acp; v; access (don't bother if too difficult to design); pi.

4A-48 WATER SAVER WATER FOUNTAIN:

pp; mp (eg: distance mouth and or person must be from water before water goes on); has water purifier; mem; ll; cm; v

Exists: water fountains with foot pedal to turn on water - yet this isn't very modern; sinks that turn on their water when hand runs below faucet (without touching anything)

4A-9 BEHAVIOR ANALYZER:

Adjusted for different languages and their dialects by manufacturer's or user's programming. Patentability will hopefully not require us to key in precise signals that are needed to trigger corresponding analysis - requires extensive scientific experimentation that might be considered semi-obvious work.

. Fort Techies: pp; mp; uk; date; user behavior; educ; game; mem; entertainment; microphone; portable; sst; iq; printer; au; mfh; bp; crt; osc; vc; cart (eg: disks for analysis of diverse dialects, languages, type people being studied, etc.); cp; cm; uq; mq; acp; v

4A-12 RETALIATOR:

Combine with functions, eg: states the time of day verbally (exists?); has a microchip recording device, which lets user say anything onto its limited time memory. Question: it might be difficult for watch to react only to other clock's sounds and ignore the other many sounds in society. User's triggering of outgoing response is not obvious?

. Fort Techies: display; pp; mp; uk; date; toy; mem; entertainment; microphone; portable; bp; sp; vc; cp; cm; v

4A-6 CLEANING SIGNALER:

Self cleaning feature may activate itself after set number of uses and alert user or clean system itself; or clean self when it determines it needs to be cleaned. Study what happens to coffee machines when they are not cleaned, what kind of deposits are left and what devices will recognize the remains from grinds, dirty water, etc?

4A-17 PILL INTAKE MONITOR:

pp; mp; uk; date; user beh; portable; t; mfh; bp; crt; osc; vc; tgh; md; cart; ep; cp; cm; cr; uq; mq; acp; v

4A-21 COMPOSTER:

Display shows eg: volume or weight of material inside, the age and or level of decomposition, temperature created from decomposition (interesting), etc.

. For Techies: sp; ll; cart (eg: special types of bacteria to speed process, or for particular types of material, etc); cp; cm; acp; v

4A-27 SOLAR HAT:

Can have flat hard solar cells, or more flexible material (if such exists); display shows amount of heat generated and or given to user and or # of hours in sun.

-If this is a feasible idea, develop it. Be careful.

5A-53 STRESS ALARM:

Display; pp; mp; educational (teaches a person to reduce their stress by identifying when and what gets them stressful); microphone; portable; sst; necklace; bp; beeps if stress is too high (may even have different lights and or sounds for different levels or types of stress); vc of outgoing sounds; cp; cm; acp; v; pi

5A-45 KARAOKE CONTEST:

mem; entertainment; microphone; synth; crt; vc; teaches a skill good at winning games in the product's system; rpc; cp; cm; uq; mq; v

5A-16 MUSICAL CRIB: pp; mp; interactive; microphone; system gets a little harder as baby grows up; beeps for programmer - adult who installs and supervises system; vc; central unit - cp, cm; acp; make child proof so kid can't get into the programming

5A-15 AMBIANCE:

pp; mp; mem; microphone; vc; egh; el; v

5A-13 COLOR JOY STICK:

pp or mp (eg: particular buttons can be programmed to create the desired color from that button, or combination of colors); uk; beeps; vc; cp; cm;
v

5A-02 LAUGHING PIN: Display (shows still or moving pictures that respond to pressing of button(s), etc); pp; mp; . For Techies: date; toy; mem; microphone; portable; bp; vc; cp; cm; cr

5A-03 ANSWERING MACHINE FEATURES:
Display (eg shows features in active mode, and or their status); pp; mp; uk; date; mem; microphone; synth; beeps; cart of desired sounds or music; tel; sp tel; rpc; cp; cm; acp; v; access (can pick up messages from remote location by keying code into touch tone tel.

5A-65 GUARD DOG TRAINER:
the sounds created to cause dog to bark may or may not be actual dog sounds, they could be other sounds that psychologically induce barking and or aggressive behavior in dog.
Display; pp; mp; user beh; mem; microphone; synthesizes the sound of owner's dog too; beeps; cart (alternative sounds); cp; cm; acp; v

5A-73 TV SYNTHESIZER:
Display shows the type sound factor in operation. Can this product be made? If so, show to Steve and he will go into more detail on the product. In question is how, eg: one can convert a show from East Ukrainian to West Ukrainian accents, or other accents that might be more noticeable.

5A-27 OUTSIDE SOUND MAGNIFIER:
pp; mp; mem; microphone; beeps; vc; v. Install in automobile. Maximize ability to hear the direction of sound so that the multiple speaker system might let ear quickly know which direction sound is coming from. More than four speakers are ideal.

VIDEO MATCH INVENTIONS:
A3-3
A3-3AA
A3-3AAA
A3-3Z
A3-3A
Below product descriptions apply to the above product/invention numbers:
-Visual sensor picks up on colors of environment, eg: via pixels it will sense globs of certain colors and determine the level of certain colors in its display to make similar and or color coordinated matches.

-Store clerk or other person controlling device may via remote control key in certain information about person viewing scream.

-mp; user beh; interactive; mem; microphone (outgoing sounds, eg: information about what is being sold, the services provided or general information, can be done in tone similar to viewer should viewer be prompted to say something, eg: if viewer makes any sound, or none at all, even, product might respond as if they said something and response is according to what they said.

-synth; mfh (can keep records of all the times machine did something in certain way and correspond this to the sales at cashiers soon after (or within one or two hours) for related product - such will help teach the store or other provider of service or product, etc what methods used by the video match invention tend to increase sales, or increase other types of desired response.

4A-32 DIALECT CONVERTER:

-microphone, synthesizer, vc, v, acp, entertainment, display shows type of accent, pp, mp, beeps

-how would this product be made? If you have any idea then give back to Steve so he may give the additional specifications.

4A-38 CANDY DISPENSER:

Outgoing sound may with or without candy give verbal instructions and or verbal praise after each or the most important step in the process of going to the bathroom (child hears / is reminded about the steps for going to bathroom (eg: person hears something when they open door, open toilet lid, lifting seat results in different announcement; etc). Product is great since adults are really the ones embarrassed about going to the potty with their kids.

-synth, microphone (system might use parent's voice for commands, praise; beeps; vc; egh; tgh; cart (product might also be used as a joke, and people can buy tapes with wild announcements); access (especially for the adult version of product).

. For Techies: mp; pp (by parent, etc);

4A-40 MEDICAL RECORDER:

Is this product obvious??

User can record when they: brushed teeth; ate (and ate what); took particular medications; had type 1 or 2 bowel movement; etc

-obvious?: device might alarm if certain function (eg: pill taking) is not done

-OTD: display; pp; mp; user beh; educ; mem; microphone (user might record own voice for system to give user commands; or system might have its own voice for giving verbal commands; microphone; bp; portable; beeps; vc; cm; cp; mq; uq; v; access; pi; int'l

4A-40 MEDICAL RECORDER: keep it in the bathroom, maybe wall mounted.

. For Techies:Display; mp; date; user beh; au; cp; cm; v

5A-72 CALL FREQUENCY ANALYZER:

display; pp for desired type of analysis; system's software might be compatible with the very popular database softwares; mp; u; date; user beh; mem; iq (system can conduct simple or complex tasks); printer; mfh; uq; mq; . acp; v; access

5A-90 VOICE CONVERTER:

Marketing strategy: why go through the trouble and great difficulty in training people to speak to each other in certain styles which will create the desired results, eg: higher work performance. The use of the product for higher work performance can bring about a change in the corporate culture since the style of hearing will be altered and hence, people become accustomed to even speaking in related styles when with people in person....studies can show this to be true. When people hear something in one tone versus another, their performance frequently differs. A great tool for business profit!

. For Techies:Display (shows the speaker the outgoing sound synthesizing they have selected - per their desired effect on the listener); pp; mp; date is shown on display at the request of user; educ; mem; microphone; system uses device which corrects bad tel signals sent or received when using poor quality lines as found in certain countries (eg: Americans can hear us better on the tel than when we listen to them, because the US converts our sounds, what they send to certain countries can become slightly garbled; mfh; vc; sp tel; tr (transmitter) (eg: mobile telephones; Walkie talkies and other radio frequency devices); cart (for desired sound frequencies); user can also request to hear incoming sounds in style they more prefer; fs; mo; cp; cm; uq; acp; v; access; international (more expensive product versions can have differing synthesizer effects when working for one type of language and or dialect, however we are all human and basic things about humanity don't necessarily change much between cultures

5A-105 MUSICAL SKATEBOARD:

Sound system can use radio, cassettes, CD, Walkie talkie (which can be taken out of holster too - great for certain types of kids); power source might get energy from the movement of wheels and or also from battery; system can have buttons when pressed makes certain announcements mp or recorded by user into microphone and onto microchip; skateboard might also have steady, flashing, strobe and other types of lights when: moving, or switched on, and or automatically goes on (though can be turned off) when dark (via use of special sensor sensing how dark it is outside (this special sensor exists, eg: in cars - their lights go on automatically in the dark. . For Techies: pp; mp; toy; mem; system is designed to take lots of shock (skateboard will be shaken a lot); exercise; portable; sst; bp; vc; cart for: types of sound/music/verbal statements; via use of remote control the user can initiate certain functions without having to reach down and or stop the skateboard, eg: turn up volume; mobile telephone; access

5A-107 TEMPERATURE CHANGE ANALYZER (new product name: Environment Change Analyzer)
Notes the previously mentioned changes even when the other factors change - humidity, precipitation (rain, snow), air pressure, diet changes are used in another patent application (so please don't cover this area, sounds (eg: if there is or isn't classical or pop music - plants are known to grow more quickly with classical music), general air pollution or system notes changes according to changes in certain chemicals in the air.
Display; pp; mp; date; educ; mem; microphone; portable; mfh; bp; sp (when in use in the wild; bp; vc; cart (sounds, chemicals for air emissions, etc); acp; v; access; system is designed not to be destroyed or accidentally altered in programming by animals, etc; fd-hdd

5A-108 FOOD BEHAVIOR CHANGE ANALYZER:
(see product 5A-107 for details on how this product is to be developed, simply exclude non-applicable matters, eg: aspects covering, humidity, temperature, sound.....)
System might bve compatible with popular database softwares.

A3-4B ENVIRONMENT COMPOSER:
-each laser can transmit in one or more frequencies, colors, etc - enabling a single receptor to generate a different sound from any particular transmitter. Plus each receptor can receive signals from more than one transmitting laser device - hence a large array of sounds is possible.
Receptors can be activated to trigger: prerecorded music programs -eg: cassette, cd, records, etc; microphone's recording device; television; cable tv; vcr player; video camera recorder; still life camera; cinema type film recorder - 35 mm, etc; answering of telephone (eg: user can speak with person via telephone's speaker telephone apparatus; opens front door (eg: when door bell rings and you don't want the trouble of going to open door); activate your scream to see who is at the door via door's camera; display scream shows colors and moving/still graphics and or cartoon characters moving according to the command of user and or music being created (eg: they move to beat of music)
-Remote; display; pp; mp; uk; interactive; educational; toy; game; mem; entertainment; microphone (user activates microphone and can have it changed around and or played back at their command); this product can be used as a form of exercise mixed with entertainment (some people find exercising painful, the joy can make it more pleasant and helps people to get themselves to exercise); iq; mfh; crt; osc; vc; cartridges (eg: types of transmissions; sounds, visuals that can be created after reception of the laser transmission); cm; uq; v; access

A3-6A DAILY DIARY:
System can also act as an electronic calendar and rolodex (organizes people's tel numbers and addresses); if it isn't too much work to develop - system's display scream shows person(s) who speak to user in manner that helps them, eg: soothes them, give them more energy, etc; display (this technology is more for future in terms of cost effectiveness?); interactive; user beh; pp; mp; educ; toy; game; mem; entertainment; microphone (user can

give system commands and have such commands come back to them aurally at certain times; system keeps track of when user exercises as well; portable; sst; iq; printer; au; mfh; bp; vc; cart; cp; cm; acp; v; access

A3-13 EMOTION WATCHER:

-user also knows how they are doing emotionally via: single or multi-colored graphs; faces (expressions show the state of mind they might be in); a numerical digit, eg: a percentage point or score point (with a lowest or highest score possible known to user by the product's manual-the software may not show the high or low scores); system might also give a verbal statement as to the user's level(s); system might tell user their state of mind on its own (triggered to occur periodically or when one of the scores is too high or too low, or when user requests the information, or the information is always visible to user.

-System might suggest what person can do to alleviate their problems, they might even give more than one suggestion and or give sometimes different variants (reduces monotony).

Person's own history and personal preferences for activities, types music, hobbies, famous writers, etc. is important for above function.

-pp; m; date; user beh; educ; mem; microphone; bp; osc; vc; cart; cp; uq; mq; acp; v; access

A3-R14 TELEPHONE VOICE BALANCER:

-the user and not the listener on the other end of the conversation might only hear any such background sound

-tel callers, receptionists, operators can have a computer display scream which directs them in emotionally suitable ways, eg: use of appropriate colors (see color psychology manuals), types of people on scream pointing or speaking, etc.

-when incoming tel comes, the music system that was being heard in the room might automatically go off at the time the tel is picked up and or transferred to the user's listening portion of handset and or the volume might go down to designated point where it can still be heard by person in room but not over the tel line (there is such a threshold point for western technology telephones)

-some of these features naturally are more directed to those who follow specific instructions and are on the tel all day, eg: such people might hear verbal announcements that analyze their voice frequencies (as being good or bad), and or might just give automatic pep talks that inspire the tel people (eg: to sell more products).

. For Techies: pp; mp; uk; date; user behavior; interactive; educ; mem; entertainment; microphone; iq; printer (gives information to user); mfh (keeps records of all the tel people, their performance [average length of call - they maybe talk too long; number of sales; which days are good or bad and why; etc]; crt; osc; vc for their incoming and outgoing speech (the latter is a rare commodity in the market place); iq; au; cart; mq (eg: how are you doing, user responds by speaking and or keying a response onto their tel key pad or other key pad; acp; v; access (keep out viruses, computer/tel vandals)

A1-3 PENS WHICH TALK (new possible product names: Talkie, Talking Pen, Pen Joy (this title good for Japanese market), Musical Pen)

-has a simple remote control device which allows user to turn on a music generating device, eg: radio and or tape and or CD and or preprogrammed sound generating system emitting preprogrammed sounds (eg: like musical box) with one or multiple sound options. This system allows for reduced batteries in pens (technology still is very backward in the area of battery power, large heavy batteries are still required)

-has a more complex remote control, which allows user to select different music options, tv stations, vcr... while working with pen. There are some very large pens in the western markets, however, one might desire to shrink the remote mechanism as much as possible. People can control what they are writing while simultaneously having control over their entertainment systems without having to get up off the seat

-can make little sounds each time pen moves, eg: sounds of water like waves, rain, etc; and any other types of new age and or computer music

. For Techies: uk; toy; game; mem; entertainment; exercise; bp; beeps; vc; cartridges of sound options; cp; acp; v

A1-13 FOOD (NEW TITLE: FOOD ENHANCER):

-electronic device might state the date at which item was first opened and possibly the number of subsequent openings, the last date of opening

-products being expensive in the west while mass producing electronic gadgets being relatively cheap, more expensive food product containers might emit sounds and or lights as an interesting element. They might even flash a little on the store shelves adding interest from consumers walking by the crowded shelves. The sound option might be for home use (and designed so it can't easily be triggered accidentally before it gets to the consumer)

-the electronic or other device will trigger the emitting of smells when: container is opened; a sensor feels lips drinking from bottle's mouth; when a button or tab is touched

-consumer can sense what the smell is from the device before purchasing by scratching a smell pad (frequently used to sell perfumes in magazine advertisements)

-the invention can be used in reusable containers. User buys containers with or without food

-container can even state the temperature and or quality or volume or weight of food or other type of contents

-use product for containing other items, eg: toys, cosmetics, money

-codes: display; mp; toy; mem; entertainment; microphone (allows user to record onto chip which plays back desired message(s); portable; sst; iq; bp; beeps; osc; vc; cartridges of sounds and or smells; access

A1-16 TEL ANALYZER:

-voice recognizer categorizes people by their word choice, eg: "cool" can show the person to be leaning toward alternative cultures...such words (especially if they occur more than once will categorize speaker(s)

-people are such that they like to affirmation of another's behavioral style (especially in the US where people are perhaps [on average] less intuitive because the culture is more superficial and there might be less to see below

the surface [many Americans don't fall into this category however]. Additionally, such analysis fits well into the American culture.

-system might let user key in additional information about other party. Such might be stored with notes and analyses from previous tel calls.

-This helps develop a better over all picture. System might go into effect after dialing certain tel number. After such number is dialed (before or after ringing, system can ask which person's name is desired - useful if there are more than one persons at such number in computer's memory), or user can key in person's name and then select which of their tel numbers is preferred for dialing.

-acts as a lie detector. System might be especially useful when: user asks if person is lying at the moment (system might also compare voice frequencies with speaker's past speaking patterns).

-software package(s) can organize all types of issues, questions, histories, business info, personality info, etc. Such data can be merged, analyzed, etc when/where necessary

-system can be merged with fax phone (transmits visual images every few seconds), later versions can transmit the person in perpetual motion. Facial characteristics might be analyzed as well, eg: frowning of eye brows, smiling, etc.

-displays screen can show how it is analyzing person. Additionally, user asks system particular questions, then system can try to figure an answer. Questions might be from a set number of question possibilities system is programmed to try answering. Answers might even have a percentage probability designating how accurate answer might be, eg: if the categorizable word occurs rarely the system's analysis might be less accurate and or the person might lean less in the direction the system suggests the speaker is in or is going to (behavioral, etc.)

-codes: pp; mp; uk; date; user beh; educ; toy; mem; entertainment; microphone; portable; iq; printer; au; mfh; bp; crt; osc; vc; cart (eg: software programs); tel; sp tel; fs; uq; mq; acp; v; access

A1-23 FOOD INHIBITOR:

-also place the item on the parts of the body, which reduce hunger (proven by user's preference and experience, or goes by the manufacturer's suggestions). The device may: send vibrations, frequencies of some type (ultra-sound, radio, etc.). Alternatively, device may act a little like acupuncture.

-one product can do many things, allowing user to try even many different modes should one not work well enough.

-device may also send the frequencies, sounds, etc without touching the body.

-device can have gauges, which regulate the level of frequency, vibrations, etc which are optimal for user

-can be device one wears around neck, keeps in pocket or purse - smaller devices may have fewer features

-codes: display, pp, mp, mem, portable, battery powered, beeps, cartridges (eg: for smells), v, acp

A1-35 SLINKY ROBOT:

-computer system senses the way a person is moving their body, eg: via user wearing transmitters on body's appendages, or certain colored labels which camera is designed to pick up, etc. Eg: person exercising can see themselves on tv. Seeing themselves in same or especially, altered variation, could be interesting. Adds excitement to the process of exercise (people need incentives to do such)

-exists and or obvious?: can follow verbal or remote control commanded instructions to: move or sound or light up in certain way, etc. Eg: instructions given to a dog.

-codes: display; pp; mp; user beh; interactive; game; mem; microphone; portable; iq; bp; sp; crt; osc; vc; egh; cart (eg: games and or tricks computer might play); cp; cm; access

A1-43 VOICE ENHANCER:

-even synthesize your own voice when listening to it in the future

-user can key in command for: type announcement they wish others or themselves to hear; way they wish sound to be altered; etc

-volume control for others (who hear speaker [user]), or for user to hear speaker.

-see your own level of stress as you speak (this helps speakers control their stress). Product will also analyze speakers other speech qualities, eg: volume; etc

-system allows user to listen to music without listener hearing (used in another product of ours)

-codes: display; pp; mp; uk; date; user behavior; interactive; educ; mem; entertainment; microphone; IQ; mfh; bp; crt (can work with computer system as well); osc; vc; cart (eg: for additional features); sp tel; fs; rpc; cp; uq; mq (eg: "are you feeling anxiety, ok...."); acp; v

A1-43A TELEPHONE FRIEND:

-select type call, then system might arbitrarily select from certain collection of possible verbal or written statements it can output. The possibilities of inputs given to user are numerous, especially in ways they can be requested, and way system can give out help.

-system can boost person's psychology even without the tel function, eg: while they are at desk, when sad, etc.

-combine with radio, tape player, cd.... Have synthesizers eg: for bass, treble, etc to improve listening for user

-synthesize incoming and outgoing sounds

-system can have visual display(s) which help user with pictures and or words

-codes: turn on system with remote control; display; pp; mp; uk; date; user beh; interactive; educ (teaches people about their psychology and how to be more positive and or effective, etc); game; mem; entertainment; microphone; iq; mfh; bp (for back up should electricity stop...); crt; osc; vc; egh; tgh; cart (eg: of word and or sound creating options); rpc; cp; uq; mq; acp v; access

A1-44 HAT CHANGER:

Is this product considered not obvious? If so, send it to Steven. He has not reviewed it.

A4-R29: ELECTRONIC DEODORIZER:

Activate the frequencies, which kill and or immobilize and or restrict the growth/multiplication rate of fungi, viruses, and other germs/bacteria. Such frequencies can be activated via:

-any two or more distant parts which transmit - receive

-a general broadcast (within small range [normally]) from one source - this should be harmless to people, animals and most plants. Such a broadcaster can be place anywhere in any variety of broadcast strengths for shoes, closets, bathrooms, cars, garden shacks, outdoor toilets, kitchens, hospitals, refrigerators

-emitting device can even go inside certain food containers. In such situations, the manufacturer might cut out or reduce chemical preservatives all together.

-something that might function like an air ionizer, which attaches airborne particles to walls and the floor, etc.; or something like white blood cells and how they work

-paint and or external casing of plastic and or rubber and or metal could be designed to change color or notify in other means about excessive changes. And or paint might be designed to better react to system's emissions of frequencies. Such paint's chemicals might be designed to have multiple uses, eg: reacts in one way for one frequency and another when responding to another frequency. (the idea of paints with herbicides exists - but what about interacting with electronics?)

-certain products might have automatic bacteria cleaning powers

-see codes "imi5": all; remote; display; pp; mp; uk; portable; sst; bp; sp; alerter; osc; score; cart (software for zapping at different frequencies; instructions and software for different types of applications); tel and or tr (transmitter) and or mo and or fax (alerts person that status has changed when situation is important enough).

A4-AAR30 Translator's Stylizer:

-has alternative uses: eg, learning other skills: mathematics and other basic skills, etc.

-see codes "imi5": all; display; fd-hdd; pp; mp; uk; date; user beh; interactive; educ; toy; game; entertainment; microphone; synth; portable; iq; printer; mfh; bp; alerter; osc; vc; egh; score; teach; cart (for different languages, uses within a particular language, eg: meeting people; business; etc); tr*, mo*; rpc; cp; cm; uq*; mq*; character

A4-R32 SPIRITUAL MAP:

-system can ask user to draw pictures with mouse type device to #1 help solve a psychological problem; #2 analyze their current psychology

-suggests what a person might do during their spare time to alleviate stress, pain, etc.

-does horoscope, biorhythm

-people of different religions may tend to be given questions in alternative styles and or different questions all together.

-see codes "imi5": all; display; fd-hdd; pp; mp; uk; date; user beh; educ; portable; sst; iq; printer; mfh; bp; alerter (tells user and or their guidance counselor if the person has reached critical states, etc.); osc; vc; egh; score; tgh; teach; cart; cp; cm; uq; mq; pi; character

A4-33 BUG CATCHER ("Mooshi Catcher" in Japanese):
-the dead insects (of any species) can be turned into compost (soil) after it degenerates. The smell (if noticeable) needs to be kept down. Product might appeal to "Greens" (people into ecology and a little into crazy products)
-product reduces garbage since most parts are reusable (excess garbage is an extremely disliked habit in the west, especially Germany where many packaging can't even be thrown out, but must be returned to the store where purchased
-the fresh bugs might get enticed by the smell of the carcasses, but then they get trapped too
-see codes "imi5": all; entertainment; score (shows volume of insects collected)

A4-33A BUG VACUUM:
-should bugs be allowed to eat carcasses, it serves as sustenance for the continued living of other pests.
-attachment may reach into all types of difficult places, eg: narrow locations, etc behind refrigerator, etc.
-system can be made part of certain products, which attract cockroaches and other insects, eg: stove (useful after period of time when turned off when bugs are eating the fat that splatters from baked foods); closets; back of refrigerators; etc. Inside the vacuum system might be a smell that attracts bugs. Additionally such vacuum function might go into effect only when it senses there is a bug, eg: like Venus fly trap going into effect when fly is on its pad.
-or product might attract bugs by making certain sounds, eg: mating calls
-see code in file IMI5 for "all".

A4-37 CHANNEL SELECTOR:
-system alerts user to shows of such interest via a print out or display on screen - eases the difficulty in reading through everything, considering that cable tv can have in excess of 30 channels now for each half hour/hour or two hour period, etc.
-while watching a show, system can be programmed to alert watcher of other shows coming on line (perhaps it would be of greater interest, yet user may be too lazy to check around.
-see code in file IMI5: all; remote; display; fd-hdd; pp; mp; uk; date*; alerter*; osc*; teach (parents might wish particular programs to be more emphasized should they be of value to their child, and or censor out unwanted type programming) - also applies to others eg: those who don't want violence, etc.; cart (eg: type programming; ability to pick up certain stations; etc; access (keep kids from watching at certain times, etc. - this product itself appears to possibly exist already); character*

A4-38 CHANNEL INTERPRETER/TRANSLATOR:
-broadcaster will need to send in code for receiver (who is blind or deaf) to comprehend information.
-the deaf person might see a character and or hands doing sign language

-such codes might also permit people (such as those watching on airplanes, in hotels, very international cities like New York or Amsterdam) to watch in their desired languages, with the transcription below and or the voice over done.

-see codes in file IMI5: all; remote; display; pp; mp; educ; entertainment; mfh; alerter*; vc; egh*; tgh*; teach*; md*; cart*; cp; access*; character*

A4-38A CHANNEL STYLE SELECTOR:

-is this not obvious considering how easy it is for video people to edit tapes in the editing room?

-see codes in file IMI5: all; remote; pp; mp

A4-43A ELECTRONIC COSTUMES:

-see codes in file IMI5: all; remote (as part of fun or game, one can turn on something in other person's costume); display; pp; mp; toy; entertainment; microphone; synth; portable; sst for certain elements only; iq*; bp; sp; osc; vc; egh*; score; teach*; cart; character.

A3-R14 TELEPHONE VOICE BALANCER:

Select the type effect(s) you wish from easily recognizable labels, eg for background effect: "peace and harmony". For your own character effect, eg: "sweet girlfriend", "bill collector (one who collects unpaid invoices for their company)", "Mr. sexy", etc.

These effects can be for your outgoing and or incoming desires, eg: you may want another to hear you in a certain way, or you may wish to hear others in a certain way, for example, a person with terrible personality that you frequently must listen to might be converted into a more appealing personality without loss of information in their discourse.

--should both parties have similar tel systems (would take a long time for the market to be dominated by this system) the system can: #1 recognize the sender as one using such synthesization, #2 the words need not be jumbled or incomprehensible anyway since digital transmissions are reasonably clear (one sound effect or the other)

--product ads a little fantasy, fun, profits and many other things to your life and or your business.

--when selling a product on the tel (a very common practice in the west), user can have standard 'synthesization and or key in the type of person they are trying to sell to and the seller's tel will adjust quickly or slowly in response. Seller might even know the potential buyer's personality type prior to calling via: the type of products they have purchased previously from the same company or other companies, such databases are available for purchase, eg: when getting discounts at certain food markets in the USA, you need a card (you apply and at same time give your tel #, bank account number, address, etc... if info not given you don't get the discount card - eg: with the company called Safeway. Safeway is probably the country's largest supermarket. Currently computers at the cash register read each item via the product's bar code and store what they buy with what,

when and in what volume, etc. This information is correlated with advertising campaigns - world news events etc and such so computers can highly analyze individual purchasing style.

. It is the total stimuli a person receives via their five senses (visual, hearing, feeling (eg vibrations), smelling, taste) that influences how a person feels at any given moment. This ability to cover such a large area is related to the future Virtual Reality products coming onto the market place. Hence, though our product might not be feasible now, the patent rights might allow future manufacturers who own the rights to make other products considered obvious to our current models!

-person on tel might get all or some of the five senses while on the tel. Product might also be good for a new type of dating game (whereby you meet new or known people) and guess who they really are, or where you play certain roles in an electronic game mixed with real life, etc.

-visual seen by speaker (may be without sound). Might even come with a little vibration, eg: with dance music

-taste: might dispense flavored candy and or pills, eg: with ginseng or caffeine to energize you, or herbs that relax you.

A3-13 EMOTION WATCHER:

. Additional ways stress can be identified: when on keyboard and person makes numerous mistakes, computer recognizes when user back spaces frequently and deletes letters (such is different when one is writing free text and changes sentences, etc since the latter is more of an editing function. One makes mistakes when their head isn't all together alright;

-computer's key pad might have a temperature monitor on some/all keys in event person's temperature drops (sign of stress), however the overall room temperature needs to be taken into account of as well, plus the question of how long person has been at the computer, (maybe they just came in from a cold room....). Depending on the accuracy of this area, product might prefer to use cold fingers as only one of several signs before computer makes decision about user's stress. Temperature modulator might be on the eight keys fingers are usually resting on. Keys for other languages would be altered accordingly.

-amount of agitation in person's chair

-in orient (where people virtually always take off shoes inside the house, foot pads might check for temperature and other matters.

-compare this with product A3-13A in Steve's directory titled "O" and in its file titled "A3&". ask him for this product number on Dec 1, 92

A3-6 DIET DIARY: Where is the second addition to this product? This product was given to Steven after initial research!

. Of use to doctors studying single and or large numbers of patients and the interactions between any two or more of the following: time of day; particular food eaten; type prescription taken and the time and frequency taken; music listened to; sleeping schedule; type and time of exercise; timing and type of any type of activity such as those listed herein; people spoken with on tel; outbreaks in (worsening) of a person's condition, and or

improvements; types of programs watched on tv; effect of certain chemicals (eg: preservatives in prepackaged foods); emotional states of mind, eg happiness, depression, energy, low energy, ability to interact with others, temperament, control of anger(s), suicide, weight gain or loss or stability, accidents (eg: car, occupational, etc.); longevity (life span)

-this product is related to product A3-6A

-product might suggest one or more menus to eat either to cook at home, eat in restaurant, or purchase as precooked food.

-system can recommend the type and time period of exercise necessary to work off excess calories in diet

-system monitors each person's weight

-system's memory can show all the possible physical health effects (positive and or negative) of each food item, eg: has such and such vitamins, is good for improving eye sight, and or can cause stomach cancer in 0.03% of population...(eating item in such and such a manner increases/decreases health harm/benefits.

-based on personal preferences for certain ingredients, eg: tomatoes, system can suggest foods to eat. Suggestions also are the product of many other ways in which system is trying to help user.

-system can also suggest certain foods for large groups of people if they are needed to be ready for sports, cerebral thinking, a very cold day (to reduce illness), etc.

-easily computes how much of each ingredient is needed for the certain number of people, eases mathematical formulas for more or less people than called for in recipes, plus it can easily calculate for regional or personalized tastes, eg: more spicy.

-see "IMI5 Product Specifications Codes" for:

all; display; fd-hdd; pp; m uk; date; educ*; microphone*; exercise; portable; sst; iq; printer*; au*; mfh: bp; alerter (when person is getting into bad state, making mistake, etc); osc*; vc*; egh*; score; tgh; teach*; cart of softwares; system will transmit via radio frequency to person monitoring them, for: checking up on them and or if the person is getting into serious trouble....; rpc; cp; cm; uq; mq; access*; pi; character

4A-47 INTERACTIVE WALKIE TALKIE (initial product title: Walkie Talkie Voice Alternator):

-try guessing the locality of your game partner by the clues given (eg: pieces to puzzle in figuring it out)

-can be any one of a number of simple two or more player games with video and possibly audio transmissions between themselves. Users can simply play in different rooms, and or over tel/modem, etc.

-system allows users to make their own games with and or without cartridges that act as authoring languages (the basic software language from which programmer creates a fleshed out program)

-communications (either written or verbal) are translated between different languages

-receiver and transmitter can both record what they receive or send out for future re-listening

5A-11 MASTER ARTIST:

-the art can be created in the ways described while also doing it to the tune of music and or sound effects or verbal recording (while the audio is going on, the visual effect is being created in rhythm, etc with the sound(s)). Such a system can also be applied for development of music videos, pure fun, etc.

-user can program types of visual effects and display can pop out such visual possibilities (within the parameters selected) while any sound is being created, eg: listening to music; listening to teacher (user has portable device in classroom); while walking around city a child can see all the visuals created by sounds all around; etc

--programming types of visual effects could include requests demonstrating preferences for: color(s); speed in which visuals are created; types of strokes of the brush; types of shapes, eg: graphs moving up and down or abstract art that is in motion or collage, etc.

--different bars wanting to attract their own clientele via the limited numbers of popular sound tracks might adjust to their special effect via this product idea

. Automatically create art whereby when you request one or more colors for part of the picture, the system will select color coordinated colors for all the other areas (filling in the sections like a coloring book whereby user fills in each blocked out area with their choice of color). For example a person's face can be depicted in hundreds of different ways.

. Depiction of art ['artist] can then result/'react in certain sounds/music. The audio portion might be within the parameters preferred by user, eg: trumpets, high bass, good rhythm, etc.

A4-41 REUSABLE PICTURE HOLDER:

Alternative things that can be held up:

-signs: co name; directions; list of employees and their room numbers to be posted in a lobby; promotion of certain products in stores, etc - eases the changing of displays

-item being posted might be made to move in order to: attract attention; move to designated location for desired purpose; etc

-hotel rooms, apartments, offices: change the picture according to type people coming for the time/occasion

-exists and being developed now by Microsoft in USA: electronic pictures, which can be changed by programming for a different picture to appear on screen

-put up notices, eg on each person's door, or on frame

. Can have a board on which items are written or to which letters or graphics are manually attached.

. Device can grab any type of paper that is of importance, eg: shopping list, passport, etc so person remembers it. Such can be put on refrigerator or inside of front door, etc.

-exists: currently one might put a paper on refrigerator with a magnet

A1-12-A BABY GUARDIAN AUDIO SYSTEM

-1st addition

-certain buttons will trigger baby to stop crying via: laughing button, button to relax, button for silly and or fun sounds like jingles, button for music, etc.
-entertain baby while guardian is away
-system sends via transmitter to guardian's receiver the fact that baby is crying. Gives guardian greater flexibility in leaving baby temporarily (eg when in store) and also entertains baby when they are away so baby is less prone to cry.
--outgoing sounds might automatically: change and or start when baby is crying
--baby's carriage might even move (rock) a little when baby begins to cry and or can simply be activated by guardian

A1-12-B LOCATOR - COMMUNICATOR:
-1st product clarification (this product concept was split from idea number A1-12)
-receiver is attached to person, animal
--when organism is lost and or is needed for whatever reasons the transmitter that works via satellite interacts as desired. Examples of interactions: sound, music, verbal command, alarm, etc is released (via receiver's commands)
--a mating call might be emitted into a particular ear in order to drive animal to specific spot on planet - as animal steers slightly off in wrong direction, their ear receives the sound from a slightly different direction into ear (or into the section of brain that judges location of sound source)
-system tells the person if they are going in right direction or not via: different lights, eg: green is good, red is in bad direction, and yellow is that they are between red and green; verbal commands; sounds; etc

A1-11 SPEECH INSTRUCTOR (old title: Animal Communicator):
-1st addition
-teach animals to talk, sing and or make sounds, for example for birds, maybe also for some other animals in isolated circumstances, eg: help a dog's barking sound more aggressive
-user designates type of animal and or purchases a system and or software for type animal eg: bird and or type species, eg: the cockatiel bird.
-the system is designed to make sounds that are easily replicated for the type targeted animal
-system can repeatedly make a sound (the repetition alone can induce animals to mimic the sound)
-also induce animals to mimic the sound via rewarding them with food and or other desirables when animal makes the desired sound
--desired sound can be repeating what was just broadcast and or making a particular sound which stands for food or making any one of the sounds that the animal has and or is learning.
-system might even set up a conversational mode with animals that are lonely. This possibly highly marketable idea can answer the animal in a different sound. Each species of animal might have different sounds according to specie. Pet owners might be enthusiastic when seeing their birds getting all charged up.

--Recall incidences where a bird in an apartment sings in excitement with other birds outside the apt when the window is open, the bird continues in great interest. However, there might be a limit as to the length and or frequency of the system's operation.

--the teaching mode can work in conjunction with the interactive conversational mode. Each specie's psychology can be such that the product will talk to them differently according to their behavioral pattern in order to get any possible type of result one can get from an animal

--Should the conversational mode alone be "obvious", the teaching mode might be "not obvious" whereby our model on the market might have the advanced features not available to competitors, even though this particular teaching mode might be the main reason for interest in such a product category. Upon developing interest, purchasers often like additional features as well.

-reward animals with food given out at the time they have done a task well.

--Food system might have memory of total amount of food given and to be given for the remainder of day / 24 hour period, and the total amount that might want to be given within a period of a day. Hence, all good behavior might not be rewarded with food

---other rewards: perhaps with sounds of praise (as interpreted by animal) as long as it won't interfere with learning of other sounds; offering of a water bath for birds (they love it). The water tray big enough for bathing disappears after the bathing activity ends (know via motion sensors) or after two to five minutes; whichever comes first.

4A-34-ZC VISUAL DIALER:

-2nd addition

-according to where the eye moves, system knows what numbers and or letters and or symbols a person is looking at.

--allows person to type letter, do very basic computer functions, do basic home automation chores

---eg: cooks food at designated time when the cook might have left the food in the microwave oven in the morning and the invalid can begin cooking and is only required the strenuous activity of getting to kitchen only once (when food is hot)

---turn on or off any appliance or device; etc.

---turn on single and or multiple lighting systems, eg: a singer can turn on many different lights and or colors and or sounds creating a major musical and or sound and or light show without the need of many people or the use of hands. Maybe hands are used for something else!

---give info from a crt/tv screen. Eg: you are in bed with your lover and too tired to touch a key pad. Simply look at the screen on the ceiling and call forth your dreams! The stock prices, sexual or non-sexual shows, and or segments of the program, etc. Even "freeze frame" certain shots of the show. Why not enjoy what electronics have to give us?

4A-5 ELIMINATOR (Old Title: Coffee Filter & Grind Compactor)

Note: this product number and 4A-6 must be done one after another, both can't be given out simultaneously
-1st addition
-system also handles: used tea leaves; pulp from orange juice and from other items used to make juice, eg: tomato, carrot, apple. Such food items might be placed into device in their entirety and or cut up in chunks and then placed into device.
-the garbage going out might be sent into the kitchen drain's garbage disposal (garbage disposal receives all the food scrap (not bones, plastic etc then grinds them and flushes it down the drain). Such disposal might allow the receiving of slightly larger food chunks from our device
-Codes (see IMI5 file): all; display; cm; cp

4A-6 CLEANING SIGNALER:
-1st addition
-for automatic coffee and or tea makers. Boiled water leaves chemical deposits inside the machine, which changes the taste of the coffee or tea.
-system signals when water purifier's filter needs changing
-Codes (see IMI5): all; alerter; cp

4A-6A PIPE CLOG SIGNALER:
-1st addition
-certain types of pipes (depending on their usage) might get clogged and become a problem later and they might become clogged without being easily noticed. Hence the value in such awareness being made
-such clogging might be dissolved automatically
-useful for piping used in: machines, water drains, sewage, water treatment, etc.
-Codes [again this means 'OTD as well]: all; alerter; cp; cm

A4-R29A SPECIALIZED METAL DETECTOR (Old title: Metal Detector Which Identifies The Type Substance Located)
-1st addition
-detector identifies the type substance (different metals have different molecular structures and show up differently in detectors). Might even identify items other than metals, eg: stones; plastics; level of radioactivity (obvious); age and or level of worsening of substance; thickness and or volume and or density
-density might then show up on system's display the possible substances item could be. Cheaper models might find it difficult to see the difference between similarly dense materials
-(obvious) shows depth in soil or other surrounding material
-shows the presence of any movement and or targeted item's speed
-display may show the shape, size, type substance, etc.

-Codes (see IMI5 file): all; display; pp for size and or type object desired - making the search work easier - can even use product in area with many other products, eg: looking for a certain size item in a shallow tray of many other small sized nuts and bolts, etc.; mp; uk; toy; portable; sst; mfh (system can memorize where certain type substances [shape, size, material, etc] are located, eg: by tray number - when user wants such and such piece it asks computer where it is located!; bp; osc; vc; score; teach; cart; cp; uq; access; character

A3-R14 TELEPHONE VOICE BALANCER

-2nd addition

-background sound selector: user chooses type of music / sound they hear without others hearing in. Item encourages user to listen into their hearing set, instead of saying "oh, I have to listen to this terrible telephone"

--The background sound might also change automatically according to the time of day, weather, type employee, type calls they are receiving, etc. This type of change in sound is designed to: improve quality control, employee work performance, worker satisfaction, etc.

--background sound might drop in volume when the listener's incoming sound from outside speaker drops a little in volume

5A-53 STRESS ALARM:

First Addition:

-identifies which types of sounds are important enough to warrant attention, eg: a type of baby's or child's cry; cat's meow when it is serious enough to warrant attention, eg: to gain access into automatic door (or any meow/dog's bark to gain access). If gaining access itself is obvious, the system of judging the validity of permitting access might be unobvious.

-user is notified on the level of stress of their or other's voice via: display (with digits and or words) and or lights on the product. The product might also act as a telephone - with easy switch having system identify the voice of recipient of call or of caller.

-system can be programmed to give alert whenever a stress level of any or designated party exceeds desired levels. This then helps user to make necessary actions and or changes.

-system also couples as lie detector - alarm can go on when voice is stressful enough

-when system is used in-non telecommunications means, user can direct its microphones to concentrate on sound generation of designated party/parties and or regions of room. Designated person(s) can wear a transmitter designating their location.

. For Techies: all; remote; display; fd-hdd; pp; mp; uk; date; user beh; microphone; synthesizer; portable; sst; mfh; bp; alerter; osc; vc; egh; score; tgh; teach; md; cart; tel; sp tel; tr; rpc; cp; uq; mq; access; pi; character

5A-50 SOUND ACTIVATOR (former title: Sound Lock):

First Addition:

-if this is patentable, it is maybe an exceptionally valuable patent. This application has taken too long. Must be done by competent person by 20 Feb 1993.

-this is the mechanism that when triggered by a certain sound sends the signals to activate and or deactivate any type of function. This product part's signal utilization is up to the product in which it is incorporated.

-different types of sound can activate and or deactivate the product in any number of ways, eg: change combinations; restrict access to certain parties (each party has own sound)

-OBV: is this product similar to say, the automatic garage opener, activated by a remote control device?

-Activate: Open/close windows in house, car. Flush toilet (people don't want to touch what others touch with their dirty fingers, yet the foot pedal for toilets is considered very low class in the west). Lids to garbage (also has tight seal keep out bugs). Air conditioning and or heating system - no longer do you need to get out of bed, the warm bath (risking electric shock), etc

-sound is triggered by human or electronically held means

-radio frequencies from a hand held means is also possible

-Steven is curious about the obviousness of these additions. Please make an exception to the product flow chart and designate what is and isn't obvious and give the results as soon as possible.

. For Techies: all; remote; display (eg: shows mode in operation and or software menu selection possibilities); fd-hdd; pp; mp; uk; date; user beh; interactive; educ; toy; game; entertainment; microphone; synth; portable; mfh; bp; alerter; osc; vc; cart; rpc; cp; cm; access; pi; character

5A-75 WARNER:

First Addition:

-also lets user easily alter the color and or intensity levels.

-perhaps the corresponding radiation level will be displayed (that is user can alter something and reduce radiation [somehow] by reducing the level of visibility of sorts. Might not be technically possible.

-notes if the outgoing sound of any device is within the pp or mp sound spectrum desired, eg: checks quality of home stereos.

. For Techies: remote; display; system can note the time(s) when a deviation occurred and even develop graphs there from showing tendencies for scientists, etc; fd-hdd; microphone; portable; mfh; printer; alerter; osc; score; cart; cp; access; character

+ 5A-48 LASER LOCK:

-codes (see file IMI5 for meanings): all; remote; display; pp; mp; uk; date (eg: times access or departures occurred); microphone (records the times anyone did something with a pre-selected time before and or after access); portable; mfh - eg: does or doesn't allow certain people's access codes/signals if they are fired - stores incoming and departure times for payroll's hourly wage; alerter; osc; access; character

-check patent application we filed in Ukraine / Russia for this.

5A-49 LASER 'ARTIST:

First Addition:

-the screen onto which one writes the desired image can subsequently allow for changes on the image

-print the same type of image and or image on different types of surfaces (metal, glass, wood, plastics, paper, cardboard, stone, cement, fabric made from any chemical byproduct, etc). This can be much better than nailing or sticking up signs in many circumstances.

-a different option allows the same image to be increased or decreased in size

-codes (see file IMI5 for meanings): all; display; fd-hdd; pp; mp; uk; toy; entertainment; portable; printer (prints onto all types of material - printer can receive materials of differing thickness; au; mfh; bp; teach; cart (of possible designs, etc); cp; character (system even allows user to select characters which can be superimposed in printed image)

5A-41 SOLAR THERMOS:

First Addition:

-energy can also be used to cool thermos

-thermos system can be of large or small size. Even ideal in locations without electricity

-turn system into stoves, and or refrigerators, chicken incubators, etc.

. . For Techies: all; date (eg: when door or other lid was last opened and when item may need to be taken out before the expiry date [when food will get too old, cold, etc]); portable; sst; bp (for back up in case the solar system fails and or needs extra energy stored); alerter; cp; cm.

4A-22 CHARACTER TEL:

-cartridges of diverse personality types

-have dials, which can accentuate, or de-accentuate particular sound characteristics

-display shows the cartoon of character user has selected with the written title of type character too

4A-29 HEALTH MONITOR (old title: Tremble Monitor)

-user's trembling characteristics are stored to develop graphs showing any major changes in trembling

-computer which analyzes trembling can correlate this with data on other physical symptoms to better arrive at medical conclusions

--many people are too vague in describing their physical ailments and conditions. This monitor helps clarify.

-worn by user on wrist, around neck, around chest via strap, or other part of body

-also monitors breathing, heart beats, blood pressure (system gets blood pressure automatically at certain times)

-blood pressure monitor also captures blood pressure when any other bodily sign indicates it is good to take measurement at that time

-camera can be placed on desk, car dash board, etc and checks for unusual eye behavior, eg: rapid movement, red eye, and or other strange movements

-perspiration monitor
-simply write down every single body function that can be monitored and develop a patent application for these
-the monitors can be coupled with other measures, eg: reaction person has to a medical treatment (operation, shot, pill, etc)

4A-48 WATER SAVER:
-height of water is determined by:
--positioning of head and or lips and how they effect laser tripping
--running of fingers through the laser key pad (doesn't require touching, see our patent application number 5A-71)
-Type water desired selector:
-choose whether your water will be with or without fluorite and or chlorine
-temperature
-volume
-incorporates water filter

5A-22 BURGLAR SPOOKER (old title: Sound Reflector)
-records isolated sounds created by burglar, vandal, or anyone else such as an unwanted person, or as a joke to a friend
-the isolated sounds can then be played back within the context of other sounds, eg: police sirens, dogs barking
-police sirens are activated within set time period after break-in or any other type activity
--instead of sirens, any other sound can be generated as well, eg: "you are entering the premises illegally, the police have been summoned", "your picture has been taken and transmitted electronically to the police station"
. Burglar Photo Snapper:
upon any illegal access or after any type of function, which generates signal to camera, camera takes picture
-camera can be motionless, or be designed to shoot photo in direction of movement
-applications: burglars, scientific experiments
-if this product is unobvious, then develop as separate patent application and take out the quote in above 5A-22 about "we have taken your picture"
. In live performances ['entertainment] the western world occasionally enjoys hearing the audience participates in the performance. Hence isolate particular regions of the audience and synthesize accordingly

5A-27 OUTSIDE SOUND MAGNIFIER:
Third Addition:
-external sounds are magnified when people are working on any type of machinery, gadget (especially those that are either dangerous in some degree and or those which make considerable noise)

-one or several microphones can be adopted, and placed in locations more likely to signify an important sound for user's use, whereby cutting down on other unneeded sounds, eg: putting portable microphone near bells (door, tel, clock alarm, security system, etc)

-system operates whenever an outside sound needs to be magnified (increased in volume) and or user needs to be alerted and or system on which user is working needs to be slowed down or turned off. Simply think of possible utilizations as described herein and then clarify.

5A-3 ANSWERING MACHINE FEATURES:

Third Addition:

-system(s) can respond to person's type of voice (signifies the type of sounds/words/etc they may prefer. Naturally all people can't be perfectly categorized by their voice type, but this preferred treatment is at least much more personalized

5A-73 TV SYNTHESIZER:

-select the type voice by character, eg: when watching a cartoon or other animation, select the actor desired when listening and or watching

--eg: have a menu from which to select characters, voices of known and or unknown actors

-a tool also useful in creating a master film and editing it for diverse markets with less expense.

A4-R29A: SPECIALIZED METAL DETECTOR (Old title: Metal detector which identifies the type substance located)

-2nd addition

A3-R14 TELEPHONE VOICE BALANCER:

-2nd addition

-Program tel so that when call is made to particular tel number the following features may be activated just for calls to that particular tel number, or all tel numbers beginning with say the same area code and the first four or five tel digits (thereby getting the other tel #'s within the large company)

--should the listener ever be put on hold, they will get selected type sounds/music to listen to

--the 'synthesization ['synthesizer] of your voice is altered according to their listening preference, eg: higher or lower pitch and bass

--saves the trouble of having to remember and or program tel according to need

-transfer information about the parties making and or receiving tel calls from other sources (eg: computer database, etc) to the tel

5A-49 LASER ARTIST:

-can take pictures via camera, then portions or all of picture can be portrayed in any number of ways onto most types of surfaces via laser

--laser can make certain types of outlines from photo too

-laser can differentiate between colors by different degrees of burning into the material

-laser can burn image onto special chemical on skin for:

--identifying where tattoo's ink should go. Using stickers may be less helpful, since each individual may want a differing size of an image, and the stickers can run out, and the laser system more readily allows designing of image (even on a computer, etc.) and then making any changes and then seeing what it might exactly look like on skin (even laser can put out into colors)

-color can be portrayed via putting a chemical solution onto material, then different laser light frequency is designed to turn only the chemicals for certain color changes when it touches it. Eg: one laser causes chemical to turn green, the other laser causes the color of red to be produced - a bit similar to developing color film also.

5A-41 SOLAR THERMOS:

-marketing slogan:

--the office's window sunlight or even regular day light works!

--Even if you have to work out in the cold, just put it in the sun (eg: for construction workers, farmers, those making lots of stops in their car (having to leave it in the cold for parts of the day..., etc)

A1-1 PEN COUNTER:

Measures the approximate distance that instrument wrote, eg: 100 meters or more. It calculates this via: amount of ink used; etc.

-calculates the number of meters that might be left for writing, drawing. Calculates the amount of square meters available for drawing (fun for artists)

A4-41 REUSABLE PICTURE HOLDER:

Product description addition:

The magnet can be imbedded behind walls.

-Also good for spaces used for business conventions, where pictures must frequently be changed.

A1-6 SPOON:

-have a leveler (like ones used by carpenters) which signals if spoon is or isn't level via sound and or light

-spoon size can be altered mechanically and or electronically

-in Animal Laboratory:

--memorizes the total volume and or weight given to any one cage or section of cages or plants, etc. Memory is based on total volumes within any hour, day, month, year. Can also create graphs. Can connect with computer.

-built in scale; and or spoon can fit onto or into a scale mechanism

-memory also works by type substance

-system can tell user how much is needed to be given

-recipe maker: select the volume desired,for particular recipe, and system will also state amount needed by each chemical and or food substance

. When dispensing, system remembers and or knows how much to give to each box or sub-box section on a conveyer belt.

CONTROLLING FOLLOWING INVENTIONS BY CLAPPING, OTHER SOUNDS, ETC:

The following products respond to humanly generated clapping, snapping of fingers, whistling, sound generating equipment or objects, etc. The humanly generated sound initiates the desired function. This clap recognizing part is inserted into each product description below.

Our invention number precedes each invention.

-Possible trademark: Clapman, Clap Man

-Utilize the basic part of microphone hears certain sound frequencies (clap, whistle...) and the specific frequency of certain duration and or number of occurrences activate or deactivates electronic operation.

REVOLVING TAPE RECORDER: ever hear a sound and not sure what you heard? Advertising targeted to certain people, such as elderly, slightly paranoid mother in laws, etc.

-microchips keep sounds for certain time, "loop system" can continue recording and erasing older sounds

-play it back in higher volume if desired; those who want more elaborate systems can later go back to the store and buy additional microphones or other options, which can record from different locations to get better sound.

*-may help show direction of sound too with direction finder

MISCELLANEOUS SOUND ACTIVATED INVENTIONS:

. Other items to deactivate and or activate according to concepts within the 2-A file:

. Speaker telephone (incoming/outgoing calls; dialing (certain claps designate digits of tel number)

. Doors: physically open and close; their locks

. Identification: each person who walks buy makes their verbal code and computer system records that it was. Uses: locates where people might be...

. Turn on shower or bath. System already knows at what temperature you want your water.

-preselecting the desired water temperature is not patentable by itself

. Turning on television, VCR, music stereo

Lights: Opens pet door for dog or cat seeking in/out to/from garden. Or system might simply respond to animal's bark or meow or scratch or push. System might also not allow operation at certain hours...

OTHER INVENTIONS SECTIONS – NOT NECESSARILY CONTROLLED BY CLAPPING:

Female Pet Controller:

When your female cat or dog, etc goes outside this device will: deter away male dogs or make the female less interested in males of their species.

-this might be done by: device giving off a smell (eg: put on animal's collar); dietary supplement (not an electronic product); device giving out sounds not easily audible to humans (yet doesn't make animals which hear this too crazy).

-scientific studies needed to show this works

SOLAR POWERED: Leave the device laying in the sun, and it automatically charges up via solar energy. Or the powering source has large solar cell(s) and stores power which in tern can be given to portable products when they are connected for the required time (like plugging into electricity); or portable device must be plugged into this solar device and then the devices will collect the sun's energy and transmit to portable product simultaneously.

SOUND 'DISTANCER:

Musical instruments playing together change their sounds according to how close or far they are moved from each other. Can be for a single person utilizing two or more parts; or two or more people with their instrument(s).

-applies whenever the sound volume, frequency, or type sound is to be altered according to how far or close two or more parts from each other.

--examples: toys - when a police car drives near a certain object or place, it will siren, or an audio statement goes on, eg: "pull over"

TOY REMOTE CONTROL SOUND ACTIVATOR:

One toy can activate sound in another toy. Eg: a toy train's button when pressed will cause the train track crossing to sound ahead, and close the gate. The gate's receiver gets signal from train's transmitter.

-transmitter can also cause following in receiver's device:

flashing lights; visual display showing words or graphics; physical movement, eg: opening/closing door, ball dropping to floor, etc

-transmitter can transmit by pressing of button, or whenever it is moved (inside has a motion detector)

JUMPING JACKS:

Distancers between legs or arms. Each time person exercises by moving their legs or arms apart beyond certain distance, the distancer will sound.

-distancer can also count the number of times the movement was made (if the legs or arms went beyond minimum distance.)

TEL TOUCH PAD:

Press soft pad and the manner in which you pressed it is transmitted to receiver. This allows something closer to physical contact while speaking with your friends. Only popular for open minded cultures, eg: Japan.

OVEN CAMERA:

Cook can enjoy the company of her husband or friends in or out of the kitchen without having to go and look at the oven window. Camera shows the state of the item inside. Other camera eyes can also view the kitchen's stove.

MOBILE COFFEE MAKER:

Make coffee in car while driving. Drivers love hot coffee. For safety device might only allow opening while: user has stopped car, or if car has more than one passenger.

MOBILE APPOINTMENT MAKER:

Salesmen always traveling on the road can get their appointment calendar more easily filled up via the following method. Secretary talks with customer and can quickly make same day appointments (great customer service) by communicating with sales representative's device (via air waves). Salesman's device stores their schedule and approximate time needed at appointment and to and from the location(s).

-if salesman needs to do something different, they ask their device if their schedule allows. The device is reasonable in allotting the needed time. Device works best for certain types of sales people, especially those whose needed time for each appointment is rather predictable . Remember, there is less chaos in the west, and people wait much less in line, etc....

CONCLUDES FILE: A's U-ALL FILE

File: Intro To Pat / A1X

FILE A1X

A1-010 Pen Pedometer: Toy pen measures the number of meters of ink written, and the approximate number of additional meters of ink remaining.

-pen counter: items that measure the amount of writing ability left or which has already taken place in pens, pencils, magic markers. The amount of life left in products before they break down.

.-4E020 Content & Date Verifier. 5E020

-"game": aspect of game in which the length of writing becomes important, eg: players must write within maximum/*minimum length and or time span ("score"/"tds") (during each move / for game's move or for all of game).

-'R's stick: 'scores all of its movements, eg in terms of: distances traveled (in air), # of angles in movement, etc.

A1-02 Condoms for men and women, which taste like male and or female sexual juices.
-Trade Names: Real Thing, Almost the Real Thing, Like the Real Thing.
.-See G dir KN, specifically 7G about condoms. Add chemicals compatible with condoms that create desired taste and or smell.

A1-050 Software Taro. It gives fortune for you and or you can give it the level of instruction desired. Electronic Taro touch or point it to person and gives reading. Use Waite's taro, similar, or Japanese, oriental palmistry. Electronic numerology: punch in all numbers associated with person, business, concept, strategy, idea, political element, etc., machine will either ad all numbers up and divide to get the magical number or will more likely average out each number given get its meaning and count all the averages and either state number of readings for each meaning or give general analysis.
-"Entertainment" / Program (sw) Screener: 9G-220: Sys (adaptive system) screens/selects (such/designated unwanted/wanted occurences/modes%/programs%). * "Tilt": controls sys' functions

A1-060 Spoon thermometer: measures temperature. Cook's sanitary device. Use as stirrer. Smaller spoon for baby.
-spoon which measures temperature. Temp shown by color or number changes or mercury rise on handle. Use the sheet material on market as thermometer maybe. Also good for babies. Also keep in cup, bowl, etc to gauge temp.
. For Techies: "S"; date; toy; portable; bp; sp; alerter - if too hot, cold...; cp; cm; uip (alerts user when the temperature is in our out of certain range).

A1-070 A sticker which changes slogans according to the temperature and or age or if a car is on or off. Slogans that say "now that the car is on/off...." will turn heads. Or have computerized read out from rear window, wires connected to engine/battery for car's on/off indication.

A1-090 Hair Clip Possibilities:
With following function options: 1]\\ becomes many hair clips when desired and back to a single semi-compact hair clip. Applies to all types of clips 2] keeps bugs away via chemicals and or electronic signals 4] (this becomes "3") is a radio 5] sends chemicals, electronics which attract sexual partners or makes people like you, or is done simply by the special design 6] holds telephone numbers in an electronic or manual rolodex which

might dial your number from a touch tone phone 7]\\ is a self defense devise using chemical spray, electronic or electric charge - easier to reach than into bag. Good time to release product, women more puritanical, eg: Clarence Thomas... 8]\\ calls for help eg: whistle 9] miniature "mic" in disguise 9] sends - receives tel calls 10] is a toy 11] devise to find things you often misplace: punch in applicable code which finds corresponding item 12] holds extra pair of keys 13] opens doors automatically via its secret transmission 14] sends pleasurable sounds vibrations or frequencies consciously or unconsciously 15] holds your makeup and or money or picture 16] has night reflector so cars can see you in dark 17] is a watch 18] detects high levels of radiation w/ a built in measurer using the variety you previously clipped onto your shirt ....20]\\ people can locate you by sensing where your hair clip is, any jewelry programmed for wearer to decide if they want or don't want there whereabouts to be known via "ps".

-D: person's head & hair = hair clip = functioning mechanism.

A1-120 Baby carriage with mother's voice when mom is there or not there. Use cassette tape or microchip. Can give baby desired effects as I've written about any of the other products. Mom's voice can be converted in terms of its frequencies for achieving desired effect. Or use father's, sibling's or other's voice. Mix with 10, 11, 8 (pocket satellite locates lost child, tells them to come home, etc.)

-"Tilt": when in designated position, mother is nr. Naturally best R ('remote control) is for slightly older children who will need training time to use sys properly.

A1-130 Taste Enhancer: Manufacturers can now offer greater varieties of tastes in pre-packaged foods. Taste is the combination of smell and chemical reactions on the tongue. The nose is more sensitive to diverse elements than the tongue. Safer than putting chemical flavorings in the food. The container, or eating utensil emits smells that complement the food.

-food: reduce chemical digestion with scents on soda containers, forks, knives, spoons, chopsticks, toothpicks, china wear, etc. Tastes of sourness; sweetness, bitterness, saltiness, and includes all elements found unhealthy to date.

-designs are both electronic and non-electronic.

-see KN's Chemical Taste Enhancer in earlier part of "B" directory.

A1-220 Biorhythm clock: tells you the hour you are likely to be: creative, alert, in need of caution from hurting yourself physically or from others, hungry, not hungry yet should eat, in need of medication or coffee, emotional upset. Based on your bio chart, and or horoscope, palmistry, taro, therapist, your input into machine.

A1-230 Hunger Inhibitor: Reduce weight by cutting down on hunger feelings.

-Diet Mechanism: Stop eating: when craving food, the electronic gadget will send stimuli frequencies, and or sounds, vibrations, smells, words, music to reduce hunger. Can go on automatically preprogrammed. Mix w/ 22 and its mixes.

A1-250 Vending machines that take credit cards for candy, alcoholic drinks (where legal like Japan), or any other item.

.-4E020 Content & Date Verifier: of (any said) occurences, eg: "tracks" / "analyzes" occurences (for uip (db improvement), intelligent monitor 2E251); anti-tampering; market research.

A1-270 Air O Riser. Open can and its liquid emits into air elements. Put it onto heater. Puts good ions into air, gives good smell. Non-electronic product.

A1-300 Bubbler: Emits bubbles from bottom of drink for one hour. Bubbles come from cup or cubes sunk on bottom.

-Cube Delight, Bubble Cube(s): adds bubbles, effervescence, carbonation to any liquid - drinks, aquariums, for chemical or scientific purposes. Chemical content (eg: oxygen, carbon monoxide) of bubble determined by particular need.

-electronic and non-electronic versions; safe

A1-330 Plant Lover: Machine gives plants frequencies to boost health, growth, green, keeps soil moist by giving only the water that type plant needs. A product that is programmed by P to make soil moist at up to or over ten moisture settings, by type plant. Comes with manual telling what to set M at. Advanced version of playing Mozart known to help growth.

A1-400 Creative Fashions: clothing whose seams easily part w (with) E M by demagnetizing. Rearrange in diverse new clothing patterns. Choose pieces for S M L or XL. Snap Fashion, Cut & Paste, Convertible Fashion, No Sew. Can use Velcro, zippers, snaps and or buttons, etc. Good for mail order, since in store demo complicated. Might work with HH or TT "sewing" machine.

A1-440 Hat changer: hat becomes darker in good light, and lighter in low light. So as to maximally effect visibility of wearer and others (drivers, hunters, moms seeking kids outside, etc).

-Also, dark hat in sun creates less light reflection and is easier to look out.

*-Used as part of strategy in game where player changes sides in middle of game. Mostly not electronic.

-see A1-490

A1-490 Cool Pillow Bliss: Stays cool on summer nights, saves on air conditioning.

-keeps you cool on hot summer nights, save on air conditioning. May also heat up. Reduces air conditioner's electricity bills. Cool Blanket, Cool Sleep.

This can be done both chemically, and or electronically.

-electronically adjustable temperatures

A1-510 Water Magic: system keeps water clean, and fertilizes cut flowers.

-grow plant's roots in water and keep cut flowers. System keeps water clean and fertilizes.

-plant cutting's water cleaner. Tablets or chemicalized or Electronic container keeps foul smelling growths, cut flowers at minimum. Many plants can continue growing in such for years.

-simply use the type of frequency emission that inhibits or kills algae and other smelly growths in water, without hurting plants, or even helping them. Simple laboratory tests, and printed material already about effect such frequencies have will show which frequencies are desired.

-the block D (drawing) needs to cover all types of frequency emissions into water: electrical, sound, light, etc.

A1-520 Fun Food Cutter: Interesting shaped animals snap food into small pieces.

eg: stick cucumber into snapping jaws of human, fish (piranha). Slice food against grate type slicer of shark, old grandma

-activatable only with special systems to keep children from using, eg: special code, key, or start up commands, etc.

-"Tilt" replaces functions of knife, etc.

File: Intro To Pat / A2

FILE A2

The feature abbreviations used here require the "Old IMI" file for explanations.

A2-010 HERB SELECTOR: program type food, # and size of servings or vol-volume/weight, regular - low - no salt diet, allergies, preference for more of certain type herbs, age of herbs, etc. M's formulae gives perfect herb combo output. Comes down little shoot from each herb which is lit when container presses against it; or entire mixture comes down one main shoot (former better). Maybe excess herb sent out for all or small portions for accuracy. Certain herbs of frequent use have larger reserves (boxes). Replace entire herb collection periodically in simple step (save from replacing each one manually). Holds 12 - 200 items. Option of putting your own herbs for own formulas; soup mix dispenser (chemical free). Therapy to touch the right spot according to how you feel. For pastas, dressings (salad, etc.), drinks. Can have liquids too. Can take your own personalized formulas too. Good for stores not selling herbs. Manufacturer can ship herbs directly too. Polaroid concept: client's must buy supply contraption - no self filling; sell machine at low price, make money on hers. Client may or may not be able to add particular spices when they run out. Price for herb supply can rise faster than machine price. Print out or display ("S") shows how much of other things u (users) need, eg: ingredients for salad dressings, pasta mixes, drinks, lasagna, stewed chicken, etc. M also holds: beans, small dried chopped vegetables & mushrooms & meat pieces, soup bases, dried milk, nuts, powdered (artificial butter, pasta bits, etc. Connects with water for dispensing, can also store bottled water. Grows sprouts.
Herb Selector; Chef's Herbs; Just Right; Master Herb(s); Magic Mix, Herb Therapy.
. For Techies: TT, LL, E, W2
-Chemical Contact Analyzer: "Analyzes" ~ "Scores" ~ "Status" type contact made by material w/ chemical reagents. 7G050 = shows what herbs / foods were kept / stored and for length of time; helps determine if food should be thrown out (expired date).

A2-01A RECIPE SECRETS: mix with Herb Selector. Upon dispensing food it cooks via microwave or heat. U can call m remotely and pp what to eat. M can hold frozen food in frozen section.

A2-01B WORLD RECIPES: mi 1 Herb Secrets, 1A Recipe Secrets. uk country & food category & chooses from options. Op: ds recipe only.

A2-01C VITAMIN SELECTOR: gives vitamins ao-and or herbs & or written suggestions according to u's ailment, desire and also a general formulae the basis for normal and all other days

A2-020. BODY CHECK: periodically mail in as ongoing physical checkup seeking any abnormalities that may need further prognosis. Urine (small containers with caps), blood (take small sharp instrument-then seal, syringe with needle), hair, Eye Dabber (for liquid in eye corner - when crying, yawning, anytime, for mucus especially when waking) - then seal; feces - spoon with small container; Perspiration Absorber (from arm pits after shower before deodorizing); Skin Scraper (especially if see abnormalities); Ear Wax Stick (w/ sealer); Nose Scraper (for mucus w/ sealer); saliva (put into mouth small container then lid it after taking out, or put in type absorber (w/ fast or slow results-trying to accumulate particular elements of greater importance). Though

perhaps costly, the wealthy may buy some peace of mind and or precautionary measures. Included can be instructions for self check-ups, eg: breasts, testicles... They or doctor chooses which sampling to mail in and frequency for each. Also records body readings into memory: heart beat, blood pressure... Body Sample(r(s), (Self) Check (Up), Check Up Sample(r/s)

.-4E020 Content & Date Verifier: of (any said) occurrences, eg: "tracks" / "analyzes" occurrences (for uip (db improvement), intelligent monitor 2E251)

.-Chemical Contact Analyzer: "Analyzes" ~ "Scores" ~ "Status" type contact made by material w/ chemical reagents. NR ('adapted notifier) shows what chemicals were present W5. 7G050

A2-02A ANIMAL CHECK: for home, zoo, wild animals. Mix w/ Body Check. Helps if u (users) is too busy to make appointment w/ vet, o (or) situation doesn't see serious enough to warrant a visit yet causes concern. TM: Animal Diagnostic

A2-030 VIDEO MATCH: retailer's video(s) show fashion, product models and architectural background with colors matching/complimenting some/all colors worn by clients walking by. Video also may match retailer's, disco's, public place's decor by color/shape/design/period of style. Video (Fashion/Clothes/Style/Product) Match. It's sociological, psychological influence to induce sales. From input by retailer, walk in clients, master computer (maybe controlled by manufacturer of product or specialized service co) the music/sound, product lines, colors, verbiage may alter according to weather, type store, region, product line, day, week, month, year; race (within limits); competition (in general or what they're doing at the time), current events/news. Can use computerized, cartoon, real life (maybe) images. Paste person's face onto a body: suits, washing machine displays. Voice print matches walking client.

.-4E020 Content & Date Verifier

.-"Entertainment" / Program (sw) Screener: 9G220: Sys (adaptive system) screens/selects (such/designated unwanted/wanted programs/modes%/programs%)

A2-03A NEUROLINGUISTIC MATCH: body walking (& speed & direction), standing, sitting, race, facial expressions, matched & altered into molded into mode. Mix with Video Match.

.-4E020 Content & Date Verifier.

A2-040// MUSIC SEAT VIBRATOR: matches music played. Connect chair by wire with music/sound source, or chair has microphone. Chair does conversion. Can replace chair with (bed, car seat, mass transit seat, dance floor, glasses, watch, bracelet, necklace, earrings, gloves, pen, stool, drinking glass (for disco's too), blinds, curtains. Portable type can be put on/below seat (all above), which reacts (for portability, joke when you yell, etc.) Sound Vibra(tor/tions), Action Vibrator. HH, TT, W1, BP, E, Cons, Small thru Large, Kids, Adult, Fun, Mood, LL

A2-050 ONE CARD: combines driver's license, picture, credit cards to which you're signed up, micro-chip with (your health history incase of health emergency, copy of original birth certificates, social security and other numbers, signature, finger prints, account numbers of other accounts like frequent flier, client account numbers, tel numbers, etc.). Also for: security access, passport, health insurance policy (hospitals know how much and what type of credit to give), stores info on what was purchased (helps solve questionable billings and saves from needing receipts)
Card can work with all or some of the options. Just stick card into reader and others can only access card's info with holder's password, and then only the info they want to give out.
.-4E020 Content & Date Verifier.

A2-060 DIET DIARY: after extended use, tells u (users) how food effects feelings, behavior, performance, thinking, etc. Punch in moods, and foods eaten. Can buy or borrow from doctor, therapist, store to help evaluate foods on emotions, creative thinking ability, performance, sports ability, sleep problems, etc. Use for several weeks to a year. M recommends which prescription/OTC drugs to take, and can be further complimented with therapy machine for greater alterations and input of data for desired changes needed. To select food eaten, key in food category, then u (users) lead via more subcategories to food item (& or common brand in country). For u (users) feelings select from general category & or then subcategories that best describe feelings. Virtually everyone would like to know, it's easier to calculate by m.
. For Techies: dd crt HH, BP, E, Cons, Sm, M, W1, adult, LL.
Mood/Behavior/Performance - Watcher/Analyzer/Diary
.-4E020 Content & Date Verifier.

A2-06A DAILY DIARY: mix w/ Diet Diary #6, Therapy Machine. Measures how u (users) influenced by: particular music, entertainment shows, people, stores shopped at, ways o times of travel, tel calls made o (or) received and when its better to talk, current events read/heard, working on computer, anything and when its better to avoid, travel, weather, light, room or place u (users) stays o (or) sleeps o (or) reads o (or) eats..., writing or receiving letters from p in general or particular people, colors, clothing worn or observed.
Research Uses: good for consumer behavior, psychological, sociological, medical, scientific, organizational behavior, product design research
Helps User by suggesting: what where why when how to do, observe, respond to things in (non) altered ways; time of day when their decision making & or intuition has been most successful (uk topic of decision a da automatically knows time/date for me - later u (users) scores decisions w/o being reminded the time for c's scoring; can auxiliarate interaction w/ (socio)psychologist/social worker. Mf must study behavior of mankind well before developing sw. M can suggest therapies in the areas of art, music, play, gardening, type hobbies...
TD: requires u (users) to key in all above influences that are being checked, plus personal behavioral style/history (might be transferred o (or) supplemented by therapy machine.
.-4E020 Content & Date Verifier, 'track.

A2-090 STATION SELECTOR: request type entertainment by #8's categories. Good for companies, travelers, drivers. Changes TV, cable stations by the show. Mix with Music Converter. Choose restaurants, disco's, clubs, theaters, stores. By logging into M you connect w/ L C.
. For Techies: "Entertainment" / Program (sw) Screener: 9G220: Sys (adaptive system) screens/selects (such/designated unwanted/wanted programs/modes%/programs%). * Tilt Stick 5E020

A3-16 ARTIFICIAL PLANTS: bends towards any/sun light like natural plants (but this might bend more). Options: droops after certain amount of darkness or set time and perks up at light or certain time; talks occasionally w/ or w/o prompting; seasonally adjusted: (changes color and) drops leaves in autumn, blooms decorations in Christmas, has snow covered branches, blooms leaves or reattaches or takes new leaves purchased, bears artificial fruit/candy/toys, needs fertilizer packet to do some/all functions (stick container into base). Says hello to people walking by: clients, etc; barks at sounds when ur not home, dances to music, programmed to do any function on any day, eg: birthday, homecoming, etc, surprise someone with the gift - if they think its just a normal artificial plant. Can mix artificial with real plants in same pot. Advertising slogans: doesn't need water, can't kill it/die, guaranteed to live ( ) year(s). For example: upon first time watering, lining within plant stems (which have high absorption) transfers liquid to: leaves (causes chemical color changes and dropping; tiny fruits to bulge with water and maybe change color too; etc)
Plant Fun, Fun/Magical/Wild/Fruity/Moving/Real/Seasonal/Designer Plants/Trees.

A2-16A E CANDY: vibratory or delicious sound sensations while eating lollipop (e m on handle),

A2-180 PIGGY BANK: animal sounds upon inserting coins: dog barks, bird sings, fish oogles, lion roars, bear roars, chickens ..., donkeys ..., horses ..., snakes and lizards makes sounds of slither, cats meow, etc. The animals make appropriate shreaking sounds when door's opened to take out money. Objects, animals can also sound that of: other animals, burp, cash registers, exaggerate sound of coin dropping, coin(s) whizzing in air or into well onto street or into toilet then getting flushed. Sounds can change, program up to over 100 sounds which sound out in chronological order whereby the first sound starts at say the 101st coin. e hh tt bp ep sp vb S (screen) med w1 cons kids adult fun semi-ll mp
Bank of Sounds, Sound Bank, Noisy Bank, Noisy Money/Coins/Savings/Animal/(Animal Type)/(Type Animal Sound Eg: Barking, Chirping) - Dog/Chick, Funny Savings (Bank). Bank can move with money insertion either in 3D or on its display ("S"): bird flapping wings, penis going erect, chicken/duck laying another coin upon insertion, dog wag tail, monkey scratches (stomach), fish back fins wag, lion/tiger opens mouth (and or to receive money)
-body parts wiggle upon monetary insertion

A2-210 DOOR.KNOCKER BEGGAR: upon knocking on door, cup reaches out asking for help, donation (for fun or cause). Normal knocker, or beggar's hand. Or a leaflet goes out upon knocking door, or display ("S") reads out message.

A2-220 DOOR CHIMER: speaks in voice(s). MP PP voices. Says, "hello (anyone home)", "somebody's at the door", "(sounds of barking)", etc. Good joke voices, sounds. When person rings bell, they may receive response, which is recorded (maybe joke style), upon last occupant leaving premise - outgoing recording is turned off.

A2-23A WITCH DOCTOR: e m. uk body or emotional ailment, m makes sounds/music/verbal instructions or nonsense which might not necessarily cure but might in some instances be found scientifically to cure. Also does: verbal (sound/po/dd) instructions for diet, exc, positive thinking, liquid intake, call a doctor (future dials tel ("T") # for you [marketing for medical doctors]); takes body tests (product already described); audio for falling asleep; teaches what u might need to be learning in class o need to know about happenings in co they work in; flashes pictures of when p was healthy/happy.

A2-23B ACCUPUNTURIST: e m. uk body or emotional ailment, dd says where to apply m (maybe w/ graphic representation of body part) & then sharp or dull pins, big points, tweezers - push, pinch, pull. Maybe have one just for hand; different models for each hand size/type or custom order model. M grips hand & or foot like foot measuring device so as to find right pressure type points. M give mild alarm if hand & or foot not in correctly. Other modes of above: ring; bracelet for arm/leg; ear ring; seat pad; shoe pads (for sitting & or walking). OP: combines w/ it outputting healing music/sounds, voice, talk, exercise suggestions (simultaneously o (or) later); sends healing fq

* A2-23D RAIN DANCE: e m makes sounds (scientifically o (or) jk) which causes rain by effecting skies/(group) positive thinking. Maybe many of the machines can be sounding out to increase rain probability. Need to study effect, if any on man-made sounds effect on any type of desired weather.

23D MANTRA: e m. sounds out your mantra, helps keep p from losing focus on mantra. uk personal info, m gives personalized mantra for: different problems, same one for life, friends, world problem solutions. May combine w/ healing sounds/music w/ o w/o mantra.

A2-23F MAGIC SPELLS: e m. uk purpose, desire, victim then m cast spells itself o (or) tells u (users) how to do it (based on classical o (or) modern methods)

A2-23G 'GAME: e m. Solve ao-and or, create world & or company & or country & or organizational & or outer galaxies & or historical & or futuristic & or interpersonal & or war -- problems & or scenes & or g. uk in

paradigm from authoring language & or mf g which can be taken in entirety & or altered & or merged w/ o g. PO sw g board paper, pieces, rules & or sw (software) g to be played on this o (or) other m. G12 sw (software) TO EL(select pp mp [from personal info-based on described products w/ personal info] roles is el (electronic) from interactions & or instructions & or mistakes made...)

-"VR"

. For Techies: "Entertainment" / Program (sw) Screener: 9G220: Sys (adaptive system) screens/selects (such/designated unwanted/wanted programs/modes%/programs%)

-Directory "D" %

A2-23I ENVIRONMENT G(S): Mi 23G God. Scenarios: church/religion spreading, shrinking, inner and external politics, exorcisms; government politics; R & D depts/companies: inventing new solutions, products, formulas, fighting opponents outside & inside organization, thieves, patent processes, law suits...; any type work, academic, creative narrow or larger field;

A2-240 RING GLOVE: gloves with clear material showing rings, bracelets, watches. Made from (clear flexible or solid plastic, vinyl, Plexiglas; etc). Or completely clear gloves that hopefully allow some air circulation eg: small or micro holes. Charm Glove(s), See Thru Gloves, Jewelry Gloves

A2-250 PICTURE TALKS: picture of known p, w/ room at bottom or over picture for writing messages w/ erasable markers or reg writing instruments or pinned notes. Usages: girl wants live-in boyfriend to remember her picture when she's at best, gives communication good feel; parent leaves instructions w/ kids feeling slightly scared. Tuck picture behind Lucite/glass & or convert writing surface into picture. Tack on wall, w2 kids adult fun ll d. Photo/You/Love/Charm/Picture - Notes/Messages/Talks/Memo(s)/Board/Communication

A2-25A MULTIPLE PAINT BRUSHES: g23 create art by each u (users) making additions/alterations

A2-26 PLANT OF THE MONTH CLUB: get weird plants each month as gift program or for self. Eg: air Venus fly traps, pitcher plants, leaf plants, tea sticks, coconuts which grow from sitting in water, unusually fast growing and or hardy plants, plants from Amazon New Guinea and other strange places, bulbs, food bearing plants, etc. Op: terrariums, fun growth containers, plant growth light bulbs designed to withstand shipping (may fit into terrariums)

Exotic Plant(s) (Club), Politically Correct Plants/Growths/Club

A2-27 STAPLER: Stronger than standard stapler and contracts with this can't be disputed as having had pages replaced. Op: notary type seal at/near/away from connected area; glue - squirts in between pages - p puts stick in s applier; standard staple devise as well; easily marred element 2 cm square inserted at connecting point. hh tt

bp ep w2 med bus cons w/o ll. Stapler of Choice, Super/Safe(r)/Strong(er) - Bonder/Stapler/Attacher/Connector/Gun, Stapler Glue (On)

A2-280 DISTANCER ALARM: 3 pieces. Tiny pieces w/ micro-chip attached to each glove, larger piece kept in coat/purse. If separated by more than mp distance, alarm. hh bp vb s w1 cons kinds adult. Save a Glove, Glove/Mitten - Saver/Alarm/Finder/Protector.
Product applies to anything else one may not want separated by pr distance, eg:
pets (owner's piece alarms, maybe pet's piece on collar says in owner's voice "come home Charlie", or "..." or has whistle dog is accustomed to be for him w/ prior training by owner. Something lent/used by employee/friend/stranger (pen from store). Autos, wallets, purses, jewelry, cash clips, etc. Carpenter's Tool Mate (pp); Thief's/Runaway's Best Friend;

A2-290 ELECTRONIC DEODORIZER: zap germs (bacteria, virus, fungi, etc) from things before touching (toilet seats, seats, desks, pens, door knobs, arm pits, entire body, etc.
-Determine presense of any/type germs present: Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material w/ chemical reagents. NR ('adapted notifier) shows what chemicals were present W5. el (electronic) version very impractical. `Pockets' of chemicals in gum, used to calculate NR. Purposes of NR: type of medical condition found in patient, patient's saliva changes according to their health "status".

A2-R29 (was A4-R29) ELECTRONIC DEODERIZER: zap germs (bacteria, virus, fungi, etc) from things before touching (toilet seats, seats, desks, pens, door knobs, arm pits, entire body, etc. Cleans surfaces, which can't be cleaned at all or too often, eg: ornamental leather with mildew.
Technical details: eg: a glove whereby the potential difference in frequencies between the thumb and pinky zaps the creatures.

A2-310 Tel ("T") REGIONALIZER: caller hears accent and music popular for their region of country, according to tel area code while going through voice mail or on hold. If available employee w/ that accent will take call (perhaps central number transfers calls to same region of country where employee there takes call).
. For Techies: "Entertainment" / Program (sw) Screener: 9G220: Sys (adaptive system) screens/selects (such/designated unwanted/wanted programs/modes%/programs%)

A2-320 ELECTRONIC MAP TRANSLATOR: map on sw offers directions, toll charges, travel times, precautions, etc into 12 languages. Covers most major cities world wide. Later covers most of planet.
TD: Plug into car's lighter, built into auto, bus; e hh bp ep sp s med w1-2 cons bus kids adult fun ll-(needs inserts for regional maps) mp b exc; has copyright date of last revision and pp-(new/altered/favorite routes, etc,

letting auto take you there). Same map alternates for user's form of transport: taxi, auto, bus, own car, train, walking (what's more scenic), flying (what one may see from sky (w alternative travel routes and landmarks w/ detailed explanations, history, geological explanations, current events (m hook into main C (computer) earlier or goes online via cellular tel ("T"), etc). Prints out maps (color too, or shades of black/white designating different codes). Such maps available from travel agency.

A2-320 SPIRITUAL MAP: map for spiritual states. Mix with therapy machine & electronic map translator. Answering multiple choice questions gives machine understanding of what you feel/think... and mach will give you verbal (written, aural) statements as suggestions, questions, creative uplifters. Spiritual maps by religion o (or) type philosophy.
.-"Entertainment" / Program (sw) Screener: 9G220: Sys (adaptive system) screens/selects (such/designated unwanted/wanted programs/modes%/programs%)

A2-33A BUG VACUUM: small version of dust buster & or kill roaches, etc electronically. Seals when turned off, eliminating bugs from eating carcasses.

A2-340 CARDBOARD ART: Cardboard, which folds up, and folds back, on which u (users) paints. For corner of room (3 cardboard pieces: floor, one for each wall), op cardboard sculpture u (users) can create, alter & or paint. Propped against flat wall (2 pieces). Kids take to school and or from school to home, activity for rainy day. Assemble cardboard into shapes: boxes, animals (birds, household pets, houses, people, trees (Christmas), cars, airplanes, soldiers, etc) TM: Cardboard Art, Pop (Out) Art.

A2-350 GARBAGE TOYS: Insert e into anything to create: cars, robots, radios, Walkie talkies, pens, pencils, container for rolodex files, tel ("T"), rattlers, speakers for music system or replaces live speaking
Op mf supplies: s standard glass cutters, scissors for hard sheet plastic, cardboard, tin cans, wire; glue(s), wire, b, bells, instructions, paste-ons making products look semi-genuine, etc.
Create products from: bottles, cans, cartons, broken products (tv, radio, watch, car, cans, hollowed eggs, toy, fake products supplied by mf (hollow stapler for tel ("T"), fax o (or) C (computer) o s refrigerator o cardboard packing of other product for entertainment system)
Notes: when its difficult to convert item, insert only part of product system and let remote communication between parts function as one system, eg: remote speakers; remote control device for any entertainment system (stereo, tv, C (computer) game, door opener, light switch)

A2-360 CAPSULE: when broken (yet may still remain in seal) becomes very cold. Not completely Steven Kays' idea. TM: Cold Capsule, TD: chemical formulae create coldness when multi chemicals come into contact with other chemicals.

A2-36A SOUND MACHINE: press button for laughter, crying, yelling, etc. It helps u (users) feel what they want and or is a companion and sympathizer. Also sounds of: baby laughing/crying/playing around/in surprise, scolding - "don't do that" in serious or humorous style, frustration, nervous reck, "la di da...", etc. Option: buy any of over a dozen inserts for the type varieties wanted

A2-370 CHANNEL SELECTOR: u (users) pp what they wish to hear/see, eg: weather, news (general or by type, eg: financial, regional), particular singers, groups, actors, directors, general type entertainment (rock, classical, Italian films...), productions from particular regions. Select from tv, HDTV, cable, radio, hamm radio (am fm sw (software) mw lw CB...) Broadcaster gives out code on another fq from actual broadcast, listeners pp selection, then their m will either give actual or op what's closest. M will state # and types of op that fits or comes near taste requested. Then, M or u (users) can automatically change to station, fq w/ o w/o touch of button. Also have scanning for type entertainment/info that comes w/ in range of selection.
-Even series television shows tend to have differences from show to show. Series seeking new viewers might later alter show enough to attract new watchers. M will state # and types of op that fits or comes near taste requested. Then, M or u (user) can automatically change to station, fq w/ o w/o touch of button. Also have scanning for type entertainment/info that comes w/ in range of selection.

A2-380 CHANNEL INTERPRETER/TRANSLATOR: mix with Channel Selector, and m will verbally or visually interpret simultaneously (or w/ some delay). Tune into broadcasts world (maybe later, cosmos) wide. Punches out in Braille (inexpensive material: plastic, paper by product), prints out for blind, deaf people.

38A CHANNEL STYLE SELECTOR: have only 100 channels to choose from? Usually prefer romance, mystery, action, violence, non-offending (for u (user) o (or) kids)? Pp style, mode desired and #37 Channel Selector will 1] add in clips not used in final editing for mass audiences, & or 2] alter voice overs, & or 3] mix w/ #8 Music Converter, Therapy Machine and related concepts, & or 4] censors out aspects (scenes, some sounds/words w/ o w/o affecting visual. TD: sw C (computer) e hh tt bp ep med w2 attachment cons bus (mix w/ video match) kids adult fun mood ll pp mp exc d. TM: Personal Censor(or), Your/Personal(ized)/Individual(ized) - Style/Censor(or)/Entertainment (System)/Program(ming)

39 POSTAGE METER: for the blind (uses Braille, has b which verbally explains m, problems needing to be checked & possible solutions). Travel piece, it converts into postage for local country (eg: good in EC, former USSR, US Can Mex, etc). Invoiced or prepaid in different currencies and then machine calculates exchange rate (may keep time of imprint to bill or alter amounts owed due to exchange fluctuations). Calculates weight in local weight system.

A2-400 LETTER WRITER: attaches to #39 Postage Meter o (or) is an optional accessory built in. Stores addresses, prints letters laser/dot matrix/daisy wheel. Has mail merge and can take most word processing

softwares. Can upgrade memory, has modem, can make tel ("T") calls (u dials on tel ("T") accessory or C (computer) dials) and bills automatically to ur-your calling card/acct if it's cheaper than local rates.

A2-410 REUSABLE PICTURE HOLDER: good for business people w/ traveling showcases, art galleries. Attach to wall. Mount loved one's picture above bureau. Maybe attaches e to wall a picture, not marring surfaces. Or uses magnets for metal walls & or frames.
Or picture floats between magnetic type devises below and above.

A2-420 FLOATING OBJECTS: float anything by arranging magnetic type devices accordingly. See #41.

A2-430 'VISUAL ANALYZER EXAMPLE: VISION SELECT GLASSES: only sees what u (user) wants to see, or blocks undesirable elements. Mix w: semi-unrealistic (to date) X-Ray glasses concept.

A2-43A ELECTRONIC COSTUMES: show person who's trying to influence how you think that u (user) see world their way, wear glasses w/ their title (mom, boss...) or name on upper outward corner(s) of lenses. Op: select exaggerated frames to mock their type behavior; micro-chip recorder/play back that gives some line they always say - u (user) can turn it on whenever, eg: "you never do what I tell you".
The Japanese love wild play things, remember how wild the top of the world Romans were, how the Americans were in their 60's? 'Customize costume.
* Joke Glasses: Show person who's trying to influence how you think that u (user) see world their way, wear glasses w/ their title (mom, boss...) or name on upper outward corner(s) of lenses. Op: select exaggerated frames to mock their type behavior; micro-chip recorder/play back that gives some line they always say - u (user) can turn it on whenever, eg: "you never do what I tell you".
Options: glass frame can have many optional attachments purchasable separately which can create 100's of characters. LCD can display ("S") character's name, title or type person.
* Applications, user can be: Japanese market: cowboy (hat extra), French painter (hat extra), American car salesman "buy American", princess. Japanese child market: Manga comic character, samurai, Elvis Presley, space man, cowboy, geisha.
US Market: Famous actor, President Bush, presidential candidate, cranky housewife. Person can be their sibling, neighbor, teacher, friend, lover, train conductor, bus driver. For professional clowns, entertainers, kids, bored adults, give as joke to someone square or already wild.
Holiday Glasses - Use in Halloween, year after year - even change costumes each hour! In the country of America: use in New Years, Valentines, presidential holidays, May day parade - be some extravaganza, July 4th - be some patriot, Thanksgiving - be a turkey - gobble gobble... (for a few minutes at a time), Christmas - be santa or an elf or whatever! This is a pre-Virtual Reality market device. Also use to enhance your creativity by being different people - gets out the rust. Use for positive behavior modeling - maybe.

. For Techies: The audio may come out of a walkman like device attached to belt or wherever! Audio also maybe from necklace. Audio output pre-programmed by manufacturer and or user - buy the audio as people do for their answering machines - the tape can come with the glass attachment for certain characters. Short pre-programmed or user voice audio can come on small chip, hence need only small walkman.

Holiday Glasses - Certain attachment purchasing options can be several characters with some minor alterations of enclosed parts. Simply select audio option and it will continue to replay that number at the single pressing of one button.

. Option: has little hanging devices, which can be squeezed by a friend, or user to make audible sounds or words...these can be for fun or shock. One device can suggest to friend to find the next device and so on ... then find the red one - maybe its hidden in the ... a sexual foreplay.

A2-440 STICKERS: slogans, pins, trademarks for fashion (T-shirts, accessories...), bumper stickers, products (consumer, commercial: electronics, toys, games, tricks, jokes, sw, advertising, packaging...). This applies to all future sticker type slogans as described herein.

TM: Planet Boy, Planet/World/International/Cosmos/Mars/Moon - Robot/Human/Man/Boy/Girl/Travel/Jet Set/Voyager -- for: bag, fashion, fashion accessories, eg watch, fashion eyewear, travel accessories, etc. Continent/Country/Planet - Jumper

A2-450 CHRISTMAS LIGHTS: flashes to rhythm o (or) entertainment system connected, audio, visual. TD: sw (software) C (computer) e tt ep med w2 cons bus kids adult fun ll mp

A2-460 STREET LIGHT CONTROL: purpose: reduces time waiting in auto, train, plane, on foot. Street light changes more quickly in the favor of moving elements (autos, etc) that want to go more via one path. For city traffic light grid system (it adjusts according to total inputs from all moving elements and adjusts other street lights accordingly for even flow throughout metro area. Attached to vehicle and goes on upon stopping or picking up signal from light that it's near signal; pp destination and m will guide auto o (or) u (user) in pattern w/ least obstruction from signals, traffic (m is online with metro's transport c, latter monitors congestion by c's car count, helicopter, history of traffic flow at this time, etc); [mix w/ electronic map idea] [m tells u (user) best time of day to travel and possible travel time, before departing], info on metro travel too.

. For Techies: sw C (computer) e hh auto-counter-top bp ep sp vp w2 cons bus adult ll pp mp exc d.

A2-46A TUNNELS: build extensive tunnels throughout central bus districts. Saved from stop lights. EG: in Manhattan, build down the avenues, and a few streets (interconnecting avenue tunnels). Multiple tunnels, eg: Fifth Avenue A, Fifth Avenue B. Latter connects u (user) w/ 57th Street C. Tunnels for electric transport. Tunnels with gas exhaust uses air shafts. Then maybe block some/all surface streets from autos & plant greenery, widen sidewalks.

A2-480 GAME BOARD(S): its printout attached to board (by clips etc) and it produces paper game board pieces u (user) attaches to heavier objects. Choose game u (user) want, eg: monopoly, your own game you have programmed, or purchased and inserted into m. Can alter rules. Mix w/ Electronic Playground Game #47. TD: sw (software) c (computer inside) e hh tt bp ep med w2 cons kids adult fun mood ll pp mp exc

A2-510 CLOCK TALKER: according to time of day, it occasionally makes statements, like: "its time to get up"-at time clock's arranged to alarm; "work day starts now"-9:00; "lunch time", "the boss is coming back from lunch soon", "time for tv news". Sounds every hour/half hour/or. PP or MP verbal content.

A2-520 CAN OPENER BARKER: cats, dogs, animals come to kitchen when hearing can open (eg: hoping for fish), so send out hostile bark during & or after opening. Versus barking, may send out sound inaudible to man that moderately repels animals. TM: Cat Away

A2-530 MACRO THINK TANK: an encyclopedia of specialized or across the spectrum info. By requesting info on particular topic, choose all the areas in encyclopedia this topic is mentioned. Then p can request more info on the sub-topic. Eg: The topic "telephones" is selected, then pick main explanatory heading or Thomas Edison, Italian design - telephones, State companies - telephones... TM: Einstein, Think Tank TD: c (computer inside) sw (software) cd hh tt bp ep med w5 cons bus kid adult ed ll po crd dd mfh cp pp mp v mem

A2-55 SHOE MAP: shoe, sock, jewelry, fashion (accessory) acts as marker w/ mem. Later know where p has been. Only do this where environment (from room to country) has outgoing fq which m takes in. Follower knows if they are cold (very far away), warm (closer), hot (somewhat close) - based on color (maybe sound too - though would give follower away to the followed)

A2-560 ASPECTS OF G'S: mi all other G described earlier and later according to whether its rl o nrl.
1] Shoe Map G: mi 55 Shoe Map. rl. follow other's scent by picking up only where they have been w/ set time/distance delay created by follower's product. Incorporate aspect into more complex G.
2] Reverse tape/microchip order of foreign & your language & their dialects. Guess which language. rl. Can also be played forward.
3] Destroyer creates paths of destruction. w/ o w/o foe which rebuilds/builds/fights destroyer. nrl.

A2-570 SLICER: via laser of: household o (or) large kitchen foods; exists?=industrial products, products too far to reach easily o (or) in space. MK: keeps knife clean, nice neat & or easier & or faster / smaller piece / no metallic after taste (eg: for lettuce) cuts

A2-580 DECORATOR: laser cuts a little path or all the way in, pp. Design with/on food, wood, metal, plastic, stone, paper... Cut & paste, crafts. Move object / laser.

A2-590 DISTANCE ANALYZER: laser o (or) light shows distance between m & object (eg: mountain, tree) by time it takes for light to reflect back or via other means. Also might clue into content of distant object by way light/sound/fq reflects back to product.

A2-600 Display ("S")
PROJECTION: as in slide projector, cable, tv, video projected onto wall, white canvas, specially reflected glass (mass transit windows, cars (while at stop light, parked; stops automatically when wheels turn and re-continues from where left off when wheels locked). Also project: all nrl G described so far in like manner & o (or) g interfaces w/ rl when placed between g m and reflector; any crt info of anyone's product eg: computers; maps; instructions; lights/lasers bouncing to rh (exists but not as op); rear view of auto driver o of pedestrian o (or) of bicyclist.

A2-610 BEHAVIOR SCALER: like m detecting if person is lying by stress... in voice, detect how:
a] sexual another person feels. Even try it on yourself to see it works. Know if you should pursue another for a hot date.
b] reliable & or constant / organized / committed / ability to follow o (or) lead
Op: gives readout of p's many other possible behavioral characteristics via po, dd, crt; input p's face & it will po/show on crt what they will look like at pp future date, or that of their children...
. For Techies: JK(until science has advanced enough to validate results)
-Portable option: Small and portable - keep in bag or pocket and look at later to determine analysis, just turn on switch to listen in for pre-programmed time length. And or use keeps hand on switch as to when they want to or not to receive input for analysis, eg: determined by timing of important statements, whereas minor talking might be less important for analysis.

A2-620 WORLD INFORMATION: mfh di current events in part of globe selected by: continent, country, city or specific area w/in metro-area, topic (weather, finance, type industry, politics, wars...), or main events world-wide; currency predictions (in newsletter which already exists in some forms) which will tell u (user) predictions for future currency exchange rate for businessmen needing to make spot decisions; time and date in any time zone (exists as a product by itself) calculating day light time conversions (many products don't do this); language translations (see translating machine invention); radio - am, fm, sw, mw, lw; television;
TD: if mfh isn't practical for things that don't change so quickly, u subscribes to info on disk that's inserted (on 3.5 inch disk or in future smaller size), and or get info by tuning into a sw, mw, lw radio station sending out info in code (do so while not using machine) - no cost and easy accessibility.

A2-630 SUPERMARKET FOOD DEMONSTRATORS: m prepares foods for possible clients of new products while they watch through window. m manufacturers what people will buy & or gives free samples.

MK: save on labor (though requires p to keep part time eye), /novelty attracts people, takes little space.

A2-640 ARTIFICIAL PETS: they walk with you, sing, swim. Saves trouble.

A2-R65 PREFABRICATED CARDS: compete with Hallmark... Buy w/ color pictures & or some phrases. uk their c (computer inside) the words. u might also get selection of slogans they want to personalize for their special someone. S o reg calendar o (or) special date m remembers dates for mailing.
MK: sold direct mail, computer/department stores
Option: buy a micro-chip in a small case, which is strictly a verbal card (sound only)! Novel idea. Can even come in attractive plastic packaging, hearts, etc, that user can hear repeatedly, even w/ magnet for refrigerator.

A2-660 PUBLIC TALKER: e m that speaks for desired socio-psychological effect, eg: in R&D or other creative places, sound overly serious to reduce icy feeling bad for creative group spirit; plays music/sounds; etc
Where: in elevators, hallways (when it senses p are walking down), entrances to rooms, floors, buildings, indoor/outdoor garages.

A2-67 PLANET PICTURES: see how different cultures do, handle, administer, stylize similar things, objects. c (computer inside) & or video & or w/ audio: sounds words music
Applications: Research & Development organizations; student school projects; tourist agencies - showing potential travelers how different cultures handle client's interests: hobbies, leisure, cuisine, etc.

A2-680 PICTURE ALTERATOR: camera & S (screen) which alters photo by moving/adding pieces, changing colors, adding sounds (for slide presentations)...

A2-690 RADIO TV ALTERNATOR: fun-joke product, at a distance e m changes the station they want, eg: unsuspecting p selects classical 94FM but at that point of dial they get country music instead, they look at the dial again and can't understand. Inserts: playboy channel or video tape; strange news channel - even false news; in tv store, sales person puts certain show onto channel - maybe to fit client's perceived purchasing style. To control child, they get bad reception for certain negative radio and or television channels.

A2-700 SOUND DIVIDER: like light prism divider, this divides sound into different parts that are normally heard only simultaneously. Op: an op feature for sound synthesizer, g, el

A2-710 SUN MAGNIFIER LASER: burns things at a distance or close up. Large magnifier is quite powerful. Uses: make art; start fires w/o matches; heat water w/o fire; tell p "don't cross", laser will burn p a little if they cross line

A2-720 Tel ("T") FREQUENCY RETURNER: caller's fq recorded, then music/sounds in similar fq, stress, happiness, level/type of feeling is heard by caller while they're on hold. Purpose: makes caller feel at one with other party. e m might make alterations to change caller's behavior.

END OF FILE A2
File: Intro To Pat / A3 A4 A5 A8

FILE A3:

A3-2 BODY CHECK: periodically mail in as ongoing physical checkup seeking any abnormalities that may need further prognosis. Urine (small containers with caps), blood (take small sharp instrument-then seal, syringe with needle), hair, Eye Dauber (for liquid in eye corner - when crying, yawning, anytime, for mucus especially when waking) - then seal; feces - spoon with small container; Perspiration Absorber (from arm pits after shower before deodorizing); Skin Scraper (especially if see abnormalities); Ear Wax Stick (w/ sealer); Nose Scraper (for mucus w/ sealer); saliva (put into mouth small container then lid it after taking out, or put in type absorber (w/ fast or slow results-trying to accumulate particular elements of greater importance). Though perhaps costly, the wealthy may buy some peace of mind and or precautionary measures. Included can be instructions for self check-ups, eg: breasts... They or doctor chooses which sampling to mail in and frequency for each. Also records body readings into memory: heart beat, blood pressure... Body Sample(r(s), (Self) Check (Up), Check Up Sample(r/s)
. For Techies: Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material w (with) chemical reagents. NR ('adapted notifier) shows what chemicals were present W5. This N copied to 7G050 Aug 95.

A3-8A PICTURE WINDOW: on wall have crt terminal showing changing outdoor scenes: trees, sea shore w/ dove, etc. Optional: aroma, real plants, sounds: crickets.

A4 FILE:

A4-69A PRODUCT VIDEO DEMONSTRATION: store clerk sees client interest in particular product - they in tern press button demonstrating what client is interested in.
-A4-R71A TIME LAPSE PHOTOGRAPHER: disposable variety. Watch plants grow, suns rise and or set, seasons change.

A4-R73 TATTOOER: design graphics w (with) mouse. Print out onto special paper, transfer onto body for temporary tattoo. Option: connect computer with electronic device, which puts designs onto body permanently

- easing the fears of tattooist with poor artistic skills. Buy designs, and or change the colors. Pictures of lover, machine takes picture.

A4-74 MERCHANDISE Display ("S") ER: upon removing of item, sounds and or music appropriate to product. Client pushes button for product info. Include distancer - sound becomes more and more alarming as it is being taken too far away. Alternative features, colors available on mail order or in warehouse.

A4-Q75 LIGHT COMMUNICATOR: color light is indication of certain area of communication. Applications?

A4-78A TAPE ANALYZER: tells quality of sound on tape. Eg: poor reproduction, poor original recording. Helps convince market to buy CD's, DAT recorders, etc. In electronic manufacturer's interest. Make cheap enough for those that might not normally afford an expensive music machine.

A4-Q78C'COMPUTER DISK ANALYZER: if quality has dropped even a little, people get nervous and want to replace. 'Cart are so analyzed.

A4-80 LIGHT MASTER: DJ controls music, sound and matching light colors dancing to rhythms. For disco, home use.

FILE A5X

A5-050 GUESSING GAME: user guesses what key stands for, if they remember by connecting pairs of same, then they win.

A5-100 CROWD SIMULATOR: client hears subtle sounds of heavier client walking traffic w/in retail outlet / co via ms / v. MS / v can also match ms / p's movements to cause a match of sorts w/ subliminal effect. M knows who is client since they come thru client doors, employees normally must use employee entrance (theft prevention). M tracks client.

FILE A8: CHARMS

A8-03 PUT PIECES TOGETHER in set number of preprogrammed possibilities creating: new objects, characters; or even sentences. Option: New sounds can be created as a result too. Can do on software, pieces on special electronic board.

-Each piece is an IMI Part.
-D: A8-03 ~ c (computer inside) = osc / S (screen) / r

A8-05 CHARMS for the woman whose lover or husband forgets to put down toilet seat - the charm alarms after flushing if the seat isn't down

A8-07 CHARMS ATTACH TO drawers, sounds when opening. Especially for young girls.

A8-08 CHARMS CARPENTER'S TOOLS: they often leave tools behind. Makes a single short reminding sound if tool is too far from carpenter's waist strap bag. Can integrate important parts with quite pieces.

A8-09 CHARMS FOR CHILD'S PLAY BOX: sounds whenever opened: drawer, chest, game box, box sold by mf to hold toys. Make like sensitive and activates for some time period. Especially use in drawer of valuables: diaries, sex magazines (keep kids out), etc.

A8-10 CHARMS JOKE: put under carpet so sounds like wood floor is badly creaking

A8-11 CHARMS WEDDING CEREMONY SOUNDS: joke for people dating, on honeymoon, valentine's day, etc. Ball and chain: designed to be attached to leg. Whenever person picks up ball on table, it sounds the wedding ceremony.

FILE A9

A9-02 APPLICATIONS OF SOFTWARES REPRESENTING THINKING PEOPLE, MINDS:

A9-04 DATING MACHINE:
machine through which one can get to know others better, either completely new people or old friends. Do things in new/different ways to bring out new behaviors/thinking/feelings.

CONCLUDES "A" INVENTIONS FOLDER

File: Intro To Pat / A5X

FILE A5X

Note: File * A5-Old was later expanded into file A5X. Some inventions were not transferred.

A5-050 GUESSING GAME: user guesses what key stands for, if they remember by connecting pairs of same, then they win.

A5-100 CROWD SIMULATOR: client hears subtle sounds of heavier client walking traffic w/in retail outlet / co via ms / v. MS / v can also match ms / p's movements to cause a match of sorts w/ subliminal effect. M knows who is client since they come thru client doors, employees normally must use employee entrance (theft prevention).. M tracks client.

+ A5-110 Replacement Identifier: Product part changes color when necessary time has elapsed for replacement.
-notice this when a part changes color, eg: it got too hot or received too much frequency or the wrong type. Color of change may signify part's possibility of needing replacement; its age; level of brittleness, conductivity, elasticity, of weight that changed, thickness changed, temperature, etc.
-give this to a chemical engineer too.
-both electronic and non-electronic versions of this product are to be built
. For Techies: Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material (of this N) w (with) chemical reagents. NR shows what chemicals present W5. This N (invention) (invention) copied to 7G050 Aug 95.

File: Intro To Pat / A6X

FILE A6X

Note: File * A6-Old was later expanded into file A6X. Some inventions were not transferred.

ELEMENTS COMMON TO MOST CHARMS NUMBERED PRODUCT LINES IN FILE A6:

(Writer: please insert the applicable elements from this beginning section into the actual product descriptions)
. Small sound making trinkets. Emits any type sound like bird chirping, whistling, bells, diverse percussions.
. Has option of being on key chain, earring, necklace, bracelet.
. Hang from indoor or outdoor tree, railing, Christmas tree, curtain, shower curtain rod, shower head, hat, necklace.
. Each item can be a non-descriptive or specific shape can have own sound: parrot, cow, fire truck, sexy lady. Each shape, sound, function is targeted to different market.
. Glows in dark.

. Internal mechanisms may be completely solid, allowing external leathery skin to contain clay like substance, which can be remolded. Buttons and any digital read out are securely flush with skin, clay substance surrounding all other sides of charm.

. Old for shapes: press object into mold into shape of cat, heart, flower... Shape becomes permanent. More expensive system model allows reshaping again.

. Attaches to other objects via: strong glue sticker upon removing of seal; Velcro; magnet; small strap (eg: around purse's own strap).

. Charm's audio, digital or video output is determined by market targeted. EG: in product A6-1 right below "Chain Music", alter type music options according to age group, kids get kiddy tunes...

A6-07 LOVE CHARM: Heart shape given to your love one. It reminds them to call you. Programmable only by giver and or user. Single use only (single type recording). Option: has voice of love one saying "I love your", etc.

. Attach pictures behind clear plastic shield. Product might be sold with plastic type template in heart shape from which one can easily cut out part of picture into heart shape for precise insertion into charm

A6-8B PERIODICALLY CHANGING ANNOUNCER

. Person's horoscope for day or given out periodically during day as stars change. Each sign gets their own version, manufacturer produces twelve versions each year.

A6-12 MATING CALLER

Has pre-programmed sounds to entice animal's interest. Speaks in their language that you are friendly and eager to meet. Make mating calls with birds, frogs, crickets, cats, dogs, other little furry animals.

Option: program type animal and or purpose

Option: Recorder Playback: When traveling to exotic lands and or if you don't know type bird, monkey, etc. machine records their voice and amplifies it back to them. Directional "mic" primarily picks up the distant sounds coming from pointed source.

. Underwater version for fish, and mammal dolphins.

. Pet Communicator: Interact with your home pet(s) to new heights!

Perhaps certain pets to date less popular in the home will respond well enhancing their popularity as pets.

. Product can also couple as a Musical instrument mixing different sounds. Sounds can be built into machine with other musical creating sounds, or be an option added to a musical machine.

. This is merged with the following product: A1-110-121004 Animal Communicator:

communicates in animal sounds, which create specifically desired effects in animals. For example it can cause a security animal to stop barking or to become aggressive if the person controlling the machine perceives danger. Teach birds to talk, sing. It can induce animals to be less or hungrier, feel less lonely, bored, tired,

1126

timid, aggressive, snappy and unfriendly. Use just for fun. Animal Fun, Animal Talker, Talk Man, Talkie Talkie. Induce or reduce sexual behavior.

A6-13 TRAVELER'S AID:

The voice translator adapted to regional dialects and serious or social occasions! By pressing any one button select automatic sentence announcer in country's language. Press button so stranger hears, eg: "can you help me? please wait, let me look in my dictionary", "does anyone speak (user's language)", "help!", "please take me to this address" - whereupon user shows taxi driver paper with address, "how much", "thank you", etc. One button lets user select from any of a dozen languages. When in set language mode, statements converted to that language. Machine's commands can be in any one of the languages.

-Future models will let user speak into "mic" which in tern speaks out in the desired language and dialect.

. Technical: when pressing "help!" if being robbed, etc, volume automatically goes into maximum.

. Marketing: people crossing many borders often don't get to learn all the languages. It's very common to drive through half a dozen countries when traveling through Europe in a few days. Also a language-learning tool.

. Related to other product numbers.

. Watch option: remembers a few important phrases, and press necessary one of emergencies, etc

A6-18 CRT SCREEN ENLARGER: Magnifies the CRT screen. Work farther away, reducing radioactive exposure.

. Work further away from radioactive CRT screen by placing the easily attachable clear plastic or glass magnifier on top of screen. Also, easier on eyes. Attachable to television sets as well.

-Lets manufacturers make smaller screens as well, causing less radiation.

. FLOAT **=

The more portable part(s) of system have opposite magnets on each end. A 'C' shaped base also has magnets which attract each of the ends of the piece in space. .2cm to 2cm of air is between the attracting magnets. Portable item is light weight. Magnets and design are designed to withstand gravity and wind, and wearing down of magnet's forces for minimum five years.

. For Techies: D: 1+ = 2- = 3 = 4+ = 5-.

-D Notes: 14 positive magnets; 25 negative magnets; 3 non magnetically conductive (between 1/2/4/5) which is the/part of product; 1 & 5 are each at their individual ends of the 'C' frame; one of the purposes of float is to create an interesting design (entertain); item which floats can be taken out from the "C" frame (used about premise/laid on table); cc. "Tilt": controls position / functions% of floating object

-Form of flotation = nr / other form of communication to user. 'Track = type flotation.

. For Techies: FAX PART - FX** / FS** =

Built in facsimile machine, sending/receiving in different speeds.

D: data/image = "sensor" = "C" = TR (transmitter) = printer

-air pad (sends and receives faxes); cart (how messages are sent and or received); "S"; "C"; uk.

-C95 Fax machine screens out unwanted messages. See fax on display ("S"), print desired faxes. NTT 29 Mar 93 NK. D (Drawing):C95=tel~c~remote

-4E020 Content Date Stamper: Registers and organizes previous occurrences.

FILE 7G INTRODUCTION

See Related Files For Details: Formerly Titled 7Gi.

Inventions Include Chemical Indicators that show what happened when, where, why and how. Interesting consumer and other applications..!

+7G050 PVC - gloves, condoms, etc:

Alerts user when it has been perforated or come into contact with harmful chemicals.. Chemical version: inner layer is of different color in tern exposing itself, or inner layer emits colored substance when punctured. Electronic version: sensor notifies if any contact has been made with specific chemicals on inner, outer or upper surface.

-uses R259 (Safety) Gloves, ES 95

+ (non-el) chemical sensor(s) placed (throughout) glove "analyze"/nr when glove came into contact w (with [or without to some degree]) dangerous/designated chemicals.

+ This N (invention(s)) expanded into 20-30 pages, combining: 7G050, 7G051, 7G052.

+ 7G051 PVC NOTIFIER:

Alerts user when it has cracked, or bent beyond desired amount, in tern releasing colored substance. See 7G050.

-exposure to air of inner substance causes: discoloration (in general area (even within several mm/cm on normally exposed, viewable surface).

+ This N (invention(s)) expanded into 20-30 pages, combining: 7G050, 7G051, 7G052.

+ 7G052 Flexed Level Notifier:

User is made aware the number of excessive times and degree of bending material undertook beyond desirable levels. Applications: wire, hinges (exists?), flexible sheeting (vinyl). Electronic sensor analyzes situation: when, where, what, how something was flexed. Useful in R&D labs, eg: testing new product prototypes, specifics applications not identified.

-cut and moved to: File REG30 7.95.

+ This N (invention(s)) expanded into 20-30 pages, combining: 7G050, 7G051, 7G052.

FILE 7G INDICATOR PATENTS (US)

Following numbers are US patents. Diagrams are drawn from each patent number with its descriptions to the title of that section. Information found after the patent number's first colon is likely beyond the scope of the patent number itself.

Color changes for 7G & 1G20* & 1G20R*

Temperature change indicators: Patent search strategy: (Color* near9 (change or changes or changing)) and ((temperature* or thermal*) near5 (change or changes or changing))

DIAGRAM: KN (invention(s)) ~ TEMPERATURE CHANGE INDICATORS = COLOR CHANGING METHOD ~

-5215378

-5202677

-5175944: clothes change color

-5165797 5153066 5115825 4804275

-4781597: for flooring, walls, structures near hot elements, structures holding or surrounding hot elements, and anything else made of concrete.

-4859360 & 4834017 & 4805188 Time temperature indicator [for cooking] & 4824827 Time-color indicators: similar to KN; combines the effects of time and temperature in determining when the designated temperature has been achieved over a minimum / maximum / pre-determined time span; the higher the temperature, possibly the less time needed to change NR.

-4832046 4834500 4835899

-4877633 & 4844933: safety of food shown by (differing levels of natural) NR; some discoloration might be reduced, but enough made available to show any hazards or lack of nutritional value due to its age and or excessive temperatures reached via whatever circumstances.

-4854160 4854332 4888219 4818215

-4888219 Temperature sensitive artificial flower

Light change indicators: Patent search strategy: ((Light* or laser*) near9 (changes or changing)) and (color* near5 (change or changes or changing))

DIAGRAM: KN (invention(s)) ~ LIGHT CHANGE INDICATORS = COLOR CHANGING METHOD ~

-5338631

-5308900: the level of resistance to color changes is reduced according to how quickly this indicator is desired to show light exposure.

-5308900: the level of resistance to color changes is reduced according to how quickly this indicator is desired to show light exposure.

-5178091 Detecting low levels of liquid in reservoir - the liquid color itself changes: (dangerously) low levels of any liquid = NR; window(s) in container can show the changed colors of liquid; color indicator in lubricants and other liquids needed to prevent: mechanical breakdowns, continuation of desired effects.

-4772529 4772561

-4779120: "access", "track", "visual-analyzer"

-4867552 & 4865440 & 4865439 & 4840477 colored contacts: changes color to light

-4844866

-4847736

-4854332

-4769310 & 4861620 Laser marking: nr ('notifier alerts user) if (unwanted / any / dangerous levels of) laser has contacted material: clothing, human/animal/organism skin, plastic or other synthetic material acting as protective gear (for humans, organisms, equipment, inanimate materials).

-4863694 4863832 4864144 4889794

HAZARDOUS CHEMICAL INDICATORS (NR functions when (unwanted) hazardous chemical occurs):
Patent search strategy: (hazardous* or danger* or carcinogen* or mercury or lead or cadmium or gas or gases or gaseous
dosimeter* or (Geiger adj counter*) or radioactive* or isotopes or cyanide* or arsenic* or phenol* or allerg* or asthma*
or chemical* or drug* or pharmaceutic*
) and (color* near5 (changes or changing))

DIAGRAM: KN (invention(s)) ~ HAZARDOUS CHEMICAL INDICATORS = COLOR CHANGING METHOD ~

-4875914 & 5239175 & 5318912: Gas leakage KN (invention(s)) = Nr
-5338643 5302749
-5187363: where moisture is not wanted. Moisture may be the triggering agent when water is combined with other chemicals and or (undesirable) occurrences.
-4962039: where moisture is not wanted. Moisture may be the triggering agent when water is combined with other chemicals and or (undesirable) occurrences.
-5120511
-5099132 Dosimeter
-5114570 water filter nr: accumulation of chemicals in liquid/air filter increases the level of NR, eg: brighter or differing colors.
-5117116 5124129 4844866 4854332 4863694 4772560 4822743
4854332 4863694 4777018 4820755 4826772 4864144
4772940 4776612 4777018 4787398 4790327 4810631 4820755 4821710 4884866 4846182 4863694
-4784959: any leakages via liquid/gas
-4834017: Time temperature indicator [for cooking] & 4824827 Time-color indicators: similar to KN; combines the effects of time and temperature in determining when the designated temperature has been achieved over a minimum / maximum / pre-determined time span; the higher the temperature, possibly the less time needed to change NR.

Surface coating indicators (NR functions upon (unwanted) (chemical content) occurrence(s): Patent search strategy: (surface* or paint* or enamel* or anondiz* or coating* or layer* or wire* or wiring* or fabric* or cloth* or textile* or cement* or asphalt* or floor*) and (color* near5 (changes or changing))

DIAGRAM: KN (invention(s)) ~ CHEMICAL INDICATORS = COLOR CHANGING METHOD ~
-5102046 5124172 4774835 4844706 4863694 4884752 4884752
-4792092 Paint color change system: coat any surface

-4863620: nr ('notifier alerts user) fabric / flexible flat material / clothing upon designated (acidic) occurrence(s).

Patent search strategy: (stress* or fatigue* or stretch* or break* or tear* or cut*) and (color* near5 (changes or changing))
-checked back from since 1989

-4775835
-4802255 Brush changes color indicating level of usage: (similar filament) materials used to change color in: fabrics; carpets; shoes; flexible coverings (of parts) (whereby the level of bending/moving/usage (helps) indicate level of usage, eg: automobile's stick shift hand gear box has flexible material on upper part keeping out debris, or tarps.
+--sweepers: manual / electric / street sweeping vehicles / brooms / mops: nr ('notifier alerts user) indicates: hazardous chemical contact (so as to reduce chances of spreading (unwanted) chemicals; excessive wear-and tear.

Time: Changes in time (and the synergistic effect with other occurrences) cause nr ('notifier alerts user) reflecting level of change/effect/time past.

Patent Search Strategy: (Time or times or timing or hour* or minute* or second*) and (color near5 (change or changes or changing))
-see other sub-sections of this patent section

KN ~ TIME RELATED INDICATORS = COLOR CHANGING METHOD ~ 4804275 4805188 4824827 4840806

Miscellaneous: checked back from 1992

KN = COLOR CHANGING METHOD =

5094286 4804275 4807387 4809901: when metals reach excessive temperatures - such soldering materials, devices, methods can be used to help act as an NR.
+- Title - Aging Gauge. It changes color showing its age: applies to diverse KN (invention(s)) which show age / other occurrences by changing color / other NR. Patent Number H630, Application number 177308, filed 1988 04 05 by inventor Betts.

Resistance: NO ACTUAL SEARCHES DONE: but some N (invention) found.

Resistance to color changes: the level of resistance to color changes is reduced according to how quickly this indicator is desired to show level of occurrence.

Patent search strategy: (Resist* or prevent* or avoid* or stop* or inhibit* or limit* or reduc* or cut* [down] or without or food* [color changes often not wanted]

KN = COLOR CHANGING METHOD = 5308900 4812517 4818568 4823245 4824246
-Foods: 4853235 & 4840806: for other foods

Key Words: chemical, chemistry, colormetric, *hazard* [bio hazard or hazardous], danger*, harmful, toxic, indicat*
Search Strategy: chem* and (*hazard* or danger* or harm* or toxic or carcinogenic) and (indicat* or colormetric*)

Colormetric: term used for when two or more chemicals interact and change color. Causes change of color in a [visible] spectrum.

CONCLUDES FILE: 7G INDICATOR PATENTS
File: Category / Chemical / 7G Indicators

7G050 I N D I C A T O R S

More beneficial types of indicators. Many diverse N in following 30+ pages.

General Use Products:
Gloves
Suits, aprons, shoe (covers)
Containers: filled too high when lid placed on; pressurized
+ Tubing: illegal dumping via flushing into city sewage system
+ Wiring: inner corrosion
Mats
Age of contents
Flooring: cements, tiles, counter tops, sinks
+ Accident indicators: auto bumpers against hit and run drivers
+ Surface indicators for common objects: pens, tel, keyboards, switches, handles, doorknobs, driving wheel, tools

+ Masks, goggles, glasses.
+ Wheels
+ Bandages

Type Indicators:
+ Timing: contact, deterioration, worsening of contents
Labels
Intermediate material: between surface and indicator

MF: simply coat indicators onto off shelf products, then make molds for off the shelf products if sales are high.

(All) N (invention) in several categories:
-breakage indicators
-type contact indicators
-stress indicators. Excess: temperature, bending, stretching, age.

Unique elements of N: Some basics only
-pockets in PVC
-type PVC used mixes better w (with [or maybe a little without]) needed chemicals to induce nr ('notifier alerts user) type reaction
-nr's color changes
-where nr ('notifier alerts user) placed: shoes, ground, clothing, gloves
-benefits: safety, anti-contamination, not releasing untested genes into environment, replaces lack of hand sensations in glove
-u selects type: PVC and chemical sensors and nr
-dormant Sub-A type chemicals
-layers

User discovers if their plastic-type product has been perforated, deteriorated or contacted dangerous chemicals. For gloves, condoms, laboratory coats, containers, etc. Problem evidenced via: release of color dye.

OTHER:
. Deterioration
. Replacement part needed
. Chemical contact notifier
. Built up pressure notified: pipes; pressurized containers (patents found in patent db?)
. Gloves: spreading toxins or other contaminants to subsequent work applications.

. corrosion (corrosive look)

+-printed wording (that shows up depending upon type occurrence). The wording is pre-made into the material: its color changes via chemical reaction (relating to nr).

<3, 3.5, 3.5, 4, 3>7G050 (Plastic) Notifiers

WHAT'S SHOWN:

Any type of occurrence user wants "notified" (abbreviation: NR) is shown. nr ('notifier alerts user) is a warning which lets user or others know via diverse means that a specific (unwanted) occurrence happened. Examples of type occurrences:

. Conditions of PVC's quality shown:

-Misc: hole; tear;

+ (minor) stretching which could lead later to real tear due to increased weak area; if came into contact w (with [or maybe a little without]) corrosive substance (which could weaken (thinned) pvc), may have already corroded outer layer of pvc; if pvc is being stretched beyond (desired / pr) capacity, eg: hand too big for glove, or excess pressure. The degree of deterioration is reflected in more or less of certain colors / type nr. nr ('notifier alerts user) functions in anticipating perforations.

--related to: airplane tires w (with [or maybe a little without]) differing layered rubber so crew knows when to change tires.

+-Age (of use): if PVC is too old, or been exposed to air/chemical (too long / beyond pr/tds time period).

+ Exceeded Temperatures shown: changes in temperature for contents (tubing, containers, lids) / environment. Different colors represent different temperatures.

--if temperature has exceeded either a minimum or maximum temperature.

.-Biological changes shown: Minute changes in temperature resulting from microorganism behavior. Type organisms and or what they are doing (w5) shown -> their measurable activities cause "nr" effect (chemicals excreted by type organism's activity, temperature, motion level (amount of friction/vibration) pvc receives, etc.) -> (chemical) reaction in (pvc) -> nr.

--friction level results -> changes in chemical condition of PVC / chemical changes resulting from mixture of studied (moving) substance w/ PVC.

-Chemical type contact shown: different colors represent type contact w: air (quality), Ph level, specific chemical wanted (to be avoided). Percentage of particular chemical content: how dehydrated, sulfuric.

+ different sides of PVC have differing nr ('notifier alerts user) according to what that side comes into contact w/ what (w5). See 'multi-layer' subsection. Applications: know which side of plastic had designated occurrence.

+ Hard surfaces (piping, siding) show any perforations, excessive stress in any like manners to PVC having problems. Eg: piping for hot water / chemicals is close to bursting. NR:

1] color oozes out via liquid (sticky, gooey, highly liquid - spilling to floor, oily, easily spreads (nearly everywhere to catch attention). Easily cleanable. 2] el (electronic system 'seeks 'adaptable 'links to 'associated 'features) "sensor" sends nr ('notifier alerts user) via c. 3] external color changes, due to: chemical reaction (within inner coating or layer / between inner and outer layer. 3] nr ('notifier alerts user) shows up down the pipeline, eg: changes piped material's color; something else is emitted or changed in material being transported, eg: fragments of some material (doesn't harm anything).

-pvc includes chemicals (mixed/built in) designed to interact w (with [or maybe a little without]) targeted substances. Chemical reaction can be seen immediately / later / how pr - w5.

.-any needed elasticity is still found in PVC.

.-certain types of contact whose nr ('notifier alerts user) isn't readily lendable to inspection by unaided human eye: held under microscope (w/: certain "lens" filters / see in certain fq, eg: ultraviolet light).

-NR shows timing of occurrence: sulfuric contact made 5 hours ago for 8 minutes, level of sulfuric contact / percentage of substance that was sulfuric at that time (w5*) was 40-50%.

O-Batches: to better ascertain w5 type exposure, different batches of chemicals used in pvc are designed for a semi-time capsule effect (each batch becomes effective at differing times, hence the more batches triggered to react / not react, a more precise reading as to type events (when, how much of what, w5).

.-different batches can nr ('notifier alerts user) (seek to show): multiple type contact by chemical type / w5.

-different batches can be attached onto PVC / taken or peeled off / activatable by: pulling tab / color / placing PVC earlier into type solution (PVC designed to hold or work effectively so previous step made is useful for any future identifying for type contact.

+-needed chemical reaction section / part on PVC is covered by: tab, tape, outer PVC layer. Reaction occurs when:

---+ outer part is taken off (by u, just before nr ('notifier alerts user) is needed)

---. worn or eroded off / or comes off in some other manner.

--combination of different batches and how they are activated can paint a better picture for: type chemical contact / w5. Eg: substance with two chemicals can be identified when each tab designed for each substance has been effected / nr. Further "analysis" of type chemical is understandable by determining how many and which of the possible multiple chemical reactions occurred - all serving as additional evidence.

--tabs / batches placed onto PVC are: absorbent for one or multiple stages for determining type contact. Can purchase tabs separately from PVC. PVC designed to better hold / work with tab/batches by: better sticking w/ tab (so it stays on / can come off); batches don't touch each other: (markers placed on pvc where any/certain tabs can be placed, markers for tabs set in locations less likely to touch each other based on what the pvc is designed for, eg: glove (avoiding points where fingers touch other parts of glove.

.-Type chemicals plastic may show contact was made with: microorganisms, specific types of: bacteria, viruses (HIV, cold inducing), tuberculosis, mold; carcinogens; acids; toxins to humans or other life forms the glove might subsequently touch; etc.

-each PVC's section (eg: glove's finger) has different function. Each section can have differing appearance: color-coded / differing type plastic (appearance/surface). Applications: helps identify which section of PVC had which type (w5) occurrence (after pvc moved / taken off from previous contraption/hand).

How nr ('notifier alerts user) Functions:
how certain type occurrence(s) makes itself known (to u (researcher/security guard)/observer/"sensor"/sys).
-scratch surface / pull off tab to see: color / texture change. +-printed wording (that shows up depending upon type occurrence). The wording is pre-made into the material: its color changes via chemical reaction (relating to nr).
.--if outer layer comes off, lettering can be imprinted upon lower layer, and exposes itself upon removal of outer layer.
.--Wording can state: danger, warning, _____ chemical contact made, hole, perforation made, caution, see manual, numeric code which is explained in sw/printed manual.
+-color change is "nr". "Nr" can also be via: change of physical (surface) PVC, eg: bubbles, get harder/softer/ more or less pliable / excretes substances (liquid, *powder, smell, (concentrated) ink dye rubs off). Each type of situation can be represented in differing type of "nr" action, eg: blue versus red for temperature, stink smell for danger, and perfume for safer situation.
.-Cement / Paint: nr ('notifier alerts user) alters via color change; changing of surface texture (corrosive (look), bubbles up)
.-Glass / See thru PVC: level of (colored) opacity change = nr. Eg: some designated chemical's occurrence is shown via reddening of material. Any presence of deterioration (crack, chip*) is accentuated by color in crack, chip.
.-material loses its elasticity / flexibility / becomes more fragile / deteriorates after chem reaction C (to 'adapt 'computer 'seeks 'associated features) occurred. This deterioration can be (+only/and or) to serve as the (specified) nr ('notifier alerts user) function. Eg: N-Dex glove, existing plastics that become brittle after excessive temperatures / contacts w (with [or maybe a little without]) certain chemicals.
+-Resin used in making the plastic has chemicals that accentuate the corrosive / deteriorated look/feel/smell* which act as NR. This might happen in certain circumstances as plastic is now made, yet not always. Hence chemical used w (with [or maybe a little without]) plastic is designed to alter plastic's appearance in designated occurrence, where it wouldn't have otherwise.
%-any other unordinary change that can be noticed: visually, "sensor". Eg: any other change that can / does occur in plastic in other situations, can have similar replicable reaction when plastic comes into contact with other chemicals that didn't cause such reaction before.
-NR Emissions: Color changes; liquid oozes out; odorous gas; ("sensor") detectable gas; nr; (chemical) reaction to occurrence makes non-electronic sound, eg: tearing/vibrational/friction sounds; (minor) popping or bubbling sounds as pvc buckles/warps/alters in chemical reaction.

How sys (system 'seeks 'adaptable 'links to 'associated 'features) (automatically) reacts to (designated / any) NR: How PVC / Sys favorably responds to NR's signal/chemical reaction: Occurrence (first reaction -> produces Chem C) -> nr ('notifier alerts user) -> Reaction (described in this sub-section, sub-C chem).

-(El) mechanism (purposely) stops flow of liquid / substance* until problem alleviated.

-(entire) sys shuts down (until repair/alteration made)

.-T security / police, eg: vandalism occurred.

-OTD D (Drawing): u (user 'seeking 'adaptation) = This N (invention) Sys (how sys reacts to nr ('notifier alerts user) / "status" of occurrence) ~ C =

ACCESS (); ANALYZER (); CART (sw effects how sys responds);

NOTIFIER (if differing multiple chemical type nr ('notifier alerts user) are developed, the composite of them can signify a more complex situation / occurrence = nr (signifying such)).

OSC (alarms go off throughout department / building (unit)); PR (); PS-Zone (); Q (); SCORE (); SENSOR (for chemical presence); STATUS (); TDS (); T (); UIP (); VISUAL ANALYZER (); WA (rubber laboratory coat = el n).

+-automatic doors shut=seal in contamination and or people trying to exit/enter. Shutting in of contamination via closing / locking of doors, windows, HVAC vents, etc caused by: nr ('notifier alerts user) -> C -> mechanical closing/locking.

+-Combat Mode: any other sys in `state of art' to combat: (unwanted / dangerous) release of substances, eg: gas masks automatically dispensed.

+--Extinguisher: retardant is applied/sprayed onto spot / area / room / unit. Retardant: fire retardant, other chemical / microorganism designed to combat / interact w (with [or maybe a little without]) (unwanted) chemical type B.

.-specialized security personnel contacted via: person calls / uip-analyzer = t = security.

-u / C (to 'adapt 'computer 'seeks 'associated features) (uip-db) contacted / given information (via t) that the occurrence could be of interest (for research applications). "Tracker".

-"visual analyzer" "analyzes" the material (altered): intelligent monitor 2E251.

-there are differing types of NR (within a particular experiment / material / part), the manner of sys' response depends on type of NR.

Multi-Layers:

-Inner/outer (glove's) layer of different color in tern exposing itself, or inner layer emits colored substance when punctured.

+-three or more layers, each w (with [or maybe a little without]) own characteristics (color, what it seeks and will nr). Eg: level of acid deterioration shown by which layer it's eaten into.

-more expensive material can be designated at more crucial positions, eg: outer layer.

Electronic Functions: [this electronic section should not be utilized in the rewrite]

Sensor notifies if any contact has been made with specific chemicals on inner, outer or upper surface. Both versions analyze type of occurrence in terms of when, and how a particular type chemical contact was made. Biggest benefit is the safety feature for mankind.

-PVC = el (electronic system 'seeks 'adaptable 'links to 'associated 'features) "sensors" = c (analyzer / memory / status) attachable to PVC = S ('screen & 'analyzer 'adapt menu for multi-users' current needs) / C (to 'adapt 'computer 'seeks 'associated features) / m / cart / gloves / PVC

-Track: (chemical) "sensors" "track" occurrences for: R&D db (compilation of history pertaining to particular experiments), tds, nr ('notifier alerts user) (w5).

-OTD D (Drawing): u (user 'seeking 'adaptation) = This N (invention) Alerter Sys ~ C (to 'adapt 'computer 'seeks 'associated features) =

ACCESS (access needed prior to activatability of nr); ANALYZER (chemical reactions); CART (chemicals, sw); EDUC (); MULTI-USER (); +NOTIFIER (); OSC (beeps alarm, nr); PR (functions of: nr, analyzer, status, type chemical (reactions) sought); PS-Zone (u/chemical/pvc must be in certain room); Q (what each nr reaction means; sys asks pertinent q to help determine "status" of occurrence, eg: what chemicals u was working w (w5)); S (coated w (with [or maybe a little without]) nr layer); SCORE (w5 chemical contact/reactions); SENSOR (chemical sensors, each sensor can differ by type chemical contact sought, often this sensor is detachable/readily thrown out after reaction occurred; D (Drawing): chemical that comes into contact w (with [or maybe a little without]) sensor = chemical sensor (in/on/attached to pvc/sys) = chemical reaction = chemical reaction to signal converter = signal = c ("analyzer") = nr ~ other desired function; SOUND ANALYZER ("analyzes" sounds emitted from chemical reaction, eg: bubbly or burning sounds help isolate type chemical sys could be, this data used to match with data in UIP-db for type chemicals in sys' db); STATUS (any chemical contact made); TDS (helps understand w5 for: isolating when/where chemical occurrence happened); *T (nr); UIP (uip-db: properties of chemicals (u may be coming into contact w), uip of u (user 'seeking 'adaptation) (list of type chemicals u may be working w), UIP-DB matched w= UIP of U); VISUAL ANALYZER ("analyzes" images before/during/after chemical reactions to help determine nature of occurrence, UIP-DB); WA (sys works w wa (R&D) type n).

-el sys reduces manpower costs, via its c operated "analysis"/diagnosis.

Generalized Usage Patterns:

-Hazardous material handling, plumbing in chemical plants & refineries, municipal wastes, dentist/researcher gloves. Huge market.

-when gets to danger level, "nr" needs to be very identifiable/noticeable/effective in catching u's attention, eg: very bright versus non-noticeable colors, loud osc*.

.--Problem: u (user 'seeking 'adaptation) might be encouraged to rely on n, even if they are forewarned about the inevitable level of inaccuracy in being forewarned of trouble.

-lab clothing, also: suits, pants, shirts, jackets, aprons, shoes, hats...

+-lab equipment (coatings): when surface has deteriorated exposing dangerous material -> NR. Dangerous material includes: radioactive..., carcinogens, gases, dangers maybe not to human life - but to the experiment or life of non human plant, animal, insect, micro-organism subjects in experiment.

-shows level of usage / rubbing / friction. Outer layer of glove wears out showing its time to change glove. If using for long time / minor tear, stretch.

+-if plastic received excessive wear and tear.

+--those parts of pvc which got greater usage already -> nr, can let u (user 'seeking 'adaptation) use other parts to spread the area of usage/wear. Eg: PVC mitten (glove) can be flipped over on same hand.

+-covering material shows "nr". Covering material / PVC wrap for: seating, tablecloths, apron, hats, cover over clothes, pen's handle (exists: pen which kills germs on contact). Acts also like the badges people wear showing what chemicals they have come into contact with.

-PVC kills (some) germs: on surface contact / upon (semi) penetration (since outer protective layer covers (possibly dangerous) chemicals to anesthetize. Kills germs upon contact w surface are of plastic.

Marketability / Value:

-Gloves: Many people are quite fearful of contamination, the number of such people probably grows annually due to increasing sophistication of population. Reduces chance of: spreading newly engineered microorganisms, illness (HIV, cancer, (chemical) burns). Salaries for risky chemical / biotech / medical workers is higher, using such gloves reduces risks and save on payrolls. With advertising, employees will demand the gloves. Shipping, handling and manufacturing costs may be low.

+-Time Saver: save time from studying nature of situation; repairs can often be eliminated by replacement (of old / deteriorated part which has changed color because of its altered condition). Part is changed before trouble occurs; lab research application; prevents greater damage that could occur should problem (deterioration) not be rectified; know what needs cleaning/replacing rather than doing it as standard practice anyway (after some periodic time period).

+-Minimizes damage: that can result if problem (deterioration) not rectified in time; replace part that could cause large sys into failure (damaging more parts); product/sys might be down/inoperable for some time if warning sys not utilized.

+-Money Saver: replace parts less often out of periodically (maintenance even if product isn't defective, since can't see its actual state wo (with [or without to some degree]) nr); time saved; lower insurance premiums and salaries because work is safer.

+-Hand's sensitivity: thinner material can be utilized giving greater sensation to hands, because alternative methods are used in responding to glove's deterioration.

+-Sweating hands in gloves are less apt to notice small leaks.

-other benefits mentioned throughout

Predicting market's usage of glove:

.-users seeking to keep down (glove) costs, might wear clear glove above this N's glove. Hence: make wearing gloves over this glove difficult via: ineffectiveness of nr ('notifier alerts user) in such circumstances (needs air/etc into perforation -> nr); (rubbery) friction getting second glove over this N's glove; nr function reduces in effectiveness after glove worn certain time period (have nr showing age of glove); will government allow all these sales inducement factors which compromise safety for budget cutters?

.--such double gloves can be sold separately by same organization, so as to reduce costs for users intern expanding market. But outer glove designed to function w (with [or maybe a little without]) inner glove.

NR: How (Problems) Shown

+-Multiple symptoms are nr: (non-conflicting) differing (chemicals) nr ('notifier alerts user) activatable, eg: 1] two different colored stripes; * 2] C (to 'adapt 'computer 'seeks 'associated features) = nr; 3] particular digits/visual effects show up on PVC (in differing places).

-N shows where the occurrence (on pvc) took place. Done via: veins which function via chemical reactions from deterioration/occurrence -> point where NR shows up for u / S.

+-U feels something (sting, prickle, acid) upon/after piercing/breakage. Helps incase u (user 'seeking 'adaptation) not looking at glove. Agent introduced to surface = chemical reaction w (with [or maybe a little without]) indicator = felt by u (acid, electric shock, osc). Especially useful for: gloves, condoms, masks, or other material in (direct) contact with skin.

++ Other ways of notifying users of the 'status:

-Over view: Users often maybe don't pay attention to the 'indicator. Hence more than just a color change can get attention.

-Forms of 'notification. Via:

--physical sensation (sting, prickle, odor release, 'osc [outgoing sound communicator part] like an alarm sound, %flashing lights 'notifier, shutting down of sys (system 'seeks 'adaptable 'links to 'associated 'features) connected / related to plastic/occurrence in question/causing concern.

--Prickling sensation can be generated from the inside and or outside of PVC, eg: condom breakage can be felt via prickling (acid release) by both the male / female receiving the condom's penetration into their orifice.

--Diagram: undesired status of chemical occurrence/piercing/breakage of material containing the indicator -> sensor / chemical reaction (air exposure / contact between previously isolated (layers)) -> chemical release (acid) / osc

+-pvc glows in dark: useful for condoms since can't see color change as readily in dark.

--or breakage may only be discernable under special [infrared] lighting...

+-taste of PVC changes upon deterioration/occurrence: condoms. Especially useful in oral sex.

+ Fits with 1G20. See US Patents here too, eg: color-changing indicators.

NR: How Shown - After the fact:

+-place PVC under certain light / sound / X-ray type frequencies. The resulting reflections show (specific type) deterioration (by type of reflection / images seen).

--This widens the possible types of indicators that can be used. Also, there may be instances where u may not want everyone to know that the indicator was triggered, eg: so as not to alert other people who might * be: shocked, or snooping around.

--Fluorescent dyes differ in terms of their emission frequencies based on nature of problem. The dyes are effected via chemical reaction by type occurrence. US Pat 5329127* - Identifies type plastics based on fluorescent dye used.

+-color changes to type color matching type occurrence: US Pat 3743846*. KN (invention(s)) allows single indicators / plastics to seek out multiple potential occurrences.

.--This can be combined w, eg: 1] indicator results being kept semi-confidential by requiring certain procedures to see if occurrence happened; 2] (multiple) indicators showing timing of occurrences.

+-after designated type occurrence happened, put PVC into situations which will cause subsequent chemical reactions -> see / "analyze" type contact PVC had w5. Eg: place glove into chemical solutions / specific type light / certain heat level. Maybe a cheaper method for detecting deterioration (after the fact).

--In other words: a] specially designed pvc comes into contact w (with [or maybe a little without]) potential substances its designed for -> b] PVC then is altered / effected in some manner to create chemical reaction upon which the type occurrence (if any) is readily seen via: unaided eye / additional chemical process / microscope / etc. Reason for additional step(s) are: cost or level of sophistication doesn't permit an instant reading for type contact w5; greater accuracy (status, level, w5) for type contact; companies can collect all gloves (w u's name) end of each time period and process them in larger batches -> then nr / tell u of any type exposure or use for research study, eg: like semi-Geiger counter tablets worn by people in nuclear reactors.

How to interpret nr's results:

-certain occurrences are more likely to be more serious than others, eg: certain chemical contact more likely than other chemicals to have caused greater deterioration (holes in gloves); (biological) contamination (spreading of viruses, loss of sterility, (excessive) contact w (with [or maybe a little without]) toxic substance).

-change the: (machine) part; glove

-"status" of situation

-other research lab uses: characteristics of PVC in differing circumstances.

-Misc: cleanliness/age/type of material

-Purity of material PVC came into contact w. Presence of any unwanted / other chemicals noticed (nr).

%-Tabs can be placed into material (being studied). Existing products that measure changes of any type related to what's described in this N, are applicable to this general N. Eg: tabs which measure (changes in) temperature, Ph, etc.

With the 'notifier, the 'user can later better identify source of occurrence / contamination spread:
1] occurrence identified, next 2] type occurrence identified, next 3] u can try to locate source w (with [or maybe a little without]) the available information:
+-Indicators showing timing of occurrences, can allow for interpretation of the trail via which occurrence/chemical spread, leading investigating person to the source of problem/contamination.
+-(Lab) clothing shows NR: deterioration of outer layer (acid ate away). Clothing designed for (removable) tabs w (with [or maybe a little without]) chemical "sensors". Let's user knows contamination has spread at an earlier stage: know before touches skin, causes further deterioration to clothing/pvc.
+-Shoes / ground covering (layer, coating, paint) shows NR. Chemicals in/on sole cause color changes on ground upon designated occurrences. Examples: see colored footprints on (tiled/coated hard) flooring and know its being spread. Color changes on floor alert people to problem, then identify who/which shoes are the problem by looking at their sole (after the occurrence as started / ended). Floor's indicators may be coated w (with [or maybe a little without]) protector, so coloration occurs when outer layer penetrated (by acids....), this especially useful when floor indicators may be slightly toxic/harmful in other respects.
--D (Drawing 'seek 'associated 'links): indicators on sole (and mixed w floor chemical/indicators) needed to cause color change to floor / shoe.
.--flooring color changes are possible via washing floor with: water, designated non-toxic chemical washes / decolorizers.

Type PVC used: selected by u
-use PVC which is better able to create pockets via: fewer steps; simply from mold / how PVC comes out or cools after pouring; subsequent chemical application inducing development of pockets.
-which mixes / reacts favorably w (with [or maybe somewhat without]) desired chemicals / uses / environments

Color: Color/odor* changes/emissions = NR.
-color generated from chemicals: mixed into PVC; coated onto PVC; inside pockets.

+ POCKETS: The material can alternatively also hold the indicator chemicals with itself.
-In other words:
PVC (other material) has (minuscule) pockets which hold / interact w (with [or maybe somewhat without]) type chemical/condition sought = u's eye / el "analyzer" = status on type(s) of contacts made w5.
-in other words: the PVC is able to hold necessary chemicals to react w/ new agents coming into contact w/ chemical in the pockets. Pocket size from molecular up to several square centimeters/meters.
-pocket shapes: any type cavity where there is a large/small opening and inside it gets narrower/wider as it gets deeper; any proportion of width to depth; pocket can be created via an enclosed wall surrounding surface, w (with [or maybe somewhat without]) or wo (with [or without to some degree]) any cavity made into the pvc surface, walls may flap. Rough surface spots (w indentations) can be termed pocket too.

-pockets are fully or partially filled, in latter, subsequent chemical agents might get into pockets (and create better chemical reaction).

-Partially filled pockets:

--How keep pockets from completely filling up w/ chemicals purposely attached to PVC: outer part of walls repel (certain) chemicals / adhesive doesn't stick there; minimize quantity of chemical applied / given* to PVC so as not to fill up pockets completely.

-cleaning of PVC may not disturb pockets

-Surface Inside Coating: smooth/rough or coated w (with [or maybe somewhat without]) substance (adhesive function) to help attach to designated chemical. This coating might [help / shield PVC against] chemical(s) (reactions).

-Nodules: pockets can be replaced w: chemical nodules attached to surface (which thereupon eats into surface for better grip/adhesion.

-Cover: (minuscule) covers of pockets may (almost) seal in its chemicals. Such covers may open (partially) when PVC is: immersed in liquid; chemical structure of PVC altered enough via introduced agent; + cover deteriorates from: acid eating it away / chemical that attacks/eats the PVC and the cover as well / age of PVC / other listed occurrence (effecting the pvc material, the cover is made from (same) material).

--Value of cover may be to not disturb chemicals in pockets except at certain times.

-chemicals in pockets might be gotten out via chemical process (immerse in chemical liquid / wash off / coat or spray on chemical that gets chemicals out of pockets).

-can reapply new chemicals into pockets for differing applications. Eg: a lab coat used for one type of experiments can be used in differing type experiments after changing chemicals in pockets. Saves from having to throw out PVC, saves time from having to buy new types of PVC if only the chemical process is needed for filling pockets / altering PVC in other way so it acts as nr.

Adhesives: whether there are or aren't pockets or any type of roughness that can be created on surface of pvc, coating(s) of adhesives will help designated chemicals stick to pvc = intern react w/ introduced agents. These adhesives can be removed (w any chemicals) (in one or multiple steps).

-the adhesive itself may be or contain the chemical(s) needed to trigger nr.

>User of the inventive idea simply selects 1] purpose (type occurrence), 2] which chemical reactions desired to serve as nr ('notifier alerts user) (shows occurrence), 3] which type of PVC and or chemicals are compatible together (can be mixed/attached together) to serve as part of the chemical reaction w (with [or without to some degree]) occurrence, 4] type of nr / nr sys desired.

-done via: el / applying designated indicators

CHEMICAL REACTIONS GENERALIZED: steps, stages, dormancy.

. Time Delayed Reactions:

-some chemicals / biological reactions have more clearly discernable results for nr, if allowed time, eg: microorganism excretes chemicals after __ days = such excretions = nr. PVC = indicator chemical used functions well over time: can't readily fall or wash off.

-dormant sub-A chemicals

. Multi-Step Reactions: (for time delay)

-some (subsequently effective) indicator chemicals are triggered after previous occurrences = cause designated chemical reactions. D (Drawing): Chemical B = Chemical A = reaction chemical = reacts w (with [or maybe somewhat without]) (dormant) Chemical C (was w (with [or maybe somewhat without]) pvc earlier) = producing reaction chemical which triggers = nr.

. Dormancy:

-some chemicals might require time to react. Or, the nr ('notifier alerts user) differs according to length of time: reaction has been taking place / how long ago reaction (Chemical C) was made.

-values in dormancy: minor contacts (measured by time period of exposure) might not warrant nr. Or, NR-"score" could be lower/higher.

-what triggers chemical out of dormancy: time period of exposure to chemical %; coating surround chemical (A) worn off (by how B/C wears it off); pocket's cover worn off / made more impenetrable for B/C chemicals.

-Dormant Sub-A Chemicals: reacts w= chemical B/C.

-Chemicals in inner layers of PVC can also be considered dormant in that outer PVC layers are their barriers. Yet the term dormancy for such situations is limited, eg: perhaps nr seeks when outer layer has deteriorated, in which case (a quicker reaction = nr) may be desired, and hence dormancy doesn't apply.

* Improvements upon existing glove nr patents whereby perforations are shown when gloves are placed within liquid solutions/water:

-type chemical B that may have been present = nr. Chem A (in solution) seeks to show if/where chem B was anywhere on PVC / if it entered puncture.

-other parts of this KN, whereby chem (chemical) A is in chemical solution of designated formulae.

Layers / Patches* of PVC: each layer / patch has differing characteristics, some layers / patches are more interested in:

+ Patches of differing indicators: allows multiple nr, which won't interfere w, each other as readily by being physically separated. -Place each nr ('notifier alerts user) at point where designated occurrence more likely to create contact / where nr won't interfere w (with [or maybe somewhat without]) function of plastic.

-strength: gives type strength w elasticity needed; avoid deterioration

-chemical reactions: mix w (with [or without to some degree]) chemicals (A); pockets.

-easily worn off; easy to deteriorate = exposing inner layer.

-cosmetic appearance

-permeability of: air, water, chemicals (a, b+, c)

-show signs of deterioration: puncture = nr; color-nr may only come from certain layer(s).
-how adhesive they are, or how readily they work w (with [or maybe somewhat without]) added adhesives, or how well they adhere to differing layers / (inner) material (they are coating).
-dormancy of reaction: deeper layers hold chemicals A
-chemicals in one layer / region (not linear, but patches) have differing nr purposes.
-sanitizing / deactivating / slowing down damage of: chemical/micro-organism B
-u can visually more readily see extent of deterioration, based on number of layers Deteriorated.

Welded points in PVC may cause nr ('notifier alerts user) effect when such points have deteriorated (liquid has seeped into their crevices / developed cracks). Shows a weakness in the PVC structure, though no leakage outside of the pvc/container may have occurred. Helps if the PVC is clear / opaque to see any nr (color change where the deterioration is seen).
-plastic bags: can show weaker welding points
-part of material used in the welding process can be treated like a separate layer (as described in this n's description). Example: it is (a portion of) this welded material that causes the nr (upon the welded material's exposure/deterioration).
-mf: prior to welding, the points to be welded have indicators applied onto them. These indicators may withstand temperature needed for welding.

Value: catch deterioration/poor manufacturing of PVC n, prior to (further) usage.

If only an outer / *inner layer (main material) has Deteriorated, then either that Deteriorated layer / or the underlying material/layer can induce nr (emit color dye) designating side/location of occurrence. Example: multi-layer glove, outer layer wears out (outer layer emits mild nr ('notifier alerts user) until its all worn off/Deteriorated); subsequently, when next inner layer is exposed, latter emits red dye, functioning like animal's skin.

U is given warning prior to leakage / complete deterioration. Values: when wearing gloves, reduces chance of contracting unwanted elements which are carcinogenic, otherwise unhealthy, avoids hot liquid from work tank filling into glove, eg: working with sharp objects.
-the sensitivity level lost in gloves of dangerous situations can be gained somewhat when the protective measure of this N (invention) helps compensate the greater thinness/sensitivity of the glove material.

Contamination NR: U (user(s)) stops contamination before it has chance of happening.
-A tool can transfer unwanted material to its usage in subsequent activity. Hence the importance in knowing the presence of (unwanted) chemicals (on the pvc surface) (in the form of dust, specs, embeddedness, etc).

-Plastic items include: gloves, tweezers, stick, container, lid might spread other unwanted chemicals or bugs (nr seeks chemicals emitted by bugs); (automatically operated) equipment's parts; thermometer's outer coating; tires; machine's rotating belts; wheels.

PATENT SEARCH STRATEGY:

-Material:

(pvc or plastic* or polyvinyl* or polyurethane* or rubber*) near5

glove, condom, cover*, vinyl

(corros* (corrode/corrosion),

(deteriorat* or disintegrat* or

-Not: biodegrad*, recycl*, non-corros*, resistant

-(fall* near3 apart) or contaminat*

-And Repair* / Problem* / Identif* (identifies) / change near2 color / react (not reactor*) / chemical near2 react* or contact* / measur* / bubbles (not other bubbl...)

-Patent search key words: pvc, poly vinyl chloride, rubber-, glove-, safe-, germ-, penetrat-, warn-, hospital, research, break-, tear-, multiple layers.

-wire / other "sensors" on/within PVC when disturbed/altered/effected in any manner described w/in this N, triggers signal (nr) showing level/type situation/problem.

Tid Bits:

+-any contaminants / chemicals (not washed off) material (pvc) causes nr (after designated timer period (via time based nr)). u (user 'seeking 'adaptation via features' links) has limited time period (%TDS), or longer contact w PVC made, the greater the level of nr/deterioration.

+-Helps u (user 'seeking 'adaptation via features' links) know cleanliness of surface / work area. This nr function applies to: paints, varnishes, Formica, *paper (board), PVC (rubber, vinyl, bags, (lid) containers...

-OTD D1: This N (Sys (PVC)) ~ C (to 'adapt 'computer 'seeks 'associated features) ~ (7G051 / 7G052) = ACCESS (limited u can know: status, nr; or use sys); ANALYZER (w5 condition/status of pvc condition); CART (sw; plug pvc = wires = el (electronic system 'seeks 'adaptable 'links to 'associated 'features) elements = c); EDUC (for educational research; lab use); M (analyzer, db); *MULTI-USER (); NOTIFIER (); PR (how analyze data); Q (u asks re condition of pvc); SCORE (# times pvc was: penetrated, damaged, and w5); SENSOR shows current / past / %anticipated (analyzer, uip): (pressure, vibration, puncture, tear, stretch, heat, cold, moisture level, age of pvc (kn) shows change in coloration, other chemical contact, level of corrosion); STATUS (); TDS (occurrence of any w5 element);

+ UIP (what el sys (system 'seeks 'adaptable 'links to 'associated 'features) should watch out for (type problem / situation / activity). Examples: file for history of designated u compared against characteristics of same u's current activity, eg: which chemicals / procedures being adopted. Areas in which u are not well trained hence more likely to need nr/forewarning: to be ignorant of protocols or being aware of negative occurrences (if they happen).

VR Glove (VR "Educ" / research tool, "interact" w (with [or maybe somewhat without]) chemicals / micro-organisms while using VR (visual analyzer)).

-OTD D2: This N (invention) sys (system 'seeks 'adaptable 'links to 'associated 'features) (glove) ~ C =

+ ACCESS (before (hand) can begin work/enter into (tank), sys' "sensor" = "analyzer" senses if correct type safety glove is being used via reading of glove: ultra violet light reflection, bar code reader); Lubrication in human vagina causes NR if the condom used is of the type that is wo: NR if deterioration occurs; quality materials - hence more likely to break; freshness (was reused before).

+-D (Drawing 'seek 'associated 'links): improper/*proper condom releases chemical into orifice which interacts w bodily / human fluids (naturally occurring in orifice) and intern (*no) NR is activated. Example: only proper condoms don't emit chemicals that would cause NR, hence chemical of existing condoms needed to interact w specially formulated lubricant. NR = stinging / odor release / unpleasant taste (for oral sex) / changes color (of lubricant / human secretions / die is emitted (from lubricant or condom*, and spread via lubricant / body fluids). ANALYZER (); ARTIST (each finger creates different color ink (onto: paper / interactive s) via: ink dispenser on each finger / chemical reaction from surface area touched w (with [or maybe somewhat without]) differing chemicals per finger, and *parts of surface contacted / differing el (electronic/electrical) charge or chemical from each finger and how interactive S ('screen & 'analyzer 'adapt menu for multi-users' current needs) or other advanced surface interacts/reads each finger); C (to 'adapt 'computer 'seeks 'associated features) (); CAMERA (2E251 Intelligent monitor only follows particular glove, because glove has: tr (transmitter) (ps), certain color); CART (c / microchip = "analyzes type (chemical) occurrence differently. Ink. Chemicals to cause differing chemical reactions (per finger)); COMPOSITION (music glove KN); K (like music glove, except no keyboard necessary since sys analyzes how finger touches different surface areas - KN); M (analyzer, db); MO (c); MOUSE (c); MQ (w5 occurrences sought); MULTI-USER (); nr ('notifier alerts user) (); OSC (); PR (); R ('remote control's 'analyzer 'adapts to user) (k); SCORE (); SENSOR (); SOUND ANALYZER (); STATUS (); SYNTH (); TDS (); T (); UIP (); UQ (); VISUAL ANALYZER (); VR* (); WA ().

.-R14 Apply (coating of) this material to - Water-repellent coating on hard surfaces, which can be bent. [Research Institute for Applied Sciences, NK].

*-Electronic system allows user(s) to bend and in any other way alter the shape / *position of the (metal).

*-OTD:

ACCESS **:(allows for bending of material); ARTIST *:(create sculpture/3D art); CART *:(); COMPOSITION *:(metal bends / moves according to music/osc); ENTERTAIN:(); PR:(how to bend when and how / w5); Q *:(); R:(); S:(); SCORE:(tds); UIP *:().

PATENT SEARCH Strategy & some related US pat numbers:
7G050 7G051 PVC Perforations Alerter, 7G052 Flexed Level Notifier.
-str: (polyvinyl or P.V.C. or pvc or rubber* or plastic*) and (perforate* or tear* or break* or hole* or cut or weakness* or glove* or disease* or research* or laboratory* or contract* or alert* or notif*).
--STR: same as above but only have glove with type perforations: +5317760 Seal indicator surgical glove or body covering;
-STR also: multi layer
--+ 5204632 Apparatus and method for detecting leaks in surgical and examination gloves: but this requires use of electricity and related, mostly for use in manufacturing gloves, or run gloves under water [with hands inside]. This patent can narrow patentability of my glove's electronic version.
-Str APS 69' to 6.92: 1] (poly-vinyl* or P.V.C. or PVC or rubber* or plastic*) and glove*; 2] replace glove w: alert* or noti* [notice/notify] or warn*)
-KW H: or hole* or cut or weakness* or disease* or laboratory* or alert* or notif* perforate* or tear* or break* or warn*
--79' - 82': US Pat No: 3653422 Pneumatic tire wear indicting tread pattern.
---4344320*
-+ 4909069 Detects leaks in rubber gloves via use of electrical conductivity water immersion test by wearer. This patent can narrow patentability of my glove's electronic version.
N Expansion. includes non-gloves too:
-sublime (colored) dye emitted upon deterioration (visible only in certain circumstances, eg: under ultraviolet light, or after immersion into special liquid, eg: water (w certain chemicals that interact w/ (dye))).
-material shows signs of tampering: see US Pat Classification # 427/7 +
--% utilizes anti-tampering (coating, +eg: shows tampering was made)

<3, 3.5, 3.5, 4, 3>
7G051 (This N (invention) merged w 7G050 8/95) PVC alerts user when it has cracked, or bent beyond desired amount, in tern releasing colored substance. See 7G050. Inner substance's exposure to air induces discoloration.
-analogy: cut in skin, causes bleeding, due to air exposure -> chemical change -> color change (in nearby area / lines throughout pvc / (nr = osc)).
-Shows how far it: has already stretched, and or how much further it might stretch before: breaking, splitting, being unable to give anymore. Each stage of stretch can cause applicable changes in coloration.

A2-23E CHEWING GUM: multiple flavors of ao enhances feelings of: sex w female or male; sports; monetary success; excitement; happiness; being on cloud nine; being on drugs (but no real side effects) use in conjunction w (with [or maybe somewhat without]) any above #23 series product o described therapy machine, music machine.

.-Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material w (with [or maybe somewhat without]) chemical reagents. nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) shows what chemicals were present W5. El version very impractical. 'Pockets' of chemicals in gum, used to calculate NR. Purposes of NR: type of medical condition found in-patient, patient's saliva changes according to their health "status".

+-Indicator Chem A: mixed into the gum / candy / tab placed into mouth.

+--benefits: some patients (kid) may be unwilling to take a test wo (with [or without to some degree]) it being in a flavored gum=nr or in (hard) candy form = nr. Also less reluctance from patient.

+--nr test shows type medical ailment suffered by patient due to changes in body chemistry: saliva, eg: levels / existence of (particular): bacteria, sugar(s), blood elements, and other standard medical tests in patent data base shown to measure medical abnormalities via changes in saliva.

+--hard candy: part of candy may be of non-candy hard material (not readily dissolvable in mouth) that is the NR portion built into the candy. This NR is on candy surface. Lollipop can also be attached to NR so person doesn't swallow NR.

OLD KN (invention(s)) Utilizing the nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) functions

A2-330 BUG CATCHER: entry possible where oil or other slippery surface (one directional fur, etc) inhibits exit. Eg: glass w (with [or maybe somewhat without]) lip curved inward. U of C prototype. Perhaps hide bug from view. Have enticing smell attraction.

TD (OTD): tt S ('screen & 'analyzer 'adapt menu for multi-users' current needs) med w1 adult wo (with [or without to some degree])

Option: rim of garbage can has little poison control dispensers roach is forced to crawl thru in order to gain entry to garbage can. The poison dispensers are replaceable for certain type garbage containers. TD: tt S ('screen & 'analyzer 'adapt menu for multi-users' current needs) med w1 adult wo (with [or without to some degree])

A3-2//. BODY CHECK: periodically mail in as ongoing physical checkup seeking any abnormalities that may need further prognosis. Urine (small containers with caps), blood (take small sharp instrument-then seal, syringe with needle), hair, Eye Dauber (for liquid in eye corner - when crying, yawning, anytime, for mucus especially when waking) - then seal; feces - spoon with small container; Perspiration Absorber (from arm pits

after shower before deodorizing); Skin Scraper (especially if see abnormalities); Ear Wax Stick (w/ sealer); Nose Scraper (for mucus w/ sealer); saliva (put into mouth small container then lid it after taking out, or put in type absorber (w/ fast or slow results-trying to accumulate particular elements of greater importance). Though perhaps costly, the wealthy may buy some peace of mind and or precautionary measures. Included can be instructions for self check-ups, eg: breasts... They or doctor chooses which sampling to mail in and frequency for each. Also records body readings into memory: heart beat, blood pressure... Body Sample(r(s), (Self) Check (Up), Check Up Sample(r/s)

A4-R71B MAGNIFIED GROWTH PHOTOGRAPHER: periodically photograph small growths of bacteria, fungus, etc over time period. By itself, product will inhibit sales of normal disposable cameras.

A5-110-022004 Replacement Identifier: Product part changes color when necessary time has elapsed for replacement.
-notice this when a part changes color, eg: it got too hot or received too much frequency or the wrong type. Color of change may signify part's possibility of needing replacement; its age; level of brittleness, conductivity, elasticity, of weight that changed, thickness changed, temperature, etc.
-give this to a chemical engineer too.
-both electronic and non-electronic versions of this product are to be built

+ 6B-710-083001 Interactive Lid: Lid warns when food or chemical contents expired, are dangerous to open, and or if lid needs to be better fastened.

-Lid Control: container's seal shows all the times it has been opened. To activate, user keys in date at which food was first prepared and or inserted into container. Subsequent times occur automatically.
-purpose: freshness; theft of food; studies on frequency of use and this can also show....; when item is of greater popularity, eg: Mondays, and or evenings. Some patents exist in area of freshness of contents via indicator tabs.
-alarm if lid is opened beyond date originally programmed for (people may ignore written memo, or think it is still ok - this psychologically causes people to become more wary of using food beyond date.
-contents: food for people, animals, botany, etc; chemicals; medicines; industrial supplies; etc.
-gives verbal warning upon opening, eg: "this is a dangerous chemical substance...handle with care"
-to open: lift tab of lid; twist tab of lid; press button and it will flip open from hinge, or easily pop off; etc
-programming of lid might be done from: outside or inside of lid, or outside the base of the container.
-other features: memory, "S"
-gives warning to put lid, cap, top, seal back on if: not perfectly in place; not put back on after required time (as programmed by user)
-communications, warnings and or alerts can be via: verbal announcement, alarm sound, flashing red light, "S" message

+-lid can give osc when opened, eg: 'warning - hazardous substance', candy or food store's lid says "hello", "please try one free sample" "warning...." ... when opened.
-system may be connected with scale (weighing system) which also tabulates changes in weights with lid opening times
-OTD:
All; "S"; "C"; pp; mp; uk; date; user beh; educ; toy; "mic"; portable; iq; t; "M"; alerter; osc; cart (type software programs); "T" & or modem (alerts user); uq; mq; access.

6B-690-083005 Composter: Apartment dwellers can now join the green culture by composting their wastes. Decomposes items that can't be decomposed in a dump. Best affordable system in winter when composting is more difficult for those with gardens. Solar powered.
-quickly turns food scraps into compost for the garden or for newly potted plants, etc. Good for those who 1. don't want to go outside for the compost pile, 2. want the compost into effect quickly, 3. want to keep out outdoor rats, cockroaches
-special device handles the problem of odors
-might run on solar power
-realize westerners are prepared to pay uneconomical prices for ecological value (even if it might be silly from an expert's point of view). Look at Germany willing to pay over $1.00 to recycle many of the consumer product packaging, though it could cost about $0.03 to burn or dump it instead. There are many other examples.
-it is essential this is solar powered. We want an advertisement that says "quickly turn your rubbish into compost with solar energy..."
-for biodegradable items: vegetable matter; all other non-vegetable matter stated by manufacturer as being biodegradable, eg: plastics, non-paper packaging.
-OTD:
PP; mp; all; date; entertainment; IQ; t; alerter (when compost is ready, etc); cartridges of bacteria to speed process.

% 8B-010-083004 Pet Locator: Know where your pet is. Collar's transmitter shows owner's receiver the room or part of garden pet is located.
+-(certain products from this feature number are Not Electronic) user knows if pet is inside or out, based on whether they past through their special door or not.
-(non electronic): The way the door was opened, either going in or out, results in door shutting in certain manner and easily seen by owner whether they look at door from inside or outside.
-pet's collar has transmitter, which shows if animal went in or out of door (based on direction in which pet's transmitter got weaker); transmitter shows what part of house or garden they are in, by owner looking on special screen;

- + owner's receiver can be used to find animal's collar transmitter. Receiver signals if owner is getting closer or farther from animal.

-useful for locating children. Animals in large zoos; nature areas; etc.

83

-way door was opened also can trigger electronic signal showing if animal past in or out of the doorway

-pet's collar also has a receiver...analyzer...speaker. This makes the sound(s) designed to call dog, eg: "whistle", or animal hears its name.

-"tilt" and vibration "sensor": know if pet is sleeping or walking, etc.

-OTD:

This locality concept applies to any moving element other than pets too, eg: vehicles going in and out of a walled in zone; locator; distancer

-Decipher between different animals / organisms / species via:

-nr applied to pet collars. Nr seeks: fleas, animal germs, show how dirty pet is (time for their wash).

8B-410-083008 Scale Alerter: anticipated weight changes are programmed into device, any changes in non-congruence are alerted

-Weight Alert: when weight is under or over tolerance level, alarms. Applicable for production line, scientific study, notices for changes in weight, etc

8B-430-083007 Mixer: when combining multiple elements of chemicals, etc, user first selects desired combination whereby the "S" lists ingredients and percent of what chemicals/elements to achieve formulae. User then puts one of the ingredients on the scale with or without the necessary precise weight and scale then states the precise amounts required for all following chemicals. This system can save a good amount of time for those using the scale frequently, and is very applicable to situations where the exact final weight of the combination is not crucial.

-user keys in desired mix and final weight, then each element's exact weight in shown

-sys determines what chemical is there = then now much of what other chemicals are needed to achieve desires as stated (k) by u / uip-tailor.

8B-460 Make Up Case: user keys in type of mood they want to create, and or colors wanted, and or occasion. System or user programs device for locality in which used (make up is worn differently in diverse cultures, or regions of countries too)

-initial programming by user might require them to key in the country and postal code of their address in order to make system functional. User might select from several make up choices after keying in their desires (such selection is done in many manners)

.-portable

-user of manufacturer might be able to select from typefaces, hair and skin types

-black and white (mono chrome) or color display ("S") also indicates type make up used with or without brand names

-great for young girls and those in their 20's and 30's, plus those who are bored with their looks, and or those who love creative make up. Good for home skits (plays)

-user can apply make up on their friends; good for make up sales people going door to door (system can print out coupons for right make up) or working in a store

-plays music while open; UP type music - gets one into creative mood for putting on make up

-895

-place nr tabs on face to determine chemical constitution before/after applying cosmetics / other chemicals = intern sys "analyzes" / tab nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) (no el) what type of ph balance / type cosmetics will work w face.

--Chemical Contact Analyzer 7G050: "Analyzes" ~ "Scores" ~ "Status" type contact made by material (of this N) w (with [or maybe somewhat without]) chemical reagents. nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) shows what chemicals present W5. This N copied to 7G050 Aug 95.

-"visual analyzer", uip-tailor

Containers [Plastic bags] / containers / bottles : nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) shows leakage / puncture / other deterioration.

Plastic Film: can be used as tabs. Benefit is one can better view how the film changed by: holding to light / looking via microscope.

Chemical information:

-Some of the (dangerous) chemical families (spillage) sought include:

ACIDS: hydrochloric+; acetic; sulfuric+; nitric+.

SOLVENTS: methylene chloride; benzene+; chloroform+; hexane; tetrahydrofuran+; Alcohols: methanol, 2-propanol; Ethers: Ethel, butyl; toluene; carbon tetrachloride+; phenol.

BASES: sodium hydroxide; potassium hydroxide; amines.

There are many others.

-Some of the methods via which nr (alerts u (user 'seeking 'adaptation via features' links) / sys) eg indicators include: Titration [measures how much of something is in something, showing percentage of sought after elements in material. Visualize this (for u) via the indicator (3rd chemical). Eg: indicator changes color when changes oxidation states. Oxidation states can be triggered when: air exposed to chemicals (via penetration, cutting, deterioration), or upon other chemical reactions.

--for Acids and Bases: chemicals sensitive to Ph change can also be used, eg: phenolphthalein.

D: perforation, deterioration, PVC flexed beyond desired:

---------- ---------- this diagram's hole/crack shown at the dot point area. Differing chemicals can be found above / in / between or below the lines pictured. The lines represent two (of the) layers in the (glove) PVC.

<1, 3, (3-mk, 4-pat), 3.5>

7G052 Flexed Level Notifier: User is made aware the number of excessive times and degree of bending material undertook beyond desirable levels. Applications: wire, hinges (exists?), flexible sheeting (vinyl). Electronic sensor analyzes situation: when, where, what, how something was flexed. Useful in R&D labs, eg: testing new product prototypes. Expensive or dangerous equipment part replacements: airplanes, outdoor machinery, factory equipment, electrical construction equipment. Saves on time needed to determine nature of repair problem.

.-analogy: cut in skin, causes bleeding, due to air exposure -> chemical change -> color change.

-mf costs for this higher than 7G050 or 7G051

-utilizes KN (invention(s)) for PVC parts that change color when: in need of repair, beyond certain age, etc.

+-system valuable when (pvc, rubber) materials used aren't type to readily show excessive wear and tear, or other sufferings, eg: potential harm occurs under visible surface (inside outer layer/lining)

-R260 "Sensor" judging ("analyzing"/"score") w5 of flexible nature of element, not ES.

-sys judges w5 object (wire / other pliable material) was bent. Eg: # of times bent (beyond designated parameter) -> nr.

-applications: useful in determining possible future/current* sys failures (due to faulty (broken) wires / pliable elements).

-sensor also seeks for other characteristics that may be watched for (in such potentially faulty scenarios), eg: excessive high/low temperature; (designated) chemical contact; over exposure to weather (elements) / etc. # times element was used or not used correctly/incorrectly/at all. Applications: forewarns u (user 'seeking 'adaptation via features' links) of potential damage (prior to showing up on) material; additional form of "sensor" / "nr".

-El D (Drawing): sensor = analyzer = C (to 'adapt 'computer 'seeks 'associated features) = s/osc/data tr (transmitter) to database (m)/sw holds or analyzes data / score.

.-Chemical D (Drawing): (excessive) flexing = chemical reaction (each time) = w (with [or maybe somewhat without]) build up of residue from chemical reaction = color / substance changes (appearance).

Applications: important / valuable machines where safety is major concern; airplanes; power plants; tel and cable co networks; autos.

How problems identified and or subsequently notified/recognizable (nr):
-use special color light (ultra violet) to see for problems - keeps it harder for people to copy/steal invention.
-place part / material in special solution, eg: water (w certain chemicals) -> thereupon inducing chemical reaction -> nr: color changes.
-(el) nr
-"score" "tracks" # times of designated occurrences = nr after threshold reached
-"status" measures ("sensor") situation (wear and tear) = nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) after threshold reached

-OTD D1: This N (invention) (Sys, pvc, wire, u) ~ C (to 'adapt 'computer 'seeks 'associated features) ~ 7G050 PVC Damage Alerter =
ACCESS (); ANALYZER (); CART (); EDUC (); M (); NOTIFIER (); SCORE (); SENSOR ();
+ SOUND ANALYZER (sys seeks sounds which might imply (negative) alteration of material in question, eg: sounds of tearing, friction (lack of lubricant), burning, popping, ripping), sounds of fire (in event winds flow in direction away from smoke detector).
STATUS (); SYNTH (sound analyzer (2e010 intelligent monitor) = synth -> replays sounds in pr manner so u/sys can better "analyze" status/what happened (w5)); TDS (); *UIP (); VISUAL ANALYZER ().

-OTD D2: This N (invention) sys (system 'seeks 'adaptable 'links to 'associated 'features) (OTD D1) ~ C (to 'adapt 'computer 'seeks 'associated features) =
ANALYZER (sw crunches all available data to arrive at prognosis); AP (); ARTIST (); BALANCE (); BVA (); C (to 'adapt 'computer 'seeks 'associated features) (); CAMERA (); CART (); COMPOSITION (); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MO (); MOUSE (); MQ (); MULTI-USER (); nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) (); OSC (); PR (); PS (); Q (); R ('remote control's 'analyzer 'adapts to user) (); SCORE (); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); tr (transmitter) (); u (user 'seeking 'adaptation via features' links) (); UIP (); UQ (); VISUAL ANALYZER (); VR* (); WA ().

+ Bandages (for humans, animals) show (nr) level of deterioration/age of use/storage. Value: lets doctor know its better to use an alternative bandage. D (Drawing): animal body = body fluids/chemicals/sweat = chemical reaction with one or more layers w/in bandage = nr (color of bandage's exterior or interior or window changes color matching type situation, eg; excessive blood / age / infection+.
-infection shown via: bandage interacting w chemicals commonly present upon infection, eg: excessive white blood cells and associated chemicals/body (fluid) changes. Uses bacteria="sensors", other microorganism-"sensors".

--bandage attempts to notice as many cases of infection as possible but isn't full proof.

PATENT SEARCH Strategy & some related US pat numbers:
7G052 Flexed Level Notifier:
-STR: <replace first set w set #a - #b]> (wear* or heat* or cold*) and <replace 2nd set w (with [or without to some degree]) sets C (to 'adapt 'computer 'seeks 'associated features) - e, then drop first set>(excess* or extreme* or beyond) and (polyvinyl* or P.V.C. or PVC or rubber* or plastic*)
-kW: beyond (designated levels...), crack*
2] set a: (corros* (corrode/corrosion),
-set b: (deteriorate* or bend* or bent* or flex*
-set c: notif* alert* notic* disintegrat*
-e: (fall* near3 apart) or fragile*
-KW: crack*, (time to) replace, repair*, broken, break*,

-US Patent No's *: 5170654 Method for wire bending in three dimensions%; 5145061*; 5258205* + 5,411,034 Condom changes color upon leakage: Filing Date: Aug 12, 94; Issue Date: May 2, 95. Inventors: Becks. San Jose Mercury News article on invention: Aug 8th, 1995, page C1 & C2.

N Expansion:
-material [being watched / monitored] for [changes/cracks/deterioration] can be coated w: differing (pvc, rubberized, paint, metallic (based) alloy) material, which is better able to nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) upon deterioration. The bleeding or other nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) can come from the coating / main material. There might be a chemical reaction between the coating and main material.

. What nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) shows, and how sys (system 'seeks 'adaptable 'links to 'associated 'features) reacts to NR. In other words:
How material shows (nr) (designated/sought after) type deterioration / what happens when material deteriorates:
-material can be immersed into material (chemical / liquid / water) to (better) show any deterioration. Eg: upon immersion -> nr.
-raise or lower material's temperature (over designated time period)
-utilize (el based) "sensors" built into/attached to material. Eg: may show if wire broke (no signals passing thru) or wire got weak (at some identifiable point). Shows material also may have questionable deterioration.
-NR functions via: (new/differing) colors (from bleeding) (better) show up.
-material becomes more or less sticky: smelly (has/reduces odor) / does or doesn't glow in dark or show certain colors when placed under particular light frequencies, eg: ultraviolet / porous (for germs, air, chemicals, liquids
-outer layer / material becomes (excessively): peely (peeling), becomes loose or flaky or brittle.

Applications. Parts for: vehicles (autos, buses, trains, air craft, shipping, factory (floor) machines/equipment; electro - mechanical equipment; c; computers; computerized equipment; t; gates/doors (access).

Definition of terms expanded. Any term can normally be interlaced with any other term from same group.
1] Deterioration: bruise; banged up; excessive impact (upon portion of material); crack; tear; break; bent (beyond); flexed (beyond); fall apart; (became too) fragile; wrinkle; crease; if material is a cord: a knot choking (signals tr (transmitter) via cord) results in nr.
2] Type impact: wear (and tear); excessive heat or cold; (deterioration) beyond designated parameters;
3]* Beyond parameters: Extreme, excessive, beyond, too much, unusual%, non-designated%.
4] (Main) Material: polyvinylchloride, pvc, rubber, rubberized, plastic, flexible PVC, PVC or rubber type coating / (outer layer,
5] NR, Alert: notify (nr+); show; make known%; (person can) notice (deterioration); change color/texture; certain wording becomes visible (upon the surface of main material in question), eg: states 'needs replacement'.
+ Indicator. "Sensor"%
6] "Status" of any deterioration "analyzed", via: chemical reaction (between (new) presence or release of additional chemicals w (with or [(somewhat) without]) chemicals in the main material; (el) "sensors" = "analyzer" = "nr"; human eye looking at the nr effects (change in color/texture).
7] Coating: paint; shock-absorbing material; rubberized layer; (hard) foam like substance; outer layer. Area where nr (non el) showing type deterioration most likely to be (primarily) located.

+ Material shows number of times, or level of previous usage (# of hours / degree of intensive usage, eg: used lightly or with much pressure/strain). Shows any combined total (wear upon) (surface) material via diverse means. Nr functions via: time based indicators (length of time pvc had contact w (with or [(somewhat) without]) designated elements, eg: skin chemicals).

Surface shows evidence of tampering: see patents w/ kw: plastic or polyvinylchloride and tamper*

"Sensors" "analyze" how frequently parts are flexed (beyond designated parameters).

Notifier types:
-Located on part of glove not usually used, eg: close to knuckle area (not much abrasion here, yet get exposure) - put indicator here.
-Located on part of PVC where contact / deterioration is more likely: inner layer of PVC at corners, edges (lip) (of containers: boxes, lids, bags).
-There are chemical and physical indicators.

-Latex swells when exposed to solvents. Glove turns into jello. Glove absorbs it. The sponge effect tells u there is the problem.

-Plastic wrap turns opaque when there is stress (pulled).

-Deterioration via mechanical means (something causing a hole, or tear), differs from chemical damage. Hence differing notifiers (indicators) are needed.

Other Points of Contact:

(to what u can spread chemical/germs). nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) shows where, when, what was spread (beyond the designated area/containers). Eases in knowing w5 elements were (unwontedly) spread. (Surfaces coated w/ nr material (indicators), type indicators used are matched to type need). Used on/in* all manner of items (used by humans).

+-NR sold in dispensable form and applied by U, or nr (notifier 'seeks 'adaptable 'links to 'associated 'features to 'notify user) built into / applied to products (N) prior to sale. Sold in: spray cans, (pump) sprays, powder form (u mixes (w other chemicals), liquid form (u dips items (tools) into it, or applies nr chemicals onto items (tools).

+ Bottoms: nr ('notifier alerts user) placed on bottoms of any devices that touch: ground ((ceramic or linoleum or other pvc) tile, carpet, (floor, table) mats/covers, cement, stone, gravel, sand, glass, floor wax, wood, etc), counter tops, basins, containers in which devices are placed, eg: sinks, tubs, shelf bottoms (in cabinets, refrigerators, ovens, environmentally controlled (temperature, air quality) equipment/containers. nr ('notifier alerts user) also placed on the potential surface areas these devices may touch.

+-devices which touch ground: chair / furniture legs/wheels; bottoms of boxes and other (plastic (coated)) boxes/crates; rubber grips (legs) placed below many (el) machines.

+ Commonly touched things have NR. Helps show of contamination/spreading. nr ('notifier alerts user) applied to =: pens, pencils, tel (handsets); handles: doors (for buildings, autos, el (electronic system 'seeks 'adaptable 'links to 'associated 'features) sys (door to view inside device), windows, drawers, lids, boxes, containers; Long thin material: straps (tieing devices (to racks)), string, wire, cord, rope, piping. Eating utensils: forks, knives, spoons, chopsticks, serving tools, glass wear, plastic (throw away) utensils (lab tools), paper cups, (storage) containers. Research tools: tweezers, eye droppers, pumps, trays, scales (platform) on which (hazardous) elements weighed, handles, long thin material, flat material. Eye glasses: frames, lenses. Jewelry (KN (* KN (invention(s)) jewelry w el functions)

-buttons (K) of el/electrical devices: T, Faxes, C (to 'adapt 'computer 'seeks 'associated features) keyboards, light switches

-fabrics: clothing, furniture, drapes, carpets, rugs, mats, vehicle floor mats.

Two glove system: material inside, with color indicator inside (some kind of ink). The chemical would show up on the glove. (The color is there already). Die is very concentrated in color. Color will rub off (and clean easily).

Where / How Indicators Used:

. Suits worn as indicators. Type types. Some people use several different suits per work shift.

. Wheel indicators: tires/wheels of (hand pushed) carts; (indoor) (motor driven) vehicles: forklifts (in chemical storage warehouses), car tires. nr ('notifier alerts user) can be on S ('screen & 'analyzer 'adapt menu for multi-users' current needs) placed on mobile / "portable" unit, above at eye visible range: tire (or attachment to/near tire) = chemical "analyzer" = NR.

--differing layers of tire used as notifiers: see other parts of invention.

. (Entire) surface area of anything ((chemical) research equipment, counter tops, floors, walls, *window (pains), curtains, carpets, door (knobs).

Indicators for holes:

-Dye: select die for type of material they are working with. Fingertips might be only part w colored dye.

--spray rubber onto artificial hand for creating inner lining of glove, then spray just fingers or all hand w dye, then re-spray plastic onto gloves.

Claims:

-the sweating in gloves makes it harder to know if/when there has been a leakage.

+-wrinkled nature of (thinner) gloves makes noticing deteriorations harder to see/notice. Hence need more than color changing NR.

.--U is instructed how to put on / wear / * take off gloves, so: there are no/fewer hidden areas, wears right size glove.

-more explained elsewhere

APPLICATIONS:

-Factories using dangerous chemicals are more apt to find use in products incorporating set indicators. In other words users with repeated applications dealing with the same dangerous substances are more apt to be required to buy our indicator products.

-Suppliers of dangerous chemicals can also be required to supply their chemicals with 'designated chemicals. This is easy enough for them since the purchasers will likely need them, and purchasing the chemical with the indicators is an easier one step processor for the buyer. Sample indicator types:

--containers [those the chemical is being transported in as well as empty additional containers for use with the dangerous chemicals for subsequent work]; gloves for handling; paints or sprays for [counter tops where chemicals may be used]

COLORMETRIC/Colorimetric (spelling?) ways are mostly developed so far as indicators. The other ways needing more concentration are:
-Biochemical methods: ELIZA {enzyme linked amino assay}. Eg: seeking certain organic molecules such as an antibody; the antibody 'reacts to 'designated chemical, leading to the 'designated 'notification.
-Electrochemical methods: Leak detection through electrical means.
.--A battery circuit is a simple electrochemical device.

CONCLUDES FIILE 7G

File: Chemical / 7G Parts

INDICATOR TERMS – 7G PARTS

Terms and concepts which are interchangeable within each group:

PVC: plastic, rubber, polyvinylchloride, %material, %glove [its material content, versus only its application strictly as a standard glove]; this n can be applied to virtually any material, eg: glass, metal, *wood, *stone, cement+. PVC can be inter-replaced (interchangeable) with one or more of other substances. nr ('notifier alerts user) simply is shown on such substances. Polyurathane. Other plastic like substances beginning with poly...

Seeks: (type) occurrences (sought -> nr); what u (user 'seeking 'adaptation via features' links) needs to know (happened / happens*)

NR: alert, "notify", (able to) notice/see (changes in material), warn; (u/sys) can identify type problem; how problem/occurrence shown; what's shown

> Testing for changes in PVC: place material in/under certain: chemicals, liquids, lights/sound/*radio... frequencies; % read tab; % see the type nr

> Deterioration (of pvc): perforation, tear, break, hole, cut, weakness, crack, falling apart, corrosion, puncture, frayed, outer layer(s) deteriorated, changes in color% / texture / content / strength / flexibility

Exceed (parameters): % altered beyond desired levels via: stretching, bending, twisting, pulling; % came into contact w excessive cold, heat; % came into contact w (with or [(somewhat) without]) (harsh) chemicals, bacteria, molds; % harsh environments/uses.

Chemical `A': Indicator Chemical; % first chemical; indicator - in that its used to indicate the presence of something, and that it isn't necessarily the nr ('notifier alerts user) itself, nr ('notifier alerts user) could be something that results from after the chemical reaction - see `C'; chemical designed to be used w pvc; chemical that is on the pvc before the designated chemical reaction. % `Sub-A' Dormant Chemical: something triggers its reaction w triggering agent later in time. Chem. (abbreviation for Chemical).

Chemical `B': Triggering Agent; % second chemical; newly introduced agent (chemical); the chemical that comes from somewhere in environment and reacts w/ chemical A [that was w pvc earlier]. % Reagent-B - one or more of the chemicals in the substance sought that will react w= chemical `A' (Reagent-A preexisting in pvc). Analyte: chemical / occurrence sought / what is being "analyzed" for.

Chemical `C': NR; reaction between chemicals `A' and= `B' -> `C'. Sub-C: chemical sub-A reacts w chemical C (to 'adapt 'computer 'seeks 'associated features) causing= subsequent reaction (Sub-C) causing= nr; reason is chemical C (to 'adapt 'computer 'seeks 'associated features) may not in itself be enough to catch notice/nr/change color.

File: Category / Chemical / 7G Techie

FILE 7G-TECH

TECHNICAL - Indicator Types:

. Home use chemical indicators for: cleaning; painting*; repairing equipment (chemicals in device may come onto hands); pipe uncloggers (Draino); etc.

. Gardening: Detects pesticides, eg: (chlorinated) aldrin, (chlorinated) dieldrin; organophosphates: attacks nervous system; organ chlorines family: aldrin, dieldrin, DBC%, PCB's (not pesticide but harmful); carbamates; phenoxy acid herbicides; other chemicals (commonly) found to combat insects / unwanted plant or microorganism growths; other chemicals.

* Benzo (a) pyren: in smoke (cigarettes, auto, steaks); asphalt sheets. These are poly aromatic hydrocarbons. Causes skin cancer.

. Hazardous wastes: people in hazardous wastes. Such employees can sue for large sums if they are exposed, hence can charge much for special gloves / containers. Eg: hazardous metals. SW846, and those mentioned in EPA's Test Methodology, eg: volatile and semi-volatile chemicals.

. Pharmaceutical: eg: heart drug gets into skin while doing R&D.

. Acid organic chloride mixtures: indicator may likely lend itself best with the chloride element in organic chloride mixtures. Concentrated acids (extreme ph).

-ph indicators: indicator may only indicate when ph has exceeded or entered within a designated parameter. Different parts of pvc (glove) have differing (ph) indicators showing w5 occurrences.

-paper indicators: placed inside the glove (exists), or container.

. Fluorescent indicator: less practical, some kind of light would be emitted upon contact.

. Carcinogens: chloroprene; radioactive chemicals; M.I.C..; benzene.

. Mechanical violation indicators:

-chemicals into plastics = and react w air:

potassium permanganate (an oxidizing agent); nitrates (calcium nitrate); organic oxidizing chemicals (chlorobenzine, nitrobenzene).

-Common occurrences: need indicators to target commonly occurring situations that alert user to: unwanted contact, PVC deterioration. This way fewer types of gloves can be manufactured to cover a wider range of possible occurrences. Differing chemical mixtures may often have common / similar chemicals for which notifiers are needed. Notifiers for oxygen, chlorine, changes in water, changes in ph, etc. would fit this bill.

-(Hazardous) metals: mercury, lead, cadmium.

%(Harmful) gases.

+Radioactive material - radioactive organics: indicators are specific to certain isotopes: + C14: (this is more likely to work because emits more energy, etc.); P32; H3; isotopes of iodine, etc; alpha-emitters; beta emitters.

-misc chemicals: cyanide; arsenic; phenols.

Indicators - Misc:

-high-energy emitting materials (radioactive, C14) could cause change in oxidation state of specific organic chemical indicators. The higher energy emitters are also more dangerous, i.e.: more likely to penetrate skin and cause damage once internalized into body.

-Oxidizers might be too powerful as an indicator.

+US Pat No 5,411,034: Condom changes color upon breakage. Issued mid-1995.

Chemicals sought:

-excretions from semolina

-chemicals causing alergies, asthma.

File: Chemical / 7GN

NEWER 7G050 INDICATOR NOTES:

Needs to be organized with main file by subject categories.

Miscellaneous:

-ideally the pvc will include indicators for diverse chemicals. So if any one chemical type contact is made = nr ('notifier alerts user) = activated.

-(desired) properties of plastic might be lost when mixing in indicators. Hence the right plastic-type substances are needed to work with designated notifiers / type chemicals/situations pvc is expected it may come in contact with. Eg: Gloves used near concentrated acids utilize plastics designed to resist acid corrosion while maintaining pliability and a sense of touch, while being able to incorporate ph indicators.

-age of glove shown by how much dirt collected onto glove.

.-minimum development costs: +/- $1,000,000, if person already set up. Includes: quality assurance, sales reps, customer service.

.-some gloves are $80/pair, using a pair a day.

-Radiation work: can use five pays per day, $50/pair, per worker.

-for nr ('notifier alerts user) which are time sensitive (upon exposure (to air/water/other chemical)) its effectiveness rate declines (quickly) in time): u (users 'seeking 'adaption) writes onto designated place time nr ('notifier alerts user) use started, u (users 'seeking 'adaption) pulls off (some, indicator's cover) tab (when date chemical clock starts).

-gloves / condoms / etc (attempts to) offer (extra) chemical, puncture and abrasion resistance and offer amazing sensitivity and dexterity and elasticity (returns to original shape following deformation (pulling, bending)). (Eg: like existing glove called N-Dex).

-Age of substance (food, chemical (changes over time)) kept in container = nr: shows age / when expired. KN. Patents for same/related indicators exist.

+-Sweating: gloves allow more breathing, reduces sweating; inner lining absorbs sweat, inner lining: (fabric) absorbent material / powder (talcum-like). Inner material = nr.

--Vents against sweating: el (electronic system 'seeks 'adaptable 'links to 'associated 'features) air vents built into gloves reducing sweating: covers all/most of glove [different sides of finger, palm areas, upper hand]; touch sensitive / important parts of glove may be wo (with [or without to some degree]) vent's (tubes) to reduce interference w work.

--air is pushed via pump (between knuckles/wrist and elbow, maybe on upper body part) into (flexible) thin tubes. Are comes out via other tubes / holes (on upper glove).

--these tubes may also carry (some of the) el signals to/from "sensors" in the el version of this N.

-elasticity stretches more than other gloves to: fit differing sized hands w/ minimal discomforture for larger hand sizes; bending (of fingers).

+-structure of glove is such that when its taken off hand (after long use / deterioration): its harder to get back onto hand / nr ('notifier alerts user) (also) shows up on inner lining of gloves (especially where most visible - palms/upper hand).

+-hand sizes: hand sizes need not just get bigger with same proportions, since some hands (from differing human races) are proportioned differently.

-gloves can be washed. nr ('notifier alerts user) shows beginning/minor deterioration (corrosion) -> u (users 'seeking 'adaptation) washes glove off -> might continue re-using (if safe).

-designer colored gloves: single or multi-colored; patterns. Different parts/colors of gloves/plastic/surface can represent differing notifiers (NR).

-gloves can go up to wrist, lower arm, or any distance up to shoulder*.

-Wrinkles in gloves: gloves designed to reduce number of wrinkles.

+-Glove size fitter N: contraption measures size and proportions of glove. Put hand onto diagram. Diagram has multiple glove sizes getting smaller within the next larger glove size. U knows their size by seeing which size/type they fully/partially cover with their (ungloved) hand. Value includes: having right fit so: minimize wrinkles, better see any color changing NR.

-mf location: in USA because lower labor cost countries put out lower quality goods. Quality control is very important in manufacturing these N.

+-gloves sold in package deals w certain other n/sys, eg: where safety during usage of n/sys is at issue. Designated gloves can also be simply recommended. Manufacturers of their own inventions/products can reduce their product liability issues by recommending usage of said gloves.

Works in combination with other pvc's/n/%sys that show changes made to its surface. Chemical formulas used are compatible / work better together. Eg:

-KN: colors change by presence or lack of: heat, (sun / bulb) light.

-color of plastics change color (become whitish) upon excessive strain (stretching, bending).

-chemical indicators: ph balance

% Polaroid sunglasses

% UV protection (coatings onto: glass, lenses)

% N (invention) / Sys: Nr shows what type of chemical touched any (fairly firm, eg: plastic, metal) N. % nr ('notifier alerts user) allows u (users 'seeking 'adaptation) to determine the w5 of the chemical contact. This invention disclosure simply gives example situations.

+ nr ('notifier alerts user) = (see thru) Window: indicator changes can be viewed thru windows into: containers (where rest of wall/cover is opaque), walls, tanks, tubs, test tubes, cups, test tubes, vats. Window's clarity changes to (chemically=/electronically=) match indicator's reaction.

+ nr ('notifier alerts user) shows when %any chemical touches %any object: NR helps determine what two (portable) %products touched eachother. NR bonds well material on which it is placed / mixed with. Example contacts:

-vehicle (car, bus, boat) bumpers act both as nr and also give off chemicals (tags) which are left on other product. Each vehicle / product (type) has own chemical tags.

--used by: researchers; police in determining accidents (hit and run (car to car or car to other standing object (tel poles, buildings, fences, parking meters) crashes).

-finger prints (exists on some level). Shows W5 touched items.

-foot prints: shoe marks (rubbing off soles (made of pvc type) -> interact chemically w/ indicator on floor. NR shows immediately / after a later chemical (indicator) is applied to floor. Indicator: reacts w typical shoe sole material.

-area of surface (floor) not touched (walked on, effected, altered) has differing color from what did not receive any contact. The reverse of seeking indicators for points of contact. The contact made causes = chemical reaction which doesn't show up on feasible indicators, hence the reverse sys may be used in such cases.

-changes in air quality, eg: chemicals in air: pollution, sulfers, acids, toxins. Air = contacts = surface of anything (kn).

-who/if anyone, sat where/when. Chemicals from fabrics of clothing, or from skin contact portions of furniture: bottom, arm rest.

.-time period any substance has been kept in container. Eg: foods: (drinks, coffee, tea, sodas, wine, other alcohol, juice, water, milk), vegetables, meats, flour based foods, fruits; chemicals or labs / medical patients/labs.

+-wrong chemicals put into (poured, inserted, injected*) container (for storage, chemical "analyzer"). nr ('notifier alerts user) shows = elicit tampering, eg: placing toxins in store counter products by villains. Stops people from reusing containers for wrong reasons: safety, toxicity, container doesn't belong for such applications or not designed to contain such hazardous materials. Hazardous material containers might have NR showing up when hazardous material it was designed for was inserted therein - then people/security/u knows: right container / filled up to or below designated level / villain didn't steal (hazardous) material via wrong container (such containers might be additionally hard to get (and also have certain insignia thereon).

-Air pressure / wind speed / barometer / altitude = nr.

-sweat from: humans, animals, dew (condensed moisture from air)

-grease, oil (toxic, edible, vegetable / petroleum based). Purpose: toxity, prevents slipping (when nr on floor, cement).

-pressure placed onto surface area: writing pen (w any paper between pen/hard instrument and surface w=nr).

+-NR placed in cosmetics (make-up): rouge, skin packs, eye shadow, lipstick, mascara, skin moisturizers, sunscreens, chapstick, other skin coverings. nr ('notifier alerts user) bonds well w skin. Exists: patented patch for NR when u getting close to sunburn stage.

+--hair spray / hair conditioner / other element that coats hair = nr: u (users 'seeking 'adaptation) discovers if unwanted chemicals landed on head / hairs of skin / fur coat. Nr bonds well w hair.
-contact lens: chemicals from wearing beyond designated time period = nr: coloration occurs, u sees (minor) increase in (colored) opacity.
-(house plant's) (potted) soil = level of water content (percent water) = nr.

-labels (stuck onto surfaces of n) = nr

NR for product parts shows when/how part exceeded desired parameters, eg: temperature, flexing, contents w/in the coated pvc has deteriorated or been effected in some undesirable manner. KN (invention(s)) - A5 dir. Parts include:
-rubber hoses, piping
-electrical wires covered w coating
-coating applied to any surface of: heat conductive material (metallic), part.

* Condom's NR seeks: Chemicals in fluids of woman's vagina: acidity of woman's vagina, body fluids; Saliva's chemicals. Exists in the May 95 patent awarded to Beckers?

(Designated levels of) dirt accumulated upon pvc triggers nr. nr ('notifier alerts user) seeks designated chemicals w/in dirt, eg: (auto) fumes, (household, fabric) dust, soil, (soil, food, household, water) micro-organism's chemical fluids/excretions. Surface area accentuates the level of dirt/chemicals it came into contact with (even if there are no (strong) indicators.

* NR: detects leaks emitted from containers. Perhaps leaks are forced out via (excessive) pressure from container/canister. Cracks.

+ Metal fences (prison bars) / N (invention) (kn) = are covered w coating which when cut/abrased -> nr: eye catching colors / odors / other form of [7G] 'notifier.

+ Tubing*, Sinks*, and Pipe traps have NR. Purpose: alerts if somebody tries to flush down dangerous material. D (Drawing): u = putting dangerous material down drain/pipe/toilet/sink/street-gutter/stream/tank* = nr ('notifier alerts user) ("sensor") = sensor "analyzer" = C (to 'adapt 'computer 'seeks 'associated features) = nr ('notifier alerts user) (osc, t=police/management/security, liquid (water) flow stopped/plugged (immediately)). "Score": levels flushed down (over time).

U can apply certain indicators onto material (plastic). Indicator matches chemical agent sought. Plastic is designed to work w a designated range of indicators. This versatility is helpful for researcher/u. Also saves u's

time in not having to figure out if plastic will interact favorably w indicators. MF: simply coat indicators onto off shelf products, then make molds for off the shelf products if sales are high.

If indicators are a problem in: deteriorating the plastic, not sticking to designated surfaces, washes off too readably, etc. Use: an intermediary chemical between plastic and indicator. The intermediary chemical can act as: adhesive, neutralizer (so won't negatively effect (deteriorate) plastic/other surface, gives indicator / plastic other desired properties.
-the intermediary chemical can be: color ink/paint/enamel; or product is sold only w intermediary chemical, then u (users 'seeking 'adaptation) applies type indicator needed for designated functions.

Nodules sticking outside surface might rupture after: abrasion, hard play.... = releases chemicals which react w indicators on (other parts of) surface = nr. Triggering chemicals need to be inserted into these nodules.
-can simply be a reminder to user to be more careful in future for that particular product, or maybe it becomes inoperable after the indicator shows up.

Air permeable plastics (gloves) may be more wearable if there is a nr in place. Since u (users 'seeking 'adaptation) can remove gloves before designated chemicals come into skin contact. Applications limited.

+ Spills over edge when: container filled to high / when lid placed on. A strip / bar area just below lid edge (on outside of container) has the indicator/nr.

+ Biodegrading: u (users 'seeking 'adaptation) applies chemicals to material (plastic) when it is ready for garbage / biodegrading. nr ('notifier alerts user) shows if the needed chemicals / process has been conducted: fully / to all parts of plastic, then allowing u to dispose of plastic accordingly.

+ Condoms Indicators: nr ('notifier alerts user) functions in showing the increased likelihood of breakage, though no deterioration may necessarily have occurred.
+- Pre-usage indicator: nr shows if/when* condom was previously used. Valuable so person knows their partner isn't supplying a used condom, and also reduces likelihood people will try to reuse condoms.
-tech: presence of likely chemical contact -> nr (changes color). Likely chemicals to trigger nr include: vaginal fluids, sperm, man's pre-ejaculation fluids, chemicals from skin, non-human lubrications usable for sex (both petroleum and non petroleum based).
+- Length of usage: condoms are best replaced after short periods of time.
+-Was condom used before: pre-usage indicators can come into effect after designated time period of such targeted chemical contacts.
-condoms (of especially stretchable variety, which need stretching prior to man's usage) can over time show NR because the condom has been in a stretched state beyond designated time.

--stretching -> causes chemical reactions -> NR

. Abused condom indicator: shows if it was abused in some manner, though it may not necessarily have deteriorated, eg: kids used in like an air or water balloon; excessive stretching or experimenting (w hands).

+-Petroleum based material (lubricants) have touched condom -> NR. Such chemicals deteriorate condoms, hence users need to be reminded via NR. U often unknowingly utilize wrong lubricants. Or NR shows if desirable spermicide or other anti-bacterial - viral agent are / aren't present, such as in lubrication or condom - the latter two can have the necessary indicators.

NR placed onto human body parts:

+ placed on / under (human's) finger / *toe nails. Under fingernails better shows hazardous chemical contact / accumulation. nr ('notifier alerts user) may even glow in dark - so u at least sees it when they go to bed.

-skin

NR also shows contents: type chemicals (percent of which ingredients); volume; weight (scale); level of calories (for human or other organism's consumption); temperature (KN in G dir, eg: spoon thermometer).

Alcohol level analyzer: nr ('notifier alerts user) determines percent of alcohol by placing tab into liquid. Example: you're at party and not sure of alcohol level, or feel restaurant is cheating you by giving a watered down drink. 7G050.

Contents of liquid "analyzed" via: NR-Tabs 7G050. Eg: shows levels of valuable nutritional information.

-Tech: nutritional information includes: all known vitamins and minerals needed for human consumption.

Existing products are often designed to resist color changes upon certain occurrences, eg (excessive) contact with: light, heat, coolness, (common / hazardous / other) chemicals. However the inhibiting chemical agents in said materials might be reduced to show a greater level of change. The degree to which such agents are reduced corresponds to the speed at which NR shows such occurrences happened.

Formulae generation systems:

Software used in developing / analyzing / evaluating formulae for food, chemistry, indicators, etc.

-uip of desired function is matched= w uip of differing elements / ingredients / chemicals / food elements = resulting in formulae of ingredients that may (best) achieve desired goal.

--the characteristics of goal are tied= via uip = to characteristics of available / known ingredients or * (KN) sys.

+ Important parts: UIP-Tailor, 7G050, PR, Track-Analyze (analyzes for what is best to track = db), Brainstorming SW, 2E010 20 30 40 50 Recipe Softwares.

. Examples:

1] develop an nr ('notifier alerts user) = alerting presence of salts / acids / hazardous elements = in/for: liquids / powders / surface contact.

2] Other 7G050.

3] sw ('tailored software) sys may simply help u (users 'seeking 'adaptation) by offering suggested possibilities: formulae / equipment / sources of information (reference material, on-line sources) / type experiments.

4] UIP-Tailor = UIP-DB: adjusts to u's needs.

5] Constitution needed in plastic resins / metals / product casing ("cm", "cp") or parts, for = tolerating designated levels of: stretching, bending, pulling = within designated environments of varying (extreme): temperatures, light, abuse, excessive wear, time period of element's use (age of N).

6] Patent search strategy: software* and (formulae* or recipe* or ingredient*)

7] Pharmaceutical: developing ingredients for drugs; ideas for research.

8] Software simultaneously designed to help researchers increase their (sociologically, psychologically related) creativity: KN

-"PR": sw ('tailored software) (re)programs itself = as controlled by UIP; programmer can help guide / control sw.

. OTD D (Drawing): u (users 'seeking 'adaptation) = This N sys (system 'seeks 'adaptable 'links to 'associated 'features) (sw suggesting formulae) ~ C (to 'adapt 'computer 'seeks 'associated features) =

ACCESS (); ANALYZER (); BILL (); CART (); EDIT (); EDUC (); MULTI-USER (); PR (); Q (); ROUTER (); +SCORE (given to each aspect = attached to each element of: goal & potential ingredients); SENSOR (7G050); STATUS (); TDS (scores time delay in getting NR effect); TRACK (history of previous (chemical/food) experiments conducted by: u, organizational body, db, m); U (researcher, student = "educ"); UIP ().

-Note: references in other inventions (not within 7G file) often state references just to 7G, but in actuality they should make the references to the 7G050 family of indicators, eg: N that change color on their non-screen surface for any reason.

Moved From 1G200

<Pat: OK, 4>

+1G200 Surface Color Changer: This is big N, especially expanded in other files since 8/95. See 7G. Colors change according to light or temperature, helping maintain desirable temperatures [white is cooler than black] for: 1] Roofs: paints, tiles, tar and gravel; 2] Tarps, tents; 3] Paints for: houses, billboards frames which get attention by changing color; 4] Fabric: clothing, curtains - helping maintain desirable temperatures.

-changes color by the season (dark for winter, light for summer) to save on indoor heating/cooling costs. Color is changed chemically (via drop in temperature or from darkness or light). Chemicals in: paint, or flexible covering material, or made into exposed surfaces of materials, eg: roofing material.

-this N copied to G\GE (G Excellent) or G\GG (G Good) 8.94. See it for updates.

.-Roof of special temperature / * light sensitive material, of hard material (plastic, clay's glaze, * metal's coating (enamel). .-Change color ^via: (easy) coating/spray (changing color as with chameleon, which can be changed back to previous color).

--change color (%nr) via rf or other emission

--this is an older N of mine?

-Dog House Roof: easier to market, keeping temperature more comfortable for any type pet.

-Sell N in forms of: separate tile units, canvases, paints, enamels, mixtures with tar (and gravel)

-Applications: roofs, roadways, driveways, decks, vehicle exteriors, machinery or equipment used outdoors;

++ How indicators help keep users warmer and cooler - VALUABLE!

++Darker color roofs [color gets darker in lower temperatures] attracts warmth. Conversely, in hot weather, the roof color becomes light, resulting in some heat reflection.

+--HVAC ducts with outdoor light exposure: they to some degree transfer heat into/out of buildings. Can also coat such appendages with insulating material (pvc related, or other material) coming into contact with outside elements/temperatures.

+--clothing: coats, hats, shoes - keeping users warmer or colder according to environment (outdoor/body temperature, (outdoor) light);

+--(large outdoor) billboards: get more attention by its changing color in up to 20+ ways according to differing occurrence levels (light/temperature/*humidity/pollution (of designated chemicals, eg: carbon monoxide, mercury, lead)-used by pollution control or air filter firms).

+--Overhead coverings: roofs, tarps, (outdoor) hard surface ground coverings

--Misc: underwater*; when device is wanted to be less noticeable (bright in day to blend with sand, then dark at night to avoid reflections from flash lights....); umbrellas; bags; computer (covers) used outdoors; (public) t; canopies (at building entrances); tents; tarps; *parachutes; window sills; window's glazing (used w or wo (with [or without to some degree]) protection against: UV, heat transfer (heat loss in winter), sound) - window changes color at designated occurrences, becoming more/less opaque as well; walls (of houses, dividers);

+-this N is similar to / compliments / synergizes (from benefits to user point of view) w (with [or without to some degree]) 7G050 PVC Notifiers. Eg:

--type of light (intensity level (as measurable by light meter) / heat level determine level/type of color change.

--NR shows the combination of type chemicals and or type light / heat, and length of time(s) surface had such/any designated occurrences.

--tabs used to monitor light / temperature levels

--"sensor" = "analyzer" = C (to 'adapt 'computer 'seeks 'associated features) = NR

.-use known chemicals that change color accordingly, and which are able to be reused for 3 or more years, and maintain fairly constant form in adverse weather conditions. Waterproof/pliable (can be applied to (pvc sheeting))/for paint chemicals.

.--a limited example: products marketed to measure human stress: lower body temperature signifies stress and creates different color (onto sheet material) than normal or warm temperatures.

-color changing material can be applied to: cars, pool bottoms, clothing, outdoor products (tel, vending machines, bikes, etc)

-D (Drawing 'seek 'associated 'links): heat / *light = chemical reaction = color changes

-D (Drawing 'seek 'associated 'links): heat / *light = "sensor" = tr (transmitter) signal to material which changes color.

-this may (also be) (primarily) only a chemical invention.

-copied to better N file 1.95

-this special coating applied to any product where its temperature is needed to be kept cooler or warmer while in sun/*other light.

-technical: changes of color due to light is in photochemistry; changes in temperature are physical chemistry's area of thermo...

+ Fits with 7G

. apply to:

+-(building, glass, pvc) windows: painted / other type coated surfaces change color.

+-(outdoor) furniture: avoid sun damage / excess heat (easier to sit on metal/plastic furniture).

-coatings of any other products: K; product casing ("CP", "CM" (as mentioned in KN));

-acts as camouflage: element changes color

+-venetian blinds: allows in light, yet limits visibility of outsiders having ability to look inside.

--If u (users 'seeking 'adaptation) wants to block incoming light during day, they can simply turn the blinds the other way around.

—Only light from outside alters color/opacity of blinds. Eg: indoor light (w different light frequency from sunlight) doesn't effect color change.

Light -> hits one (outer) side of each blind only. The other side of blind blocks the type light frequency that would effect the other side (outer).

-altitude, depth below liquid (water) surface, barometer, air flow (wind, aerodynamics (that are favorable (as pr))). nr ('notifier alerts user) locate on diver's mask - where u can see NR (on glass).

--also applies to any other clear material: windows, containers, windshields.

-auto windshields, windows

a73

-(chewing) gum color. NR shows: presence / lack of any/designated flavor, eg: rose color shows cherry flavor exists to the degree of its red color intensity [pink is lighter shade]. NR shows health of human chewer [saliva chemicals carrying designated chemicals / ph associated w/ illness -> NR: color changes.

-Tires: NR shows dirt (grease) level or presence thereof.

-certain elements (on surfaces) change color only to certain light frequencies, eg: type light bulbs, sun, or sun higher than 45 degrees over horizon (light intensity), sun not covered or covered by clouds.

+-hard candy (lollipop): NR attached= to stick = its surface comes in contact w/ saliva = while its other sides are surrounded by candy.

--

-finger prints: become more readily: visible / fixed (not easily rubbed off) after =: temperature / light has changed / or change made to it.

-(tab) Nr shows when product's packaging was opened. Packaging might be air tight, hence NR shows presence of any (excessive) new air (over extended time period).

.--solves problem of limited air contact just prior to sealing packaging and air contact through gaps after sealing. Uses time based NR (KN).

-ovens: NR shows when desired temperatures over desired time period has been reached, eg: 1] set # minutes temperature was over 80 degrees Celsius; or 2] same as #1] but if temperature went up to 90 degrees, then time period before NR shows up is reduced.

. Patent search strategy: Color* near5 chang*. Replace change w: alter*, sensor*, senses, sensing; indicator*.

. US Patent No's:

.-Some patents here are very important, others aren't, thought the designations for patents (especially for this N, are less likely to show their greater / less than value).

-5114218: sunglasses change colors via el mode of altering pixels in lenses; 492535 time color indicator; 4659619 Magnets change color of fabric; + 4659649 photosensitive systems showing visible indication of exposure, eg to radiation; 4687728; 4751912 exhaust gas spillage indicator; 4788432 Radiation...; 4804275; 4804630 4805188 4814269 4818215 4820316? 4820755; + 4822743 Method and cloth for detecting leaks in closed bodies: applies to gas leakage...; 4829187 4863694; + 4750814 Window glass of auto changes color for anti-dazzle; + 4382700 Shelf life indicator: wick from material, eg: mineral jelly shows changes in content's chemical contents; + 4430299 monitors chemical reactions; 4456723 4467025 4472507 4482635; + 4488547 Face mask: changes color to signal its loss of ability to filer bacteria due to moisture build up; 4490440; 4538811; 4615828; 4614715; 4615828 4524264 4629330 4145186 4150570 4166058 4170190 4191125 4196167 4201548 4212153 +4215562 Detects surface ans subsurface flaws in rolled products 4220016 jewelry changes color according to u's body temperature 4231370 4235108 4244693 4245997 4248597 +4249273-pool tile changes color (KN color changes to warm the pool when its too cold - but is this KN (invention(s)) same as patent?) 4258000 4263850 4271121 4276190+ 4277368 4277848 4278439 4291122

=

-exists: mood rings; window panes - if they're constructed in double layers (cross polarization controlled electronically - rotate, then color changes).

The parts file titled `Parts-Med' also is applicable for understanding the parts' codes used within 7G file inventions, for medical, and biological (research) applications.

File: Chemical / 7GQ *

INDICATORS - FILE 7GQ

Questions: Some of the areas needing research

1175

Miscellaneous:
-How small pockets made into plastics: opening .25mm or less with width maybe .5mm and depth maybe .5mm.
-How PVC constructed, eg: layers, color dyes, el "sensor" sys (how el analyzer knows what's on sensor).
-where would you look for this info, name titles...
-timing of occurrence
-which type plastics for gloves might allow air permeability
.-what common equipment needs extra nr ('notifier alerts user) around. Can explain yet keep n secret?
%-indicators for targeted chemicals
%-Secret: additional targeted chemicals.

. nr ('notifier alerts user) types: or state just triggering chemical
-coatings
-mixings
-indicator shows up under special lights
-indicators that may withstand high temperatures
-body infections
.-high / low temperature
.-flexing
.-gen use perforation noticed via: oxidation, chlorine

. Chemicals sought:
-hazardous chemicals

. How 'indicators work with = hard surfaces [such as bonding, how well they act as indicators]:
-plastics
-cement
-glazes, enamels, paint
-metals
-glasses

. nr ('notifier alerts user) location: How dangerous chemicals spilled/spread then come into contact w humans in lab/home (concentrate on indoor contaminations).
-name other places NR's are placed

. Str:
-difficult q later for person's crup (increasing of creativity)

-mention both any known chemicals, other ideas *, where you'd look

File: Chemical / 7GR

INDICATOR RESEARCH NEEDED: COLOR CHANGES FOR 7G & 1G20R

. Material: changes indoors and outdoors**
-vinyl, eg: aprons, tarps.
-hard plastic, eg: plastic containers, Formica, vinyl floor tiles
-paints, enamels: surfaces they cover include: plastics, metals, woods*, cement*
-rubber and rubberized plastics, eg: thick and thin tubing and gloves.
-fabric (cotton, polyester, other)
-metal surfaces*: all commonly used metals found in laboratories, eg: anodized surfaces
-glass**
-coated wire: electrical type wires of all types
-asphalt, cement, ceramic glaze **

. Why 'indicator changes:
-do indicators show changes in temperature [and if so how rapid a change], and or the current temperature:
.--temperature at that moment (eg: from zero Celsius or 20 Celsius, to 30 Celsius or 40 Celsius).
-excessive temperature reached over time - accumulated effect. Especially over 40 Celsius for two or more minutes a time totaling perhaps from one hour to 100 hours or more.
-hazardous chemical contact: list common and semi-common chemicals with their indicators (that can bond with the type surfaces). Eg: acids, radioactive material.
-age: which indicators can be used to speedup the process of discoloration to plastic.
-** Damaging effects from sunlight, eg: its UV [ultra violet light]

. Notes:
-water, air and cleaning (with soap and water) will hopefully not destroy the indicators or plastics.
-What about forced water from automatic cleaning machines.
-some fragility or other problems caused by indicators will be tolerated at this stage in the research
-type materials mentioned are very general and include other materials of similar nature that you can find might work with the needed indicators.
-* material may be underwater

File: Chemical / Chem General 7G

CHEMICAL GENERAL

*1J081 LIQUID QUALITY "NOTIFIER": drop the element in the liquid [water]= element tests the quality of the "designated" liquid. Check the water's health safety level for: bacteria, viruses, (in)organic compounds.
-Shape of "notifier": tab; straw [tester on bottom of tip]; pill that dissolves in liquid and [may change color to 'designate level of desired safety/contaminants/etc.
-See 1J080; file 7G.
-What Color Changes Can 'Score: any 'designated chemical contents like: salt, glucose (for diabetics), (known) allergens (for user), %calories (per cubic mm), ph balance (acidity).

7J-08 ALTERNATING GLASS: Glass alternating between opaque and translucent:
Glass can be clear, or act as curtain depending on the flick of a switch. Windows and other forms of glass can be useful for either light and views, or desired privacy.
. 'Images appear on glass

Technical:

--By running 'designated [electric] 'frequency through the glass, pixels or other [powder size chemical] elements are triggered to create opaqueness [to the 'designated level].
--Instead of glass can also use: plastics; [bent] LCD; % any material used in current/future computer screen technology.
-Technical Alterations - cheaper or more feasible:
--Different colored lights are cast upon [glass] in 'designated pattern.
-Older KN?
-'Program window to create any 'designated color.
-% Glass functions as an electronic 'screen, showing the desired information or 'image. Eg: lettered wording; %television; etc.
-Changeable stripes or other 'images can be 'programmed in to serve as safety against people walking into the glass. This is more applicable for glass doors when guests are over. Many people have hurt themselves by walking into clean glass doors.
-Glass is programmed to communicate any form of [visually related] 'notification. 'Notification on the 'image level can accompany any other function like audio 'notification.

. Glass with creatable 'images:

-Alternating/moving lines
-Any moving splurge of colors, eg: like fire works; moving shapes; etc.
. Miscellaneous:

-Glass surface can be smooth or slightly rough (creating an opaque surface w/ minimal loss of light transference).

-The glass itself need not be consistent. Different sections can create differing light colors. Eg:

--Lines or wording can have designated particles for creating designated 'images.

--Recessed areas of glass may correspond with differing particles so both different colors and the recessions convey a word. Maybe the surrounding glass is without color, or a differing color.

-D (Drawing 'seek 'associated 'links): (electric) light source -> clear glass (without obstructing particles) -> particles -> light is reflected (away from original light path).

. Example products:

-Cut glass of different shapes like prisms, etc: light is reflected in interesting ways according to: 1] how the glass is cut/shaped; 2] the particles and how laid out; 3] the direction and type source of light.

-[Different pieces of] glass can move/rotate in a pre-'programmed form. Create a show of [colored] light.

--%Light show automatically corresponds to the type music/sound

-Planet earth globe (or globe of abstract colors): each country / continent has differing lights.

--Instead of the globe spinning, the countries move on the globe.

-Novelty battery powdered globe or other shape. Can be carried about, or used in game, or handed to friends.

-Glass flooring

-The glass can also serve as a form of light, by transmitting light from the glass. Eg: light source comes from glass edge, and particles in the glass reflect the light out [at 90 degrees from the source].

--Such glass can be flat [and placed along a wall]; or in interesting [curved] shapes [such as globes]. Portions of the glass might have holes [showing light source isn't from a central light bulb].

--Multiple layers of glass can be over each other. As each piece may be cut differently, the areas of non overlap can depict different colors. Eg: inner layer color shows through the hole in the outer area; or the area where the yellow and green glasses overlap creates a blue like light.

See: Ice ball abstract 1J080, etc.

File: Chemical / 7G *

* LESS IMPORTANT 7G ASPECTS

* Exists?

-Similarities in existing products: there are many two-layer things in world, eg: when bending one layer, it can expose other layers; credit cards change color after pressing in typed name.

-Similarity: similar to one-use gauges for determining the stress a package has been subjected to when shipping.

-Deteriorated PVC can naturally change its color, (visible) structure, and flexibility. Deterioration: aged, abuse. Yet such chances may not signify clearly type occurrences sought, or only happen after levels of abuse have exceeded the level of abuse that needs to be determined.

.-Liquid or hard form of PVC has differing colors / properties. Properties also differ between differing temperatures while PVC is in its hard form.

-which chemicals react to which chemicals to serve as nr function; which chemicals mix well enough w PVC when forming PVC product. Situations corrosive to PVC.

* Legal:

Label on PVC (glove, condom) explains:

the "nr" is not to be relied upon; "nr" may give hard to identify notice to u; no warning might be given. On other products, U told nr process is not always certain, nor will it nr u about other types of potential problems not listed. Despite warnings, some countries may still inhibit usage for all aspects of this product.

-idea is the nr effect is better than having no such nr.

* PVC Falling Off: When element (outside layer / detachable part) becomes damaged/deteriorated it (automatically / more readily) falls off / apart. Via: its (coating/outer layer) sticking mechanism loses its grip to main n/element.

-this happens because: it better nr u of condition of PVC; better see nature of underling problem (which might not be visible wo something coming off).

* Corrosive Situations / Environments: -> triggering NR

-use in corrosive atmosphere environments: US Pat 5316035, 5112664

-when PVC material is not made of corrosion or other easily deteriorated material, for whatever other reasons, eg: such PVC materials lose the needed characteristics for whatever desired applications a u may have.

-usage of rubber deteriorating materials, eg: fluids US Pat 5275054

-bacteria, molds - US Pat 5247984

-contact w/: (severely) hot or cold temperatures; acids

-(negative) (chemical / electrical*) reactions between PVC and what PVC comes into contact w/.

-rust or other corrosion to surface / material% PVC is attached to. Intern causing: PVC to deteriorate (more than necessary), PVC to (partially) detach / fall off (more than might be necessary).

-Other types of deterioration in pvc. US Patent No's *:

5334335 5318805 5298254 5295541 5280670 5277726 5262237 5254192 4919986 4743468 4492781 4409270 4260439 4181547 4074412 4123309 3975558 3926895 3920497 3887413.

* EXCESSIVE PUNISHMENT NOTIFIERS: Old KN from A5 dir.

. Indicator to show temperatures have exceeded desired parameters:

-Some kind of metal in coating. Then gets easily oxidized at higher temperature.
-Apply coating via: paint / spray, done by mf / u.
.--include this indicator type into the plastic itself. Oxidations shows up on the surface area of the plastic.
. The problem of the high temperature needed to get plastic into liquid form prior to molding needs to be somehow handled, eg: some indicator that indicates the second time excessive temperatures have been reached [first time would be when plastic was in liquid form].
. indicator shows when temperature entered into some zone w/in the 30 degree to 100+ degree Celsius range.

Legal Elements:
-warnings are placed on the glove, box, wrapper, and or on inside * instructions.
-glove material doesn't cause rash to skin. Maybe the major legal liability concern if other precautions taken. Differing people have differing allergies.
-there are many needle stick law suits, but none known for gloves.
-language of warning label in main language of target country. Maybe don't need to put on secondary language instructions.
-these products can establish new standards of care in diverse industries.
-product liability law suits pertain more to products which are dangerous in themselves. This n normally has no moving parts. The hole or other deterioration or contamination doesn't cause the injury itself, and is one step removed from the injury.
-can get product liability insurance.

* Exists:
. N-Dex Glove: once its violated (gets hole), it falls apart (shatters, hole gets larger quickly). Glove made from Nitril. This doesn't change color. Problem: hand may be in dangerous solution upon violation resulting in increased danger to health. This glove is the best seller for America's largest glove manufacturer.
-Retails for $11 per dispenser box: 50 pairs per box.
-From Best Manufacturing (USA's) largest glove manufacturer. They only make gloves. Tel 800 884-6413.
--Distributor - Glove 2000: 800 554-5683
-major uses for N-Dex: working with blood, fire fighters, etc.
-fits and stretches like latex; resists oils, gasoline, kerosine, fat, and other solvents. Latex falls apart but this generally doesn't. This is three times stronger than latex.
-wasn't designed to fall apart upon getting a hole, so said salesperson, maybe because it doesn't always alert user to presence of a hole.
-US Patent No. 5014362

* Probably exists: indicator paper worn by user beneath glove to notify if hole has been made. Was probably advertised in some safety and health magazine between 8/93 and 8/94. Maybe it wasn't successful since its not now a common item, nor apparently advertised. This is merged with our PVC Notification product idea.

4G120 Plastic parts that change color with age. Many applications. Eg: when part needs to be replaced, such as for repair, or undue weather conditions. Obvious since plastic often shows color change, even if unintentional? Needed repair occurs when entire part, or part of part, or part's label change color, or a written inscription becomes visible. Applications show: brittleness; exposure to elements, eg: excessive temperature or humidity.
-See KN, probably A or B* dir.
-Changes in color can signify one or more of the following^ for the said part / object with multiple parts: temperature/environment/weather conditions in which it was ((too) cold/hot/humid); multi usage ("multi-user"); amount of use it received (stretching (of rubber)); level of (sun) light it received.
-Applications:
--plant pot shows^: level of moisture in soil, nutrient level. Patents exist for indicators showing soil's moisture level.
--machine hoses / ((pvc) coated) wires show^: brittleness, age levels, ability to conduct (fq/electricity) and level/"score" of impedance factor(s)
--if item (part) received excessive^: temperature (high/low); humidity/moisture; stress (bending/stretching*)
--battery power levels (seen via window). Same or related patent found on database.
-patentability: though issue of plastics changing color w/ age couldn't be new, the idea that its timed for specific occurrences might be.
-copied to better plastics N 1.95For Techies:
-when multiple elements are measured (simultaneously), different sections of product can show designated colors for designated situations, or, multiple colors can be noticed at same time, eg: normal color is white, blue designates cold, red hot, and purple shows product has been in both extremes, but more in the cold since the purple is blue-purple.
-D: parts: [] (cover or box) / (x) (cover or box) / O / o / <> / ═══ (pipe) / _____ (wire)/ ||| / \\ / X / C
-this is probably an earlier KN in A directory.

Repetitive data: color also changes when / due to changes in: Airborne chemicals: odor (air quality index, pollen, pollution, level of other chemicals: oxygen, carbon di/mono oxides, hydrogen...dust). % (certain fq ranges of) sounds. % vibration: movement, friction, jolting (within certain parameters).

CONCLUDES THIS CHEMICAL FOLDER

EXERCISE RELATED INVENTIONS:

1182

File: Category / Exercise

$$ 1G22 Pedometer Reward Generator:

REWARD GENERATED BY USAGE LEVEL:

McDonald's pedometer: Related patent.

Exercise and loose fat. Pedometer scores how many calories were burned, and in tern get a coupon (certificate allowing customer discount on their next purchase at restaurant). Pedometer might spit out a coupon. Rent or borrow pedometer from McDonald.

-D (Drawing 'seek 'associated 'links): u (users 'seeking 'adaptation) (walking) = "sensor" = pedometer ("analyzer", K, S, Printer (of coupons, "score", "sw")).

--"SW": uip; store selects how sys (system 'seeks 'adaptable 'links to 'associated 'features) will "score" -> reward user; UIP - adjusts required calories to be burned / level of exercise with U's age (range).

-Patent search strategy: Pedometer*

-US Patent No's: 5164967 5117444 5065414 5117444 4649552 4651446 4741001 4771394

-+ 4855942 Pedometer and/or calorie measuring device and method: quite similar to KN, yet abstract doesn't mention that coupons are given out, nor that device is rentable from store.

-coupons can be given out simply for quantified level of exercise, eg: each kilometer (walked) equals one point.

-Reward Types: caffeine drink [keeping clients on the go]; food; music and other 'cartridges' 'entertaining people. * Certain items purchased result in greater 'correlated points earned by clients, eg: caffeinated drinks.

--more free usage of [el] device / sys / access

--air mileage; long distance t usage; gifts or cash back [as earned by Discover Card or American Express].

+ Any N (invention) that is= 'scored= can 'react w= rewards.

-Score: Any type 'scoring pattern can be applicable, eg: $ usage level; time quantity usage level; 'score only for particular type of [newly offered] services. Score = Access-BA.

-D (Drawing 'seek 'associated 'links): u (users 'seeking 'adaptation) = activity / function = sensor / score = C (to 'adapt 'computer 'seeks 'associated features) = outputted services / functions / rewards.

-Algorithm types: the greater the level of reward the level of point accumulation increases / *decreases as 'designated [based on activity w/in 24 hour period]; time of day / year= corresponds to level of points as well.

+ Other devices that measure activity / u's usage= then giving rewards:

-PS-Zone: rewards according to u's PS actions / movements.

-Gasoline usage: if clients buy all / most gas from same vending group, eg: Standard Oil, they get cheaper / free [auto repairs]. Auto has 'sensor= which senses the 'tagged chemicals used only by Standard Oil. Advertising states: our gas keeps your car running longer and better.

-Cybernet: the greater frequency of u's accessing particular [groups of] sights the more points. Access = Score = Rewards.

-'Exercise equipment = score: treadmills= scoring speed / meters traversed; weight systems= scoring total weight w number of repetitions [giving higher scores to greater weights than number of repetitions according to 'designated algorithm] = rewards in air mileage or usage of gym.

-BA = Score: good behavior= 'results in= rewards. Eg: child's good behavior in getting good 'scores on computerized tests; their not watching excessive television or 'interacting w (with [or without to some degree]) el (electronic system 'seeks 'adaptable 'links to 'associated 'features) 'games.

. OTD (Other Technical Details) D (Drawing 'seek 'associated 'links):

U = This N sys (system 'seeks 'adaptable 'links to 'associated 'features) [Reward Generator] ~ C (to 'adapt 'computer 'seeks 'associated features) = U's activity/reward = ACCESS [] // ARTIST [] // ANALYZER [] // BA ('behavior analyzer) [] // CART [] // EDIT [media u 'interacts w alters according to u's score] // EDUC [u goes to higher level] // MULTI-USER [] // NR [when / how rewards dispensed / accumulated] // PR [] // PS-Zone [] // Q [] // R ('remote control's 'analyzer 'adapts to user) [] // ROUTER [] // SCORE [] // SEEKS & REACTS [] // SENSOR [] // SOUND ANALYZER [] // TDS [] // T [] // TRACK [] // UIP [] // VISUAL ANALYZER [] // VR [] // WA [].

File: Exercise / 2 Battery

4E010 MOTION POWERED BATTERIES

Patentability in big question. See the Patent section below. Nothing like this for sale on web found.

ABSTRACT

Attach battery charger to body appendage or moving object. For example place it on one's leg prior to exercising, or attach it to a bicycle wheel. Movement energy is transferred into stored battery power. Exercising energy charges up your batteries. You can charge your batteries while also getting the health benefits from exercising! Save money from buying replacement batteries that end up in landfills harming the environment. There are many other innovative features related to this confidential invention as well.

APPLICATIONS OF INVENTION & PATENT CLAIMS

Attach to: lower leg, soles of shoes, tread mills, body muscle toning equipment, bicycle, even car hub cap, etc! Also harnesses energy from: ocean waves, automobile breaks. Charger gets its energy from kinetic movement.

Good excuse for exercise while saving environment and electric bill. Joggers induced to keep steady pace by the powering of their walkman radio.

Marketing: shoes/other devices being sold can be marketed as generating certain units of energy per kilometer walked or run, by person of certain weight. Or, per miles biked, or, per kilograms lifted/pulled. Eg: energy generated per mile, versus gallons consumed per mile by cars. Walk / exercise / bike instead of driving.
-exercising will pay for the product in terms of the electricity and or non-harm generated to environment.
.-governments might give tax deductions / rebates for these products: for manufacturing, purchase, or usage. * "Score" for level of usage.

"SCORE":
User measures how much exercise they accomplished. The more or harder the item pushed, moved, hit, the higher the "score". Let's users feel: better, more masculine, stronger, and productive. Also shows level of exercise (force), number calories burned, amount of energy generated / + stored into battery.
-'Screen shows how much energy is being generated by which type action (while action is occurring), eg: while on tread mill. Software compares results (calories burned, energy generated) for differing activities.
-osc sounds (buzzes nicely, "stereo") (louder) according to type/level/intensity of exercise.

HOW WORKS:
-type recharger (mode) used depends on type motion (direction/speed/duration of (non repeating) movements) most anticipated. In tern, sys can better harness movement energy by: (self) adjusting (uip-tailor) its moving parts.
-uses batteries and rechargers that are the most energy, cost efficient, and safe for user and hopefully environment, eg: nickel-cadmium batteries.
-any alternator might be coupled w/ other energy generating sources: solar energy, (standard) batteries, electrical power (from electric plant), windmills.
.-Need a creative magnet field [moving part]. The creative field moves inside = stator, like pendulum. Upon moving - rolls around. * The sys (system 'seeks 'adaptable 'links to 'associated 'features) need not be attached (to wheel hubcap). Stator collects = energy and amplifies = [metal core absorbs the energy then = gets induced into stationary wiring = (which is wound in a special manner)]. = Now there's A/C current via the rectifier. = The plus [+] and minus [-] part of rectifier connect to the battery's + or - ends/sections = intern charging battery.
-the pendulum and stator sub-parts of this N (invention(s)) might be off the shelf parts.
-Adapts to each type motion/exercise. Either different devices or device adjusts its way of harnessing the type motion as its happening.

MISCELLANEOUS:
-cheap to manufacture?; can see many buyers.

-Body movements: jogging, walking, hiking, aerobics, swimming (waterproof), chopping (food, wood), working (house construction, farming), dancing.

-Problems: Would require much exercise to power battery. Can develop a good motion to trapped energy conversion ratio? Likely somebody already conceived it?

--But even some charging might be useful as the needed motivation for people to exercise. The health benefits might not always be enough. Also, exercising in this way can be 'scored, showing thee increased battery energy storage. Good for environment. Etc.

.-extends battery life. Accompanies other battery life extender sys, eg: solar power.

-Psychology: gives extra excuse to exercise; maybe the mechanics are slightly improved upon such similar battery system previously used for watches in 1970's, 1980's*.

+ D1: gyrating (wheel) = turns as moved = causes friction = surface area of contact point = converter (friction to electricity) = tr (transmitter) = battery~c~s (score: battery life level)

EXISTS:

.-Seiko has quartz watch: wrist watch not to wind main spring (not to wind main movement). Electric currents go through (quartz). Converts motion to electric energy. Differs from Rolex. This might make it less likely to patent this invention.

.--Rolex watches, get kinetic motion -> physically tightens spring of mechanical watch.

-rewindable spring based watches. Alternator (car).

If questionably patentable, argue need for product.

-tennis shoes lighting up as u*it walks, maybe motion powered. -R83 Pedometer suggests target pulse rate for exercisers. Users input age and resting pulse prior to starting out. *[a copied KN?]

.--[Omron Corp: Nanajo-Sagaru, Karasuma-dori, Shimogyo-ku, Kyoto 600 Japan. Tel 075-344-7000 NK 23 May 94]

-`Life Cycle': exists? exercise bike w led screen powered by cranking pedals.

-Exists: alternator harnessing ocean wave energy: 4447740

-appears the watch alternator battery is the only known product which converts motion and stores into battery form. Other alternators use the energy as its being transformed.

* HOW ATTACH: place on object where there is greatest movement potential, eg: farthest out (with widest swing); point where greatest energy can be created, sometimes trading off for the easiest way in which it all can be used, eg: safer, less pressure required by user, product functions closer to how it would normally function without the energy converter such as with less obstruction, and less bulk or matter (wires, plugs, converter, battery) sticking out.

+ PATENT SEARCH Strategy & some related US patent numbers:

4E010 Motion Powered Re-Chargeable Batteries: ()

-OTD: (auto) flywheels.

-kW: alternator kinetic batter* motion arm leg

-US Pat Search Str Battery: alternator batter*. Bib disk 9.94. 5285146 Regulator circuit for voltage for charging battery by...; 5132605; 5119010; 5305798%

--str: exercise* alternator*: 5238462 Stair climbing exercise apparatus utilizing drive belts: battery not mentioned; 5135447 Exercise apparatus for simulating stair climbing: battery not mentioned.

--STR: ("motion powered" or "movement powered") and batter$ and (charge$ or charging)

-differing motion powered batteries exist, but for exercising?

-S: call alternator companies, asking re feasibility

-Str: one word - alternator

1] <replace w 2>(exercise* or shake* or shaking* or move* or moving*) near10 (alternator* or batt*) and (charg* or recharg* or power* or energiz*)

2] following replaces #1]'s first section: (bicycle* or walk* or radio* or treadmill*)

-RM: alternator invention abstracts hard to understand, hence unreliable searches.

-79'-82': 4227092 Hand cranked electrical power source.

-US Patent No's: + Exerciser with flywheel 4470597 1984; Exercise bicycle attachment 4613129; 4996637 Electrical converter utilizing switched uni-directional and bi-directional energy sources. 4480966 converts surface motion of liquid.

. US Patents: 6629574 6281660 6037728

+ 6316906 – Kinetic battery charging system for cell phones

+ 5949215 – Battery charger

+ 3792307 – Kinetic energy to power lights of bicycle through pedal power. Replaceable rechargeable battery not part of this?

++ 4837494 Generator and rechargeable battery system for ski.

MOVEMENTS CREATING ENERGY (KINETIC)

Type movements harnessed. D (Drawing): motions = energizing alternator = resulting functions (battery charging). Also ad alternator to:

*1] Doors: outer part w greatest swing motion, or at or with the hinge.

2] Exercise equipment: Treadmills (in tem system requires less/no electricity to run); Muscle building equipment: level or resistance is alterable, and the greater resistance pushed against, the greater the energy developed, eg: bar bells, Nautilus type equipment

-replaces weight lifting (for muscle building) / body toning equipment involving pushing or pulling or * stretching of device: the resistance u encompasses -> powers battery. Leg presses are one of the greatest energy generators per push.

--eg: pulling or pushing (padded) part = pulls attached cord -> as cord moves, its resistance -> alternator -> powers battery

-contraptions attached to joints of human / animal body = its movement (especially if much resistance is involved) -> alternator -> powers battery. However may cause repetitive stress injury.

*3] Tennis rackets: or any such object receiving banging pressure.

4] Balls: tennis, basketballs, golf, baseball*, etc. 5] Shoes, Pogo stick, walking stick: also harnesses the energy from downward pressure. Teenager can power up their walkman batteries with designer tennis shoes. Balls p100, 101: motion of balls generates energy, eg: ball inside ball is key mechanism

*6] Vibration converter attached to: automobiles, trains, earthquake zones lighting up entire cities without power (joke).

*7] Office equipment: keyboards, staplers, drawers, pens.

*8] Toys: autos (exist?); dolls (energy from their appendage movements); race & train tracks; Yo-Yo's (KN)

9] Rollers, wheels: bikes, autos, carts (shopping).

10] Stair steps, walkways*: as one steps down, the energy created gives some upward boost to human walker, resulting in less total human energy exertion.

-Safer Applications: Exercise step-mills (type treadmill) with hold bars. Lights up stairway. The pressure needed is great to push down a few millimeters, hence more stable ground surface like carpet padding.

11] Pet Dogs. `Rover' name for trade mark. Battery used to power sys (system 'seeks 'adaptable 'links to 'associated 'features) accompanying animal. Eg: powers (monitoring) sys attached to animals (in wild, under study). Reduces need to replace batteries.

12] Pet (gerbil, mouse, dog) running on inside of circular spinning treadmill.

13] Yo Yo's gyration and snap when reaching string end. Kids can power up their toy, video game batteries. Get's traditional parents to purchase a non-crt toy, since kid will need to Yo Yo before he can play game?

14] (Ocean) waves move the alternator = charges the battery within waterproof (floating) capsule. Powers up: lights (nr) showing land is near; electronic/electric* (research/monitoring/tr/oceanographic/nautical/navigational) equipment, eg: lighted beacons, fish catching equipment (working as part of larger sys, eg: attracting / scaring fish into trap), sends SOS signals (when needed by distressed person): sys holds (el / via paper in capsule) data on where distressed person might be found - as explained by person who launched the gadget).

15] Vehicle movement, eg: breaks charge a battery rather than only powering up el (electronic system 'seeks 'adaptable 'links to 'associated 'features) sys. Though this seems obvious was told this doesn't exist. Why? Apply to: cars, buses, trains, bicycles...

-typing on key board

-air craft: breaks; landing pads catching the shock from landing craft
-boxer's punching bag: converts impacts into energy
-dog/pet pulling on leash / cord
.-note: any number following the product category is the page number for the manufacturers for such product categories as found in the "American Export Register" 1994, from Thomas Publishing Tel 212 629-1130.
-Specially designed contraptions to harness motion (kinetic) energy -> battery:
-musical instruments: percussions (pressure -> energy converter); string instruments (bow's movements).
-all terrain vehicles
-flapping: bird wings, flippers or fins in water attached to fish or people, flapping in wind, flapping/moving from ocean waves.
-waves; water friction or force coming up against: walls (of boat, cement on ground) or shore's wave catching mechanisms.
-amusement machines: coin operated, toys. p55
.-engines: p547 - 550: they act as generators.
-generators p 741-746
-speed reducers p.1427: breaks converting energy to battery.
-spinning devices
-spin testers p1427
-shock absorbing devices translate impact into battery charging, eg: springs - p 1437 - 1440.
-Hydropower: water flowing down hills, eg: via pipes, down damns.
-wind: windmills
-shakers: parts/balls inside flow from side to side generating energy. Eg: sealed 1 meter pipe filled with balls. Hoola hoops.
-jump ropes: twisting of rope -> powers battery
-jumping jacks -> powers battery
-breaks: any type of situation where breaks are applied (where such energy isn't already translated into another purpose, eg: elevators).
-Shake battery and its system around in 1,000's of manners and energizes battery, eg:
strap to ankle and job (while losing weight); attach to wheel of bike/car.
-Attach to any moving object, sys: things that rotate/gyrate (tires), things that vibrate (excessively, eg: factory machines).
+-Shoes: foot's pressure (while walking) = presses up device (which goes back up again after pressure of body transferred to other foot) = alternator = desired function (battery charger).
--some shoes can have a greater level of depression (felt by u) as they walk = creating more energy. This can also require more exercise energy, using up more body calories.

--alternator gets it energy from any part of shoe, eg: + heel, front of shoe sole, side of shoe sole, level at which shoe bends in about front third of shoe as u (users 'seeking 'adaptation) walks = the resistance is countered by foot = intern powering alternator.

%-general types of motions harnessed: jumping (upward* and downward motion); hop scotch; swimming; walking; jogging; hiking; sprinting; climbing (stairs, mountains); collisions: of entire device or just parts w/in alternator, banging, accidents; breaks to stopping/slowing down; pulling (anything); pushing (anything); lifting; dropping; twisting; bending; folding; % holding (carrying); turning (around 360 degrees at a time); ocean wave's up and down motion.

--the part of product which moves most (at the most important pivotal point in the movement +) is the part that supplies the alternator's energy.

ENERGY GENERATED ALSO CAN POWER UP:

-fan, eg: while on treadmill or other (mentioned) exercise equipment. Cool off while exercising, a good way to motivate harder exercise.

-Harnessed energy can also: -> light up built in lamp, make sounds (osc) which last for certain duration after movement, reduce energy consumption to operate a system (simultaneously).

+-Any portable device. "portable" N. Especially if u (users 'seeking 'adaptation) is away from electrical outlets.

-mobile "T".

.-Sys can bypass battery recharging (as pr/k by u)

DIAGRAM: [---------l l----------l l----------l kinetic l
battery ll--tr--l b. charger l--tr--l alternator l--energy ---------l l----------l l----------l

NON-KINETIC ENERGY SOURCES: Converting from energy forms other than motion, to charge batteries:

-heat (fire, coal), nuclear or fusion energy

+-solar energy: KN. Place sys in light, and powers up battery charger. D (Drawing): (sun) light -> solar panels = energy converter = battery charger = battery.

-hydroelectric or wind (mill), [though similar to motion]

-energy transfer from any/most chemical reactions: nuclear, fusion, fire, etc!

-thermal energy

-steam energy

-Sound converter: converts sound energy into electricity? No clue if talkative managers could push for any research needed. Attach to: microphones, tel, 'sound analyzers. Joke?

-changes in temperature are translated into battery recharging, eg, via: hot temperature liquids (water) cooling down, or via chemical reactions of other sorts. Or furnaces, eg: p706 - 713. Huge solar / heat changing elements (placed on roofs / ground).

OTHER:

. % Attach to other moving objects in creative manner, eg: pet dog's feet and tail motions [trade name for pet market is Rover].

. Spoke with in the mid-late 1990's - doing research on the invention. He asked if they ever heard of such a product, to which their reply was negative:

-Powersonic, Redwood City 364-5001 Katherine, Carl.

-Battery co's in consumer yellow pages, SF

-GN 909 598-1919 John Huang, via Regina from Evergreen.

. System 'scores user's movements to show the level of energy being created for battery storage. Body movement 'analyzed by inventions related to the Invention 3E061 - Human Body Motion Tutor.

. Attach battery charger to exerciser's treadmill: the farther out (on the wheel), the greater the energy impact upon charger.

CONCLUDES "2 BATTERY" FILE

File: / Battery + Nike Reward

1G22 BATTERY CHARGER REWARD GENERATOR:

FILE: BATTERY+NIKE REWARD. Reward Generated By Usage Level.

Invention later filed by Nike. US Pat No 6,585,622 on Dec 3, 1999.

DESCRIPTION:

McDonald's pedometer: Related patent.

Exercise and loose fat. Pedometer scores how many calories were burned, and in tern get a coupon (certificate allowing customer discount on their next purchase at restaurant). Pedometer might spit out a coupon. Rent or borrow pedometer from McDonald.

-D: U (walking) = "sensor" = pedometer ("analyzer", K, S, Printer (of coupons, "score", "sw")).

--"SW": uip; store selects how sys will "score" -> reward user; UIP - adjusts required calories to be burned / level of exercise with U's age (range).

-Patent search strategy: Pedometer*

-US Patent No's: 5164967 5117444 5065414 5117444 4649552 4651446 4741001 4771394

-+ 4855942 Pedometer and/or calorie measuring device and method: quite similar to KN, yet abstract doesn't mention that coupons are given out, nor that device is rentable from store.

-coupons can be given out simply for quantified level of exercise, eg: each kilometer (walked) equals one point.

-Reward Types: caffeine drink [keeping clients on the go]; food; music and other 'cartridges' 'entertaining people. * Certain items purchased result in greater 'correlated points earned by clients, eg: caffeinated drinks.

--more free usage of [el] device / sys / access

--air mileage; long distance t usage; gifts or cash back [as earned by Discover Card or American Express].

+ Any N that is= 'scored= can 'react w= rewards.

-Score: Any type 'scoring pattern can be applicable, eg: $ usage level; time quantity usage level; 'score only for particular type of [newly offered] services. Score = Access-BA.

-D: u = activity / function = sensor / score = c = outputted services / functions / rewards.

-Algorithm types: the greater the level of reward the level of point accumulation increases / *decreases as 'designated [based on activity w/in 24 hour period]; time of day / year= corresponds to level of points as well.

-

+ Other devices that measure activity / u's usage= then giving rewards:

-PS-Zone: rewards according to u's PS actions / movements.

-Gasoline usage: if clients buy all / most gas from same vending group, eg: Standard Oil, they get cheaper / free [auto repairs]. Auto has 'sensor= which senses the 'tagged chemicals used only by Standard Oil. Advertising states: our gas keeps your car running longer and better.

-Cybernet: the greater frequency of u's accessing particular [groups of] sights the more points. Access = Score = Rewards.

-'Exercise equipment = score: treadmills= scoring speed / meters traversed; weight systems= scoring total weight w number of repetitions [giving higher scores to greater weights than number of repetitions according to 'designated algorithm] = rewards in air mileage or usage of gym.

-BA = Score: good behavior= 'results in= rewards. Eg: child's good behavior in getting good 'scores on computerized tests; their not watching excessive television or 'interacting w el 'games.

. OTD D:

U = This N Sys [Reward Generator] ~ C = U's activity/reward =

ACCESS [] // ARTIST [] // ANALYZER [] // BA [] // CART [] // EDIT [media u 'interacts w alters according to u's score] // EDUC [u goes to higher level] // MULTI-USER [] // NR [when / how rewards dispensed / accumulated] // PR [] // PS-Zone [] // Q [] // R [] // ROUTER [] // SCORE [] // SEEKS & REACTS [] // SENSOR [] // SOUND ANALYZER [] // TDS [] // T [] // TRACK [] // UIP [] // VISUAL ANALYZER [] // VR [] // WA [].

File: Category / Help Impaired

WE ALSO SPECIALIZE IN IMPAIREMENT ASSISTANCE INVENTIONS

OUR ENTIRE PATENT APPLICATION IS DESIGNED TO ADAPT INVENTIONS TO PEOPLE WHO HAVE DIFFERENT PHYSICAL AND OR MENTAL LIMITATIONS. LET'S MAKE THIS A BETTER CARING WORLD STARTING TODAY!

Introduction to a few examples: Inventions are designed for all types of handicapped individuals. These include: physically disabled; and those impaired by sight, hearing, and or *touch.

See 7J02 Language Trainer & Voice Analyzer: Teaches language learners how to pronounce new words.

7J03 Pre-Access Notification: As a handicapped individual may require more time to get to the rest room, they can send a signal to the rest room 'notifying any occupants of the coming arrival of a handicapped party.
-Diagram: handicapped user = 'remote control = 'computer = 'notifier [telling pre-existing occupants of the expected arrival] / doors are locked if rest room is vacant so handicapped party can have space reserved for them.
-Locations handicapped party may access:
rest rooms; elevators; hallways (lacking ideal size); public telephones; office copier; kitchen [user may require more space and it might be best kitchen is left for them only].

7J04 Hallway Pre-Access Analyzer - "Cat Whiskers": The invention will analyze availability of space for wheel chairs or other disabled assistance equipment. Examples:
-acceptable hallway dimensions in the halls and for going around corners.

7J05 Location's ADA Accessibility Score: User knows the level of ADA compliance locations have prior to traveling or entering that region of the site. Examples:
-web sites are required by law to display the rating
-the US post office requires the rating to be included within the address if they want the mail received. Rating might be after the street, suite or zip (postal) code info.
-type ratings: multiple digits, each digit representing the score for corresponding issues. Eg: Suite 200-BCD6
--B = wheel chair accessible score (A is best and fully compliant, F is zero access into building)
--C = sight impaired score. Average level, only Braille present.
--D = hearing impaired score. Nothing except structure of property is such that egress in emergencies is very easy.
--6 = Overall score for all aspects of ADA compliance with 1 being the best, and 10 the worst.

* 8G030 Attach (writing) instruments to one's bodily appendage, cast etc. For physically disabled.
Writing instruments which attach/strap-onto/snap-onto finger+, or... Attach any invention to appendage; invention's tailor' adjusts to user's needs.
--/wrist/arm (upper or lower)/leg*/foot*/toe*/torso*/casts used by those who broke bones. Especially for impaired people.
+ Place hole like contraption in cast which (firmly) holds inserted writing instrument ((ball point) pen, (mechanical) pencil, (paint / hair) brush, comb.
--differing holes in N (invention) can be utilized for differing instruments.
--collect royalties from hospitals utilizing novelty.
--positioning of holes designed for type handicap suffered by u w broken bones.

See our file for a great way to adapt text for people with reading impairments like those with slow reading, or dyslexia.

File: Category / Hm Automation

HOME AUTOMATION:

$ 1G17 Grey Water Collection & Distribution System:
It's a Water Savings Device For Garden Watering:
Water that flows from a unit (house, apt, office, etc) is saved and then used for watering a garden, lawn, farm... Water saved in tank, then tapped into by designated faucets/water switches. For parts of world with little water, eg: Western USA, Spain, Italy, Greece, etc. At least the basic idea exists. Recycling water is common knowledge, but its only done more manually?
-'Adapts by: eliminating (to city sewage) dirtier water based on an as needed basis [keep cleaner water].

DETAILS:
-either all water (except from toilet) is re-channeled, or the user determines which water (at time of using it) is channeled for reuse
--Control which water you want: press button or lever at/during/after water usage to determine if re-channeling is used. Water might be held in temporary unit in the even user changes their mind about how the water is to be used. Overflow valve [goes into sewage system].
.-system may have: water filter; alarm if water content contains characteristics of harmful substances (high/low Ph, poisons).
-users may use only certain types of soaps which are benign for plants

-a separate sink could be used when one needs to clean things they don't want to be rechanneled, eg: paint brushes, used machine parts, etc. Though naturally most of what one cleans w (with - 'adaptatro controls level of 'interaction) water is not harmful.

-garden water can go into holding tank from which pump waters garden (if overflows, can go into: sewer system / become septic tank and give deep ground feeding of soil)

-D: (fresh) flowing water = drain = control mechanism (designating direction of outflow; C ('computerization 'adapts features selected by user) = sensor/analyzer for harmful water) = water flows = flows to temporarily holding tank (has "score" (shows volume full / history) / flows to sewer system = control taps into this saved water first for designated uses: garden, miscellaneous cleaning (initial hosing down of dirty car, washing down sidewalk/road).

+ to prevent bad water from being reused, u (multi-users) may be required to select which direction water flow will flow out to: reuse, or sanitation dept. Solves: u (multi-users) accidentally forgetting to select where water will go after usage.

-filters (may be) used before reused water is reused.

File: Category New / House / Food Kitchen.doc

FOOD & KITCHEN RELATED

% 2J-05 Stove Top Heat Repeller: Reduce burning on (gas) stove by having cooking utensil repel heat by one of several means, while minimizing heat transfer to the utensil (pot).

-Means of repelling:

--air is blown (downward) toward heat source (just enough) to keep it (flames) from touching utensil.

--chemical composition of utensil's outer layer (bottom of pan) designed to: repel heat (resulting in something like magnets of same orientation repelling each other, though scientific process unrelated) / spreads the heat over a wider area (like copper coating) / transfers up to a maximum amount of heat (total / per time unit) eg: substance whose effect is similar to asbestos.

* 5J06 Coffee mug w/ heat sustaining elements:

Material built into [bottom] of coffee cup, keeps heat longer⇨ hence liquid stays warm longer.

-material might be used throughout the container. Maybe its more heat wise activatable in a microwave oven.

+-see: COOLING - HEATING - INDICATOR BALLS FOR LIQUIDS, ETC 1J080

2E030 Group Diet Correlator: Key into software the liked food types, and or ingredients, then system will furnish recipes. For multiple people desiring recipes of mutual interest, system will find recipes matching most of their individual likes.

<2, 2, 2>

2E040 Personalized Recipe Maker: System receives ratings from users on the recommended recipes, in tern further improving its future suggestions (eg: greater or lesser use of certain ingredients). Suggested recipes also influenced via: user's health requirements; country or region where software is sold.

2E050 Calorie Calculator: Key in maximum desired calories. Include information on how one burns their calories (type exercise). Receive recommended recipes for requested volume food. -<2, 2>

File: Ice Ball / Ice Ball Intro Indic

ICE & HOT BALLS ABSTRACT 1J080

Table of Contents for Ice & Hot Ball Files:

. Introduction

. Thermos

. Read Later

. New Technology

After freezing it is the fastest way to chill juice, beer and wine, without being diluted by melting ice. Ice Balls replace the need for messy ice trays which often spill water when carried to the freezer.

-More ice balls are frozen and stored in the same space as ice cube trays.

-Small portable Ice Ball cases replace bulky ice chests, plus a possible trip to the store for a messy bag of ice.

-The invention saves the user from the risk and worry of temporarily placing their beverages in the freezer to avoid melting ice in their drinks.

The Hot Ball: The innovative hot ball.after being microwaved, keeps coffee and tea hot. It saves the user from adding hot coffee to a half full cup, which can only heat up a little. The Hot Ball also saves from having to readjust the diluted sugar and cream levels.

-One of the easiest ways to have a hot drink outdoors.

The travel case allows for one of the easiest ways to enjoy cold or hot drinks outdoors. Many more unique features abound! There's a huge market if only a fraction of the world's five billion people bought a set of Ice Balls and Hot Balls. Most people drink cold and or hot beverages daily. The conservative projected profit is well over $64,000,000.

There are many other innovative features related to this confidential invention.

ICE HOT BALL CHEMICAL CONTENT INDICATORS

Color change notifies non-temperature nature of contents.

-For example:

Shows the quality of tea or coffee, such as: type of roast, how much sugar needed for this coffee/tea blend (due to the drink's inherent (acidity)).

-Invention 1J081 Liquid Quality "Notifier". This invention is part of the main 1J080 invention, and to be filed for the patent office later as a separate but related invention.

The age/quality of the liquid (eg: orange juice) may alter over time, and have a standard/known change, eg: a higher acidic content. So 'notifier can 'seek 'designated changes in the quality of a liquid to determine: age, sweetness, nutritional value...

% Alerts people on restricted diets to presence of certain ingredients in their drink:

-Due to human error in restaurants, one can never be sure if their drink contains an allergen or other unwanted ingredient.

-Diabetics:

--Going to restaurants they may order sugar free soda, but accidentally receive drinks with sugar; or the waiter ran out of sugar free soda... Drinkers (bringing their own indicator implements can check for themselves.

+--Problem is they need to keep the ice balls cold, maybe in a special cold casing which was also pre-frozen before leaving their home.

--Other chemical contents users are allergic too can also be shown by the color indicators. -Etc...

Certain germs can cause a change in the color of the indicator. Color indicators for different countries can be region specific; in that the higher presence of certain germs differ by region. Ice balls utilize different safety color indicators based on the country and or type of application.

-The indicator may not know the presence of the germ itself, but may 'seek the chemicals associated with the germs' presence, such as anything such germs emit and which is not normally found in drinks, or emitted by non dangerous germs.

Other chemical contents for which indicators can be utilized:

.-type of tea

-any deterioration of beverage due to aging (of original material for brewing, or since brewed).

-something dirty: grease, bacteria, (presence or lack of chlorine), soil matters

GENERAL TEMPERATURE INDICATORS FEATURES

The ideal temperature (such as for a baby) can be 'designated/'notified (by type color).

Buyer selects the desired temperature they want by buying / altering the device to change color or do whatever is 'designated at such temperature / situation.

-or buyer manufactures the cube via their "easy to use" home maker...

Use color indicators to show how hot liquid is getting while its being heated. Enables user to stop the heating process by removing the hot ball when desired temperature is achieved.

Hot drink heating ball:

.-cube shapes: sphere, cube, shape of animals, etc. Shapes kept smooth enough for hygiene.

%-other changes according to temperature: shrinks/expands; images appear/disappear on surface of cube; osc (slight buzz) *; smell*.

%--the balls can be dropped from (below the coffee canister)

%-the balls only start emitting heat when the liquid drops below a certain temperature. This may be because: it retains hot temperature better than the mug...

Ordinary ice cubes disappear when useless, but plastic coated ones don't let user know when they become dysfunctional.

Technical:

-temperature of the inside of heating/cooling implement needs to be differentiated from outside temperature via:

--(chemical/temperature/thermometer) "sensor" placed inside heating/cooling implement = window to surface = NR.

--at worst: temperature of entire drink effects greatly the color of heating/cooling implement

As temperature of cooling/heating implement changes one of following can occur:

%-implement (in liquid) floats or sinks, acting as NR. Weight change caused by shrinking / expanding / chemical alteration of coating material (PVC based) / contents w/in casing.

%-bubbles come forth (carbonating effect)

.-odor released

% Heating Ball Dispenser:

-Picture waiters walking about with the ball dispensers in a high tech cafe. Their other hand can hold the canister for more coffee.

-Container changes color according to its temperature:

saves from having to touch or drink it to check the temperature.

-Cooling down something like liquids, *grainy material, etc without altering its constitution. Useful for laboratory applications, since shows when the cooling or heating implements are no longer of sufficient temperature changing value.

--The holding device itself may be of assistance in altering the temperature (especially if its constitution is designed to store the desired temperature).

Examples of liquid beverages that are desired cool, but not suited to dilution: wine, beer, juice, soda, other exotic cool drinks which utilize coconut milk instead of water, etc.

-Hot beverages: Coffee, tea, hot milk with coco.

--Difficult to remake more of the hot liquid to heat up if no extra liquid was made. Any extra liquid made will either cool down, or run the risk of drying up while kept warm.

Ice balls are useful when only room temperature drinks are available:

-from one's cabinets

-if just purchased from a store

-if purchased from a store cooler, it got warm on the journey home, or wasn't cool enough when purchased.

END ICE HOT BALL INDICATORS INTRO FILE

File: Ice Ball / Ice Ball Thermos

ICE HOT BALL – RELATED THERMOS WITH STORED DISSIPATING HEAT

INNER REFLECTIVE SURFACE:

-Have a reflective bottom area, or the entire inner surface reflects. The value is in making the current color of the ball that much more noticeable; giving a life to the drink based on the temperature alone.

--more suitable to clear or semi clear liquids; and liquids that are *somewhat color matched to the balls.

-Different color balls and their reflections ads a new dimension to drinking pleasure, novelty, and coffee table small talk...

Container stores balls until needed:

-Balls can be poured and stored in [side] of cup, while their temperature is [mostly] maintained due to buffering and no/little contact with the liquid.

-User on an as desired basis releases balls.

-Automated release version diagram: liquid = thermometer = analyzer = mechanism release controller = mechanism release = ball flows [gently] into liquid without splashing [since flows not from above water].

Thermal Container 'Window:

-A small area of container via which 'user can touch the heat transferring surface to gauge the liquid contents. This is better than using ceramic/glass containers releasing temperature everywhere.

-Indicators can show the temperature/'status.

-% 'Screen/'Notifier functions as 'window too.

-Safety / *Hygiene benefits. Eg: avoid burning.

-Optional 'shield over 'window.

STORED HOT / COLD 'IMPLEMENT

-The [bottom of] thermal container can retain an implement of any shape [other than ball], like flat thick disk(s). The disks have a buffer/lid/wall from the actual liquid, which is (re)movable when liquid temperature falls outside of desired range.

-Heating implement: it might be heated in: separate heater; or kept within the (thermal) liquid container - since (microwave) heat can approach it through the container.

Heating Cooling Implement's Location Options:

-entire inner surface area [of outer cup].

-bottom [half] of outer cup's inner surface area.

HEATING/COOLING IMPLEMENT'S SHIELD - GENERAL:

-might be something that: pops off; slides off; ejects off.

-implement might even be a [permanent] part of the cup. The smooth finishes are such that cup/implement are easy to clean [without taking implement out]. In this case it's the shield that may be cleaned: specially/separately/with special attention.

Inner Cup Shield: -[disposable] cup within a cup

-the outer cup contains the implement

-when liquid temperature falls outside desired parameter. Options are:

--pour inner cup contents into outer cup contents, intern giving liquid direct exposure to implement. Inner cup serves as barrier until temperature changes.

---should inner cup not be tolerant to excessive temperature of implement, an additional shield may be utilized.

-only part of the [disposable] cup need protect itself from excessive [heat], such as inner cup's bottom.

Double sliding inner cup shield: -Two cups fitting into each other of same size. Both cups have [about] half their bottom cut out. 'User decides how much [if any] contact they will give liquid to heating/cooling implement, as the liquid temperature may deviate from 'designated parameter.

-The more liquid contact with 'implement, the greater effect liquid is to receive.

-For cleaning, the inner cups can be fully taken out.

-The multiple overlapping cups can be:

--hinged so they slide over each other neatly [without much gap between each], so water less likely to touch 'implement [in undesired location].

--marked on top [near lip - where user drinks from] so user knows where the gaps below are. Enables user to align cups into desired position.

'Implement's speed of temperature release: -Its construction might be of a substance that releases temperature slowly, so as not to require [much] [alterable] shielding.

-Absorbs desired heat/cooling as quickly as possible. But the characteristics for the desired slowness/speed of release may be more important.

-The temperature to which 'implement is altered in heater/cooler may be [automatically determined by 'analyzer] related to room/environment temperature at the time. In other words, hot coffee will need more heat boost in a cold room.

-Yet offices/homes at normal temperatures may simply require a standard "indoor" product that doesn't need to be concerned about calculating in the environment temperature.

-Temperature release is effected by:

--characteristics of 'implement's chemical content

--type 'shields, and 'buffers

Miscellaneous: -multiple cups fitting into each other are possible, to continue temperature maintenance.

-'implement needs to hold more of the excessive temperature than the liquid. What materials in 'implement best allow this?

-maybe heat/cool container w (with - 'adaption controls level of 'interaction) 'implements before/separately from liquid, because 'implement needs a greater temperature variation.

-chemical for temperature release: a non-movable barrier [while drinking] can be utilized, such as against chemicals of danger, eg: dry ice placed into contraption.

Issues: disposing of inner cup; messiness in pouring from one cup to next

Patent search strategy on thermos containers:

-(container* or cup*) and (therm* or insulat*) and (heat* or hot* or cold* or cool*) and (liquid or coffee* or tea or beverage*)

--refined search can narrow above search by adding following to main strategy:

(save* or storing or store* or energy* or batter* or portable or vehicle* or drink* or indicat* // or latent and transfer* or conducts or conducting or dissipat* or regenerat*)

US Patents: ++5572872 Liquid cooling, storing and dispensing device; +5720555 Temperature indicating container and lid; +5842353 ...heating and cooling drinks; 5871042; *5699841; ?4696338; ++4823554; +4320626; 5271244; 4320656; 5067922 Drink cooler and throwing toy; 5301508

CONCLUDES ICE HOT BALL – RELATED THERMOS FILE

File: Ice Ball / Ice Ball *

ICE HOT BALL *

COOLING - HEATING - INDICATOR BALLS FOR LIQUIDS, ETC 1J080

See KN (invention) in A directory; %(7G050 NR); %1J081. See + 7G inventions.

.-Surface can show the 'status of the contents in which the devices come into contact.

Surface changes color according to nature of the material into which its surface comes into contact.

US Patent No's: 4016762; 4388332; 39354327; 4893477; 5180598 4028118

-also see patents / N (invention) / KN (invention) in PVC Notifier 7G050 that involve color changes to temperature. pat no: 4919983

The temperature of the drink, coupled with the (user/'analyzer) knowing the quantity of the substance -> allows the user / 'analyzer to know how many balls to place into the liquid.

Balls may compliment existing Styrofoam [drinking] cups.

Safety: -consider different shapes to assist in safety. Eg: no crevices in shape which can hold dirt.

-Ice is more slippery when dropped on the floor.

Ball shapes: flatter shapes can dissipate the temperate more quickly; disk shaped 'implements, might have a ridge or other shape along the sides so both sides can be in fuller contact with the liquid, without one side resting flatly on the bottom of the liquid container.

The type of beverage being drunk might appear in wording as the color indicator, such as "coca cola", "coffee", or "juice". This is done by the indicator seeking a chemical exemplary just for such a beverage.

Different descriptions of the invention, are limited aspects to the invention.

-Any one or more descriptions of the invention need not necessarily cancel out, or risk the value of the cooling balls, nor the color changing functions.

-The desirable and practical features have to be ironed out for something that interests at least a portion of the market not seeking the perfect invention, but something that solves their current dilemma for heating and reheating drinks.

Liquid can also be non-human consumption material such as for: [live stock or pet] animals; liquids in scientific laboratories; medical lab utilization; machinery [where indicators show the 'status]; see file 7G. This broad area is even more confidential than other aspects of the invention! Hopefully the Partner will continue their work in this area later.

Benefit of the buffer also is to reduce chance of minor explosion should the 'implement touch liquid of greatly different temperature than itself.

As a novelty other factors can change 'notifier's colors:

-type of light hitting 'implement. Eg: sun and fluorescent and incandescent light results in differing colors; and their intensity also is reflected in intensity or type of color.

Simple terms in the invention's marketing like "ice and hot balls are more convenient" can be utilized.

Easier on user's eyes: Easier to read, such at a distance, or for children or illiterates in third world countries. Possible medical applications for less educated patients who may be required to heat or cool down a liquid to a 'designated temperature for maximal medical value.

Hosts are better aware as to when it is time to serve more balls without needing to disturb the drinker, who themselves may not be fully aware of the current liquid temperature.

Flavor Balls: The hot or cold balls might also dispense flavors as well by:

--dissolving itself completely

.--keeping the dispensing material within the ball, whereby the ball is reused.

The 'status of 'balls can also be [visually] seen under special circumstances, eg: infrared light. Benefits include:

-checking for any leakage, see: +7G050 Condom or Glove Breakage.

Straws also have the 'indicators. Also any piping used to move liquids about, such as from machine to machine or container.

Put 'indicator balls into [fish] aquariums.

Built up pressure notified, if gets too hot.

Should temperatures exceed either very cold, or very hot; hopefully the indicators will show a [related] color [to that of just being cold or hot]. However, make sure at least "cold" or "hot" colors are shown, and not disappear if the temperature gets even further to the extreme. There can be safety issues involved if the temperature is so hot that the hot color fades, making users think the liquid is safe.

Indicators also show: poor air quality in bubbles from: carbonation.

Glow in the dark: -they may glow in the dark [but only in certain temperatures]. Fun for backyard parties, Halloween sales.

-Dating tool:

passionate nights with lights turned off - but have your partner finish their whiskey on the rocks before the light goes out [a way to get them ready for fun...].

--Limit of two drinks a night!

Factory or Laboratory Safety Feature:

-Should any one of any harmful substances commonly used at a person's work place land into their drink by accident, the balls' or beverage container's 'indicator can show such occurrence. This is a small price to pay for worker safety, and may reduce insurance rates.

-Can work with or without heating characteristics. From another perspective, something like a Geiger counter against radiation.

-Especially useful with 'indicators that are readily designed to take on the indicator characteristics the user wants them to have, without having to make a special manufacturing run.

Other ways of notifying users of the 'status:

-Over view: Users often maybe don't pay attention to the 'indicator. Hence more than just a color change can get attention.

-Forms of 'notification. Via:

--physical sensation (sting, prickle, odor release, 'osc [outgoing sound communicator part] like an alarm sound, %flashing lights 'notifier, shutting down of sys (system linked to 'adapted features) connected / related to plastic/occurrence in question/causing concern.

--Diagram: undesired status within liquid/piercing/breakage of material containing the indicator -> sensor / chemical reaction -> chemical release (acid) / osc / other form of 'notification.

Balls differing from each other such as by their size dissipate temperature quickly or slowly according to the size. Bigger balls have a thicker buffer. This is all the more reason for the customer to purchase multiple types of balls.

Ice kept out of the freezer melts, increasing the speed at which all the ice cubes melt from the excess water. Less need for multiple trips to freezer, increasing electric bill.

END ICE HOT BALL * FILE. END THIS ICE BALL FOLDER

File: Ice Ball / Ice Ball Techie

ICE HOT BALL TECHNICAL ASPECTS FILE

* Note: Technical details cover a wide range of applications beyond just beverages. Use this material to trigger new ideas, and give less focus to the remaining aspects.

-For example: this covers diverse issues such(S ('screen & 'analyzer 'adapt menu for multi-users' current needs) perforations into the 'ball, and more than might be expected, because much research was already done in this area for another invention. Please don't be overly alarmed because of the extensive details on this subject. This was largely a "cut and paste" from another file, with some modification.

HOW 'INDICATOR QUALITIES ARE PLACED ONTO BALLS:

Option 1 - Pockets:

-smooth or semi rough surface area keeps the safe chemicals on the surface, when the ball is placed in such chemicals in the forms of: power, paste, liquid, gas, and or while 'receiving 'electrical 'frequencies [making the balls that much more receptive to receiving the 'indicator characteristics].

-the surface may have absorbing qualities.

--likewise the surface might repel [old] 'indicator qualities by: being immersed in a chemical [bath] substance; then being ready for a re-administration of the same 'indicator chemicals, or a different 'indicator.

--the process might be simplified for the customer who may not need to know all the mechanics of the process. Eg: they might just plop the ball into a device which "does the rest".

Option 2:

-the clear ball has the 'indicator colors inserted inside.

-the ball might snap, or screw shut, or has a door slide or hinge shut.

--then maybe a non-toxic sealant might be put around the ball; only if the contents aren't the safest for human consumption.

Option 3:

-balls are simply disposable.

Option 4:

-indicators work for a long / indefinite time period.

* Option 5:

-the ball is like an onion in that outer layers can come off.

POCKETS: The material can alternatively also hold the indicator chemicals with itself.

-In other words:

PVC (other material) has (minuscule) pockets which hold / interact w (with - 'adaptative controls level of 'interaction) type chemical/condition sought = u's eye / el (electronically 'adapted) "analyzer" = status on type(s) of contacts made w5.

-in other words: the PVC is able to hold necessary chemicals to react w/ new agents coming into contact w/ chemical in the pockets. Pocket size from molecular up to several square centimeters/meters.

-pocket shapes: any type cavity where there is a large/small opening and inside it gets narrower/wider as it gets deeper; any proportion of width to depth; pocket can be created via an enclosed wall surrounding surface, w (with - 'adaptatro controls level of 'interaction) or wo (without except for research and other purposes)any cavity made into the pvc surface, walls may flap. Rough surface spots (w indentations) can be termed pocket too.

-pockets are fully or partially filled, in latter, subsequent chemical agents might get into pockets (and create better chemical reaction).

-Partially filled pockets:

--How keep pockets from completely filling up w/ chemicals purposely attached to PVC: outer part of walls repel (certain) chemicals / adhesive doesn't stick there; minimize quantity of chemical applied / given* to PVC so as not to fill up pockets completely.

-cleaning of PVC may not disturb pockets

-Surface Inside Coating: smooth/rough or coated w (with - 'adaptor controls level of 'interaction) substance (adhesive function) to help attach to designated chemical. This coating might [help / shield PVC against] chemical(s) (reactions).

-Nodules: pockets can be replaced w: chemical nodules attached to surface (which thereupon eats into surface for better grip/adhesion.

-Cover: (minuscule) covers of pockets may (almost) seal in its chemicals. Such covers may open (partially) when PVC is: immersed in liquid; chemical structure of PVC altered enough via introduced agent; + cover deteriorates from: acid eating it away / chemical that attacks/eats the PVC and the cover as well / age of PVC / other listed occurrence (effecting the pvc material, the cover is made from (same) material).

--Value of cover may be to not disturb chemicals in pockets except at certain times.

-chemicals in pockets might be gotten out via chemical process (immerse in chemical liquid / wash off / coat or spray on chemical that gets chemicals out of pockets).

-can reapply new chemicals into pockets for differing applications. Eg: a lab coat used for one type of experiments can be used in differing type experiments after changing chemicals in pockets. Saves from having to throw out PVC, saves time from having to buy new types of PVC if only the chemical process is needed for filling pockets / altering PVC in other way so it acts as nr.

Adhesives: whether there are or aren't pockets or any type of roughness that can be created on surface of pvc, coating(s) of adhesives will help designated chemicals stick to pvc = intern react w/ introduced agents. These adhesives can be removed (w any chemicals) (in one or multiple steps).

-the adhesive itself may be or contain the chemical(s) needed to trigger nr.

User of the inventive idea simply selects 1] purpose (type occurrence), 2] which chemical reactions desired to serve as nr (our notifiers not guaranteed) (shows occurrence), 3] which type of PVC and or chemicals are compatible together (can be mixed/attached together) to serve as part of the chemical reaction w occurrence, 4] type of nr / nr (our notifiers not guaranteed) sys (system linked to 'adapted features) desired.

-done via: el (electronically 'adapted) / applying designated indicators

CHEMICAL REACTIONS GENERALIZED: steps, stages, dormancy.

. Time Delayed Reactions:

-some chemicals / biological reactions have more clearly discernable results for nr, if allowed time, eg: microorganism excretes chemicals after __ days = such excretions = nr. PVC = indicator chemical used functions well over time: can't readily fall or wash off.

-dormant sub-A chemicals

. Multi-Step Reactions: (for time delay)

-some (subsequently effective) indicator chemicals are triggered after previous occurrences = cause designated chemical reactions. D: Chemical B = Chemical A = reaction chemical = reacts w (dormant) Chemical C ('computerization 'adapts features selected by user) (was w pvc earlier) = producing reaction chemical which triggers = nr.

. Dormancy:

-some chemicals might require time to react. Or, the nr (our notifiers not guaranteed) differs according to length of time: reaction has been taking place / how long ago reaction (Chemical C) was made.

-values in dormancy: minor contacts (measured by time period of exposure) might not warrant nr. Or, NR-"score" could be lower/higher.

-what triggers chemical out of dormancy: time period of exposure to chemical %; coating surround chemical (A) worn off (by how B/C wears it off); pocket's cover worn off / made more inaccessible for B/C chemicals.

-Dormant Sub-A Chemicals: reacts w= chemical B/C.

-Chemicals in inner layers of PVC can also be considered dormant in that outer PVC layers are their barriers. Yet the term dormancy for such situations is limited, eg: perhaps nr seeks when outer layer has Deteriorates, in which case (a quicker reaction = nr) may be desired, and hence dormancy doesn't apply.

1209

LAYERS / PATCHES* OF PVC: each layer / patch has differing characteristics, some layers / patches are more interested in:

+ Patches of differing indicators: allows multiple nr, which won't interfere w, each other as readily by being physically separated. -Place each nr (our notifiers not guaranteed) at point where designated occurrence more likely to create contact / where nr won't interfere w function of plastic.

-strength: gives type strength w elasticity needed; avoid deterioration

-chemical reactions: mix w chemicals (A); pockets.

-easily worn off; easy to decompose = exposing inner layer.

-cosmetic appearance

-permeability of: air, water, chemicals (a, b+, c)

-show signs of deterioration: puncture = nr; color-nr may only come from certain layer(s).

-how adhesive they are, or how readily they work w added adhesives, or how well they adhere to differing layers / (inner) material (they are coating).

-dormancy of reaction: deeper layers hold chemicals A

-chemicals in one layer / region (not linear, but patches) have differing nr purposes.

-sanitizing / deactivating / slowing down damage of: chemical/micro-organism B

-u can visually more readily see extent of deterioration, based on number of layers Deteriorated.

Welded points in PVC may cause nr (our notifiers not guaranteed) effect when such points have deteriorated (liquid has seeped into their crevices / developed cracks). Shows a weakness in the PVC structure, though no leakage outside of the pvc/container may have occurred. Helps if the PVC is clear / opaque to see any nr (our notifiers not guaranteed) (color change where the deterioration is seen).

-plastic bags: can show weaker welding points

-part of material used in the welding process can be treated like a separate layer (as described in this n's description). Example: it is (a portion of) this welded material that causes the nr (upon the welded material's exposure/deterioration).

-mf: prior to welding, the points to be welded have indicators applied onto them. These indicators may withstand temperature needed for welding.

Multi-Layers: -Inner/outer (glove's) layer of different color in tern exposing itself, or inner layer emits colored substance when punctured.

+-three or more layers, each w own characteristics (color, what it seeks and will nr). Eg: level of acid deterioration shown by which layer its eaten into.

-more expensive material can be designated at more crucial positions, eg: outer layer.

+'Notifier - How Shown: Multiple symptoms are nr: (non-conflicting) differing (chemicals) nr activatable, eg: 1] two different colored stripes; * 2] C ('computer 'adapts features selected by user) = nr; 3] particular digits/visual effects show up on PVC (in differing places).

PATENT SEARCH STRATEGY - Much relates to topics beyond beverage indicators. Material: (pvc or plastic* or polyvinyl* or polyurethane* or rubber*) near5
glove, condom, cover*, vinyl
-Occurrence: (corros* (corrode/corrosion), (deteriorat* or disintegrat* or
-Not: biodegrad*, recycl*, non-corros*, resistant
-(fall* near3 apart) or contaminat*
-And Repair* / Problem* / Identif* (identifies) / change near2 color / react (not reactor*) / chemical near2 react* or contact* / measur* / bubbles (not other bubbl...)
-Patent search key words: pvc, poly vinyl chloride, rubber-, glove-, safe-, germ-, penetrat-, warn-, hospital, research, break-, tear-, multiple layers.
-wire / other "sensors" on/within PVC when disturbed/altered/effected in any manner described w/in this N, triggers signal (nr) showing level/type situation/problem.

COLORMETRIC WAYS are mostly developed so far as indicators. The other ways needing more concentration are:
-Biochemical methods: ELIZA {enzyme linked amino assay}. Eg: seeking certain organic molecules such as an antibody; the antibody 'reacts to 'designated chemical, leading to the 'designated 'notification.
-Electrochemical methods: Leak detection through electrical means.
.--A battery circuit is a simple electrochemical device.

OTHER:
. Questions: Some of the areas needing research
. Pockets: -How small pockets made into plastics: opening .25mm or less with width maybe .5mm and depth maybe .5mm.
. 'Indicator types: or state just triggering chemical
-coatings
-mixing
-indicator shows up under special lights
-indicators that may withstand high temperatures
. How 'indicators work with the hard surfaces of the [portions that can be immersed] 'implements [such as bonding, how well they act as indicators]. Surface types:
-plastics
-cement

-glazes, enamels, paints
-metals
-glasses
. Research Needed On Indicator's Color Changes
. Why 'indicator changes:
-do indicators show changes in temperature [and if so how rapid a change], and or the current temperature:
-excessive temperature reached over time - accumulated effect. Especially over 40 Celsius for two or more minutes a time totaling perhaps from one hour to 100 hours or more.
** Any damaging effects from sun light, eg: its UV [ultra violet light] to 'indicators.
. Water, air and cleaning (with soap and water) will hopefully not destroy the indicators or plastics. * What about forced water from automatic cleaning machines.

TYPES OF INDICATORS: This section is a copy of file 7G-Tech.
. Home use chemical indicators for: cleaning; painting*; repairing equipment (chemicals in device may come onto hands); pipe uncloggers (Draino); etc.
. Gardening: Detects pesticides, eg: (chlorinated) aldrin, (chlorinated) dieldrin; organophosphates: attacks nervous system; organ chlorines family: aldrin, dieldrin, DBC%, PCB's (not pesticide but harmful); carbamates; phenoxy acid herbicides; other chemicals (commonly) found to combat insects / unwanted plant or microorganism growths; other chemicals.
* Benzo (a) pyren: in smoke (cigarettes, auto, steaks); asphalt sheets. These are poly aromatic hydrocarbons. Causes skin cancer.
. Hazardous wastes: people in hazardous wastes. Such employees can sue for large sums if they are exposed, hence can charge much for special gloves / containers. Eg: hazardous metals. SW846, and those mentioned in EPA's Test Methodology, eg: volatile and semi-volatile chemicals.
. Pharmaceutical: eg: heart drug gets into skin while doing R&D.
. Acid organic chloride mixtures: indicator may likely lend itself best with the chloride element in organic chloride mixtures. Concentrated acids (extreme ph).
-ph indicators: indicator may only indicate when ph has exceeded or entered within a designated parameter. Different parts of pvc (glove) have differing (ph) indicators showing w5 occurrences.
-paper indicators: placed inside the glove (exists), or container.
. Fluorescent indicator: less practical, some kind of light would be emitted upon contact.
. Carcinogens: chloroprene; radioactive chemicals; M.I.C..; benzene.
. Mechanical violation indicators:
-chemicals into plastics = and react w air:
potassium permanganate (an oxidizing agent); nitrates (calcium nitrate); organic oxidizing chemicals (chlorobenzine, nitrobenzene).

-Common occurrences: need indicators to target commonly occurring situations that alert user to: unwanted contact, PVC deterioration. This way fewer types of gloves can be manufactured to cover a wider range of possible occurrences. Differing chemical mixtures may often have common / similar chemicals for which notifiers are needed. Notifiers for oxygen, chlorine, changes in water, changes in ph, etc. would fit this bill.

-(Hazardous) metals: mercury, lead, cadmium.

%(Harmful) gases.

+Radioactive material - radioactive organics: indicators are specific to certain isotopes: + C14: (this is more likely to work because emits more energy, etc.); P32; H3; isotopes of iodine, etc; alpha-emitters; beta emitters.

-miscellanous chemicals: cyanide; arsenic; phenols.

Indicators - Misc:

-high-energy emitting materials (radioactive, C14) could cause change in oxidation state of specific organic chemical indicators. The higher energy emitters are also more dangerous, i.e.: more likely to penetrate skin and cause damage once internalized into body.

-Oxidizers might be too powerful as an indicator.

. +US Pat No 5,411,034: Condom changes color upon breakage. Issued mid-1995.

. Chemicals sought:

-excretions from semolina

-chemicals causing allergies, asthma.

. How the Ice or Hot Ball can better alter desired temperature - ideal substances to make balls with:

-what material per volume retains more of the desired temperature?

-materials that can go to higher or lower temperatures, while maintaining its ideal (liquid or solid) state.

-ethylene glycol: is anti freeze, but probably toxic. A non-toxic form or material of related characteristics desired.

. Enthalpy (temperature retention ability). Check into thermo dynamics.

. Temperature sensitive indicators:

-Mood rings; flat thermometers whose color changes according to the temperature [without use of mercury].

END: ICE HOT BALL TECH FILE

File: Category / Laboratory

LAB AND R&D RELATED

CUPS, LIQUID CONTAINERS: For all container N (invention) (especially in G1 file): Have lids (easily taken off). Human consumption variety containers have lids designed for easy drinking while driving, walking (semi-spill proof).

* 1J020 Temperature NR: nr (our notifiers not guaranteed) shows temperature of water. D: liquid temperature -> NR: tab changes color = color represents temperature.

-7G050. See spoon KN (invention) in G directory, which changes color by temperature - for feeding babies.

* 1J030 Window: see height of liquid. Reduces risks of spillage by allowing u (multi-users) to adjust their levels of caution w/ how full container is.

-lights are emitted up to level of liquid mark (top of water).

$ 1J040 Heater: Keeps liquid hot/cold to designated temperature (while in car). Thermometer used to control temperature-controlling sys. Eg: for coffee or tea or soda.

$$ 1J050 Carbonator: Carbonates liquid (after opening (of soda)). Eg: bubbles emitted from lower part of container. KN.

-D: insert carbonator into bottom of liquid's container.

O-Cube Fizzler: after cube is altered in some manner, it fizzles bubbles into drink when placed therein.

-how cube might emit bubbles:

1] freeze -> then bubbles when placed in warmer liquid; place cube into some chemical (non-toxic) solution/gas/pressure chamber.

2] cube banging about in container (friction/pressure) -> bubbles from cube.

-Terms: cube can be replaced w: sphere or any other (temperature holding) device placed into container of liquid.

-Patent search strategy: +carbonat* and cup. KW: container, glass [cup]

-US Patent No's: 4745853 4735974 4886525 4423670 4596341 4211342 +3615673 Making carbonated beverages within a cup.

+ 1J060 Know depth of liquid in container by "analyzing" amount of pressure placed on bottom of cup. D: pressure-"sensor" = NR/S/*OSC. "Analyzer" knows exact volume of liquid by= knowing: size + shape of container + depth of liquid.

-this sys (system linked to 'adapted features) can be a back up to other sys (system linked to 'adapted features) measuring depths of liquid.

-Applications: know to change the way any existing liquid in container is treated. Amount of liquid determines how it is treated, eg: more heat is given to keep larger amounts of liquid warm. When u (multi-users) can't see in containers (eg: with Hazardous wastes (kept under ground or away from U)), (when it's dangerous to either have a window / open container). Other laboratory research. Back up measure for measuring percent of container being full. Gaseous liquids.

-"Sensor" "analyzes" for changes in percent of each ingredient.

-consider existing products w/ gauges showing liquid content level, eg: auto gas tank meters.

1J070 Container Temperature Maintainer: Keeping liquid cold/hot: Container placed in (super) freezer/heater ((microwave (oven)). Container made of special material which: can hold cold temperatures / drop in temperature quickly / hopefully also stay cold longer than time it takes for it to get cold (possible?)%.
-replaces need for ice cubes.
-exists: foam containers, which surround most of soda/beer cans - acting as temperature barrier; Styrofoam cups; cups with lids - keeping out external air; products that get hotter (colder?) when they are agitated.

5J05 Life organism raising software:
"Educates" users in growing or raising plants, animals and other organisms. User= via sw= does in representative format= what they would normally do in real life to take care of the life form.
-Teaches / Warns: user is "guided", or user does what they think best and system simply "nr" when / after user makes errors.
. Plants:
-Lights: user places plants in place of with (what they think is) best light level. Each "zone" has different color representing light level / hours of (direct) light.
-Water: soil changes color by moisture level. User sees any excess water collect in bottom collector, which user can remove so plant roots don't rot. "NR" activates when water above 1cm is left in it.
-Other: "status" also shows soil's nutrient levels; wind; amount / type insects and other pests.
. Animals: W5 food, grooming, "exercise" given.
. Microorganisms: "status" for environmental factors: temperature, humidity, light.
. Applications: Universities for teaching students. Saves money from having to kill life forms, and or set up real life situations. sw (software 'adapts by linking with 'associated features) is compatible with material user may have read earlier. This sw (software 'adapts by linking with 'associated features) can be form of semi real-life test ("questionnaire").

Abstract

The invention guides people to improve their physical movements.
Benefits from the invention include:
-Teaching the user to correctly lift heavy items with less chance of back injury.
-Alleviating carpal tunnel syndrome. The invention replaces more restrictive existing wrist braces.
-Better overall body posture. Standing and sitting up straight, improves health, self esteem and overall well being.
-Better effects from yoga and meditation that come from correct posture.
-Helps desired movements become habitual, without worry of forgetfulness.

Small attachments to the body transmit information on the body's movements to the central unit via wire or wireless. Inexpensive mechanical versions of the invention are also beneficial.

The invention is an automated physical therapist tailored to the user's unique needs. The invention carefully adapts to hundreds of therapy needs where body movement restriction is part of the normal healing process. This is done by attaching the invention's parts to the necessary bony parts of the body, whose positioning requires monitoring. The reduced hours patients need with costly physical therapists more than covers the cost of buying or renting the invention while improving quality care. The invention's advantages over human physical therapists are substantial. The invention reduces employer liability, and saves insurers by reducing time needed with physical therapists. The invention is the best known 24 hour physical therapist. It's the fastest, most efficient, and cheapest known way patients can improve themselves.

Over a hundred body movement issues from physical therapy to improving golf swings now have a more sophisticated means by which people can visualize their own movement's deficiencies. Computer graphics

compares their depicted motion, with how their silhouette should have moved. Computer memory tracks their improvement over time, and shows exactly what minor refinements remain to be improved.

People with over a hundred types of limited limb usage issues from paraplegia to serious sufferers of arthritis, can creatively utilize the invention to control electronic devices. The user's sign language is interpreted as electronic code. For example, body sign language allows the user without touching anything, to activate a light, send e-mail, or use a speaker telephone. The invention interprets the body movements as particular forms of sign language, which is translated into the corresponding command code. Insurance companies, and retirement homes can save billions of dollars in labor costs allowing the handicapped to help themselves. Most importantly the disabled and elderly want the freedom independence brings.

There are many other innovative features related to this confidential invention as well.

File: Motion / 3E061 Body Guide

FILE 3E061 Body Guide

3E-061 Body Position Guide: Instructs users to be in the ideal body position for the type mood or function they may be in.

+ Our very related inventions: 5E020 Magic Wand; 1J010 Body Movement NR; 3E061 Body Motion Instructor; 3E150 "PS-Zone"%

-'Score measures= then rewards or punishes user according to their good body positioning ['tracked over time]= via nr / silent vibrator whose movement feels good or bad to user [according to uip-ba = uip-tailor]

-Examples of functions w/ associated body positions: studying; meditating [achieving higher transcended states via eg: Zen's lotus sitting position]; working at office, or desk or factory [avoiding repetitive movement strain, such as typing or assembly]; sex; *listening to: people, music; thinking, brainstorming [for creative ideas in groups, see KN (invention) paper on increasing creativity]; walking; jogging; aerobics or gymnastics [preventative maintenance training, eg: avoiding broken bones]; [standing while] cooking; doing household chores; physical rehabilitation [system adjusts to user's type [permanent handicapped] condition]; reading or watching [TV].

.-see following type text on possibly ideal body positions: yoga; body therapy and rehabilitation.

-Later, maybe u (multi-users) doesn't need the KN (invention) alarm system any more if their intuitive rising skills have been improved. KN (invention) allows u (multi-users) to temporarily be in wrong body position (for maximum 5 minutes, pr). OTD: pr; tds; score; status; uip; osc.

. Sleeping body position application: (KN teaches user into (change into) (sleeping in) certain body positions prior to rising, the theory is that the person learns to intuitively alter their body position and intern better prepare them for waking with less associated stress and for a better frame of mind for the day.

.-This is something like the philosophy behind existing N (invention) that gradually turns on light as time approaches the anointed hour, KN (invention) also utilizes this light changing KN.

-NR is activated when u (multi-users) is in wrong position within designated time (one hour) before alarm time.

+ KN (invention) is improvement on existing US Patent No: 4617525 Sleep posture monitor and alarm system.

-U can later view on 'screen their 'tracked body positions.

-

. OTD D: u (multi-users) = This N sys (system linked to 'adapted features) (tutors/analyzes: sleeping, walking, dance, swimming - for style / calories burned / grace (theater)) ~ C ('computer 'adapts features selected by user) =

BILL (u / animal being trained, pays/suffers penalty (nr, electric shock) whenever they aren't in desired mode/position/movement pattern); CART (); EDUC (); MULTI-USER (); NR (gives positive or negatives sounds/stimuli according to how uip "scores" u); OSC (); PR (); PS-Zone (); Q (); R ('remote control's 'computer 'adapts by linking with 'associated features) (); SCORE (); SENSOR (); TILT (); TRACK (); U; UIP (); VR+ (); WA+ ().

File: Motion / 3E061 Body *

MOTION TUTOR 3E061&: BACKGROUND NOTES

Abstract - Reworded: Teaches people to improve their body posture. Device instructs users to be in the ideal body position for the type 'mood or function they may be in. Similar inventions exist.

-For human body's repetitive strain injury. Systems "sensor's" determine when part of body has bent beyond designated parameters, eg: via poor typing habits.

-How invention functions:

User straps on attachments to different parts of the body. Each attachment transmits its location [without wires] to the sensor. The system then analyzes the overall body movement pattern. In tern the system scores the body movement pattern for the type of ideal movement sought.

Differing applications cause 'notifier of 'system to function differently. sys (system linked to 'adapted features) responds differently to different circumstances as dictated by: motion "sensor"; uip; "score"; type activity u (multi-users) is involved in (sys knows via "analyzer" / uip); and or what 'user programs/requests system to do/'guide.

%* Related invention [pat # not known]:
This is something like the philosophy behind existing N; that gradually turns on light as time approaches the anointed hour, KN (invention) also utilizes this light changing KN. This invention's current application is a morning alarm, getting person gradually accustomed to waking up by giving light.
-Should the user be in a poor sleeping position, the light goes on slowly to wake them up.

(Non) Human Body Applications. Invention placed onto:
-Animals:
--'track their movements= for 'analysis / 'ba
-Objects - to see how they move (on their own). Examples:
.--trees [in the wind or hurricane] for research
.--new construction projects which need to see their strength in the wind
--combine this invention w/: 'vibration \ 'sensors \ other motion 'sensors
--mechanical products w/ moving parts. Measures for defective movements

"Tilt": attached to differing regions of body where designated movements are more/most readily "analyzable".

Part Files To Print:
-The important files design engineer needs to read to better understand the scope of this invention are the part files titled: +Tilt; Remote; Guide; PS-Zone.
-Request a copy of these files after you understand most of the invention description, and have conducted a good patent search, and are truly able to get the needed results completed on or before the deadline!

Working with specific tools, such as one of the many dangerous ones like chain saws:
-The 'tilt - 'notifier can alarm whenever a device is on or on and in a specific dangerous mode, while being in an unsafe position.
-This is an example of another related invention not exactly part of 3E061. The part of the invention, whereby the user puts the 'guide onto their body is part of this very invention, and one that can be considered.

For carpal tunnel syndrome and other repetitive strain injuries see:
-Desired body positions determined by books on related subjects, standard medical practice, and patient's doctor.

.-Applies to diverse illnesses as outlined in the popular book "Repetitive Strain Injury - A computer user's guide", by Emil Pascarelli, MD, published by J. Wiley & Sons, New York City.
-web, etc.

Study robot movement research and patent applications, especially in the areas of:
-how they move their appendages
-the trajectory path of their movements (less so the changes in their physical location).
-'w5 [when, how, what, where, when] robot's appendage movements are: restricted, restrict able, determined not to exceed designated constraints [due to possible breakage or wear and tear].
-how robot movements and human movements are similar; what robot researchers have learned about human movement patterns.

Web search engines: Try key words: "carpal tunnel" and products, tilt, "move at angle"

% Incorporate Panasonic's carpal tunnel massage device with the 'guide device. Or maybe their product is used as part of the healing process, but kept as a separate product.
%*-Incorporate healing skin lotions.
-Details on the existing product at www.carpalproducts.com

More Talent May Be Needed: Key Words for searching on web for people with desired skills and or interests. If more people are needed consider looking outside your geographical area, where people have even less opportunities to work on a good invention. If interested they might come out to you or you can start working without meeting and continue from there - it might be an avenue at least worthy of exploration. Confidentiality clearance needed before releasing certain portions of any invention details to public.

-yoga
-meditation
-*medical
-physical therapy
-paraplegic
-electronic hardware
-mechanic, mechanical
-engineer, engineering
-what else?

-Instructional manual gives clear ['interactive] directions [via its 'guide].

-Plastic and soft parts are washable, maybe even in the dishwasher or special machine washer.

-The 'analyzer needs to be sure that the parts are positioned correctly in relation to the person's body joints.

-Checking Attachments are On Correctly - Double-checking:

User can be asked to move about their body appendages in certain manners, eg: 360 degree swings in certain directions [while moving another attachment], system then 'analyzes to see that they are correctly positioned vis a vis each other.

-For greater certainty the body is moving correctly, one can also try:

.--user being fully flat on hard floor while doing 'designated movements

.--user putting their [entire] body into a [solid] device/body brace/structure; putting aside the question as to whether the body is in right position. Then system 'analyzes how each of these parts are positioned while the attachments are either stationary, or moving within the constraints of the structure.

-% 'Sensors on device know when they are correctly connected to the body and 'notify user as to the 'status of their being put on correctly or not= via differing 'osc beeps.

-For example: the self checking mechanism requires certain things to be in place, though it may not be 100% sure a part is on correctly since there may be too many things to check.

5J03 Body Posture Corrector - This description is basically repetitive:

-"Sensors" attach to body parts, "notify" whenever body has poor alignment (as "programmed").

-Device for maintaining correct posture - when walking.

-"Sensors" attached to body parts: head (back, forehead, sides, top); neck (back, sides); shoulders; back (spinal area); hip (back, sides); * legs; * feet; * arms; * hands.

--attach especially onto bony areas due to greater stability....

-How central idea functions: "Sensor" must be in certain position = or will "notify" user. "Sensor's" desired angle of position (relative to earth's gravity, eg: carpenter's level) is set when the user or their instructor presses "remote" button ("k") at the time the "sensors" are aligned correctly (as visually viewed / via "analyzer" utilizing other existing technology).

-U deactivates system whenever they desired. Eg: for walking, physical work.

-"Notifier" activated whenever non-alignment continues beyond designated ("pr") time span.

. Other applications:

-inducing people to sleep in desired positions, eg: on back, or if they have other physical ailment, eg: bone injury needing designated sleeping position.

-movement therapy, eg: Alexander technique. For: exercising (swimming, jogging); work safety (lifting).

Purpose: reduces chance of body injury / improves movement for better sports / exercise performance. People sitting while driving or riding horses, or dancers.

-utilizes Steven Kays' preconceived inventions: 9G050 Multi-directional Level

%* 9G050 Surface Angle Measuring Device:
This is a different related invention project included herein for interest.
Determines the flatness of a surface like that of the carpenter's balance measuring device with a little bubble in a tube; when the bubble is in the middle of the tube, the device is considered flat. Other tubes are positioned to show if device is perfectly at a 45-degree angle. This invention is better in that it applies to non-flat surfaces as well by using prongs to know the average position of the device being measured.
-Each leg reaches to a different point 'analyzing for:
#1: How level surface is. Designed especially for non-flat surfaces (have multiple curves, bumps). #2: Also checks for degree to which surface is horizontal / vertical (vis a vis desired perspective, eg: diagonal column, gravity pull). #3: Measures accuracy for degree to which desired angle is what it should be.
.-consistency level at designated points.
-D1: leg(s) = central point (c, sensor).
-D2: multiple existing levelers meeting together (as the letter X or shape of star - *)
-Patent search strategy: level+ and (measure or measures or measuring) and (carpet* or hous* or wood*).
-US Patent No's [from before 1990]: 4850491 4182046
-Technical - how KN (invention) looks: possibly a circular bubble (with flat-(is) top) = air pocket inside plastic bubble holding the liquid = moves to point opposite where there is the most dip/angle.
-Used for standard level measuring, eg: left to right and or front to back or other.
+ measures degree to which angle is at desired degree, eg: u (multi-users) wants 45 degree angle: place level on the (flat) surface then= rotate= then click into place the plastic bubble at the 45 degree point= resulting in plastic bubble being perfectly horizonal if the main contraption is at 45 degrees (in terms of earth gravity). Set level to measure accuracy of angle to any (five degree increment).
-claims: old levels used vials instead of rounder plastic bubbles which measure front to North to South or West to East or NW to SE...., while KN (invention) also can handle designated angles vis a vis up to down while also checking for other angles (incongruence), eg: (flat surface) being crooked in any other way from manner desired.
-Related to Invention 3E061 Human Body Motion 'Guide. That invention measures the angles at which body limbs are moving. It suggests alternative angles at which limbs may be held such as to avoid carpal tunnel syndrome.
--An adaptation can be in that the 9G050 Surface Angle Measuring Device, will be able to gauge the angle at which a human limb is placed, since there are no flat positions on the human body.

Tilt / Balance Detection: laser or other 'frequencies can determine the relative position each piece is to the other.
-'frequencies can include: 'distancer; %'ps: 'positioning system. This part focuses more on GPS matters however; so a micro version of such is needed. Too expensive maybe.

-Trade Mark possibilities: Body or motion balance, eg: body balance or motion balance tutor; body guide; body instructor, body tutor; Motion Tutor; Posture Doctor

-* Very similar inventions are under two different product numbers:

3E061 and 1J-010.

-Working at a stationary desk, work table, conveyor belt, or other work area:

-The system needs to have calculated into it the type chair and desk, along with their heights; and 'guides accordingly. In other words, the 'designated body positions are determined once one inputs into the system the height of the chairs, table, and distance from chair user might need to reach. It also suggests how the chair and table heights can be altered.

.--The 'guide invention might be sold along with chairs and desks, whose heights are adjustable. All the user needs to do is key into the system what the desk and chair's markers state are their important height parameters.

-Maintaining designated distances from computer screen (s) or book, so as not to hurt human eyes.

.--Diagram: "distancer" (measures distance from user to screen) = 'analyzer = 'notifier.

-Other repetitive manual work, or other commonly practiced poor body motion patterns: alerts user to their body motions, which are harmful to the body.

Remote Control Features Background:

Existing Canon product:

Camera detects user's eye movements, view finder's frame is where the eyeball is looking. [Canon, 17 Jan 93 "Yomiuri Daily" Newspaper from Tokyo, article. - Don't have article though]

+-eye movements control products. Positions of eye represent different signals.

Steven Kays is developing the R123-1 Eye Controlled Touchless Keyboard:

Camera detects movements as eye looks at each letter on board. Upon eye's stopping at each square (represents key), signal is created as if key were pressed manually. Place head into goggles or brace within view of eye movement sensor. Applications: the physically impaired; hygiene (Touchless control); lack of space; virtual reality. Controls all keys of standard keyboards.

-additional keys can be added for, eg: designating that the next two keys stopped at are to be considered pressed simultaneously (look at simultaneous key #1 -> alt key #2 -> F3 key #3).

-depending on technical requirements / user's (steady) eye control, time period for eye to stop at each key is set (via mf or user's pr).

-helps if eye socket's position is stable in some manner, so eye movement has point of reference so sensor knows how eye is moved.

--more sophisticated "visual analyzer" version: sys (system linked to 'adapted features) seeks face of u (multi-users) (via image recognition of any human or particular u, eg: via facial characteristics -> knows where eyes are. In tern, when head moves, sys (system linked to 'adapted features) accommodates. Sys knows the change in angle of head effects how eye needs to move to see squares (any point of vision).

-D: what eye sees (tr gives its location to c) = eye(s) = movement sensor = visual analyzer = c.

* 5E050 Body movement = "R":
Way in which user touches/moves in seat/sofa/furniture/contraption = "synthesization of sound = memory/speaker/play back.
-degree to which element/part is squeezed the degree to which volume/base/treble... goes up or down.
'Remote Control Features - How user's sign language is interpreted as electronic code:
-see the 'Remote part.
Activate, deactivate any electronic device and or control its operations without touching the main unit (unit's buttons).
D: 1uk~2display~**3osc = 4c = 5signal converter = 6tr/6rc (via wireless/wire) = 7signal converter = 8c = 9(product follows desired command).
-OTD 1: Transmission distances for radio frequency transmissions reduced according to local usage regulations (use re-transmitters). Can be in any shape/dual function/attached as a combination ^: necklace, clock, wrist watch, bracelet, belt (belt buckle), key ring, pocket pager, "air pad", %eye glasses, %ear rings, %hat, %head band, %shoes, wallet/purse/*bag attachment (or inserted therein), %umbrella (handle; rod for "tr"), car, *bicycle, %ring, computer (notebook, organizer), tel instrument, attached to (door, wall, furniture (chair, sofa, table, bed). Is waterproof and can even be submerged into water without possible electric shock.
D: remote (uk)~c = tr/rc = function
-OTD 2: Some of the below may be designed only for limited controls (activation/deactivation) if there is a limited range of possible triggering of desired control signals in the final design. In which case simple/complex controls/pp are handled via other means (buttons / keyboard / + Victor Co's AV System Remote Controller which works w (with - 'adaptor controls level of 'interaction) 13 types of audio-visual equipment).
Clapper: by clapping or whistling, user activates system. For more complex operations, the claps and or whistles or any other sound combination triggers corresponding function. Voice activation system too. See ^: Parts, "Clapper" file for details.
% Magic Air Pen: Remote pen's movements are transmitted to computer. Make strokes in the air or on any flat surface. Each different stroke creates a different signal. (PD) 3A-790-042004
% Body Movement Controller: Incorporates the 'Miburi' released by Yamaha after my filing of this idea!
Dancer Toy: Create signals as you dance. Dancer's movements can be converted into an infinite array of different signals (as pp/mp). **Example: Moving of left leg can generate sounds of bells or drums. Each zone of the room in which user moves left leg, creates a different signal, according to the area (PS). History see: B7-120-022001
-Other virtual reality products that create signals according to body movements (gloves).
-"PS": According to which devices they are moving (dancing) near. Eg: if they are near one block (transmitting or receiving signals) then the shoes or the block will make a different sound. That is put the blocks where you want, these blocks create "sound zones".
OTD: All; remote; display; pp; mp; uk (desired sounds); interactive; toy; game; entertainment; microphone; exercise; portable; sst; bp; sp; osc; vc; egh; score; md; cart (sounds); cp. For indoors or outdoors use

CONCLUDES File: Body Motion / 3E061 Body *

File: Motion / 3E061 Claims

3E061 MOTION TUTOR CLAIMS

Teaching hundreds of different additional skills to refine people's physical movements in:

-Sports: Throwing or swinging at balls in tennis, baseball, basketball and football.

-Teaching truck drivers working excessive hours to avoid dosing off. This is an improvement over an existing product.

-Working correctly with diverse tools and machinery for purposes of safety, better work performance, and reduction of potential damage to expensive machinery. Saves teacher's training time.

-Correcting body positions for: carpal tunnel syndrome, sitting at a desk, walking, yoga, and meditation, etc.

Lifting heavy objects:

-The invention can save millions of people from the agony of life long back injury, plus possibly over a billion dollars in world-wide worker's compensation and lost work hours payable by insurance companies, businesses and governments.

-Employer's using it as part of their training program, may reduce their liabilities even if back injuries still occur; since the company can demonstrate that they are doing everything possible to prevent the problem. This puts more of any blame on the employee who may not have used the invention, or practiced what he was taught.

-The invention can score how well the employee picked up objects. Users may even be asked to pass the simple test before being hired giving another valuable legal protection for the employer.

User views their past movements:

-Later, the user can view on the screen their tracked body positions.

-Computer graphics shows a window for how someone of their exact size and build should have moved. This window can be shown side-by-side, or juxtaposed over the user's actual movements.

-Their movements can be laid over that of the ideal movement, eg: user's silhouette over another silhouette of same size. This can be done simultaneously or serially.

-The system analyzes the human body's movements by determining where each body part should be vis a vis the invention's parts [which 'transmit their locations].

-User's progress over time can be shown by: overlapping current w/ past movements; differing 'scores of their movements [like via a chart over time]

Pet Trainer: The invention teaches dogs to better behave themselves for example by not jumping onto people.

Many more creative features abound with the same and related versions!

File: Motion / 3E061 Claims *

CLAIMS FOR 3E061 MOTION TUTOR *

Flexible monitors on bottom of wrists (7G052). "Tilt". Body parts attachable to: fingers (so fingers don't stretch too much / often hitting way out K's keys. Other body (human) parts: neck, waist, ankles*.

Physical rehabilitation [system adjusts to user's type of [permanent handicapped] condition]; reading or watching [TV].

Other Use Possibilities: Monitor movements of people or objects. Study the movement patterns. What else?

Attachments of parts are made to Individual body parts:
-finger(s), wrists, elbows, shoulders, neck, *eye (lid), chest (spinal cord area), waist, hip, leg joint meeting hip socket area, knee, ankle, toes.
--what else can such a 'guide do?
-Multiple sensors placed on each mentioned part - each 'sensor present to maximize "analysis" for each movement, eg: neck has more sensors than elbow since former has more types of angled movements possible.
-'Sensors can be (partially) hidden/disguised via: standard clothing, neck sensors - turtlenecks or necklaces, %jewelry: bracelets, shoes - ankle; medical wraps or apparatus.
--what creative forms of jewelry can be suggested?

Dance and stylized body movements:
-Tai Chi: The Tai Chi for of art is a meditative dance from China that is becoming more popular in the US. When correct positioning is achieved in the correct 'order & timing [such as the right pause between movements], system rewards user by playing new age music. Or user continues practicing until system 'analyzes user has achieved the right pattern; in other words the better the student movement, the faster the class is completed.
-Teaches any other type of desired body movements, the reasons for such form of body movements need not necessarily be 'pre-programmed into the machine. The 'user 'programs the machine to suit. Examples:
--Learning how to: walk on fragile ground; balancing oneself while rope walking; learning movements for any type of film stunt work [maybe the film director wants a certain effect from the movements - in that the desired movements may run counter to how a person would normally move in a 'designated circumstance]; how to stand [while talking and or 'interacting with someone or something (like a KN (invention) invention)].

-Dance trainer: "education", "tilt", ballet, modern dance, theater (walking, posing, jumping).
-What other types of body movements can benefit from 'guidance?

* Exercise:
-Jogging: to reduce damage to legs caused by poor habits, eg: knees.
-Studies user behavior to determine which shoes would better match their needs.
-Aerobics or gymnastics [preventative maintenance training, eg: avoiding broken bones]
-Sports education. Eg:
--Learning to ride a bike, surfboard, etc.
--Learning to use any new sport equipment, eg: rackets, rolling bowling ball.
-Gymnastics: any of the Olympic competition activities.
-Exercise: jogging, swimming.

Guides how to hold and play musical instruments correctly.

Miscellaneous Benefits:
.-[standing while] cooking
.-doing household chores.
.-see following type text on possibly ideal body positions: yoga
%.-Speech therapy: Teaches people to improve speaking by positioning their head in a certain manner.
.-sex
.-thinking / brainstorming / studying: certain positions may elicit greater creativity. The manufacturer might suggest the positions, or the user may determine what works best for them - they just need to be reminded on occasion.

What other forms of benefits can you suggest?
-Specialists who can make additional recommendations for ideal body positioning include: chiropractors; yoga instructors; actors; psychologists; medical doctors (for patients needing to (temporarily) change their positioning (due to their medical changes).

Restraint
+ Proximity Restraint: Stops people's movements when they are not where they are supposed to be. Can be a safety and or security precaution.
-'Access codes needed to stop the restrictive mechanisms.
--Users required to wear the invention: Should the device be taken off [unsnapping triggers 'notifier]= access or punishment or 'notification [to security can occur].
-Diagram: When 'user is in a 'designated 'zone = the invention = will restrict = the user's movements.

+ Incarceration Restraint: 'Guide can work as a form of containing a person's overall movements, eg: for criminals during transport (may be more freeing than leg or hand cuffs).

User can be punished or rewarded to their 'tracked behavior over time:
-'Score 'analyzes the degree to which user exceeded 'designated movement parameters, and by what margin. Differing [bad/good/moderate] movements are [each] scored positively or negatively via diverse variables [tied to degrees of goodness].
-The worse/better the user's movements, the more/less restrictive the system can get [automatically].

Standing and Walking Postures:
-A high percentage of the population will benefit from better posture. Correct posture helps in maintaining good health and self esteem. Due to mankind's historic evolution from walking on all fours, our backs and posture continue to be a problem. This is the only known invention that effectively reminds and instructs users to move their bodies correctly.

Meditating: The invention helps the user achieve higher transcended states by inducing them into the correct arched sitting position. Studies show achieving the desired body posture is important for inducing meditative states of mind.

Yoga:
-The invention 'guides the user into ideal body positioning. Less practiced yoga pupils may be less apt in knowing the ideal position, and are maybe unable to see themselves objectively without an instructor. The invention 'scores the users progress.
-The invention's cost may in time pay back from the savings in inconvenient classes, transportation costs, lost time one might be otherwise working. The user can soon start taking higher quality yoga breaks at one's will without tutors.
-'Guide's 'Order & Timing:
The device may be coupled with a timed 'guiding device for the recommended sequence of body movements. Its verbal cue ['osc] instructs user as to the ideal time period for remaining in each position. User may be given a set pause between positions.
--Before beginning, the user may put on one to a dozen or so sensors. The 'analyzer only studies the positioning of the applicable 'sensors for the pertinent body exercises.
-As the user follows the prompts; 'system knows or assumes at what angles the user should be in for each general body posture.
-If the user's angles are completely different [by over 30 degrees on average for all sensors], system turns off its 'guidance system; so as not to interfere.

-Helps replace the need for a daily yoga instructor. However an instructor or the manufacturer's representative or school is needed to 'program the device for what body angles are ideal for the user.
-The invention can have a built in expectation that the user's flexibility will improve. The teacher or 'system will gauge the user's age, recent yoga experience and so forth in determining an expected curve of improvement over time. Additionally the student can visit their instructor occasionally for a reprogramming of the machine should their improvement be faster or slower than 'predicted. 'TGH (Therapy gets harder).

Sleeping body position application:
Invention teaches user to sleep in certain body positions prior to rising.
-The theory is that the person learns to intuitively alter their body position and intern better prepare them for waking with less associated stress, and for a better frame of mind for the day. In other words after using the system for some time, the system can alter the user's subconsciousness so they no longer need the device.
-Those in hospital beds may need sleep 'guidance. Eg: those w/ broken bones and under heavy tranquilizers may not realize the pain incurred by certain movements (while asleep). Such people might be given less tranquilizers to keep them alert enough, so this device may actually help induce better sleep! People could pay dearly for just this one feature.
-Studies show that sleep positioning is correlated to behavior types. For example, people sleeping on their backs are often socially more outgoing than those who sleep on their stomachs. Invention can be used to help induce behavior modification; possibly along with other forms of mental therapy.
-Invention also applies to (leaned back sitting) sitting (on lounge chair) or other resting body position 'guidance.

EXAMPLE INVENTION IN MINOR DETAIL
-Carpal Tunnel Syndrome Therapy Machines
-Carpal tunnel syndrome is one of the forms of repetitive strain injury suffered by millions. This paper goes into some detail on the benefits of the invention for those with carpal tunnel syndrome. The version of the invention for carpal tunnel syndrome serves as a rough example for how other applications of the invention may be developed.
-Carpal tunnel syndrome has a chronic lack of good solutions. The marketing of special carpal tunnel wrist massage machines (from Panasonic), carpal tunnel skin lotions and special teas are all signs that good inventions are lacking, and the market is willing to buy almost anything in the hopes of solving their problems.
-The invention affords greater forms of flexibility than available from other carpal tunnel syndrome products, which generally are some form of a cuff worn about the wrist with minimal flexibility. The invention however is designed to provide the helpful restricted wrist movement, while also allowing the user to temporarily disengage the restricted mode on an as needed basis.
-The user may need to temporarily gain more flexibility for their wrists for any number of reasons. Wrists after all are flexible because we need them this way to do the things we do on a daily basis. Many people shun the

old fashioned products due to their encumbrance, and intern don't gain the benefit existing products have to offer.

-The invention's flexibility may also induce the user to wear the invention more often, intern gaining from the invention's benefits.

-The flexibility offered the wrists is designed in different variations.

-Given any emergency action required of the user, this invention if properly constructed can be safer to use than existing remedies, since the hands have more of the needed mobility to respond appropriately. When in the middle of some panic, the user might forget they have on the device. Design the invention so that it is removable in the quickest time with the fewest number of movements necessary.

Mechanical Version One:

-When necessary, the user simply snaps the release of the invention. This mechanical release keeps the invention on the wrists but affords greater flexibility.

Mechanical Version Two:

Invention's construction example #2 - purely mechanical version:

-Similar parts may be attached to the back of the forearms and hands like in the other construction example, but the key element is the angle at which the (ball) joint connecting the two parts is.

-Maybe the joint can be locked by user at desired angle and at the 'designated times. In tern only that angle, with or without a limited flexible range is afforded the user [typing at the key board].

Electronic Version For Carpal Tunnel Syndrome:

, or the user can simply ignore the minor alarm sensation they receive when they move their wrists naturally, since the invention doesn't have to physically restrict all their movements.

-when user bends too far, they will bend their hand into the stationary dull pointed device. However (maybe) if user continues to bend into this pointed element, the pointed element will give way, allowing user greater flexibility without the "punishment" factor.

-Alarms to the user 'notifying them of poor movements can be in the forms of:

mild vibrations, sounds, very mild electric shock, mechanical element than pokes at their skin, and or differing lights each signaling a different 'score.

Invention's construction example #1 - electronic version:

-The 'tilt sensors are placed on the forearm, and also the back of the hand. The forearm must be at a 'designated angle. Perhaps the back of the hand has to be at a 'designated angle in relation to the forearm or independent of the forearm.

+-As different people's hands and forearms differ from each other, then the user needs to 'program at what angle their 'tilting parts must be set to 'seek, so it determines the ideal body positioning has been achieved. Hands can be measured in different ways, eg: 1] from side to side when the hand is flat on a table; 2] the hand's thickness.

-Self 'monitoring:

A simpler version allows the user to simply view the angle at which the part is situated, with or without an electronic means of 'notification, or 'analysis as to what is the correct angle. For example, 'user can easily view the top of their forearm while typing.

.-This applies to any other applications of invention other than carpal tunnel syndrome.

.-Diagram: Body movements -> System's "sensor's" determine when part of body has bent beyond designated parameters, eg: via poor typing habits -> 'notifies user / 'guides user.

People habitually forget about their poor movements, due to habit, or otherwise. Carpal tunnel and other related syndromes usually creep up on people. Since physical injury worsens with those who don't practice proper movements, there is a clear need for this device in one form or the other; even if only an inexpensive of the invention is utilized for the mass market.

The daily usage of computers worldwide is exploding, and interns the growing need for the invention with the carpal tunnel syndrome therapy application.

Physical Therapy Continued from other papers:

.-Teaches people [out of physical necessity] to use their alternative appendages. For example people who have suffered injury to a limb, or who had 'a stroke need 'guidance in using alternative means: Teaches people to use other available appendages more, eg: hand for writing / working; leg. Usage changes involve: less pressure, exertion, movement.

-Motion "sensor" can also be utilized.

-Works w (with - 'adaptor controls level of 'interaction) / replaces physical therapy methodologies (commonly in practice)

-Medical conditions include:

arthritis

-accidental injury: torn ligaments, broken bones (can take off casts earlier or avoid all together, especially when casts are of less help in such occurrences)

-muscle or bone diseases

-birth defects

-The invention can be self taught and adjusted; yet a therapist may be utilized if there is medical insurance coverage.

-Etc

Sports:

-Throwing or swinging at balls in tennis, baseball, basketball and football.

-Throwing balls in baseball, football, basketball, etc.

-When catching or swinging at the ball, the direction, any spin, and *speed of the ball are to be reflected in the correct movement response/swing.
--System knows the nature of the ball via:
---controlling how it comes to the user
---'visually analyzing its movements
-Speed swimming.

Fine tuning one's gymnastics and dance technique movements.
END OF CLAIMS SECTION: Look for more claims in application
File: Motion / 3E061 H2*

3E061 MOTION TUTOR - OTHER

How Invention Knows The Positioning Of All Its Parts:
How the different 'sensors know where on the body they are, and how they are juxtaposed to the other parts:
-Each part is assigned [normally] only to one portion of the body. The 'programming surrounding this part pertains just to that body part, eg: forearm.
-Invention knowing where it is on the body and knowing what position it should be in (vis a vis gravitational field):
--'Software's 'analyzer knows how they should be in relation to each other based on: type model used and for what size person should be using system; the type of body movements system is to 'guide; if one of the parts falls well out of the normal movement pattern [as determined by 'tracking], system will 'notify user.
.--This lends the overall invention to prefer simpler designs when feasible.
.--the parts/sensors are hopefully placed correctly onto the body.
.--different size parts might be used for differing body parts: such might create better perfect fits. Inventions made/adaptable for people of differing sizes.
%'Distancer knows the distance from other parts.
%+-Distancer placed on each end of each movable part. In tern the 'analyzer gauge's position of each part vis a vis each of the other parts, or vis a vis a single 'sensor located on or off the body.
--System assumes/'analyzes [within a permissible 'designated margin of error], that the parts are fitted onto the person correctly. Therefor it 'analyzes then 'scores how good the movements are.

Checking If System Is Being Used Correctly
Ways system can judge it's possibly not being utilized ideally:
-Maybe the parts are too far apart? Someone putting the wrong part on a limb might cause this.
-For example, the distance between the different body attachments is [on average] not the correct amount.

--This might be determined via: the 'distancer which measures by radio waves between each piece.

-Maybe the wrong person is using the system, and they are of a different size.

-Maybe the user assumes the system is programmed to 'guide them for a movement pattern other than what the system thinks it should be 'guiding.

.--In versions too expensive, the system can determine what the movement guidance needed is, and then kick in from there. Done by 'tracking the past [minute's] patterns, and matching it against the system's database of movement patterns.

-The pattern in which the pieces are 'coordinated with each other in the overall body movements.

-Without knowing if the system was put on incorrectly, or the user is doing something wrong, it will be difficult for the System to 'analyze for inappropriate movement; it may assign poor movement characteristics to either the user and or how the parts may be incorrectly attached.

-A 'designated 'notification can be made in such situations.

Ways to help make sure system is used correctly:

-User makes sure the parts are on correctly, and in the correct distance from the other parts.

--For example: User is to measure the distance between attached parts. They may lay on the floor. User or system then can 'analyze if all is OK.

-Require a person trained in the device to attach them up correctly with the parts.

-Scale back the invention:

Have fewer parts. The simpler the easier to use. Naturally this overall invention is complex for expensive models.

-% Wires between the parts: the manner in which 'sensor senses they are being bent may help in: determining the correct overall movement pattern [since incorrectly placed parts will effect the movement of any connecting wires accordingly - for any individual with given body measurements].

-Different size parts are made to fit right onto the individual like shoes. One needs the correct size. Eg:

--the entire forearm is grasped in a manner so that it can only fit on with minimal chance of error.

---release mechanisms may be built in.

--Buyer can special order each part, or they are kept in stock adjustable products at the store. Invention is usually not a "one size fits all" product, but exceptions abound.

-The attachments can be [mostly] solid [plastic] - assuring greater accuracy of each piece's 'transmitters / 'receivers / 'sensors being in the correct position.

-Using general [human] caution.

Errors & Less Desirable Body Movements:

'Programming in permissible range of tolerance for error:

-The level of tolerance system has for poor movement can be 'programmed and altered.

-should the human body measurements not be perfect*, or should the devices not be placed perfectly; system might give more room for error.

--maybe the device, user, or type movement requires such greater flexibility. Reasons include: person has poor coordination; the movements desired are difficult to attain or repeat; user may need to make [spontaneous] alterations from the 'guided path.

-The system's increasing its margin of error is easier or more logical or applicable should system 'analyze that it isn't being used correctly.

-the user/system may (re)set the margin of error. Reasons may include:

.--the invention appears not to fit onto body perfectly due to: user's lack of experience ['database knows how often user used system to date]; parts not moving in an as ideal a manner as hoped; difficult to physically meet the movement.

-'Guide system can be 'programmed to turn on/off 'system's "punishment" mode if user lacks correct posture:

--maybe user doesn't need the 'notifier system any more if their [consciously directed or intuitive] movement skills have been improved. Invention allows user to temporarily be in wrong body position (for maximum 5 minutes).

--OTD: score; status; UIP; osc; 'behavior analyzer; 'track; *program.

PARTS 3E061

Intro: These terms are fully or partially inter replaceable. In other words, each group of terms can usually be replaced with each other, intern broadening the patent. Terms describe the parts and or functions.

.-Complete definition of terms found by: Using [high tech] thesaurus for each aspect of definition; doing key word searches on high tech databases like www.uspto.gov for seeing how such are utilizable.

'Analyzer: Is the brain of the invention. Studies the different parts' positions. Controls / 'monitors the: 'guide, 'monitoring, 'tilt, 'tracking, 'uip, 'user.

'Education: User is educated on the better techniques in: dancing, gymnastics, aerobics, jogging, walking, yoga.

-System reprimands bad movements, and gets tougher ('TGH) over time as student should have increased their skills). 'Guide.

'Guide: Instructs user how to move; 'educational; Normally the invention 'monitors the user, and intern 'guides them into better positions by: beeps, lights, or other forms of 'notification.

-'TGH [therapy gets harder] as person improves [their yoga], in other words 'guide gives a 'score for user's 'tracked movements, and intern 'guides user to harder tasks.

--For medical applications, 'tgh may simply automatically assume the user's physical condition is being improved unless it is 'programmed to think otherwise.

'Monitoring: 'scoring; evaluating if the 'designated body position is being achieved. 'Guide uses 'monitoring to determine what guidance if any is needed.

'Tilt: Position of any of the 'sensors; Part [used as a sensor]. Balance.

-(body posture (standing up right / at right angle (see KN's `Level Analyzer' N (invention) in E or G* dir))

-The angle at which the 'sensor is positioned is determined by

an electronic or mechanical version of the carpenter's level measuring device.

-Each part can give its own readings as to its angles. Each part can be connected to different portions of the person, hence a different desired angle can be sought for each piece.

-'Analyzer: studies the changing trajectory path of each part, and or how the different parts are positioned in relation to the other parts.

--The analysis of trajectory paths is more valuable when multiple positions are ideal, versus tasks where there is only one ideal angle. Multiple positions can be the way one is retaught how to walk, single positions can be meditating.

'Tracking: following 'user's trajectory graphs of body movement; 'monitors the user's [improved] movement history.

'UIP [User Information Programming]: User's past movement patterns, what ailments they have/had/need correcting & how. 'Behavior analyzer. 'System 'tailors itself to user's needs [according to how 'guide best determines it should be done].

'User: Patient; person undergoing physical therapy; normal person seeking invention's benefits. Any (3D) object or animal whose movements need to be 'monitored, 'tracked, 'guided, and or controlled.

- - - - -

Limiting number of 'sensors:

-To minimize the number of 'sensors, the user may have only a few of the needed 'sensors. The idea is that if certain body parts are in the right position, then it is rather likely the other parts are doing OK as well.

-'Sensors might be placed on the more difficult or problematic body parts.

-Advanced versions for which users are prepared to pay extra can have more parts.

Rewards are given for good movements. Different forms of 'notification can be given to the user, based on how good the pupil is. The worse the position the worse the feel of the 'notification, eg: louder beeps.

The exploding global market for computers is increasing the call for a solution to repetitive strain injuries.

The invention's advantages over human physical therapists are substantial. For example:

-Patients not needing to be reminded [time consuming for hired help]. Less observation time required.
-Invention is in many ways like having a 24-hour physical therapist.
+-The ability for human therapists to accurately gauge the desired angles of movements is less precise than the invention's ability. The medical doctor simply prescribes to the invention what angles and other type movements are desired, and how they are to change over time. This is coupled with doctor monitoring and corresponding reprogramming of the machine.

The system is over time, cheaper and often more effective than live instructors. Examples include:
-History and database of user's: movements, behavior, problems, what 'guide modes worked best, what 'tgh modes worked best, user preferences, etc. All this data is usually too much for a teacher with multiple students to remember, and too time consuming to remember. Improved 'tailoring.
-Available 24 hours. No travel necessary to connect student with teacher.
-etc!

Diagram: User = Body Movement Invention ~ C ('computer 'adapts features selected by user) =
. ACCESS: 'designated movements allow access.
. ANALYZER: how movements interpreted; 'guide
. ARTIST:
. BA: learn about the wearer's behavior
. BILL: charge more for certain types of movements
. CART: each sw (software 'adapts by linking with 'associated features) cartridge allows different functions, eg: how movements are taught or interpreted
. COMPOSITION:
. COORDINATOR: balances the user's abilities, learning curve, 'tgh and 'guide.
. EDIT: 'guide tries to cut out 'designated behaviors from user's movement [behavior].
. EDUC
. MULTI-USER
. NR
. OSC
. PR
. PS-Zone:
--'designated desired movements differ by region in which user is located
--each appendage's movement falls into a different 3 dimensional location [another way to interpret actually made movements]
. Q: System asks user what skills or benefits they wish to gain from the 'guide feature.
. REMOTE: 'Remote control objects via user body motions.
. SCORE

. SEEKS & REACTS: System punishes 'designated bad movements
. SENSOR
. TILT:
. TRACK:
. UIP:
. UIP-Tailor:
. VISUAL ANALYZER: Camera can study movements made. Would help if user wore lights or other transmittable signals on key body points.
+. VIRTUAL REALITY: This is a form of virtual reality.
. WA: an easier form of 'remote control.
. ZONE

'Artist Part:
-movements correlated into art (two or three dimensional) plus maybe sound and any other effects, eg: vibrations, changes in temperature or smells.
-draw/create (moving/'interactive) 'images while (on 'virtual reality).
-replaces the paintbrush and or computer mouse.
-user is better able to create three dimensional 'images: each location in which the 'transmitter/'remote control is located can be interpreted as paint or any other form of creating [digitized] characteristics.
-drawing onto two-dimensional medium with their X and Y axis: movements [perpendicular] on a Z or other plain can increase or decrease the size or have such movements interpreted in any other ['editable] mode. Examples: changes in color [shades], volume of sound or size or smell, etc.
-See 'Tilt

'Entertainment: User's learning new movement forms can be entertaining. Eg: dance, yoga, gymnastics, acting skills [how one walks in conjunction with other movements and statements that need to be verbalized (as determined by the system's computer screen).

'Exercise: Device 'scores the level of 'exercise activity. 'Scores the number of calories burnt, and otherwise 'analyzes the level(s) at which user's behavior reached the ideal movements/characteristics/ speeds/etc.

'Predict: Therapy gets harder according to how well it 'predicts user's movements will change.

W5: the w5 elements determine desired body movements. Eg:
-when: time of day; or in what sequence of 'Order & Timing function
-where: 'zone; to where body appendage moves exactly [what angle, how far outstretched (if at all)]
-why: for therapy, or 'entertainment

-what: which body movements are needed, when and how
-how: how to move

Miscellaneous:
Connecting invention to body:
-Attaching invention parts/'sensors to user via:
straps; %human body implants; clamp onto body *[over skin or clothes or [therapeutic covering / body suit], eg: parts snap around body appendage...
-Children users or when the invention is used by 'multiple-users: The part's pieces can be adjusted to fit different body sizes. -As the adjustment is made, the user or the system automatically 'programs the 'analyzer accordingly, so system adjusts its 'guidance according to the type body/'behavior profile of the user.

Work needed:
-Focus on those applications, which may appear more, cost effective and for which there are bigger markets.
-The specifics for the working out of the invention's mechanics need to be worked out. Balance the benefits gained with the manufacturing costs, without necessarily expecting the perfect machinery. Study and apply existing technology to this innovative application. For example check out:
--www.uspto.gov for their database on mechanical parts. Apply existing knowledge to physical therapy applications.
--ask university librarians on material explaining how to create such mechanisms.
--search the web, etc.
--Also, communicate with physical therapists as to what movements need monitoring.

Breathing & Other Negligible Movements By User:
-The 'analyzer learns how to ignore less important movements like shaking, minor jerking, etc. It looks at things like the average position over a short period of time. It ignores jumps in the curves of movements.

The user can click when they start and or end their movement task. This better allows the user/system to know what movements are to be 'analyzed. In expensive models, the system determines the starting and ending, based on the 'tracked pattern of movement, and how such matches against the system's database of the [desired] movement patterns.

'Analyzer determines/guesses how far each body part extends beyond each of its parts. In other words, a part may for example be just above the ankle, and since the system knows for what body type the part is being used for, it can approximate how far the part is from the bottom of the heel. The user may also key in information about their body dimensions, eg: shoe size and chest sizes.

Pet Trainer: The invention teaches dogs to better behave themselves by not jumping onto people. 'Guide can work as a form of containing an animal's movements such as:
-while needing to be restrained for a veterinarian [the invention can be placed onto the animal by the pet's owner].
-while guests are visiting, and the owner doesn't want to completely lock animal out.
-teaching pets good manners, such as not jumping onto people.
-teaches dogs not to run too much: retrains leg movements beyond designated parameter, and or limits the number of big steps within a time frame [see part 'order & timing'].
END OF THIS FILE 3E061 H2

File: Move / 3E061 IMI&

MORE PARTS - MOVEMENT TUTOR. File IMI&

Note: Part names followed by a plus "+" symbol show extensive details are printed on these especially important parts.

ACCESS = Gain access to electronic product's controls with a correctly keyed in combination. Body movement's specific sign languages are read as forms of needed passwords.

ANALYZER = Computer software analyzes how to handle situation.

ARTIST+ = Allows user to make and edit images according to body movements.

BA+ = Behavior Analyzer. Analyzes live behavior of people. Type movement is interpretable behavior. User's behavior [as stored in database] enables system to better 'guide user for their 'tailored needs.

BILL = Billing: Charges users by amount and type of usage.

CART = Cartridges to be inserted into system. Frequently contains useful software / databases.

CLAP = Clapper. Each combination of claps controls a different function. Allows user to control invention without touching.

COMPOSITION + = Electronic Music Composition: Another variation of product can also be used to create interesting music according to type movements. See Yamaha's Miburi invention.

CA / CONTENT ANALYZER = Analyzes the database contents of user's behavior; so system can better 'tailor itself to user's needs.

COORDINATOR = Coordinates different parts of system.

DANCE * = Body movement generates sounds.

DB = Data Base. Stores: past movements of user; forms of movement patterns user needs to be taught; etc.

DISTANCER + = Signals whenever any two parts separate or come together. Signals via radio waves if separation is more or less than programmable distance. See other registered file on distancer for details. The distance between any two parts is another method by which to gauge movement.

EDIT = sw (software 'adapts by linking with 'associated features) edits / screens out data before it reaches u (multi-users) / Sys*. 'Guide can focus on certain forms of instruction, ignoring other aspects [of the database].

EDUC + = Educational: teaches interesting skills. Replaces human therapist.

EGH = Education Gets Harder. Adjusts to user's proficiency in body movements.

ENTERTAIN + = Also used as form of entertainment.

EXERCISE = Also used as form of exercise. 'Scores user's exercise for: calories burned; number miles run and more importantly under what conditions [eg: going up a hill].

GAME + = Also used as an abstract form of a game. By attaching this semi 'virtual reality machine, users can play games with each other over 'telephone lines while in different locations.

GUIDE + = An instructor. Suggests how user might proceed. System guides user so they can move better.

INTERACT / INTERACTIVE = System interacts with user according to their needs.

M / MFH = Mainframe computer hookup option for more complex tasks. User can pull down databases of other desired movement patterns, rules for 'virtual reality ['games].

MM = Multi Media. Movements interpreted in diverse forms of 'multi-media ['entertainment].

MOOD = User's mood. 'Behavior analyzer is either told by user, or 'analyzes on its own user's behavior. In tern it 'guides user to the body movements 'designated by user or system as solving or creating a desired emotional mood.

MORNING = Morning alarm. To deactivate alarm, user must do certain body movements, intern become more alert.

MQ = Machine asks user questions to obtain information so system can better 'guide user for their movement needs.

MULTI-USER + = System is specially designed for multiple users who have different body types, seeking different physical therapies.

NOTIFIER = User is notified on the status of any situation. Eg: when user's movements fall outside the 'designated parameter.

ORDER & TIMING = System reacts to the order and timing of user's movements. 'Order & timing is a more sophisticated method by which system can 'analyze what user is doing 'W5.

OSC = Outgoing Sound Communicator. Communicates with user by speakers, eg: instructions.

PD = Positioning Device. Portable unit, which broadcasts its location to the Positioning System, or location of a part, attached to a body appendage.

PR + = Program (software)

PREDICT + = System predicts what areas of 'education user needs special attention. Predicts what bad/good movements are more likely to occur, or what movements user wants [after their abilities have gotten better]. 'Behavior analyzer is used to arrive at predictions.

PS = Positioning System. Identifies the position of the movable part (Positioning Device) via its airwaves broadcast.

PS-ZONE = System reacts according to the location of the part in question.

Q = User / System ask each other questions. Helps each better understand each other.

R + = Remote Control

REACT = System reacts to good/bad movements.

ROUTE / ROUTER = sys (system linked to 'adapted features) routes user to designated part of a program [according to user's needs].

SCORE = The status of situation and or user's performance.

SENSOR = Sensor. Senses movement via many means.

SEEK & REACT = System seeks designated body movements, which intern causes a reaction, which responds accordingly.

STATUS = System shows the status of current and past movements, such as to how good they were.

TAG = Each moveable attached part is 'tagged, and 'tracked.

TAILOR = System tailors itself to better function for designated purposes.

TDS * = Time Date Stamp made on each aspect of a movement, much like each frame from a cinema camera. Useful in 'tracking and 'analyzing movements.

T / TEL = Telephone. Data on movements communicated over phone lines.

TGH = Therapy Gets Harder. As user's ability increases, system matches user's newer skills.

TILT + = Parts attached to the body are 'analyzed for their movement or how they are 'tilted.

TR = Transmission/receiving of movements via airwaves & or wire.

TRACK / TRACKER = System tracks or monitors actions of user.

U = User, Person.

UIP + = User Information Programming. System uses collected information about user's movements and behavior to better serve them.

UQ = User can ask invention questions such as what and how user can change about their movements.

VIBRATION = Vibration generated by device to signal 'score of type movement.

VR / VIRTUAL REALITY + = Future use with virtual reality technology possible. Less important now.

WA + = Walk About. Portable invention.

W5 = Forms of movements such as: When / Where / How / Why / What

5E080A ACOUSTICS SELF ANALYZER

Abstract

The invention synthesizes the stereo's music according to the acoustical qualities of the room. This works in conjunction with other existing synthesizing technologies. Buyers of stereo systems will naturally favor brands licensing our invention.

One of the sound analyzing methods to achieve the ideal sound quality is to study how the sounds it emits are echoed back to its microphone. The system emits test sounds that are best able to demonstrate the room's acoustical characteristics.

There are many other innovative features related to this confidential invention as well.

Details

Marketing:
-Replaces the need for hiring accoustical engineers. Though they may be better than moderately priced versions of the invention, end users rarely wish to find and pay for such services (only to rearrange the furniture later and or move); plus we are selling a "concept" even if perfect sound is not achieved. Buyers are also into what they think sounds good.
-Different quality versions of the invention are available at differing prices.
-This helps compete with other music systems that sound best in the show room. The invention also makes the music system sold in the showroom sound better as well.
-Competing music systems have a harder time selling themselves due to the unknown nature of their sound qualities.
-This is an invention for which there is largely yet an unknown need.

-Ads can simply tout something like: "The sound adjusts itself to your home", or "Synthesizer automatically adjusts itself to the acoustical qualities of your home", etc....

"Analyzer" adjusts system according to: "multi-user" / type music / uip / type application, eg: sounds to boost sales, or make people feel at home.
-how technically possible? The method extra important for determining patentability. -Sys modifies itself via whatever feedback it gets from room. Auto frequency control. Like a standard dolby feature built into products.
-maybe cheap mf once chip developed
-User can also (complement) osc's sound alteration via sys's k.

Acoustics Self Analyzer: Related products exist to some degree - but their degree of overlapping on this invention in unclear. Study the patent database.

Additional functions:
-"Analyzer": to reduce noise (for neighbors) sys (system linked to 'adapted features) will automatically alter the more penetrative sounds, eg: stronger bass, by taking out the harsher elements (cutting down bass).

-Do a key word search for KN (invention) with "synth". Eg: for applications.

How works:
-D1 (diagram one): different microphones -> sound analyzer = osc (c)
-D2: osc -> sound reflects back to "mic" = c (sound analyzer1) = osc (adjusted by c; synth).
--Notes: 1: sound analyzer tries broadcasting in different frequencies -> intern analyzing which results best meet requirements as controlled by: (manufacturer's) pr, uip.

* 5E010 'Speaker's Positioner:

Invention helps novices or others determine the best positioning of their sound speakers.
This is a similar but different invention. Uses "distancer"/"GPS" for when system analyzes where the speakers should be placed.
Helpful for:
-bands frequently setting up new at new locations
-distance of speakers from each other in relation to size/dimensions of room/*type of room surface construction (acoustics (bouncing of sounds)) are determined via^: manual measurements / keying in of info; determined

(249

electronically via^: "distancer", electronic distance measuring tools (commonly available in retail hardware stores).

-people who like to often make adjustments to their room's acoustics (feels like you have a new stereo system, and or new room, for greater variety).

=

. ACCESS: the manner in which sounds are echoed results in the desired password.

. CART: desired sound qualities *

. COMPOSITION: 'guides user to compose sounds to be played in designated environments (the idea being that original sounds from which synthesis may occur will inherently sound better for certain locations and social settings than others). User can via trial and error see how system synthesizes sounds during the composing process.

. CONTENT ANALYZER: analyzing content of sounds being echoed back

. COORDINATOR:

coordinates many factors: type music, with type environment, with type 'mood desired, with how different portions of the music (instruments) are handled differently by the synthesizer such as by giving greater emphasis to some parts and in different ways.

. DATA BASE: part of the 'analyzer; something like a history db upon which system can determine how to synthesize. 'Coordinates different pieces of info including elements from the db. Database elements include:

-system's past experience

-different size and type environments, eg: there are 100 type size rooms

-desired 'moods .

. DISTANCER: The distance user is from the system results in differing sounds. The 'Balancer can also balance the speakers according to the location of the main listener, or if there are multiple listeners, the system averages out the central location for all the listeners each having a transmittable device designating their location.

-the distancer and balancer are not part of this contract. Competitors are probably secretly working on this aspect. Info included herein for your review. These parts might be described in the patent application however with some chance of getting patent protection for them on a limited scale.

. EDUC: musical education %

. EGH (Education Gets Harder): applies to the tutorial

. ENTERTAIN:

. % GAME: [blind folded] players guess what room in the [house] they are in based on the sound qualities.

File: Musical / 5E080B

5E080B ACOUSTICS SELF ANALYZER

Over View: Audio system adjusts itself to each situation. The stereo emits sounds differently according to the room's acoustical qualities, such as its size, and types of sound reflective materials. <3, (Bob Green 4-Pat, 3-mk),

An improvement upon US Patent 4,306,113 by Roger Morton in Penfield, NY. Patent posted on www.uspto.gov That patent has or is probably about to expire. Their invention generally focuses just on the sound coloration from each sound component and the room.

How it works: The sound analyzer draws/sees a picture of the room through sound waves, like how a bat sees without eyes. The microphones analyze emitted sounds into the room. It studies how sounds reflect off room's walls. Adjustments are made according to the sound source, and the room of the broadcast.

-

Tailored To Each User - Claim:

. Each listener's preferences are taken into account. Sound qualities are tailored to each person's tastes. When multiple people whose preferences are stored in the system, happen to be in the room together; the system will compromise by averaging out each listener's preferences, to arrive at sound waves that average out what each person wants.

-

Psychological Effect - Claim:

. The desired psychological effect can also be calculated by the system, so the audio output also considers how the desired effect, can be emitted for the type sound in the designated room.

. Effects include: harmony, liveliness, sadness, soulful energy (greater base), alertness and caution (high pitched), playfulness.

-

Sound Source Taken Into Account – Claim?:

Sound emission is adjusted according to the sound qualities being emitted. System can pre-analyze sounds before broadcast; or adjust sounds as they're emitted.

-

Details:

. Sound coloration is the term for degradation of the sound quality heard.

. Works with any sound emitting system, and any type of music or sound.

. Helps replace the need for professional sound engineers, and their equipment for determining how to alter sound coloration.

In other words: It self analyzes the best synthesis for acoustics of the room.

. Certain sound frequencies are increased/decreased, according to the characteristics of the sound source / environment.

-

% Wizard Suggests Where To Place Stereo Speakers:

. (simultaneously) each sound analyzer is placed on top each speaker.

. a simplified method is needed for users.

-

-"Analyzer" adjusts system according to: "multi-user" / type music / uip / type application, eg: sounds to boost sales, or make people feel at home.

-how technically possible? The method extra important for determining patentability. -Sys modifies itself via whatever feedback it gets from room. Auto frequency control. Like a standard dolby feature built into products.

-maybe cheap mf once chip developed

-User can also (complement) osc's sound alteration via sys's k.

-

Additional functions:

-"Analyzer": to reduce noise (for neighbors) sys will automatically alter the more penetrative sounds, eg: stronger bass, by taking out the harsher elements (cutting down bass).

-Do a key word search for KN (invention) with "synth". Eg: for applications.

-

How works: D1 (diagram one): different microphones -> sound analyzer = osc (c)

-D2: osc -> sound reflects back to "mic" = c (sound analyzer1) = osc (adjusted by c; synth).

--Notes: 1: sound analyzer tries broadcasting in different frequencies -> intern analyzing which results best meet requirements as controlled by: (manufacturer's) pr, uip.

* 5E010 'Speaker's Positioner:

Invention helps novices or others determine the best positioning of their sound speakers.

This is a similar but different invention claim. Uses "distancer"/"GPS" for when system analyzes where the speakers should be placed.

Musical Blocks 9J010

9J01 Magical Building Blocks ™

Easy way for users to 'access musical composition.

Hardware & Software Versions:
Every combination generates different sounds. Sounds can differ greatly or slowly (as programmed or controlled by user), with each block connection.
-Software version: place blocks next to, or (partly) overlapping.
-Educational': hear and see (visual (color)) changes as pieces are attached/detached (one at a time)

Each piece ['connectable block] can represent:
-musical instrument(s)
-singer(s)
-track(s) of whatever sound, music, voice, or (electronic) function (for non-musical application, functioning like "Peter" 1D).
-volume, pitch, base, treble, balance', colors/lights (which change to the music(al beat).

'Adapting:
-'customizable function that 'adapts to user. There's a synergistic effect when the other blocks 'interact with each other and the 'customizing block = each block algorithmically effects the other blocks [and averages/tempers/enhances the other's influence].
-other circumstances influence 'customization, eg: 'behavior analyzer determines user could hear sounds in a 'designated 'order & timing to [create the desired effect / offer verbalized 'guidance / give ['osc] rewards based on 'scores for how blocks are connected].

Rubrics Cube like functions:
-some parts might only fit/match with designated parts, or connection points (of main unit(s)).
-each re-arrangement(s) of (same) parts generates different OSC.

+ <3, 3, 4, 4 $(hw version)>
3C292 (former number) Each combination has designated "reactions": 1] interesting sounds; 2] permits "access"; 3] changes colors
. What "designated" combinations do:
+-sounds
+-Access: creates needed "access" (for "game"):
--Hardware version: "designated" combination (emits right 'frequency).
--Software version: gain access into computer or for "game" when= "artist's" "images" on "screen"= are aligned as "designated".
-Memory "game". How and where "images" fit together= "scores" points.

.-other "reactions": *words, lights, *vibrations, etc. Certain combinations of certain models can move: like a toy robot (walking, rolling, crawling on floor, jumping, vibrating, dancing, wiggling). Any other "notifier" or "entertainment" or "game"% function.

-pieces slot into each other creating effects according to what is connected, eg: if pieces are put together creating a doll, it can say "hello" or "my name is John" and it walks, put together a dog it "barks" and moves its tail. Other combinations might only make a sound (*or vision onto its or "R" "S" unit).

-4C140 Musical Rubrics Cube:

Get into right combination and sounds and or lights

-as you get warmer (closer to the desired completion) system can give signals if you are getting warmer or colder by sounding/lighting

.-related to 3C200, 3C290

.-each part can have many different possible actions depending on the combination with other parts

.-simple versions of product can sell to children

-each block identifies the others via: wireless TR (transmits) *; code of TR (transmits) from each piece (piece #1's identity code -> part #2's rc -> analyzer (c) -> osc / function).

-Cheaper sw (software 'adapts by linking with 'associated features) version (for kids). All activities described in this N can be replicated on SW / %VR. Color graphics. Multi-media. CD-ROM. M.

-pieces can be held together via: snapping into each other (like Lego blocks)/ magnet. While together, their el (electronically 'adapted) contact points are able to tr=rc (by touching).

.-connection points can be (altered by u) so only certain pieces can fit in (certain (multiple) ways).

.-Pieces of all shapes can be detached and reattached into interesting shapes; resulting in interesting images (not restricted to wire forms), eg: blocks, spheres, prisms...

+ Relates to 1D010, in that most IMI parts can be a block connectable with other IMI blocks. This idea connects potentially all KN.

.-the pieces put together can be any KN (invention) and or IMI part (code), with resulting function.

-there can be a sound (osc) whenever (any/certain) pieces are attached/touching (during the process of assembly. Advantage: tells u they ((in-)correctly) adjoined pieces.

-external units / 'nodules: the mobile/portable units that are connected to central sys (c=brain) via (wireless) tr.

OTD D2: (Multiple) u (multi-users) = External Unit / This N sys (system linked to 'adapted features) (5E090) ~ C ('computerization 'adapts features selected by user) =
ACCESS (); ANALYZER (how each external unit interacts w (with - 'adaptor controls level of 'interaction) each other and or central c); ARTIST (group art making - each u has own unit which adds to the group art, eg: 1] each player given only certain colors / shapes / writing modes / time periods - in which to do whatever (art, compose%) they wish.); BALANCE (sys averages/considers each u/player's location.); BRAIN (determines which external parts are: comparatively more important for designated functions considering (w5); to be communicating w which parts of sys, eg: external units #2 & #99 & central c; audio volume to be heard by each u; audio volume that should be generated (to other u) by each external unit); C (each external unit can take over (many of) the functions of central c via: access, consensus from other external unit (their u), tds (that unit's time slot), uip/score = "game": who is winning game); CAMERA (); COMPOSITION (stick 5E020, Yamaha Miburi); DISTANCER (); *EDUC (learning terminal); K (); M (); MQ (); MULTI-USER (central c differentiates between different external units via: access/uip/analyzer); SCORE (game, developing uip); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); TR (transmits) (wireless, cellular, infrared); U (players, receivers of

services/transmissions (external unit can be (fairly) passive)); UIP (); UQ (); VISUAL ANALYZER (); VR* (); WA ().

* OTD D3: [(Each) external unit has such functions) (effecting the entire sys) as listed in following parts]: C (5E090) =
ACCESS (); %ANALYZER (); ARTIST (); BVA (); BALANCE (); CAMERA (); CART (); COMPOSITION (); EDUC (); GPS (); K (); M (); MIC (); MO (); MOUSE (); MQ (); MULTI-USER (); nr (our notifiers not guaranteed) (); OSC (); PR (); PS (); Q (); R ('remote control's 'computer 'adapts by linking with 'associated features) (); SCORE (); SENSOR (); SOUND ANALYZER (); SPEECH (); *STATUS (); STEREO (); SYNTH (); TDS (); T (); UIP (); UQ (); *VISUAL ANALYZER (); VR* (); WA ().

Musical UIP Part: determination of sounds user likes= are given preferential treatment (uip-tailor's selection process) is 'guiding user.

File: Musical / Audio Misc
AUDIO MISCELLANEOUS

Introduction: Especially Tied to Parts: Sound Analyzer, OSC, Notifier. Sections with invention numbers had improvements made in this file – the same number may have central descriptions elsewhere.

++ 6J070 OUTGOING SOUND ADJUSTS TO TYPE OCCURRENCE: Eases the manner in which listeners can hear. Sounds generated on level they are not easily masked by existing/'predicted environmental sounds. The outgoing sound process is altered to maximize comprehension.

General:

-Listener's interpreting differences in sound types: Differences [even nuances] in sounds= [subconsciously] indicate to listeners= the status/score of situation.

-Type sound is edited to be better heard/comprehended in the environment:

--'sound analyzer determines existing sounds [coming from other sources] and synthesizes [edits] its sounds accordingly.

---eg: adjustments made to volume, base, treble, word choice %, pitch; [lack of] background sound; mood of sounds; etc.

-Read entire synthesizer and osc part information. Portions of this invention duplicated and expanded in these parts.

--Portions of this KN (invention) also from old OSC part.
-There is an [automatic] [5 second] pause between each message delivery. Should multiple messages be delivered [for simultaneous delivery], system will hold them as designated.
-'Score gives preference to the placement of messages of greater importance [uip, status].
--Preferences include:
which message is placed first; how message is synthesized; [pre-recorded] messages only played when needed [as requested by analyzer].
* File: CategoryNew /
-The sounds can be in the form of tones of voice / who is speaking / background or associated sounds. All this may not necessarily effect the actual text of words spoken.
-UIP can= effectively help match sounds to user's tastes / [culturally or experientially bound] comprehensibility levels= resulting in a more positive 'mood in listener / more effective way of communicating, such as the system being more 'user friendly'.
.--in this information age, it saves time and clutter to the mind, by conveying information on a less linear [white and black, or yes or no, or articulated form]

Interfering noise types:

-machinery:
printers, construction, electronic entertainment [radio, music, TV], elevators, escalators, vacuum cleaners
-traffic
-other people's conversations
-other announcements [made via intercom or other osc]
-speaker telephones
-misc:
clanging and banging, or other normal [human generated] noise; animals [birds, barking].

APPLICATIONS:

RAIL STATIONS AND AIRPORTS AND OTHER NOISY AREAS:

--volume increases when there is greater noise interference.
--the osc holds the information until the noise passes [after the sound analyzer senses when the peak [volume] has been reached, then triggers osc when the volume has later dropped [80%].
--starting and ending of noisy vehicles or equipment may be in the software program's data base= but changes occur and the actual noise times may differ. Therefore, this system can either over ride such a program, or conversely be over ridden by that system.
-The volume increases only in area with greater noise [interference].

LANGUAGE SPOKEN:
-vehicles with many people of designated language groups can give more preference to communications in the appropriate language.
.-eg: planes arriving from Copenhagen in Barcelona can be greeted [automatically] first in Spanish, then Danish, then English. Normally Spanish is followed by English, then French, then Italian, then German...
.-language spoken determined via: where bulk of tickets purchased, or language preference of ticket holder [entered into program]; cities of vehicle's origin; also the likelihood people from such countries speak the native language, eg: more fliers from Tokyo to Madrid speak English than Spanish, and if half the fliers are Japanese and the other half are British, English will be given greater priority.

SOUND SILENCER: -Sounds of interference can be masked via [existing techniques - sound canceling devices] [which emit sound frequencies opposite to the sound that is to be masked.
-The osc's sound however is however synthesized to be on a frequency other than either the unwanted sound, or the opposite frequency sound. In other words, the desired communication gets as little interference from the unwanted sound and the sound blocking process, or whatever else can make the desired sound to be [clearly] heard / comprehended / remembered.

MAXIMIZING USER'S RETENTION:
-Studies are needed to show which sounds result in higher /

better:
--memory retention in user.
--utilization of provided information. Some sounds make users more alert [like coffee does to wakefulness].
--findings from these studies are used to maximize desired results in listeners / users.

UIP - MAXIMIZING SOUND APPEAL:
-People from different regions prefer sounds in designated sound patterns, eg: The French like communication with more emphasis on the nasal; US citizens from the southeast like more "twang", while the British like more "charming twist". [ha ha]
--Whatever the language, such as English targeting French native speakers= the sounds are synthesized accordingly. In other words, the words are made to sound somewhat like that of a foreigner speaking a second language [without necessarily sounding like a foreigner] - a middle ground is found.
-Announcers in airports probably do this unconsciously, such as when announcing flights in the local language, to London or Paris or New York.

SYNTHESIZER COMMUNICATES IN MODES OTHER THAN WORDS:
-[subtle] differing forms of 'status osc can communicate: 'multi-user [who is being addressed]; direction to which listener is urged to pay attention or be 'notified about; level of urgency
-the sound alterations [via editing] are designed to:
--match uip
--psychologically appeal to listener / match the type situation [psychologically] / result in the designated psychological reaction [fire truck alarm waking a person up in the way it does, while differentiating itself from police etc].
-Value: in the world of information clutter, the tone alone can convey: level of importance [status, score]. Better allows listeners to focus on what is needed, versus tuning out all audio communication.

+ 6J080: EMERGENCY VEHICLE SIREN NOTIFICATION: In Each Car: To minimize disturbance to the general population, sirens from any type of municipal vehicle is transmitted via airwaves (strictly) to the cars ahead of it on the road. Level of technical feasibility? High-pitched sounds are more directional.

-GPS Enabled Siren: when approaching/entering intersections it can increase the volume; point to side streets when there. Driver need not focus on raising/changing the sound.

--GPS's map shows what buildings/other sound obstructions exist, and siren 'reacts accordingly. Siren's 'sound analyzer determines how it is sounding.

-Sirens can also be any 'osc:

-Won't disturb non-drivers in area.

--'sensors/receptors in [cars] pick up/amplify sounds/signals [others might not get/hear] [so as not to disturb].

--Since many vehicles require this invention for it to work, governments might: start requiring such installation soon, and then start to drop the volume of the broadcast sound to the general environment as more cars are properly equipped to receive the transmissions.

-The car receivers can also be utilized for / in conjunction with:

--music entertainment: such gets stopped while the notification sound is made. See A or B level related inventions on just this aspect.

Traffic Signal Alterations:

-Automatically alters the traffic signals to the (emergency/designated) vehicle's advantage. UIP.

General:

Emergency vehicle drivers [may] [automatically] point their transmitters in the direction they wish to travel. This helps reduce confusion: alerting drivers not in their path; altering traffic lights not in their path.

--Should there be a question as to the path of the driver, system may only notify drivers, or notify traffic signals with a score above [40% chance] driver will cross their path.

--Transmitter has a maximum distance [distancer] before it alerts lights or drivers.

-[Emergency] vehicle's broadcast can also allow receiving [hospital] know the expected approaching time, reducing the tasks required by ambulance attendant helping patient.

-Other vehicle applications:

--everyday car horn blowing. Such might have a shorter broadcast range.
.--like CB radio, allow nearby cars to speak with each other.
But hopefully not yell at each other... Ha ha.

Delivery trucks approaching building to say recipient should come downstairs to collect package [saving driver's time needed to buzz owner and wait for any response]. Gives time for recipient to get themselves ready.
-delivery of packages, mail, cargo...
-the cost savings here alone may make it worthwhile to pay for certain / all possible recipients to have such a receiver.
-[Delivery / pick up] [vehicle's] user's transmitter/receiver may know / guess / learn / receive:
--if recipient's system is active
--any [delivery instruction] messages from recipient.

7J11 Radio Frequency Quality Selector: The user selects a preference level for the quality of receptivity they will personally tolerate, such as stations 'scored between "1" (best reception) down to "10". The greater the user's tolerance the greater the number of stations from which to choose.
-Invention is most useful when user either lacks enough selection or is willing to compromise on quality of sound for a more desirable station [found by the radio's search mode that selects [all] stations with the 'designated tolerance 'score].
-Applies to all types of other forms of: reception / communication / transmission. Examples:
--mobile tel
--grounded line communication [in countries with poor reception]
-Related in concept to:
--web search engines like yahoo.com
--kn invention of cell phone that warns when communication frequency is about to get worse or better, based on location
-Parts: UIP; osc; sound analyzer

3E-090 MINIATURIZED SOUND RECORDINGS:
Picture someone putting into their pocket devices the size of money coins, which are pre-recorded music. Easily carry these around. They don't scratch and the title of the piece is on the outside. For details on contents, eg: on the titles and playing times for each piece, stick the piece into the player and see the "display".
.-can be in all types of shapes: flat disks, donuts, cubes, balls %-such can also hold memory for software, databases, tel numbers, instructions, maps and data for GPS.

++ 2D-220 Guess the Sound: Common sounds are 'synthesized, making them harder and harder to guess what they are.

Application as a trivia game. Also in educating users, eg: learning sounds of dysfunctional mechanical equipment.

User buys cartridges of sounds. A "trivial pursuit" of sounds. Also play mime: partners try to tell each other what object they are trying to convey via sounds they compose on the system. Market to those with intuition and poor memory of trivial facts.

-user can also record own sounds and let others guess
-D: cart (sound types) = osc/synth (mic, k) = c = k (players k in the type sound they think it is, and each player gets "scored" in the "game").
-D1: [c ->(S ('screen & 'analyzer 'adapt menu for multi-users' current needs) (shows type object to portray in mime game)] = compose/osc.
-2D-221
-simple version: play tape in stereo, manual tells what each verbally announced sound number is.
-OTD:
CART:(sounds); COMPOSITION *:(u can compose sounds, letting others guess what it is - something like playing mime; purposely create sounds for "game" / "entertainment" / "education"); ENTERTAIN:(); K:(r*); MFH:(sounds database); MULTI-USER*: (sys adjusts to each player's proficiency level in the game; uip-tailor); NOTIFIER:(when answer is right, wrong, or %nearly correct); OSC:(); PR:(synth, osc, prompts, rules, score system, type hardware (osc) used); Q*:(ask sys questions to get hints on what sound is, maybe limited by number of questions that can be asked); S:(); SCORE:(who is winning); SYNTH:(); TEL:(different players can play over t line; d: sys = t = sys); UIP*:(sys compensates for the type of answers user appears to be getting correctly -> intern future sounds are either easier or harder for player (according to pr)); WA*:(this sys (system linked to 'adapted features) is portable).
. 9/96:
-by guessing the correct family tree of organism: player is allowed to guess sub-species / other specie sounds that follow.
-"Interacting" w (with - 'adaptor controls level of 'interaction) sound / "image" of organism: player must know the opposite sex's sound after hearing a sound= in order to get the good "score". Player uses "composer" to generate desired sounds.
. See:

-2D-281 Sound Selector: System selects out particular sound frequencies so user can magnify the desired sounds for analysis.

.-Guess the item game: in game part folder. 2D221, 2D240.

File: Musical / Trigger Toy

3C481 Sound Activator Toy:

The triggering of sound in one object triggers sounds in other objects. Can create multi chain reactions. A device's musical sound can trigger other pieces to follow; depending on how the initial piece is activated. Exists in basic form.

-The secondary objects pick up on sounds / transmissions (RF / electrical pulses as well) from source object. Example: Baby doll cries, then mommy doll says "Don't cry". Compose' music.

-

. Sound triggering other sounds toy:

+ Marketing: toy guns are less popular in the 1990's, hence focus on non-gun applications. Be creative!

-Secondary object can continue chain reaction to third level object(s), then fourth level, and so forth.

-Toy's air wave transmitter activates sounds of other toys. Examples: Toy gun firing causes enemy fire; throwing grenade activates stereo sounds.

.-Toy gun when pressed makes its own sound, but then results in: sound of other guns at distance location(s) (from "R" speaker); the sound of person(s) being hit by gun fire; sounds of glass, etc being destroyed.

-toy grenade's "sensor" transmits signal when it hits ground (vibration or motion sensor), or child can press timer prior to throwing which then activates sound from remote stereo.

.-Utilizes 1C-250, and 1C-251.

.-Positioning of objects may be important, in that they may need to be in certain location ("locator", "balancer"*) prior to being able to transmit* / receive sounds.

-OTD: "R"; "S"; "C"; pp; mp; uk; date; interactive; educ; toy; all; "mic"; portable; "M"; bp; sp; osc; vc; egh; score; tgh; md; cart; cp; uip; character; distancer; motion sounder; float; cc; tilt; composition.

-anything described in "reaction" part.

-EXISTS in basic form. Mattel's US Patent 4973286 Multiple Activation Crib Toy.

Moved from S&R Part on 1.06.

File: Plastic & Mechanical / 6G PL

FILE 6GL Mostly Plastics

(PVC / Rubber* / Metal / Wood* / Other hard material) / Electronic

*6G-01 Toy Vehicle w detachable floating wheels. Use wheels in pool as air tube.

*6G-040 Replaceable (sunglass) lenses for different seeing purposes: sunny / different distances / images on glass section. Glasses made of pvc/glass/ etc

*6G060 Remote (R) Control Aqua / *Land Animal: Moves as u (multi-users) wishes. Moves and looks like a: fish (moves via fins below/on surface of water) / frog/crocodile/alligator/snake/cat/dog/.
-use in (swimming / lake) pool. Amphibious: travels on land/water

+ 6G070 Tailored handle gripper: Not patentable? - sw (software 'adapts by linking with 'associated features) aty. * <Pat: 1; 4>
-Marks/impressions from fingers / fingerprints are (temporarily) left on the (section of barrel) where the hand holds the tool: pen/pencil (mechanical)/marker/brush/computer stylus; hammer; any other hand tool. Grip material can be made soft again if user wishes to alter the type grip, such changes made via: heating or placing hardened clay like material in (liquid) (chemical) solution (of water). Material might always stay semi-soft to improve user's ability to hold onto tool via differing ways. Also for people with impaired grip abilities, those with arthritis.
-User can fashion the grip like clay in any way, or strictly based on impressions made from holding handle.
-creates better grip; new marketing tool; helpful for deformed hands; creates a different feel while writing
-this flexible material (on the out part of the barrel) can be made to harden by^: leaving in open air for some time after opening sealed package / leaving in sun / baking / applying a chemical by brush, dipping, spray / placing in boiling water.
--may stay (perpetually) soft, so same/multiple users can use pen and have/make different grips.

.--the writing instrument itself is designed not to destruct if/when coming into contact with these elements

-allows users to hold their instruments in unique ways: hold pen between outer fingers when hand is in a fist / hold between thumb and forefinger / etc. Great for feeling creative while painting / drawing.

-alterable hand grip applications for normal and hand impaired people include: auto's stick shift, other handles (drawer, door knob, closet doors*, water faucets, coffee cups, scissors, window (to open/close); wheel chair, automatic bed controlling elements; tel handle; etc.

.-grip section can come in certain (pre-molded) forms for (interesting) fits, eg: makes user more creative / practical minded, via^: prickly./bumpy surface; many big/small bumps; strange curvatures; unlimited shape possibilities.

-barrel can take pen / pencil / knife instrument inserts, enabling user to switch between two or more tools/gadgets using same barrel.

-the contact point where the handgrip element meets the barrel (eg: parts b=c) can have special surface/material so u can replace c (when/if c gets old / user want c (grip material) of different characteristics.). Eg: something of a brillo/rought pad like substance is firmly glued to handle, and enmeshed with clay like material.

*-o Basically repeated info: Marks from fingers / fingerprints are (temporarily) left on the (section of barrel) where the hand holds the pen/pencil (mechanical)/marker/*brush/computer stylus.

-creates better grip; new marketing tool; helpful for deformed hands; creates a different feel while writing

-this flexible material (on the out part of the barrel) can be made to harden by^: leaving in open air for some time after opening sealed package / leaving in sun / baking / applying a chemical by brush, dipping, spray / placing in boiling water.

--the writing instrument itself is designed not to destruct if/when coming into contact with these elements.

$$ <Pat: Questionable, 4>

+ 6G020 Ball within ball movement slowing device: Slows ball's movement. Applications limited by creativity includes: dispensing chemicals, ink (for spontaneous style art), grease; situations where the rolling effect is desired with more gravitational force. Additional applications not yet realized.

-inner sphere: a heavy ball within the ball shell can cause the entire ball to move more slowly across the (painted surface). Differing degrees of control of the ball can be made according to the substances/weights inside the ball shell (inserted by u (multi-users) or mf).

--inner ball can also dispense ink

1269

-one or more balls within ball. Central most ball might be solid/hollow (filled with dispensing material). Middle ball also can be filled with same / different dispensing material, in tern the rate of emission of desired elements effected by rate of ball's movement. Have creative applications surely.

-point of dispensing is via: hole(s) / pore(s) (throughout (each) sphere). Dispersion point can utilize other methods for controlling level of flow outward.

-Innermost sphere might be solid (acting more as movement inhibitor.

-Manufacturing (hollow) spheres: as in current methods, eg: welding two halves. Uses 6G021 Otto.

* 6G021: Otto: Type toys: Object emits ink onto paper via numerous means, eg: sponge, internal roller. Object in shape of: car, whose wheels emit ink; gingerbread man (stamps ink like stamp); snake emits by how it wiggles; elephant via snout; ball by how it rolls; ball and bowl (ball rolls onto paper in cone).

-formerly numbered 6G02-0

-Object paints across the (paper) as it travels (and when in ink/pencil ejecting mode):

-Physical object in shapes of: car/bus/person/robot/animal (cat/dog/donkey/elephant/snake/frog/bird)/ball/cube/rectangular prism/pyramid

--part/all in flexible material (sponge/rubber) which can bend (more than other parts of the same object) in tern effecting the image (ink) created.

-Ink ejects from: wheels / feet / body (snake) / wings / *mouth (tongue / end of elephant's trunk)

o-Ball:

* o-Liquid soup (water) is in bowl: effects how Otto moves about (Otto may have magnet helping it attract itself to bowl) / liquid makes differing (lighter) colors according to the Otto in bowl at the time. Can have multiple Otto with the (same) liquid in same bowl. Otto releases chemicals changing liquid. Another element (Otto) can negate / clarify the previously effected (colored) liquid.

-Miscellaneous

-upon falling to the ground (due to shock / free fall (not touching anything) the ink dispensing mechanism can el (electronically 'adapted) be cut / reduced to reduce ink spotting onto unwanted surfaces.

-Bowl: paper can be cut/purchased so as to fit into a bowl. In tern allowing Otto to paint as it wishes within the bowl. The paper can later be taken out (in its unique non rectangular form/rectangular form (though only part of it can be painted onto at a time) and framed. Great for the ball Otto.

--bowl can be in a cone shape (helps in allowing rectangular paper)

--platforms (disks) can be placed in the bowl so as to allow Otto to move about only above / below disk. Disk size can (mechanically) expand/contract. Oddly shaped bowls may also allow for such different shaped disks.

-different Otto's can be of one or multiple inks.

-the (insert able) ink can be of one or more colors (mixed, eg: blue and yellow making green)/have (switches allowing the two or more colors to come out simultaneously/consecutively)

-(single solid) balls can simply be dipped into ink (ball's hard, spongy material)

(232)

o-El version of Otto: the point of contact (as specified for ink/pencil/etc) is the electronic contact point->creating images->c=s/k/cart/artist/composer (visual sound converter**)
-on sw create shapes for bowls/containers
-the liquid makes electronic images
o-has walking legs: as Otto is taken/dragged/forced along the surface, its legs (automatically) go into motion making their (foot) prints onto (surfaces).
o-string attached to `Otto' (while in bowl/on (flat) paper) limits /controls its distance(s); string length adjustable; string of (non)elastic material
o-`Otto' designed not to spill (ink) as not wanted^: splattering onto u; ink running off paper (due to excessive ink); etc. Ink output limited (only to (paper) onto which it makes contact.
o-seal the `Otto' into complete chamber^: two halves of same shaped bowl are put together, with paper inside / el (electronically 'adapted) (electronically 'adapted) "sensors" on walls/`Otto'.
o-Otto can be taken apart / re-assembled / receive additional parts altering its shape / functions: being a rubber stamp; rolling around; rubbed across.

$$ 6G030 Changing Color Jump Rope:
-insert (lines/strings/liquid/*powder) into (clear(ish)) flexible tube (rubber)
--handle may change color accordingly
--can glow in dark
+--laser light goes through rope (colors change via switch (k)): c=laser=tr (light)=medium (rope)=rc~2nd handle reflector. Can use in the dark.
-handle=osc (vibration->sensor =c~pr->osc). osc (mechanical bell(s))
-replace the strings to jump rope (w differing lengths) (without need for insertions into the rope section)
-how color can change: chemicals in rope's plastic / hollowed filled in area (of string / handles) changes color according to^: type el charge/fq sent from one/both handle's tr; (sun/florescent/other electric) light; sounds waves%; temperature (of room/air/rope; stretching/twisting/rolling up rope results in altered colors.
--color changes via triggering agent (nr, 7G050)
--(both) jump rope (string/handles) in particular liquids.

o-D: handles = vibration "sensors" = osc/[tr/rc: alters color]
-length of cord can be altered by its coiling up inside handle (if too long)
-store things inside handle^: (home) keys; pencil; lipstick, money (coins/rolled up bills); etc.. Lid to handle (on outer part of cylinder (away from rope) has screw on / snap lid(s).
.-handles=stereo (sound source in one handle=speakers in one/both handles). Activate by k (turning on), via vibration "sensor" which plays when handles moving (enough).

o-compact jump rope: all the string rolls up inside each handle (half into each) = handles snap/screw together-> for carrying , user has only one single cylinder with no string showing!
o-Jumpedomiter ™: a type pedometer, which counts number of jumps. u (multi-users) can program height of average jump, in tern sys can calculate amounts jumped -> "analyzer" -> score -> s/osc/nr/states amount calories lost and or to be lost. This meter, is covered in lower 4G file.
-Patent search strategy: +(Jump* adj rope) and color*

. Other applications for cords that change colors:
-strung along area wanted to be used as warning or other type of communication or notifier (nr) - each color represents different communication.
-toys, party for children

File: Plastic & Mechanical / Gen PL

General Plastics

$$? 1G18 Wall Growing Ivy: <Pat: OK, 3>
Similar patent exists. Planters are built into walls, intern allowing a new wall to more quickly cover itself with ivy. Ivy grows from cavities in the sides and very top of wall. Made of cement or clay bricks. Soil fills portions of entire wall allowing roots to reach soil surrounding wall's base. Wall also has cords, which more readily absorb moisture to upper walls cavities, these cords are plastic coated only in lower wall regions. Watering can also be done via below surface pipes with small holes. For strength, wall can also be in differing overall designs, eg: wider at bottom, or have creative buttress designs.
-also has some terracing helping ivy establish itself. Other plants can grow upwardly from top (if government zoning restrictions on heights of walls doesn't including growth from the wall).
-this N copied to G\GE (G Excellent) or G\GG (G Good) 8.94. See it for updates.
-watering helped by inserting absorbing material, which takes moisture from ground down below up to wall. Soil may be in all/part of inner wall. Run hose on top of wall with many small holes to water therein too. Special small canyon to hold this hose (in disguise), this hose is replaceable.
-holes in wall allow ivy to grow through to other side, while the holes are so when one looks in from outside the hole is slanted towards ground (they can't look horizontally inward)
-reservoir used to automatically water plants
.--(when soil is dry - using existing tube water feeders w/ absorption plugs placed in soil - when soil dry, absorption plug draws water from reservoir to soil its in contact with.)

.-tech: material made from: cement / clay / plastic - based material (weather proof, sun proof (wont discolor, crack)). Blocks held together w (with - 'adaptor controls level of 'interaction) cement (like building brick wall), or plastic adhesives.

-other life forms living in / by% wall: flowers, shrubs, trees*, cacti; aquatic life (fish, plants, snails) with windows built into walls.

-other uses for wall: dividers for: indoor rooms, highways; empty lots, wind breakers.

-miscellaneous: windows in wall may permit wind, easier visibility - seeing what is on other side of wall.

-growing apparatuses can be (portable) made have: cement, brick, plastics, stone, (treated) wood).

-portable versions: moisture is released / absorbed from earth on which N may lie. N can also keep excess water / have self-watering system, which stores water.

-Patent search strategy: (wall+ or walls+) and (plant or plants or ivy) and (cavit* or hole* or pot* or container*)

-US Patent No's: 5213857+ Wall material for growing plants - but not cavities; 5099009 D323133 D258255 plant pot's wick 4932159 5042197 5044120 D323133

-+ 4658541 Interlocking planters, for use in erecting decorative walls (KN parts can be inter-locking / replaceable; water drains down to lower regions; KN (invention) of made of more sturdy material; * KN also used where sturdy material is needed to: keep out intruders / support building structures)

-Utilizes Plant container KN in G directory.

-exists: lattices put against wall; plant pots with holes on side used for growing strawberries.

-MK N To MF (marketing to manufacturers): press releases; architectural organizations

File: Category / SA 5E040

5E040 Sound & Visual Recorder Activated By Designated Occurrences:

Recording prompted upon presence of designated sounds or images: Microphone and or camera are only activated when desired. User Information Programming ™ knows what to listen or look for. Then it records what UIP is seeking. This saves lots of time. People won't need to play back past recordings that lack what is being sought. They system 'Seeks & Reacts to designated occurrences. The core of this product largely exists. See our unique aspects.

Expansion Ideas:

. Think in a positive way, outside the area of security systems.

. When an incident happens, what 'reaction might system initiate?

. When any type of 'sensor notices a designated event, system can respond accordingly. Consider the following 'sensors for: smell, vibration, motion (which may or many not cause noticeable vibration).
. Imagine having a friend by your side that does something for you when something happens while you are busy. How would you like them to help you?

Example Uses:
. Rewards pets with food pellets when they make the desired types of motions.
. Windows close when: it rains; or temperature / wind exceeds a certain range.
. When any number of online news services use designated key words or general images, that websites' page is sent to you. Examples:
-You are contacted when any inventions related to your project are discussed.
--A more elaborate system for General Electric, or Panasonic might determine what terms any of their market analysts would need to have searched. This saves time from the employee having to decide what terms to watch for, but they can still edit the list if they like.

Applications:
-Security monitoring, e.g.: upon breaking of glass, voices outside normal hours, dogs barking.
-When unattended baby cries, the record function kicks in, and transmits sounds to guardian who can then determine what action to take.
-Only records high-pitched voices (of women). Less accurate of a system though.
-Etc!

Miscellaneous: recording can be ongoing, though designated portions are 'tagged according to type occurrence, for easy play back. Exists in some formats, eg: sys (adaptive system) functioning upon deciphering particular person's voice.

In other words: sys (adaptive system) Responds Only To Certain Sounds: Program system to seek certain sounds, then= when they are heard by system=, system will=:
1] record / synthesize as programmed (seeking desirable aspects from soup of differing sounds = via "sound analyzer"; this can be done during or (by u) well after complete recording)
2] "notify" (emergencies)
3] respond via mode w/in %"access".
-D1: (Step 1: shake coins in pocket(s); Step 2: memorized; 3: user "pp" how #1 is to be "synthesized"; 4: user 'shakes coins in nearly any manner within mic's range; 5: "mic" records; 6: playback.
-D2: externally generated sound -> mic = sound analyzer = C (computer) (cart/m) = notifier/mic (recording system/synth).

-"sound analyzer" is "pp" to only seek sounds similar to the original inputting of the desired sound to be selected. System should ignore other sounds.

Sound = "mic" = Sound Analyzer = Memory = Function

-incorporates functions of Roland's "Hanauta" system (rhythm from humming creates tempo for guitar or other sounds)

-OTD: access; security applications (breaking glass / dog barking / crash sounds -> mic -> 5E-04 ("sound "analyzer"")=c=notifier/r (user can ^:listen in on action / control (el) in remote location (scene of perceived crime) / contact security (guards). Sought after sounds can also be from ^: cart / m, in this way the breadth of sound spectrums might be broader / more carefully selected to avoid misinterpretation with other sounds.

+ synergizes w (with) 2E251 Intelligent Monitor.

-mic = recording activated by = any triggerable occurrence/action within "access".

-exists: microphones that stop recording when silence starts

Patents:

-Patent search strategy: microphone and record.

-US Patent No's: speech recognizing systems, eg: 5251283 and 5182765; improvement over 5239587 Recording device for hunters - which takes sound samples; 5197490; (sys can also lure organisms (via sounds=osc) after designated (animal sounds heard by mic) and bring animal (closer to mic or trap or hunter or food or other destination (for research purposes) so mic can better capture = "sound analyze"), eg: 4896305 - Animal luring patent; 4898179; (investigates = "sound analyzer" nature of situations eg: 5012820 patent; 5014039+; 4644330 - anti-snoring device, example of how KN (inventions) can respond to sounds (applies to 2e251 too), sells well in marketplace; 4160386 +4340915 (KN records with greater sensitivity (via mic closest to sound source as= determined via "sound analyzer") when: designated sounds occur / as pr).

-+4342106 Remotely controllable voice-operated starter for tape recorder made by Olympus - N (inventions) is voice activated.

-+? Records sounds above specified predetermined levels during given time intervals 4003264 (This KN). Title of this patent: Device for measuring and registering of sound.

--COPY THESE PAT TO SOUND ANALYZER

-Occurrences initiating recording: "CID" - incoming calls from designated telephone numbers, or to designated tel number/extensions; particular animal sounds (for biology laboratories); police sirens; breaking or cutting of glass or metal or wood or other (building or protective) material. See 2E251. "Speech": sounds of particular people, identified by: (regional / foreign accent), pitch (man or woman), particular words (more likely to be spoken by particular (type) person (eg: villains versus maintenance personnel).

-Research needed: identifying the sound frequencies for designated occurrences triggering recording, and then how those frequencies may not be mistaken for other frequencies by "sound analyzer".

File: Category New / Sports.doc

Exercise Inventions

Especially Tied To Parts (Functions): 'Exercise, 'Entertainment%

$$ 1J090 Quick Sip: For joggers, bikers. Long Tube (straw): goes near mouth from= container carried by u (user) (on hip, in bag, on belt...). Exercise pumps water up to mouth. The more exercise, the more liquid available. wo (without) exercise, sucking the liquid up long straw difficult. Semi-space age design.
Pumping energy from: 1] motion battery charger KN
2] each pressing of foot onto ground pumps (air / *(drink) liquid / other) (in accumulated form). 3] squeeze flexible bottle to generate pressure into straw of contents.
-Though won't be popular in some regions, eg: Eastern Europe, trendy Californian joggers, eg: wearing special jogging outfits and tennis shoes like this invention.
-Patent search strategy: (liquid adj dispenser)+ and portable.
-US Pat No's: 5154317 5037389 4703871 4420097 4491244 4629098
-Similar existing N: straws, suckles used by nursing babies.

* 5J01 Floating Treadmill: Treadmill utilized on swimming pools, lakes, and calm rivers. Exercise while traveling on water.
-Impracticalities include: getting on/off boat safely. Climbing from water might be too dangerous.
-How to maintain perpetual freedom from hitting poolsides:
--The propeller [so to speak] is designed so that it requires exertion of human energy to move through water, but it doesn't move the floating device in any direction. Perhaps the propeller(s)' design cancels out the forces pushing device to go say forward against going backward.
-Ways to steer treadmill around: another [smaller] treadmill used, or the design of the main treadmill altered to allow directional control.
-Getting on/off the treadmill without falling into pool:
--The floater docks or locks into a dock.
--Pedal action sucks water out of a tank making it lighter. This enables user to get into treadmill while it is semi anchored by friction energy onto pool steps or other below water [movable] docking device. When user wishes to dock, they position boat in desired place and [manually] allow water into this air-trapped compartment dropping boats height in water.
.-Other ways to keep treadmill from pool edge:

--Only [10%] of the actual energy is not conflicted in that the treadmill moves but does so slowly enough to make turning easier since floater isn't traveling so fast.

--Device automatically steers floating device away from edge two or more meters before arriving at the edge.

--Turning device may keep floater going in a circular or oval pattern. However the level of energy exerted from legs [unlike arms] will make device rather speedy and make person dizzy [hazardous].

--Maybe device is fixed to edge of pool, and doesn't move. Treadmill only pushes against water.

--Electronic version: sends laser to pool's edge to determine distance, and when approaching minimum distance toleration, it forces treadmill to turn away before its too late so tread milling can continue.

--With an [automatic] flip of switch same peddling motion simply puts device into reverse. In other words, keep peddling forward but treadmill takes energy and pushes it back.

--Steering wheel allows user to steer away from edge, possibly staying in circle path. This alone may not be patentable.

-Marketing: sold through mf and distributors of: bikes, exercise equipment (treadmills), pool supplies.

--Target next spring and summer's selling season in northern hemisphere.

--People prefer exercising outdoors on the water to being stuck indoors. Also ideal for those who have pools but don't use them - another usage for an existing home feature that is often neglected for lack of use.

-Similar inventions: Peddle boats for one or more people.

-Has place [settings] for: drinks, fan, 'entertainment devices [TV, PC Screen], etc.

-Improvements to peddle boats:

-"score" device measures number calories burned / distance traveled.

-u = "s" (screen) = "camera" = views what's below water surface

-position treadmills in tandem or side-by-side.

--Sun cover protection. Maybe it can have solar power in case user gets tired. Keeps rain off. Can pop out cover when desired.

* 5J02 Variable Peddling Motion System: for peddle boats, bikes, and treadmills.

-Feet move in alternative motions depending on which angle [of the 360 degrees] of the circular movement feet are. Legs can move in arched, up and down motion.

--Purpose: give legs the freedom to move in differing ways / angles. Therapeutic possibilities.

--Can move feet next to each other in a push and retracting motion versus moving in circular motion, eg: like leg weight presses.

-Caution: design so as not to hurt legs or other body parts. Physical therapists use known studies to determine desired leg/body movements to achieve desired aim.

-Use system for body parts other than legs. Eg: arms (for wheel chair bound person) to move about on land/water.

-"Score" system, which compensates for more difficult angle movements when determining the calories used. In other words, different motions may require more energy but create less physical force.

5J03 Body Posture Corrector: moved to 3E061

+4855942 Pedometer and/or calorie measuring device and method: quite similar to KN, yet abstract doesn't mention that coupons are given out, nor that device is rentable from store.
-coupons can be given out simply for quantified level of exercise, eg: each kilometer (walked) equals one point.

See in "I" file following inventions:
-1G22 Battery Charger Reward Generator
-4E010 MOTION POWERED BATTERIES

+ 7G010 Gyrator: exercise by gyrating heavy object at end of string. System measures number gyrations and level of centrifugal force. Control length of cord. Product liability?
-exercise by having object at end of string swing about. The force exerted upon string and or the speed are measured (score) = via "sensors".
-following effect the speed/force at which detachable object flies off: gyration speed, length of cord/extension, and if spun (manually) the longer one spins maybe the faster the gyration. Balance time with speed of discharge. Fewer discharges with further reaches.
-control length of cord = via retractor (as with vacuum cleaner's cord) = manually/automatically controlled
.-can replace objects at end of cord for differing ^: weights, sizes (drag on air), safety (softer), indoor/outdoor usage.
-flying object can have = lights / osc. These function according to type movement / via control by u.
-generates electricity / battery power
-(mechanical) release handle lets gyrating object fly out (at user's control).
-applications: mankind controlled device which gets other's attention for^: emergencies (road accidents); traffic signaling; sales events; toy; exercise; play with pet (dog).
.-The gyration feeds battery attached to handle: disk=gyration charger=battery.
-current laboratory versions might exist
-might be patentable if there is a new way of doing it. Patentability of 2 without this improvement.
-sys counts and or measures the stress on string. Mechanical / el (electronic) versions.
-measures extent of exercise effort.
-mf cheap

+-injury to other people – must be designed out before used.

-KN: g\4g N (inventions) at end of file which counts/scores number of jump rope swings.

MOBILE TEL LOCATION NOTIFIER 3E010

Signals when mobile communication device is approaching a poor reception zone.

Patent Search Needed – Too Complex For Steve. Some overlap from patents.

ABSTRACT

Tells user when their cellular or cordless phone is about to approach a pocket with limited transmission possibilities. Current systems show the level of receptivity leaving the user having to guess in which direction they might move to improve receptivity. The invention guides the user to the direction in which better receptivity can best be obtained. Can be part or separate from the phone.

OVERVIEW

The user's location for purposes of identifying when they are approaching a pocket of poor communication ability is determined by GPS. As a backup the following means can also be utilized to determine the approaching of a pocket with poor communication ability: weakening of signals; other existing modes.

Simple version of invention:

-The orange light comes on to show low battery levels. The yellow light shows one is entering into an area of poor transmission that adjoins a pocket with no transmission possibilities. If static is heard but the green light remains, this shows that the static is probably temporary. The red light shows the trouble with having no communication is not the phone or the battery, but being in a no communication pocket.

INVENTION DESCRIPTION & NOTES

Identifying Pockets of poor transmission ahead of time. System shows pockets of areas w/ 'score showing the quality of reception in such areas.

+-User keys into their ['tel] device a code for the 'designated area(s) they are approaching. Such codes can be:

+--number of miles and direction from where user is located. [only this aspect appears not obvious from the patentability point of view].

.--postal zip codes [obvious patentability wise?]

.--tel area code plus first three digits of phone number user knows is in the area of question [obvious patentability wise?]

-The function works both when the handset is on and off, as the value of receptivity is important in both scenarios.

+ System adjusts how it 'scores [anticipated] reception by 'tailoring itself to diverse circumstances. Examples:

-type of handset

-type services being provided by tel carrier in 'designated areas

-weather

-if user is indoors/outdoors/under car roof

+ User instructs system how bad a phone connection they'll tolerate. The level of quality connection the user has requested it needs, eg: the minimum quality they'll tolerate for a] business call, *b] non business call.

--system 'tailors itself to user's preferences.

-type of telephone network [and correlated quality of connections].

-level of quality in connection as effected by land based lines. If there is a poor connection to the wire/optical lines, system will tolerate less trouble in the airwaves.

+ Shows user how to get better reception:

-system gives user a differing 'score, should user alter any one or more of the elements that are effecting their reception, positively or negatively. Eg: reception would be 10% better if user walked 4 meters (to the north) of the building.

--digital map on device can 'guide user.

+ GPS can map out a travel route for the user by which one can maintain the best receptivity.

How system can easily communicate with the user.

'Notifier's way of informing user of 'status (as to the quality of the current* / anticipated quality of connection(s):

-distance can also be indicated by background sounds only heard by cordless 'tel user. Such sounds can be ^humming, beeps increasing in intensity in relation to the distance from transmitter and or difficulties in reception.

-vibration of the instrument. Different types of vibration are codes, eg: portion of phone sending the vibration indicates the direction in which reception (would improve) if user went there, and the pauses in between the vibration indicates the distance needing to be traveled.

+ Database Map of the general terrain:

-system uses satellite maps showing location of buildings, roadways and obstructions in the region. This coupled with GPS (or related) showing user's location; enables system to 'guide user as to how they can help/hurt the quality of reception.

-software can analyze the height of buildings and other obstacles to better 'guide system to correspond with users' location and needed corresponding adaptation.

.-the existing Sandbourne map shows the outlines of buildings.

Ways System Can 'Tailor Itself To User's Situation: How to improve reception:

-a different form of telephone carrier transmitter/receiver is used to communicate with user's phone to compensate for user's location. In other words, different carriers can serve each location with differing levels of quality, and system can automatically switch to better carriers.

--the extra cost for such a switch can be calculated with the expected increase in quality.

-Assumes different forms of transmission can for example transmit better through buildings, mountains, etc depending on the carrier and their forms of transmission.

Technical:

All types of 'scores / graphs / charts are available to user for them to determine diverse reception possibilities:

-Cordless and cellular 'tel: shows approximate distance from transmitter so user is less likely to get cut off. And or gives warning via light and or audio when it is nearing outer limits. -The quality of transmission is "scored" = seen on S (screen) / Nr.

Diagram:

base t = distancer/pd=(portable/cordless/cellular) t

-applications: walkie talkies; * radio frequency (reception) devices (radios, stereos) (in vehicles);

* Battery Notifier:

-warns (nr) when: battery is running low (hence preservation of power gives N (inventions) less range / ability to handle physical obstacles to receptivity).

-exists by itself, but maybe not with this system.

Miscellaneous:

-osc [outgoing sound communicator] says "interruption in (maybe) 12 seconds / 50 meters. If by time sys (adaptive system) gauges speed of auto....

-'nr functions when poor reception of any type (can effect sys (adaptive system) performance). Eg: any mobile communicator; connection w (with) satellite (due to approaching plane, bird, clouds, meter...); lowering battery power.

-exists: sys knows when to switch cellular cells. Sys signals are weakening.

-problem: u (users with or without full 'access) knows when they are reaching mountain or tunnel. What about cliffs on side of highway? Maybe needs complex sw to determine u location visa vis tunnel location. Obstructions near big cities would have relay stations.

-GPS might already be in the car, saving manufacturing costs.

-what would block off communication: cliffs by road side. Is this so?

-Limitations: dealing with telephone monopolies; just licensing this invention difficult. But one client can pay a fortune for the rights.

-"Analyzer" shows the best position (ps-zone) for rc / tr (transmitter) to be in for better quality transmissions. Eg: satellite dishes, t, other wireless communications.

-negative weather conditions [effecting communication] 'notified via= wireless m tr.

-energy level needed to compensate for poor transmission= by increasing the transmission's intensity: system 'analyzes the tr (transmitter) quality / zone to determine if such boost is required; NR ('adapted notifier) shows the score of this tr's intensity / battery usage level.

--certain zones may restrict tr beyond 'designated intensity: u (users with or without full 'access) is notified prior to entering such zone - display shows this; communication is automatically effected.

-This invention is a subset of the common part called: "PS-Zone". Study all the parts, especially the "zone" part very well, and adapt it to this invention.

U.S. Patent Search Strategy 2.99:

-cellular and telephone* and (notifie* or alert* or warn*). Nothing important enough found.

US Patent Search 4.04:

-str: (ttl/ cell and (telephone$ or phone$) and (approach$ or "coming near" or "coming up" or notifie$ or alter$ or warn$ or predict$) and ("poor reception" or "no reception" or "poor transmission" or "black hole")

Key Words:
-cellular, mobile
-telephone
-notifie*, alert*, warn*, % predict*

Antennae distance 'notifier - for uses other than portable communication devices too:
-the further the 'distancer says user's [portable] device is from the transmitter/receiver, the greater the 'designated 'score. -applications: any device that requires exchange of communication / frequencies, and that might also be portable.
.-applies to mobile antennae / transmitters.
-str: ttl/(cell$ and (tel or telephone or phone) and (approach$ or "coming near to a" or "coming up" or notifie$ or alert$ or warn or warns or predict$) and ("black hole" or "poor transmission area" or "poor transmission" or "no reception" or "poor reception")
. US Patents %: 6418319 6240292 6195555 6035197

Types of desired communication includes:
-telecommunications
-portable devices keeping contact for whatever purposes, eg: small isolated systems used by cattle ranchers...

What one can do upon entering a poor pocket:
-Stop and continue conversing.
-Tell the party that you will call back.
-Walk or drive around the pocket

* PARTS

Note: More important parts have extensive detailed descriptions more easily available.

ACCESS = Gain access to electronic product's controls with a correctly keyed in combination. Access to communication can be limited by region - a call restricter.

ANALYZER = Computer software analyzes how to handle situation.

BILL = Billing: Charges users by amount and type of usage.

CART = Cartridges to be inserted into system. Frequently contains useful software / databases.

DATA BASE = Of poor quality zones.

GUIDE = An instructor. Suggests how user might proceed. System guides user so they avoid poor quality communication.

INTERACTIVE = System interacts with user.

NOTIFIER = User is notified on the status of any situation.

PD = Positioning Device. Portable unit which broadcasts its location to the Positioning System. Form of Global Positioning System [GPS].

PROGRAM = Programmable facets include: how user wants telephone to function.

PREDICT = System predicts what will occur, or what user wants, eg: direction of user's moving location.

QUESTION = User and or System ask each other questions. Helps each better understand each other.

REACT = System reacts to occurrence as programmed, eg: poor quality of communication.

ROUTER = sys (adaptive system) routes call to designated alternative carrier or solution.

SCORE = The status of current and 'predicted user's location and corresponding quality of calls.

SENSOR = Senses via many means the quality of communication.

SEEK & REACT = System seeks designated occurrences, which intern causes a reaction which responds accordingly, namely poor quality of communication matters.

SOUND ANALYZER = Analyzes type sound, for quality of transmission.

STATUS = System shows the status of call, eg: the quality of call, quality of receptability for a given area, etc.

SYNTHESIZER = Sound synthesizer, masks poor transmission signals.

TAILOR = System tailors itself to user's unique needs, to better function for designated purposes.

TRACK = sys (adaptive system) tracks or monitors actions of user, or system, eg: to determine the 'behavioral patterns of the caller. For example system may determine automatically where user's home is and the general route user travels to go there. This info used to 'guide user.

ZONE = A certain area with defined boundaries. The area is also dealt w/ according to its distance from point of perspective. Map gives 'status to different 'zones for their quality of phone receptability.

File: Category / Tel Ring Delay

CLEVER TEL RING DELAYER 3G010

3G010 Tel Ring Delayer:

ABSTRACT:

. System delays callers until the receiving party is ready to receive the call. System judges when the call recipient is being delayed. Caller is given the option of leaving a message or can wait for a live person.

. The recipient's availability and delay can be verified by either: 1] system's device 'tracks the recipient as being nearby; or 2] the recipient's signals via his pocket remote control that he will be delayed in responding to the call.

-The recipient has the option of keying in the expected time by which they can take the call.

. System utilizes functions like User Information Programming, and the optional Caller ID.

When the recipient is delayed but wants to answer, the call won't go to voice mail. The caller hears a recording which can have them to wait temporarily until the party they are calling can get to the phone.

Important Applications:

-Answering machines: program tel to have callers wait until person can get to telephone. Tel answering machine knows when owner is home or not: automatically has two answering modes.

-Intercoms: gives owner more time to answer.

-If caller gets a busy, tel company can still put them on hold. Caller knows their cue position without disturbing receiving party.

Miscellaneous Functions:

-Callers while kept on hold can hear / *read: music; number of people or calls ahead; target person's future schedule so caller might retry attempting communication.

-All existing voice mail functions apply, eg: Callers may opt to leave a message rather than wait.

-Times of poor connections can inform parties on other ends: wait; nature of problem, eg: poor transmission quality. User or system can select or self-determine nature of problem, in tern give (nr, osc) applicable "status".

-Incoming calls routed by: caller ID, extension number requested.

User Controlling Tel System To Delay Caller. Options:

-User's remote control device can instruct 'tel system to delay the caller in some manner. This remote control device can be part of user's garage opener / other common 'remote control device - making it handy.

-User's (cell) phone has button to 'transmit control to land line related phone.

-'Sound analyzer hears user's voice commands.

System [automatically] knows owner's/user's location via:
1] 3E210 GPS Satellite Obstruction Compensator; 2] localized location determinators (KN) at: garage driveway, garden, bathroom (shower), noisy workbench; 3] "sensors" "analyzing" for activity in the dwelling, eg: human vibrations, speaking; front door opening - analyzed with combination of other sensors; 4] owner selects from ten plus outgoing messages, eg: "I'm in back yard, leave message or call back in an hour", "I'm driving to/from work/home"; 5] incoming calls are (already being) forwarded. 6] User triggers small portable device (couples as: pager, door opener, remote control, watch, *organizer) which activates type outgoing announcement.

Delay in phone ringing Option:
Callers will wait longer for tel to be picked up since they might allow a common number of four or more rings.

Problems: Need to probably license to phone monopoly. But cheap to just get patent then license? Need to do public relations to get phone company to adopt system. Likely someone thought of this in the crowded telephony industry with powerful players.

Delayers also for:
-Door bells: the party being visited sends message [by wireless] to person at door.
-Street lights (for ambulances, mass transport vehicles getting priority, eg: Dutch buses for which lights can give preference and change to green since there are generally more people in a bus than in other vehicles).
-Oven temperature reduces temperature when "brain" knows/"senses" the user is going to be late/going out of house. Intern, food can cook for longer and be ready hot later without burning.

-OTD D2: This N (inventions) Sys (adaptive system) (t ring delayer) ~ C (computer) =
Fax (sys picks up fax later); ACCESS (); ANALYZER (); AP (); ARTIST (); BALANCE (); BRAIN (); BVA (); C (); CAMERA (); CART (); COMPOSITION (); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MO (); MOUSE (); MQ (); MULTI-USER (); NR ('adapted notifier) (); OSC (); PR (); PS (); Q (); R ('remote control) (u controls sys: ring delay when u is away from t); SCORE (); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); TR (); u (users with or without full 'access) (); UIP (); UQ (); VISUAL ANALYZER (); VR (); WA ().

-say on ans "I'm old and slow, so wait. Or carry phone."

-all software implemented regardless of where signal of t being picked up is generated from).
-give more time between rings.

% Maybe caller doesn't hear rings during first one or two rings. This gives the caller additional reasons to let it ring longer. This handled through tel carrier.

.-signals generated from handset or switching matrix.

-if can do from handset: don't need to worry about the tel monopoly. Easy to find out.

--difficult to find out if: Tel Co switching matrix would dump the call if it didn't get a ring back signal w/in certain time. Ask phone co.

-caller can get sound/osc that says wait (initiated after certain # rings).

DIAGRAMS:

-D1: caller = t ~ C (computer) / intercom = tel company C (computer) processing network (analyzer) = t ~ tel ans ~ c = [poor/type connection analyzer] / owner's location analyzer

-D2: caller dials up = c (pr by receiver's t) = caller hears delayed ringing / receiver hears ringing immediately

-works with fax/answering machines too

-the term `caller' can be replaced with `one who is making the initial contact'; `owner' with `one who receives communication'; `call' or `incoming call' with `sender's action'.

-GPS tells tel sys where u is, hence t sys reacts accordingly.

-problem: signal generated by switching network? Will tel co alter it for you? Switching station receives on/off hook signal from tel (DC signals?). Hold patent until tel co opens their mind?

-OTD D: T / This N (inventions) Sys / C =

ACCESS (status of call owner limited to certain parties); ANALYZER (nature of problem/status: where owner is, who caller is (via latter's uip or access)); *CART (owner's location, type osc or vm options); *M (uip, owner's whereabouts, gps); MIC (t, intercom, paging systems); MULTI-USER (each telephony number can: route / distinguish between different incoming calls (via caller ID, access; distinguish who incoming call is for, via: extension number, voice recognizer); NOTIFIER (tel rings; counts time or number rings made by caller - simultaneously or *after they quit (hung-up)); OSC (tel ring, status for caller, owner); PR (); PS (); Q (how caller* / owner can better use/ alter sys); S (); SCORE (number of messages); SENSOR (); *SOUND ANALYZER (helps determine level of quality transmission); STATUS (); TDS (vm); T (); UIP (); WA (t).

OTD (Other Techie Details) D: This N (inventions) (T Ring Delayer) / C [line drawn to each below N#] =

-2E251 Remote Controlled Camera: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.

-3E010 Mobile Tel Location Notifier: Goes into effect when this N#'s "analyzer" determines so as: pr, uip. Eg: when u is about to enter poor reception area, system allows for extra long ringing (receiver, may or may not know this).

-3E040 Telephone with Selected Noise Canceled when Beyond Designated Distance: -3E041 Telephone with Selected Noise Canceled when Environmental Sounds Are of Unwanted Frequencies:

-3E151 GPS Circumstance Correlator and Controller: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.
-3E210 GPS Satellite Obstruction Compensator: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.

-5E020 Remote Control Stick with Switch: Goes into effect when this N#'s "analyzer" determines so as: pr, uip.
+-5E040 Recording prompted upon presence of certain sounds: Goes into effect when this N#'s "analyzer" determines so as: pr, uip. Eg: user is washing dishes, taking shower, already on tel, snoring, sleeping.
-9G220 Channel Scanner Skips Stations Having Commercials: system lets incoming communication (t) come in more so during commercials.

PATENT SEARCH Strategy & some related US patent numbers:
3G010 T Ring Delayer: ()
-str Bib 8.94: tel* ring* delay*
-Str APS 69'-78': tel* ring* delay*
--US Pat No's *: 3965304; 4103114.

"Morning Alarm"'s ring only activates after designated time if/when: u (users with or without full 'access) is (temporarily) out of bed (maybe bathroom); u is on "t" (so as not to disturb person on other end of line); other sounds are being generated at that time, eg: other (door / oven / t) rings.

PS: Sys (adaptive system) knows where u is, and delays ring accordingly. However, U can deactivate this/any other feature.
-sys tells caller where recipient of call is (in terms of distance / speed / expected time recipient might pick up phone (based on their speed vis a vis distance to travel and type terrain (stairs or flat land) to be traversed).

OSC gets louder in each succeeding ring = KN (inventions) in "A" directory.

Receptionist picks up call if / when:
-expected time u would catch call exceeds programmed time (expected time caller may wait wo (without) loosing patience, hanging up).
-after certain # of rings: exists

"Analyzer" decides how to handle / route ("route" = future IMI part?) incoming / *outgoing calls/data.
--weighs differing aspects/data/uip of situation (caller type, recipient, time of day, where recipient is - what they are doing (w5)).
--3G050 Call Router

Distant Future Use: Incoming fax calls are handled differently. Differentiating between fax/verbal/e-mail/"entertainment"/etc calls determined via: CID = registered for type activity; incoming call is coded (by transmitter / receiver "analyzes" contents (while caller is on semi-hold)); incoming calls are destined for differing tel # depending on nature of call, hence Sys (adaptive system) knows what each call is for based on this or any other factor.

Receiver's (any t KN) is (temporarily) busy, but can subsequently handle incoming call were it given more time. In this case, caller gets delayed ringing versus: busy signal / reduced rings -> voice mail, etc.

Receiver can judge nature of incoming call (CID, CID = UIP) and intern choose how quickly they may rush to catch call, or how receive call.

Both caller and recipient can know if there is a call delay related sys available / in use / deactivated. Either caller or recipient can activate / deactivate caller delay features from their locations.

Delay in phone ringing Option:
Callers may wait longer for tel to be picked up since they might allow a common number of four or more rings. However the delay in hearing ringing should not exceed a number of seconds, otherwise the caller will think the call has not gone through the phone company correctly and a redial might be attempted.

Technical:
-When the tel receives the call/fax, the loop is completed, then ringing stops.
-Delay needs to be done by N-user or carrier's network.
-Sometimes a person will hear a ring even though the receiver didn't get a ring.

. OTD D: u (users with or without full 'access) = This N (inventions) Sys (adaptive system) (T (Ring Delayer 3G010) ~ C (computer) =
-4E030 Image Input Access Sys: (u can create delay before ("access") sys requires U to respond (for needed password))
-5E040 Mic Controlled Via Sound: ("sound analyzer" judges where u is in reference to the t)
-5G061 Dyslexia SW: (U has improved S (screen) on T=C sys)

Technical Elements - Not certain:
-Probably when the tel receives the call/fax, the loop is completed, then ringing stops.
-Delay needs to be done by N-user or carrier's network.

-Sometimes a person will hear a ring even though the receiver didn't get a ring.

Questions - try calling AT&T collect: Go through AT&T operator.
-Consultant Liaison Technical Research Ctr 800-257-4636: 2
-Media Relations Mgr: Donna Cunningham 802-482-3748.
-Network systems: switching boxes, etc. Media Relations: Carl Blesch 708-224-4196.

+ Also see file: Parts-Telecommunications for further explanations parts codes used.

Caller ID:
-Based on the caller's CID', the system can 'notify the recipient of the caller's identity. Should the caller's ID be blocked, the system can ask the caller to identify themselves and or have the caller call back and unblock their number so the recipient (and their system') can know the caller's ID -> then process the call according to UIP.

Side Features:
-Recipient can have the call 'routed to the designated party [within the co] if recipient opts not to take the call [based on 'caller id / 'user information programming].

Rewording:
The recipient's availability and delay can be verified by either: 1] system's device 'tracks the recipient as being nearby; or 2] the recipient's signals via his pocket remote control that he will be delayed in responding to the call.
-The recipient has the option of keying in the expected time by which they can take the call.

Diverse Features

BA: tailors itself to behaviors 'ba 'predicts user will exemplify

DATABASE: caller id

DISTANCER: distance recipient is from need point of contact they are expected to approach.

EDIT: certain contactors are 'routed into the "do not disturb" mode. A message might be taken for such parties.

INTERACTIVE: system attempts to 'entertain or assist callers during their waiting time

LOCATOR: identifies recipient's location

MULTI-MEDIA: invention applies to any electronic device whereby one party (a live human or machine) seeks to make [live] contact with the recipient [user of this invention].
Other examples include:
-telephones via the web
-internet's instant messaging, whereby contactors expect a prompt reply [if they know the recipient is on-line].
-anything that desires a response from a live person and where electronics is used for communicating [two] ways

MULTI-USER: delaying features depend on who is being contacted

PREDICT: to the degree the recipient is too busy to offer a reply, system attempts to gauge the delay time.
Examples:
-recipient is 50% through listening to a 2 minute voice mail message while being contacted by an outside caller. Caller is asked to wait 65 seconds [adding in 5 seconds additional time for recipient to switch tasks].
-walking time for recipient to reach destination: based on perceived travel speed [during first 3 seconds]
-see 'behavior analyzer

ROUTER:

SCORE : urgency/importance of caller, contrived from caller or recipient or via 'content analyzer.

TRACK / TRACKER: follows recipient to better 'predict when/how they'll respond to caller

UIP (USER INFORMATION PROGRAMMING) Tailors invention to user's unique needs:

WA (WALK ABOUT) Portable Aspects:

Interchangeable Terms - Expanding Invention:
-Caller can also be: contactor, sender, approacher, one who walks up
-Recipient can also be: receiver of call, message, inquiry, e-mail, instant message.
-Tel ring(s) can also be: form of 'notifying recipient, alert signals, communication from 'osc.

-Tel device can also be: any electronic device that receives communication; computer; door bell; intercom; pager [caller can be responded to with the expected delay time [w or wo (without) 'entertainment in the meantime for the contactor].

For situations where it may take time for one to answer the tel, the caller may not hear ringing for a while (during which the receiver's tel will begin to alert the receiver of the incoming call).

CONCLUDES TEL RING DELAY FILE

User Tool Related:

$$ 1J100 Self Adjusting Leg Table: Table top resting on user's legs while person is sitting: top of table kept horizontal (flat) by adjusting itself to the angles at which legs of the table are placed. -For legs in standard sitting position - with both feet on floor; or, for legs crossed - in Indian sitting style on ground *.
-Benefits: keeps drinks and other elements on counter from sliding off.
. How Adjusts:
-while u (users with or without full 'access) in (semi) stationary position: u (users with or without full 'access) cranks / slides / snaps / adjusts parts/legs so counter top is level.
-For watching ball games, also, while u (users with or without full 'access) is moving (in vehicle: car, train, bus, plane, boat): swivel adjusts height in manner similar to coffee cups that maintain rather flat bottom as car bumps around.
-Patent search strategy: +table* and adjust* and angle* and leg*.
-US Patent No's: 5299510 5131106 5129702 4943040 4991518 4143601 4196675 4259909 4095843 +4703701 (KN is portable and for resting on lap; the legs are met at bottom by bar which can connect at least two legs; legs can fold out - allowing for easier carrying. 4372631

$$ 1J110 Self Adjusting Leg Table Alarm: Alarm goes off if user accidentally alters table's positioning w/o first deactivating electronic level "sensor". This way u is less likely to spill contents from table top.
-Applications: for baby (feeding table).
-NR D: level "sensor" ("tilt") = "analyzer" ~ C (computer) (k) = OSC
-Other applications: table bed (for late morning breakfast) whenever the level of anything has exceeded beyond desired parameter in: truck beds; parts of building being constructed (where concern is over something slowly

loosing balance leading to a crash); when u has tilted their "tilt" device beyond / into undesirable parameters/functions.
-connects with: Self adjusting table 1J100.

* 5J08 Irreversible Screws - Mechanical Versions:
Exists probably. Irreversible screws, or ones which can't be taken out are frequently used for installing material so it can't be taken out by vandals, such as fixtures in public areas such as rest rooms. The problem is that no known equipment, even if specialized and less likely to be had by vandals exists which can remove the common irreversible screws. Therefore, designed are screws with special heads, more complex than the common phillips screw, that can only be taken out by one with the correct head to their screw driver, matching the unusual gripping pattern on top of the innovative screws.
. Patterns for screw heads can vary tremendously. [Note: 'heads' are: the widest part that remains visible after the screw is mostly screwed in]
-Recessed designs on 'head' of screw:
-'female' holes or cavities of any simple or complex shape. Eg: is circular, semi-spherical;, or block shapes (such as miniature staircases, or any Rubics cube shaped recess), L shapes [the inner most region not (easily) visible to naked eye - like twisting caves.
--swastika [or portion there of but more complex than the standard phillips design].
-'male' projections from screw's 'head' can be the opposite of the 'female' 'heads', eg: multiple tiny blocks piled upwards so that a 'female' screw driver's 'interface' can [almost] completely cover the projectile architecture and grip it well enough to turn the screw 'head'.
-Screw driver shape that interfaces with corresponding screw head: the shape naturally fits and matches, with some allowance for error by having the screw driver's male 'interface' portion smaller than the female [recesses] of the screw head. Likewise, the driver's female 'interface is bigger than the screw 'head's' male projectiles.
Reasons: improper manufacturing [of screw heads, wear and tear, and any other reason (known with common screw and screw driver shaping)].
-possibly all shape alterations or grooves give preference in getting the screws in, rather than out.

5J09 Soldered Screws:
Screws have a thin layer of solder which melts at a much lower temperature than ordinary metal. After screwing in the screw, a heater is placed into the phillips head and heats the screw to a temperature to melt the solder but not the screw or the metal into which the screw is embedded.
-call screw expert to determine if such exists - easier than web search. Then do web search.
The benefits of this include:
-Tighter and stronger connection is made.

-Avoid retightening: Screws otherwise often get loose, and rescrewing can be a highly costly endeavor depending on their location. Also people forget or don't know about tightening screws, causing undesirable breakdowns.

-Reduces tampering by vandals.

-Depending on the application this can be more beneficial than outright soldering or welding. For example:

-More precise connections might be made by first screwing in the screw.

-It may be less messy and require less specialized skill:

--General soldering requires skills for determining the correct amount of solder to not only provide the right level of strength. --Helps prevent overflowing of excess solder.

--Avoid the hassle of using precut pieces of solder which needs to be matched to the right point of soldering. This adds excessive confusion. It may be easier simply to have differently sized screws for determining the level of solder and or strength required.

-the temperature transference level of screws is much higher than the material into which screw is imbedded into. Heater, or screw driver's 'interface' is [electrically] highly heated to heat the entire screw [like common soldering gun]. Examples:

+ the substance imbedded into [wall] melts [from the heated screw]. Screw's grooves can be rough [bumpy], creating greater grip, after imbedded substance re-solidifies after cooling. Pulling screw back out can best be done first by melting material surrounding screw - if it is to be taken out neatly. Otherwise the old fashioned approach of drilling a hole where the screw is can be done in which case the screw somewhat shatters.

.--roughness of screw's grooves can be made by: [spraying on] wax in spotty fashion to screw= then dipping in acid so non waxed spots are slightly eroded; or via other manufacturing processes.

Ideally, roughness designed so its easier to get screws in than out in non melted material.

-uses elements from 5J08

-application includes nails, nuts used w (with) bolts [bolt melts w/ nut and or imbedded material]: creates greater grip.

See: 6J040 CORD NOTIFIER in "II" folder.

5A490 Magical Pen ™

Laser Artist: this (laser) art device will record movements of pen (when in active mode) into "C", which is then transferable onto paper, canvas, plastics, etc via printer or second laser which transfers images already created onto hundreds of surface types.

-There are additional descriptors on this elsewhere – conceived by Steve.

3C-250 Virtual Reality Pen ™:

Pen transmits how it is being moved. The separate receiver's speakers transmit sounds according to how pen was moved.

-User controls how the receiver synthesizes the pen's signals. -Eg: one movement can sound like many bells, or sound like the pen is moving in sand, etc.

.-Great for kids

-applicable to any device (with or without pen), eg: stick, ball, cube, doll, toy car, toy airplane...

-related to 3A-790 / 3C-790.

Techie:

-method #1: pen emitting laser hits receiving screen, which records lasers received. These recordings might be demonstrated onto another screen, constantly active print out (shows each movement as they are being made, eg: with plotter).

-method #2: according to movement of hand-held device "C" records (via: mouse type device with roller on floor, wire, motion detector(s)) where the hand-held device is going when active.

-different active modes can generate different intensities, colors, widths of the stroke, etc

Diagram: User's Hand = Pen Barrel ['Sensors (movement / 'vibration 'sensors) = motion / 'vibration 'analyzer / 'K) = writing output.

See 5J07 Jet Lag Adjuster

File: Category / Visual Analyzer / IQ Monitor
FILE 2E251 Intelligent Monitor – Visual Analyzer

2E251 Intelligent Monitor: Camera functions are controlled as dictated by computer monitoring system. Computer records according to what its 'analyzer is 'seeking: what, when, how, why, where. System tries to replace all the features of a human guard/monitor. Saves costs. <3, $, 4, 3>

Examples of when recording takes place: cells in Petri dish divide growing up to half the space, or change color; particular people enter or exit (system determines person via their transmitter or other means); there is any type of threat or disaster (as determined via some computer "analyzer"); system sees / hears particular sounds: dogs barking, breaking glass, unusual walking patterns.

Detection System - camera seeks out activity via:
-motion detector: (old N, KN), heat sensors, changes in visual pixels, tripping of laser lights, vibration sensors, "sound analyzers" maybe for glass breakage, changes in light (switching on light switch (sys ignores (via c) changing sun motion)), etc.

-UIP - User Information Programming: database shows system what human activities are of less interest, such as those who: wear suits, work normal hours, walk in normal patterns (don't stop in risky zones), have higher security clearance, any other criteria security/researchers use to identify risky/unusual/other behavioral patterns.
-Ignores signals according to analyzer's software: sounds of particular frequencies - via "sound analyzer"; motion by other cameras (within its view); moving shadows via window light source, via: sun, moon, car or street or other outside lights. Interacts w/ other (security or monitoring) systems; unsuspicious people because of their uip.
-Adaptation. System adapts to changing needs by: the minute, day, business cycle, state of emergency, alert from guard or another security system.
-Additional senses: System collects then analyzes multiple sets of data. Smell "analyzers", eg: detectors for fire, (hazardous) chemical releases, body odor, dampness. Intuition: UIP? Vibration: distinguishes between type vibrations such as from truck pulling up at night from air conditioner. Finger print or eye's iris analyzer: to gain access, know who is entering or leaving.

Reacting to Villain: when system first identifies desired activity or determines there's (likely) a villain, it can: (call) police; internal security; sound alarms (osc); automatically lock doors or access into computer systems or physical terrain; unleash guard dogs; activate other security (monitoring) systems; spray colored die (everywhere or onto moving objects); * spray tranquilizer gas or (insect, rat, or herb) poisons, eg: stop spread of newly engineered germs; any other known automatic response system in security / monitoring% situations.
-Need to consider legal liability issues in reacting to villains.
-Court cases. 4E020 Communication Verifier: helps prove occurrences were recorded at time data was transmitted and time date stamped at secondary source, eg: remote computer.

Database:
-Huge database of diverse circumstances, images, data used by system to decide via its computer "analyzer" as to whether an object should be: tracked, labeled, captured.
-Building up of database leads to development of uip for such (future) type of (possible similarly repeating) circumstances.
-Tracking objects over period of time(s). Database used to help identify repeating return / actions of same/similar objects. Uses/develops uip.
-System studies / matches profile of watched object. Uses UIP.

Access. Authorized personnel gaining access into building / (computer) system: uses pass code which triggers manner in which system will monitor them; system may ask authorized personnel (automated) questions as to why they are doing what they are doing (w5); system knows how to differentiate between different people and by what they are doing.

Manufacturing: analyzes for why and when (w5) products fail. Failure analysis seeks: at what stage visible defects are more likely to occur via tracking system; identifies which production unit is putting out the defective parts or work; watches the changes in appearance of objects after they have been altered in some way such as color or texture change after welding, popping out of mold, stamping; changes in life or food matter over time for color, texture, * odor (smell analyzer); * parts dropping off assembly line.

Additional Applications: Marketing analysts use to study buyer patterns of those meeting their computerized search criteria, eg: what gold credit card customers do after / before purchasing particular items, or what tall blond ladies buy/do in Macy's/record store three days into Madonna ad campaign; security in: airports, shopping malls, office buildings, banks, tracking same person who hops between different buildings or airports connected to same monitoring system; monitoring aggressive chimps in captivity; * limits how a virtual reality (VR) system can be used, eg: blocking them from walking beyond certain distance, or changes the VR software according to the what or where (w5) of user's situation.

Exists: computer controls camera, eg when: every 30 seconds, or when joystick moves. When there are no more parts coming down assembly line, sys stops itself. C moves camera under a preprogrammed manner, eg: panning every so often - probably not adapting to environmental changes. Remote controlled cameras via: joystick.

-System hones onto passing automobile's license plate numbers (if they are speeding) then processes the numbers as needed, eg: seeking particular license numbers, giving speeding citations.

-Maybe exists:

Probably minor pixels change on frame to frame due to electrical static. But this system might ignore such. It searches for big changes. Then system follows the big change's movement. But might not have improved above.

Maybe Patentable: system identifies (particular) person via uip (user information programming), eg: color, height, then camera follows. Then sys automatically goes to top 3rd part of person. Sys knows to go to top of image.

-nr when bottom of petri dish is filled.

-point camera into nuclear plant, point at unusual area (hot), camera (infra-red) then moves its head to other important areas (thereafter, which might intern be effected).

Problems: Visual analyzers require maybe expensive programming, though we have cheap foreign programmers available. Each user will want to tailor system to their needs, increasing programming costs. Non-visual analyzers can misinterpret signals, eg: sound analyzer. This product number needs narrowing down to one or few patent applications.

-many detector and trip systems exist, in tern hurting chances for patentability and marketability.

Miscellaneous:

*-Interactive. Camera shoots in certain instances when: "visual analyzer" is triggered in any way like a motion being sensed; type of image made is automatically routed/edited according to how "visual analyzer" analyzed image.

-2E210 Image searcher: camera seeks particular images, intern shoots, follows, pans, etc accordingly as programmed.

-if there are multiple unusual / sought after circumstances, system can (quickly) pan between the two, giving equal time to each, or proportionally more to the one by how unusual it is (with a maximum 65% of time to any one point).

--if one of the points becomes less unusual (villain left their bag on floor and walked further), system gives less attention (since its not moving (much) anymore)

*--sys functions with one or more cameras that (partially) overlap same view area.

-camera zooms into desired activity, person, object, (as changes occur).

OTD D: This N (inventions) Sys (adaptive system) =

ACCESS (does/doesn't watch moving objects/u according to type transmission from their tr (transmitter) / access code u (users) k upon entry); ANALYZER (develops profile of object being studied = uip = sys reacts accordingly); CART (access (card) of entering u (users) has/triggers: sw, type pr, uip w (with) associated functions); EDUC (learn the w5 of people/potential villains; learn to catch repeated illegal activity by same/similar people in same/different locations/situations via uip); M (db, uip); MIC (sound analyzer); MULTI-USER (uip, tracking); NOTIFIER (police, security); OSC (alarms); PR (); PS (tr worn by u); Q (people in security / those being observed (if they have problem) can help solve it (eg: access was denied (for silly reason)); S (security / people being observed can see themselves); SCORE (chance such u (users) may commit crime = via uip, db); SENSOR (motion: heat, vibration, visual analyzer = causes sys to pay closer attention); SOUND ANALYZER (); STATUS (helps security monitor what's going on, intern paying greater attention where it is due); SYNTH (osc is altered to more scare villains, type sound is "analyzed" for and in tern selected by "analyzer" based on uip of observed object, and object's "behavioral voice analyzer", and behavior "analyzer", and crime software); TDS (w5 of occurrences, for uip, db); UIP (); VISUAL ANALYZER (); WA (worn by observed object or security; ps; tr (transmitter) their access code).

-D1: moving or stationary objects: people / animals / organisms / meteorites / products or parts = controls w5 images are shot/recorded/"tr" = via visual analyzer / uip / Satellite / m / R ('remote control) (c) / motion detector / tds / smell analyzer / vibration analyzer.

-D2 - UIP: [data used to develop uip: viewed object = camera=visual analyzer / db (database) / m / k (what guard enters)] = c's analyzer (sw: matches files)

-D3 - Reacting To Isolated Sought After Situation, or Villain: monitoring system thinks there is high chance of this being the case = then system studies other data received from current situation, eg: matching it with its db (database) = if chances of sought situation (increasingly) likely = system reacts: catching / stopping / blocking / incapacitating object or villain / tracking them (more closely).

Miscellaneous:

-related to the earlier 1G040.

-System identifies user/potential villains/u via: (their access), w5.

-This invention "interacts" with:

Any KN (inventions) %; Any existing% security monitoring sys, eg: it gains additional info (via monitoring, uip (data collection = for matching data)/ helps police / helps determine nature of unusual activity.

-System knows what its to ignore / not pay much attention to, (due to sys' c=memory (uip of such type occurrences)).

-Organizing & Processing Data D:

OTD D: This N (inventions) Sys (adaptive system) (C=SW for organizing & processing data. / 4E020 Content & Date Verifier / C / 2E251 Intelligent Monitor =

-3G050 Call Rerouter: when object goes in / out of range / desired uip = monitor (begins) "analysis".
-4E020 Registered Electronic Media Communication: when object goes in / out of range / desired uip = monitor (begins) "analysis".
-5E020 Remote Control Stick with Switch: when object (this or any (standard) r) goes in / out of range / desired uip = monitor (begins) "analysis".
-5E040 Recording prompted upon presence of certain sounds: when object goes in / out of range / desired uip = monitor (begins) "analysis".

-OTD D2: This N (inventions) Sys (adaptive system) (2E251) ~ C (computer) = BALANCE (mic controlled to get accurate recording on multiple audio tracks); BVA (certain behavior is/isn't monitored); EDUC (for research applications); GPS (monitor controlled by any/lack of pd); MOUSE (u/guard controls (panning, other movement): camera, mic); MQ ("brain"); MULTI-USER (differs between: pd, u (users) (their characteristics: bva, "brain")); Q ("brain"); SOUND ANALYZER (); SOUND VISUAL ANALYZER (Interprets occurrences into codes/text); SPEECH (u (in zone near monitor's sensors (might have "access"/R/"brain" to) control 2E251 sys, solves problem of sys misdiagnosing security guards as potential villains); STEREO (sensors pick up information and replay it into Stereo/Synth; TDS (); UQ (); + VR (allows u (users) (wearer of vr sys) to walk about w (with) VR sys interpreting environment for u (as pr). Example: walk around Palo Alto and u (users) experiences the walk as a walk in Paris, u (users) doesn't fall down, sys seeks necessary information to assist u (users) as u (users) requests (via their VR sw). System in similar manner guides robots to do whatever tasks they are wanted to do. "Brain" for robot or VR); WA (VR; Security/U controls sys via R).

<3>: Intelligent monitor. But can be done?
-harder to explain in marketing: need to show p they need it.
-much time: to do market search, and patent application.

-Reduce mf costs: limited function "sensors" [for guiding monitor] cut costs, eg: sensor = sound analyzer (seeking any sound). Large int'l companies seeking to reduce payroll expenses can use this system, and pay for cruder monitors versus being without.
-guards watching multiple cameras will have difficult time hearing multiple sounds (simultaneously) / identifying which sound comes from which location.
-this N (inventions) dates back to "visual analyzer" too
-for ideas see file: E\3E.

-Asher: never seen camera controlled. Nat'l Geographic type pictures of flowers growing, did something trigger the camera in its stages?

Conrad: machine vision is a big area: eg it detects cracks in bottles. Transducer is what this concept.

-vibration "analyzer": seeks certain types of vibration modes (similar to "sound or visual analyzer" in mode). Trucks have a particular vibration characteristic (monitor trucks other than ours).

-people characteristics for sys to catch/notice: height - easy to do; facial characteristics - hard to do - very complex for non-human.

Patent search: visual recognition systems.

-patentability: Maybe exists, some sensor tripped then activates camera, mic. Exists: mic activated by sound above certain threshold. Focusing on "sound analyzer" activating sys - makes it more likely this would be patentable.

--Obvious?: tripping light to activate monitor might.

--Not Obvious?: heat sensor, vibration sensor, smell analyzer, because less common, less off the shelf. Visual analyzer.

--Exists: point camera at bin of parts, steering robot hand for type part, eg: nut or bolt. Maybe not more complex sys.

File: Category / Web / Registrar 4E020

4E020 Registrar: Content & Date Verifier +

<2.5-pat, 4-mk), 3.5, 3, 3, mf-cheap>

4E020 Registrar: Content & Date Verifier.

System 'tracks and helps prove what contents were sent versus just evidence of transmission. Improves upon the services of overnight couriers, registered mail and notary publics by combining all their benefits into one. System works via customer e-mailing or faxing material to service provider which stores in fairly tamper resistant computer filing system, then transmits documents to addressee via: fax, e-mail, and or post office's registered mail.

System improves upon: Federal Express' overnight service and notary publics since their verification service doesn't prove contents sent were actually those claimed to have been sent.

Basically any event in the universe, which can be recorded then digitalized, is stored. System then time date stamps the data while making the occurrence's contents unalterable. Registers: electronically sent documents, verbal telecommunication, events captured via a/v "camera", etc. "Sensors" and "Analyzers" seek then register certain occurrences, which match software's criteria via 2E251 Intelligent Monitor, simpler software.

Applications:

Documents Verification:

Send electronically and have such transmissions and their contents registered. The post office's certified mail system doesn't easily enable senders to prove contents of mailing. Central mainframe computer stores transmission time, contents, and time received or file opened. Send via e-mail, fax, etc.

.-Printed communication verification: From banking to buying houses to general contract law related matters. In business, contract terms specify how notices are to be sent or received, hence they could specify this registration service (as one of the (backup) means). If the post office is the market, obtaining a supply contract could be difficult, but don't need post office. One can have this verification system even for most of a business' semi-routine communication.

*-Money wire transfers (Exists?), airline tickets, passport visas.

*-News reporters sending information: receivers want to be sure pranks aren't sending incorrect data for world publication.

-Signature verification: helps identify the signature as genuine via: matching contents w~ sender (access, password, cid) w~ proof of receipt by recipient(s) w~ "visual analyzer" (database of signatures)

--KN: speed at which the signature was written via el (electronic) means [(mouse, wireless pen) = c] helps prove originality of signature. ---speed of writing naturally changes somewhat at differing letters and sections of letters (something harder for a counterfeiter, hacker to counterfeit). TDS each signal as signature being written.

---'digital watermark' w/ each signature / material being registered.

Audio / Visual Occurrence Verification:

All events that can be converted to digital form are recorded, then stored for unalterable registration.

Type functions:

1] Shoot still/moving film which is transmitted (via modem) for registration.

.-"sensor" = "analyzer" = "visual analyzer" determines the angles of subjects/view vis a vis the "lens", in tern = harder to counterfeit (down the line in the sending -> storing process)

2] A/V and technical (chemical reactions) result from scientific experiments registered. Eg: for FDA.

3] All events that are taking place, eg: at court trial, research actions related to 'first to invent', banking, laboratory procedures, street monitoring. Also utilizes 2E251 Intelligent Monitor.

-"tracks": where people, u, clients went, walked, what they did.

4] Verbal communication (with or without the visual mode): phones (t); live speaking recorded onto microphone.

-"sound analyzer" (can also) convert spoken words into text [as is technically feasible]. Applications: allows key word searches for text; reading text is faster/easier than hearing extended conversations.

.--those words / images not translatable / "analyzable" (visual analyzer) into text can be coded in such manner that the code can be "analyzed" by human/sys later to determine probable chance ("score") such semi-blip/garble is/was word / (type) image, it could/should have been.

Electronic Signal Verification:

-signals sent between parts or differing systems. These signals (probably) have little meaning by themselves without the context of other signals / sw (software) (software) / entire sys(s).

--different steps in multi-step (el) process w/in single or multi-connected-sys (sw tds each el signal / transfer of data) even down to the nearest millisecond time differential between such events.

---additional benefits: helps "analyzer" analyze data/occurrences/steps to better arrive at (fuzzy logic) conclusion, eg: catches if something is out of place / non-ordinary (via uip of designated occurrences (what sys is watching out for (2e251 intelligent monitor)).

--eg: w5 (whose "access" password) c was turned on.

-"access" of any sort: who came in, left

-Router 3g050: "tracks" what el (electronic) files were sent where, when, how and by whom (w5).

-this system functions as a 'digital watermark' as discussed in New York Times' Business & Technology section on Mon August 7th, 1995.

Verification material was viewed / opened / experienced (by addressee / recipient).

-upon opening material, a code is activated/altered = tds of such opening occurrence(s).

-alterations to said material clocked = "tracked"

-"scores"/tds/registers: w5 for (type) occurrence (opened, experienced, received).

Miscellaneous KN:

-"PS" identifies location(s) (in points of time = "tracks") of designated elements / objects / u.

Organizing ~ Processing Data:

-Reduces human error factor for mislabeling occurrences for: time, type activity (w5), uip. Computers can more readily: locate, utilize, understand, alter, "analyze", "score", "status" data. Eg: correct file determined via: tds, kilobytes of file, type contents (uip-content analyzer)

-Helps develop: databases; uip; status.

-form of organization / processing utilizes anti-tampering methods (access).

-multiple backup computers: can only be used / turned on (manually) via access
.-access physically stores material in differing locations (c, files) as part of its strategy
-Organized according to: easiest to "track"; uip (subject matter); what material is predicted to be needed / used in certain manners.
--eg: if tds data is used as db (database) for future uip, then material more readily made available for said purposes (said applications may have easier access requirements); (leaked, hacked) material more (financially) damageable = guarded (access) more carefully.

Marketing: Customers simply send data to our company via fax, e-mail, airmail, delivery, etc. We then store data electronically and in paper form.
* -Retransmitting to final addressee: 1] Air mail registered: our clerk takes to post office, gets some certification of mailing. 2] E-Mail: Use existing verification modes. 3] Fax: Use existing verification modes, namely have witnesses state they watched the transmission verified as transmitted by fax machine.

Proving who created material and W5: Verifying data was actually sent from, and or created by particular u/clients/(client) sys (c, camera, mic, intelligent monitor 2E251)/w5.
-Sys (at registration service organization (c)) verifies that particular documents were received from sender via: 1] caller ID (CID, mo); 2] "access" (password: identifies sender / allows sender particular type (uip) "access" into service provider's computer (c). All actions by sender (c) are = tracked = C (computer) = memory. Tag (label, code, access) (automatically) sent with (all) sender's communication (to service provider).
-verifying the signature/"access" (password, identifying code of sender): was with the document (from time of transmission -> service provider rc and giving tds). Contents are difficult to tamper. Tracking shows w5 data was: sent (by whom, when (tds), how (modem, fax, e-mail), what (contents of data: text, a/v), where (from sending point, CID, access (only works when sent from particular: locations (gps) / C (computer) / sw (software) (which can't be duplicated/copied (without special permission, access), and if copied such copies are tracked)).
O - (if) signature created/signed (el): u (users) = c. The speed / pauses of signature are "analyzed" (matched w (with) uip of u, *access) for how the manners of writing the signature match w (with) how u (users) signed documents before: when signing up w (with) service, how their signature styles/speeds have changed over time while u used this / other (c) sys.

UIP * : Determining Authenticity of Sender's Identity:
-UIP of U: Sys (adaptive system) "analyzes" / matches as much data about u (users) (their behavior - uip) for all phases during which data is created = stored = sent = to service provider. "Score" for how well uip of u (users) matches service provider's db (database) of user's uip is generated.

Anti tampering: Make it difficult to alter in electronic memory, and or filed papers what was sent (w5). Each user's own computer might record messages sent / received as well. Any tampering made shows tampering was done (w5).

-This sent/received info stored at sender's/receiver's sight/c useful: u (users) subscribe to sys, in which case they can't tamper w (with) incoming text, but can copy from it. Stays in memory, to help serve as evidence (they received or sent).

-makes it cheaper to record huge numbers of messages.

-client sends message via user of this patent.

-an internet recording system.

-Patentable? Conrad: local computers (networks) record w5, then just add a security system to this to avoid tampering of: dates sent, received, contents.

+-develop node on internet via which messages past through to us, then we send out via airmail (MCI Mail) and or internet or fax, or combinations there of. The airmail letters registered at post office (via human assistant employee) while contents are stored in service company.

-Cut and paste signatures via computer: replaces need to redo signatures. * Same signature always used for sending in particular mediums, or circumstances, helping reduce fraud, and any subsequent study or backtracking.

-any signals (tds, materials (aspects thereof), w5 data, additional data to verify authenticity) can be (password) coded ("access").

* Preventing Registration: Beyond legislation.

-Like blocking caller id (CID), certain users can request (electronically) that their actions (sent messages, verbal communication) can't be registered (as having been received).

Problems:

*-Confidentiality: Lose confidentiality because info gets stored somewhere. Data might be patentable if stored and kept confidential at same time.

--Following occurs (almost) simultaneously: data sent = registration of data sent / data stored = data received = registration of data received / data stored.

-Miscellaneous: What's the 'how'? It's the great need that would make this patentable, versus obviousness of solution.

-The On-line services and military have message verifications systems, yet do they verify content without risk of tampering? On-line show if right person got message, or whole message?

Preventing Registration - Continued from above:

-Blocking done by: keying in code (access%), maybe at any time before, during or after action or transmission.

-Limited elements might be recorded as programmed by sender or receiver, or type situation (uip).

-Sender or receiver knows if communication is/was being registered. Can trace who (w5) registered data. A code is generated in order to instigate registration mode, hence catching this code, then allows tracer to follow how the data with its code (which is designed to leave a trackable computer trail) moved about; * or was altered and in what form (w5, *uip).

* Software for mass marketing documents via electronic means: Result: is ability to send large numbers of documents via fax or e-mail with signatures in faster mode than doing individually, eg: via standard fax. No known single software easily gets signatures onto the documents and does the software mail merge function, resulting in excessive time wasted by world, printing to fax a signed letter.

-Details on how this might be done: 1] getting signature into computer easily, via: scanner, *mouse, receiving a faxed signature. 2] Insert the signature into the primary document. 3] Have the fax number in a particular field of the addressee files. 4] Mail merge, creating multiple form letters with differing addressee information. 5] Software seeks the particular field for fax number, and sends documents automatically at designated times. -We've been told this can be done by altering existing software, but haven't seen this relatively easy task worked out.

-Organizing & Processing Data D:

OTD D1: This N (inventions) Sys (adaptive system) (C=SW for organizing & processing data. / Action Verifier) / C / 2E251 Intelligent Monitor =

ACCESS (better determine who can gain access, working w: uip, visual, sound and behavioral analyzers); ANALYZER (how to file w5); CART (data to be registered); EDUC (); M (storage for: registration, db); MIC (); MULTI-USER (processes differently); NOTIFIER (when one or more w5 elements of a (previously stored) occurrence as pr are met as requested by u); *OSC (); PR (how to process, organize, register, NR ('adapted notifier) data; controlling what to even record and how (w5)); Q (); S (screen) (); SCORE (differing scores determine how data/files organized/processed, eg: by uip, db (database) or pr requirements); SOUND ANALYZER (if certain occurrences happen -> (records ->) registered); STATUS (); TDS (); T (tr data via modem, fax, e-mail, pagers, etc); UIP (); VISUAL ANALYZER (if certain occurrences happen -> (records ->) registered); WA (controls sys).

-Utilizes "Tracker" (new IMI part).

-OTD D2: U (send/retrieve info; access) = This N (inventions) Sys (adaptive system) (Registration Verifier) / C (computer) =

ACCESS (records w5, eg: a/v data on who walked by); ANALYZER (1] determines which files are more important for memory. 2] Sys isolates particular activities for "analysis". Isolation via: uip / visual analyzer / sound analyzer / comments from live observers (k) / key words. 3] this limited pool of data after isolation gives less data for studying); AP (ba); BRAIN (decides (automatically / as pr) what needs registration / "analysis"

based on: key words / access (u/material) / uip (u/material); reduces manpower costs; compiles data for uip/analyzer as needed for purposes other than registration (eg: patent searches, strategic "game".); C (); CAMERA (2E251); CART (see tracking system section); DISTANCER (Tracking (cart in this OTD section)); EDUC (study of information management/security); GPS (); K (access - who can use sys); M (cart of this OTD); MIC (); MO (non central c = m/source c); MOUSE (); MQ (); MULTI-USER (anti-hacking sw); NR ('adapted notifier) (when brain determines likely (score) that hacker is into co sys); OSC (); PR (); PS (); Q (); R (); SCORE (); SENSOR (); SOUND ANALYZER (); SOUND VISUAL ANALYZER (); SPEECH (); STATUS (); STEREO (); SYNTH (); TDS (); T (); TR (); U (); UIP (); UQ (); VISUAL ANALYZER (); VR* (); WA ().

-synergizes with Intelligent Monitor 2E-251.
-this sys tds every type of monitored activity: e-mail, intelligent monitor.

UIP Continued ** For 4E020

Note: this UIP section too complex.
-UIP also used to: keep out people/u from illicitly entering ("accessing") sys, eg: controlling computer hackers; tracks who is developing data (w5) from idea conception to last registration (w service provider).
-1] "access"; 2%] congruence of type data / A/V u (users) is generating w (with) their past activities (sent to service provider); 3] sw (software) used by u / user's sys; 4] 4E020 Content Date Stamper: Registers and organizes previous occurrences that led to current data filed. Via: key word search / matching images before w (with) after (analyzes for similarities in same/other images w/in sets of text/(visual)data.).
-D: data input = analyzer = memory (mfh, cart, recognizes multi-user) = analyzer = data output = function
-OTD #1:
5A-810-042003 Advisor: compiles and analyzes user's information.
-OTD #2: c; both pp and mp program how they want the system to collect, retrieve and analyze the data in database; uk; tds (when and how elements occurred); m (db); score (score information can be processed for the pi database; and pi can help generate desired scores); cart (for additional data for the database; and or software for processing the database); uq (pi database is used to help generate answers about, eg: about user's past preferences and or activities); mp (the database and or software can help prompt questions, eg: to expand the database, guide the user in the right question if the system first gets the right information); access (limits access to sensitive information within all or part of the database (re: uip) to people with the right password).
-Article in "Scientific American", p.64, April 1995. Article title: "Machines that learn from hints" ("analyzer"). Its about: Machine learning improves significantly by taking advantage of information available from intelligent hints; discusses the algorithm process in general terms; gives differing examples, eg: computers judging how much credit to give to credit card applications based on other similar people's past histories.

-OTD Part #1: Electronic device obtains information about the user by one or more of the following: remembering user's previous performance, eg: their abilities on this, or related devices (which transmit uip data to other units via wire, or %wireless); asking questions from user, or "M"; Device recognizes more than one user by multi-user, eg: their codes used to gain access into device. Personal information is stored in memory and used by device to more intelligently tailor itself to user's particular needs.

-OTD Part #2: user can take their cart (their personalized uip for all identical or related products) from machine to machine - intern sys knows who sender is, or limits "access" otherwise; different cart effects user's uip differently with the correlated changes in functions; type character changes according to uip (if a display ("S") is used); date; uip data (material being registered) can be viewed on display ("S") and or printed out; uip is used to increase the user satisfaction quotient, eg: entertain, (^possibly by: way in which function operates, sounds, lights, words are used to better create the type of electronic effect uip indicates is more likely to increase user's positive reaction to using product [test studies are conducted to see the reactions of people in test case studies of 50 - 1000 people]); "C"; % uip can support interactive (by giving the additional data needed to better tailor invention to user; % data obtained for uip's memory from microphone ("mic") (voice recognizer); mouse; mp (how material registered); multi-user (who sent/received/registered material); uip's database guides system's functions (determines the type (how material registered), manner (registration), timing (registration), whether or not to notify, mq, osc, synth; pp (registration); uip database influences printer's print out parameters, score, speech, vc, it prompts - accepts - processes uq; tds (registration); uk. Data (registered material) is also obtained via^: "uk", "cart", "tel", "mo", scanner; UIP (of: material / u (users) (those who developed, used , saw info) can be programmed/understood with the help of: psychologists (behavioral analyzer), sociologists, marketing experts; U's city (tel area code/zip code) / caller id (tracks w5 of any occurrence).

-D: data input (registration)/output = for "analyzer": tr/rc=c

-utilizes fuzzy logic

.-Sys analyzes user's actions -> database (behavior). Eg, Ubiquitous computing: u carries (tiny) "c" that communicate with other "c" embedded in: appliances, t, cars, walls, KN. Eg: Xerox's Parc Tab, and other products mentioned in "Popular Science" Feb 95 from p.47.

2D021 System 'reacts (intelligent monitor 2E251, decides what is to be registered automatically) to external products according to w5 occurred / system is 'interacting w:

Eg:

-Incoming-Call Identifier - Screener / External Element Identifier: "access".

-Calls from desired tel numbers have a different ring. Hereby caller knows whether to pick up the call or not.

-(Designating different type connections / (incoming) calls related to another of our ideas?): sys responds differently depending on which other N/sys/existing product wants to "interact" with it.

--sys knows identity of other part/sys via its: "access" / code / tel # / uip (behavioral characteristics of N, or U: how it moves / functions / responds (to stimulate from central "C" or "M") / visual analyzer / sound analyzer.

-D: Central Product / Sys (adaptive system) = C (computer) = sensor / analyzer / uip analyzer / caller ID Sys (adaptive system) part = tr/rc = External Product / Sys.

-OTD: ACCESS *(); CID (); CAMERA (LENS) (intelligent monitor 2E251); CART (type uip or senses or data (registration) sought); INFORMATION RETRIEVAL (registration); K (); MFH (registration); MIC (); MOUSE (registration); MP (); MULTI-USER (); NOTIFIER (when desired contact has been made with (registration)); PR (registration); PS (location of external product (registered material) is a determining factor in deciding if any/type connection/contact/registration/"access" is to be made); R ('remote control) (); ROUTER (routes external product by their type nature); S (screen) (shows status); *SCORE (type registration); SOUND ANALYZER (registered material analysis: a/v material); TDS (registration); TRANSFERRING INTER-SYSTEM TELEPHONY (registration of t communication); UIP *(); UK (); VISUAL ANALYZER (registration); VOICE MAIL (registration)

.-A sensor that connects to u (users) (human body, eg: finger wrap; animal*) to read electromagnetic signals generated by the skin. Proprietary software interprets those signals and translates them into actions. Being researched by company: Other 90% Technologies Inc., Sausalito - See Wall St. Journal 1995 (maybe 6.95) article titled: Mind Games: Soon You'll Be zapping Bad Guys Without Lifting a Finger. Finger wrap version will sell for $100-$200.

-End of UIP - Sub-section. 4E020 Content & Date Verifier

"ACCESS" ** For 4E020

-"Access" has many applications: restricting who has access to view/review/check.

ACCESS (4E020) = OTD: 1 gain access via keying in alpha-numeric combination; 1 or, key insertion; or, 1 with remote ("R"); 2 access can be changed via pp, mp, cart; 25 character; 1 clap; 24 tds (scores w5: when, *how, *what, %why, who gained "access" into system - [may also be used for uip [database]]; 25 "S"; 23 %distancer activates/deactivates lock; 123 access lock can be a physical and or software barrier; 245 "C"; 245 %interactive (activates/deactivates access).

13 signals for activation/deactivation of access can be received and or activated via: microphone ("mic") (sound signals activate/deactivate access); tel ("T"); mo; tr; %fs (correct image eg: signature); remote ("R"); 2*tilt; 2 *distancer (eg: clapper); 245 mp; 24 mq (prior to activation/deactivation; for uip database upgrade); 24 multi-user (individual requires own password or other activator/deactivator to gain access); 245* notifier (who, what, when, %where, why gained access, and or is using system); 25 osc (if password or other activator/deactivator effected desired function, eg: gained access); 24 * uip (access draws on pi's database to mq prior to allowing user access to user; 24 questions for access change according to user's uip (mq an action user made on system in one of [important] previous activities); 24 pp; 24%score.

2 the necessity for the access feature is normally trivial, but assists in marketing, and helps organize differences between multi-user; uip.

1 the type code used in the password (a series of sounds, lights, letter or number combinations, etc) activates and or deactivates the corresponding function reserved for individuals equipped with the password.
24tds of user's past access is used develop his uip. Excessive or insufficient usage can exclude him the uses from some/all functions, trigger "notifier", and inform the user's supervisor via tel ("T"), mo, e-mail.
24 the type of uq can consequently (according to system's uip, mp, pp) affect/control the type of password/manner needed to activate/deactivate; 5 speaker.
-1R-45 `Dynamic Signature Verification': Write in your password. The system also identifies user's handwriting style. [Developed by: Communication Intelligence Corp, Redwood Shores, California / Riley Design Associates, San Mateo, CA 4.94 PS]
-4C-020 Transmission Lock, w/ other diverse "access" modes.

==

Concerns:
-4E020: content verifier. Maybe saw it in NYT, but doesn't know if it handled content. So why was this a 1 score, maybe marketability: narrow markets, need to teach buyers re something they never were wanting before.
-it's doing what computers already know how to do; might exist inside companies somewhere; could be put onto internet as a service (technically possible, or something interesting to make it patentable).
--maybe making more patentable: putting onto internet; making contents unalterable impossible - somebody on internet might learn how to break into code - hence unalterable impossible probably -> then hard copy is notarized (hence improves safety);
--patent search: look more in computer literature than patent database.
--improve how to make material unalterable. Happens automatically. Eg: hard copy is tds, then bound (so can't replace pages). Put material onto cd-rom, tape, or hard disk - back up at each time, or once daily; keep track of who gains access into Sys (adaptive system) - catching hackers).
--method of access: preventing access to hackers. "Access" for legitimate users.

-Patentability: this is automation of known manual/mechanical task. Need neat twist working w (with) e-mail.
America On-Line stores past messages that were sent, but questions of privacy are there.
Key card access systems exist which keep records of who came in through doors. Cameras put date onto picture (probably not done by film developer).
-How can we narrow down this and 2E251.

-world is going e-mail.
-in physical world hard to verify anything. In electronic communication world, verification easier.
-when receiving data, letter states it was also sent to the verification service.

-Legal issue could be nightmare for service co.

-Patentability: Nobody else doing it? Retransmitting data helps patentability. Argue real need for it. Since nobody thought of it and there is such a need for this, shows it's not obvious.
-services which scrub the message, sender's identity. He is in Switzerland, doing it for free. But he doesn't archive it. Opposite somewhat of this N.

-Tracking receipt of message: Sys (adaptive system) determines when message / letter was picked up / opened / received. This helps close the process by determining receipt. --tracking from beginning to final receipt / opening contents done via: "access" (mail man k code into box which matches delivered item w (with) = tds (time of deposit, time of opening).

. Exists: R43 Alerts if there's mail by signaling if mailbox's door was opened. [Inventor Colleen Murphy, Easton, CT 4.94 PS]
-For home or POB.
-OTD:
ACCESS:(to get mail; other items/access); MORNING:(tells user if there is paper ready for them (by front door); NOTIFIER:(); OSC:(); PR:(); PRINTER*:(); S:(); SCORE:(tds w5 about mail (waiting to be picked up); depositor of mail can "k" w5 as to the deposited mail, eg: from whom and when deposited, weight, etc).

. Proving 'tr was made: u (users) (client) can affirm their material was sent / received (as desired, in terms of the transmission / mailing mode; and or accuracy of actual contents being (re)transmitted, via:
-u selects / is given access (password) (at time of initial tr (transmitter) to service provider or upon becoming a (signed up) customer). Then U can (pay to) view / get the materials and or type of tr. It can be up to U to verify that no errors occurred on the part of: U, service provider, recipient (sys).
-helps avoid law suits to service provider
-service provider clearly states at (all/some) stages of user's tr (transmitter) that service provider is not liable (beyond certain dollar limit / cost of that tr (transmitter) / not liable at all).
-each inquiry by any party into verifying any past tr (transmitter) results in bill to client. Eg: courts request copy of material -> client / whoever requests the information pays service company.
-if client / u looses password / user's access (password) doesn't enable u to gain access (to view) (previously sent material): One or more of following helps prove: a] who (w5) - sent material / material was sent, b] u (may be required to) send tr only from designated telephone #'s: if sender blocks their CID, service provider's c halts service (for that tr); c] uip of u (their application form / previous material sent to service provider (matches: key words, targeted recipients, subject matter)); d] u can state time and or day and or recipient(s) for said tr in question.
--u may request type(s) of security measures service provider (can) offer in event: c hacker tries gaining access; client unable to gain "access" (lost their password / user's c sys/sw (access type sw) becomes un-operational)

Anti Tampering: One or more of following might be enacted.

-Specially encrypted hardware/sw (Access (password, uip, cid)) placed at each point of transmission(tr): sender's C (computer) = tr (transmitter) (channel used) = service provider's c = (recipient's c)

-Usage of one of numerous existing anti-tampering sys.

-Only tr (from client) / (to recipient) made at certain time of month are (more) valid [issues of validity are drawn less into question].

-(maybe) only Sys (adaptive system) sw (software) knows the actual times, which can occur every hour but only allows for transmissions beginning within any one-minute time parameter. Such time parameters can continue to alter / evolve, perhaps its by chance and determinable by all sys (each c point in chain of transmission).

--needed passwords change in rather - related manners: over time; each subsequent password differs from previous (yet part of password remains similar to identify parties).

--changing "access" procedures (passwords) needed in subsequent chain of (any) event. Sys might help u get / figure out what such "access" elements might be.

-receiving and or sending points each need "access" to continue tr/rc of material. Eg: sending customer might unknowingly send material to wrong (competitor's) computer / sys.

-sys shuts down when following detected via ("analyzer", "access", "sensor"%): bugging, eavesdropping; one or more needed protocols not in effect (access, cid); wrong time of tr; sys guesses there is (1%) chance a hacker is playing with general / customer's sys.

-tr and rc sw (software) use related encryption programs. Material can stay in encrypted form at all times, unless: any one appropriate party has "access". Records (tracking, access) for any unscrambling of material.

-number of kilobytes per file/transaction (staying similar) and another (anti sw (software) virus) programs.

-recipient (at any stage) sends tr (w access type code) to sender (at any point (original sender / service provider to addressee) at any designated future time (as accorded by access). If sender can't respond appropriately (as accorded by access, eg: have new/old password, which is transmitted at designated time later) a `hacker "status"' is given to appropriate parties -> NR ('adapted notifier) / access (at any point in sys ups its security measures) / police "notified".

-personal signature (person's name as via hand writing and (standard/el) pen) needed for any action = "visual analyzer" = "access" = transaction/tr allowed.

-tds is matched w (with) each kilobyte / character / word / paragraph / page of registered material. Eg: via back up systems. Should something (in material) be changed (by hacker), the new material won't match backed up material. Only government courts might be allowed to (physically / remotely) turn on such back up +c / sys / sw. * Can have multiple backups (spread over time) of registered/registerable material.

N Expansion: One or more of following in each group can normally be replaced with each other.

1] People who pay for service: user; client; sender%; automated 'tracking system.

2] Material being registered / secured (against hackers): text material; digitized code of any type; data; information%; contents; [communicated] sounds [picked up by 'mic from room / 'tel]; 'images [caught on 'camera]; uip-db; [altered] db.

3] Security related: access; tds%; password; code%; security; protocols%

4]* Studying contents of material: uip; key words; subject matter.

5] Identifying parties involved (in chain of events): cid (caller ID); u (users) with appropriate access.

6] Hackers/Hacking: Tampering; illegal (attempted) access; villain%; Sys (adaptive system) shuts down in response to such parties/activities %; lack of protocol%.

7] Transmission / tr (transmitter) (via): t line; wireless; mo; fax; post office (certified/registered letter); c "cart" (w access needed to read material) (sent by: post / other tr); % initial transmission is the first step: from source of material to: service provider / addressee; other forms of communication.

8] Recipient: target%; rc; receiver%; service provider (on receiving end from original sender); Receiving c/sys%; user of 'tracking system.

9] Sender: transmitter; service provider (on sending end, intern service will: send (material / [access codes] to (backup) C (computer) / addressee); U%; Sending/Transmitting c/sys %.

10] Service Company: organ / sys that: tds / registers material / holds material (against tampering); sys / organ between the original sender and backup c / address, however, the backup c is usually part of the service company too; service provider; service company; middle party%; post office's certified/registered mail delivery sys (via paper / electronic) %.

11] Access: password(s); code (identifying something%); encryption (gaining access)%; decoding%; keeps out hackers; voiceprint of designate u (those who already have access) = sound analyzer = access (gained). There is a time / space slot (for memory of sound print) within transmission.

12] Registration: registers; verifies; certifies; backup (c); keeps record / log of transmitted/registered material; post office delivering and keeping record of sending/receiving of material %; %encrypts as well; makes tamper resistant.

13] SW: encryption sw (software) (software) included as part of general (word process / transmitting / password (access) sw; sw (software) for manipulating / sending material %; access sw%

14]* Courts, checking if material was sent: Federal government; judge; determining validity of a customer's claim that particular material was sent from and to at designated time and via particular mode (got registered by service provider (w5)); customer checking to see if material was sent w5 they requested (to addressee / themselves (as verification they invented said material at such and such date, replacing USPTO's Document Disclosure Dept)) %

Additions: Replaceable terms.

Any term/concept w/in each group, normally inter-replaceable:

-Service provider: company which receives / stores / registers+ material; software and or m which does the registration automatically on or off sight / on user's C (computer) (sw).

-Data: material; (written) text (on cart, via e-mail); spoken words (via t, mic); images (via: "camera", related to "image analyzer"); occurrences: el (electronic) signals; content; "sensor" = "analyzer" = this registration Sys (adaptive system) N; %sw; db; video (tapes, disks, data/images recorded=registered via= "camera").

-Verification: registration; notarized; proof; proves; proven; stored (with tds = matching contents); sent via post office's certified letter to addresses . .

-Anti-tampering: "access"; password; code; access-uip%.

-User: client; %sender of original data; u.

-Transmission: e-mail or on-line tr; faxing; t (tel call); t line %; transmit; send; sent.

-Receiving: rc via tr; % receiving by somebody down the chain of event; original sender normally doesn't receive anything vis a vis the main aspect of invention, except maybe confirmation of sending / information for evidence material was sent / access; (material was) opened (by addressee) %; addressee%

-Material opened. Material is/was: used; opened; experienced; copied/moved/altered (after (main) registration) (w any changes carefully tracked to the w5 of any changes is carefully documented = registered).

-Computer: c; %m; %sw; % printed copy version of material registered and filed (in paper filing cabinet); % R ("air pad")

-"Sensor"%: % 2e251 intelligent monitor; %motion "sensor"; %"camera"; "sensor" for changing occurrences (in research laboratory); % visual analyzer.

-"Visual analyzer"%: analyzes contents of image (2-D, 3-D, 4+-Dimensional); "scores" differing (aspects) of image(s).

-"Analyzer"%: how material organized / processed %; access%; what material is to be registered %, and w5%.

Proving material didn't get altered after initial transmission:

-Recipient sends code that they received material (proving transmission occurred). This code from recipient includes (codes for): 1] # kilobytes. 2] retransmission of identical contents to (sender / service provider (back up c) / 3rd service provider. 3] w5 received material was stored/registered (by recipient/service provider (at location differing recipient's). 4] Other characteristics of material sent by recipient to any 3rd/4th/5th parties. Characteristics: every (fifth word); # words per sentence; first or 8th, or last letter of each line; how material looks after its encrypted or altered via (standard) sw method.

5] "Access" needed to determine w5 material is verified (as having been received at each point by designated parties / registered / not having been altered by hacker).

6] Method of above #5 can occur via changing method, hence makes harder for hacker to determine w5 systems will handle/process/register material.

Catching Hackers:

-Sys tries to buy time, so Sys (adaptive system) can determine identity of hacker via: hacker's CID; characteristics of hacker (whose information do they want and why, uip%); what access methods have they gotten and which of those methods match which methods that were given to which parties (and via which means).

-Police are contacted when hacker identity determined.

-Other standard hacker catching modes used.

+ sys compares what elements hacker has registered in their system with the system(s) they may have hacked= in helping to catch and prosecute hackers.

.--the registration system in hacker's computer may not necessarily be very sophisticated. Hacker's TDS of material is useful.

Storing & Registering (Almost everything):

-All files, texts, papers, diagrams, spoken with prior to being thrown out / discarded (by organization) are scanned / sent to M (registration sys).

-Filter: screens out certain files based on: w5 they were created and by whom for what purposes; key words; subjects; directory or file names of files; whether file does/did/doesn't have a password (access).

Files are organized / *indexed / logged according to:

-w5 re development/sending of file

-client

-location, or CID of customer

Sys "tracks"/suggests how files are routed: 3G050

N Expansion:

-sys "analyzes" targeted occurrences/signals (as Sys (adaptive system) is pr by u). Eg: "analysis" conducted with 2E251 Intelligent Monitor.

-sys "analyzes" / compares "scores"/"status" to determine if tampering occurred, or if data at any one stage doesn't match with other stages of the registration process.

+ System determines what will be registered according to characteristics of situation:

-'Analyzer determines what actions shall be `tracked – `registered.

-UIP ~ 'sensors: controlled by 'analyzer / `track.

-sw's search mode can `seek `designated occurrences that were registered.

-'designated 'sensors are activated when 'designated. Eg: certain 'sensors show the type activity desired is occurring= then [additional] `sensors [and their additional `sensing abilities] are activated= to collect additional information= which is 'registered / 'analyzed, as 'designated.

-UIP determines that it could be (legally) wise to register material.

--Criteria to register include: "BA" (behavioral "analyzer", bva, visual analyzer (facial characteristics%) shows customer/u appears to be dishonest/tricky; particular key words; images = visual analyzer; access (multi-user); intelligent monitor 2e251

-"Analyzes" = "tracks" repairs / repair history: 5023817+

6B-40 Time and Date Stamp Fax: records time of fax in and output

-person from whom received (might know via tel number of sender - in some regions of world, receiver shows their tel #); sender who sent out fax.

83

-uses the currently existing technology of caller id (receiver of tel ("T") call can identify caller's tel number): if a fax message was received and yet not transmitted well enough, the system can tell user from where the fax came (maybe the fax is missing the tel number and or fax and or address of the sender due to mechanical failure or the sender's absent mindedness)

Overview - How parts might fit:

OUR EARLIER PATENT FILING

Exact Wordings in our abandoned 11/94 Application - Clippings Only: We should have put in the money to get the patent.

Introduction: All information is in exact quotes. Only bits and pieces are included....much more depth is available throughout the patent application. Information in [squared brackets] was inserted to help understand the previously filed information.

Text

Filing's central description:

" 4E-020 Registered Electronic Media Communication: Easier to use than sending/receiving/filing registered and other communication. System will memorize to whom/from whom messages were sent/received and store the text of the message as well. Using caller ID, the receiver knows from where the message was sent. Helpful in cases of litigation. "

" TDS * = Time Date Stamp. Program memorizes, labels, and identifies timing of desired occurrences.
-D: timer = tr (transmitter) = c
-OTD: display ("S") shows the TDS assigned to applicable element.
-Etc....."

p.21 line 39:

" M / MFH = Main frame computer ("C") hookup option for more complex tasks....On-Line-Transaction-Processing.

p.22 line 16: "%TDS"

-line 22: "calculates/tabulates #1's "score" and or output desired by #1 -> data sent to #1 -> #1 processes accordingly...

p.15 line 9:

"CAMERA / LENS = Captures visual images and translates them into....digital.

D: camera = tr/rc=c=tr/rc=viewer/r"

p.16 line 1:

"+ C (computer) / COMPUTER = Computer. The most important central part in each product number...."

p.19 line 21:

"FS ** = Built in facsimile machine, sending/receiving...

D: data/image = "sensor" = "C" = "tr"...

p. 19 line 41:

"GPS * = Global Positioning System....
...analysis determines: 'W5 - *how, when, where, *why, what moved. Example: ^Sony's PYX15 model.

p.23 line 41:
"MICROPHONE.....sounds of particular types are received and or recorded and or processed."

p.23 line 52:
"Modem.....show modem transaction was or wasn't completed successfully; the information or results achieved from the modem transaction; .....tds (of modem transaction)

p.24 line 25:
"Manufacturer programs....
....user can select from one or more menu systems/formats...

p.31 line 13:
"SCORE = the status of: product / user's performance / *situation.
-D: data input/sensor = "C" = output
Status ^includes: determining if system is: on, off, which function is in operation, how far into the operation it is, *any problems, and or results (success, failure; type, eg: quantity, quality, manner); the number of times a particular even occurred (something within the system and or something outside in the environment *(such as sounds, or something or someone giving a command to device).
..."date"
...relies on "C" and its memory, and %mfh; % microphone
...data is also obtained via^: "uk"..."tel", "modem", scanner.

p.32 line 23
SENSOR = Senses for signals: ...microphone...sound analyzer..."visual analyzer"...motion sensor..."distancer [a form of GPS]
...."access" [password and security system] (when particular pattern(s) of signal(s) re received, system functions according to any "UIP" [how user wants system to function].
...mp/pp [program]: how system w/ "sensor" shall react
...each occurrence of (incoming) signals is "tds".

p.38 line 28
Visual analyzer:.... storage of all visual effects it is comparing against"
-D: camera = data converter = C (computer) = tr (transmitter) = function

p.48 line 49:

COMPUTER:....If one unit's desired size restricts / doesn't allow a computer within it, computer abilities (memory, "mfh" separate main frame computer hookup], "pi") are connected to the "C" in D (drawing) via^: wireless...; wire, transferring of disks.

p.49 line 31:

Computer: ...allows user/system to alter/control/monitor/show "status"/keep memory.

...one or more ports in "C" might interface with all peripherals / other products.

p60 line 21

GPS Tagger (TM): System follows MD's [moving device's] W5 [what, when, where, how, why] movements.

-GPS Scoring...

p60 line 38

GPS Movement Analyzer: Compiles and 'analyzes movements, eg: distances/locatons traveled, speeds, timings (length of travel, time spent motionless)...

p62 line 12

Notifier = User is notified (alerted) as to the "status" of any situation. .....All notifications can also be kept in memory with the time of the occurrence being time and date stamped. Notifies (W5 - what/how/why/where/when) action: (has been completed...

-Notifies when: "access" permitted...; mfh decides when/how/where/why a notification can/will be made; modem; ...notifies W5 action has been completed; mp/pp [program] type of notification

p.73 line 11

UIP = User Information Programming.

D: data input = analyzer = memory (mfh, cart, recognizes multi-user) = analyzer = data output = function

-...both pp and mp program how they want the system to collect, retrieve and analyze the data in database; tds (when and how elements occurred)

SEE: File fs/reg/11-94A. Covers first response in Feb 18, 97 to USPTO's first office action.

NEWER:

-4E020 Registrar: (1] (registered) material is "analyzed" for uip/key words and this analyzed material is then = tagged (uip) = intern such tagging helps in matching whatever (u that is being evaluated (for their access/uip) w (with) the (registered) material. 2] "Analysis" helps control/guide the 2E251 Intelligent Monitor.)

End 4E020 Registrar: Content & Date Verifier

CONCLUDES THIS FOLDER FOR SOME OF OUR POPULAR INVENTION CATEGORIES.

DEPENDENT CLAIMS SIMPLIFIED:

EASILY SEARCH WHAT YOU WANT IN THIS INVENTION ONLINE:
This fantastic system generates claimable features tailored to the user. A speedy license is available. For example enter keywords or descriptions like at our Discover/LicenseItToday.Com. Licensable features for new genres of inventions show up. This offers results different from common patent pending application databases. See Unity-Search.

SEEKING AN INVENTION TO SOLVE YOUR CIRCUMSTANCE?
Patent application adapts by providing needed solutions. It suggests unique solutions that satisfy your stated need put into keywords, etc. See Unity-Solutions.

SIMPLIFICATION PROCESS:
Simplified system eases navigating for what you want. See Unity-Simple.

WANT YOUR INVENTION ADAPTED TO CHANGING REQUIREMENTS?
User must handle requirements A then B to gain 'access. Access requirements change in time, and are 'tailored to the situation. See Unity-Access-Change.

DISCOVER INTERESTING VARIATIONS:
. Over 100,000 variations are adapted to your invention's subject matter. Can beat Google.com. User needs to try this before judging how it can help them. You must dig deeper than just viewing the sample solutions provided!
. Conceived an invention? File your patent application, better assured all its pages arrived. System proves who sent or did something by digging inside. Sign a delivered package; knowing something like a diamond ring is really inside. See 4E020 Registrar.
. Type in what you want. For example might you want your cat or dog to clean their paws before entering the pet door? Problem solved down below!

1ST STEP – YOU MUST ENTER KEYWORDS.

2ND STEP: LICENSE AN ADAPTED INVENTION – QUICKLY & EASILY:
Want to be the licensee or licensor? Exclusive world license agreements are tailored for the friendly licensee. It's easier to license than circumvent this broad application that helps you. See Unity-License.

FIND MANY MORE CLAIMED TREASURES INSIDE:
Kindly understand, patent attorneys clarified this patent application, filed its novel manner, should meet patent filing documents for inventions at this stage. It needs help interfacing with clever searchers that will it. It might guarantee top value, before payment.

INTRODUCTION JUST TO THE UNITY ASPECTS OF THIS APPLICATION

Dig deeply into the revolutionary disclosures. Invention variations often begin with a short identification number. Discover today how it can satisfy your unique needs.

LICENSE OUR ADAPTED INVENTION – QUICKLY & EASILY:

Exclusive world license agreements are tailored for the licensee. For example the user views our license agreement at Agreement/LicenseItToday.Com. Zero payment is needed while licensee studies the inventive ideas, while they have the option to extend the exclusive license for ten to twenty years.
. Potential licensees just call California at (+1) 707.428.5000 to speak with a live person who will kindly interface with both the caller and adaptive designs' database of features. This interface is designed for both potential licensees, and authorized people with higher 'access privileges. All agreements must be in writing from authorized person, other interactions are brainstorming.
. Licensees seeking zero royalty payments during a trial period exceeding a month, can be tracked to make sure they are moving forward in bringing products from the license, onto the world market.

. The above also describes the (semi) automated functions.

SEARCH HEREIN FOR WHAT YOU WANT – Unity-Search:

Links within this patent application show new ways of searching for needed inventions. Ask the system for what you need, and it can be made available. If you don't find a link (schematic connection) to an applicable feature, chances are good that you'll find it via another link structure. Like a (human) brain, there are many pathways to other parts of the thinking mind.

. Utilize multiple search modes to 'access all the features you 'seek in this and subsequent patent applications if you don't read it from top to bottom. We claim how our features are inserted and designed, so they are often 'accessed (found through our interfaces) via: multiple links, keywords, *subject categories, etc. Details in patent application's introduction.

. Locate features by key word searching: Parts' [function] roles in Adaptive Design [can be found / used / 'interacted with [for this pat application] searching that and *related terms based on desired common methods/results. The greater the adjacency between [the terms for the] 'nodes the [better/faster/simpler] the process might be.

. Thesaurus Searching: Search for related terms (in this invention database) based on a thesaurus' key word relevancy. This greatly increases the number of potential links. It helps simplify matters (reducing key word clutter).

--Thesaurus 'database has each (central word / concept / feature / invention) rank all related/'associated terms 'scored for relevancy. This and related databases can be stored on the system's 'computer.

. Search Engine Like Searching: The millions of criteria used to determine relevancy by functions related to web search engines can be used.

--eg: Google.com, Yahoo.com, AOL.com, MySpace.com, MSN.com. Surf today and in future, their search engines to find other search criteria for actual and theoretical models.

SIMPLIFYING & CONDENSING SYSTEM [SIZE]: Another Claim

LINKING SIMPLIFIES:

We claim the way the patent application's features interlink within itself and to outside sources. Their benefits include:

-Easier navigation & interface: finding the needed feature/invention. Smaller 'screens allow mobile 'nodules.

. Easier to control and monitor: the central nervous system [computerized 'brain].

. Less memory required to run the system.

. Less energy required: memory; [electrical] energy; resources [hardware and software] requirements.

. Greater Creative 'Customization: 'customization needs less 'seeking / scanning [key word searching for features]. 'Customizing is easier as more features/resources are available with the unified invention, than if the invention were separated.

. Despite the simplification, its complexity and lack of tremendous finances kept us from developing a working model for the unity of the invention.

-Simplicity: increases security; reduces software's virus risks. Fewer portals for 'access to protect. ['Analyzer] controls how ['w5] 'customization/links are 'routed / and services are rendered [by 'reacting].

MAKING FEATURES OPTIONAL REDUCES CLUTTER:

All features are optional, except central components in electronic features like: 1. power source, 2. some CPU (central processing unit), and 3. Ability to control (power switch) and offer 'adapted functions.

-Clutter by over repeating that features are optional (can be) omitted. This un-clutters the user interface, and text in this patent application. However we give more examples for what's optional and not necessary.

-The mere presence of an indirect or direct link to other features, outside the central description for the feature at hand (usually what's found in the same section of this application like an invention number or what's in the feature lists) is (usually) optional.

-Pet Door Paw Cleaner claim example: Collars with RFID (wireless transmitter) limit 'access to those with the 'designated RFID is optional. The other 100,000+ variations for wireless entry in linked files related to 'Access are also optional, e.g.: the central description for 'access links to 'visual analyzers. While 'V.A. may be incorporated into the Pet Door if desired. It wasn't necessary to add cumbersome descriptions for this option in the Pet Door's central the central description; doing so doesn't invalidate the patent applications' full optional features when linked information isn't copied again (copied and pasted) into a feature's central description.

-'Adaptation: Optional features are offered for 'access and or license.

. Consuming unnecessary detailing the technological sides of things, known to one skilled in the art, can or will clog (make it harder to view the main points) in this system (patent application/interface).

CONDENSING TEXT:

References between specific invention numbers / features. A link should suffice. However references are sometimes made. Lack of a specifically worded reference like "See Invention Number AC-9110" does not imply lack of relatedness. One of our goals is showing how this patent application's text size reduction can reflect in the constructed invention. Details in the introduction sections. Expanded versions of this document may be available at our site: ProfitableInventionAbstracts/LicenseItToday.Com. This saves on costs for translating the application into over 50 languages as planned, and will hopefully make it more user friendly for the patent examiner than the other versions.

SHRINKING / EXPANDING DESCRIPTIONS & ABBREVIATED TERMS:

. Properly worded feature descriptions can shrink text size by over 95%, but at some potential loss of (speed in) comprehending what's written. However, reading time is also shortened. Reader can request an expanded version be given tailored to their needs. For example the Guide feature learned what the reader knows, and can better guide them accordingly.

. Shrink: How this invention can/has had its descriptions/'interfaces shortened:

Omitting unnecessary words like "the" helps. See our abbreviations and features (parts) files.

. Search & Replace: Use key word searches for long or abbreviated terms, then replace. Minimize errors doing this that result in improper replacements ['editing] that [greatly] change the meaning. For example: replace the term "U", for "User" or "Licensee" by typing a space before and after "U". Otherwise all words with the letter will be replaced. Our diagrams can have the lines between the parts next to the term, eg: U='Interfaces With='Keyboard. So consider also replacing terms that are adjoined with the link symbol (equal sign "=").

. Using feature terms as text: serves the purpose of easing comprehensibility (reading) and condensed language (for wider range of readers and users). For example the word "adapt" can be viewed as one or more of the following: 1. A word; 2. A feature as in function; 3. An electronic part, however worded in a manner to make it more user friendly for technophobic (technically challenged people who have repeatedly been told something is more user friendly than it is in reality) users; 4. A link to thousands of technical examples, plus direct and indirect links to patents; 5. More. One click can highlight all terms that are any of the above, for example putting an apostrophe before each word as with many of our terms herein. This patent's application rephrases its functions to show how it can fit into a sentence, for example "it shows Tom how to create inventions" is the same as " it 'guides Tom to create inventions". Altering the label can also: 1. Better convey meaning where and when needed; 2. Make material more interesting – variety is proven to often help the user stimulate ('guide) the user's creativity.

-Labels: To shrink this pat application we often relabeled our features, and/or omitted the apostrophe – if such are needed to be seen simply run a software search (and replace) feature connected to a thesaurus that will pull up related terms and phrases (like in web search engines).

. When usual words or terms out of context are found: 'predict it might be a result/'reaction to faulty [key word] replacement. Find characteristics in the unusual phrasing that suggest an improper replacement. Sentences with gross grammatical errors, and/or thought patterns differing greatly from how humans [can think], are signposts for such errors, that need not be dismissed.

. Another patent "Psuedo Random Number Generator" waas published on Nov 29, 2001 claimed to be the longest patent at the time. Its US patent number is: 3,314,440. We are longer and have *improved the randomness of its nature.

COST / BENEFIT 'ANALYSIS & SIMPLIFICATION:

. Important Concern: How Much More Simple Does The Patent Examiner &/Or User Prefer This Application At The Great Cost Of Losing The Application's Claims?

. This may not a clear cut legal and/or issue. Hence multiple variations allow the needed 'adaptations. Dig deeper into this application to understand.

.—All of its features can be alternatives and/or optional in furthering our claim.

. Simplifying can reduce the inventions' claims, if one omits the necessary parts. The greater the sum of the parts herein, the greater can be its whole (value, novelty of our revolutionary application).

-Traditional patent filing requirements will make it hard to keep up with evolving technology in the new genres we are claiming. Let's try to adapt to the needs of as many people with little or no loss to anyone.

. Everyone has a different (emotional) value or preference (can be 'scored [for 'adapting this interface]) for how simplified and or complicated they want (this system) to be. Hence the system 'adapts accordingly. However

placing many but not all variations in this patent application can exceed ten million euros, just in per page fees alone (based on current page fee requirements in certain patent offices), plus greater costs in translating and proofing the documents into many languages (without altering: subject matter / 'accessibility, interface design, and/or causing other problems like technical ones, such as changes in memory or 'programming).

Terms Used For Explaining – Unity Of Our Inventions:

SOME CODES (FUNCTIONS / PARTS) IN "ADAPTIVE DESIGN" SYSTEM

Examples for how codes are put into practice within "Adaptive Design":

ADAPTIVE DESIGN = How the unity of inventions 'adapt [by how the pat application's aspects integrate].

CART + = Any of the electronic invention numbers / functions are [also] [un]pluggable. Connect/unconnected/activate an invention as needed. 'Cartridges are a [type of] 'node in the unity of inventions' system.

CRC = Central Computer Adaptive System [unity of inventions]. Where the 'nodes and 'function meet

DISTANCER = Events triggered when multiple 'nodules are at 'designated distances [from each other].

EDUC * = Teaches how to use the Adaptive Design: how the different aspects integrate to 'adapt. [Can] learn on CRC's (work station)/N/printed information (book).

EGH * = The determination of changes in difficulty (via score, uip) and 'correlated invention for 'adapted purpose can be at central computer/product number.

ENTERTAIN = See Below
EXERCISE = " "
GAME = " "
MICROPHONE = " "
MORNING = " "
MOUSE = " "

Adaptive Design applies itself to the 'adaptive need, by using its resources. Best [by 'score for 'designative need] form of ['adapted / claimed] function offered [to user] is based on the invention options [claim] available / connected / paid for / that can be created. E.G.: User = ['Adapted] Function = 'BA = CRC. 'Designated functions can change ['egh, 'tgh] as need/situation changes, or 'adapt switches mode into different function [invention] [to better match situation]. Exemplified in functions/resources include:

Specific inventions; 'access, 'artist, ' ba, 'balance, 'camera, 'communicate, 'composition, 'coordinator, 'database [what's needed / how applied], 'edit, 'egh, 'entertain, 'exercise, 'gps, [how it 'interacts (with user], 'microphone, 'morning, 'mouse, 'mp, 'mq, 'multi-user, 'notifier, 'order & timing, 'osc, 'pp, 'predict, 'ps-zone, 'Q, 'R, 'react, 'sa, 'score, 'synth, 'sensor [what it seeks], 'sw, 'tel, 'tgh, 'track, 'va, 'uq.

. 'Predict [functions based on what 'analyzer tied to 'predicting function has/is giving the highest 'prediction-'score]. Each 'prediction [from any combination of resources (of parts) as outlined] creates their own [potential] 'score. All 'prediction-'scores are compared with a [specially creative for the situation] 'score chart – and the highest 'prediction 'score [with least uncertainty / greatest (likely) value even if there is a greater uncertainty factor] = resulting in the adaptive design choosing the best 'prediction. Adaptive designs function(s) 'react accordingly.

FEATURE = Function, Part or Invention.

FUNCTION = Part or invention's output. Any [software] driven function, e.g. desired outputs.

LINK:
-what ties this and previous applications' inventions and parts together.

NODE:
-invention that can be separated from central computer [with loss of peripheral functions via tree branching].

PART = Feature. Introductions are in the Parts files. Example parts: 'access, 'sound analyzer.

Peripheral Functions:
-functions that aren't part of the main functions as described in the invention [number]. Probably not listed in the invention's abstract. Not related to level of function's importance [especially from perspective of other connected nodes].

MISCELLANEOUS - UNITY OF INVENTION POINTERS (Claims):

ADAPTING FOR FUTURE TECHNOLOGY. Fadap ™:
Adapt this unified invention by utilizing future technology on an as needed basis: Use search (engine) criteria to find / emulate / 'access the functions/features/inventions to related aspects [in this unified invention].

EACH ASPECT IS NORMALLY OPTIONAL:
Be careful, the unity of inventions unites all aspects of this patent application, while keeping the ability to process/function/offer one or more aspects/functions [claims / independent claims] without jeopardizing the entire unity [claim] of system. Don't use/quote a part of this application, at the detriment of the application's other descriptions when there is a conflicting overlap. Don't create an unnecessary restriction by taking text out of context, unless such serves the particular need at that time/place/situation.

MANY EXAMPLES IN THIS DOCUMENT:
More invention examples in pat application, gives further clarification for the unity of the invention: By virtue of explaining the details of the inventions [claims], through the many links [tree branching], each new invention [claim] further clarifies the unity of inventions in this, past and future patent applications of filers. Each function in the united invention, connects with every other function listed or inferred: otd: each part/invention/claimable subject matter makes many references/links to every other part/invention/claimable matter via a nearly infinite number of methods.

CONTENT & DATE VERIFIER 4E020 REGISTRAR:
Track which inventions were used. System proves who did what electronically trackable event, along with when, where and how it transpired. Better than when contents were sent/airmailed versus just evidence of transmission. Improves upon the services of overnight couriers, registered mail and notary publics by combining all their benefits into one. System works via customer e-mailing or faxing material to service provider which stores in fairly tamper resistant computer filing system, then transmits documents to addressee via: fax, e-mail, and or post office's registered mail. See its huge central description file.

MORE INFORMATION *
"ADAPTIVE DESIGN" SYSTEM (1D-010) – KINDLY READ THIS SECTION LATER

Covers All / Any Aspects Of Pat Application

Semi Intro To Adaptive Design System, Also known as "Peter"

Adaptive Design 'adapts itself to needs by utilizing applicable resources for each situation:
This Adaptive Design patent application uses needed aspects of the united invention, to achieve the desired function. The need is determined through

an 'analyzer. 'Adaptive Design 'tailors itself to needs based on available resources.

Summary of Goal Oriented Design and Independent Claim:
User's (central computer) can 'designate the pathways [links] to 'designated functions

via which this can come about, by [only] utilizing the necessary parts from the overall adaptive design's unlimited variations of possibilities within the given ranges. At any one time, the (majority) of the hardware/software (is) ignored for the particular application.
"Adaptive Design" is a large complex system capable of carrying on thousands of diverse functions, even simultaneously when feasible. 'Adaptive design, and 'adapting (UIP) synergize each other – their definitions/functions greatly overlap.

Summary rewritten using many parts (function) terms: 'User (has their needs = determined by themselves or UIP) = Optional Occurrences:

1. User is 'educated and 'guided to [better] determine what [invention or function] they want; and how to use and of benefit from it.
2. User and or 'analyzer [can] 'score which functions/inventions will better meet the need [based on the 'behavior analyzer]. The highest 'scored function [can] be presented to the user/beneficiary.

The "Creator's" central computer is the center, which controls the separate (portable) nodules. Product numbers (N) are the group or related functions.

According to the *manufacture's carrying out of descriptions herein: A nodule can carry out the functions for one or all N's; only the software (via cartridge/transmission) need be altered for nodule to carry out desired function. Simplified nodules may receive additional parts to carry out desired functions (attached/snapped on by user) according to (central computer's, teacher's, common sense, book's) instructions. Nodule is portable and can become a stand alone system after development, and have more complex functions carried out with the help of the central computer, and or the central computer's main frame hook-up (mfh).

* "Adaptive Design" system also^: helps users develop new inventions with system's hardware/parts*; acts as point of sale for merchants (users can try prototypes, and if happy place order for stand alone N); allows user to program their N in desired manner via central computer (which creates software cartridge for N).

This system via its CAD software functions allows the user to cut and paste parts and desired functions creating impressions (eg: audio/visual) of the listed product numbers and parts (product specification codes, product numbers can become parts too), derivations thereof, and new inventions utilizing the listed product numbers and or parts and or functions. The central unit can be done on a * personal computer (simple level only), on main frame computer, and up to virtual reality.

"Adaptive Design" guides users to plug parts into each other creating the desired products. The software (CAD system(s), etc.) shows the steps for assembly and creates the cartridge for the needed software to operate the newly assembled products.

+ User Information Programming 'adapts the output/invention design and or functions.

Description

* Notes:
-The user may elect to partake in the "Creator's" introductory self tutorials.
-Most of the needed software (most functions in most product numbers) can already be in the product numbers. It is simply a command that activates the desired software application at central terminal or product number (listed product on this application, *derivative, *new invention) (R [remote])(via^: r; wire/wireless; access; uk) in the designated manner to generate the applications desired.

Notes:
-CRC designates the pathways via which desired applications/functions are carried out. This designation is carried out in standard electronic practice, eg: selects parts/pathways according to their availability (in good repair, not occupied by another application being carried out); simplest mode (fewer steps for system, user); usage of elements (nodules, parts) that are cheaper to manufacture, and or less likely to be needed by other applications.

User can choose from multiple variations of each product design, and or create the variation desired which will then be manufactured (identical products in a quantity of one or more) by the manufacturer designated by "Creator's" manufacturer database.

Develop inventions by getting ideas from system's database of product ideas. Device will then select applicable companies who may manufacture and or sell your product idea.

Use the database of most of our inventions from which to get ideas about new products. Eg: user keys in "remote control" and gets the product ideas in that category from which to get stimulation for a new product idea. The ideas in the database are designed to increase the creativity of those who read the ideas.
-Then user types in their invention.
-Next is optional: system connects to database of patents, and user can search to see if a related invention is filed
.--(also can check other electronic databases describing such inventions).
-User selects the type of letter they desire to mail out soliciting their idea. Sample letters:
--to manufacturer, we wish to produce this invention with you, what will be the cost? At minimum this gets manufacturer's interest.
--asks large retail outlets, wholesalers, sales representatives from database if they would like to place a minimum sized order.
--letters go out to the mass media that is interested in such product categories
.--although a quick sale may not take place, attention is achieved and this is the key!
-system's computerized translator makes rough translations of the product description and diagrams. The inventor's description in his native language is also attached for mailing.
.-Letter is available in 18 languages, and can be selected by user
-User selects all the manufacturers from our database specializing in said product categories. By picking any product user is assured there are 20 - 200 manufacturers world-wide in that product

category.
.-the system both creates inventions, and includes products and product ideas which create, hence an applicable title for this device is Adaptive Design.

SOME IMPORTANT CENTRAL POINTS ABOUT 1D-010:

Non-Information Processing Portion of Idea:

+ Briefly, this is how we consolidate the separate ideas into one. The patent application titled "Adaptive Design" uses software and or virtual reality, user is able to experience and work with each invention. Next example: remote device (with transmitter, receiver, display ("S"), speaker, timer, small computer ("C"), microphone, sound synthesizer, sound playback, key board, volume control, memory) interacts with system's main unit (with more of the same features as the remote device, especially its complex database and software) in playing out the many of the functions for nearly all the inventions in the filing. The specifics for how each invention would be processed by the software is very simple, yet viable.

Other common threads for each idea: they all increase user's creativity by virtue of the product ideas (future separate patents), special effects of "Adaptive Design", functions for each invention can be programmed by user. 98.5% of the inventions may be electronic, all could later be made electronic in some haphazard means.

The aim is for our descriptions and diagrams for each separate invention to constitute a priority date in this or an updated filing.
-[air pad, basic, cart, character, mfh, notifier, uk, osc, pi, portable, pp, speech, cordless speaker tel, tds.

+-this system combines all the products in directories A, B, C and D. However, remember each of the products are obviously, also able to be developed separately from each other as well.
-the software and database are sold within portable computer ("C") device which has many other features
-The term CREATIVE SHELL as explained below in notes for 1D-010 is one of the important methods of developing ideas with 1D-010
-The branching out of the database is explained in "Beginning Introduction" - simply computerize all mentioned in this file.
-The structure of the database is largely explained in the paper titled "Database". Additional details are available from other parts of 1D-010's explanation.
-Some of the purposes of 1D-010 are: to make inventions, come up with creative ideas, make money for the seller of 1D-010 and its users, entertainment, education.
-"Imi" parts are interconnect able. E.g.: as in 3C292 Magical Building Blocks.

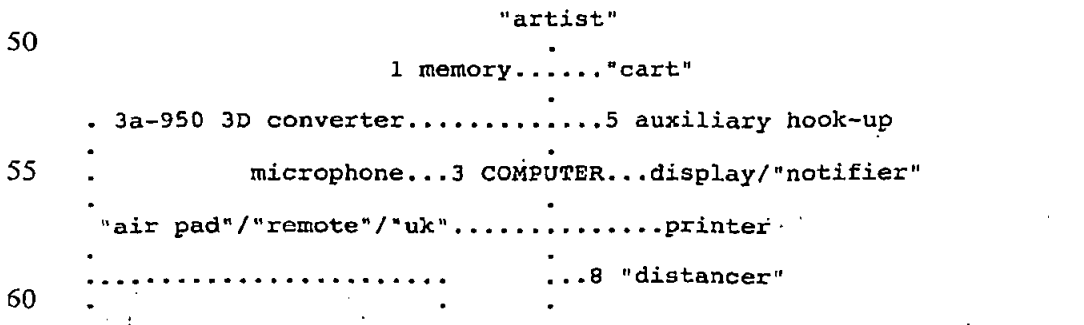
FAIRLY IMPORTANT POINTS ABOUT 1D-010:
-user can order through 1D-010's manufacturers any/some of the products listed in this or other filings of this inventor to: buy, and or lease and or see pictures of and or get greater information about.
--user can choose from multiple variations of each product design, and or create the variation desired which will then be manufacturer by the designated manufacturer (eg: one with rights to the basic

idea that generated the creative shell)
-user can select and or develop many product characteristics, eg: size, casing design, color, product's "pp" or "mp" or "cart"

Software and or Virtual Reality:
.-using software and or virtual reality, user is able to experience, work - interact - play with the basic idea and or creative shell (includes both the basic idea from 1D-010 and the additional information about product provided by user by merging with other parts and functions from 1D-010 database and or the addition comes purely from user's mind).
.--This is for creating product ideas, and or experiencing those products which might already have been produced and available for order. This serves also as a type of interactive computerized point of sale, accepting credit cards, etc.
-software is likely to offer possible suggestions and or directions into the right branch see "Beginning Introduction"] for the ideas selected by user
-when user want more options about an existing and or new idea proposed by inventor (his invention, or someone else's) user can request how far he wants system's branching to seek out such elements, eg: request can be made to find all elements pertaining to "interactive" within one or more product numbers up to branch 2 or 20
--the product numbers can be selected via: key words, category, keying in product numbers, or by any other element that separates one product number from another.
-any product can be stored into 1D-010's memory, eg: patents from another system's database; literature on electronic media about product; etc.
-May utilize technology from Echelon Corp which works on bringing a common intelligence to all sorts of electronic devices. Wall St. Journal, June 19, 1995, p.R28.

* OTHER POINTS ABOUT 1D-010 HARDWARE DESIGN:
-waterproof and floats, e.g. for use in pool, bath, shower, beach, lake, picnics, voyages
-makes sounds that please user when latter is in low creative level according "score" (little typing on key pad, few products with their files created); or user may request such sounds
-connects with music stereo; music synthesizer allowing user to "compose" sounds that boost their creativity (while composing and or listening)
-via "clapper" user is able to easily/creatively input data (just talks system which converts sounds to computer ("C") signals)

One Diagram Version For 1D-010:



c (central computer - most important feature for "Creator").

Sub-diagrams (additional parts that connect to the above #1 diagram, eg: the below connect with #1 via #1's Computer):
#2: R - C ('computer) - mfh
#3: uk / vc* / visual analyzer* / osc / mouse / morning* / locator* / distancer* / microphone / sound analyzer* / speech / any other sensor(s) = R / C ('computer) / MFH* = printer / display / score
#4: uip / pp / mp / mq / cart = R / C / MFH*
#5: modem / fs / sp tel / tel = R / C / MFH*
#6: c = vr.

Utilizes software functions found in other creativity enhancement and brainstorming software.

OPTIONAL MODES OF TRANSFORMING PRODUCT IDEAS IN THE USER'S MIND:
A number of the product ideas within this and other patent filings can transform the ideas within the database, e.g.:
-3a-950 Picture To 3-D Converter (user can also input via "uk" in conjunction with database and software for product design, the dimensions of product and have them
-"artist"
-4a-430 Game Creating Machine
-5a-130 Color Sticks
3a-580 Remote ("R") control
5a-610 Invention Store Software
5a-620 Virtual Reality Invention Laboratory
OTD:
pp; mp; toy; game; entertain; printer; mfh; cart (product ideas for database; letter formats; computer ("C") based software language translation systems); word search option of software, allowing user to pull up all product ideas with the desired key words from 1D-010 or "mfh"'s database - in order to get product ideas, or do patent searches; character; 3a-110 Antenna Art; Magic Air Pen; 5a-460 Touchless Switch; % remote; % notifier

POSSIBLE OPTIONAL CONFIGURATIONS OF 1D-010'S HARDWARE AND SOFTWARE:
3a-580 Remote ("R") control.
5a-610 Invention Store Software
5a-620 Virtual Reality Invention Laboratory
OTD: pp; mp; printer; mfh; score (levels of interest from other parties in user's ideas; number and or quality of ideas he develops; % changes in "pi"); % tgh; cart; 3a-110 Antenna Art; Magic Air Pen; 3a-820 Silent Light Notifier; 5a-460 Touchless Switch; a1-040 Space Phone; a1-500 Personalized Outgoing Message (adaptation for people responding to the solicitations made by 1d-010's user, e.g.: via user's mail or tel or fax...; personally answers even E-Mail, Fax, ?letters, Modem transmissions, etc); *a6-010 musical necklace; remote; notifier

-database of parts applicable for most of the inventions predicted to come out of invention are selectable and with prices. This information can be attached to letter inventor sends to manufacturer.
-this is more fun than playing chess or watching television. Also it allows for hope that the inventor may one day become rich.
-the book on how to increase creativity as filed with the US

Copyright office is available on the system for reading.
.-additional trademarks to this product: invention man; inventor; let's invent; invention software [and database]; develop[er]; creative shell; creative developer; invent; create; Adaptive Design; invention challenge

Software to assist brainstorming.
-One of them is produced by Mindling Corporation for about $200. Their US Tel 1 800 253-1844. Also covered in San Jose Mercury News, Sept 18, 1995 issue, titled `Problem - Solving Software...'
-The type questions are selected according: to UIP for nature of product or problem needing brainstorming; UIP of U; available db (databse) on
sys, eg: if it can recognize and make suggestions for key words supplied by u (user) (DB has files for related information on such key words).
-OTD: "entertainment" and "mood" creative an upbeat psychological / sociological effect in U of sys (system) / sw.

OTD: display ("S"); fd-hdd; pp; mp; uk; mouse; date; tds; %interactive; basic; %game; entertain; portable; printer; au; mfh; bp; osc; speech; vc; egh; score; cart; for communicating with other companies - tel, sp tel, tr, mo, fs, caller id, tel number memory; cp; uq; mq; access; pi; character; multi-user; cc; * remote; * notifier; remote ("R") control; % morning; portable.

Additional Notes

Codes: "N" designates product number. "CRC" designates central computer of "Adaptive Design" - though the functions can be the same as the N's computer, CC is larger (and less portable).

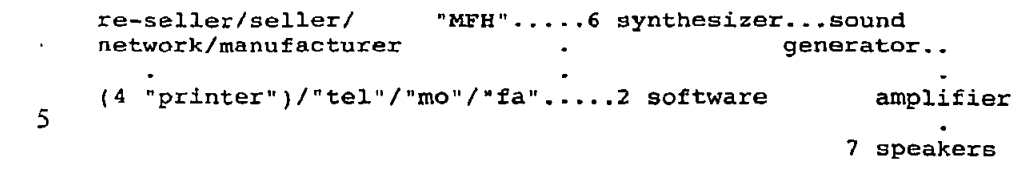
User can create inventions by finding pertinent parts and or functions in the database of this patent application's product numbers and parts. User searches via key word and or product category, or "Adaptive Design" can do its own type of searches based on the characteristics of the product(s) and or desires (functions, applications, preferences) user is working with and or keys in.

New cuts and pastes via software allow user to develop his new ideas. He may also develop new software for the new inventions via (Creator's) different model software which require (easy) programming steps.

Examples of product numbers and parts are in patent application. E.g., remote control, display, speaker, key board, locator, memory) interacts with system's main unit (the "Creator"), and or a separate central feature (computer). The assembled product's functions are controlled by software. Applications can be any invention in application, e.g.: the "Balancer" product. Balancer causes speakers to adjust audio balance according to where remote control transmits its location.

Common aspects of every electronic product number and part:

-They all increase user's creativity by virtue of their fantastic natures. Refer to Steven Kays' materials on how to increase creativity (confidentially filed in copyright office, etc.)



1: Memory: Databases; holds memory for sound generation; files created by user
2: Branching: see paper describing how this file of separated product ideas are organized and described and coded. Virtual Reality and Software: 5a-610 Invention Store Software; 5a-620 Virtual Reality invention Laboratory; can get software and other data from 1 and or "cart"
3: Computer ("C") is the central point; analyzes, converts and processes all data; with minimal key strokes system will send out solicitation letters or electronic signals (fax, e-mail) using format letters
4: system may also fold and stuff envelopes; plus also print letter sender's signature on letter, then stamp the letters
5: CD-ROM reader; pre-recorded music generating system; etc
6:
6a.-Analyzer Determines Sound Effects: sounds are generated to stimulate user's creativity. The system selects appropriate sounds/music according to, eg: combination of user's "pi", product idea (such as idea's "pi"), what user has stated they prefer, the type of product they are working on can generate applicable sound variations (car invention will hear car and or wheel sounds according to the feature and or direction in which user wants or needs or can go in their thinking and or branching around in software.
6a1: user hears consumers using, speaking about, asking questions about at store, and others selling the basic ideas or creative shell ideas.
6b. -"Synth"
7. "Balancer"; (sounds appear to only come from certain parts of room and toggles back and forth to create all types of interesting and or unusual sound effects, e.g.: sounds toggle from left to right every 3 seconds for 30 seconds; this slight disorientation in listener can unlock their creativity); different buyers/users/etc can each be heard on an one of more than four speakers.
8. "distancer": helps replicate real life experiences in using product
8a. each feature of distancer can have "display", "cart", "uk", "fd-hdd", "remote", "air pad", "microphone", "synth", "speaker". User with help of 3 computer ("C") programs distancer's functions so that it helps replicate many functions of desired product ideas. Eg: the "portable" distancer can be programmed to be the following products, plus other products from this inventor's patent filings too: 3a-281a morning code alarm clock; 3a-580 remote ("R") control; 3a-630 sound analyzer; 5a-310 world clock; a6-010 musical necklace; 3a-790 magic air pen.
8b: (3 computer ("C") and its parts) will via transmissions provide other signals to help "distancer" to function somewhat like the desired product.
8c: system's pp and mp allow such programming

Additional Diagrams

#1: notifier / access - air pad = cart-date-c (computer)-display =

-One or more functions for each product number can be programmed by user.

-Functions can first be visualized/experienced by user/targeted *parties on central computer's "display", "printer", *"vr", "osc", *"character". And altered (to suit preferences) via: uip, pp, mp.

-Central computer's role in each product number.

-Electronic: Over 98.5% of the inventions are electronic [or have potential electronic versions]. Remaining *1.5% can be discarded from "Creator's" uses. Those products not fitting with "Adaptive Design" have their individual advantages. All products can be toyed with on "Creator's" central computer.

-Simultaneous operation: "Adaptive Design" can control 100 or more different product numbers simultaneously via ^: its separate ports (wire/wireless) (one or more ports for each invention). Central computer has optional multiple work stations (for visualizing / then getting product numbers operational).

-Software: Each product number is controlled via and has the benefits of software via: central computer's software (CAD, author language), mp, pp, cart.
--Cartridges (from Creator/manufacturer) create completely different applications from same hardware. Just insert cartridge (into product number/ *central computer) and follow the (easy) steps / system is operational soon thereafter automatically (cart may turn product number/system on according to mp/pp/uip).
*-Product numbers can be made waterproof/float, e.g. for use in pool, bath, shower, beach, lake, picnics, voyages. E.g.: product fits into a waterproof box with: view to see display; sealed openings for keyboard, speaker, etc.
*-"OSC": Makes sounds according to programming, such as to: please user, alert him to malfunctions in assembled product, give the status of an operation - such as two beeps means designated function was completed satisfactorily. E.g., see parts: "notifier", "score", "osc".
*-See "Entertainment": Product numbers are in their degree entertaining (for user, parties effected by device)
-"Educational". E.g.: learn electronics; software; invention process (CAD, assembly instructions); increases creativity (gives ideas for related/new products); puts what one learns (via central computer's software. assembly) into practice; central computer allows for tutorials;
-Security: "access" (restricts usage to all or limited applications (on a user by user basis (uip, "access" code))).
-User can select and or develop many product characteristics, e.g., one or more of the following: size, casing design, color.
-Manufacturing costs: Due to the similarities of parts, total hardware, and type applications, there are savings on cost of producing same/related parts and or products for each invention. Software costs for all products are reduced as well.
-Boosts sales
-Market testing
-Interfacing: Unique possibilities for user
-Mobility: Portability of product numbers ("R" [remote control]) / User need not be tied down to product number ("speech")
-Same/related hardware for multiple uses. Many of the same parts are used (though their applications differ).

--For simplification, "Adaptive Design" and or product numbers can be designated into different hardware systems, each designated for particular product numbers. Each area of applications can have one or more "Adaptive Design" systems.
--Separating "Adaptive Design" into separate (sub-) systems. E.g.: different "creators" for applications in: audio (input/output); desk use; user's mobility; indoor/outdoor use; non-mobility; security (sensing via audio/visual/vibration/ "access" /alterations in uip); etc. Each product number can have all or some of its applications/functions handled via one or more (sub-) system(s).
--Each product number / feature can also be completely separate from the other inventions.
-Product number tailors itself to user's ^: needs/behavior/desires/situation, via^: uip, pp, *mp.

Notes On Common Aspects:

Due to the branching (see "Introduction to Product Descriptions" paper) each part has the option of being connected to each product number in multiple ways. The diagrams for complex potential wiring between parts are in the application. Applications for each part are described in the product number's central description or in one of its branches; and or determined by: the user / *target parties (via^: "creator's" central computer; and or mp/pp/cart which are in the product number's separate hardware and or in "creator's" central computer.

CONCLUDES TODAY'S INTRODUCTION TO UNITY SECTION

File: Claims / UIP All

SECTION ON INVENTION ADAPTING TO CHANGING NEEDS

User Information Programming. Independent & Dependent Claims.

Sections Of This File: 1. Introduction. 2. System Can Get Harder as User Learns. 3. Links. 4. Patents & Our Improvements. 5. System Thinks Like An Inventor Getting Solutions.

What is UIP ™? It collects and or receives data/input about both the situation and a (potentially corresponding) need. Its broadly termed "analyzer" ('behavior analyzer = 'score) determines what will best meet that need. This leads to an output which includes: a 'tailored function, or product (schematic). See UIP, 1D [Unity of Invention] and other files!

Independent Claim: User Information Programming. Creates a catalog of inventions, tailored to the needs of the manufacturer's marketing analyst, users, etc.

Dependent Claims:
1] Invention creating machine.
2] Compensation: When one part doesn't work properly, then other parts handle things with UIP. See UIP-Link.
3] Links between parts.
4 - Other Dependent Claims] The functions, and numbered byproducts.
Notes on Dependent Claims] They have unique features, which also can overlap onto the other dependent claims due to the high interrelatedness of each page in this application. Database of possible functions/byproducts. For example the pet door which 'adapts to the situation.

UIP's Invention Creating Machine Claim shows:
. How a list of needs are determined, and then is correlated with a list of potential functions (inventions in the

application). Each need and potential function has its own types of scores used to match a need with an available function or idea for an invention.
-Tailors itself to a need as defined by UIP in specs
-Suggests inventions (hopefully) in at least the degree of details that are developable by (some) people skilled in the art based from a list of options spelled out in say a million pages of inventive ideas. Ideas spun out might also be designed to trigger more (related) ideas from: readers (people), or software based 'analyzing systems%.

Exclusions (What isn't covered by the User Information Programming claim):
. When there is only one type of response from the product based on what happens to it. A difference in user or most environments/situations does not effect a change in the response. Examples:
-Items comprising a single uniform material like metal or rubber that responds to pressure, heat, pulling, etc.
-Existing versions or parts of a: rubber band; hinge; stapler; thermometer (controlled devices); ball; wire; match; candle; oven; wheeled vehicles; text editing software like Microsoft's Word ® software including search and replace functions; electrical power adapters / generators.
-When a person / organism pushes something like a button, then there is a pre-programmed response like a light switch, that has a single response.
-Many other examples
-Non electronic byproducts and how they are tailored is covered, but not the non-tailorable duplicate-able byproduct itself.
-See listed patent numbers throughout, the application, and the patent numbers those applications refer to.

UIP-Link: UIP LINK = Optional ways of dealing with situation when a function isn't working correctly. See UIP-Link File.

UIP-GETS-HARDER
(Good Examples: Pet Door Paw Cleaner, 'Education Gets Harder, 'Therapy Gets Harder)

Broad Claim: User must handle requirements A then B to gain 'access. Access requirements change in time, and are 'tailored to the situation, resulting in the same/related results.
-User must meet multiple 'designated criteria in 'designated 'order & timing to achieve desired result from system.
-This is one feature of our Pet Door Paw Cleaner. It teaches pets to move their paws on mat before 'access.

Staging Of Rewards:

Examples:
-System 'Educates accessor 'interactively = rewards/'reacts by: allowing 'access, 'educating, 'guiding.
-'Guides 'Education Get Harder = as user learns. There's a gap in each lesson getting harder via: 'order & timing.
-Gain 'access to new features/functions as user learns: menu of options opens up; pet gains rewards.

Criteria for receiving reward gets harder:
-Pet: gains 'access, grooming, food.
-User (humans): 'access to
. Level of reward increases as user's learned 'education increases.
.-Exists: the better user learns how to use existing products, often the greater the benefit, e.g.: pushing down a common stapler with the right speed and pressure = results in better stapled documents; Apple, Oracle & Microsoft based software. They would be enhanced via this patent application's 'tailoring.

3C292 Magical Building Blocks: Each combination has designated results. 'Guides user to learn 'tailored skills: [re]learn to use [poor/[non]functioning] parts of human/organism brain. 'Tailor tests user to determine brain functioning 'traits = then designs 'educational program = then 'guides and rewards user.
-See 3CE file.

* 6B240 Driver Identity System: can only activate vehicle after correct actions/'sensors have been triggered. W5 travel patterns restricted by such 'access behavior.
-See part Access-BA-Auto.

6G241 GPS Tracker: like 6b240, it rewards/allows 'access to 'designated features based on: user

performance/W5 'tracked object [did not] change locations.

3E061 Motion Tutor: Requires/'Guides users [to improve their] movements, eg: the correct level of movement gains 'access. System assumes user's movements will either change or improve over time.

At first requirements can be A then B. Later it can be either: A then B then C; or B then C [then...]; or C then D; or * C then B.

UIP-Link

Optional ways of dealing with situation when a function isn't available.

Types of New Linking Needed When (Designated Function Not OK):
Finding Alternative Parts and/or Inventions When Any One or More of Them Is Not For Whatever Reason 'Accessible or Known.

1] Unavailable Part - Severance:
-it is not in [full] connection [due to wireless interference].
-computer virus detected via: anti-viral software program(s).
-function is fully or partially unavailable, e.g.: it's file(s) were erased or corrupted.
-function is (too) busy serving other needs [for other users].
-[central] computer has other trouble/limitations = 'accessing/connecting: a function outside a more central description of a function is not OK.
-conflict between functions: one function has dominated/interfered with another function. Software [may] need to be fixed.

2] Better Mode Found:
Finding new functions that [better] meet needs [even if all functions/aspects remain [mostly] available: Another mode/function is determined to better meet needs = then system goes via new links/functions [to better 'adapt itself].
Should portion of invention become unavailable: [Like the brain for a human or other organism] Adaptive Design can still function if almost any portions of this patent application were removed, due to the many links between its many functions. Also, 'Adaptation creates new links between available functions if part of the invention's hardware/software/peripherals damaged, functioning improperly, or not [fully] unavailable. Each function has many common functions built into it - and such functions can duplicate/transfer/copy themselves to other features [as a self-repairing/other 'adaptive mode].
-Finding/creating the alternative/new tree branching links when an applicable link or 'associated function are unavailable: 1. 'scores can be given to every possible link/[combination of] functions that can [help] satisfy a 'designated need. 2. 'route with the highest 'score [based on whatever criteria(s)] becomes the backup/default mode = and need gets met [with only temporary interruption/aberration] until new mode is determined/tested/better 'adapted (after it [re]learns needs).
-A user [person/(another) system] can request/suggest/get 'guided into determining alternative/better modes.

Figuring Out Something Is Not Working Right So Other Functions Compensate:

Topic Reworded – Determining Something Is No OK. Should any number of functions/parts be unavailable, how the remaining parts/functions can 'adapt and still provide [all/some of] the same functions. How to [Automatically] determine a [current] function/mode is [not]-ideal/inoperable. E.G.: When user: disappeared / changed their need or there's a completely new user.

-Feedback/input from user / 'analyzer, e.g.:

--A problem might be suggested when a user (chooses to) deactivate a function via 'remote control and or changes from a function. Cause of this could be the function didn't apply well enough, didn't apply at all, or wasn't working. [Each] such avoidance of a function is [also] used for creating the 'score.

-Signals sent to/from [central] and function - to [help] determine its state of functioning based on whatever criteria, e.g.: how useful it is/was based on popularity of usage = which affects its 'score.

--Central Computer sends = signals to [peripheral] part/function = 'seeking [and asking for] = 'score [how well function is operating = then 'analyzer 'reacts by [keeping mode/function and or altering the mode, and or 'seeking a new function by creating a new link] = then verifying if the new link/function achieves a [better] 'score.

--Function [continually] does self checks: like how existing software programs check/fix their software issues; have level of Kilobytes per folder and their files remained [constant / adjusted as expected due to past occurrences – 'order & timing]; function compares itself with the same/similar functions elsewhere in the same/different unified invention.

-Chosen invention sends signals to 'analyzer giving 'status of its function(s) / ability to 'adapt.

-Fact(s) that other function(s) stepped in, or something suggesting such, can indicate something isn't alright.

-If one function isn't working properly, another function might catch the problem – because they might not normally be doing something if the questionable function acted OK.

--'tracking might imply/state that 'access isn't working when: 'access permits entry to entity, but the 'tracked behavior of that entity does not match expected behavior for that user – such as a bank teller seeking 'access to a bank's foreign currency holdings available for withdrawal by clients not connected to that teller's password.

-Multiple functions address similar issue – but one function isn't matching up to the other functions. Info from other functions [with similar goals] [suggests] that a function(s) isn't OK, because it doesn't [come close to] matching the info from the other functions. E.G.: a 'visual analyzer shows a truck speeding through a red light, but the 'sound analyzer hears a truck stopping at the same time via its 'time date stamp.

DETERMINING A FEATURE(S) ISN'T IDEAL:

|Parts Section #1|: U = Applicable Functions Of Invention [1. Gets poor feedback. 2. One or more of the following inventions/parts signals to the 'analyzer = that the 'designated mode's 'status in meeting [previously selected] [minimum] 'score has changed (for the worse)] ~ 'C (CPU) / 'Analyzer =

|Parts Section #2| – **How 'Analyzer Determines Something Isn't Ideal**: ACCESS (Security Control)[not granted (despite repeated attempts to gain entry by same user) (who otherwise [from other 'scores] seems legitimate)] // BA (Behavior Analyzer) [user isn't (as) happy] // EDIT [mode of 'editing causes a poor 'reaction] // EDUCATIONAL [user's 'score [school grade] not getting better [fast enough]] // MULTI-USER [system works for one user but not as well for other] // NOTIFIER [is activated when it wasn't needed (because user/system/'score for other function doesn't give a high 'score of needed 'notification, eg: user inputted the 'notification was a false alarm] // OSC [got bad 'score] // PS-ZONE ['predicted behavior/function in a 'zone doesn't match ideal/past actions/'reactions/'scores] // QUESTIONING [types of questions received 'score that there's a technical problem [but probably not an 'access or other (quantifiable) topic based on the theme of the ['order & timing of the] questions] // R (Remote Control) [used from non-typical locations because old locations had worse connectibility (due to interference or function at that 'zone might not be operating properly] // ROUTER [alternative routing is given/suggested] // SA (Sound Analyzer/Sound Recognizer) [sounds don't match 'predicted profiles] // SCORE [drops] // SEEKS & REACTS ['seeking doesn't result in 'designated/historic/'predicted 'reactions] // SENSOR [multiple 'sensors (in same 'zone) give conflicting info/status] // TDS [doesn't match what's 'predicted] // T (Telephony) [connections aren't achievable or go to non 'predicted points/inventions] // TRACK [lost (full) tracking of user/function, and or behavior of tracked element changed (out of range)] // VA (Visual Analyzer/Visual Recognizer)/SA [the range picked up 'scores with (likely) malfunction so SA/VA needs to get feedback from other function ['predictor]/(the) user (by asking her a question(s) like: 1. Is system functioning properly? 2. What 'score(s) would you (user) give the 'designated function(s). 3. Ask questions / give 'guidance that doesn't directly ask user to 'score the function, but by inference (may) determine a malfunction is occurring – eg: user couldn't provide (proper) answer/feedback about something they should/could have known had system functioned properly] // WA (Walk About) [].

* Sections 1 and 2 interact.

Sub-Parts of UIP-Link:

Compensate =
Another function takes over for the failings of a non OK function. Part or all of the non-OK function can be compensated = to achieve a higher 'score for 'adaptation.

Function Not OK =
Function is not connected; fully or partially malfunctioning = and the not OK function might need to be deactivated / 'tracked for aberrant behavior [ba].

Licensing =
When a feature isn't or can't be licensed, then the system can operate as if it were somehow inactive. Discover what other links lead to alternative 'adaptable features.
. (Potential) Licensee: finds ways to reduce royalty payments by restricting themselves to 'designated resources, even when related features in the unity of this invention exist.
. (Potential) Licensor: discover how [potential] licensees can find ways to pay fewer royalties, and/or infringe upon another's intellectual property rights. Then possibly block 'access to such alternative routes [by which the same feature and essentially similar invention could be constructed and/or offered].
. Anti Hacking method.
. Patent searching tool for patentability: Explore [all] the variations comprising a unity of invention.
. Inventions are 'licensed based on ['W5 something is adapted].
. A speedy license agreement is 'tailored ('edited) for the licensee, using the form agreement.

Remnants =
-(Each) function/invention can have remnants of itself in the other functions (limited to how we have links shown). When one aspect of a function is not working OK, then its remnants elsewhere in the system can [help] cover for what's missing/not OK.
-Each [main] part is 'correlated with every other part = resulting in the correlation/creation of a sub-part [file] in each such part. Just because a feature is not working correctly, doesn't mean all its sub-parts [located in other parts] aren't OK = especially if [anti-viral/hacking/corruption] software programs are properly executed.
-Remnants from less related remnants can compensate. Remnants in [less] directly-connected / spelled out functions can compensate: If function "A" isn't OK, then:
--Option 1: remnants of functions "B" found in functions "C through Z": can compensate function "A". Etc.
--Option 2: Wider Abilities: remnants of functions "A" / "C" found in functions "D through Z" can help/compensate "B" (partly not OK) = so "B" can better compensate function "A". Wider options based on pattern shown from option 1 to 2.
--Option 3: step 1: function "D" remnants inside even, remnants of "E" = which are both in "F" = can compensate function G or [A to Z]". Diagram: f [e (d)] = compensate = g. Step 2: G / H remnants in G = compensates A. Step 3: A [helps] compensate A in above options 1 & 2. Etc.
--Options 1, 2, 3 and so forth offer even broader options, via unlimited possibilities within the parameters of the parts and presence of links. JUST FOLLOW THE LINKS - To See The Available Forms of [backup] compensations.

Synergy =
There's a synergy from having multiple functions/inventions, in that alternative ones can fill in when another one isn't OK. The more functions connected the greater the synergy in: backup strength, 'adaptation. Just another reason why all exemplified functions (invention numbers and parts) listed are important in this application.

EXAMPLES IN SPECIFIC PARTS:

Shows how it's determined a part isn't OK, then how to compensate.

U / Another Function = This N Sys [1. Determining Function's Not OK. 2. Compensation(s) - Solving Problem By 'Rerouting To Other Function(s)] ~ C =

ACCESS [determining what's not OK] =
|Parts Section #1|: U = 'Access =
|Parts Section #2 – Access maybe shouldn't have been granted earlier as evidenced by aberrant occurrences: actions of past (correct) and current (illegitimate) users don't match (per 'BA) as in actions

in following parts. 'Access has sub-parts/remnants for all/portion of itself in each (main) part. This determines what's not OK about the 'access part; then can compensate by 'analyzing/'tracking user via the other functions (and or access's remnants inside the other parts). Then 'access' compensation can do what 'access normally would do: convert user to higher alert, limit or deny all access, etc.|: ARTIST [user's style doesn't match behavior [ba] of correct accessor] // CART [cart is/is-connected to another function/user] // EDIT [] // EDUCATIONAL [user appears to know too much or too little or some of each in different subject areas] // MULTI-USER [interchange between multi-users] // NOTIFIER [current accessor triggers notifier too much; or user altered W5 'notifier could function] // PS-ZONE [user rarely goes to a 'zone] // QUESTIONING [] // R (Remote Control) [] // ROUTER [] // SA (Sound Analyzer/Sound Recognizer) // SCORE [] // SEEKS & REACTS [] // SENSOR [] // TDS [] // T (Telephony) [] // TRACK [] // UIP (User Info Programming) [] // VA (Visual Analyzer/Visual Recognizer) [] // WA (Walk About) [W5 it is used (as 'tracked)].

CARTRIDGE = any of our functions / inventions' electronic aspects can be connected to the united system like a cartridge. Different functions and inventions [with corresponding features] can be plugged in as a replacement [though may not be a full compensation – better than not having this option].

-'tel connection = with another system / 'sw / function that compensates for the cartridge.

CHARACTER * = 'tailor / 'ba make up a 'character

CLAP = 'sound analyzer = 'remote control = device being controlled

COMPOSITION (of sounds) = 'microphone / 'keyboard = 'synthesizer / 'edit = 'computer = 'osc / database stores music – and offers template audio pieces that can be 'synthesized.

COORDINATOR = 'analyzer.
U (User) / System = UIP / controls function / 'transfer of signals output based on what's 'predicted [as a need] [completely compensates] =
. UIP-DB = based on how 'database elements are 'scored
. UIP-Guide = draws upon: 'ba / 'questioning / 'seek & react

DATA BASE = ['remnant] data stored with other function(s) can replace/help data in another database.

DISTANCER = 'positioning system, 'tracker ['order & timing]

EDIT = 'tailor the text; artist-edit.

EDUCATION = 'tailor = 'guide. 'Access appropriate files. 'Analyzer / 'Behavior Analyzer determines what needs to be taught. 'EGH. Answers to 'Questions = 'Guide / 'Analyzer / 'Tailor.

ENTERTAINMENT = 'tailor

EXERCISE = 'guide 'adapts the 'educational program to user. It 'coordinates info from other parts.

GAME % = 'tailored 'guidance offers: 'egh, 'tgh, 'artistic 'entertainment.

GUIDE = 'tailoring the 'educational process.

INTERACTIVE = system 'adapts to the needed situation via: 'multi-media, 'entertainment, 'order & timing for how it functions; 'predicting; 'analyzer determining what is needed w5 and in what 'order and timing.

K (Control via keys) = 'Remote control; 'tilt. 'tailor determines user's needs without user needing to key in their interests. Creating 'artist related 'images as form of communication – each 'image user creates or clicks on = represents a different string of [hyperlinked / active] terms/buttons.

LOCATOR = Ways to locate an item:
1] 'Clap your hand and [wireless] device's 'osc will sound.
2] GPS; PD'; 'distancer
3] 'Sound analyzer determines where the sound is coming/came from, its change in location and speed.
4] 'Notifier alerts [when device needs to be notified about something].
5] W5 [mobile] device is in/out of 'zones.
6] 'tracking
7] * source of 'vibration

MIC = 'visual analyzer to sound converter part.

MODEM = 'Tel

MORNING = 'ba 'adapts to user's need by 'analyzing w5 user needs to be woken = then the 'time date stamp signals the = 'notifier.

MOTION SOUNDER = 'vibration analyzer = 'osc

MULTI-USER * = Different user determined via = 'access [password] / 'ba / how something is requested to be

'tailored by user or system.

MM / MULTIMEDIA = 'analyzer 'coordinates how the following function = 'artist ['image alteration] / 'edit / 'composer / 'synthesizer / 'osc.

NOTIFIER = 'access / 'score / 'ba / 'sensor = are 'analyzed for shift in desired functioning of parameters [based on what's stored in database] = system 'seeks such shifts = and 'reacts by = an 'osc.

ORDER & TIMING = system 'correlates what has/is/will be needed by its = 'time date stamp / 'score = 'reacts.

OSC (Outgoing Sound Communicator) = Audio signals to 'speakers replaceable via = 'seek & react.
. When Audio Signal portion of 'OSC needs compensation: **OTD:** [**Parts Section #1**]: U = Part ['OSC] ~ 'C (CPU) [limits / alters what audio signals are allowed]=
[**Parts Section #2**]: ACCESS // ANALYZER [] // BA (Behavior Analyzer) [] EDIT or 'COMPOSER // EDUCATION GETS HARDER / TGH [] // MULTI-USER [] // NOTIFIER [only high 'scored items activate 'speakers] // PS-ZONE [only certain locations can send/receive audio (signals)] // QUESTIONING [] // SA ['analyzes the sound in the audio signal before allowing it to compensate] // SCORE ['scores the audio signals] // SEEKS & REACTS [to 'designated audio signals] // T (Telephony) [censors what signals can be 'transmitted] // TRACK [only (un)tracked sound signals are transmittable] // TAILOR ['analyzer controls what audio signals are broadcast W5].
. When 'Speakers of 'OSC are not OK: System sends [compensated] audio signal to: 'vibrational mode that might be audible [to humans/pets]; vibration used to communicate via signals that are felt; 'speakers from other parts of the same/different system; text info = connected to audio signal can be broadcast / sent to 'screens; lights flash ['notifying target user to: read their email / 'screen. Communicated via sending out smells.

PD (Positioning Device, GPS) = Compensated by [non GPS] features of: 'Distancers / 'Locators / 'Tracking. They follow / identify locations.

TRACKER =
when certain 'tracking [sub]-parts / functions are unavailable [eg: 'sensor/''visual analyzer/'ba/'education] a [bad] person can still be identified / 'tracked via one or more of the following:
1. System notes that user has made improper/questionable 'access [spent too much time in highly protected topics/'zones] = which is determined by 'scoring = the occurrence is then 'analyzed and system determines to continue 'tracking / deny [full] 'access. 2. The pattern by which person is [getting] 'routed = results in 'reactions [functions for which are likely to trigger the 'notifier / 'tds determines there's a lack of timely payment] = then system 'reacts by further 'tracking / 'routing person to another topic/'zone [that has less/pseudo confidential information] [so person won't know they are being 'tracked] then info is fed to the police/government courts [for prosecution].
-Loss of essential functions of [software based] 'adaptation functions would be one of the greatest detriments but would not stop all functioning.

Compensation relies on ['remnant files] in other functions based on: their 'database / what is 'predicted [as a current or future need by (user)] / [automated – 'order & timing / 'seek & react] / 'edits [censors] what [audio] signals are allowed.

Concludes UIP-Link Section

STAGES IN GIVING REWARDS:

Examples:
-System 'Educates accessor 'interactively = rewards/'reacts by: allowing 'access, 'educating, 'guiding.
-'Guide's 'Education Get Harder = as user learns. There's a gap in each lesson getting harder via: 'order & timing.
-Gain 'access to new features/functions as user learns: menu of options opens up; pet gains rewards.

Criteria for getting reward gets harder:
-Pet: gains 'access, grooming, food.
-User (humans): 'access to
. Level of reward increases as user's learned 'education increases.
.-Exists: the better user learns how to use existing products, often the greater the benefit, e.g.: pushing down a

common stapler with the right speed and pressure = results in better stapled documents; Apple, Oracle & Microsoft based software. They would be enhanced via this patent application's 'tailoring.

3C292 Magical Building Blocks: Each combination has designated results. 'Guides user to learn 'tailored skills: [re]learn to use [poor / [non]functioning] parts of human/organism brain. 'Tailor tests user to determine brain functioning 'traits = then designs 'educational program = then 'guides and rewards user.
-See 3CE file.

* 6B240 Driver Identity System: can only activate vehicle after correct actions / 'sensors have been triggered. W5 travel patterns restricted by such 'access behavior.
-See part Access-BA-Auto.

6G241 GPS Tracker: like 6b240, it rewards/allows 'access to 'designated features based on: user performance / W5 'tracked object [did not] change locations.

3E061 Motion Tutor: Requires / 'Guides users [to improve their] movements, eg: the correct level of movement gains 'access. System assumes user's movements will either change or improve over time.

For Techies: At first requirements can be A then B. Later it can be either: A then B then C; or B then C [then...]; or C then D; or * C then B.

File: Claims / Door Access / Door Access

Door Access Cleaner

Invention gets pets to clean their own paws. Unique device reduces dirt tracked in by pets. Pets are guided' to clean their paws. Pets walk on the brushy floor mat while waiting to gain entrance through our electronic pet door.

Dirt is removed from their paws while waiting for the door to eventually open automatically.
Pets and people will always need pet doors with the best known cleaning option available, and this is it! For extra measure, the system has the option of beeping the owner just before pet enters, so their paws can be checked.

TRAINING [PET]:
-Initially installed without [major] 'access restrictions. [Can] 'educate how 'access is made. Animals quickly learn and remember points of 'access.
-As the pet becomes accustomed to their new pet door, encumbrances increase via ['order and timing]. The required [waiting time] [increases]. The longer the pet waits frantically, the more they step around and remove the dirt from their paws.
-Line up/install more [cleaning] encumbrances over time.

BENEFITS: [Pets] learn to better clean themselves like humans.
-Invention more than pays for itself.
-Save costs on carpet cleaning and replacement.
-Decreases the likelihood of urine and feces being found on carpet during pet's childhood and in old age [as pets can't wait as long during such times to relieve themselves].
-Saves [human] productivity.
-More people will rely on pet doors, including those using designs dating back thousands of years – a flap over a hole in the wall or door.
-Happier pets and owners.
-Health: [pets don't freeze in cold outside, and reduction in uninvited [animals]]. Less back breaking work for people to manually clean pet paws – resulting in less [back] injuries.
-Safety: less mud [for humans] to slip onto on shiny floors.
-Dirt is what keeps people from getting [more] pets. Easier for people to risk adopting additional pets as the pet door reduces the risks of pets relieving themselves indoors.
-Huge niche world market, especially in wealthier countries.

CLEANING SIDES OF PET*:
-Pets are induced to brushing or rolling themselves against (standing/flat) objects that will remove unwanted elements: dirt, hair, insects, etc. This feature is less central to the main concept of removing foot dirt.
-Teaching Pet: Owner can teach pets that the door opens faster when the animal brushes themselves. Pet food treats can also be given for learning any feature.

TIMER:
-System knows pet's presence on/near the mat/door via:
1. laser beam(s) which need to be broken (continuously or certain percentage of time during the waiting period); or 2. timing device that goes on upon initial nearby contact w/ door via laser/collar transmitter.
-Maximum number of access times (coming indoors) can be set, to reduce traffic.

PET WAITS (For Alerted Owner):
-(Series of beeps) alerts owner (in stages) that pet has/will probably (BA) enter. Enables owner to check (for dirt) if owner elects.
-Cage waiting area (past access' point) can:

1. reduce dirt in cage area (like pre-entry area, or via other means), such as when raining; 2. give (more) time for owner to come; 3. allow pet indoor entry, without coming inside until owner opens the inside gate.

BROADEN-ABLE TERMS:

-Pet: Any moving organism, from microscopic (amoebas to humans, or animals studied/induced (for zoological studies or agriculture). % Includes pet clothing, shoes. Dogs, cats, (pet/raised) pigs birds/poultry cattle sheep goats (fixed skunks) gerbils hamsters.
-Door: 'access.
-Inducing (pet): they (help be involved in) dirt removal process/system; (not gain) access, or redirect to other location/access.
-Dirt: debris on or near paws, or between toes; anything on or near pet (fleas, vegetable matter (seeds w/ stickers) on fur, ticks, dander, dandruff, (shedding hair/skin).
-(Pet) Collar: gives access. (Embedded) pet ID.
-BA: connects UIP (of pet or master)= w pet's (behavior / needs of pet/owner)
-Access (points): home, stables, cages, any (artificial) boundary in/outdoors. Threshold.
-Sensors: (paw) dirt level, pet location/ba, pet's (changing) distance from: access point; owner's location in/out [home], [hence required 'notification/access permission may differ].
-Cleaning Elements: doormats and other bristly or combing related devices. The stiffness and length of bristles and combing teeth can match the animal breed, size, (willing) behavior of pet, how dirty the terrain is, etc.

Other actions pets are encouraged into:
-Not to bark/meow while waiting. Sound Analyzer' will deactivate or stall the opener upon hearing such sounds. For example, the door may not open for a set time period after any pet noises or other nuisances (regardless of whether other pet behavior parameters have been met).
-% pet learns new tricks: sensor is attached to determine how pet has acted (w5).

Issues:
-No cleaning device may be perfect but this one is maybe by far the best.

OTHER CONNECTABLE PRODUCTS:
-might connect this device with other products to remove unwanted elements, eg: vacuum pet door (= which follows this invention in chain of entry events).
-create a housing over/around the mat helping to force the pet to stay put (on mat).
-[Fitted] doormats/brushes/etc designed for specific invention [grips the replaceable/cleanable] [brush like] cleaning device.

REDUCES DISEASE caught via: transfers between in/outdoor, zones. Dirty farm animals coming into proximity of poor farmers in undeveloped areas, eg: southeast Asia.

MAT / SENSOR TYPES:
-Placed (vertically): pet induced (via imbedded sensors / laser sensors) to scratch paws/body to trigger access.
-The mat is neither too bristly to keep the pet from standing on it, nor too weak to not remove a level of dirt. Replaceable (fit in) mat differs based on type dogs, terrain (sand, mud or vegetable matter issues), weather (rainy).
-Dirt level.
-Also: 'visual analyzer, smell 'analyzer: they 'seek & 'react to [dirt on entity (feet/tires)]

[BIRD / INSECT] EXCREMENT CATCHER:
Bird Gate: Teaches birds to poop before they fly inside the person's home.
-Cage is where bird gets their food, water, toys, etc.
-Bird bowel (BM) movement is the main problem with enjoying pet birds.
-Sensor' determines BM occurred. Then the gate opens automatically. Gate only closes (slowly and gently) after the movement sensor' determines the bird has come back inside.
-BM Sensor can be triggered by:
1. Bird BM smell analyzer.
2. Bird must have BM over any or part of bird floor cage. Sensor determines BM via, A. (greater) vibration (than the norm) from the BM drop. B. presence of any portion/element of BM triggering sensor, e.g.

dampness.

BIRD GATE CONSTRUCTION:
. General:
-Careful not to hurt or close upon bird.
-Perches placed on both sides of door. Bird then pushes the (non heavy) door or curtain to gain entry. The gateway becomes stiffer or less movable when in "closed mode".
-Bird Foyer with two doors. Cage design doesn't encourage pet to enter foyer or doorway except when the gateway is (visibly) open(able).
. Bird Encouraged Not to Remain Outside Cage Too Long (before they have the next BM):
-Minimal food is (automatically) given at a time, so bird needs to get back inside to feed often.
. Keeping out other [birds/insects/creatures]:
-Designated' birds wear tiny transponder on foot, only allowing their access'
-Useful for having birds which live outside too.

BASIC DIAGRAM: pet (paws) = floor (bristled carpet) = "access" (pet's collar) triggers tds = after designated time pet waits (on mat) = door opens (allowing pet inside).

FIGURATIVE DRAWING (TECHNICAL DIAGRAM):
User ('pet) = This N Sys [pet door opener] ~ C = ACCESS [pet collar designates user; each user's different (RF emitted) password allows differing access, eg: dirtier pets must wait longer (even if a cleaner pet w/ access is also waiting; entrance/*exiting prohibited at certain times: when raining; humans wish to be left alone (while having a party))] // ANALYZER [] // BA [times pets i.e. coming thru door] // CART [attached to collar; emits scent (to attract/repel bugs/other dogs)] // EDUC [teaches pet to wait by door; TGH teaching pets to wait longer] // MULTI-USER [each human/pet have different access, and control features, eg: Mary wants dogs in house during afternoon, while Bob (if he's home and his RF shows he's home) wants them outside; so once pets, leave they can't come back inside during designated times.] // NR [when pet/human is in/outside notifying the pet/user] // PR [] // PS-Zone [existing invention Steve Kays conceived before another manufactured it: pet stays within designated bounds (based on where underground wire transmits signal to dog's collar, mildly shocking them until they know not to cross the line.] // Q [u asks system to track' pet behavior and is told how/when/W5 pet behaved/went thru door] // R [user controls door opening remotely – this is easily a stand alone feature] // SCORE [] // SEEKS & REACTS [seeks certain pet behavior; then allows them access'] // SENSOR [motion detector needs to be activated for designated time (TDS), minimizing chance pet will sit and wait] // SOUND ANALYZER [recognizes pet's noise (bark, meow, chirp) which may also be needed to gain access; keeping out unwanted pets] // TDS [] // T [user can monitor remotely how pet is doing; and how they were tracked'] // TRACK [] // UIP [manner of pet access given based on user preferences] // VISUAL ANALYZER [shows (which) pet needs access; and if they moved and in what manner] // WA [portable dog door (for when visiting (grandmother's house)].

MORE STEPS:
Additional stages/aspects [to access process] might be added on/made more difficult, in stages as [pet learns/becomes accustomed] / [additional cleaning needed]. Can attach on other [previously patented] cleaning/'access restriction device(s).

OTHER ENTITIES SEEKING 'ACCESS:
. Clean Mobile Devices [vehicles]: [Tires / body] are/must be cleaned before 'access. Reduces contamination spread. 'Environmental Protection. Steps might include: 1. going through 'designated [car wash] steps; 2. ['visual] 'sensor 'seeking dirt/discoloration; 3. Continued cleaning 'reacts to earlier step's [dirt 'analysis], then 'guides/'predicts for additional needed cleaning steps. 4. Same/different cleaning process [with different cleaning agents 'designated for type [dirt] issue found.
. Work clothing / Space suits / other material or casing surround [humans / animals / robots / mobile devices. The wearer/possessor of protective material needs to initiate / handle steps [on their own] [with 'guidance].
. Items coming down [factory] conveyor. Patentable variation?

REFERENCES:

http://boards.hgtv.com/eve/ubb.x/a/tpc/f/1974011632/m/2351090681/r/8791031681_ - 879103168II built a "deck" made of stone dusk and pavers outside the dog door so that the dogs walked across that before they got into the house. I then had a variety of rugs that they walked over before they made their way upstairs. Very little mud made it upstairs. In this house

US PAT 5,546,895 Grooming brush *pet door*
A pet door consisting of an opening filled by the bristles of a brush or brushes. An animal moves through the opening by pushing aside the flexible bristles, which reliably and quietly reseal the opening after the animal passes. Moving through the brushes is as natural to an animal as moving through tall grass or underbrush. The brushes perform a grooming function by removing dirt and debris from the animal's coat as it enters. The brushes have high insulating value due to the volume of air trapped among the bristles.

http://www.halfbakery.com/idea/Vacuuming_20Pet_20DoorA ring-vacuum that goes around the pet's door. For dogs or cats: A ring shaped vacuum cleaner attachment mounts around the pet's door to the house. When the pet sticks its head in the door, the vacuum is automatically triggered, and the pet is swept of any dirt and fleas as it wriggles through. Sure, it will scare them at first...

WEAK COMPETITION:
-Dirt Trapper: A cotton floor that absorbs water, dirt and mud from dog paws to help keep your floors clean. Non-skid latex backing keeps it stable on most surfaces. Price $24.95 – $74.95 www.plowhearth.com 800-494-7544

KEY WORD SEARCH Ideas Include:
-track, dirt, mud, paw(s), clean(s), cleaner, blow [warm] air
-(door) mat, bristles, comb, rake
-*animal(s), *rug, *carpet, fur, "(dirt) sticks to"
-wait(s), waiting, (in)patient, patience, electronic
-pet(s), door, petdoor, doormat, automatic(ally)
-More Parts: movement (sensor), RFID, collar

PET DOOR ADDITIONS FOLLOW (PROBABLY FROM 2006).

Limited Doorway Access: Invention gets [pets] to [clean their own paws]. Unique device reduces dirt tracked in by pets. Pets are guided' to clean their paws. Pets walk on the brushy floor mat while waiting to gain entrance through our electronic pet door.

Claim is for any entity seeking 'access, whereby a pause requiring multiple non-identical steps are needed prior to granting physical entry.

[ONLY ONE] PET ACCESSES AT A TIME: Step up onto platform option: only one dog at a time. Door closes after 1st dog gets in. Prevents one dog from doing the paw cleaning and the 2nd from scooting in right behind the 1st dog and through the door.
-Multiple pet doors, with one or more collars assigned only to specific pet doors.
-Pet collar's RFID required for access. Keeps out other pets, wild animals [raccoons].

[PET] KNOWS / 'PREDICTS DOOR IS OPEN by one or more:
-sound (s)
-smell (s) of: food, inside the home
-(un)clicking of door heard by dog (s)
-door positioned in (slight) tilt position. Then door opens a bit when its released (s).
-door opens partially (so dog pushes rest of way), or opens fully.
-pushing on it
-sees it moving [in wind] or vibrating or fidgeting from mechanical device *

DOOR OPENING METHODS: slides open/closed; opens up/to side, and out at (90 degree) angle (sticking outside the house).

MISCELLANEOUS:
. Many related features in the 'Games folders, e.g.: 'access controls.
. Most dogs don't get the dirt only on their paws, they get it up a little bit higher as well. So maybe a SIMPLE two stage process or a deeper material/brush to wash paw and foot. Or (adjustable mat) whereby the mid section reaches the pet's chest,

ADJUST WAITING TIMES: The user can adjust/'edit pet's/person's waiting times for 'access for the 'designated/specific person/animal (dirtier pet / breed). Time is adjusted by 'designated occurrence, eg: big dirtier dog forced to wait and clean self on mat longer.
-Diagram: Big Dog/('game) villain (w/ low 'honesty 'score)=more dirt (mud/bad 'tracked history)=longer/shorter/altered wait/'access privileges (more / longer bristles must be past thru) . Little dog=little dirt=shorter waiting time at door. Programmed from collar/'PS to door/'access.
. Time device working w/ locking mechanism, to lock after a certain time, so that the pet may not come in/out. Pet taught to either come home before too late, or can't get in; and or that they can't go out after set time.

[WATER] CLEANING: from source of water or liquid is sprayed upon pet as requirement prior to entry. Maybe swim through water/pond/bin of water. Then maybe fan/air drier for next step, hanging (dry rags to walk thru) or other drying methods (used for any moving objects). Then maybe pet must wait [in foyer (w/ warm blowing air)] to dry [in cooler weather].

AREA AROUND DOOR RAKES THE FUR/CLEANS PAWS: Make the actual door made out of/attached to with some kind of cleaning device(s), door mats, plastic covered with cloth(or bristles) so that when the dog tries to kick/hold open the door they are cleaning their front paws. Dogs/cats can enter legs/head first.

BRISTLES: Make bristles (very soft, like toothbrush bristles). That way, even if the dog does not move around a lot, they are still getting the dirt off just by the bristles moving.

IS PET INSIDE OR OUTSIDE? 8B-010 Pet Locator: (certain products from this feature number are Not Electronic) user knows if pet is inside or out, based on whether they past through their special door or not.
-The way the door was opened, either going in or out, results in door shutting in certain manner and easily seen by owner whether they look at door from inside or outside.
-pet's collar has transmitter which shows if animal went in or out of door (based on direction in which pet's transmitter got weaker); transmitter shows what part of house or garden they are in, by owner looking on special screen;
- + owner's receiver can be used to find animal's collar transmitter. Receiver signals if owner is getting closer or farther from animal.
-useful for locating children. Animals in large zoos; nature areas; etc.
-way door was opened also can trigger electronic signal showing if animal past in or out of the doorway
-Footnote: This locality concept applies to any moving element other than pets too, eg: vehicles going in and out of a walled in zone; etc.

SENSORS: Detect dirt [on/in paws or fur]. A required 'score [for cleanliness] needed for 'access. More expensive version for smaller market niche.
-Sensors located on ground [inside] mat / sensors that need to be stepped on. Also sensors placed on [wall].
-'Sensor types include: 'visual analyzers, 'smell analyzers, 'content analyzers. While it may be difficult there's the option of 'sensors being placed on the ends of bristles / other protruding devices that [partly] fit between the paw/foot's toes/fingers/%finger nails.
.--Other safe content analyzers might see through paws ['seeking dirt], such as very bright light whereby the 'visual analyzer looks at the paws from the top.
. Training: will be more difficult. But in time pets can learn that they need to [repeat] the cleaning process to gain entry. They [may] learn that dirt they feel between toes is enough for them to keep cleaning, instead of even trying to gain 'access.
-Training device / human trainer can dispense food/biscuits outside. Pet must go through [different] types of dirt/mess to [come back] to the gate. They need to clean self to get more food from [similar] automatic dispenser indoors. As only a little is given at a time [and one exit/entry] is required between each serving, pet can keep up the process days on end [without human labor time].
-[Pets] can be trained to do other things in like process, e.g.: clean their fur. Simpler/Safe versions can apply to human children [coming in from playing outside]. 'Exercise [and solve boredom] [when recuperating from injury and [pet] doesn't wish to walk/run/fly (bird)].

-'Customization: computer read outs show owners 'W5 pets bring in less dirt based on: time of day, environment [rainy weather]. System/owner can 'adapt accordingly, e.g.: increase 'access requirements [during inclement weather]; give smaller food rewards and 'guide pet into more [self] 'education in learning to clean their paws.
-Unfavorable rewards [see our other pet inventions] can be given when: pets try 'accessing when [dirty]; they walk outside near dirty [muddy] areas.

Most Of This Section From 2005 Patent Filing. Invention Inspired By Steven's Neighbor Dog.

CONCLUDES MAIN SECTION OF [PET] DOOR DIRT CLEANERS

DOORWAY ACCESS CLAIMS
(Includes Patentable Concepts For Pet Door Paw Cleaner)

CLEANING ANYTHING THIS CAN ADAPT TO:
. Run 'software test on text to 'analyze for its contents. Should it pass this test then next test is required.
. Remove features of an invention (including those in this patent application) on an as desired/needed basis [in 'tailored fashion]. 'Edit 'seeks 'designated criteria ['scores what is needed and cost/availability of parts/resources/time/'education]. Helps simplify [aspects of (this)] invention / existing system(s).
. 'Access: omitting criteria that effects one's 'access 'score. 'Order & Tracking of 'tagged entities behavior [ba] can [alter] 'access [let in person/animal/mobile device].

FORCED WAITING FOR 'ACCESS: [Pets] are made to wait before entering the pet door.
-(Impatient) Pet Behavior Used To Get Animals To Clean Their Own Paws
-Entities are encouraged to conduct designated, activity to achieve the desired purpose (of the owner). Pets are motivated to act in designated manner to achieve their goal (gaining entry). BA triggers actions based on: pet's behavior / how designated actions are met (no entry, owner's wishes). Eg:
-Required waiting time (increases and or changes) over usage time. So pet doesn't always expect that they'll have to wait a minimum set time, the required time can deviate, (thereby inducing impatient behavior where pet may move more (removing more dirt).

KEEPING [PET] MOVING ON MAT:
System minimizes chance pets will just sit and wait, and not tramp their paws on the mat. Methods to keep pet lively:
-Sounds (of owners (coaxing pet)) = via osc/recorder/ba: BA = triggers OSC when = motion detector doesn't 'sense pet motion.
-Food [odor] released at designated stages in time/place.
-Heat / Cold (air flow/mat) (according to weather/programming).
-Alerter: master knows when pet gains access. (Owner might (manually) remove excess dirt). Animal trained (by owner/sys) to wait upon entry (designated time).

FOYER *:
-(Semi) caged waiting area between geographical zones' can be useful in isolated circumstances.
-Foyer becomes the pet's main home, from which they can go outside, or come into the main part of person's home.
-Maintain more control over pet's location, and dirt.

SENSORS:
-Required situation/result/'reaction is necessary for gaining 'access = then 'sensor gives 'access.
-'Sensors 'seek [dirt] [with an amount [not] to exceed] per 'score.
-Relies on more than 'predicted behavior to meet entry criteria.
-Weight and/or light 'sensors, e.g.: can give 'access to 'designated pets during certain times of day (based on changing day light hours).

Also See Following Feature's Central Descriptions: access, adapt, analyzer, educate, game, gps, order & timing, pd, predicts, ps, react, sensor, sa, status, tag, tailor, guide, interactive, multi-user, va, zone.

THE CLAIMS HERE ARE RELATIVELY NARROW EXAMPLES FOR THE WIDE AREA OF TECHNOLOGY WE CLAIM. IT'S LIKELY THAT A PATENT SEARCH YOU MAY BE DOING NEEDS TO DIG DEEP INTO THE BODY OF THIS PATENT APPLICATION, INSTEAD OF RELYING ON WHAT HAS BEEN CLAIMED TODAY. THIS PATENT APPLICATION IS MUCH MORE MULTI-DIMNENSIONAL IN ITS SCOPE THAN IT APPEARS ON FIRST VIEWING. WE TRY TO MAKE THE LICENSING SYSTEM A FAST, EASY AND ETHICAL PROCESS.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY
(Chapter I of the Patent Cooperation Treaty)

(PCT Rule 44*bis*)

Applicant's or agent's file reference PCTADAPT2006-12	**FOR FURTHER ACTION**	See item 4 below
International application No. PCT/US2006/048704	International filing date *(day/month/year)* 19 December 2006 (19.12.2006)	Priority date *(day/month/year)* 30 December 2005 (30.12.2005)
International Patent Classification (8th edition unless older edition indicated) See relevant information in Form PCT/ISA/237		
Applicant KAYS, Steven		

1. This international preliminary report on patentability (Chapter I) is issued by the International Bureau on behalf of the International Searching Authority under Rule 44 *bis*.1(a).

2. This REPORT consists of a total of 5 sheets, including this cover sheet.

   In the attached sheets, any reference to the written opinion of the International Searching Authority should be read as a reference to the international preliminary report on patentability (Chapter I) instead.

3. This report contains indications relating to the following items:

☒	Box No. I	Basis of the report
☐	Box No. II	Priority
☒	Box No. III	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
☐	Box No. IV	Lack of unity of invention
☐	Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
☐	Box No. VI	Certain documents cited
☐	Box No. VII	Certain defects in the international application
☐	Box No. VIII	Certain observations on the international application

4. The International Bureau will communicate this report to designated Offices in accordance with Rules 44*bis*.3(c) and 93*bis*.1 but not, except where the applicant makes an express request under Article 23(2), before the expiration of 30 months from the priority date (Rule 44*bis* .2).

	Date of issuance of this report 01 July 2008 (01.07.2008)

Applicant LicenseItToday.Com

1. This opinion contains indications relating to the following items:

- ☒ Box No. I Basis of the opinion
- ☐ Box No. II Priority
- ☒ Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- ☐ Box No. IV Lack of unity of invention
- ☐ Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- ☐ Box No. VI Certain documents cited
- ☐ Box No. VII Certain defects in the international application
- ☐ Box No. VIII Certain observations on the international application

2. FURTHER ACTION

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

3. For further details, see notes to Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US 06/48704

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:

   ☒ the international application in the language in which it was filed.

   ☐ a translation of the international application into _____, which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. ☐ This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any ***nucleotide and/or amino acid sequence*** disclosed in the international application, this opinion has been established on the basis of:

   a. type of material

      ☐ a sequence listing

      ☐ table(s) related to the sequence listing

   b. format of material

      ☐ on paper

      ☐ in electronic form

   c. time of filing/furnishing

      ☐ contained in the international application as filed

      ☐ filed together with the international application in electronic form

      ☐ furnished subsequently to this Authority for the purposes of search

4. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US 06/48704

Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of

☒ the entire international application

☐ claims Nos. _____

because:

☐ the said international application, or the said claims Nos. _____ relate to the following subject matter which does not require an international search *(specify)*:

☒ the description, claims or drawings *(indicate particular elements below)* or said claims Nos. _____ are so unclear that no meaningful opinion could be formed *(specify)*:

This International Search Authority is unable to establish a claim scope or recitation upon which a search could be performed. In addition, the disclosure contains mere presentations of information that cannot be determined to comprise a functional description or figures relating to a functional description of what the applicant believes to have novelty, inventive step and industrial applicability under PCT Articles 33(2)-(4). Thus, the disclosure is so unclear that no meaningful opinion could be formed as to novelty, inventive and industrial applicablity as defined by PCT Articles 33(2)-(4).

☐ the claims, or said claims Nos. _____ are so inadequately supported by the description that no meaningful opinion could be formed *(specify)*:

☐ no international search report has been established for said claims Nos. _____

☐ a meaningful opinion could not be formed without the sequence listing; the applicant did not, within the prescribed time limit:

- ☐ furnish a sequence listing on paper complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Searching Authority in a form and manner acceptable to it.
- ☐ furnish a sequence listing in electronic form complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Searching Authority in a form and manner acceptable to it.
- ☐ pay the required late furnishing fee for the furnishing of a sequence listing in response to an invitation under Rule 13*ter*.1(a) or (b).

☐ a meaningful opinion could not be formed without the tables related to the sequence listings; the applicant did not, within the prescribed time limit, furnish such tables in electronic form complying with the technical requirements provided for in Annex C-*bis* of the Administrative Instructions, and such tables were not available to the International Searching Authority in a form and manner acceptable to it.

☐ the tables related to the nucleotide and/or amino acid sequence listing, if in electronic form only, do not comply with the technical requirements provided for in Annex C-*bis* of the Administrative Instructions.

☐ See Supplemental Box for further details.

PATENT COOPERATION TREATY

PCT

DECLARATION OF NON-ESTABLISHMENT OF INTERNATIONAL SEARCH REPORT

(PCT Article 17(2)(a), Rules 13*ter*.1(c) and (d) and 39)

Applicant's or agent's file reference PCTADAPT200	**IMPORTANT DECLARATION**	Date of mailing *(day/month/year)* 21 MAR 2008
International application No. PCT/US 06/48704	International filing date *(day/month/year)* 19 December 2006 (19.12.2006)	(Earliest) Priority Date *(day/month/year)* 29 December 2005 (29.12.2005)
International Patent Classification (IPC) or both national classification and IPC IPC(8) - G06Q 30/00 (2007.01); USPC - 705/1		
Applicant LicenseItToday.Com		

This International Searching Authority hereby declares, according to Article 17(2)(a), that **no international search report will be established** on the international application for the reasons indicated below.

1. ☒ The subject matter of the international application relates to:
   - a. ☐ scientific theories
   - b. ☐ mathematical theories
   - c. ☐ plant varieties
   - d. ☐ animal varieties
   - e. ☐ essentially biological processes for the production of plants and animals, other than microbiological processes and the products of such processes
   - f. ☐ schemes, rules or methods of doing business
   - g. ☐ schemes, rules or methods of performing purely mental acts
   - h. ☐ schemes, rules or methods of playing games
   - i. ☐ methods for treatment of the human body by surgery or therapy
   - j. ☐ methods for treatment of the animal body by surgery or therapy
   - k. ☐ diagnostic methods practised on the human or animal body
   - l. ☒ mere presentations of information
   - m. ☐ computer programs for which this International Searching Authority is not equipped to search prior art
2. ☒ The failure of the following parts of the international application to comply with prescribed requirements prevents a meaningful search from being carried out:
   ☒ the description ☒ the claims ☒ the drawings
3. ☐ A meaningful search could not be carried out without the sequence listing; the applicant did not, within the prescribed time limit:
   - ☐ furnish a sequence listing on paper complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Searching Authority in a form and manner acceptable to it.
   - ☐ furnish a sequence listing in electronic form complying with the standard provided for in Annex C of the Administrative Instructions, and such listing was not available to the International Searching Authority in a form and manner acceptable to it.
   - ☐ pay the required late furnishing fee for the furnishing of a sequence listing in response to an invitation under Rule 13*ter*.1(a) or (b).
4. ☐ A meaningful search could not be carried out without the tables related to the sequence listings; the applicant did not, within the prescribed time limit, furnish such tables in electronic form complying with the technical requirements provided for in Annex C-*bis* of the Administrative Instructions, and such tables were not available to the International Searching Authority in a form and manner acceptable to it.
5. Further comments:

Form PCT/ISA/203 (April 2005)

Programas del fabricante

Micrófono

Alarma de la mañana (puede recordar sobre cualquier cosa marea a la invención)

Multi-Media (maneras opcionales de obrar recíprocamente con invenciones)

Multiusos (puede adaptarse a cada usuario)

Notificador (saber qué está sucediendo)

Orden y sincronización (miradas en los patrones de acontecimientos)

Comunicador sano saliente (locutores opcionales)

Los animales domésticos predicen (el tamaño de mercado futuro de la invención)

Software de la predicción

Programación

Preguntas (el sistema pregunta a usuario se quieren qué características de la invención)

Teledirigido

Clientes de la encaminamiento a lo que buscan

Pantalla

Buscar y reaccionar (el sistema reacciona dándole a invención búsqueda)

Analizador de sonidos (comandos de la voz)

Cuenta (medidas como de bien las invenciones se adaptan)

Seguridad (infractores del retén, etc.)

Sensores

Software

Visión sana (opción audio-visual)

Estado

Sintetizador (cualquier sonido se adapta a las preferencias de usuario)

Telecomunicaciones (estancia conectada con invenciones)

Terapia (mejores invenciones que usan de la sensación)

Inclinación (palanca de mando)

Tiempo y estampilla de fecha

Pista (saber la invención fue utilizada)

Usuarios (que definen a la gente que utiliza invenciones)

Analizador visual (se adapta basado en lo que ve)

Realidad virtual (futurista...)

W5 (la invención pregunta qué sucedió, donde, porqué, cuando y cómo)

Caminata sobre (variaciones de las ofertas para las aplicaciones del portable)

Zona (véase la sección del localizador).

LAS CARACTERÍSTICAS COMUNES ANTEDICHAS TIENEN SU SUB-FEATURES EN ARCHIVOS SEPARADOS.

Las características comunes siguientes se separan en archivos múltiples. Sus archivos (Secundario-Características) se organizan alfabéticamente junto con las otras características.

ADAPTARSE:
. Introducción y sastre
. Invenciones adaptantes
. Piezas secundarias
. Ampliarse
. Artículo
. Cifrar las secuencias para el software y la DNA
. Otras adaptaciones

. 3E

. 3G

. 4E

. adaptación del disco volador 4G280

. 5E

. 5G

. 7G

. 9G

. Audio en general

. Notificador de la longitud de la cuerda

. Investigación de la longitud de la cuerda

. Invención - captura de movimiento

. Ajustador del retraso de jet

. Software del punto de venta

. Invenciones de la lista de "R"

. Seguridad de la intoxicación alimentaria de mar

. Guía de la pronunciación del analizador de la voz

DIBUJOS FIGURADOS

EXTRACTO

DEMANDAS

. Demanda independiente

. Demandas del dependiente: Maneras interesantes de buscar nuestro directorio de la invención en este uso de la palmadita e Info actualizado en LicenseItToday.com. El genio que piensa diseño adaptante. Unidad de esta solicitud de patente y de su directorio fijado de la invención. Tener acceso a los sistemas.

La palabra clave que busca para sus invenciones puede ser una manera rápida de descubrir nuestras tecnologías revolucionarias hoy

Para las actualizaciones y más visita LicenseItToday.Com

Archivo: Introducción a la sección palmadita/Intro6 1

INTRODUCCIÓN CORTA A LA SOLICITUD DE PATENTE

Actualizaciones en LicenseItToday.Com

¡LEÍDO POR FAVOR!

PARA LOS LECTORES DE LA PRIMERA VEZ: El primer leyó esta sección introductoria. En segundo lugar, localizar las invenciones por una búsqueda de palabra clave o su número de identificación. Tercero, cuidadosamente el contenido del estudio, entonces leyó en allí.

Las características comunes en cada uno de las invenciones ven la versión práctica simplificada. Más detalles son en el archivo de la característica principal donde se explican la mayoría de las abreviaturas.

Los primeros contadores de tiempo pudieron no hacer caso de la información precedida con un "" de la estrella, o de la rociada del punto ". -". ¡Disfrutar de la solicitud de patente interesante.!

Descripción de producto central: La descripción central es presentada primero por su nombre y precedida a menudo por su número del producto, luego su descripción. La información adicional sobre la invención se explica en la sección de ramificación. Las ideas del producto se pueden integrar con otras ideas del producto, o desarrollar por separado.

¿Buscar una gama específica de invenciones? Ahora hacer una búsqueda de palabra clave de este uso de la palmadita. Para las actualizaciones y más visita www.LicenseItToday.com de la información. Entonces usted puede leer sobre cómo se presenta nuestra solicitud de patente.

RAMIFICANDO NUESTRAS INVENCIONES

Las ayudas de ramificación explican los niveles probables de importancia en comprender la descripción central. La llanura adicional de los conceptos la ramificación es las ideas, que se pueden combinar con la descripción central, puede estar en el mismo o la diversa solicitud de patente de las ideas de la descripción central. Hay muchas maneras de ramificar los acoplamientos entre los usos de esta palmadita muchas secciones. Esta introducción cubre una buena porción de las variantes.

Reducción del espacio: El sistema de ramificación del árbol reduce grandemente accesos repetidores. El listado simple para el tipo de ramificación que la invención ramifica en: informa al lector para encontrar esa sección de la rama en este y fuentes relacionadas, para la información restante.

Hay dos secciones para donde se divulga el sistema de ramificación: primero, las descripciones de producto; en segundo lugar las "características separadas". Descripciones de producto aplicables del suplemento de las "características".

Las búsquedas de la palabra clave del software para todos los datos en esto y limaduras referidas (también) se utilizan en la localización de datos relacionados. Las búsquedas incluyen: nombres de parte, números del producto, % otros datos (las palabras o las frases encontradas en la descripción central y mencionadas en otras partes de nuestras limaduras, o la patente particulares busca en cualquier base de datos de la patente (los E.E.U.U.)). Utilizar nuestras palabras claves encontradas en las especificaciones, y las secciones específicas de la palabra clave.

Ambas descripciones de producto, y las características, ramifican generalmente hacia fuera en la red siguiente:

RAMA 1: El primer párrafo (eventualmente) en la descripción central a la invención, o características comunes compartidas por nuestras invenciones.

RAMA 2: La descripción adicional excepto el OTD siguiente (otros detalles técnicos) (eventualmente). Ramifica 1 y 2 componen la descripción central.

RAMA 3: Diagramas exhaustos de siguiente de la rama 1 y 2. de OTD con sus descripciones atadas en el mismo archivo, pero no cubierto en la rama 1.o 2. Notas introductorias leídas posteriores que explica las ramas 4, 5, 6, 7, 8, 9, etc.

Nuestro sistema es más elaborado que la ramificación de un árbol. Los acoplamientos (ramas) hacen en muchas direcciones, y a menudo acoplamiento de nuevo al punto donde está el usuario en nuestro sistema inventivo. Los acoplamientos empiezan en donde usted está obrando recíprocamente nunca con el sistema interesante.

INFORMACIÓN DE CARÁCTER GENERAL

Descubrir porqué este uso fue hecho diferentemente de limaduras tradicionales.

Uno de los propósitos principales de las "características" es reducir costes de la investigación, del desarrollo y de fabricación usando diseños similares dentro de diversos sistemas electrónicos del producto. Hace más fácil programar, fabricar, poner y aprender utilizar el sistema simplificado, y repitió características.

Cualquier uno o más característica mencionada en una descripción de producto pudo ser útil. La descripción de producto incluye la descripción central, las partes con sus apéndices, y los diagramas.

La prioridad va a los usos de la palmadita de los E.E.U.U.:

Appl #	nuestra referencia #	fecha archivada (aproximado):

Este Appl PCTAdapts2006-12 archivó archivado el 19 de diciembre de 2006 en la forma de papel

Las dos limaduras de la patente de diciembre de 2006 en USPTO (palmadita de los E.E.U.U. y oficina de la marca registrada) tienen especificaciones idénticas. Los usos son idénticos a excepción de los formularios de inscripción.

Esta solicitud de patente entera es puede ser archivada con las actualizaciones en el plazo de tres semanas para las sumisiones nacionales de la solicitud de patente en diversas oficinas de patentes incluyendo la Oficina Europea de Patentes.

Archivo: Introducción/IMI S 5 de las características

CARACTERÍSTICAS - VERSIÓN PRÁCTICA CORTA

Este archivo da la idea básica para cada característica.

¡La búsqueda de la palabra clave ahora adentro, u hojea por Subject!

El ACCESO = accede a las funciones electrónicas con afinado correctamente en la combinación, el etc.

ADAPTARSE = otro término para adaptar. Ver la programación de la información de usuario.

El ANALIZADOR = los programas informáticos analiza cómo manejar la situación.

AP = uso: Cómo la invención puede ser utilizada.

El ARTISTA = permite que el usuario haga y que corrija imágenes.

El ASOCIADO = asociando semejanza nivela entre los acontecimientos múltiples o los archivos convertidos a digital.

VAGOS = analizador del comportamiento. Analiza el comportamiento vivo de la gente.

El volumen del BALANCE = de los altavoces ajusta según donde la persona se sienta. El sistema utiliza el punto central para dos o más personas.

CUENTA = facturación: Usuarios de las cargas por cantidad y el tipo de uso.

CEREBRO = el cerebro de la computadora. Cosechadoras: "Analizador", "UIP", etc.

C = computadora. El centro del sistema a menos que esté descrito de otra manera.

CÁMARA/LENTE = el ojo del sistema.

CARRO = cartuchos que se insertarán en sistema. Contiene con frecuencia software/bases de datos útiles.

PALMADA = chapaleta. Cada combinación de palmadas controla una diversa función. Permite que el usuario controle la invención sin el tacto.

COMUNICAR = cuando cuaesquiera dos o más personas, animales o dispositivos comunican con uno a de cualquier manera.

COMPOSICIÓN = composición de música electrónica: Otra variación del producto se puede también utilizar para crear música interesante.

El CA/el ANALIZADOR CONTENTO = analiza la comprobación, o el contenido de la base de datos.

COORDINADOR = características de los coordenadas diversas del sistema.

MODIFICAR para requisitos particulares = ver nuestro para adaptar la característica.

D = diagrama. Este símbolo precede a menudo diagramas.

La DANZA = el movimiento del cuerpo genera sonidos.

FECHA = reloj interno, calendario, notificador de la alarma del reloj.

DB = base de datos

EXHIBICIÓN/S = pantalla.

El ™ de DISTANCER = señala siempre que cualquier dos piezas se separen o vengan juntas. Señales vía las ondas de radio si la separación es distancia más o menos que programable. Ver el otro archivo registrado en el distancer para los detalles. ™ de Distancer

El EDIT = el interruptor (software del `) corrige/defiende hacia fuera datos antes de que alcance a usuario.

EDUC = educativo: enseña a habilidades interesantes. Substituye a instructor humano.

EGH = la educación consigue un ™ más duro ajusta a la habilidad del usuario.

ENTRETENER = también utilizado como forma de hospitalidad.

¡PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = [el `modifica para requisitos particulares] amistad del EP!

EJERCICIO = también utilizado como forma de ejercicio.

FX = transmisiones de fax.

JUEGO = también utilizado como forma abstracta de un juego.

GPS = sistema de navegación mundial.

™ de la GUÍA = un instructor. Sugiere cómo el usuario pudo proceder. El sistema dirige a usuario así que pueden mejorar el sistema del uso. ™ de la guía

INTERACTIVO/INTERACTIVO = el sistema obra recíprocamente con el usuario.

K = llave adentro. El usuario ordena manualmente el sistema, llaves en comando o datos, el etc.

KN = invención de Steven K una y S.

CONCESIONARIO = usuario que utiliza la invención.

LOCALIZADOR = localización de las demostraciones.

M/MFH = opción de la transmisión en circuito del ordenador central para tareas más complejas.

MIC/MICRÓFONO = micrófono

Milímetro = medios multi.

MES = módem

HUMOR = humor del usuario.

MAÑANA = alarma de la mañana.

RATÓN = ratón de la computadora.

Programas de la P.M. = del fabricante.

MQ = la máquina hace preguntas del usuario para obtener la información así que el sistema puede mejorar a usuario del servicio.

MULTIUSOS = el sistema se diseña especialmente para los usuarios múltiples.

N = producto. Puede también estar una invención de S t e v e n K a la y S.

Notifican el NOTIFICADOR = al usuario en el estado de cualquier situación.

La ORDEN y la SINCRONIZACIÓN/O y T = el sistema reacciona a la orden y a la sincronización de acontecimientos externos.

OSCILADOR = comunicador sano saliente. Señala a usuario cuando ocurrió una función dentro del dispositivo.

OTD = otros detalles técnicos. Para Techies.

Paladio = dispositivo de colocación. Unidad portable, que difunde su localización al sistema de colocación.

Banda = programa (software)

PREDECIR que = el sistema predice qué ocurrirán, o qué usuario quiere.

Picosegundo = sistema de colocación. Identifica la posición del paladio (dispositivo de colocación) vía su difusión de las ondas.

PS-ZONE = el sistema reacciona según la localización del elemento en la pregunta. Zona del sistema de colocación

Q = usuario/sistema se hace preguntas. Ayuda a cada uno mejor a entenderse.

R = teledirigido

RC = receptor

REACCIONAR = sistema reacciona a la ocurrencia según lo programado.

La RUTA/el RANURADOR = el sistema encamina el usuario/el otro (parte de) sistema al punto señalado/programa. Un tipo de "redactor".

S = pantalla de ordenador.

CUENTA = el estado de la situación y o del funcionamiento del usuario.

SENSOR = sensor. Sentidos vía muchos medios.

S&R/la BÚSQUEDA y REACCIONAN = las búsquedas del sistema señaladas las ocurrencias, que internan causas una reacción que responda por consiguiente.

El SA/el ANALIZADOR de SONIDOS = analiza el tipo sonido. No importante.

El ANALIZADOR VISUAL SANO = convierte sonidos a los efectos visuales; o convierte inversamente efectos visuales a los sonidos. Es "analizador visual" y el "Mic" interpreta imágenes en datos: redacta la descripción de lo que ve/oye; el otro sistema de los códigos ("cerebro") puede utilizar para procesar ("cerebro") imágenes/sonidos.

El DISCURSO = el sistema habla con el usuario.

SP teléfono del teléfono = del altavoz.

El ESTADO = el sistema demuestra el estado de la situación.

ESTEREOFONIA = estereofonia

Interruptor = software

Sintetizador de SYNTH = de los sonidos.

Etiquetan la ETIQUETA = al usuario de A, o el archivo, o la otra parte de cierta manera. Los detalles son cubiertos por la característica del perseguidor, que confía en etiquetas.

El ™ = el sistema del SASTRE se adapta a una mejor función para los propósitos señalados. Esto también se llama se adapta, modifica para requisitos particulares, y programación de la información de usuario.

Estampilla de fecha del TDS = del tiempo.

T/teléfono = teléfono.

TGH = la terapia consigue más difícilmente. Mientras que la capacidad del usuario aumenta, el sistema empareja más nuevas habilidades del usuario.

La INCLINACIÓN = los dispositivos son controlados por cómo se inclina el palillo. Cada posición de la inclinación representa una diversa función.

TR = transmisión/recepción vía ondas y o alambre.

PISTA/PERSEGUIDOR = acciones de las pistas o de los monitores del sistema del usuario, o sistema.

RASGOS = los rasgos del usuario. La programación del usuario Info ajusta invenciones a los rasgos del usuario.

U = usuario. La persona o el otro partido autorizado para utilizar las características.

™ del UIP + = programación de la información de usuario. El sistema se adapta a las necesidades únicas del usuario recogiendo la información sobre ellas. También llamado: Adaptarse, modificar para requisitos particulares, adaptar.

Reino Unido = ve "K".

UQ = el usuario pueden hacer preguntas de la invención.

VIBRACIÓN = vibración generada por el dispositivo por razones específicas, eg.: hospitalidad; notificador; formar de la comunicación basada en el tipo de vibración.

™ del VA/ANALIZADOR VISUAL = alarmas cuando la cámara ve un cambio en su opinión. No importante.

VR/REALIDAD VIRTUAL = uso futuro con la tecnología de la realidad virtual posible. Menos importante ahora.

WA = caminata alrededor. Unidad portable. También obra recíprocamente el usuario de w (con) vía altavoces.

™ W5 = cuando/donde/cómo/porqué/qué

ZONA = área de A cierta con límites definidos. El área también se ocupa según de su distancia del punto de la perspectiva.
Cada característica se explica más detalladamente a través de la solicitud de patente

Abreviaturas y símbolos - lista corta

Introducción del archivo/de la característica/cortocircuito 4 de Abb-Sym

ABREVIATURAS Y SÍMBOLOS DE USO GENERAL

Con explicaciones simplificadas.

Leído lista ampliada y detallada en su sección principal.

ABREVIATURAS - DE USO GENERAL

"D" = dibujo figurado, diagrama.

"EL" = electrónico/eléctrico

"Existe" = la función particular descrita existe y se diseña felicitar otras funciones del producto.

`Fq " = frecuencia: frecuencia de la transmisión vía la radio o el alambre. Eg.: señales eléctricas/códigos convertidos a digital; infrarrojo; radiofrecuencias [RF]; sonido (para el propósito de la transmisión).

"IMI" = ve el archivo de las características (piezas).

"KN" = invención.

"Kilovatio" = palabras claves para encontrar características relacionadas en este uso, base de datos de la patente, etc.

"Misceláneo" = misceláneo

"N" = producto existente en mercado, o invención confidencial.

"Obvio" = la versión simple de qué se describe los mayo o mayo no ser (completamente) patentable.

"DE OP. SYS." = opciones.

`OTD' = otros detalles técnicos. Leer su sección más adelante. O para los techies.

""/"" del PL/"del plástico PVC" = producto construido del PVC/del otro subproducto del petróleo.

"Interruptor" = software

"Sistema" = sistema electrónico.

`U = usuario (s)

"Ver" = versión.

"W" = con.

"WO" = fuera

"Divide en zonas" = las localizaciones señaladas. Ver las "Picosegundo-Zonas".

SECCIÓN DE LOS SÍMBOLOS

"-" = la descripción siguiente es el principio de una nueva sección que describe el producto.

"--" = lo que sigue es la subdivisión de la sección anterior que describe el producto.

"" = este artículo puede ser menos importante para el concepto de producto total central.

". -" o "-." = el mismo significado que "" y "-". ". -" sin embargo se utiliza solamente para comenzar una nueva sección que describe el producto.

". -" es más bajo en la ramificación, por lo tanto el igual a. El usar comenzado "-." en vez de ". -" en agosto de 96. Esto no se utiliza virtualmente, y el uso de esta forma pudo ser un error significando un período también.

"..." = etc. O los conceptos anteriores pueden ser uno o más de los ejemplos para las ideas dichas del producto. Este símbolo es normalmente tres, con todo hasta cinco puntos.

"=" "- >" ">" = cuando está utilizado en las descripciones de producto señala las líneas entre las partes de un diagrama. La presencia de uno de estos símbolos demuestra que los datos son un diagrama real; por lo tanto ninguna necesidad de escribir el "diagrama". "- >" y ">" son iguales, y el contrario de <, <. Señalan la dirección de señales, "=" permite uno o la transmisión de dos vías de la señal (< - y o - >).

"+" = uno de los aspectos más importantes.

"%" = esta función amplía perceptiblemente la idea del producto más allá del concepto básico. Puede ser que también sea demasiado "lejos hacia fuera" ser factible.

"()" o []' = demuestra uno o más de los ejemplos posibles múltiples. Uno puede guardar o conservar cuál está en paréntesis.

Incluye una lista limitada de posibilidades.

"/" o \' = significa "y o". Por ejemplo los medios de A/B, A y o B se aplica al panorama.

"~" = iguales que "/" o "\" a menos que una línea también se dibuje entre las piezas cuando se utiliza esta línea ondulada símbolo.

": " = la información después de los dos puntos representa uno o más de las manifestaciones posibles.

Archivo: Introducción a las concesiones de la palmadita/de la lista

LAS CONCESIONES DE LA TAPA SE DAN A LA GENTE SIGUIENTE:

Conceden la gente siguiente de alrededor del mundo los altos honores para su contribución creativa a esta solicitud de patente. Las concesiones se han dado desde los años 80 para la contribución creativa de la gente a esta solicitud de patente. Los recipientes de la concesión están para:

T Acevedo
Un Akiyama
R Akui
P Akuna

Un Alexander
S Alten
Un Ayama
S Bazhinev
Playa de D
F Bellet
R Bigham
Una floración
Bock de B
G Boissiere
Un Borg

Archivo: Introducción a la patente/a la continuidad del R&D

NUESTRA INVESTIGACIÓN DE LA VIDA REAL SOBRE ASPECTOS DE ESTE USO DESDE ENTONCES

Leer esta sección mucho más adelante

Esto también significa nuestra continuidad en la investigación de esta solicitud de patente. Incluye la investigación de la vida real en la aplicación de los conceptos de la invención. En los E.E.U.U., las derechas patentables pueden comenzar en el concepto de la idea, incluso antes de la fecha de limadura de la patente como se requiere en el resto de los países excepto las Filipinas. Ejemplos de la investigación:

SOBRE LA VISIÓN: NUESTRO TEMA DE LA INVESTIGACIÓN

. Seguridad gubernamental en: puntos del control fronterizo al entrar/que sale edificios a las fronteras del país, transporte: tener acceso, analizador del comportamiento.

. Adaptándose a los comportamientos culturales en Japón, Europa más antigua Unión Soviética, los E.E.U.U., México, Canadá, el etc.

. Promover la incubadora de negocio

. Investigación de las funciones de: comercial y relacionado (propiedades inmobiliarias residenciales), centros de negocios de la oficina (habitaciones ejecutivas), incubadoras de negocio (financiadas por el gobierno y/o fuentes privadas). Muchas fuentes/organizaciones en el Internet: OfficeBusinessCenters.Com, Technology.Gov, WorldBank.Org, Bio.Org, Jetro.Go.Jp, NewEnergyFinance.Com, EmIncubation.Co.UK

. Gobierno: VAGOS para los empleados del gobierno (localizados regionalmente y a otra parte); ciudadanos y votantes; expresando opiniónes público y a través de los canales del gobierno (para las mejoras y/o la identificación de problema necesarias). Problemas con el interés de uno mismo de los jugadores de la energía que en promedio no eleva ventajas/las mejoras necesarias para los ciudadanos (regionales).

. Protección del medio ambiente: reciclaje; energía de la generación/del ahorro. Pista vía el VA, SA, VAGOS.

. Ciertas organizaciones obstruyen el desarrollo de las incubadoras de negocio. Esto ayudó a nuestra investigar y/o a mejorar el concepto de la incubadora de negocio y su de proceso [incluso si los resultados finales no aparecían total nuevos.]

. Investigación del proceso creativo del pensamiento. Adaptación de ideas, características, servicios a: cultural limitar los patrones del pensamiento (las decisiones de la compra que no son todas basadas económicamente [según lo determinado por vagos]). Esto requiere el suplemento que adapta, puesto que los juegos de la economía del negocio del papel en cliente que el pensamiento modela superan más fácilmente líneas culturales.

. Cómo los profesores (de la ingeniería y de los artes), los ingenieros, los artistas y los consumidores se comportaron, dentro y fuera de sus patrones de comportamiento de la investigación.

. Reacciones de la gente a nuestras invenciones confidenciales.

. Simplicidad del interfaz: cómo presentar materias en formato corregido simplificado. Qué características deben ser primeras explicarse (en extracto), (así que los usuarios pueden ser dirigidos a la apreciación/que usa otra las' características/los servicios asociados ligados). Interfaces para: Incubadora de negocio; Venta/propiedades inmobiliarias comerciales/residenciales del alquiler con opción a compra en todo el mundo; explicación de nuestras invenciones; La gente de ayuda realza' analiza su proceso del pensamiento creativo; Importancia de las etiquetas/de los títulos (del trabajo); Aspirantes de la investigación [el usar de las pruebas del acceso del `(vagos del `)], etc.

. Rentabilidad:

- Unidad: la consolidación de necesidades de los multi-usuarios, entonces adaptando los servicios de su común/del promedio de las necesidades ahorra costes, e.g.: tipo características de la incubadora. ¡Un servicio se ata a otras características ofrecidas [unidad de la invención], incluso debido a la proximidad del cliente/de la característica, cómo una necesidad liga a otra necesita (sobre el cliente que es dirigido), familiaridad del interfaz [del ser humano], más.!

- Más barato investigar acciones humanas vivas, que prototipos. Nuestras invenciones también se modelan' asociado [nuestro negocio] a transacciones humanas/económicas [dando por resultado la generación del rédito] del proceso de la investigación/del lanzamiento de las invenciones futuras.

. Las materias confidenciales exploradas, una porción se divulgan aquí.

IMPORTANCIA (INCUBADORA E INVENCIÓN DE NEGOCIO) A LAS CARACTERÍSTICAS:

Investigaron el ACCESO = a la policía, ADT, Sonitrol y otros servicios basados los E.E.U.U. de la compañía de seguridad. Comportamientos de la gente que tiene acceso correctamente al sistema de seguridad del edificio, y saliendo correctamente las zonas de la seguridad. Gente rectora en los métodos de acceso.

. Restringiendo acceso basado encendido: analizador del comportamiento (comprobaciones de antecedentes); estampilla de fecha del tiempo; privilegio de tener acceso a zonas señaladas.

. Contraseñas para utilizar los dispositivos (copiadoras). Siguiendo uso, y asociando esto a los réditos, y generando a clientes de más largo plazo (licencias extendidas). Honorarios más baratos por las copias hechas

hacen a clientes tan más feliz que éste es un punto frecuente de la interacción para los clientes. Esto hace interacciones frecuentadas más comprables, y de tal modo aumenta la cantidad de satisfacción del cliente. Los réditos de servicios fijos, menos auxiliares (el espacio de oficina arrienda) pudieron generar más renta. Cuando una característica es menos confiable (las copiadoras) considerar cargar menos para él (hasta que se mejora la característica de la invención).

. Nuestro limpiador del pie de la puerta del animal doméstico ató a la gente que seguía la suciedad en el edificio porque ella no pudo pasar bastante tiempo usando la estera del piso.

ADAPTAR el ™ = los servicios interempresariales que emparejan (B2B) a las necesidades del cliente, e.g.: telefonar la contestación (los servicios); dando el acceso y vagos servicios relacionados (en el escritorio del recepcionista). El reaccionar a la gente/a las compañías que aprovechan incorrecto de nuestros servicios adaptados.

. Comunicando con la gente vía los patrones del comportamiento alternativos, diseñados para conseguir señaló reacciones. Buscando su interés ofreciendo interfaces señalados.

. Abordar el engaño en otros: seguimiento de su comportamiento sin su conocimiento; la educación de ellos y de otros vía la orden y medir el tiempo de mi comportamiento que no bulla cuando lo piensan será más barata para que haga lo que él quiere. El establecimiento de mi consistencia en la tolerancia de prácticas fraudulentas tenía una ventaja prevista en tener pocos conflictos (infracciones).

. Haciendo nuestro negocio y otros servicios más accesibles vía la dirección adaptada, e.g. poca entendía los servicios de la incubadora de negocio, ni nuestros métodos para aumentar las capacidades creativas inventivas en gente.

ANALIZADOR = dando el acceso: confianza en los datos del sistema de seguridad' que siguen para mejorar el sistema del acceso [limitando privilegios de acceso a los partidos con [acceso relacionado] comportamiento incorrecto.

El ARTISTA = los VAGOS que demuestran a gente de las opiniónes tienen de arte. Cómo los artistas/arte crean humores señalados, y efectúan los comportamientos de la gente [según lo reflejado en VAGOS].

El ™ del ASOCIADO = los clientes/los empleados de las asociaciones pueden hacer/acoplamiento con lo que consideran/oír/leídos [el `va, sa, el corregir, vagos]. Asociaciones de qué acoplamientos las' llevaron a las ventas o el usar de los servicios [los servicios del uso/de la licencia y/o los alquileres del espacio físico que fueron adaptados por W5.

VAGOS = comportamiento del propietario: cómo intercambian el acceso para la renta de la facturación, balanceado por el análisis de riesgo [basado en la seguridad (búsqueda, vagos del fondo), predijo comportamiento del cliente [concesionario del `].

Acceso de la CUENTA = de la pista de características en [publicación mensual] la facturación. Qué características eran W5 usados, y buena voluntad para que los clientes paguen, sin importar cómo asociaron un cociente del coste/ventaja. Algunos servicios son así que importante pero gente estaban menos dispuesto a pagar ellos [para los vagos demostrados tales estaban las derechas previstas para su licencia del acceso]. Cómo diversas incubadoras de negocio analizadas/siguieron esta situación para el mayor rédito de la facturación, y renta del cliente [derechos del `].
. Software de la facturación, eg.: Software de Excel.

CÁMARA/LENTE = acceso, vagos, va. Investigación de las cámaras de seguridad.

CARRO = tarjeta de destello de Digitaces [con imagen] para [copiadora/cálculo del color].

La PALMADA = las luces/las características del acceso [restricción] activaron. Conociendo a gente ser edificio basado en sonidos en vestíbulo, etc. Con los sonidos, las luces se dejan encendido.

COMUNICAR = telefonía. Adaptó nuestro servicio de contestación del teléfono a los clientes. Nuestra comercialización se adaptó a los comportamientos y a los estilos locales del negocio.

El COORDINADOR = el cliente necesita con servicios e instalaciones disponibles del edificio.

La DANZA = que los movimientos del cuerpo (del recepcionista) generan predijo reacciones en concesionarios, eg.: mayor placer (hospitalidad) del `, curiosidad (interés en la compra' accesing otras características) de continuar la experiencia positiva. Ergonómica (no lastimada su parte posterior, o caída).

DB = siguiendo uso facturable. Base de datos de acceso a: analizar W5 está utilizando características, así que podemos: aumentar la satisfacción del cliente - > retención del cliente (licencias más largas)/mayores facturaciones mensuales.

™ de DISTANCER = artículos que no sueltan. Custodia de las cosas donde pertenecen. Atar plumas al sujetapapeles. Reducción del hurto.

ENTRETENER = la hospitalidad W5 genera la mayor facturación [de largo plazo].

La PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = consumición eléctrica por los dispositivos [fijos] tiene gusto de encenderse, HVAC [ventilación de la calefacción y aire acondicionado], ordenadores personales, adminículos electrónicos.

. Las dificultades que conseguían a gente reciclar sus basuras, y teniéndolas cogieron con un mejor interfaz para [los arrendatarios]. Seguimiento, VAGOS, acceso [el `W5 para escoge sube; destrozando documentos].

El EJERCICIO = los dispositivos [arrendatarios] podrían querer. Escalera = construido en el amo de la pisada [resistencia del comportamiento a caminar encima de un solo tramo de escalones a pesar de subsidios por enfermedad]. ADA [acto americano de las inhabilidades]. Instalaciones de la gimnasia de la oficina.

JUEGO = visitantes en el área de recepción que juega [vídeo/no electrónico] a juegos. W5 se juegan.

GPS = quién hizo W5.

La GUÍA = los clientes aprenden características más disponibles después de que comenzaran a autorizar algo. Demasiada información sobre características disponibles contradice el deseo de la invención para un interfaz más simple.

. El confiar en/que aprende utilizar una función, puede llevar naturalmente al interés/a la franqueza del cliente a aprender sobre otro menos o [la O.N.U] relacionó características, eg.: las funciones de la copiadora [del color] consiguen EGH que requiere complicado.

. El interfaz amistoso/honesto crea efecto sinérgico en: los clientes confían en más cuando el abastecedor es [usuario] amistoso; las ayudas de la facilidad de manejo crean confianza. El comportamiento difícil [maximizar beneficios a corto plazo] lastima facturaciones de largo plazo en gran medida, eg.: los clientes hablan con uno a. Los clientes analizan/los vagos que los servicios/invención ofrecen.

INTERACTIVO = más es el mejor. Vivir contra asistentes automatizados del teléfono.

Comportamiento del CONCESIONARIO/del LICENCIADOR = del cliente y del propietario [vagos del `]. Cómo maximizan/reducen al mínimo, renta/los gastos/los honorarios de derechos monetarios. Se autoriza/se utiliza W5 algo. El concesionario W5/los licenciadores no actúa en sus mejores intereses financieros [debido a la falta de ver todas las (ligado' se asoció) ventajas]. Qué comportamientos/opiniones (vagos, asociaciones del `, corrigiendo) nublarse/juicio del efecto (análisis de la toma de decisión del negocio).

El LOCALIZADOR = sabe que los clientes son W5 (arrendatarios): las ayudas conectan a llamadores de teléfono [defendidos] entrantes con nuestros clientes. El seguimiento del cliente acelera la conexión del teléfono en términos de: acelerando la conexión/pudiendo hacer el acoplamiento (difícilmente hacer si la persona señalada y/o la característica querida no pueden ser encontradas/ser conectadas con).

MIC/MICRÓFONO = VA del sistema de seguridad.

. Los VAGOS de [recepcionista en el teléfono] demuestran qué acciones crean mayores facturaciones.

. El VA es forma de control de acceso: ¿puede el visitante/el cliente potencial ser confiado en? Facturaciones futuras que predicen [cuánto pasarán].

Punto del milímetro = de energía. Poner la impresora sobre redes [para ésos con el acceso]. La simplificaión de interfaces puede también reducir la renta [pocas personas capaces de tener acceso a la red complicada de la impresora] genera a menos facturaciones, pero a menos clientes frustrados. Los clientes frustrados pudieron ser más corto plazo.

NOTIFICADOR = acceso incorrecto [uso] seguido por los empleados/los sistemas de seguridad.

PREDECIR = las necesidades [sin especificar] del cliente, y longitud de seguir siendo un cliente. Estudiar su historia de crédito, y utilizar nuestro proceso relacionado analizador del comportamiento.

Q = sabe las preguntas W5 para pedir

RUTA/RANURADOR = clientes anticipados directos a los servicios que predecimos que necesitan; o aún a otras organizaciones basadas en su perfil del comportamiento.

S&R/la BÚSQUEDA y REACCIONAN = cómo nosotros y/o los clientes buscamos y reaccionamos el uno al otro.

SYNTH = que expresan las tonalidades W5 tenía reacciones fiables en oyentes/usuarios.

T/características de sistema de teléfono del teléfono = de la incubadora de negocio recomendadas por OBCAI

TGH = los métodos para aumentar el pensamiento creativo (en invenciones de concepción) consiguieron más difícilmente.

RASGOS = de clientes.

UQ = preguntas comunes y respuestas

La VIBRACIÓN = la gente de la pista W5 están caminando [en el edificio] [para los vagos]. Qué características son W5 usados.

VA = siguiendo actividad económica/[empleados de la incubadora] analizando comportamiento del cliente = características/servicios del sastre.

Patrones del ™ W5 = del uso para los servicios facturables

ZONA = el derecho de propiedad de las propiedades inmobiliarias. El mayor uso de ciertas zonas en el edificio crea un patrón de comportamiento de usuarios; por el que reaccionemos adaptándose a sus necesidades por consiguiente, e.g.: localización de nuestros servicios, equipo, etc.

¡Mucho más.!

Archivo: La introducción a la palmadita/a la búsqueda y substituye

BUSCAR Y SUBSTITUIR EL TEXTO PARA LAS VARIACIONES DE LOS USOS DE LA PALMADITA

Versiones simplificadas y detalladas importantes de esta solicitud de patente

ELEGIR LA VERSIÓN NECESARIA

Actualizaciones y más Info visitar www.LicenseItToday.com o pedir las jefaturas de California 1-707-428-5000

Este archivo demuestra búsqueda y substituye las características que pueden y/o haber sido conducido en este uso de la palmadita. Para condensar el uso mientras que proporciona la instrucción, buscar y substituir se ha conducido de diversas maneras en todas partes.

Nuevos párrafos:

- Substituir dos vueltas (vueltas de carro) por un retorno del carro entonces un cuadro. Esto da lugar a omitir líneas vacías entre los párrafos (como en la versión de texto original). La muesca que comienza en el margen izquierdo facilita legibilidad. Esto es mejor que omitiendo todas las vueltas de carro, incluso si un símbolo fue utilizado para señalar donde un nuevo párrafo comienza.

La abreviación llama en general:

. Usted puede ser que convierta la mayor parte de las palabras comunes en el uso.

. Elegir los 100 a 10.000+ la mayoría de las palabras de uso general como "y" convertido a "y".

. La solicitud de patente publicada/puede tener un acoplamiento a nuestro Web site con el cual podría dar el contenido entero y/o sin la abreviatura - como cortesía. Quisiéramos que la gente consiguiera de fácil acceso a este contenido de las solicitudes de patente.

. Traducir el texto en otras idiomas. Adaptarse se traduce qué

. Las partes anteriores de la solicitud de patente utilizan pocas abreviaturas. Esto ayuda en el aprendizaje y la comprensión.

. Archivos con pocas abreviaturas, por lo tanto buenos puntos de partida para aprender nuestro sistema: el archivo de las características principales, características del acceso.

. Para condensar y simplificar la lectura requerida de esta solicitud de patente entera; este uso de la palmadita, los términos singulares era variaciones de uso frecuente, mientras que omitía de la palabra del sufijo que demostraban pluralidad, presente último o, y otras estructuras gramaticales. Por lo tanto ver un término singular tal como "característica" implica las "características plurales" puede aplicarse.

Acoplamientos:

Las características alternativas pueden ser insertadas (por nuestro software) donde hay acoplamientos. Cada característica tiene acoplamientos a muchas otras características y a sus secundario-características. Estos acoplamientos se demuestran en varias maneras. Incluyen:

. Términos en soportes (como tales) o [como esto].

. Qué sigue los dibujos que contienen los solos signos de igualdad [líneas entre las partes en nuestros dibujos], o los dos puntos pueden alcanzar el mismo propósito.

- Vaciar (espacio abierto) en soportes, o después de éstos mencionó que los signos de igualdad y los dos puntos demuestran donde las especificaciones pueden ser insertadas. Los ejemplos se encuentran a través de este uso. Recordar que los espacios vacíos no son necesarios demostrar la presencia del acoplamiento.

Indicadores misceláneos en la adaptación de este texto:

. Explicar por lo menos la palabra completa, con o sin las palabras adicionales describiendo la característica. Puede ser algunas palabras adicionales más que un párrafo.

. La descripción completa para una invención con sus numerosos adaptaciones pudo exceder 1.000.000 páginas. Este aspecto importante está ALTO naturalmente porque:

- Los acoplamientos hechos de una característica (el paso 1) va a muchas otras páginas (paso 2). Los acoplamientos en el paso 2 van a muchas de sus páginas (paso 3). El paso 3 liga al paso 4, 4 a 5, y así sucesivamente. Muchos de los acoplamientos hacen un círculo completo de nuevo a la característica en el paso 1, vía las trayectorias divergentes. La introducción de los usos de la palmadita tiene detalles.

. Utilizar el software de la edición de textos como la palabra para Windows o Apple; programas en línea; hacerla en su cabeza (de los lectores); cambios del handwrite; etc. Ahorrar cada variación encajonan una versión se adapta mejor.

Cambia que se ha hecho en porciones de este uso de la palmadita: Correcto y o alterar la gramática. Corregir los faltar-deletreos. Capitalizar los títulos: Nuevas invenciones, y nuevos asuntos.

Estrategias de búsqueda:

. Las estrategias de búsqueda no se incluyen normalmente en solicitudes de patente. Pueden ser utilizadas para buscar invenciones en este uso y/o las bases de datos de otras patentes. Mientras que una alternativa de esta solicitud de patente no las está divulgando, deseamos: 1. Demostrar los ejemplos adicionales para cómo las

patentes relacionadas pueden ser encontradas, a pesar de la naturaleza limitada de las estrategias sugeridas. Este otras demostraciones relacionaron encarnaciones para entender mejor las invenciones. 2. Ser de uso fácil, sin requerir al usuario ser creativo en la concepción de buenas palabras claves.

Ver la sección de las abreviaturas para más ejemplos. Las flechas demuestran en lo que se puede hacer un término o de. Usted puede invertir las flechas, e.g. "con" el → "con" en bastantes para demostrar que "con" puede ser ampliado en la palabra "con" sin (sin) tener otra flecha el ir la otra manera. Las flechas adaptaron esta sección en la fabricación de ella más fácil para que más (no toda la) gente entienda (y comtemplar).

Términos específicos que pueden o haber sido corregido en este uso:

. y → y. y → y

. →/del ao. &or del → del ao. → del &or y o

. → de OTD otros detalles de Techie, u otros detalles técnicos, o para Techies (omitir cualquier retorno del carro después de él)

. Anota el → al pie de la página. Para Techies

Alargar:

. → de w con. con el → con

. → del wo sin. sin → fuera

. → opcional opcional/alternativa

. Usuario del → de U

. D: Dibujo del →. Dibujo figurado del → de D. Diagrama del → de D

Términos de uso general: Las abreviaturas y las extensiones usadas son mencionadas en sus mismas líneas:

`D, diagrama, dibujo, dibujo figurado. Seguido a menudo por los dos puntos.

EL del `, electrónico

`Fq, frecuencia - el tipo eléctrico.

El `IMI, característica, parte, y funciona quizá

`KN, N, invención. Seguido a menudo por los dos puntos.

Kilovatio del `, palabras claves. Seguido a menudo por los dos puntos.

. ' Nr, notificador, alarmas

`Misceláneo, misceláneo

El `obvio, existe

OTD, otros detalles técnicos, para Techies, leyó más adelante. Seguido a menudo por los dos puntos.

Interruptor, software

`Sistema = sistema electrónico.

U, usuario (s), persona

`W, con, con.

`WO, SIN, fuera

Abreviado:

. aproximar el → (LY) aproximadamente

. → medio sistema de pesos americano

. especialmente → especialmente

. → exp del experimento

. laboratorio del → del laboratorio

. → máximo máximo

. → MES del mes

. neg negativo del → (LY)

. posición positiva del → (LY)

. separar el → (LY) sept

. sepd separado del →

. → estándar std

. tecnología técnica del → (LY)

. → vol. del volumen

Las muestras de las características (piezas) abreviaron:

. comm del →//comunicada/comunicación

. → c de la computadora (ized)

. coordinación coordinada del →

. invención o → N o KN del producto

. el notificador/notifica/notifie (s/d) nr del →

. → de OTD para Techies (cualquier etiqueta reduce el confundir de gente no técnica)

. → teledirigido R [no investigación]

. Interruptor del → del software

. → SA del analizador de sonidos

. Teléfono del → del teléfono

. → visual VA del analizador

Alterar las descripciones de la invención (especificaciones):

. El pequeño → adaptó tamaño

. ¿El → obvio existe?

. El → rápido adaptó despacio

. Más → menos. El → de la cantidad adaptó cantidad

. → opcional importante (aspecto)

. → costoso adaptado al presupuesto del ajuste

. Excluir el → incluyen

. Buscar el → buscado

. Encontrar el → encontrado

Otros métodos:

. Etiquetando la línea pasada de cada archivo, antes de que se consoliden en un uso:

Archivo de los extremos: El ____ = concluye este archivo: _____. La nota, toda la información y las funciones son encontradas teniendo acceso (con el permiso) a todos los acoplamientos atadas a lo que desea el usuario.

. Texto del cierre relámpago (reducir requisitos de memoria poniéndolo en un archivo de cierre relámpago). Relampagar vía las maneras que cambian la memoria requerida, con o sin los cambios del texto.

. Substituir las palabras algo que una persona puede no entender: mantener fuera de las manos de (los niños), de la gente no educada métodos aplicables, de la seguridad, del etc. Guardar quizá los códigos del cambio a otra parte.

Liberar el espacio abierto:

. Reducción de líneas vacías: Convertir todas las líneas vacías múltiples a partir del 3 encendido para arriba abajo a 2 líneas vacías, eg.: convertir cuatro vueltas de carro a dos vueltas de carro, después redactarlas hacia abajo a tres vueltas de carro en dos vueltas de carro. Convertir dos vueltas de carro en un retorno del carro seguido por un pequeño cuadro.

Precede menos principio material importante con cualquiera o. - o. -. Tener un código uniforme.

- Reducir dos (o más) espacios vacíos en o entre oraciones, (un solo espacio).

- En el texto (de la original), los nuevos temas comienzan a menudo en el margen izquierdo, en una nueva línea con un punto, una rociada, o una rociada doble.

--+ el círculo minúsculo de A pudo representar donde un punto o secundario-punto termina y comienzo de un nuevo punto o del secundario-punto. O un 1 precede una rociada, y 2 precede una rociada doble. La idea es que más bajo es el número la llanura posterior es la cadena de la anchura.

. Substituir dos espacios entre las palabras vacíos a un espacio.

. Substituir las líneas vacías por menos espacio, (pero más que qué se encuentra entre otras líneas).

. Espacio antes de nuevos secundario-puntos. Alternativas:

--el ejemplo demostrado: el secundario-punto del párrafo es un punto. Secundario-punto del punto una rociada. Rociadas del doble del secundario-punto de una rociada. Detalles en la introducción.

--insertar una lengüeta (dentro de la misma línea que la oración precedente)

--número de código para cada nuevo secundario-punto, eg.: punto = 1, rociada = 2, rociada doble = 3...

--las oraciones que preceden secundario-puntos pueden no tener períodos en su extremo.

Considerar no buscar y no substituir secciones señaladas, e.g.:

. Reducción del espacio abierto en páginas con las columnas, e.g.: índices; listas de gente que recibe nuestras concesiones. Dibujos figurados (diagramas) que usan puntos lineares.

. La figura dibujos que ya muy se condensan generalmente usando nuestro método especial nosotros demanda.

La mejor manera de experimentar esta solicitud de patente se está imaginando cómo el sistema entero funcionará. Un modelo verdadero es el mejor como las invenciones y sus características pueden estar en uno o más tecleos (acoplamientos) lejos, dependiendo de donde en el sistema usted está en ese entonces.

Concluye esta búsqueda y substituye la sección

Introducción del archivo/de la característica/Abb-Sym 4

ABREVIATURAS, SÍMBOLOS Y CARACTERÍSTICAS RARAMENTE USADAS: Detalladamente

SECCIÓN DE LAS ABREVIATURAS

"B" = este viejo símbolo fue cambiado a "N".

La "idea básica" = las descripciones completas para cada producto numera. Incluye: descripción central y todas sus ramas.

"Ramificando" = las ayudas de ramificación del árbol explican los niveles probables de importancia en comprender la descripción central.

"Descripción central" = la descripción escrita después del listado principal de cada número del producto. Es la parte central del sistema de ramificación.

. - Esto excluye OTD del número del producto - la otra sección de los detalles técnicos; pero incluye: aspectos con cualquie símbolo (excepto %), y las piezas, usadas en la descripción central hasta una rama.

El "código" = considera "piezas", o el "archivo de las piezas".

"Shell creativo" = cuaesquiera características de producto adicionales proporcionadas por otros partidos más allá del alcance de la idea básica.

"D" = diagrama/teléfono. Eg.: D1 es el diagrama #1, D2 es el diagrama #2. D1 y D2, si en la misma sección general, debe ser relacionado para iguales y o separar normalmente productos.

El "revelador" = se convierte, el desarrollo, %developer

"Dir " = directorio: invenciones de Kays". Los primeros dos espacios de un número del producto tienen una letra que demuestre de qué directorio es el archivo del producto, eg.: 1B-050-022004 - > categorías A, B, C, D, E de la letra de la muestra del B....

"Eg." = los ejemplos siguientes son solamente uno o más de los ejemplos posibles. Iguales que: "^", "etc", "..."

"EL" = electrónico/eléctrico

El "etc" = los conceptos anteriores puede ser uno o más de los ejemplos para las ideas dichas del producto. No es una lista completa. Iguales que: "^", "eg. ", "..."

"Existe" = la función particular descrita existe y se diseña felicitar otras funciones del producto. La omisión de "existe" de cualquier descripción nunca la implica es una característica única.

`Fq " = frecuencia: frecuencia de la transmisión vía la radio o el alambre. Eg.: señales eléctricas/códigos convertidos a digital; infrarrojo; radiofrecuencias [RF]; sonido (para el propósito de la transmisión).

"IMI" = ve el "archivo de las piezas".

`IOW' = es decir. La información se pudo repetir, con o sin nuevas dimensiones.

"KN" = invención de Sr. Kays. Uno o más invenciones que él concibió.

"Kilovatio" = palabras claves. Utilizado generalmente para la palabra clave del software busca, eg.: para localizar los archivos relacionados con las palabras claves señaladas. % estas palabras claves mencionadas se

pudieron también utilizar para las búsquedas electrónicas de la patente de bases de datos mundiales para ampliar la invención (usos).

La "categoría de la letra" = considera "Dir": Directorio.

La "subcategoría de la letra" = la categoría de la letra tiene productos de cada uno de sus archivos divididos en subcategorías separadas. Eg.: la categoría D de la letra tiene subcategorías de la letra: DE, DG, DI.

"Misceláneo" = misceláneo

"N" = producto existente en mercado, y o KN.
- definición hasta cerca de 1995: número del producto; uno de los aspectos de Steven Kays de la invención; cualquier producto precedido por las piezas del producto de un producto del number'; es productos también; La "especificación de producto cifra el apéndice - números de patente de los E.E.U.U. para cada código"

"Obvio" = esto tiene cierta ocasión de ser obvio apenas en su forma simple. Obvio puede significar no patentable debido a ser demasiado similar a otros productos. El hecho de que este término fuera utilizado no dice de ninguna manera que las funciones con esta declaración sean más o menos probables ser obvias.

`OTD' = otros detalles técnicos.

"DE OP. SYS."/opcional = opciones. Importante: este término se utiliza para ayudar a aclarar descripciones, y/o ofrece alternativas. Un elemento opcional en sí mismo no sugiere que si está utilizado, esté en vez de algo más. Cada característica/aspecto como descrito es una variación incluso cuando tal no se menciona.

El 'organismo = cualesquiera vive el organismo, que se mueve [a menos que esté indicado de otra manera]. Eg.: Seres humanos, mamíferos [animales domésticos, animales mantenidos cautiverio o encontrados en salvaje, pájaros], pájaros, reptiles. %Microorganisms se aplican si la invención se puede hacer para aplicarse a ellos, en vista de su tamaño pequeño, eg.: ameba, bacterias, virus. Los organismos se describen comúnmente en el contexto científico de analizarlos vía vagos, o para seguir su comportamiento.

""/"" del PL/"del plástico PVC" = producto construido del PVC/del otro subproducto del petróleo/caucho (endurecido)/%vinyl/metal/madera.

"Parte el archivo" = pieza de especificación de producto, eg.: "distancer", "chapaleta". El archivo de las piezas es la lista completa de todas las partes en "el papel de las piezas de especificación de producto".

"Categoría de producto" = el tipo de producto desde el punto de vista del fabricante, eg.: cámaras, juguetes.

""/"De la descripción de producto N" = la descripción central de cada número del producto más todas sus ramas, eg.: OTD, apéndices, diagramas.

"Archivo del producto" = los archivos dentro de una categoría de la letra, o subcategoría de la letra, eg.: 2.o, 2DE, 2DG, y 2DI.

""/"Del número del producto N" = la mayoría de las ideas del producto con una descripción central se precede por a # eg.: 1B-050-022004.

. - Cada número del producto señala ideas del producto a parte del resto de los papeles. Los números del producto se encuentran normalmente en un archivo del producto con uno o más números del producto.

"Pieza de especificación de producto, código de la especificación de producto" = piezas: Los significados idénticos son las piezas usadas en las descripciones de producto. Cada concepto con mayúsculas dentro de piezas de especificaciones de este "producto" archiva o su apéndice, y utilizado en las descripciones del número del producto. La abreviatura "IMI" fue utilizada para señalar las piezas archiva, e IMI& el apéndice de las piezas.

El "RM" = me leyó. Notas a entender mejor.

"Interruptor" = ("computadora") software

"Símbolo" = Eg.: , %, -, --. -, ()," ", +, O,...

"Sistema" = (relacionado (EL)) sistemas, sistema

"Ver" = versión. Eg.: versión electrónica o mecánica o plástica.

"W" = con. Para los propósitos del diagrama (figura), %each "w" también representa una línea entre qué precede y qué sigue. W/In = dentro.

. Dibujos figurados: códigos y más del diagrama

. Características menos comunes

. Misceláneo: Palabras claves, detalles en características comunes.

CARACTERÍSTICAS COMUNES: Descrito moderado.

CARACTERÍSTICAS COMUNES: Minuciosamente. Leído más adelante.

Acceso

Adaptación

Analizador (decide cómo conseguir invenciones que usted quiere)

Artista (proceso creativo)

Analizador del comportamiento (se adapta al comportamiento del usuario)

Balance

Básico

El mandar la cuenta (genera renta)

Cerebro (proceso creativo)

Cámara

Cartucho (mejora de la licencia del software)

Carácteres

Componer (proceso creativo)

Contentar el analizador

Coordinador

Danza (conecta con qué puede moverse)

Base de datos

Distancer (trae a cliente a las invenciones)

Redactor (adapta instrucciones, el etc)

Educador (aprender utilizar la invención)

Hospitalidad

La protección del medio ambiente es importante

Ejercicio

Experiencia (mejorar la experiencia del usuario así que pasan más)

Juego (conceptos para no los usos del juego)

Guía

Icono

Teclado

Localizador (hallazgo sobre cualquier cosa)

Unidad central

"WO" = fuera

"Descripción escrita" = encarnaciones. Es la descripción de un número o de una pieza del producto en la forma de palabra, incluyendo todas las ramas. Excluye diagramas.

"Divide en zonas" = las localizaciones (señaladas) según lo descrito en la parte "Picosegundo-Zonas". Eg.: está diferenciando zonas en las cuales (picosegundo) el resultado localizado en la diferenciación: efectos, causas, procesos, etc.

SECCIÓN DE LOS SÍMBOLOS

"-" = la descripción siguiente es el principio de una nueva sección que describe el producto.

"--" = lo que sigue es la subdivisión de la sección anterior que describe el producto.

"" = señala la información para el lector que ha agarrado ya ideas relacionadas sin tales marcas. Este artículo puede ser menos importante para el concepto de producto total central. Realizar que la carencia de esta parte no significa que el artículo es una idea central. Este y piezas relacionadas (. -. --) tener no concerniente la patentabilidad debido a la pieza de por sí. Esta parte puede seguir o preceder inmediatamente un aspecto tan posiblemente menos importante. También se incluyen cualesquiera de sus subdivisiones siguientes representadas por "--". Ejemplo: si el elemento o la sección de una parte se precede o se sigue cerca, el aplicables son menos importantes. Un elemento puede tener a partir del uno, a un máximo de dos (es menos crucial que) directo al lado de él.

. - La estrella después del título de cada parte se aplica solamente cuando: la pieza se utiliza en cualquier sección de OTD (salvo especificación de lo contrario, eg. por "+" que se anula); este tipo de estrella no se aplica cuando la pieza se utiliza en una descripción con excepción de OTD.

"." = comienza la nueva sección principal dentro de un archivo. Algo tiene gusto de un nuevo subcapítulo. Se siguen por "-" de que los subconjuntos "." Eg.:

. Corregir: el programa ajusta---

. - Don't confunde "." con ". -", o "...", o un período simple en el final de la oración.

. - Tales nuevas secciones principales pueden también apenas comenzar después a saltar una línea vacía. Las secciones a veces principales se encadenan juntas vía una sola rociada en margen izquierdo entre las secciones.

". -" o "-." = el mismo significado que "" y "-". ". -" sin embargo se utiliza solamente para comenzar una nueva sección que describe el producto.

". -" es más bajo en la ramificación, por lo tanto el igual a. El usar comenzado "-." en vez de ". -" en agosto de 96. Esto no se utiliza virtualmente, y el uso de esta forma pudo ser un error significando un período también.

": " = las descripciones después de dos puntos son algunos de los ejemplos para la descripción de la invención. Este símbolo es mucho más importante que puede aparecer. Los dos puntos se pueden también interpretar a menudo como dos lados separados del diagrama. Los dos puntos ": el" símbolo representa una línea del acceso que la precede al acceso que la sigue. El acceso después de los dos puntos puede también ser un subconjunto de qué precede los dos puntos. Los dos puntos representan qué siguen como el ser "incluye por lo menos el siguiente", "una pluralidad de...".

- Además, algo de una demanda independiente de la patente pudo ser interpretada como qué precede los dos puntos; y secundario-demanda ser qué sigue los dos puntos.

"..." = los conceptos anteriores pueden ser uno o más de los ejemplos para las ideas dichas del producto. Este símbolo es normalmente tres, con todo hasta cinco puntos.

"=" "- >" ">" = cuando está utilizado en las descripciones de producto señala las líneas entre las partes de un diagrama. La presencia de uno de estos símbolos demuestra que los datos son un diagrama real; por lo tanto ninguna necesidad de escribir el "diagrama". "- >" y ">" son iguales, y el contrario de <, <. Señalan la dirección de señales, "=" permite uno o la transmisión de dos vías de la señal (< - y o - >). "=" si está utilizado en piezas de especificación de producto inmediatamente después del título de la pieza en el casquillo, describe la pieza referida.

. - las señales que viajan en estas líneas pueden ir via^: alambre, radio, telefonía.

- también ver "introducción el archivo de las piezas" para los detalles
- cuando "=" carece un espacio solamente en su lado izquierdo, el símbolo se puede también leer (para la facilidad de la lectura solamente), como coma. Eg.: Activar la luz del switch= entonces se gira.

- - > y < - los símbolos son líneas de la flecha. % si ninguì□n conflicto, o el apuro con la solicitud de patente, tales símbolos se puede también substituir por "=".

"O" o "o" = la descripción siguiente es un producto separado que se pudo también combinar con uno o más partes de la descripción restante dentro del mismo número del producto. Estos símbolos no están en capitales o cotizaciones cuando están utilizados.

": " o "el ^" o "@" = enumeró es uno o más de los tipos posibles de funciones, de usos, de piezas, y o de diseños de producto totales. No una lista completa. "@" se utiliza raramente, y si es así antes de Mid-1994. el

"^" es igual que: "eg. ", "etc", "...", "@". Esos artículos que siguen el "^" se tratan como "y o" si se separan por "; ". Esto se aplica a qué sigue ": ". El símbolo del "^" fue utilizado hasta 1995.

"+" = aspecto importante. Uno o más de las ideas dentro de la sección inmediatamente después del "+" del símbolo pueden ser un concepto central para la idea total. Sin embargo, la carencia de este símbolo no significa que la idea es de ninguna importancia central. La mayoría de los lugares con los cuales pudo ser etiquetado "+" no era así que etiquetado, por lo tanto carencia del "+" no tienen ningùn impacto (a menos que posiblemente dentro del contexto de las 100 palabras de alrededor en iguales/las páginas consecutivamente numeradas).
. - si una parte en OTD de-emphasized por una estrella en este "papel de las piezas de especificaciones de producto", la colocación de "+" al lado de la pieza anula inmediatamente tal estrella.

""= representa piezas. Utilizó esto en los años 90 que las piezas están o entre paréntesis, o cada uno de las letras de la parte es letras a veces adentro capitalizadas. Si las piezas se encuentran en el cuerpo de la descripción redactada, las piezas refieren a los títulos completamente capitalizados de una parte en "el papel de las piezas de especificación de producto". Para la facilidad de mecanografiar, las piezas enumeradas en los diagramas y u OTD (otros detalles técnicos) no necesitan estar en marcas de la cotización o ser capitalizados completamente. La forma de la pieza pudo cambiar levemente, eg.: para los propósitos gramaticales, la pieza puede estar en el caso posesivo. Las abreviaturas de la parte fueron utilizadas hasta el junio de 1996.

el `= el solo símbolo del `, y "" los símbolos tienen significados idénticos.

"%" = esta función amplía perceptiblemente la idea del producto más allá del concepto básico. Un subconjunto de la idea se puede relacionar con la descripción de producto central. La mayoría o todo el exterior de la mentira de los aspectos pero cerca de la descripción de producto central. Ejemplo: si la misma parte se refiere en diversas ramas de la descripción, ésos con un % o se efectúan por consiguiente en que rama particular, pero % o no efectúan la misma parte por consiguiente en ramas sin los símbolos. Solamente un % se pone al lado de un elemento, por lo tanto no hay % dobles.

"()" o []' = demuestra uno o más de los ejemplos posibles múltiples. Uno puede guardar o conservar cuál está en paréntesis.
(Utilizado en encarnaciones/especificaciones/diagramas escritos/cómo la función mencionada se pudo poner en práctica.)

+ - () incluir la lista limitada de posibilidades. Otros elementos (poder) ser colocado (además) dentro de ().

- Combinaciones: la información en estos soportes no necesita necesario ser leída, eg.: omitido de la descripción, aunque pueden todavía ser necesitados en una cierta capacidad de permitir la invención. Las descripciones con () pueden ser adentro leídos muchos diverso ways^: con o sin la información adentro (); si hay múltiple () en la descripción - > puede utilizar/no hace caso de uno o más la información acorchetada en cada las combinaciones posibles.

--El uso y o no hace caso de uno o más sistemas de información separados por "()", para leer cada combinación señalada. Eg.: #1: [un (b) = una c (d)] se pueden leer por lo menos nueve maneras, tales como #2: a = c (d), y o #3: a = D. Cada combinación está para diversas variaciones de la invención (para las aplicaciones alternativas). Cuanto mayor "()" las ocurrencias múltiples se separaron a través de la encarnación principal, el número de combinaciones crece exponencial. "()" Utilizó en los aumentos posteriores de "ramificación" de las encarnaciones el número exponencial total de combinaciones.

- Estos soportes diseñaron normalmente ampliar las descripciones de la n.

- La información dentro () es generalmente un subconjunto de la pieza, eg.: "sensor" = c ("analizador") = oscilador: la línea se extrae de analizador a la computadora ("C"), y las líneas se extraen de "c" al "sensor" y al "oscilador". --El interior de los datos "()" no necesita ser un subconjunto, cuando es una idea diversa/relacionada. Eg., grapadora (grapas): #1, grapas se podría también clavar adentro manualmente sin una grapadora; #2, grapas se pudo soldar con autógena para los usos no-conectivos también. % si la aplicación "()" ser un subconjunto o no [sin la opción de ambos], entonces "()" se puede considerar un subconjunto (para los propósitos de la patente).

. --D: piernas = robusteza del juguete (sensor/c ("analizador" (software))). Para (impreso) los propósitos esquemáticos, el software es el analizador interior, analizador dentro de c, c dentro de la robusteza del juguete, sensor dentro de la robusteza del juguete - (con objeto de este diagrama). La robusteza del juguete podría tener diversos interiores puesto que () son las posibilidades limitadas, eg.: el juguete es puramente mecánico.

. - El soporte izquierdo se afina a veces adentro con la omisión accidental del soporte derecho siguiente, eg.: (analizador) compara con (analizador.

. - Cuando () utilizado después de un número de patente: éstas son ideas inventivas (nuevas aplicaciones) basadas en KN y las configuraciones de la patente.

"/" o \' = significa "y o". Por ejemplo los medios de A/B, A y o B se aplica al panorama.

Otro ejemplo: en un diagrama se utiliza "/" símbolo como sigue: [parte 1/part 2 = parte 3 = parte 4]. En el ejemplo precedente, parte el diagrama de tres va a parte el' S1 y o 2, que está allí es la posibilidad de variaciones. La parte 3 tiene una línea para parte 4.

Los detalles siguen: Ejemplo: [parte 1/part 2 = parte 3 = parte 4/part 5] está igual que a: el diagrama de la forma de >3<, 1 2 4 5 circunda los 3 (en patrón sabio del reloj); y o b: puede ser D1 partido: 1=3=4, D2: 2=3=5. (no se demuestra ninguna línea entre 1 y 2. importantes: una línea no se excluye, y %might se dibuje entre las dos piezas si es viable.). En lugares aislados "\" pudo haber substituido "/".

- Combinaciones: hay con frecuencia "/" del múltiplo en descripciones de N - > uso y o no hace caso de uno o más sistemas de información separados por "/", para leer cada combinación señalada. Eg.: #1: [a/b = c/d] se pueden leer por lo menos nueve maneras, tales como #2: a = c/d, y o #3: b = C. Cada combinación está para diversas variaciones de la invención (para las aplicaciones alternativas). Cuanto mayor es "múltiple/" ocurrencias separadas a través de la encarnación principal, el número de combinaciones crece exponencial. "/" Utilizó en los aumentos posteriores de "ramificación" de las encarnaciones el número exponencial total de combinaciones.

"~" = iguales que "/" o "\" a menos que una línea también se dibuje entre las piezas cuando se utiliza esta línea ondulada símbolo. Eg. #1: 1~2=3=4/5, líneas están entre 1&2, 1&3, 2&3, 3&4, 3&5, %maybe 4&5; el 1/2 pasa con 3 conectar con 4/5. Las líneas entre 1 y 2 son opcionales, desde el símbolo del "~" podrían también ser una raya vertical diagonal, en otra versión del diagrama.

- ver la "introducción a las descripciones de producto" para los detalles

. - [si los símbolos de este archivo no transfieren entre los sistemas de los programas informáticos: su el mayúscula ``del 'solo secundario-cotiza llave según lo encontrado en el ordenador portátil de Toshiba T1910, mientras que utiliza el software WordPerfect 6.0B para el DOS. A partir de 1991 ahora (3 de enero de 1995) todas las entradas de datos era en palabra perfecciona 5.0 para el DOS o más arriba. Puesto que 4.94 la computadora de Toshiba T1910 fueron utilizados.

"; " = el punto y coma es una rotura en el flujo del pensamiento (más débil que un período, con todo más fuerte que comas). Cuando hay una raya vertical diagonal en la oración seguida por "; ", el punto y coma debe romper normalmente las líneas en el diagrama. Ver "/" sección.

": " = la información después de los dos puntos representa uno o más de las manifestaciones posibles [%applications para las funciones dichas]. "()" El símbolo es similar a los datos después de los dos puntos. Datos que siguen ": " ser más probable tener la posibilidad del escalonamiento más allá de los límites de la idea/de los términos que preceden directo los dos puntos, que preceder de los datos directo "()". ^ de los símbolos conectados ": " son iguales que ": ". A veces hay información seguida por los dos puntos, que entonces es seguida por otra ": " dentro de la misma oración, en este caso éste puede significar que dos puntos de siguiente de los datos los primeros son un semi-subconjunto de datos que lo preceden, y dos puntos de siguiente de los datos los terceros son un semi-subconjunto dos puntos de siguiente de los datos de primeros, o dos puntos anteriores de los datos de primeros.

Viejos símbolos del diagrama: utilizado en el material hecho hasta mid-1993. Las líneas verticales se pueden también representar por "mí", un punto". ", o "L", etc. Este 3ultimo demuestra las piezas adicionales que están

en la línea abajo y directo a la derecha del "L". A veces una línea de volutas de los bloques encima a la línea o a la página siguiente.

VIEJA SECCIÓN DE LAS ABREVIATURAS

Introducción: Esta sección cubre las viejos abreviaturas y símbolos, que se continúan sobre todo en más nuevas invenciones. Más viejas invenciones pueden ser ésas encontradas en las secciones A, B y C, o que tienen esas letras en sus números del producto, e.g. "2A400".

Anuncio o Adv: publicidad

CUANTO ANTES: Cuanto antes

Gato: categoría de producto, eg.: TV; teléfono

CIS: Antigua Unión Soviética o SNG también llamado

Dir: directorio, eg.: "Un Dir" está de primera N desarrollada

DM: Correo directo

F: fax

G: cv, caza de trabajo; concesión (de la fundación/del gov't)

HW: ayuda querida (haciendo publicidad); nueva gente necesaria

II: I n n o v un instituto de t i o n

L: legal

Pls: por favor

N: Golpecito, producto # (generalmente uno concebido por K una y s). Puesto que cerca de 1996 "NK" significa las invenciones del producto concebido por K una y s, y de los medios de "N" los productos y en general.

Mk: comercialización

Musgo: Moscú

MU: Musical, música

J: Japón

R: investigación

Req/RQ: requisitos; requerir

RF: Radiofrecuencia. Cuando es factible incluye a la transmisión y a recepción infrarrojas. D: device#1=tr/rc=tr/rc=device#2

SPB: St. Petersburgo, Rusia

T: El teléfono, ve "piezas". Vieja definición:

letra/correo

TYO: Tokio

U: usted, una más nueva definición es: usuario

Ur: su

X: documento: para la publicación, visto por el público

2: Desarrollo de la idea del producto

4: Relaciones públicas, artículos

8: Comprobar para ver quién está copiando mis ideas

\: El diagrama parte - y o señalando si una línea se dibuja entre las piezas. Ver las "piezas"

/: si no se dibuja ninguna línea "necesario" entre las partes en diagrama. Ver las "piezas"

UNA MÁS VIEJA VERSIÓN DE PIEZAS (A PARTIR DE 1990-1992)

La más nueva versión como en "piezas principales" sobrepone las descripciones adjunto si suceden ser dos diversas definiciones para las mismas piezas.

A = y

EN = la comunicación del pedazo del juego, el pedazo de cada jugador comunica con uno a y la máquina de proceso central vía las ondas de aire (probablemente no el alambre)

EN = y o

AU = para el nivel adulto 16 años y encima

B = tiene botones (no mencionados si los PP); "K"; "R"

Uso del bebé de BA/KI/CH=for 0-4 años/cabrito 4-8 años/niño 9-15 años

C = productos del uso como el compañero provechoso del ejercicio y o guía, organismo de la regla; "ejercicio". La nueva versión es "computadora", si es dudoso sobre el uso "computadora" de la interpretación. Consumidor de CS/BU/CL=for/uso comercial del uso/de cliente

D = esto es la vieja definición para "T" (telefonía) (incorporada (el teléfono celular o estándar))

DA = tiene fecha interna, reloj, contador de tiempo necesario para el funcionamiento del interruptor; "tds"

DD = "S"; construido en indicador digital (eg.: El LCD), puede mover de un tirón adentro para la compacticidad

DS = "S"; exhibiciones de la máquina en la CRT, el indicador digital, o el impreso (papel regular o termal)

EP = componentes electrónicos: el producto funciona por medio de los microchipes, de los procesadores y de los otros elementos estándar para este tipo producto electrónico; "C"; "básico"

El EL = enseña a habilidad (no no necesario psicologica) práctica. La definición usada a partir de finales de 1993 es EL = electrónico. "educ"

Y = nuevo tipo de hospitalidad ("entretener ")

La extensión = funciona en el plano o la superficie semi plana, tapa de tabla, esta opción no funciona encendido las baterías, o energía de la vibración.

ALETA = descripciones de la opción del producto de los finales

G1 = juego para una persona solamente

G2 = juego para dos personas solamente

G23 = juego para dos o más personas. G12 = para 1 o 2 personas, G3 = tres personas solamente.

GGH = el juego consigue más dificilmente. pues la capacidad del usuario en la condición mejora o empeora, la máquina compensará cerca: siendo más fácil, más duro jugar (en términos de habilidad, rapidez...)

HM/OF/SC=for se dirigen/el uso de la oficina/de la escuela o del laboratorio

Índice de inteligencia = versión especial para la gente con el índice de inteligencia dentro de la tapa el 2% de la población

JK = para el uso como diversión chistosa, una novedad inusual, "entretienen"

M = vieja definición: máquina (producto descrito dentro de producto # solamente). Nueva definición que fue aplicada a las nuevas escrituras en fecha 3.94: "MFH" [transmisión en circuito del marco principal]. La vieja definición todavía se encuentra en las escrituras compuestas a 1992.

MA/FE = para uso de varones/de hembras

= memoriza señales de entrada anteriores en su "C"

El MI = los elementos de este producto es permutable con uno

NRL = no juego de la vida real, jugado interconectando con el juego electrónico y o el tablero.

O = o

OD = dispositivo de la telecomunicación que trabaja vía ondas de aire; "T:

PÁGINA = programable por el usuario (afinando en sus botones del plástico) y o el fabricante; "pp"; "P.M."

El PO = construido en impresora imprime el Info/datos/cuadros sobre el papel, tiene el borde del rasgón, la termal o papel de papel [del asiduo]; "impresora"; "S"; "fs".

Derecho = ritmo

RL = el juego de la vida real, jugado adentro o al aire libre, requiere a gente que se mueve en un ambiente

SD = teléfono del altavoz; nuevas piezas "teléfono del SP"; "T"

SC = comunicador sano: recibe ("mic") y o envía ("oscilador") sonidos mecánicos, y o las palabras humanas y o las voces

SH = demostración

VC = persona controla el volumen de sonidos; "oscilador"

TD = descripciones técnicas

PARA = el uso del juguete, "entretiene"

TK = para el uso como truco de la diversión, broma; "entretener"

TM = marcas para el producto

El CAC = "mic" (interno o externo) registra los sonidos facilitados por el usuario (sobre el microchip o posiblemente la cinta), y se puede repetir en totalidad o probablemente en formato corregido u otro alterado usando los sintetizadores incorporados; "oscilador"

UR = su

WH = que

"-" = solamente cuando está utilizado en TM: separa el orden de las palabras, 1r, 2do...

18L = operación, instrucciones y comercialización en 18 idiomas: Inglés, japonés, español, alemán, francés, chino (dialectos del mandarín, del Cantonese), ruso, árabe, portugués, italiano, griego. Más las familias de lengua de: Báltico, Slavic, germánico, iraní, sudanés, Malayo-Polinesio y turco.

Una MÁS VIEJA VERSIÓN DE PIEZAS (hasta 1995 o tan)

CH = también para los niños debajo de la edad 16. Una partición más nueva.

El cm = la cubierta está de metal liso de la calidad con el revestimiento esmaltado.

Cc = diseño creativo de la cubierta.

- D: ..... Los puntos (...) son la cubierta plástica

. |||||||.

Barras de los dos puntos (|} es el producto

..... La forma encajonada se simplifica también, pero demostrar

la cubierta es una cubierta exterior.

- OTD: Utilizado hasta quizá 1995. El broche de presión encendido, o el tornillo en pedazos se puede esculpir alrededor de la unidad básica como decoración solamente. Los pedazos están de plástico colorido y o de metal esmaltado. Los pedazos se pueden encajar a presión solamente encendido en las maneras que no obstruyen el uso normal del dispositivo, o causan peligro. La cubierta se pudo moldear y soldar con autógena para no ser cambiable. Ver el "cerebro".

COLOR =

- Nueva definición - después de agosto de 1996: Colores cuaesquiera 1.000 o más estándar/tintas. + ver a "artista" y "corregir".

- Vieja definición - antes de 1995: Color del artículo usted toca cambios, eg.: causado por cómo cambios en cristales líquidos de los efectos de temperatura. Uno o más del siguiente pueden cambiar color: todo o una parte de la cubierta (una tira de cristales líquidos), botones, "exhibición".

El CP = la cubierta plástica de la calidad lisa, salvaguardias contra peligros comunes tiene gusto: impactos, calor, descoloración, etc.

- D: ..... Los puntos (...) son la cubierta plástica

. |||||||. Barras de los dos puntos (|} es el producto

..... La forma encajonada se simplifica también, pero demostrar

esa cubierta plástica es una cubierta exterior.

CR = cubierta del caucho fuerte y durable liso, salvaguardias contra peligros comunes. Similar al "cp".

CRC = computadora central ("C") de número 1D-010 del producto del "sistema adaptante".

ABREVIATURAS PERIÓDICAS

Introducción: Las referencias se hacen a los periódicos de uso general mundiales. Las invenciones desarrolladas adjunto son generalmente invenciones de la mejora de ésos publicados. Para los propósitos del diagrama: se yuxtaponen las invenciones mejoradas compiten un vis los productos publicados.

DY = "Yomiuri diario", Tokio. También cualquiera incluye cualquier cobertura de diferenciación dentro de "Yomiuri Shimbun" del editor. El artículo encontró en su sección de los "nuevos productos", en publicado semanalmente en el diario.

ES = catálogo científico de las ventas de "Edmundo". 101 E. Gloucester Pike, Barrington, NJ 08007 los E.E.U.U. Teléfono +1 609 547-8880, servicio de atención al cliente 609 573-6260, fax 609 573-6295. Los productos mencionados en el catálogo científico 1995 de Edmundo son un ejemplo que se puede incorporar en todas las o algunas invenciones. Hay de vez en cuando ejemplos múltiples de tales productos en este catálogo. La cubierta de este catálogo tiene "15C1A" impreso.

Picosegundo = "ciencia popular", los E.E.U.U. No confundir esto con el "picosegundo" para el sistema de colocación (si en duda verdadera después presumir que el "picosegundo" representa "sistema de colocación".

QMRR = "revisión del estudio de mercados del capricho".

- Ver "la revisión del estudio de mercados del capricho: Usos prácticos en estudio de mercados". Especialmente edición de febrero de 1996. Avenida de 8030 cedros., #229, Bloomington, manganeso 55425. Teléfono 612-854-5101. ISBN: 08937451. Tiene los listados de softwares relacionados, y las compañías con los especialistas capaces de hacer la programación, especialmente páginas 78 a 85.
- Cuando QMRR se utiliza en el software parte el archivo. Ver especialmente que las clasificaciones del producto de software con iguales/relacionaron los títulos (listado cerca de 10-20 softwares existentes).
- Definiciones de las funciones usadas en softwares del estudio de mercados: examen (métodos, preguntas, respuestas, "análisis"), ambiente, estudio de mercados, perfiles de cliente, (cambios adentro) figuras de ventas (eg.: más y menos de ciertos modelos que son vendidos, atado a otros cambios en mundo/mercado/usuario) ven las compañías mencionadas del "capricho", y los libros del estudio de mercados.

NK = "semanario de Nikkei", Tokio.

- Esta idea del producto incluye y es una extensión del producto descrito en de los servicios del semanario de Nikkei del `de Japón (parte de Nihon Keizai Shimbun) la sección de los "nuevos productos y" que abarca una página llena en la mayor parte de sus ediciones.
- En la ocasión, un artículo incluirá y será una extensión para de la tecnología del semanario de Nikkei del `la sección de la "ciencia y" para la fecha dicha.

EPO, USPTO y OMPI: Las bases de datos de la patente del gobierno ligaron de www.WIPO.in t

DTSW = "directorio de los surtidores técnicos del software", publicado cerca: teléfono +1 914-963-3695, fax 914-376-5011 de CAE Consultants Inc. los E.E.U.U. Avenida de 41 Travers., Yonkers, NY 10705 los E.E.U.U.

Estos datos también disponibles en: HTTP: /el directorio de www.caeconsultants.com usado era "hasta la fecha en fecha 1/1994". El CAE también ofrece el Info libre en el teléfono para localizar a surtidores.

También ver el archivo menos de uso general de las características (fue nombrado Features).

CONCLUYE ESTE ARCHIVO DE ABB-SYM: Abreviaturas y símbolo detallados
Archivo: Introducción a la introducción de la palmadita/del diagrama

DIBUJOS FIGURADOS

INTRODUCCIÓN A NUESTROS DIBUJOS ESCRITOS EN CÓDIGO DEL TEXTO

Introducción a encontrar los dibujos figurados (dibujos) en este uso: Los dibujos se incluyen en esta limadura. La mayor parte de los dibujos existentes, sin embargo, pueden no aparecer inicialmente ser dibujos alguien que mueve de un tirón rápidamente a través de la limadura de la patente. Los dibujos son generalmente cadenas de partes en una sola línea; conectado por las rociadas. Esto cubre en gran parte dibujos informales.

Ejemplo

Ejemplo simplificado del diagrama de la computadora: EL → DE LA CPU DEL → DEL TECLADO DEL → DEL USUARIO MODIFICÓ SALIDA PARA REQUISITOS PARTICULARES

Debajo: versión del diagrama antedicho usted es más probable ver.

Detalles

- Los dibujos se pueden encontrar para cada descripción de producto en diagrama fijaron 1, y/o en diagrama fijaron 2. dibujos están también con el texto impreso. La mayoría de las descripciones de producto que comienzan con el "directorio de C" tienen dibujos.
- Las características (piezas) están generalmente en "paréntesis", y características (piezas) a partir del 1997 son precedidas por un apóstrofe. Ver el papel de las características (piezas) para los detalles.

"=" conecta las características (piezas) del diagrama. La presencia de "=" significa que tal es un diagrama (la clarificación de su ser un diagrama se puede hacer pero no es necesaria). Para facilitar la lectura la primera vez, "=" se pudo considerar las comas, especialmente cuando no hay espacio a la izquierda del símbolo como con comas regulares. E.g.: Activar la luz del switch= entonces se gira.

SECCIÓN 1 DE LA INTRODUCCIÓN:

. Parte 1 de la introducción: ¡Adentro PRIMERO LEÍDAS - entonces invenciones interesantes de la búsqueda de la palabra clave!

. Características - versión práctica corta. Leer esto pronto.

. Abreviaturas - versión corta

. Símbolos - versión corta

SECCIÓN 2 DE LA INTRODUCCIÓN: Leído mucho más adelante

. Concesiones que dimos

. De la investigación décadas continuas del pasado adentro

. Buscar y substituir

. Abreviaturas y símbolos detalladamente

. Dibujos figurados: códigos y más del diagrama

. Características menos comunes

. Misceláneo: Palabras claves, detalles en características comunes.

CARACTERÍSTICAS COMUNES: Descrito moderado.

CARACTERÍSTICAS COMUNES: Minuciosamente. Leído más adelante.

Acceso

Adaptación

Analizador (decide cómo conseguir invenciones que usted quiere)

Artista (proceso creativo)

Analizador del comportamiento (se adapta al comportamiento del usuario)

Balance

Básico

El mandar la cuenta (genera renta)

Cerebro (proceso creativo)

Cámara

Cartucho (mejora de la licencia del software)

Carácteres

Componer (proceso creativo)

Contentar el analizador

Coordinador

Danza (conecta con qué puede moverse)

Base de datos

Distancer (trae a cliente a las invenciones)

Redactor (adapta instrucciones, el etc)

Educador (aprender utilizar la invención)

Hospitalidad

La protección del medio ambiente es importante

Ejercicio

Experiencia (mejorar la experiencia del usuario así que pasan más)

Juego (conceptos para no los usos del juego)

Guía

Icono

Teclado

Localizador (hallazgo sobre cualquier cosa)

Unidad central

Programas del fabricante

Micrófono

Alarma de la mañana (puede recordar sobre cualquier cosa marea a la invención)

Multi-Media (maneras opcionales de obrar recíprocamente con invenciones)

Multiusos (puede adaptarse a cada usuario)

Notificador (saber qué está sucediendo)

Orden y sincronización (miradas en los patrones de acontecimientos)

Comunicador sano saliente (locutores opcionales)

Los animales domésticos predicen (el tamaño de mercado futuro de la invención)

Software de la predicción

Programación

Preguntas (el sistema pregunta a usuario se quieren qué características de la invención)

Teledirigido

Clientes de la encaminamiento a lo que buscan

Pantalla

Buscar y reaccionar (el sistema reacciona dándole a invención búsqueda)

Analizador de sonidos (comandos de la voz)

Cuenta (medidas como de bien las invenciones se adaptan)

Seguridad (infractores del retén, etc.)

Sensores

Software

Visión sana (opción audio-visual)

Estado

Sintetizador (cualquier sonido se adapta a las preferencias de usuario)

Telecomunicaciones (estancia conectada con invenciones)

Terapia (mejores invenciones que usan de la sensación)

Inclinación (palanca de mando)

Tiempo y estampilla de fecha

Pista (saber la invención fue utilizada)

Usuarios (que definen a la gente que utiliza invenciones)

Analizador visual (se adapta basado en lo que ve)

Realidad virtual (futurista...)

W5 (la invención pregunta qué sucedió, donde, porqué, cuando y cómo)

Caminata sobre (variaciones de las ofertas para las aplicaciones del portable)

Zona (véase la sección del localizador).

LAS CARACTERÍSTICAS COMUNES ANTEDICHAS TIENEN SU SUB-FEATURES EN ARCHIVOS SEPARADOS.

Las características comunes siguientes se separan en archivos múltiples. Sus archivos (Secundario-Características) se organizan alfabéticamente junto con las otras características.

ADAPTARSE:
. Introducción y sastre
. Invenciones adaptantes
. Piezas secundarias
. Ampliarse
. Artículo
. Cifrar las secuencias para el software y la DNA
. Otras adaptaciones

Archivo: Introducción a la sección palmadita/Intro6 1

INTRODUCCIÓN CORTA A LA SOLICITUD DE PATENTE

Actualizaciones en LicenseItToday.Com

¡LEÍDO POR FAVOR!

PARA LOS LECTORES DE LA PRIMERA VEZ: El primer leyó esta sección introductoria. En segundo lugar, localizar las invenciones por una búsqueda de palabra clave o su número de identificación. Tercero, cuidadosamente el contenido del estudio, entonces leyó en allí.

Las características comunes en cada uno de las invenciones ven la versión práctica simplificada. Más detalles son en el archivo de la característica principal donde se explican la mayoría de las abreviaturas.

Los primeros contadores de tiempo pudieron no hacer caso de la información precedida con un "" de la estrella, o de la rociada del punto ". -". ¡Disfrutar de la solicitud de patente interesante.!

Descripción de producto central: La descripción central es presentada primero por su nombre y precedida a menudo por su número del producto, luego su descripción. La información adicional sobre la invención se explica en la sección de ramificación. Las ideas del producto se pueden integrar con otras ideas del producto, o desarrollar por separado.

¿Buscar una gama específica de invenciones? Ahora hacer una búsqueda de palabra clave de este uso de la palmadita. Para las actualizaciones y más visita www.LicenseItToday.com de la información. Entonces usted puede leer sobre cómo se presenta nuestra solicitud de patente.

RAMIFICANDO NUESTRAS INVENCIONES

Las ayudas de ramificación explican los niveles probables de importancia en comprender la descripción central. La llanura adicional de los conceptos la ramificación es las ideas, que se pueden combinar con la descripción central, puede estar en el mismo o la diversa solicitud de patente de las ideas de la descripción central. Hay muchas maneras de ramificar los acoplamientos entre los usos de esta palmadita muchas secciones. Esta introducción cubre una buena porción de las variantes.

Reducción del espacio: El sistema de ramificación del árbol reduce grandemente accesos repetidores. El listado simple para el tipo de ramificación que la invención ramifica en: informa al lector para encontrar esa sección de la rama en este y fuentes relacionadas, para la información restante.

Hay dos secciones para donde se divulga el sistema de ramificación: primero, las descripciones de producto; en segundo lugar las "características separadas". Descripciones de producto aplicables del suplemento de las "características".

Las búsquedas de la palabra clave del software para todos los datos en esto y limaduras referidas (también) se utilizan en la localización de datos relacionados. Las búsquedas incluyen: nombres de parte, números del producto, % otros datos (las palabras o las frases encontradas en la descripción central y mencionadas en otras partes de nuestras limaduras, o la patente particulares busca en cualquier base de datos de la patente (los E.E.U.U.)). Utilizar nuestras palabras claves encontradas en las especificaciones, y las secciones específicas de la palabra clave.

Ambas descripciones de producto, y las características, ramifican generalmente hacia fuera en la red siguiente:

RAMA 1: El primer párrafo (eventualmente) en la descripción central a la invención, o características comunes compartidas por nuestras invenciones.

RAMA 2: La descripción adicional excepto el OTD siguiente (otros detalles técnicos) (eventualmente). Ramifica 1 y 2 componen la descripción central.

RAMA 3: Diagramas exhaustos de siguiente de la rama 1 y 2. de OTD con sus descripciones atadas en el mismo archivo, pero no cubierto en la rama 1 o 2. Notas introductorias leídas posteriores que explica las ramas 4, 5, 6, 7, 8, 9, etc.

Nuestro sistema es más elaborado que la ramificación de un árbol. Los acoplamientos (ramas) hacen en muchas direcciones, y a menudo acoplamiento de nuevo al punto donde está el usuario en nuestro sistema inventivo. Los acoplamientos empiezan en donde usted está obrando recíprocamente nunca con el sistema interesante.

INFORMACIÓN DE CARÁCTER GENERAL

Descubrir porqué este uso fue hecho diferentemente de limaduras tradicionales.

Uno de los propósitos principales de las "características" es reducir costes de la investigación, del desarrollo y de fabricación usando diseños similares dentro de diversos sistemas electrónicos del producto. Hace más fácil programar, fabricar, poner y aprender utilizar el sistema simplificado, y repitió características.

Cualquier uno o más característica mencionada en una descripción de producto pudo ser útil. La descripción de producto incluye la descripción central, las partes con sus apéndices, y los diagramas.

La prioridad va a los usos de la palmadita de los E.E.U.U.:
Appl # nuestra referencia # fecha archivada (aproximado):

Este Appl PCTAdapts2006-12 archivó archivado el 19 de diciembre de 2006 en la forma de papel

Las dos limaduras de la patente de diciembre de 2006 en USPTO (palmadita de los E.E.U.U. y oficina de la marca registrada) tienen especificaciones idénticas. Los usos son idénticos a excepción de los formularios de inscripción.

Esta solicitud de patente entera es puede ser archivada con las actualizaciones en el plazo de tres semanas para las sumisiones nacionales de la solicitud de patente en diversas oficinas de patentes incluyendo la Oficina Europea de Patentes.

Archivo: Introducción/IMI S 5 de las características

CARACTERÍSTICAS - VERSIÓN PRÁCTICA CORTA

Este archivo da la idea básica para cada característica.

¡La búsqueda de la palabra clave ahora adentro, u hojea por Subject!

El ACCESO = accede a las funciones electrónicas con afinado correctamente en la combinación, el etc.

ADAPTARSE = otro término para adaptar. Ver la programación de la información de usuario.

El ANALIZADOR = los programas informáticos analiza cómo manejar la situación.

AP = uso: Cómo la invención puede ser utilizada.

El ARTISTA = permite que el usuario haga y que corrija imágenes.

El ASOCIADO = asociando semejanza nivela entre los acontecimientos múltiples o los archivos convertidos a digital.

VAGOS = analizador del comportamiento. Analiza el comportamiento vivo de la gente.

El volumen del BALANCE = de los altavoces ajusta según donde la persona se sienta. El sistema utiliza el punto central para dos o más personas.

CUENTA = facturación: Usuarios de las cargas por cantidad y el tipo de uso.

CEREBRO = el cerebro de la computadora. Cosechadoras: "Analizador", "UIP", etc.

C = computadora. El centro del sistema a menos que esté descrito de otra manera.

CÁMARA/LENTE = el ojo del sistema.

CARRO = cartuchos que se insertarán en sistema. Contiene con frecuencia software/bases de datos útiles.

PALMADA = chapaleta. Cada combinación de palmadas controla una diversa función. Permite que el usuario controle la invención sin el tacto.

COMUNICAR = cuando cuaesquiera dos o más personas, animales o dispositivos comunican con uno a de cualquier manera.

COMPOSICIÓN = composición de música electrónica: Otra variación del producto se puede también utilizar para crear música interesante.

El CA/el ANALIZADOR CONTENTO = analiza la comprobación, o el contenido de la base de datos.

COORDINADOR = características de los coordenadas diversas del sistema.

MODIFICAR para requisitos particulares = ver nuestro para adaptar la característica.

D = diagrama. Este símbolo precede a menudo diagramas.

La DANZA = el movimiento del cuerpo genera sonidos.

FECHA = reloj interno, calendario, notificador de la alarma del reloj.

DB = base de datos

EXHIBICIÓN/S = pantalla.

El ™ de DISTANCER = señala siempre que cualquier dos piezas se separen o vengan juntas. Señales vía las ondas de radio si la separación es distancia más o menos que programable. Ver el otro archivo registrado en el distancer para los detalles. ™ de Distancer

El EDIT = el interruptor (software del `) corrige/defiende hacia fuera datos antes de que alcance a usuario.

EDUC = educativo: enseña a habilidades interesantes. Substituye a instructor humano.

EGH = la educación consigue un ™ más duro ajusta a la habilidad del usuario.

ENTRETENER = también utilizado como forma de hospitalidad.

¡PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = [el `modifica para requisitos particulares] amistad del EP!

EJERCICIO = también utilizado como forma de ejercicio.

FX = transmisiones de fax.

JUEGO = también utilizado como forma abstracta de un juego.

GPS = sistema de navegación mundial.

™ de la GUÍA = un instructor. Sugiere cómo el usuario pudo proceder. El sistema dirige a usuario así que pueden mejorar el sistema del uso. ™ de la guía

INTERACTIVO/INTERACTIVO = el sistema obra recíprocamente con el usuario.

K = llave adentro. El usuario ordena manualmente el sistema, llaves en comando o datos, el etc.

KN = invención de Steven K una y S.

CONCESIONARIO = usuario que utiliza la invención.

LOCALIZADOR = localización de las demostraciones.

M/MFH = opción de la transmisión en circuito del ordenador central para tareas más complejas.

MIC/MICRÓFONO = micrófono

Milímetro = medios multi.

MES = módem

HUMOR = humor del usuario.

MAÑANA = alarma de la mañana.

RATÓN = ratón de la computadora.

Programas de la P.M. = del fabricante.

MQ = la máquina hace preguntas del usuario para obtener la información así que el sistema puede mejorar a usuario del servicio.

MULTIUSOS = el sistema se diseña especialmente para los usuarios múltiples.

N = producto. Puede también estar una invención de S t e v e n K a la y S.

Notifican el NOTIFICADOR = al usuario en el estado de cualquier situación.

La ORDEN y la SINCRONIZACIÓN/O y T = el sistema reacciona a la orden y a la sincronización de acontecimientos externos.

OSCILADOR = comunicador sano saliente. Señala a usuario cuando ocurrió una función dentro del dispositivo.

OTD = otros detalles técnicos. Para Techies.

Paladio = dispositivo de colocación. Unidad portable, que difunde su localización al sistema de colocación.

Banda = programa (software)

PREDECIR que = el sistema predice qué ocurrirán, o qué usuario quiere.

Picosegundo = sistema de colocación. Identifica la posición del paladio (dispositivo de colocación) vía su difusión de las ondas.

PS-ZONE = el sistema reacciona según la localización del elemento en la pregunta. Zona del sistema de colocación

Q = usuario/sistema se hace preguntas. Ayuda a cada uno mejor a entenderse.

R = teledirigido

RC = receptor

REACCIONAR = sistema reacciona a la ocurrencia según lo programado.

La RUTA/el RANURADOR = el sistema encamina el usuario/el otro (parte de) sistema al punto señalado/programa. Un tipo de "redactor".

S = pantalla de ordenador.

CUENTA = el estado de la situación y o del funcionamiento del usuario.

SENSOR = sensor. Sentidos vía muchos medios.

S&R/la BÚSQUEDA y REACCIONAN = las búsquedas del sistema señaladas las ocurrencias, que internan causas una reacción que responda por consiguiente.

El SA/el ANALIZADOR de SONIDOS = analiza el tipo sonido. No importante.

El ANALIZADOR VISUAL SANO = convierte sonidos a los efectos visuales; o convierte inversamente efectos visuales a los sonidos. Es "analizador visual" y el "Mic" interpreta imágenes en datos: redacta la descripción de lo que ve/oye; el otro sistema de los códigos ("cerebro") puede utilizar para procesar ("cerebro") imágenes/sonidos.

El DISCURSO = el sistema habla con el usuario.

SP teléfono del teléfono = del altavoz.

El ESTADO = el sistema demuestra el estado de la situación.

ESTEREOFONIA = estereofonia

Interruptor = software

Sintetizador de SYNTH = de los sonidos.

Etiquetan la ETIQUETA = al usuario de A, o el archivo, o la otra parte de cierta manera. Los detalles son cubiertos por la característica del perseguidor, que confía en etiquetas.

El ™ = el sistema del SASTRE se adapta a una mejor función para los propósitos señalados. Esto también se llama se adapta, modifica para requisitos particulares, y programación de la información de usuario.

Estampilla de fecha del TDS = del tiempo.

T/teléfono = teléfono.

TGH = la terapia consigue más difícilmente. Mientras que la capacidad del usuario aumenta, el sistema empareja más nuevas habilidades del usuario.

La INCLINACIÓN = los dispositivos son controlados por cómo se inclina el palillo. Cada posición de la inclinación representa una diversa función.

TR = transmisión/recepción vía ondas y o alambre.

PISTA/PERSEGUIDOR = acciones de las pistas o de los monitores del sistema del usuario, o sistema.

RASGOS = los rasgos del usuario. La programación del usuario Info ajusta invenciones a los rasgos del usuario.

U = usuario. La persona o el otro partido autorizado para utilizar las características.

™ del UIP + = programación de la información de usuario. El sistema se adapta a las necesidades únicas del usuario recogiendo la información sobre ellas. También llamado: Adaptarse, modificar para requisitos particulares, adaptar.

Reino Unido = ve "K".

UQ = el usuario pueden hacer preguntas de la invención.

VIBRACIÓN = vibración generada por el dispositivo por razones específicas, eg.: hospitalidad; notificador; formar de la comunicación basada en el tipo de vibración.

™ del VA/ANALIZADOR VISUAL = alarmas cuando la cámara ve un cambio en su opinión. No importante.

VR/REALIDAD VIRTUAL = uso futuro con la tecnología de la realidad virtual posible. Menos importante ahora.

WA = caminata alrededor. Unidad portable. También obra recíprocamente el usuario de w (con) vía altavoces.

™ W5 = cuando/donde/cómo/porqué/qué

ZONA = área de A cierta con límites definidos. El área también se ocupa según de su distancia del punto de la perspectiva.
Cada característica se explica más detalladamente a través de la solicitud de patente

Abreviaturas y símbolos - lista corta

Introducción del archivo/de la característica/cortocircuito 4 de Abb-Sym

ABREVIATURAS Y SÍMBOLOS DE USO GENERAL

Con explicaciones simplificadas.

Leído lista ampliada y detallada en su sección principal.

ABREVIATURAS - DE USO GENERAL

"D" = dibujo figurado, diagrama.

"EL" = electrónico/eléctrico

"Existe" = la función particular descrita existe y se diseña felicitar otras funciones del producto.

`Fq " = frecuencia: frecuencia de la transmisión vía la radio o el alambre. Eg.: señales eléctricas/códigos convertidos a digital; infrarrojo; radiofrecuencias [RF]; sonido (para el propósito de la transmisión).

"IMI" = ve el archivo de las características (piezas).

"KN" = invención.

"Kilovatio" = palabras claves para encontrar características relacionadas en este uso, base de datos de la patente, etc.

"Misceláneo" = misceláneo

"N" = producto existente en mercado, o invención confidencial.

"Obvio" = la versión simple de qué se describe los mayo o mayo no ser (completamente) patentable.

"DE OP. SYS." = opciones.

`OTD' = otros detalles técnicos. Leer su sección más adelante. O para los techies.

""/"" del PL/"del plástico PVC" = producto construido del PVC/del otro subproducto del petróleo.

"Interruptor" = software

"Sistema" = sistema electrónico.

`U = usuario (s)

"Ver" = versión.

"W" = con.

"WO" = fuera

"Divide en zonas" = las localizaciones señaladas. Ver las "Picosegundo-Zonas".

SECCIÓN DE LOS SÍMBOLOS

"-" = la descripción siguiente es el principio de una nueva sección que describe el producto.

"--" = lo que sigue es la subdivisión de la sección anterior que describe el producto.

"" = este artículo puede ser menos importante para el concepto de producto total central.

". -" o "-." = el mismo significado que "" y "-". ". -" sin embargo se utiliza solamente para comenzar una nueva sección que describe el producto.

". -" es más bajo en la ramificación, por lo tanto el igual a. El usar comenzado "-." en vez de ". -" en agosto de 96. Esto no se utiliza virtualmente, y el uso de esta forma pudo ser un error significando un período también.

"..." = etc. O los conceptos anteriores pueden ser uno o más de los ejemplos para las ideas dichas del producto. Este símbolo es normalmente tres, con todo hasta cinco puntos.

"=" "- >" ">" = cuando está utilizado en las descripciones de producto señala las líneas entre las partes de un diagrama. La presencia de uno de estos símbolos demuestra que los datos son un diagrama real; por lo tanto ninguna necesidad de escribir el "diagrama". "- >" y ">" son iguales, y el contrario de <, <. Señalan la dirección de señales, "=" permite uno o la transmisión de dos vías de la señal (< - y o - >).

"+" = uno de los aspectos más importantes.

"%" = esta función amplía perceptiblemente la idea del producto más allá del concepto básico. Puede ser que también sea demasiado "lejos hacia fuera" ser factible.

"()" o []' = demuestra uno o más de los ejemplos posibles múltiples. Uno puede guardar o conservar cuál está en paréntesis.

Incluye una lista limitada de posibilidades.

"/" ò \' = significa "y o". Por ejemplo los medios de A/B, A y o B se aplica al panorama.

"~" = iguales que "/" o "\" a menos que una línea también se dibuje entre las piezas cuando se utiliza esta línea ondulada símbolo.

": " = la información después de los dos puntos representa uno o más de las manifestaciones posibles.

Archivo: Introducción a las concesiones de la palmadita/de la lista

LAS CONCESIONES DE LA TAPA SE DAN A LA GENTE SIGUIENTE:

Conceden la gente siguiente de alrededor del mundo los altos honores para su contribución creativa a esta solicitud de patente. Las concesiones se han dado desde los años 80 para la contribución creativa de la gente a esta solicitud de patente. Los recipientes de la concesión están para:

Archivo: Introducción a la patente/a la continuidad del R&D

NUESTRA INVESTIGACIÓN DE LA VIDA REAL SOBRE ASPECTOS DE ESTE USO DESDE ENTONCES

Leer esta sección mucho más adelante

Esto también significa nuestra continuidad en la investigación de esta solicitud de patente. Incluye la investigación de la vida real en la aplicación de los conceptos de la invención. En los E.E.U.U., las derechas patentables pueden comenzar en el concepto de la idea, incluso antes de la fecha de limadura de la patente como se requiere en el resto de los países excepto las Filipinas. Ejemplos de la investigación:

SOBRE LA VISIÓN: NUESTRO TEMA DE LA INVESTIGACIÓN

. Seguridad gubernamental en: puntos del control fronterizo al entrar/que sale edificios a las fronteras del país, transporte: tener acceso, analizador del comportamiento.

. Adaptándose a los comportamientos culturales en Japón, Europa más antigua Unión Soviética, los E.E.U.U., México, Canadá, el etc.

. Promover la incubadora de negocio

. Investigación de las funciones de: comercial y relacionado (propiedades inmobiliarias residenciales), centros de negocios de la oficina (habitaciones ejecutivas), incubadoras de negocio (financiadas por el gobierno y/o fuentes privadas). Muchas fuentes/organizaciones en el Internet: OfficeBusinessCenters.Com, Technology.Gov, WorldBank.Org, Bio.Org, Jetro.Go.Jp, NewEnergyFinance.Com, EmIncubation.Co.UK

. Gobierno: VAGOS para los empleados del gobierno (localizados regionalmente y a otra parte); ciudadanos y votantes; expresando opiniónes público y a través de los canales del gobierno (para las mejoras y/o la identificación de problema necesarias). Problemas con el interés de uno mismo de los jugadores de la energía que en promedio no eleva ventajas/las mejoras necesarias para los ciudadanos (regionales).

. Protección del medio ambiente: reciclaje; energía de la generación/del ahorro. Pista vía el VA, SA, VAGOS.

. Ciertas organizaciones obstruyen el desarrollo de las incubadoras de negocio. Esto ayudó a nuestra investigar y/o a mejorar el concepto de la incubadora de negocio y su de proceso [incluso si los resultados finales no aparecían total nuevos.]

. Investigación del proceso creativo del pensamiento. Adaptación de ideas, características, servicios a: cultural limitar los patrones del pensamiento (las decisiones de la compra que no son todas basadas económicamente [según lo determinado por vagos]). Esto requiere el suplemento que adapta, puesto que los juegos de la economía del negocio del papel en cliente que el pensamiento modela superan más fácilmente líneas culturales.

. Cómo los profesores (de la ingeniería y de los artes), los ingenieros, los artistas y los consumidores se comportaron, dentro y fuera de sus patrones de comportamiento de la investigación.

. Reacciones de la gente a nuestras invenciones confidenciales.

. Simplicidad del interfaz: cómo presentar materias en formato corregido simplificado. Qué características deben ser primeras explicarse (en extracto), (así que los usuarios pueden ser dirigidos a la apreciación/que usa otra las' características/los servicios asociados ligados). Interfaces para: Incubadora de negocio; Venta/propiedades inmobiliarias comerciales/residenciales del alquiler con opción a compra en todo el mundo; explicación de nuestras invenciones; La gente de ayuda realza' analiza su proceso del pensamiento creativo; Importancia de las etiquetas/de los títulos (del trabajo); Aspirantes de la investigación [el usar de las pruebas del acceso del `(vagos del `)], etc.

. Rentabilidad:

- Unidad: la consolidación de necesidades de los multi-usuarios, entonces adaptando los servicios de su común/del promedio de las necesidades ahorra costes, e.g.: tipo características de la incubadora. ¡Un servicio se ata a otras características ofrecidas [unidad de la invención], incluso debido a la proximidad del cliente/de la característica, cómo una necesidad liga a otra necesita (sobre el cliente que es dirigido), familiaridad del interfaz [del ser humano], más.!

- Más barato investigar acciones humanas vivas, que prototipos. Nuestras invenciones también se modelan' asociado [nuestro negocio] a transacciones humanas/económicas [dando por resultado la generación del rédito] del proceso de la investigación/del lanzamiento de las invenciones futuras.

. Las materias confidenciales exploradas, una porción se divulgan aquí.

IMPORTANCIA (INCUBADORA E INVENCIÓN DE NEGOCIO) A LAS CARACTERÍSTICAS:

Investigaron el ACCESO = a la policía, ADT, Sonitrol y otros servicios basados los E.E.U.U. de la compañía de seguridad. Comportamientos de la gente que tiene acceso correctamente al sistema de seguridad del edificio, y saliendo correctamente las zonas de la seguridad. Gente rectora en los métodos de acceso.

. Restringiendo acceso basado encendido: analizador del comportamiento (comprobaciones de antecedentes); estampilla de fecha del tiempo; privilegio de tener acceso a zonas señaladas.

. Contraseñas para utilizar los dispositivos (copiadoras). Siguiendo uso, y asociando esto a los réditos, y generando a clientes de más largo plazo (licencias extendidas). Honorarios más baratos por las copias hechas

hacen a clientes tan más feliz que éste es un punto frecuente de la interacción para los clientes. Esto hace interacciones frecuentadas más comprables, y de tal modo aumenta la cantidad de satisfacción del cliente. Los réditos de servicios fijos, menos auxiliares (el espacio de oficina arrienda) pudieron generar más renta. Cuando una característica es menos confiable (las copiadoras) considerar cargar menos para él (hasta que se mejora la característica de la invención).

. Nuestro limpiador del pie de la puerta del animal doméstico ató a la gente que seguía la suciedad en el edificio porque ella no pudo pasar bastante tiempo usando la estera del piso.

ADAPTAR el ™ = los servicios interempresariales que emparejan (B2B) a las necesidades del cliente, e.g.: telefonar la contestación (los servicios); dando el acceso y vagos servicios relacionados (en el escritorio del recepcionista). El reaccionar a la gente/a las compañías que aprovechan incorrecto de nuestros servicios adaptados.

. Comunicando con la gente vía los patrones del comportamiento alternativos, diseñados para conseguir señaló reacciones. Buscando su interés ofreciendo interfaces señalados.

. Abordar el engaño en otros: seguimiento de su comportamiento sin su conocimiento; la educación de ellos y de otros vía la orden y medir el tiempo de mi comportamiento que no bulla cuando lo piensan será más barata para que haga lo que él quiere. El establecimiento de mi consistencia en la tolerancia de prácticas fraudulentas tenía una ventaja prevista en tener pocos conflictos (infracciones).

. Haciendo nuestro negocio y otros servicios más accesibles vía la dirección adaptada, e.g. poca entendía los servicios de la incubadora de negocio, ni nuestros métodos para aumentar las capacidades creativas inventivas en gente.

ANALIZADOR = dando el acceso: confianza en los datos del sistema de seguridad' que siguen para mejorar el sistema del acceso [limitando privilegios de acceso a los partidos con [acceso relacionado] comportamiento incorrecto.

El ARTISTA = los VAGOS que demuestran a gente de las opiniónes tienen de arte. Cómo los artistas/arte crean humores señalados, y efectúan los comportamientos de la gente [según lo reflejado en VAGOS].

El ™ del ASOCIADO = los clientes/los empleados de las asociaciones pueden hacer/acoplamiento con lo que consideran/oír/leídos [el `va, sa, el corregir, vagos]. Asociaciones de qué acoplamientos las' llevaron a las ventas o el usar de los servicios [los servicios del uso/de la licencia y/o los alquileres del espacio físico que fueron adaptados por W5.

VAGOS = comportamiento del propietario: cómo intercambian el acceso para la renta de la facturación, balanceado por el análisis de riesgo [basado en la seguridad (búsqueda, vagos del fondo), predijo comportamiento del cliente [concesionario del `].

Acceso de la CUENTA = de la pista de características en [publicación mensual] la facturación. Qué características eran W5 usados, y buena voluntad para que los clientes paguen, sin importar cómo asociaron un cociente del coste/ventaja. Algunos servicios son así que importante pero gente estaban menos dispuesto a pagar ellos [para los vagos demostrados tales estaban las derechas previstas para su licencia del acceso]. Cómo diversas incubadoras de negocio analizadas/siguieron esta situación para el mayor rédito de la facturación, y renta del cliente [derechos del `].

. Software de la facturación, eg.: Software de Excel.

CÁMARA/LENTE = acceso, vagos, va. Investigación de las cámaras de seguridad.

CARRO = tarjeta de destello de Digitaces [con imagen] para [copiadora/cálculo del color].

La PALMADA = las luces/las características del acceso [restricción] activaron. Conociendo a gente ser edificio basado en sonidos en vestíbulo, etc. Con los sonidos, las luces se dejan encendido.

COMUNICAR = telefonía. Adaptó nuestro servicio de contestación del teléfono a los clientes. Nuestra comercialización se adaptó a los comportamientos y a los estilos locales del negocio.

El COORDINADOR = el cliente necesita con servicios e instalaciones disponibles del edificio.

La DANZA = que los movimientos del cuerpo (del recepcionista) generan predijo reacciones en concesionarios, eg.: mayor placer (hospitalidad) del `, curiosidad (interés en la compra' accesing otras características) de continuar la experiencia positiva. Ergonómica (no lastimada su parte posterior, o caída).

DB = siguiendo uso facturable. Base de datos de acceso a: analizar W5 está utilizando características, así que podemos: aumentar la satisfacción del cliente - > retención del cliente (licencias más largas)/mayores facturaciones mensuales.

™ de DISTANCER = artículos que no sueltan. Custodia de las cosas donde pertenecen. Atar plumas al sujetapapeles. Reducción del hurto.

ENTRETENER = la hospitalidad W5 genera la mayor facturación [de largo plazo].

La PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = consumición eléctrica por los dispositivos [fijos] tiene gusto de encenderse, HVAC [ventilación de la calefacción y aire acondicionado], ordenadores personales, adminículos electrónicos.

. Las dificultades que conseguían a gente reciclar sus basuras, y teniéndolas cogieron con un mejor interfaz para [los arrendatarios]. Seguimiento, VAGOS, acceso [el `W5 para escoge sube; destrozando documentos].

El EJERCICIO = los dispositivos [arrendatarios] podrían querer. Escalera = construido en el amo de la pisada [resistencia del comportamiento a caminar encima de un solo tramo de escalones a pesar de subsidios por enfermedad]. ADA [acto americano de las inhabilidades]. Instalaciones de la gimnasia de la oficina.

JUEGO = visitantes en el área de recepción que juega [vídeo/no electrónico] a juegos. W5 se juegan.

GPS = quién hizo W5.

La GUÍA = los clientes aprenden características más disponibles después de que comenzaran a autorizar algo. Demasiada información sobre características disponibles contradice el deseo de la invención para un interfaz más simple.

. El confiar en/que aprende utilizar una función, puede llevar naturalmente al interés/a la franqueza del cliente a aprender sobre otro menos o [la O.N.U] relacionó características, eg.: las funciones de la copiadora [del color] consiguen EGH que requiere complicado.

. El interfaz amistoso/honesto crea efecto sinérgico en: los clientes confían en más cuando el abastecedor es [usuario] amistoso; las ayudas de la facilidad de manejo crean confianza. El comportamiento difícil [maximizar beneficios a corto plazo] lastima facturaciones de largo plazo en gran medida, eg.: los clientes hablan con uno a. Los clientes analizan/los vagos que los servicios/invención ofrecen.

INTERACTIVO = más es el mejor. Vivir contra asistentes automatizados del teléfono.

Comportamiento del CONCESIONARIO/del LICENCIADOR = del cliente y del propietario [vagos del `]. Cómo maximizan/reducen al mínimo, renta/los gastos/los honorarios de derechos monetarios. Se autoriza/se utiliza W5 algo. El concesionario W5/los licenciadores no actúa en sus mejores intereses financieros [debido a la falta de ver todas las (ligado' se asoció) ventajas]. Qué comportamientos/opiniones (vagos, asociaciones del `, corrigiendo) nublarse/juicio del efecto (análisis de la toma de decisión del negocio).

El LOCALIZADOR = sabe que los clientes son W5 (arrendatarios): las ayudas conectan a llamadores de teléfono [defendidos] entrantes con nuestros clientes. El seguimiento del cliente acelera la conexión del teléfono en términos de: acelerando la conexión/pudiendo hacer el acoplamiento (difícilmente hacer si la persona señalada y/o la característica querida no pueden ser encontradas/ser conectadas con).

MIC/MICRÓFONO = VA del sistema de seguridad.

. Los VAGOS de [recepcionista en el teléfono] demuestran qué acciones crean mayores facturaciones.

. El VA es forma de control de acceso: ¿puede el visitante/el cliente potencial ser confiado en? Facturaciones futuras que predicen [cuánto pasarán].

Punto del milímetro = de energía. Poner la impresora sobre redes [para ésos con el acceso]. La simplificaión de interfaces puede también reducir la renta [pocas personas capaces de tener acceso a la red complicada de la impresora] genera a menos facturaciones, pero a menos clientes frustrados. Los clientes frustrados pudieron ser más corto plazo.

NOTIFICADOR = acceso incorrecto [uso] seguido por los empleados/los sistemas de seguridad.

PREDECIR = las necesidades [sin especificar] del cliente, y longitud de seguir siendo un cliente. Estudiar su historia de crédito, y utilizar nuestro proceso relacionado analizador del comportamiento.

Q = sabe las preguntas W5 para pedir

RUTA/RANURADOR = clientes anticipados directos a los servicios que predecimos que necesitan; o aún a otras organizaciones basadas en su perfil del comportamiento.

S&R/la BÚSQUEDA y REACCIONAN = cómo nosotros y/o los clientes buscamos y reaccionamos el uno al otro.

SYNTH = que expresan las tonalidades W5 tenía reacciones fiables en oyentes/usuarios.

T/características de sistema de teléfono del teléfono = de la incubadora de negocio recomendadas por OBCAI

TGH = los métodos para aumentar el pensamiento creativo (en invenciones de concepción) consiguieron más difícilmente.

RASGOS = de clientes.

UQ = preguntas comunes y respuestas

La VIBRACIÓN = la gente de la pista W5 están caminando [en el edificio] [para los vagos]. Qué características son W5 usados.

VA = siguiendo actividad económica/[empleados de la incubadora] analizando comportamiento del cliente = características/servicios del sastre.

Patrones del ™ W5 = del uso para los servicios facturables

ZONA = el derecho de propiedad de las propiedades inmobiliarias. El mayor uso de ciertas zonas en el edificio crea un patrón de comportamiento de usuarios; por el que reaccionemos adaptándose a sus necesidades por consiguiente, e.g.: localización de nuestros servicios, equipo, etc.

¡Mucho más.!

Archivo: La introducción a la palmadita/a la búsqueda y substituye

BUSCAR Y SUBSTITUIR EL TEXTO PARA LAS VARIACIONES DE LOS USOS DE LA PALMADITA

Versiones simplificadas y detalladas importantes de esta solicitud de patente

ELEGIR LA VERSIÓN NECESARIA

Actualizaciones y más Info visitar www.LicenseItToday.com o pedir las jefaturas de California 1-707-428-5000

Este archivo demuestra búsqueda y substituye las características que pueden y/o haber sido conducido en este uso de la palmadita. Para condensar el uso mientras que proporciona la instrucción, buscar y substituir se ha conducido de diversas maneras en todas partes.

Nuevos párrafos:

- Substituir dos vueltas (vueltas de carro) por un retorno del carro entonces un cuadro. Esto da lugar a omitir líneas vacías entre los párrafos (como en la versión de texto original). La muesca que comienza en el margen izquierdo facilita legibilidad. Esto es mejor que omitiendo todas las vueltas de carro, incluso si un símbolo fue utilizado para señalar donde un nuevo párrafo comienza.

La abreviación llama en general:

. Usted puede ser que convierta la mayor parte de las palabras comunes en el uso.

. Elegir los 100 a 10.000+ la mayoría de las palabras de uso general como "y" convertido a "y".

. La solicitud de patente publicada/puede tener un acoplamiento a nuestro Web site con el cual podría dar el contenido entero y/o sin la abreviatura - como cortesía. Quisiéramos que la gente consiguiera de fácil acceso a este contenido de las solicitudes de patente.

. Traducir el texto en otras idiomas. Adaptarse se traduce qué

. Las partes anteriores de la solicitud de patente utilizan pocas abreviaturas. Esto ayuda en el aprendizaje y la comprensión.

. Archivos con pocas abreviaturas, por lo tanto buenos puntos de partida para aprender nuestro sistema: el archivo de las características principales, características del acceso.

. Para condensar y simplificar la lectura requerida de esta solicitud de patente entera; este uso de la palmadita, los términos singulares era variaciones de uso frecuente, mientras que omitía de la palabra del sufijo que demostraban pluralidad, presente último o, y otras estructuras gramaticales. Por lo tanto ver un término singular tal como "característica" implica las "características plurales" puede aplicarse.

Acoplamientos:

Las características alternativas pueden ser insertadas (por nuestro software) donde hay acoplamientos. Cada característica tiene acoplamientos a muchas otras características y a sus secundario-características. Estos acoplamientos se demuestran en varias maneras. Incluyen:

. Términos en soportes (como tales) o [como esto].

. Qué sigue los dibujos que contienen los solos signos de igualdad [líneas entre las partes en nuestros dibujos], o los dos puntos pueden alcanzar el mismo propósito.

- Vaciar (espacio abierto) en soportes, o después de éstos mencionó que los signos de igualdad y los dos puntos demuestran donde las especificaciones pueden ser insertadas. Los ejemplos se encuentran a través de este uso. Recordar que los espacios vacíos no son necesarios demostrar la presencia del acoplamiento.

Indicadores misceláneos en la adaptación de este texto:

. Explicar por lo menos la palabra completa, con o sin las palabras adicionales describiendo la característica. Puede ser algunas palabras adicionales más que un párrafo.

. La descripción completa para una invención con sus numerosos adaptaciones pudo exceder 1.000.000 páginas. Este aspecto importante está ALTO naturalmente porque:

- Los acoplamientos hechos de una característica (el paso 1) va a muchas otras páginas (paso 2). Los acoplamientos en el paso 2 van a muchas de sus páginas (paso 3). El paso 3 liga al paso 4, 4 a 5, y así sucesivamente. Muchos de los acoplamientos hacen un círculo completo de nuevo a la característica en el paso 1, vía las trayectorias divergentes. La introducción de los usos de la palmadita tiene detalles.

. Utilizar el software de la edición de textos como la palabra para Windows o Apple; programas en línea; hacerla en su cabeza (de los lectores); cambios del handwrite; etc. Ahorrar cada variación encajonan una versión se adapta mejor.

Cambia que se ha hecho en porciones de este uso de la palmadita: Correcto y o alterar la gramática. Corregir los faltar-deletreos. Capitalizar los títulos: Nuevas invenciones, y nuevos asuntos.

Estrategias de búsqueda:

. Las estrategias de búsqueda no se incluyen normalmente en solicitudes de patente. Pueden ser utilizadas para buscar invenciones en este uso y/o las bases de datos de otras patentes. Mientras que una alternativa de esta solicitud de patente no las está divulgando, deseamos: 1. Demostrar los ejemplos adicionales para cómo las

patentes relacionadas pueden ser encontradas, a pesar de la naturaleza limitada de las estrategias sugeridas. Este otras demostraciones relacionaron encarnaciones para entender mejor las invenciones. 2. Ser de uso fácil, sin requerir al usuario ser creativo en la concepción de buenas palabras claves.

Ver la sección de las abreviaturas para más ejemplos. Las flechas demuestran en lo que se puede hacer un término o de. Usted puede invertir las flechas, e.g. "con" el → "con" en bastantes para demostrar que "con" puede ser ampliado en la palabra "con" sin (sin) tener otra flecha el ir la otra manera. Las flechas adaptaron esta sección en la fabricación de ella más fácil para que más (no toda la) gente entienda (y comtemplar).

Términos específicos que pueden o haber sido corregido en este uso:

. y → y. y → y

. →/del ao. &or del → del ao. → del &or y o

. → de OTD otros detalles de Techie, u otros detalles técnicos, o para Techies (omitir cualquier retorno del carro después de él)

. Anota el → al pie de la página. Para Techies

Alargar:

. → de w con. con el → con

. → del wo sin. sin → fuera

. → opcional opcional/alternativa

. Usuario del → de U

. D: Dibujo del →. Dibujo figurado del → de D. Diagrama del → de D

Términos de uso general: Las abreviaturas y las extensiones usadas son mencionadas en sus mismas líneas:

`D, diagrama, dibujo, dibujo figurado. Seguido a menudo por los dos puntos.

EL del `, electrónico

`Fq, frecuencia - el tipo eléctrico.

El `IMI, característica, parte, y funciona quizá

`KN, N, invención. Seguido a menudo por los dos puntos.

Kilovatio del `, palabras claves. Seguido a menudo por los dos puntos.

. ' Nr, notificador, alarmas

`Misceláneo, misceláneo

El `obvio, existe

OTD, otros detalles técnicos, para Techies, leyó más adelante. Seguido a menudo por los dos puntos.

Interruptor, software

`Sistema = sistema electrónico.

U, usuario (s), persona

`W, con, con.

`WO, SIN, fuera

Abreviado:

. aproximar el → (LY) aproximadamente

. → medio sistema de pesos americano

. especialmente → especialmente

. → exp del experimento

. laboratorio del → del laboratorio

. → máximo máximo

. → MES del mes

. neg negativo del → (LY)

. posición positiva del → (LY)

. separar el → (LY) sept

. sepd separado del →

. → estándar std

. tecnología técnica del → (LY)

. → vol. del volumen

Las muestras de las características (piezas) abreviaron:

. comm del →//comunicada/comunicación

. → c de la computadora (ized)

. coordinación coordinada del →

. invención o → N o KN del producto

. el notificador/notifica/notifie (s/d) nr del →

. → de OTD para Techies (cualquier etiqueta reduce el confundir de gente no técnica)

. → teledirigido R [no investigación]

. Interruptor del → del software

. → SA del analizador de sonidos

. Teléfono del → del teléfono

. → visual VA del analizador

Alterar las descripciones de la invención (especificaciones):

. El pequeño → adaptó tamaño

. ¿El → obvio existe?

. El → rápido adaptó despacio

. Más → menos. El → de la cantidad adaptó cantidad

. → opcional importante (aspecto)

. → costoso adaptado al presupuesto del ajuste

. Excluir el → incluyen

. Buscar el → buscado

. Encontrar el → encontrado

Otros métodos:

. Etiquetando la línea pasada de cada archivo, antes de que se consoliden en un uso:

Archivo de los extremos: El ____ = concluye este archivo: _____. La nota, toda la información y las funciones son encontradas teniendo acceso (con el permiso) á todos los acoplamientos atadas a lo que desea el usuario.

. Texto del cierre relámpago (reducir requisitos de memoria poniéndolo en un archivo de cierre relámpago). Relampagar vía las maneras que cambian la memoria requerida, con o sin los cambios del texto.

. Substituir las palabras algo que una persona puede no entender: mantener fuera de las manos de (los niños), de la gente no educada métodos aplicables, de la seguridad, del etc. Guardar quizá los códigos del cambio a otra parte.

Liberar el espacio abierto:

. Reducción de líneas vacías: Convertir todas las líneas vacías múltiples a partir del 3 encendido para arriba abajo a 2 líneas vacías, eg.: convertir cuatro vueltas de carro a dos vueltas de carro, después redactarlas hacia abajo a tres vueltas de carro en dos vueltas de carro. Convertir dos vueltas de carro en un retorno del carro seguido por un pequeño cuadro.

Precede menos principio material importante con cualquiera o. - o. -. Tener un código uniforme.

- Reducir dos (o más) espacios vacíos en o entre oraciones, (un solo espacio).

- En el texto (de la original), los nuevos temas comienzan a menudo en el margen izquierdo, en una nueva línea con un punto, una rociada, o una rociada doble.

--+ el círculo minúsculo de A pudo representar donde un punto o secundario-punto termina y comienzo de un nuevo punto o del secundario-punto. O un 1 precede una rociada, y 2 precede una rociada doble. La idea es que más bajo es el número la llanura posterior es la cadena de la anchura.

. Substituir dos espacios entre las palabras vacíos a un espacio.

. Substituir las líneas vacías por menos espacio, (pero más que qué se encuentra entre otras líneas).

. Espacio antes de nuevos secundario-puntos. Alternativas:

--el ejemplo demostrado: el secundario-punto del párrafo es un punto. Secundario-punto del punto una rociada. Rociadas del doble del secundario-punto de una rociada. Detalles en la introducción.

--insertar una lengüeta (dentro de la misma línea que la oración precedente)

--número de código para cada nuevo secundario-punto, eg.: punto = 1, rociada = 2, rociada doble = 3...

--las oraciones que preceden secundario-puntos pueden no tener períodos en su extremo.

Considerar no buscar y no substituir secciones señaladas, e.g.:
. Reducción del espacio abierto en páginas con las columnas, e.g.: índices; listas de gente que recibe nuestras concesiones. Dibujos figurados (diagramas) que usan puntos lineares.
. La figura dibujos que ya muy se condensan generalmente usando nuestro método especial nosotros demanda.

La mejor manera de experimentar esta solicitud de patente se está imaginando cómo el sistema entero funcionará. Un modelo verdadero es el mejor como las invenciones y sus características pueden estar en uno o más tecleos (acoplamientos) lejos, dependiendo de donde en el sistema usted está en ese entonces.
Concluye esta búsqueda y substituye la sección

Introducción del archivo/de la característica/Abb-Sym 4

ABREVIATURAS, SÍMBOLOS Y CARACTERÍSTICAS RARAMENTE USADAS: Detalladamente

SECCIÓN DE LAS ABREVIATURAS

"B" = este viejo símbolo fue cambiado a "N".

La "idea básica" = las descripciones completas para cada producto numera. Incluye: descripción central y todas sus ramas.

"Ramificando" = las ayudas de ramificación del árbol explican los niveles probables de importancia en comprender la descripción central.

"Descripción central" = la descripción escrita después del listado principal de cada número del producto. Es la parte central del sistema de ramificación.
. - Esto excluye OTD del número del producto - la otra sección de los detalles técnicos; pero incluye: aspectos con cualquie símbolo (excepto %), y las piezas, usadas en la descripción central hasta una rama.

El "código" = considera "piezas", o el "archivo de las piezas".

"Shell creativo" = cuaesquiera características de producto adicionales proporcionadas por otros partidos más allá del alcance de la idea básica.

"D" = diagrama/teléfono. Eg.: D1 es el diagrama #1, D2 es el diagrama #2. D1 y D2, si en la misma sección general, debe ser relacionado para iguales y o separar normalmente productos.

El "revelador" = se convierte, el desarrollo, %developer

"Dir " = directorio: invenciones de Kays". Los primeros dos espacios de un número del producto tienen una letra que demuestre de qué directorio es el archivo del producto, eg.: 1B-050-022004 - > categorías A, B, C, D, E de la letra de la muestra del B....

"Eg." = los ejemplos siguientes son solamente uno o más de los ejemplos posibles. Iguales que: "^", "etc", "..."

"EL" = electrónico/eléctrico

El "etc" = los conceptos anteriores puede ser uno o más de los ejemplos para las ideas dichas del producto. No es una lista completa. Iguales que: "^", "eg. ", "..."

"Existe" = la función particular descrita existe y se diseña felicitar otras funciones del producto. La omisión de "existe" de cualquier descripción nunca la implica es una característica única.

`Fq " = frecuencia: frecuencia de la transmisión vía la radio o el alambre. Eg.: señales eléctricas/códigos convertidos a digital; infrarrojo; radiofrecuencias [RF]; sonido (para el propósito de la transmisión).

"IMI" = ve el "archivo de las piezas".

`IOW' = es decir. La información se pudo repetir, con o sin nuevas dimensiones.

"KN" = invención de Sr. Kays. Uno o más invenciones que él concibió.

"Kilovatio" = palabras claves. Utilizado generalmente para la palabra clave del software busca, eg.: para localizar los archivos relacionados con las palabras claves señaladas. % estas palabras claves mencionadas se

pudieron también utilizar para las búsquedas electrónicas de la patente de bases de datos mundiales para ampliar la invención (usos).

La "categoría de la letra" = considera "Dir": Directorio.

La "subcategoría de la letra" = la categoría de la letra tiene productos de cada uno de sus archivos divididos en subcategorías separadas. Eg.: la categoría D de la letra tiene subcategorías de la letra: DE, DG, DI.

"Misceláneo" = misceláneo

"N" = producto existente en mercado, y o KN.
- definición hasta cerca de 1995: número del producto; uno de los aspectos de Steven Kays de la invención; cualquier producto precedido por las piezas del producto de un producto del number'; es productos también; La "especificación de producto cifra el apéndice - números de patente de los E.E.U.U. para cada código"

"Obvio" = esto tiene cierta ocasión de ser obvio apenas en su forma simple. Obvio puede significar no patentable debido a ser demasiado similar a otros productos. El hecho de que este término fuera utilizado no dice de ninguna manera que las funciones con esta declaración sean más o menos probables ser obvias.

`OTD' = otros detalles técnicos.

"DE OP. SYS."/opcional = opciones. Importante: este término se utiliza para ayudar a aclarar descripciones, y/o ofrece alternativas. Un elemento opcional en sí mismo no sugiere que si está utilizado, esté en vez de algo más. Cada característica/aspecto como descrito es una variación incluso cuando tal no se menciona.

El 'organismo = cualesquiera vive el organismo, que se mueve [a menos que esté indicado de otra manera]. Eg.: Seres humanos, mamíferos [animales domésticos, animales mantenidos cautiverio o encontrados en salvaje, pájaros], pájaros, reptiles. %Microorganisms se aplican si la invención se puede hacer para aplicarse a ellos, en vista de su tamaño pequeño, eg.: ameba, bacterias, virus. Los organismos se describen comúnmente en el contexto científico de analizarlos vía vagos, o para seguir su comportamiento.

""/"" del PL/"del plástico PVC" = producto construido del PVC/del otro subproducto del petróleo/caucho (endurecido)/%vinyl/metal/madera.

"Parte el archivo" = pieza de especificación de producto, eg.: "distancer", "chapaleta". El archivo de las piezas es la lista completa de todas las partes en "el papel de las piezas de especificación de producto".

"Categoría de producto" = el tipo de producto desde el punto de vista del fabricante, eg.: cámaras, juguetes.

""/"De la descripción de producto N" = la descripción central de cada número del producto más todas sus ramas, eg.: OTD, apéndices, diagramas.

"Archivo del producto" = los archivos dentro de una categoría de la letra, o subcategoría de la letra, eg.: 2.o, 2DE, 2DG, y 2DI.

""/"Del número del producto N" = la mayoría de las ideas del producto con una descripción central se precede por a # eg.: 1B-050-022004.

. - Cada número del producto señala ideas del producto a parte del resto de los papeles. Los números del producto se encuentran normalmente en un archivo del producto con uno o más números del producto.

"Pieza de especificación de producto, código de la especificación de producto" = piezas: Los significados idénticos son las piezas usadas en las descripciones de producto. Cada concepto con mayúsculas dentro de piezas de especificaciones de este "producto" archiva o su apéndice, y utilizado en las descripciones del número del producto. La abreviatura "IMI" fue utilizada para señalar las piezas archiva, e IMI& el apéndice de las piezas.

El "RM" = me leyó. Notas a entender mejor.

"Interruptor" = ("computadora") software

"Símbolo" = Eg.: , %, -, --. -, ()," ", +, O,...

"Sistema" = (relacionado (EL)) sistemas, sistema

"Ver" = versión. Eg.: versión electrónica o mecánica o plástica.

"W" = con. Para los propósitos del diagrama (figura), %each "w" también representa una línea entre qué precede y qué sigue. W/In = dentro.

"WO" = fuera

"Descripción escrita" = encarnaciones. Es la descripción de un número o de una pieza del producto en la forma de palabra, incluyendo todas las ramas. Excluye diagramas.

"Divide en zonas" = las localizaciones (señaladas) según lo descrito en la parte "Picosegundo-Zonas". Eg.: está diferenciando zonas en las cuales (picosegundo) el resultado localizado en la diferenciación: efectos, causas, procesos, etc.

SECCIÓN DE LOS SÍMBOLOS

"-" = la descripción siguiente es el principio de una nueva sección que describe el producto.

"--" = lo que sigue es la subdivisión de la sección anterior que describe el producto.

"" = señala la información para el lector que ha agarrado ya ideas relacionadas sin tales marcas. Este artículo puede ser menos importante para el concepto de producto total central. Realizar que la carencia de esta parte no significa que el artículo es una idea central. Este y piezas relacionadas (. -. --) tener no concerniente la patentabilidad debido a la pieza de por sí. Esta parte puede seguir o preceder inmediatamente un aspecto tan posiblemente menos importante. También se incluyen cualesquiera de sus subdivisiones siguientes representadas por "--". Ejemplo: si el elemento o la sección de una parte se precede o se sigue cerca, el aplicables son menos importantes. Un elemento puede tener a partir del uno, a un máximo de dos (es menos crucial que) directo al lado de él.

. - La estrella después del título de cada parte se aplica solamente cuando: la pieza se utiliza en cualquier sección de OTD (salvo especificación de lo contrario, eg. por "+" que se anula); este tipo de estrella no se aplica cuando la pieza se utiliza en una descripción con excepción de OTD.

"." = comienza la nueva sección principal dentro de un archivo. Algo tiene gusto de un nuevo subcapítulo. Se siguen por "-" de que los subconjuntos "." Eg.:

. Corregir: el programa ajusta---

. - Don't confunde "." con ". -", o "...", o un período simple en el final de la oración.

. - Tales nuevas secciones principales pueden también apenas comenzar después a saltar una línea vacía. Las secciones a veces principales se encadenan juntas vía una sola rociada en margen izquierdo entre las secciones.

". -" o "-." = el mismo significado que "" y "-". ". -" sin embargo se utiliza solamente para comenzar una nueva sección que describe el producto.

". -" es más bajo en la ramificación, por lo tanto el igual a. El usar comenzado "-." en vez de ". -" en agosto de 96. Esto no se utiliza virtualmente, y el uso de esta forma pudo ser un error significando un período también.

": " = las descripciones después de dos puntos son algunos de los ejemplos para la descripción de la invención. Este símbolo es mucho más importante que puede aparecer. Los dos puntos se pueden también interpretar a menudo como dos lados separados del diagrama. Los dos puntos ": el" símbolo representa una línea del acceso que la precede al acceso que la sigue. El acceso después de los dos puntos puede también ser un subconjunto de qué precede los dos puntos. Los dos puntos representan qué siguen como el ser "incluye por lo menos el siguiente", "una pluralidad de...".

- Además, algo de una demanda independiente de la patente pudo ser interpretada como qué precede los dos puntos; y secundario-demanda ser qué sigue los dos puntos.

"..." = los conceptos anteriores pueden ser uno o más de los ejemplos para las ideas dichas del producto. Este símbolo es normalmente tres, con todo hasta cinco puntos.

"=" "- >" ">" = cuando está utilizado en las descripciones de producto señala las líneas entre las partes de un diagrama. La presencia de uno de estos símbolos demuestra que los datos son un diagrama real; por lo tanto ninguna necesidad de escribir el "diagrama". "- >" y ">" son iguales, y el contrario de <, <. Señalan la dirección de señales, "=" permite uno o la transmisión de dos vías de la señal (< - y o - >). "=" si está utilizado en piezas de especificación de producto inmediatamente después del título de la pieza en el casquillo, describe la pieza referida.

. - las señales que viajan en estas líneas pueden ir via^: alambre, radio, telefonía.

- también ver "introducción el archivo de las piezas" para los detalles

- cuando "=" carece un espacio solamente en su lado izquierdo, el símbolo se puede también leer (para la facilidad de la lectura solamente), como coma. Eg.: Activar la luz del switch= entonces se gira.

- - > y < - los símbolos son líneas de la flecha. % si ningu□n conflicto, o el apuro con la solicitud de patente, tales símbolos se puede también substituir por "=".

"O" o "o" = la descripción siguiente es un producto separado que se pudo también combinar con uno o más partes de la descripción restante dentro del mismo número del producto. Estos símbolos no están en capitales o cotizaciones cuando están utilizados.

": " o "el ^" o "@" = enumeró es uno o más de los tipos posibles de funciones, de usos, de piezas, y o de diseños de producto totales. No una lista completa. "@" se utiliza raramente, y si es así antes de Mid-1994. el

"^" es igual que: "eg. ", "etc", "...", "@". Esos artículos que siguen el "^" se tratan como "y o" si se separan por "; ". Esto se aplica a qué sigue ": ". El símbolo del "^" fue utilizado hasta 1995.

"+" = aspecto importante. Uno o más de las ideas dentro de la sección inmediatamente después del "+" del símbolo pueden ser un concepto central para la idea total. Sin embargo, la carencia de este símbolo no significa que la idea es de ninguna importancia central. La mayoría de los lugares con los cuales pudo ser etiquetado "+" no era así que etiquetado, por lo tanto carencia del "+" no tienen ningul□n impacto (a menos que posiblemente dentro del contexto de las 100 palabras de alrededor en iguales/las páginas consecutivamente numeradas).
. - si una parte en OTD de-emphasized por una estrella en este "papel de las piezas de especificaciones de producto", la colocación de "+" al lado de la pieza anula inmediatamente tal estrella.

""= representa piezas. Utilizó esto en los años 90 que las piezas están o entre paréntesis, o cada uno de las letras de la parte es letras a veces adentro capitalizadas. Si las piezas se encuentran en el cuerpo de la descripción redactada, las piezas refieren a los títulos completamente capitalizados de una parte en "el papel de las piezas de especificación de producto". Para la facilidad de mecanografiar, las piezas enumeradas en los diagramas y u OTD (otros detalles técnicos) no necesitan estar en marcas de la cotización o ser capitalizados completamente. La forma de la pieza pudo cambiar levemente, eg.: para los propósitos gramaticales, la pieza puede estar en el caso posesivo. Las abreviaturas de la parte fueron utilizadas hasta el junio de 1996.

el `= el solo símbolo del `, y "" los símbolos tienen significados idénticos.

"%" = esta función amplía perceptiblemente la idea del producto más allá del concepto básico. Un subconjunto de la idea se puede relacionar con la descripción de producto central. La mayoría o todo el exterior de la mentira de los aspectos pero cerca de la descripción de producto central. Ejemplo: si la misma parte se refiere en diversas ramas de la descripción, ésos con un % o se efectúan por consiguiente en que rama particular, pero % o no efectúan la misma parte por consiguiente en ramas sin los símbolos. Solamente un % se pone al lado de un elemento, por lo tanto no hay % dobles.

"()" o []' = demuestra uno o más de los ejemplos posibles múltiples. Uno puede guardar o conservar cuál está en paréntesis.
(Utilizado en encarnaciones/especificaciones/diagramas escritos/cómo la función mencionada se pudo poner en práctica.)

+ - () incluir la lista limitada de posibilidades. Otros elementos (poder) ser colocado (además) dentro de ().

- Combinaciones: la información en estos soportes no necesita necesario ser leída, eg.: omitido de la descripción, aunque pueden todavía ser necesitados en una cierta capacidad de permitir la invención. Las descripciones con () pueden ser adentro leídos muchos diverso ways^: con o sin la información adentro (); si hay múltiple () en la descripción - > puede utilizar/no hace caso de uno o más la información acorchetada en cada las combinaciones posibles.

--El uso y o no hace caso de uno o más sistemas de información separados por "()", para leer cada combinación señalada. Eg.: #1: [un (b) = una c (d)] se pueden leer por lo menos nueve maneras, tales como #2: a = c (d), y o #3: a = D. Cada combinación está para diversas variaciones de la invención (para las aplicaciones alternativas). Cuanto mayor "()" las ocurrencias múltiples se separaron a través de la encarnación principal, el número de combinaciones crece exponencial. "()" Utilizó en los aumentos posteriores de "ramificación" de las encarnaciones el número exponencial total de combinaciones.

- Estos soportes diseñaron normalmente ampliar las descripciones de la n.

- La información dentro () es generalmente un subconjunto de la pieza, eg.: "sensor" = c ("analizador") = oscilador: la línea se extrae de analizador a la computadora ("C"), y las líneas se extraen de "c" al "sensor" y al "oscilador". --El interior de los datos "()" no necesita ser un subconjunto, cuando es una idea diversa/relacionada. Eg., grapadora (grapas): #1, grapas se podría también clavar adentro manualmente sin una grapadora; #2, grapas se pudo soldar con autógena para los usos no-conectivos también. % si la aplicación "()" ser un subconjunto o no [sin la opción de ambos], entonces "()" se puede considerar un subconjunto (para los propósitos de la patente).

. --D: piernas = robusteza del juguete (sensor/c ("analizador" (software))). Para (impreso) los propósitos esquemáticos, el software es el analizador interior, analizador dentro de c, c dentro de la robusteza del juguete, sensor dentro de la robusteza del juguete - (con objeto de este diagrama). La robusteza del juguete podría tener diversos interiores puesto que () son las posibilidades limitadas, eg.: el juguete es puramente mecánico.

. - El soporte izquierdo se afina a veces adentro con la omisión accidental del soporte derecho siguiente, eg.: (analizador) compara con (analizador.

. - Cuando () utilizado después de un número de patente: éstas son ideas inventivas (nuevas aplicaciones) basadas en KN y las configuraciones de la patente.

"/" o \' = significa "y o". Por ejemplo los medios de A/B, A y o B se aplica al panorama.

Otro ejemplo: en un diagrama se utiliza "/" símbolo como sigue: [parte 1/part 2 = parte 3 = parte 4]. En el ejemplo precedente, parte el diagrama de tres va a parte el' S1 y o 2, que está allí es la posibilidad de variaciones. La parte 3 tiene una línea para parte 4.

Los detalles siguen: Ejemplo: [parte 1/part 2 = parte 3 = parte 4/part 5] está igual que a: el diagrama de la forma de >3<, 1 2 4 5 circunda los 3 (en patrón sabio del reloj); y o b: puede ser D1 partido: 1=3=4, D2: 2=3=5. (no se demuestra ninguna línea entre 1 y 2. importantes: una línea no se excluye, y %might se dibuje entre las dos piezas si es viable.). En lugares aislados "\" pudo haber substituido "/".

- Combinaciones: hay con frecuencia "/" del múltiplo en descripciones de N - > uso y o no hace caso de uno o más sistemas de información separados por "/", para leer cada combinación señalada. Eg.: #1: [a/b = c/d] se pueden leer por lo menos nueve maneras, tales como #2: a = c/d, y o #3: b = C. Cada combinación está para diversas variaciones de la invención (para las aplicaciones alternativas). Cuanto mayor es "múltiple/" ocurrencias separadas a través de la encarnación principal, el número de combinaciones crece exponencial. "/" Utilizó en los aumentos posteriores de "ramificación" de las encarnaciones el número exponencial total de combinaciones.

"~" = iguales que "/" o "\" a menos que una línea también se dibuje entre las piezas cuando se utiliza esta línea ondulada símbolo. Eg. #1: 1~2=3=4/5, líneas están entre 1&2, 1&3, 2&3, 3&4, 3&5, %maybe 4&5; el 1/2 pasa con 3 conectar con 4/5. Las líneas entre 1 y 2 son opcionales, desde el símbolo del "~" podrían también ser una raya vertical diagonal, en otra versión del diagrama.

- ver la "introducción a las descripciones de producto" para los detalles

. - [si los símbolos de este archivo no transfieren entre los sistemas de los programas informáticos: su el mayúscula ``del 'solo secundario-cotiza llave según lo encontrado en el ordenador portátil de Toshiba T1910, mientras que utiliza el software WordPerfect 6.0B para el DOS. A partir de 1991 ahora (3 de enero de 1995) todas las entradas de datos era en palabra perfecciona 5.0 para el DOS o más arriba. Puesto que 4.94 la computadora de Toshiba T1910 fueron utilizados.

"; " = el punto y coma es una rotura en el flujo del pensamiento (más débil que un período, con todo más fuerte que comas). Cuando hay una raya vertical diagonal en la oración seguida por "; ", el punto y coma debe romper normalmente las líneas en el diagrama. Ver "/" sección.

": " = la información después de los dos puntos representa uno o más de las manifestaciones posibles [%applications para las funciones dichas]. "()" El símbolo es similar a los datos después de los dos puntos. Datos que siguen ": " ser más probable tener la posibilidad del escalonamiento más allá de los límites de la idea/de los términos que preceden directo los dos puntos, que preceder de los datos directo "()". ^ de los símbolos conectados ": " son iguales que ": ". A veces hay información seguida por los dos puntos, que entonces es seguida por otra ": " dentro de la misma oración, en este caso éste puede significar que dos puntos de siguiente de los datos los primeros son un semi-subconjunto de datos que lo preceden, y dos puntos de siguiente de los datos los terceros son un semi-subconjunto dos puntos de siguiente de los datos de primeros, o dos puntos anteriores de los datos de primeros.

Viejos símbolos del diagrama: utilizado en el material hecho hasta mid-1993. Las líneas verticales se pueden también representar por "mí", un punto". ", o "L", etc. Este 3ultimo demuestra las piezas adicionales que están

en la línea abajo y directo a la derecha del "L". A veces una línea de volutas de los bloques encima a la línea o a la página siguiente.

VIEJA SECCIÓN DE LAS ABREVIATURAS

Introducción: Esta sección cubre las viejos abreviaturas y símbolos, que se continúan sobre todo en más nuevas invenciones. Más viejas invenciones pueden ser ésas encontradas en las secciones A, B y C, o que tienen esas letras en sus números del producto, e.g. "2A400".

Anuncio o Adv: publicidad

CUANTO ANTES: Cuanto antes

Gato: categoría de producto, eg.: TV; teléfono

CIS: Antigua Unión Soviética o SNG también llamado

Dir: directorio, eg.: "Un Dir" está de primera N desarrollada

DM: Correo directo

F: fax

G: cv, caza de trabajo; concesión (de la fundación/del gov't)

HW: ayuda querida (haciendo publicidad); nueva gente necesaria

II: I n n o v un instituto de t i o n

L: legal

Pls: por favor

N: Golpecito, producto # (generalmente uno concebido por K una y s). Puesto que cerca de 1996 "NK" significa las invenciones del producto concebido por K una y s, y de los medios de "N" los productos y en general.

Mk: comercialización

Musgo: Moscú

MU: Musical, música

J: Japón

R: investigación

Req/RQ: requisitos; requerir

RF: Radiofrecuencia. Cuando es factible incluye a la transmisión y a recepción infrarrojas. D: device#1=tr/rc=tr/rc=device#2

SPB: St. Petersburgo, Rusia

T: El teléfono, ve "piezas". Vieja definición:

letra/correo

TYO: Tokio

U: usted, una más nueva definición es: usuario

Ur: su

X: documento: para la publicación, visto por el público

2: Desarrollo de la idea del producto

4: Relaciones públicas, artículos

8: Comprobar para ver quién está copiando mis ideas

\: El diagrama parte - y o señalando si una línea se dibuja entre las piezas. Ver las "piezas"

/: si no se dibuja ninguna línea "necesario" entre las partes en diagrama. Ver las "piezas"

UNA MÁS VIEJA VERSIÓN DE PIEZAS (A PARTIR DE 1990-1992)

La más nueva versión como en "piezas principales" sobrepone las descripciones adjunto si suceden ser dos diversas definiciones para las mismas piezas.

A = y

EN = la comunicación del pedazo del juego, el pedazo de cada jugador comunica con uno a y la máquina de proceso central vía las ondas de aire (probablemente no el alambre)

EN = y o

AU = para el nivel adulto 16 años y encima

B = tiene botones (no mencionados si los PP); "K"; "R"

Uso del bebé de BA/KI/CH=for 0-4 años/cabrito 4-8 años/niño 9-15 años

C = productos del uso como el compañero provechoso del ejercicio y o guía, organismo de la regla; "ejercicio". La nueva versión es "computadora", si es dudoso sobre el uso "computadora" de la interpretación.

Consumidor de CS/BU/CL=for/uso comercial del uso/de cliente

D = esto es la vieja definición para "T" (telefonía) (incorporada (el teléfono celular o estándar))

DA = tiene fecha interna, reloj, contador de tiempo necesario para el funcionamiento del interruptor; "tds"

DD = "S"; construido en indicador digital (eg.: El LCD), puede mover de un tirón adentro para la compacticidad

DS = "S"; exhibiciones de la máquina en la CRT, el indicador digital, o el impreso (papel regular o termal)

EP = componentes electrónicos: el producto funciona por medio de los microchipes, de los procesadores y de los otros elementos estándar para este tipo producto electrónico; "C"; "básico"

El EL = enseña a habilidad (no no necesario psicologica) práctica. La definición usada a partir de finales de 1993 es EL = electrónico. "educ"

Y = nuevo tipo de hospitalidad ("entretener ")

La extensión = funciona en el plano o la superficie semi plana, tapa de tabla, esta opción no funciona encendido las baterías, o energía de la vibración.

ALETA = descripciones de la opción del producto de los finales

G1 = juego para una persona solamente

G2 = juego para dos personas solamente

G23 = juego para dos o más personas. G12 = para 1 o 2 personas, G3 = tres personas solamente.

GGH = el juego consigue más difícilmente. pues la capacidad del usuario en la condición mejora o empeora, la máquina compensará cerca: siendo más fácil, más duro jugar (en términos de habilidad, rapidez...)

HM/OF/SC=for se dirigen/el uso de la oficina/de la escuela o del laboratorio

Índice de inteligencia = versión especial para la gente con el índice de inteligencia dentro de la tapa el 2% de la población

JK = para el uso como diversión chistosa, una novedad inusual, "entretienen"

M = vieja definición: máquina (producto descrito dentro de producto # solamente). Nueva definición que fue aplicada a las nuevas escrituras en fecha 3.94: "MFH" [transmisión en circuito del marco principal]. La vieja definición todavía se encuentra en las escrituras compuestas a 1992.

MA/FE = para uso de varones/de hembras

= memoriza señales de entrada anteriores en su "C"

El MI = los elementos de este producto es permutable con uno

NRL = no juego de la vida real, jugado interconectando con el juego electrónico y o el tablero.

O = o

OD = dispositivo de la telecomunicación que trabaja vía ondas de aire; "T:

PÁGINA = programable por el usuario (afinando en sus botones del plástico) y o el fabricante; "pp"; "P.M."

El PO = construido en impresora imprime el Info/datos/cuadros sobre el papel, tiene el borde del rasgón, la termal o papel de papel [del asiduo]; "impresora"; "S"; "fs".

Derecho = ritmo

RL = el juego de la vida real, jugado adentro o al aire libre, requiere a gente que se mueve en un ambiente

SD = teléfono del altavoz; nuevas piezas "teléfono del SP"; "T"

SC = comunicador sano: recibe ("mic") y o envía ("oscilador") sonidos mecánicos, y o las palabras humanas y o las voces

SH = demostración

VC = persona controla el volumen de sonidos; "oscilador"

TD = descripciones técnicas

PARA = el uso del juguete, "entretiene"

TK = para el uso como truco de la diversión, broma; "entretener"

TM = marcas para el producto

El CAC = "mic" (interno o externo) registra los sonidos facilitados por el usuario (sobre el microchip o posiblemente la cinta), y se puede repetir en totalidad o probablemente en formato corregido u otro alterado usando los sintetizadores incorporados; "oscilador"

UR = su

WH = que

"-" = solamente cuando está utilizado en TM: separa el orden de las palabras, 1r, 2do...

18L = operación, instrucciones y comercialización en 18 idiomas: Inglés, japonés, español, alemán, francés, chino (dialectos del mandarín, del Cantonese), ruso, árabe, portugués, italiano, griego. Más las familias de lengua de: Báltico, Slavic, germánico, iraní, sudanés, Malayo-Polinesio y turco.

Una MÁS VIEJA VERSIÓN DE PIEZAS (hasta 1995 o tan)

CH = también para los niños debajo de la edad 16. Una partición más nueva.

El cm = la cubierta está de metal liso de la calidad con el revestimiento esmaltado.

Cc = diseño creativo de la cubierta.

- D: ..... Los puntos (...) son la cubierta plástica

. ||||||||.

Barras de los dos puntos (|} es el producto

..... La forma encajonada se simplifica también, pero demostrar

la cubierta es una cubierta exterior.

- OTD: Utilizado hasta quizá 1995. El broche de presión encendido, o el tornillo en pedazos se puede esculpir alrededor de la unidad básica como decoración solamente. Los pedazos están de plástico colorido y o de metal esmaltado. Los pedazos se pueden encajar a presión solamente encendido en las maneras que no obstruyen el uso normal del dispositivo, o causan peligro. La cubierta se pudo moldear y soldar con autógena para no ser cambiable. Ver el "cerebro".

COLOR =

- Nueva definición - después de agosto de 1996: Colores cuaesquiera 1.000 o más estándar/tintas. + ver a "artista" y "corregir".

- Vieja definición - antes de 1995: Color del artículo usted toca cambios, eg.: causado por cómo cambios en cristales líquidos de los efectos de temperatura. Uno o más del siguiente pueden cambiar color: todo o una parte de la cubierta (una tira de cristales líquidos), botones, "exhibición".

El CP = la cubierta plástica de la calidad lisa, salvaguardias contra peligros comunes tiene gusto: impactos, calor, descoloración, etc.

- D: ..... Los puntos (...) son la cubierta plástica

. |||||||. Barras de los dos puntos (|} es el producto

..... La forma encajonada se simplifica también, pero demostrar

esa cubierta plástica es una cubierta exterior.

CR = cubierta del caucho fuerte y durable liso, salvaguardias contra peligros comunes. Similar al "cp".

CRC = computadora central ("C") de número 1D-010 del producto del "sistema adaptante".

ABREVIATURAS PERIÓDICAS

Introducción: Las referencias se hacen a los periódicos de uso general mundiales. Las invenciones desarrolladas adjunto son generalmente invenciones de la mejora de ésos publicados. Para los propósitos del diagrama: se yuxtaponen las invenciones mejoradas compiten un vis los productos publicados.

DY = "Yomiuri diario", Tokio. También cualquiera incluye cualquier cobertura de diferenciación dentro de "Yomiuri Shimbun" del editor. El artículo encontró en su sección de los "nuevos productos", en publicado semanalmente en el diario.

ES = catálogo científico de las ventas de "Edmundo". 101 E. Gloucester Pike, Barrington, NJ 08007 los E.E.U.U. Teléfono +1 609 547-8880, servicio de atención al cliente 609 573-6260, fax 609 573-6295. Los productos mencionados en el catálogo científico 1995 de Edmundo son un ejemplo que se puede incorporar en todas las o algunas invenciones. Hay de vez en cuando ejemplos múltiples de tales productos en este catálogo. La cubierta de este catálogo tiene "15C1A" impreso.

Picosegundo = "ciencia popular", los E.E.U.U. No confundir esto con el "picosegundo" para el sistema de colocación (si en duda verdadera después presumir que el "picosegundo" representa "sistema de colocación".

QMRR = "revisión del estudio de mercados del capricho".

- Ver "la revisión del estudio de mercados del capricho: Usos prácticos en estudio de mercados". Especialmente edición de febrero de 1996. Avenida de 8030 cedros., #229, Bloomington, manganeso 55425. Teléfono 612-854-5101. ISBN: 08937451. Tiene los listados de softwares relacionados, y las compañías con los especialistas capaces de hacer la programación, especialmente páginas 78 a 85.

- Cuando QMRR se utiliza en el software parte el archivo. Ver especialmente que las clasificaciones del producto de software con iguales/relacionaron los títulos (listado cerca de 10-20 softwares existentes).

- Definiciones de las funciones usadas en softwares del estudio de mercados: examen (métodos, preguntas, respuestas, "análisis"), ambiente, estudio de mercados, perfiles de cliente, (cambios adentro) figuras de ventas (eg.: más y menos de ciertos modelos que son vendidos, atado a otros cambios en mundo/mercado/usuario) ven las compañías mencionadas del "capricho", y los libros del estudio de mercados.

NK = "semanario de Nikkei", Tokio.

- Esta idea del producto incluye y es una extensión del producto descrito en de los servicios del semanario de Nikkei del `de Japón (parte de Nihon Keizai Shimbun) la sección de los "nuevos productos y" que abarca una página llena en la mayor parte de sus ediciones.

- En la ocasión, un artículo incluirá y será una extensión para de la tecnología del semanario de Nikkei del `la sección de la "ciencia y" para la fecha dicha.

EPO, USPTO y OMPI: Las bases de datos de la patente del gobierno ligaron de www.WIPO.in t

DTSW = "directorio de los surtidores técnicos del software", publicado cerca: teléfono +1 914-963-3695, fax 914-376-5011 de CAE Consultants Inc. los E.E.U.U. Avenida de 41 Travers., Yonkers, NY 10705 los E.E.U.U.

Estos datos también disponibles en: HTTP: /el directorio de www.caeconsultants.com usado era "hasta la fecha en fecha 1/1994". El CAE también ofrece el Info libre en el teléfono para localizar a surtidores.

También ver el archivo menos de uso general de las características (fue nombrado Features).

Archivo: Introducción a la introducción de la palmadita/del diagrama

DIBUJOS FIGURADOS

INTRODUCCIÓN A NUESTROS DIBUJOS ESCRITOS EN CÓDIGO DEL TEXTO

Introducción a encontrar los dibujos figurados (dibujos) en este uso: Los dibujos se incluyen en esta limadura. La mayor parte de los dibujos existentes, sin embargo, pueden no aparecer inicialmente ser dibujos alguien que mueve de un tirón rápidamente a través de la limadura de la patente. Los dibujos son generalmente cadenas de partes en una sola línea; conectado por las rociadas. Esto cubre en gran parte dibujos informales.

Ejemplo

Ejemplo simplificado del diagrama de la computadora: EL → DE LA CPU DEL → DEL TECLADO DEL → DEL USUARIO MODIFICÓ SALIDA PARA REQUISITOS PARTICULARES

Debajo: versión del diagrama antedicho usted es más probable ver.

Detalles

- Los dibujos se pueden encontrar para cada descripción de producto en diagrama fijaron 1, y/o en diagrama fijaron 2. dibujos están también con el texto impreso. La mayoría de las descripciones de producto que comienzan con el "directorio de C" tienen dibujos.
- Las características (piezas) están generalmente en "paréntesis", y características (piezas) a partir del 1997 son precedidas por un apóstrofe. Ver el papel de las características (piezas) para los detalles.

"=" conecta las características (piezas) del diagrama. La presencia de "=" significa que tal es un diagrama (la clarificación de su ser un diagrama se puede hacer pero no es necesaria). Para facilitar la lectura la primera vez, "=" se pudo considerar las comas, especialmente cuando no hay espacio a la izquierda del símbolo como con comas regulares. E.g.: Activar la luz del switch= entonces se gira.

"/" raya vertical diagonal significa "y/o". La manera más fácil de leer la descripción la primera vez, es a menudo leer solamente la primera "y/o" la opción, que permite a lector a más fácilmente considera el flujo del pensamiento.

e. G.: Diagrama: [parte 1/part 2 = parte 3 = parte 4/part 5] está igual que a: diagrama de la forma de >3<; y b: puede ser D1 partido: 1=3=4, D2: 2=3=5, con D1 y D2 que son conectados en la parte 3. No se utiliza ninguna línea necesario en 1 y 2, aunque una línea no se excluye.

"()" el material en estos soportes es opcional. La manera más fácil de leer el texto es la primera vez casi no hacer caso de los soportes.

Diagrama de la muestra. Lo que sigue es uno de los dibujos para esta solicitud de patente:
- Diagrama: Persona = teclado = computadora = impresora

Dibujos relacionados del medio dos del dibujo #1 y del dibujo #2 (si están en la misma sección), e.g.: D1, D2, D3...

Los números de parte usados en el diagrama se pueden también utilizar dentro del relacionado para el Techies o la otra sección de los detalles (OTD) técnicos - otros detalles técnicos. Estos números de parte del diagrama usados adentro para Techies: demostrar que sus características (piezas), están conectadas con esa sección del diagrama.

El símbolo del "~" es igual que la raya vertical diagonal, a menos que haya también la opción para una línea dibujada entre las dos características vecinas (piezas) separadas por esta línea ondulada símbolo "~".

Los dos puntos ": el" símbolo representa una línea del acceso que la precede al acceso del subconjunto que la sigue.

Cada sección dentro del para la sección de Techies es creada por el punto y coma, separándola de cualquier otro material; por lo tanto cada sección también se lee como un diagrama y/o tiene su diagrama combinado con las otras secciones dentro iguales para Techies.

A menudo los términos "entonces" y generalmente "alternadamente" son iguales a" - > " o "=". Es decir estos términos redactados se comparan con los símbolos para el tipo estructura del diagrama.

- Al igual que viable, cada parte/bloque en cada diagrama para cada idea electrónica del producto en anillos de esta limadura el dispositivo computer-like central. Cada componente electrónico, tiene una conexión opcional con una computadora central ("C"). D: cada componente electrónico de la idea del producto = ""/"del tr rc" = "c" = algu□n otra parte implicada con esta idea del producto

- "C" (computadora) es una inclusión opcional para cada descripción central en esta limadura que requiere el hardware electrónico. Como OPCIÓN, uno o más de las "características múltiples (piezas)" se refirieron en cada tal producto o la descripción de la parte se puede conectar con esta "C". Cada "parte" es un diagrama separado (como si en una transparencia, y ellas pueda ser sobrepuesto apropiadamente, intersecándose en "C", para ver el sistema potencialmente complejo (puede haber una cierta repetición, por lo tanto la sobreposición pudo estar de modo que las repeticiones se sobreponga sobre uno a, así que tales piezas/aspectos se leen una vez)). "C" se define en las "características (piezas) archiva".
- El lector sabe que la materia impresa es un diagrama cuando cualquier uno o más de los símbolos del diagrama se utilizan. Los dibujos son precedidos a menudo por la "D capital".

Ejemplos del diagrama: 3 versiones cada vez más detalladas de la misma invención de la computadora

Versión A: Ejemplo simplificado del diagrama de la computadora:
Usuario - > teclado - > CPU - > salida deseada

Versión B: Interpretación semi detallada del diagrama antedicho de la computadora:
El usuario - > teclado (el usuario entra la información, los datos incorporados en la computadora en proceso fácil del paso) - > computadora (el software analiza datos incorporados) = software corrige la información entrada simplificada en formas = un software más abstractos corrige el diagrama original entrado en diversas variaciones para cada necesidad = computadora modificadas para requisitos particulares digital hace salir diversas versiones del diagrama original entrado.

Versión C: Interpretación compleja del diagrama antedicho de la computadora:
Usuario (ingeniero de diseño de la electrónica o examinador de la patente) - > teclado (el formato abreviado las entradas del usuario para qué constituye un diagrama de dos o más porciones y o entra los usos deseados para las invenciones; los datos se pueden también incorporar en la computadora sin el ratón aburrido de la computadora) - > la CPU (el software analiza datos incorporados) = software analiza la base de datos de cada parte incorporada con sus aplicaciones múltiples también demostradas en un patrón de árboles de ramificación (esta base de datos puede ser el árbol de la invención) = diagrama original entrado de los convertidos del software en centenares de tipos de dibujos dependiendo del uso deseado) = computadora digital hace salir 8 millones de diversas versiones para cómo las invenciones pueden diagramed (construido):
1) archivos convertidos a digital creados recientemente
2) impresora (del color)
3) pantalla de ordenador
4) el software demuestra en realidad virtual cercana cómo funcionarían las invenciones.
5) se construye la invención: 1) por la arcilla que talla el dispositivo (cortador controlado por los archivos convertidos a digital y otros programas informáticos para emparejar el diagrama señalado); 2) sistema

automatizado de la programación (por ejemplo vía usar "la pieza programada del software de la información de usuario")

FINAL DEL CÓDIGO PARA LA SECCIÓN DE LA EXPLICACIÓN DEL DIAGRAMA

Archivo: Introducción de las características/características

CARACTERÍSTICAS MENOS DE USO GENERAL: Leído más adelante

Características sobre todo para las invenciones ligadas a los archivos A, B y hasta cierto punto C.

Se aplican al directo unido/indirectamente del uso de la palmadita.

FECHA del '' = nuestro reloj digital y calendario. Es el contador de tiempo para nuestro grupo fecha/hora de Digitaces.

El COJÍN del AIRE = ve teledirigido. Utilizado raramente, por lo tanto delineado con un asterisco.

ALERTER = ven el "notificador"

TODOS = ven "básico"

USO/APPL/AP = uso. Una de las maneras alternas las invenciones puede ser utilizado. "Apl también llamado" - con la sola letra "p". Solicitud de patente.

AU = también para el nivel adulto 16 años y encima.

El BASIC = considera el apéndice.

CUENTA/FACTURACIÓN = facturación: Usuarios de las cargas por cantidad y el tipo de uso. Limita uso facturable por criterios.

Nombre del CEREBRO = de la característica cambiado a la computadora.

EXHIBICIÓN = pantalla de visualización. Esta característica (también vista como parte) fue retitulada a "S".

FD-HDD = este nombre de la característica (también vista como parte) cambió a la "computadora".

El FLOTADOR = el dispositivo portable separado flota en el aire vía los imanes especiales.

. Las partes más portables del sistema tienen enfrente de los imanes en cada extremo. Una letra "C" formó la base también tiene imanes, que atraen cada uno de los extremos del pedazo en espacio. los .2cm a los 2cm de aire está entre los imanes de atracción. El artículo portable es ligero. Los imanes y el diseño se diseñan para soportar gravedad y el viento, y usar abajo de las fuerzas del imán para el mínimo cinco años.

- Dibujo: 1+ = 2 - = 3 = 4+ = 5.

- Notas del dibujo: 14 imanes positivos; 25 imanes negativos; 3 no magnético conductores (entre 1/2/4/5) que es/parte del producto; 1 y 5 es cada uno en sus extremos individuales del bastidor de "C"; uno de los propósitos del flotador es crear un diseño interesante (entretener); el artículo que flota se puede sacar del marco de "C" (usado sobre premisa/puesto en la tabla); cc.

- "Inclinación": colocan/el functions% de los controles del objeto flotante

- Formar de la flotación = del notificador/de la otra forma de comunicación al usuario.

- 'Pista = tipo flotación.

FX = capacidades del fax. También puede enviar y recibir vía: Internet, módem (véase el MES), otros (radio) medios electrónicos para los datos o texto.

- Construido en la máquina de facsímil, envío/que recibe en diversas velocidades.

- Dibujo: datos/imagen = "sensor" = "C" = tr = impresora

- Para Techies: cojín del aire (envía y recibe faxes); carro (cómo se envían y o se reciben los mensajes); "S"; "C"; Reino Unido.

- la máquina de fax o-C95 defiende hacia fuera mensajes indeseados. Ver el fax en la exhibición ("S"), los faxes deseados impresión. NTT 29 de marzo de 93 NK. Dibujo: c95=tel~c~remote

. - matriz contenta de la fecha 4E020: Los registros y organizan ocurrencias anteriores.

La LENTE = ve la "cámara/la lente"

MES = módem. Módem: conecta vía el teléfono ("T") con: @ otras computadoras (unidades centrales), dispositivos.

Dibujo: remote/uk/display = c (datos de la computadora) = convertidor de datos = tr/rc = convertidor de datos = "C" = exhibición/impresora/función

- Para Techies: tener acceso requerido para comenzar la comunicación del MES; ventilar los comandos MES del cojín; carácter; (datos sobre la transacción encendido) "S"; % entretienen; "C"; % comunica con "M"; ratón; P.M.; notificador (la transacción del MES de las demostraciones estaba o no fue terminada con éxito; la información o los resultados alcanzados de la transacción del MES); pp; salida tranferible a la impresora; tds (de la transacción del MES).

. - matriz contenta de la fecha 4E020: Los registros y organizan ocurrencias anteriores.

Se induce al MD/el HUMOR = el humor de usuarios por el sistema que saque las sensaciones emocionales señaladas.

. Leído más adelante: Multi-media de sistema se diseña accionar reacciones señaladas en seres humanos o animales.

- Diagrama: La adaptar-Base de datos recoge la información sobre usuarios = analizador determina qué mejor del modo de las multimedias saca la emoción señalada querida en u (usuario) = alcanzando los resultados deseados: los usuarios disfrutan o encuentran del sistema el desafiar, o de más guía amistosa del `de u (usuario) [ajustando al patrón del comportamiento del usuario] o los educan son más eficaces.

- Esta función tiene parte convertida de "ENTRETIENE", aunque el "humor" es una función, de la cual puede ser separado, ENTRETIENE.

El ™ del RECEPTOR ACÚSTICO del MOVIMIENTO = hace el sonido sobre el movimiento del dispositivo.

. Hace el sonido o la música cuando el sensor del dispositivo se agita en cualesquiera/la manera señalada [vagos del movimiento].

. Tipo sonido de los programas del usuario. Ver el producto numerar 5A-1050-042002. "Corregir".

Dibujo: indicar el "sensor" = "C" = el oscilador/function/tr

. Patentes de los E.E.U.U. [disco de 12.95 baberos]:

- str: (sonido o música) adj15 (movimiento o movimiento o mudanza)

- Patentes de los E.E.U.U.: 5475372 dispositivos sensibles del movimiento del detector del terremoto; ++ 5373096 Yamaha's Miburi: dispositivo de control sano musical responsivo al movimiento de las porciones del cuerpo de un ejecutante [Yamaha KN más adelante copiado?].

RATÓN = cambiado a teledirigido.

P.M. = cambiado a la banda [programa].

Pi = cambiado al UIP.

PP = cambiado a la banda [programa].

PP = personalmente programa [vieja característica cambiada a la banda 9.97]:

Las funciones son personalmente programables por el usuario. El usuario decide qué programas a activar, desactivar, alteran y o agregar.

Dibujo: Reino Unido ()/telecontrol ("R" de los programas) = c (software/carro) = función del software (usuario de las ayudas)

- Ver el "cerebro".
- "Facturación": cuentas para qué/cómo programas del usuario el interruptor.
- Acceso: "Tener acceso al regulador" o el accessor legítimo puede alterar "contraseñas necesarias" para sí mismos u otros usuarios.

La IMPRESORA = las impresiones desearon la información del sistema.

- Adaptador, tarjeta y software externos de impresora para las impresoras estándar.

Dibujo: c = el tr = el convertidor de señal = el mecanismo de impresión = imprime sobre el material (tal como papel)

- Para Techies: la exhibición ("S") demuestra los menús del software para cómo el usuario quiere el documento mecanografiado; conecta con el sistema automatizado que utiliza "C"; pp; P.M.; Reino Unido; matriz de punto o laser o impresoras de color estándar con sus cartuchos de tinta - básicos; impresora portable; cp. C puede tr a la impresora vía el alambre/la radio. Cuál está en "s" o la "impresora" puede ser visto en la otra por completo. similar/como manera, en totalidad o part= como "señaló" cerca: uip-adaptar, banda, y K.
- Printer=SW=notifier=C: si la impresora (w5) carece bastante tinta de particular colorear en cartucho antes de usuario: intenta imprimir/amplía imagen

RC = receptor. Recibe señales de tr (transmisión).

RCP = cubierta lisa de la prisma rectangular (semi-caja formada). Las variantes tableros tienen 4 pedazos de goma en las esquinas inferiores, contador conmovedor.

DISCURSO = incluido en el "OSCILADOR". Esta función se puede separar de los otros modos del oscilador (comunicador sano saliente). Si el "discurso" está en sistema entonces hay una opción para el "oscilador", eg.: "discurso" - > "C" - > "oscilador".
% consideran el "cerebro".

SP teléfono = teléfono del altavoz ("T"). El micrófono del dispositivo ("mic") ajusta el volumen de sonido entrante según la distancia de la fuente sana del micrófono ("mic"). ~c=osc del tr= " T "
. - "Facturación": cuentas para qué/cómo el system coge.

ESTEREOFONIA = sistema de sonido. Música/fuente sana (música, difusión previas) = jugador (CD, cinta de Digitaces, cinta de cassette, fonógrafo, receptor de radio) = amplificador = altavoces/teléfonos principales

Dibujo: mic/tr = amplificador del convertidor de señal = de la parte posterior del c~recorder = del juego = del convertidor de señal = oscilador (comunicador sano saliente) (altavoces)

El JUGUETE = puede también funcionar como un juguete. Para Techies: El proceso del tener un rato interesante es nuevo e interesante desde el punto de vista experimental; %interactive; multiusos; notificador; P.M.; Reino Unido, "cerebro". "Mandando la cuenta": las cuentas por tiempo utilizaron/"tenido acceso".

VC = control de volumen: el usuario pre-seleccion el volumen de sonidos del altavoz.
- Dibujo: perilla/botón = tr = c (regulador) = amplificador = oscilador

El ANALIZADOR de la VOZ = ve el "analizador de sonidos".

VIBRACIÓN = vibración generada por el dispositivo por razones específicas, eg.: "hospitalidad"; "notificador"; formar de la comunicación para: "estado", "cuenta", una presencia o una carencia simple de cualquier usuario puede necesitar (saber) por ejemplo un sí o no - o con./desc. - o bueno o malo. Ver el "acceso" = la "vibración".

Comprobar la versión práctica simple de las características principales, más nuestras abreviaturas y símbolos. Visita bondadosa www.LicenseItToday.com para las actualizaciones, el etc.

Archivo: Introducción de las características/sinónimo de la característica

TÉRMINOS SINÓNIMOS PARA NUESTRAS CARACTERÍSTICAS PRINCIPALES
(Esto puede ser una manera más fácil para la gente no técnica a entender las características usadas en nuestras invenciones interesantes)

Introducción: Las secciones de la característica principal se enumeran alfabéticamente. Los términos sinónimos adjunto incluyen a veces una fracción minúscula de los números de clasificación aplicables de patente de los E.E.U.U.

. Alternativas y palabras claves para la característica del ACCESO: admisión, entrada, acercamiento, avenida, conexión, contacto, curso, puerta, entrada, entrada, entrada, introducción, llave, puerta abierta (argot), paso, trayectoria, camino, ruta, manera
. Código de clasificación de patente de los E.E.U.U. para el acceso: 726.4 Seguridad de información/autorización

. Alternativas y palabras claves para ADAPTAR la característica: acclimate, acomodar, acostumbrarse, alterar, cambiar, venido alrededor, conformarse, conformar, familiarizar, formar, caber, habituate, armonizar, hacer, emparejar, modificarse, prepararse, calificar, reajustar, reconciliar, remodelar, revisar, trabajar mejor, formar (argot), cuadrado, juego, sastre

. Código de clasificación de patente de los E.E.U.U. para adaptarse: 715.789 La informática: proceso del documento, proceso/basado de la presentación del interfaz de operador en uso o perfil de usuario

. Alternativas y palabras claves para la característica de ALERTER: observadora, en el protector (argot), la seguridad, advierte, notifica, mira, ayuda para proteger.

. Clasificación de patente de los E.E.U.U. para ALERTER: 340.825 Comunicaciones: Eléctrico, subclases 825 a 825.98 para controlar uno o más dispositivos para obtener una pluralidad de resultados por la transmisión de señalada de señales de control distintivas plurales sobre un número más pequeño de líneas o de canales de comunicación,

. Alternativas y palabras claves para la característica del ANALIZADOR: el análisis, mastica encima (argot), confab (argot), considera, estima, evalúa, imagina, calcula, desmenuza (argot), examina, interpreta, investiga, juzga, golpea con el pie alrededor (argot), refundición, resolución, escudriña, arregla, explica, estudio, prueba, piensa a través

. Clasificación de patente de los E.E.U.U. para el ANALIZADOR: la informática 706.14: inteligencia artificial/sistema adaptante

Alternativas y palabras claves para la característica del USO: aplicación, appositeness, empleo, ejercicio, ejercitando, función, germaneness, operación, pertinencia, juego, práctica, propósito, importancia, usance, utilización, valor

. Alternativas y palabras claves para la característica del ARTE: abstracción, diseñando, ilustrando, imitando, modelando, el moldear, pintando, pictorialization, retratando, representación, sculpting, formando, simulando, bosquejando, symbolization, compositor. Clasificación de patente de los E.E.U.U. para el ARTE: 382.159 Clasificadores de /Trainable del análisis de imagen o reconocedores del patrón

. Alternativas y palabras claves para la característica de la ASOCIACIÓN: afiliación, alianza, venda, fraternidad, manojo, círculo, clan, pandilla, club, coalición, combinación, combinada, compañía, confederación, confederación, congreso, cooperativa, corporación, equipo, muchedumbre, familia, federación, beca, fraternidad, cuadrilla, gremio, transmisión en circuito (argot), liga, orden, organización, equipo, sociedad, piscina, paquete de la rata (argot), anillo, sociedad, sindicato, relación, descompostura de máquina, tribu, tropas,

compañía, unión, contrapartes, semejanza del compañero, equivalente, igual, copia, reproducción, copia, duplicado, compañero, accesorio, cómplice, afiliado, asistente, aliado, ayudante, cooperador, compañero, compatriota, camarada, confederato, consorte, camarada, compañero, amigo, ayudante, socio, par, compinche

. Código de clasificación de patente de los E.E.U.U. para la asociación: 706.46 La informática: Representación de la inteligencia artificial/de conocimiento y técnica del razonamiento

. Alternativas y palabras claves para la característica del ANALIZADOR del COMPORTAMIENTO: el reloj, psicología, sociología, antropología, entrega, comportamiento, conducta, los éticas, etiqueta, expresión, forma, hábitos, gerencia, mien, modo, moralejas, naturaleza, observancia, funcionamiento, práctica, presencia, propiedad, papel, comportamiento rutinario, deseos, necesidades, cravings, búsqueda, quiere. Código de clasificación de patente de los E.E.U.U. para el ANALIZADOR del COMPORTAMIENTO: 706.14 Inteligencia de proceso de datos, artificial/sistema adaptante

. Alternativas y palabras claves para la característica del CARTUCHO: diskette, disco del disco blando, duro, impulsión dura, tambor magnético, cinta magnética, bobinador de cintas, disco magnetoóptico, disco óptico, almacenaje primario

. Código de clasificación de patente de los E.E.U.U. para el CARTUCHO: 706.11 Inteligencia de proceso de datos/tener interfaz utilizador particular

. Las alternativas y las palabras claves para COMPONEN la característica: el autor, explosión hacia fuera (argot), el molde, comp, concibe, idea, cocina para arriba (argot), diseña, idea, descubre, elabora, soña para arriba, fabrica, forja, forma, formula, enmarca (argot), fantasma (argot), escribe bajo la firma de otro, se imagina, procesa, inventa, golpea apagado (argot), golpea hacia fuera (argot), compone, observa abajo, orquestra, origina, encierra, poetize, producir, puesto en el suelo, la cuenta, garabato, escritura, tinta de la vertiente, tiempo, producción, azote para arriba (argot), escribe

. El código de clasificación de patente de los E.E.U.U. para COMPONE: 706.22 Tratamiento de la inteligencia de proceso de datos, artificial/de señales (e.g., filtro)

Alternativas y palabras claves para la característica de la COMPUTADORA: máquina sumadora, análogo, cerebro (argot), calculadora, copia, compatible, informático, cerebro digital, electrónico (argot), ordenador portátil (argot), unidad central, micr3ofono (argot), microordenador, mini (argot), miniordenador, desmenuzadora de número (argot), máquina de computadora personal, de pensamiento (argot)

. Alternativas y palabras claves para la característica CONTENTA del ANALIZADOR: composición, constitución, materia, tema, sustancia

. Código de clasificación de patente de los E.E.U.U. para el ANALIZADOR CONTENTO: 706.54 Inteligencia de proceso de datos, artificial/sistema analógico del razonamiento:

Alternativas y palabras claves para la característica del COORDINADOR: acomodar, ajustar, convenir, adaptar, combinar, conducir, conformar, correlacionar, armonizar, integrar, emparejar, endentar, organizar, reunir, proporciónar, agruparse, reconciliar, reconciliate, regular, trabajar mejor, sincronizar, sistematizar, team para arriba

Alternativas y palabras claves para la característica SEÑALADA: asignar, asignar, designar, repartir, apropiarse, asignar, autorizar, abotonar abajo (argot), caracterizar, cargar, elegir, comisionar, implicar, constituir, definir, delegar, denotar, diputar, sustituir, describir, dictar, destinar (argot), elegir, evidenciar, favorecer, dedo (argot), indicar, individualizar, hacer, marcar, mete, nombrar, nominar, optar, enclavijar (argot), escoger, precisar, establecer claramente, preferir, reservar, selecto, fijado aparte, puesto a un lado, demostración, escoger, ranurar, estipular, tabular (argot), marcar con etiqueta (argot), golpear ligeramente (argot)

Código de clasificación de patente de los E.E.U.U. para DISTANCER: 361.179 Electricidad, sistemas eléctricos y dispositivos/proximidad o contacto:

. Alternativas y palabras claves para la característica del REDACTOR: adaptarse, alterar, amplificar, analizar, anotar, arreglar, montar, asignar, corregirse (argot), censurar, comprobar, elegir, compilar, componer, condensar, copiar, corregir, cortar, suprimir, desechar, cuidarse, elaborar, enmendar, suprimir, ofrecer, fino - la consonancia, final, mota de la mosca (argot), pasa, compone, pule, se prepara, prescribe, corregido, publica, juntado, cambia, vuelve a calibrar, rectifica, redacta, regula, refundición, reformula, divulga, revisa, selecto, disposición, pega hacia fuera, labra, aprieta, ajusta

. Código de clasificación de patente de los E.E.U.U. para el REDACTOR: la informática 715.530: el proceso de la presentación del documento, el interfaz de operador que procesa, y la exhibición del ahorrador de pantalla que procesa/corrigen, composición, o control de almacenaje:

Las alternativas y las palabras claves para la EDUCACIÓN CONSIGUEN una característica MÁS DURA: Enorme (argot), ambicioso, arduo, deslomador, fastidioso, pesado, desafiando, crucial, exigiendo, difícil, effortful, exigiendo, formidable, irritando, duro, ganado con dificultad, pesado, hercúleo, inmenso, intrincado, irritación, trabajado, laborioso, del tamaño de un hombre, no fácil, oneroso, diligente, dolorosa, problema, problemático, prohibitivo, rígido, severo, tieso, vigoroso, titánico, laborioso, resistente, molesto, intentando, cuesta arriba, por aguas arriba inflexible, fastidioso, abstracto, abstruso, el desconcertar, desconcertar, complejo, confusión, confundiendo, obscuridad, profundo, delicado, enigmático, enigmático, enredado, esotérica,

ocultado, inexplicable, implicado, nudoso, laberinto, flojo, serpenteando, misterioso, místico, desconcertando, agradable, obscuro, obstinado, paradójico, dejando perplejo, profundo, desconcertando, el pasear, sutil, enredado, espinoso, cosquilloso, confuso, insondable, incomprensible, disgusta, tosco, oscuro, fastidioso, díscolo, quisquilloso, severo, descortés, insuperable, irritable, estrepitoso, perverso, refractario, rígido, grosero, pesado, unaccommodating, unamenable

Alternativas y palabras claves para la característica de ENTERTAIN/ENTERTAINMENT: la diversión, bola, encanto, deleite, placer, disport, disipación, distracción, divertissement, disfrute, hospitalidad, día de maniobras (argot), frivolidad, diversión, juego, satisfacción, muecas (argot), período culminante (argot), escándalo (argot), risas (argot), levedad, tiovivo (argot), pasatiempo, comida campestre (argot), juego, placer, relajación, condimento, deporte, whoopee (el argot)

Alternativas y palabras claves para la característica de la PROTECCIÓN DEL MEDIO AMBIENTE: ecología, control del medio ambiente, análisis de consecuencias para el medio ambiente, gerencia ambiental, control del medio ambiente, política medioambiental, ciencia ambiental, environmentology

Alternativas y palabras claves para la característica del EJERCICIO: acto, acción, actividad, las calisténica, constitucionales (argot), descarga, disciplina, taladro, perforación, esfuerzo, examinación, ejercitando, esfuerzo, gimnasia, trabajo, lección, movimiento, ocupación, operación, funcionamiento, problema, búsqueda, recitación, schoolwork, estudio, tarea, prueba, tema, trabajo, entrenamiento, calentamiento, entrenamiento

Alternativas y palabras claves para la característica del JUEGO: competición, competencia, fósforo, reunión, redonda, sistema, torneo, aventura, diversión, atletismo, distracción, diversión, empresa, festividad, follow-the-leader, divertida, diversión, broma, alegría, alegría, ocupación, pasatiempo, piddly, plan, juego, procedimiento, búsqueda, reconstrucción, jugueteo, esquema, deporte, deportes, empresa

Alternativas y palabras claves para la característica del GPS: X, área, cojinetes, districto, ambiente, arreglo, geografía, tierra, escena, lugar, localización, lugar geométrico, punto, poste, referencia, región, escena, asiento, ajuste, sitio, situación, espacio, punto, soporte, estación, alrededores, topografía, zona, paradero

. Alternativas y palabras claves para la característica de GUIDE/GUIDANCE: consejero, asistente, capitán, caperuza, cicerone, conductor, regulador, convoy, consejero, criterio, director, docent, acompañamiento, ejemplo, modelo, expositor, genio, genio, alcohol de guía, gurú, inspiración, plomo, líder, estrella polar, amo, mentor, modelo, monitor, paradigma, pionero, patrón, piloto, pionero, timón, explorador, estándar, superintendente, profesor, ujier, consejo de la vanguardia, auspicios, conducta, conducción, control, transporte,

consejo, dirección, gobierno, ayuda, instrucción, inteligencia, dirección, gerencia, navegación, supervisión, enseñando

. Código de clasificación de patente de los E.E.U.U. para la GUÍA: 706.11 la informática - inteligencia artificial http://www.uspto.gov/go/classification/uspc706/sched706.htm - interfaz utilizador particular de C706S011000having

Alternativas y palabras claves para la característica INTERACTIVA: colabora, combina, conecta, entra en contacto con, coopera, interconecta, la interacción, interreact, ensambla, se combina, endienta, red, alcanza hacia fuera, se relaciona, toca, toca la base (argot), une, se acerca, llama, conecta, consigue, interconecta, alcanzar, hablar a, la charla, teléfono, visita, escribe

Alternativas y palabras claves para la característica del LOCALIZADOR: parecido, venido sobre, detectar, determinar, descubrir, establecer, hurón hacia fuera (argot), consiguen en, suceden sobre, golpe sobre, gancho (argot), luz sobre (argot), reunión con, nariz hacia fuera, precisan, punta, lugar, posición, estudiada, susto, búsqueda hacia fuera, olor hacia fuera, humo hacia fuera (argot), punto, estación, huelga, tropiezo encendido, rastrean, disparan encima (argot), destapan, desentierran, ponen a cero adentro

Alternativas y palabras claves para la característica de MFH: análogo, cerebro, informático, cerebro electrónico (argot), microordenador, mini (argot), miniordenador, desmenuzadora de número (argot), máquina de computadora personal, de pensamiento (argot)

Alternativas y palabras claves para la característica del NOTIFICADOR: conocer, aconsejar, alertar, anunciar, informar, afirmar, blazon, resumir, difundir, cablegrafiar, advertir, circular, pista adentro, transportar, contar, informar, declarar, divulgar, diseminarse, divulgar, aclarar, expresar, completar, dar, anunciar, hacer alusión, dejar saben, dan a conocer, mencionan, paso hacia fuera, poste, proclaman, promulgan, divulgan, revelan, envían la palabra, hablan, chillan, la indican, la sugieren, hablan, la enseñan, dicen (qué sucedió), notifican, expresan, advertir, atar con alambre, ascendente sabio (argot), escribir

. Clasificación de patente de los E.E.U.U. para el NOTIFICADOR: 340.825 Comunicaciones: Eléctrico, subclases 825 a 825.98 para controlar uno o más dispositivos para obtener una pluralidad de resultados por la transmisión de señalada de señales de control distintivas plurales sobre un número más pequeño de líneas o de canales de comunicación,

. Alternativas y palabras claves para la característica del &TIMING de la ORDEN: patrón, secuencia, orden (de acontecimientos), historia (que demuestra patrones del comportamiento - las ayudas predicen futuro).

. Código de clasificación de patente de los E.E.U.U. para la ORDEN y la SINCRONIZACIÓN: 706.14 Inteligencia de proceso de datos, artificial/sistema adaptante

Alternativas y palabras claves para la característica del OSCILADOR: el acento, dinar, armonía, entonación, intensidad, modulación, música, ruido, nota, echada, raqueta, informe, resonancia, reverberación, sonando, suavidad, sonance, sonancy, sonoridad, sonorousness, parásitos atmosféricos, tenor, tonalidad, tono, vibración, voz, conoce, hace publicidad, aconseja, anuncia, difundió, lleva, conecta, entra en contacto con, transporta, corresponde, declara, divulga, descubre, se disemina, divulga, aclara, consigue a través, hace alusión, imparte, implica, informa, interactivo, interfaz, dejó encendido, dejó hacia fuera, da a conocer, red (argot), pasa encendido, telefona, proclama, publica, publicar, levantar, alcanzar hacia fuera, se relacionan, divulgan, revelan, suenan para arriba, significan, separan, indican, sugieren, dicen, tocan la base (argot), transfieren, transmiten, revelan, decreto judicial

. Las alternativas y las palabras claves para PREDICEN la característica: adumbrate, anticipar, augurar, concluir, conjeturar, la bola cristalina, adivinar, dopar, dopar hacia fuera, prever, imaginar, calcular, forebode, pronóstico, prever, forespeak, prever, conjeturar, deducir, juzgar, augurar, presagiar, presumir, prognosticate, prophesy, psych hacia fuera (argot), leído, ver venir (argot), clasificarlo para arriba (argot), soothsay, suponer, conjeturar

. La clasificación de patente de los E.E.U.U. para PREDICE: la informática 706.14: inteligencia artificial/sistema adaptante

Alternativas y palabras claves para la característica del PROGRAMA: diseño, instrucciones, línea, orden, política, clase política, procedimiento, proyecto, esquema, secuencia

Alternativas y palabras claves para la característica de PS-ZONE: área, venda, correa, circuito, tierra, reino, región, sección, sector, segmento, esfera, territorio, zona

Alternativas y palabras claves para la característica de la PREGUNTA: examinación, calibrador de espesor, investigación, investigando, investigación, inquisición, interrogación, interrogatorio, investigación, encuesta, pregunta, preguntando, tercero, tercer grado (argot), escurridor (argot)

Alternativas y palabras claves para la característica de la RUTA: la dirección, conducta, consigna, transporta, dirige, envía, escolta, delantero, guía, plomo, piloto, mandato, considera, envía, shepherd, envía, demuestra, dirige, transmite

Alternativas y palabras claves para la característica de la PANTALLA: tubo catódico, CRT, exhibición, terminal de gráficos, monitor, pantalla, VDT, UDV, unidad de presentacion visual, terminal video

Alternativas y palabras claves para la característica de la CUENTA: cuenta, adición, agregado, cantidad, promedio, cuenta, cuenta final, grado, marca, número, resultado, puntos, tarifa, cómputo, expediente, resultado, acción, suma, resumen, adición, lengüeta, cuenta

Alternativas y palabras claves para la característica de la BÚSQUEDA: estar después de, sacudida para, echada alrededor, persecución, peine, cavar, cavar para, empuje para, redada, explorar, aventar, hurón hacia fuera, los pescados, seguir, ir después de, hacer fuego sobre para, buscar, investigar, investigar, mirar alrededor, mirada alrededor, ratón, nariz, vagabundeo, vagabundeo después de, perseguir, buscar, registrar, arraigar, funcionar después de, explorar, rasguñar, buscar para, búsqueda hacia fuera, olor alrededor, oler hacia fuera (argot), rastrear

. Alternativas y palabras claves para la característica del ANALIZADOR de SONIDOS: el acento, dinar, armonía, entonación, intensidad, modulación, música, ruido, nota, echada, raqueta, informe, resonancia, reverberación, sonando, suavidad, sonance, sonancy, sonoridad, sonorousness, parásitos atmosféricos, tenor, tonalidad, tono, vibración, voz, análisis, mastica encima, considera, estima, evalúa, imagina, desmenuza, examina, interpreta, investiga, juzga, arregla, explica, estudio
. Códigos de clasificación de patente de los E.E.U.U. para el SA: 701.231 La informática: tratamiento de señales de discurso/Recognization

. Alternativas y palabras claves para la característica del VA: equivalente, facsímil, semejanza, fósforo, modelo, fotografía, cuadro, retrato, similitud, escupida, imagen el escupir, cuadro mental, opinión, visión
. Códigos de clasificación de patente de los E.E.U.U. para el analizador visual sano: 704.235 Discurso a la imagen

Alternativas y palabras claves para la característica del ESTADO: condición existente, cómo las cosas se colocan, ninguì□n cambio, parámetros, actual situación, situación, tamaño de él, colocándose, situación, estado, estado en el quo, generalmente, cuenta

Alternativas y palabras claves para la característica del SINTETIZADOR: unirse, arreglar, mezclar, armonizar, incorporar, integrar, hacer entero, fabricación, orquestrar, symphonize, unificar, complementar, caber, ir con, adaptarse, sintetizar,

Alternativas y palabras claves para la característica de la TELEFONÍA: teléfono de coche, teléfono celular, teléfono de célula, teléfono móvil, teléfono digital, teléfono del campo, teléfono basado en los satélites, teléfono sin hilos

Alternativas y palabras claves para la característica de la ETIQUETA: agregar, colindar, poner, adjuntar, añadir, atar, comprobar, bautizar, designado, lista, copia, reserva, asimiento, identificar, marcar, nombrar, labrar, clavar con tachuelas, marcar, golpear ligeramente, llamar, marcar, titular

Alternativas y palabras claves para la característica del SASTRE: a la medida, aduana-caber, por encargo, diseñador, hecho a medida, cabido perfectamente, adaptado, acomodan, se adaptan, alteran, conforman, convierten, aduana-hacen, cortar, ensamblar a cola de pato (argot), manera, ajuste, se modifican, moldean, quadrate, reconcilian, trabajan mejor, forman, cuadrado, estilo, juego, adaptar-hacen

Las alternativas y las palabras claves para la TERAPIA CONSIGUEN una característica MÁS DURA: el análisis, curación, curando, medicina, tratamiento remediador, remedio, terapéutica, tratamiento, (argot) considera EGH

Alternativas y palabras claves para la característica de la PISTA: huella, huella, paso, surco, trayectoria, expediente, rastro, zona, rastro, pisada

Alternativas y palabras claves para la característica del USUARIO: usuario final, último consumidor, cliente, consumidor, cliente, usuario final, patrón, perspectiva, comprador, representante, comprador, usuario, vendee

Alternativas y palabras claves para las LLAVES del USUARIO EN característica: el palo hacia fuera, batió hacia fuera, copia, estralla apagado, teletipo, tacto, tocar-tipo, transcribe, escribe a máquina, escribe, inscribe, inserta, intercala, interpola, introduce, enumera, registra, observa, fija, introducido, registro, establecido, toma abajo

Alternativas y palabras claves para la característica de la ZONA: línea de demarcación, territorio neutral, zona neutral, correa, bloque, ciudad, condado, división, dominio, dominio, recinto, campo, lugar, vecindad, paquete, remiendo, diagrama, recinto, principado, cuarto, sección, sector, esfera, estado, estiramiento, territorio, el municipio, zona, césped, vecindad, sala

Archivo: Palmadita introducción/IMI de las características

PARTES - CON PATENTES RELACIONADAS:

Introducción: Todas las patentes son los E.E.U.U. a menos que se indicare en forma diferente. Ver el archivo "notas introductorias - menos importantes" para la ayuda en la lectura de este archivo.

El ACCESO = accede a los controles de producto electrónicos con afinado correctamente en la combinación.
- kilovatio: acceso, computadora, entrada, (aumento o keyless) adj3 (acceso o entrada), contraseña, interactiv
. --el juguete, diversión, juego, niño, cabrito, imagen, proyección de imagen, crea, creando
- str: (el achiev u obtiene o logra o consigue [o consigue o consiguiendo] o gana o keyless) adj3 (acceso o entrada)
- str: contraseña y (acceso o entrada). Str: seguridad y acceso. Str: (el drenaje o crea o creando) adj9 (acceso o acceso)
- Patentes de los E.E.U.U.: sistema keyless pasivo de la entrada 5420925 5418842 5396609 5373557 5345579 en el coche 5319364 507402 = "c" 5450524 5206905
. Mejora en patentes:
- Patente: 5247497 sistemas de seguridad basados en el identificador único de la grabación para el aparato de lectura subsecuente. La información proporcionada por U al sistema cuando entraron por último se repite así que U sabe si accedió algún otro previamente. Cesionario: Octel [co grande].
--mejoras:
- U = este sistema de N (patente:) ~ 5247497 C =
TENER ACCESO () AL ANALIZADOR de // () // EDIT () // NR (el nr de u cuando (w5) u no comprobó para considerar cuál era su "identificador único" (el tipo 5247497 entrado) durante su sesión pasada, sistema es inútil si u no comprueba, y mejor si los cheques de u cada vez) Picosegundo-Zona de la banda de // del OSCILADOR de // () () // (el sistema "sigue" w5 u movido y o lo que lo hicieron (uip, los gps)) CUENTA de // del RANURADOR de // Q () // R () // () la cuenta anterior o el "estado" o "el TDS" (del u (uso anterior) pueden ser un identificador único - este automatation ayuda u) a la PISTA menos creativa/perezosa de // TDS () // T () // del ESTADO de // () () // UIP ().

VAGOS = analizador del comportamiento. Analiza el comportamiento vivo de la gente.
. kilovatio:
- psycholog del comportamiento, sociolog, movimiento [movimientos, mudanza, movimiento]
- animal, ser humano, persona, gente
- estudio, estudios, analyz, monitores, supervisando
. str: (psycholog del comportamiento, sociolog, movimiento [movimientos, mudanza, movimiento]) y (- animal, ser humano, persona, gente) y (estudio, estudios, analyz, monitores, supervisando)

TERMINAR ESTO PARTE CON EL ARCHIVO RELACIONADO DE LAS PATENTES

Archivo: Lazo introducción/IMl de las características 2

MUCHAS CARACTERÍSTICAS con ALGO de SU SUB-FEATURES PRINCIPAL ENUMERADO

Introducción: Las piezas principales de las maneras pueden ligar/lazo juntas.

- Cómo utilizar este archivo: Centrarse más en subpartes sin las estrellas, y las subpartes que ayudan a desarrollar la parte principal [contra cómo la parte principal ayuda a otras piezas, puesto que estes 3ultimo deben tener la referencia bajo ellos]
- Las piezas etiquetadas con, son esperanzadamente subpartes principales necesarias para hacer su función principal de la familia de la parte. Para reducir la confusión, evitar usar este archivo así que las subpartes demuestran cómo la parte principal ayuda a otra parte; es decir las subpartes se enumeran para ayudar a desarrollar las subpartes de la parte principal y a reducir posiblemente la repetición entre las piezas principales similares.
- . - Las piezas etiquetadas con son solamente pieza de relaciones con las estrellas posibles.
- Propósitos de este archivo: las piezas de la No-estrella pudieron necesitar combinarse y mejores redefiniciones. No hacer caso la mayor parte de de las subpartes etiquetadas.

LA CARACTERÍSTICA PRINCIPAL SIGUIÓ POR COMIENZO DE SUB-FEATURES AQUÍ:

ACCESO = pista q sa del nr de la orden y de la sincronización del cerebro (el notificador del 'alerta a usuario)
Seek&react order&timing del ranurador del ANALIZADOR = del coordinador

- 'Subconjuntos de analizador: coordinador; analizador del comportamiento; buscar y reaccionar; analizador de sonidos; uip (algo un tipo de analizador); analizador visual.
+ la naturaleza de la situación [que no se ata con alambre totalmente en analizador] se entiende vía los sensores múltiples, eg.: analizadores sanos y visuales. Ver los sensores.

Juguete va de la pantalla del milímetro de la imagen de la experiencia del ARTISTA = del carácter
El ANALIZADOR del COMPORTAMIENTO = la guía de la experiencia multiusos predicen la pista uip va del tgh del estado del sa Seek&React
Zona del picosegundo del BALANCEADOR = del oscilador del distancer
CUENTA/FACTURACIÓN = pista del tds del estado de la cuenta

La CÁMARA = analizador visual ve: Artista

CARTUCHO =

Imagen del CARÁCTER = de la experiencia

PALMADA = r

La COMPOSICIÓN (de sonidos) = danza synth sa mic entretiene wa del vr de la vibración del juguete de la inclinación del sensor del oscilador del movimiento-receptor acústico de la experiencia

Sastre del uip- del estado del seek&react de la guía del ranurador del COORDINADOR = del analizador. Éste es un subconjunto de analizador. Sensor = coordinador: analiza los sensores múltiples para conseguir una mejor comprensión de situaciones.

Wa del vr del juguete de la inclinación de la zona del movimiento-receptor acústico del localizador del ejercicio del distancer de la DANZA = de la composición

Los vagos de la BASE DE DATOS = del analizador predicen la cuenta tds uip va del sa

DISTANCER = sensor del picosegundo del movimiento-receptor acústico del localizador del juego de la danza del balanceador.

El EDIT = el ranurador del milímetro de la imagen de carácter de la cámara del artista uip-adaptan el va

El humor de la guía de los vagos de la EDUCACIÓN = del analizador predice a sastre del uip- del tgh del estado de la cuenta

Vr de la HOSPITALIDAD = del juguete del humor del ejercicio

Danza del EJERCICIO = de los vagos

La EXPERIENCIA = entretiene

El JUEGO % = artista-se arrastra inclinación del carácter de los vagos

El tgh interactivo de la cuenta de la educación de la GUÍA = del analizador uip-adapta

INTERACTIVO = el sensor del seek&react de r uip-adapta

K (control vía llaves) = zona interactiva de la inclinación de la danza R de la palmada (el analizador teledirigido del `se adapta al usuario)

El LOCALIZADOR = ve: distancer

El MD/el HUMOR = los VAGOS (analizador del comportamiento del `) entretienen experiencia

Synth del MIC = oscilador sa

MODEM =

La MAÑANA = los VAGOS (analizador del comportamiento del `) entretienen zona interactiva de la inclinación del tgh del tds del sensor del seek&react de la cuenta del oscilador R del nr de la experiencia del ejercicio (el analizador teledirigido del `se adapta al usuario)

El RECEPTOR ACÚSTICO del MOVIMIENTO = compone el vr del oscilador del distancer de la danza

MULTIUSOS = el carro de los VAGOS (analizador del comportamiento del `) corrige

Los milímetros/las MULTIMEDIAS = la composición de la cámara del artista corrigen

NOTIFICADOR = vibración interactiva del sastre del uip- de la pista del estado del seek&react de la cuenta del acceso

Zona del visual-analizador del tds uip del estado de la cuenta del sonido-analizador del seek&react de la mañana del analizador de la ORDEN y de la SINCRONIZACIÓN = del acceso. Ver: Analizador de sonidos; Acceso.

OSCILADOR (comunicador sano saliente) = synth del balanceador

El paladio (dispositivo de colocación, GPS) = ve el distancer

PREDECIR = seek&react order&timing interactivo sa tds uip w5 de la ruta de la guía q de la educación del coordinador de los VAGOS del analizador (analizador del comportamiento del `)

Q = la guía de la educación del DB del analizador interactiva predicen el uip

Zona interactiva del uip VA de la pista de la inclinación búsqueda sa de la palmada de R = del acceso (las búsquedas visuales del analizador del `y reaccionan a las imágenes señaladas)

El RANURADOR = analiza la pista uip va del teléfono de la cuenta guía sa del coordinador de los vagos

PANTALLA = substituir-oscilador interactivo-k del nr

Los vagos de la CUENTA = del analizador mandan la cuenta el estado tds del seek&react

BUSCAR y REACCIONAR = zona order&timing interactiva del uip de la pista del tds del estado cuenta sa del nr del movimiento-receptor acústico de los vagos del analizador (el notificador del `alerta a usuario)

El movimiento-receptor acústico del mic del SENSOR = del analizador order&timing predice zona del va de la vibración del uip de la pista de la inclinación del tds del estado búsqueda sa de la cuenta

El nr interactivo del localizador del ANALIZADOR de SONIDOS = de los vagos k del analizador predice estado del sensor del seek&react de la cuenta

ESTADO = zona del tds uip del sensor de la cuenta de la cuenta del analizador

Interruptor (software) = estado interactivo tds de la cuenta del DB del coordinador del cartucho del analizador

El componer-traslapo de los vagos del SINTETIZADOR = del analizador entretiene el exper que el oscilador interactivo del movimiento-receptor acústico del mic predice sa uip

Teléfono = ranurador interactivo sa del oscilador del módem del mic

TDS (estampilla de fecha del tiempo) =

TGH (la terapia consigue más difícilmente) = educación del coordinador de los VAGOS del analizador (analizador del comportamiento del `) entretienen la guía del juego que el order&timing multiusos interactivo predice el estado uip del seek&react del ranurador de q

INCLINACIÓN = vibración interactiva del sensor del movimiento-receptor acústico R del distancer de la danza de la composición del balanceador del artista (el analizador teledirigido del `se adapta al usuario)

La educación del distancer del JUGUETE = del artista entretiene wa del vr del tgh del seek&react del movimiento-receptor acústico del humor del juego de la experiencia del ejercicio

El PERSEGUIDOR = el acceso analizan el localizador de la guía del distancer de la cuenta de los vagos que el nr multiusos (el notificador alerta a usuario) picosegundo order&timing del `predice la zona w5 del tds uip VA del estado sensor sa del seek&react de la cuenta del ranurador (las búsquedas visuales del analizador del `y reaccionan a las imágenes señaladas)

U (usuario) % = sistemas que pueden ser usuarios además de gente: tener acceso [pieza o persona de acceso que del sistema] al juego que el teléfono multiusos del sa del ranurador de R (el analizador teledirigido del `se adapta al usuario) [se está encaminando qué] [qué hace el sonido correcto puede utilizar el sistema] [sistema vía el teléfono] uip de los accesos [cualquier resuelve el perfil del uip, hace un accessor]

El UIP (información de usuario que programa) = el UIP-Acceso, UIP-BA, UIP-Corrige, UIP-DB, UIP-Ranurador, UIP-Tailor+, UIP-Pista. El UIP se aplica al IMI.

El UIP = el UIP-Acceso, UIP-BA, UIP-Corrigen, UIP-DB, UIP-Ranurador, UIP- Tailor+, UIP-Pista

Vr interactivo de la inclinación del movimiento-receptor acústico r del ejercicio de la VIBRACIÓN = de la danza

La guía VISUAL milímetro interactivo de la cámara del ANALIZADOR = del artista del analizador predice estado de la cuenta de la pantalla de R (el analizador teledirigido del `se adapta al usuario)

VR % = el distancer de la danza del balanceador entretienen ejercicio que el movimiento-receptor acústico interactivo milímetro del localizador predice zona del wa del uip va del juguete de la inclinación del tgh del sintetizador sensor sa del seek&react de la cuenta de la pantalla del ranurador de r

WA = zona del vr del juguete del teléfono oscilador sa del nr del ejercicio

W5 =

Wa del visual-analizador del uip del perseguidor del tds del estado de la cuenta de la ruta del localizador del distancer de la danza de la ZONA = del balanceador de los vagos del acceso

CONCLUYE EL ARCHIVO EN CÓMO LAS CARACTERÍSTICAS PUEDEN LIGAR A SUB-FEATURES PRINCIPAL

Archivo: La introducción/IMI de las características existe 2

LOS EJEMPLOS EXISTENTES DEL PRODUCTO SE RELACIONARON CON NUESTRAS CARACTERÍSTICAS EN 1996

Introducción:

- Los productos enumeraron en este file% existen, y ejemplifican las encarnaciones opcionales de las piezas según lo mencionado en descripciones de nuevas invenciones.
- La descripción de producto puede también incluir inventivo sobre basado nuevo material/correlacionada con los productos existentes.

La pieza que dirige a la cual se atan los productos existentes es parte de "sistema ramificación" según lo descrito en la "introducción principal a las descripciones de producto". Los fabricantes están probablemente en América a menos que estén mencionados de otra manera. Cualquier fecha atada directo a los productos existentes es probablemente la fecha (o fechas) cuando su publicidad del producto fue publicada. La breve

descripción de cada parte precede productos existentes para ayudar solamente a familiarizar a lector en la orientación general de la partición.

El ACCESO = accede a los controles de producto electrónicos con afinado correctamente en la combinación.
- Cerca electrónica: guarda animales domésticos lejos del alambre subterráneo del voltaje, puesto que el collar de perro emite la señal negativa cuando viene el perro cerca. Substituye la necesidad de cercas comunes. Vendido por Alsto en 800 447-0048, y las industrias 800 de Comtrad 704-1121, y una imagen más aguda. 94-9/95.

--la gente desautorizada puede/no puede = "acceso físico" del aumento.

COMPOSICIÓN = composición de música electrónica: Otra variación del producto se puede también utilizar para crear música interesante.

- Juego de ordenador virtual interactivo de la guitarra: Si usted maneja jugar adelante a las canciones correctamente, usted avanza a un de alto nivel de jugar de la música. Ver para preestablecer imágenes como usted juega. Vendido vía Skymall en 800-424-6255, #63004 94-95.

Notifican el NOTIFICADOR = al usuario en el estado de cualquier situación.

- El adminículo se enciende para arriba durante terremotos. Vendido por las soluciones electrónicas innovadoras Int'l, VA. SF crónica 1 de febrero de 95, página Z2.

+--"Pista": estados si el tipo ocurrencia ocurrió dentro (que) de área señalada, eg.: fractura del vidrio, otros robos, fuego (sensores de temperatura), accidentes/escapes químicos.

- Señales del "notificador" cuando se bloquean las pistas del tren: las luces laser notan cualquier obstrucción. Semanario de Nikkei - antes de 95 tempranos. Convertido vía Japan Aviation Electronics Industry Ltd y el ferrocarril Co. de Eas Japón

- Dueño de coche "notificado" cuando su coche está siendo roto en. Semanario de Nikkei - antes de 95 tempranos, bajo artículo tituló "subida del crimen alza ventas de dispositivos antirrobo autos.

- Alarmar los sonidos cuando el "notificador" detecta cambios leves en corriente de aire dentro del coche. Explotación minera Co, Japón del metal de Sumitomo. Semanario de Nikkei - antes de 95 tempranos, bajo artículo tituló "subida del crimen alza ventas de dispositivos antirrobo autos.

- El "notificador" busca cambios en el coche interior emitido infrarrojo de la radiación (calor del cuerpo). Semanario de Nikkei - antes de 95 tempranos, bajo artículo tituló "subida del crimen alza ventas de dispositivos antirrobo autos.

- Alarma auto del sintonizador de la voz: cuando el detector de movimiento ("sensor") activó = predeterminó números de teléfono se marcan = receptor oye el mensaje previo, eg.: éste es Juan, mi hogar en ----- está siendo roto en.

. Sistemas caninos existentes:

Introducción: También se aplica hasta el parts%: R, acceso, pista.

- Parar el exceso que raspa emitiendo el sonido de la alta echada. Vendido por Alstos en 800 447-0048. 94-9/95.

- Cerca electrónica: guarda animales domésticos lejos del alambre subterráneo del voltaje, puesto que el collar de perro emite la señal negativa cuando viene el perro cerca. Substituye la necesidad de cercas comunes. Vendido por Alsto en 800 447-0048, y las industrias 800 de Comtrad 704-1121, y una imagen más aguda. 94-9/95.

- Descortezamiento previo del perro oído cuando viene alguien cerca, eg.: según lo detectado por el movimiento "sensor". Vendido por una imagen más aguda 6/94, # SI600; e industrias 800 de Comtrad 704-1211.

El OSCILADOR = comunicador sano saliente señala a usuario cuando ocurrió una función dentro del dispositivo.

- Altavoces sin hilos: escoger e ir casi dondequiera (dentro de hogar), #45121W y 53111W. Auriculares también sin hilos, #53577W. Vendido por Hammacher Schlemmer 94- '95. Altavoces también de las industrias de Comtrad y de muchos otros fabricantes.

- El dispositivo acalla la estereofonia del coche para las llamadas entrantes y salientes en su teléfono móvil. Industrias 800 de Comtrad 704-1211.

--El OSCILADOR se para/volumen reducido cuando suceden ocurrencias ciertas/importantes, eg.: la alarma, campana suena (teléfono, puerta, alarma, (cocinando) contador de tiempo).

R = teledirigido

- Reloj de la transmisión de datos: Transfiere la información de su computadora. Almacenar las citas, números del teléfono, listas de lío... Hecho por Timex, los E.E.U.U.

- Ratón sin hilos de las computadoras que se mueve en tridimensional dentro de sitio. Desconocido del fabricante. (Quizá otro co con excepción del laboratorio creativo.)

- Pasar la mano delante de la estereofonia activa la función del snooze (que apaga el sonido). De Magnavox, vendido por la radio en 800-726-8742 #31014 94-95.

- Ajustar el ángulo de la TV vía teledirigido. Vendido por Skymall en 800-424-6255. #63004. 94-95.

- (Cámara de vídeo) 's controlado por los movimientos de ojo vía su = "sensor". KN: para controlar cualquier otro enganchó electrónicamente encima de sistema. Canon. SF crónica 17 de agosto de 95, página c3, columna 1.

- Comando de la voz teledirigido. Nombre comercial: Programador de la voz del VCR. Vendido vía Hammacher Schlemmer 9/94, #53554W. También vendido por Comtrad Industries en 800 704-1211.

- Pídola: Convierte (infrarrojo) frecuencia (de radio) alejada de la señal. Permite las señales de pasar con obstáculos. Industrias de Comtrad 800-704-1211. 94 - temprano 95. ¿KN anterior (invenciones) también?

PISTA = acciones de las pistas o de los monitores del sistema del usuario, o sistema.

- El adminículo se enciende para arriba durante terremotos. Vendido por las soluciones electrónicas innovadoras Int'l, VA. SF crónica 1 de febrero de 95, página Z2.

+--"Pista": estados si el tipo ocurrencia ocurrió dentro (que) de área señalada, eg.: fractura del vidrio, otros robos, fuego (sensores de temperatura), accidentes/escapes químicos.

UIP = programación de la información de usuario. Las aplicaciones del sistema recogieron la información sobre usuario para mejorar los sirven.

- UIP - T (telefonía): [La gente guardó en asimiento del teléfono oye el anuncio y otras grabaciones informativas (según el perfil del UIP del llamador (su llamador identificación = las bases de datos). El llamador puede también oír grabaciones durante señales de comunicando. Llamada de teléfono media contestada en cuatro anillos según estudio.

Noticias de Mercury de San Jose 6.28.94, página 1E. Quantum Systems Inc, Ramsey, NJ.]

--los llamadores eligen lo que oyen/conseguir (vía en línea/fax) del menú del interruptor del servidor (software adaptado `).

- Sistema de datos de la emisión de radio: 1] Radio del u interrumpida para dar las advertencias del tráfico o del tiempo (KN: cosechadora gps = sistema). 2] "s" demuestra mensajes de estaciones, eg.: nombre de la canción y artista y publicidad y kn-otra uip-comunicación. USA Today, el 22 de febrero de 1993, página delantera.

EL EXTREMO IMI EXISTE ARCHIVO: ¡Ver que las piezas principales archivan y sus apéndices!

Archivo: Introducción/IMIT 7 de las características

CARACTERÍSTICA DE LA TELEFONÍA DE "T "MUCHAS DE SUS SUBPARTES

Introducción: Este archivo incluye definiciones adicionales a las piezas para los productos en telefonía, comunicaciones, multimedias interactivas. Estas definiciones son parte (ser combinado con) de "piezas principales" archivan. Las definiciones adjunto son solamente minucioso más importantes que las piezas archivan. Sin embargo, si hay la dominación de la toma de la pieza la pregunta (conflicto, por ejemplo entre este archivo y archivo de las piezas) de un este archivo (es el defecto). Para: Telefonía, comunicaciones electrónicas, % ("R") de la electrónica interactiva alejada, % de las multimedias, etc.

GENERAL: Uno, el múltiplo y o todas estas piezas de la telefonía se puede incorporar en uno o más sistemas de red complejos grandes de la telefonía que cubren las localizaciones múltiples (diversos sistemas de integración). "C" es el centro de los diagramas y de las descripciones combinados.

- Cuando ""/"" del teléfono/"de T D" se utiliza en N (números del producto) con excepción de ésos en este archivo (tal como las cuyas características principales puedan/no pueden ser la telefonía), se refiere primero a

las "telecomunicaciones" simplemente, después a la ramificación más futura hacia fuera en todas las piezas de la telefonía contenidas en este archivo.

- Los productos siguientes también se aplican al ^: todos los tipos de instrumentos del teléfono (caseros, oficina, profesional), multimedias (vídeo, cable, teléfono video), audio interactivo/representación visual/datos (correo de voz, juguetes, hospitalidad), comunicación sin hilos (móvil, celular, PCS (sistema de comunicación personal), %GPS, Walkietalkie, paginadores).

PIEZAS DE LA TELECOMUNICACIÓN

El ACCESO = el acceso a las funciones del teléfono es restrictable: Las funciones de la telefonía son limitadas/moduladas/controlado

el "acceso permitido" según el tipo ""/"del carro acceso" puso en "el teléfono" de "Reino Unido". Ejemplos: --W5 tipo llamadas permitidas (quién; el sistema puede pedir la información del usuario antes de permitir el "acceso" en mode/to deseado deseado teléfono #.

- D: 1User = 2UK~3TR (habla) = 4TEL~5C = 6TR = 7TEL/8C/9MFH

-7MFH analiza código de ACCESO de CART/PD y de los permisos functions/ACCESS aplicable del interno.

-3 telecontrol ("R")

- Buscadores de la O-Dirección: El tipo sistemas del "GPS" incorporó en unidades móviles del teléfono. La información está disponible para el usuario según la suya/su localización (el sistema actúa como guía turístico: mejorar que el sistema actual que se restringe a los usuarios que son mantenidos el autobús; el sistema dirigirá a persona también (adonde ir después, mientras que la persona puede también utilizar un mapa de la "exhibición" /printed (hacia fuera)))

- D: el tel~pd~c~printer = la persona mfh~live que da a información \ tel-o-C5 llave inteligente de la habitación va más allá de viejas llaves de la tarjeta magnética, tiene viruta de circuito. Se puede programar con referencia a datos referente a usuario, a la facturación, al etc. la tarjeta del 18 de diciembre de 92 X. permite la activación del "teléfono". D: C5=tel/tr=remote

el dispositivo %-o-C78 advierte a usuario si olvidaron trabarse para arriba al irse. La puerta es azul cuando está trabada, rojo cuando está abierta. 20 de diciembre de 93. D: C78 = c = "teléfono". Usuario alertado (vía: "teléfono" /tr/notifier) siempre que la persona desautorizada haya entrado en la puerta (no hizo el "acceso correcto" del usuario)

regulador entrante/saliente de +5A-700: para activar la característica de la llamada saliente, primero presionar un botón especial (una vez o cualquie número de épocas repetidas en orden) que le deje conseguir señal para marcar. El llamador debe marcar los números pronto después de eso o se pierde señal para marcar y el cualquier presionar de otras llaves en el cojín se no hace caso. Además, habrá el anillo si una llamada entrante viene y se puede escoger solamente encima de (si el microteléfono está de gancho) presionando iguales o el otro botón especial - éste evita que los cabritos/los bromistas contesten al teléfono.

- OTD: requiere la memoria de pocos códigos; deja otros utilizar su teléfono que permite también para la mayor flexibilidad; puede restringir cualesquiera/todas las llamadas (distancia; por código de área/el teléfono específico numera (la identificación de llamador restringe encima de cómo ciertas llamadas se escogen); entrante y o llamadas salientes)
- Los padres no pueden controlar siempre a sus cabritos de usar el teléfono; por lo tanto esto es una característica valiosa.
- D: tel=c (memoria; reconocimiento de la identificación de llamador y proceso) = línea del teléfono regulador interurbano 5A-701: Restringe el acceso a interurbano marcan hacia fuera funciones vía primero:
- necesitando "el acceso" de "Reino Unido", eg.: de la espera el _ del _ exactamente los segundos después de coger el receptor antes de marcar del principio/del código cambiable de la llave antes de la marca, del instrumento del teléfono del usuario o de su "mfh" permitirá el marcar hacia fuera
+ instrumentos libres del teléfono de la oferta que marcan automáticamente en su sistema. Un botón adicional marca el número del teléfono del acceso automáticamente. Dar los teléfonos libres en países como Japón donde están extremadamente costosos.

Usos: comunicación interurbana del teléfono; información del mfh (tiempo, noticias, hospitalidad); dial en su madre/amante.

- Pueden también ser producidos barato y ser dados como promoción.
- Para las compras de la gente para los nuevos teléfonos, dejarlos comprar el instrumento que viene con un crédito para la distancia u otros servicios.
- Cualquier otro tipo de t/mm relacionó el servicio disponible vía el "tr".

CONTESTADOR AUTOMÁTICO = sistema de contestación de la telefonía.

OTD: ACCESO.(); %ARTIST (hacer el arte e irse por ejemplo mensajes; los sistemas del llamador o del receptor pueden: el usuario pronto, ofrece los equipo y programas de computación para hacer la función); BALANCE (); BVA (); CID (); %CAMERA (LENTE) (); %CART (carro de la licencia como parte del mensaje entrante/de salida de los u); PALMADA (); %COMPOSITION (hacer la música e irse por ejemplo mensajes; los sistemas del llamador o del receptor pueden: el usuario pronto, ofrece los equipo y programas de computación para hacer la función); CONFERENCIA (); FS (); % del JUEGO (hacer los juegos (volver sus movimientos) e irse por ejemplo mensajes; los sistemas del llamador o del receptor pueden: el usuario pronto, ofrece los equipo y programas de computación para hacer la función); K (); MFH (); MIC (); RATÓN (); P.M. (); MULTIMEDIAS (); MULTIUSOS (para el llamador/el receptor, eg.: llave en el código para el tipo persona querida ("correo de voz")); NOTIFICADOR (); NOTIFICACIÓN DE LLAMADA (); PORTABLE (); IMPRESORA (); Picosegundo; R (); S (); CUENTA (); ANALIZADOR DE SONIDOS (); ESTÉREO (); SYNTH (); TDS (); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (); UIP (); Reino Unido (); ANALIZADOR VISUAL % (); CORREO DE VOZ (); MODULADOR DE LA VOZ (); VR % (); WA % ().

Los siguientes son parte de los ejemplos posibles adicionales: contestador automático de las multimedias 1C-071:

Dejar los mensajes (video) para la gente en su oficina u hogar. También tiene característica del vídeo interactivo, por el que el usuario pueda hacer preguntas y conseguir más información.

- Como un contestador automático del teléfono, mensajes de las multimedias de la licencia (audios/representación visual) en la máquina de otra persona transfiriendo datos vía ondas del alambre o de aire.

- Todas las operaciones también incluyen el sistema de contestación estándar del teléfono (audio solamente). El aviso saliente se puede recibir audiblemente, o audio/visualmente en el dispositivo del llamador; el dispositivo de recepción incita a llamador con audio y o señal visual de enviar sus señales de a/v (solamente el audio puede ser aceptado sin embargo también si el sistema del llamador es más limitado).

- Puede trabajar con los teléfonos video actuales más crudos, y con modelos futuros más sofisticados.

Notas al pie de la página:

También actos como un fax que recibe la máquina.

. - Si el dispositivo del llamador no permite la transmisión visual, o si hay falta técnica, el sistema trabajará apenas en modo audio

. - Uso adicional: recibir los videoclips en cualquier momento de (las demostraciones, naturaleza educacional [el usuario puede pedir de instrucciones detalladas del fabricante en cómo funcionar, reparar, del etc su producto])

- Viejas notas al pie de la página: exhibición ("S"); "C"; pp; P.M.; Reino Unido; fecha; indica la hora y la fecha de mensajes entrantes/de salida automáticamente; interactivo; juguete; todos; hospitalidad; "mic"; synth; mfh; punto de ebullición; alerter; oscilador; vc; cuenta (número de mensajes); carro; teléfono; teléfono del SP; tr; MES; FS; cp; mq; acceso; carácter.

- Hace más fácil decidir quién es mensaje a contestar; mejorar la manera de comunicarse.

. 5A-5 > llamada auto de o detrás:

- H-debe la licencia del llamador no su mensaje, la máquina puede llamar detrás número y dejar el mensaje en la voz del dueño del contestador automático indicando que desean que salieron de un mensaje.

- Números del almacén de mayo de cada uno que llamaron y que entonces los retrasos (éste está ya en existencia)

- También vuelve llamadas de teléfono (obscenas) de la manivela con las declaraciones especiales registradas por el usuario y o el fabricante

- Dice a persona que ha llamado en último plazo seleccionado, "usted ha llamado otra vez y usted no está dejando su número, cómo puedo hacer el contacto, deja por favor su mensaje"

- [Mayo o mayo no ser legales]

. señal sonora de 5A-051 H o: este sonido debe tener psicologicamente despertar efecto. Hace los oyentes la sensación: feliz, o sexual, o excitado, meditativo y relaxed, calmado, el anuncio, humor (la risa puede substituir

señal sonora), el sonido animal substituye a señal sonora (registrar quizá su propio animal), y o a cualquier otro llamador de donante sano el humor del deseo dejar el mensaje/la sensación amistosos/buenos

. 4A (before#1) código de o cada mensaje por (nombre, asunto de la persona...) entonces archivos del microprocesador para la referencia futura

. características del contestador automático 5A-3: señal sonora saliente y o sonidos y o conversiones de los mensajes de salida - todos en las frecuencias, ritmos demostrados científico realzar la salud, sensación del bienestar, felicidad.

- Las máquinas pudieron incluso indicar que son tal producto de la salud, haciendo a llamadores más felices de haber llamado y sintiendo suspendido menos por las máquinas impersonales convencionales, mientras que consiguen su sano y o alza creativa.

+ dependiendo del número de teléfono del llamador (vía el sistema de identificación del llamador), el mensaje de salida es pre-seleccion para ellas por el usuario.

- Obra recíprocamente con el patrón de la voz del llamador para diseñar sonidos psicologicamente apropiados

. Contestador automático con el sintetizador de voz saliente: seleccionar el tipo de voz saliente querido con cualquier sonido del fondo, y ser otros carácteres en sus mensajes de salida.

- La función de la grabación del sistema permite que el usuario registre sobre las cintas de cassette, el etc para la inserción en cualquier otro dispositivo sonido-que crea.

¿? - Contestador automático con el sintetizador de voz: Alterar su mensaje de salida así que es más atractivo. La gente tendrá gusto de usted más {ella piensa a menudo de usted objetivo al escuchar su voz (de una distancia), encima de donde ella tiene la opción de la respuesta o del colgante .....}

. Existe: Selección de la lengua: pulsar la tecla correcta del número para conseguir instrucciones en lengua deseada

juego del contestador automático de 5A-4 H: piden el llamador jugar al juego. El juego puede incluir el siguiente un de los: preguntas de las curiosidades, preguntas sobre la persona que es llamada; el llamador debe indicar su preferencia por lo que pidió, eg.: color preferido, alimento, persona famosa, país, música, músico, etc.

- Respuestas a las preguntas de opción múltiple contestadas presionando número correcto en el cojín dominante del teléfono; o anunciado verbalmente sobre la máquina

- El llamador pudo conseguir solamente a través vivir persona, o se permita dejar el mensaje si salen del tipo máquina/usuario de la respuesta quieren oír. El oyente puede oír adentro y llamada del grito también. La máquina pudo decir el siguiente en respuesta a respuestas: muy bueno; ahora usted sabe hablar con....; apesadumbrado intentar por favor otra vez en su llamada siguiente; no llamar detrás hasta que usted .....; se están procesando sus respuestas; etc.

- las preguntas programaron/instalado por el usuario/el fabricante

. mensajes del teléfono del almacén de 5A-6 H ciertos en electrónica. Puede entonces escuchar siempre que el usuario quiera sin la interferencia con los mensajes entrantes futuros.

- proceso de la recuperación: la llave en el pedido los viejos mensajes almacenados los cuales se han escuchado ya, después da el mensaje de la fecha o de la persona o pide mensajes de la fecha o de la persona en memoria . retardo de respuesta del teléfono 4C-160-000000:

Si la persona no puede conseguir fácilmente al teléfono a tiempo, pueden enviar la señal que dice a llamador "espera por favor, yo está viniendo al teléfono".

La señal se puede generar cerca: sistema de reconocimientos vocales; el presionar del botón que está conectado vía el alambre, o ("R") control alejado; uso de la palmada; o todas las llamadas se manejan con tal aviso cuando el sistema sabe que el usuario está en el país

- el llamador oye la voz o la grabación viva

8B-310 sobre la vivienda o el sitio que entra, dispositivo coge el distancer de la persona y los alertará if/when: 1. tienen un mensaje. El grito allí podía demostrar y o imprimir el mensaje en aquel momento, si las peticiones de la persona. 2. demostrar su calendario para el día, semana... las reuniones 3. se programan para 4. acontecimientos que podrían estar de interés a ellos

- la persona de la respuesta recibe pudo indicar llano de urgencia en la comunicación, eg.: menos urgente; urgente; muy importante. La persona pudo estar ocupada con algo en ese momento.
- comercialización: conseguir sus mensajes más rápidamente y fácilmente; notificarse cuando usted tiene mensajes importantes en vez de tener que vadear a través de mensajes menos urgentes a menudo. Las ayudas substituyen la necesidad de la secretaria.
- categorías: chimers de la puerta, puerta TV, contestadores automáticos, software, computadoras, paginadores, intercomunicadores .....

5G: Contestador automático del teléfono:

Programar los tiempos en los cuales las llamadas entrantes son estar:

la llamada de a] remitida señaló teléfono # (las llamadas 10-11am van al teléfono #1, llamadas 4-7pm van al teléfono #2); el contestador automático del teléfono de b] coge llamadas automáticamente (usuario los mayo o mayo "no ser notificado" de la llamada entrante); el tiempo de c] de la semana efectúa el tipo de mensaje de salida. También CUENTA

- es incómodo hacer su llamada del teléfono remitir a en algún lugar donde usted no está; el usuario pudo olvidar reprogramar (los pp) su teléfono ("R") de la localización alejada tan este sistema controlado del TDS útil.

Mach de contestación del final

. Correo de voz y secretaria virtual: identifica llamadas entrantes importantes y o toma un mensaje o los remiendos llaman al recipiente si están en el teléfono o en otro teléfono a otra parte. Detalles pedir el REGUERO DE PÓLVORA 415 834-9453, o 800. Ver el artículo en SF crónica, P.D los 1, y de junio de 16, 1996. D: "contestador automático" = reguero de pólvora.

El ARTISTA = uno o más usuarios puede hacer/arte del diseño [el milímetro demuestra/los programas/los juegos] obrando recíprocamente con uno a/"mfh", vía el "t" o el otro "tr". "Mfh" se puede programar vía: UIP/PP/MP/CART. D: C~User del usuario C = MFH (CARRO, T).

- OTD (otros detalles técnicos): ACCESO (); CONTESTADOR AUTOMÁTICO (); BALANCE (diseñar los efectos sonoros para acompañar la presentación del milímetro del u); BVA (cada carácter/elemento visual en la presentación del milímetro responde/habla con observer/u que obre recíprocamente, diferentemente según el uip de este 3ultimo); CID (); CÁMARA (LENTE) (); CARRO (); PALMADA (); COMPOSICIÓN (); CONFERENCIA (); EDUC (); EJERCICIO (); FS (); JUEGO (); K (); MFH (); MIC (); RATÓN (); P.M. (); MULTIMEDIAS (); MULTIUSOS (); NOTIFICADOR (); NOTIFICACIÓN DE LLAMADA (); PORTABLE (); Banda (la demostración del milímetro se podría crear usando "software del autor" (de partido de M/other) (vía tr w otro c)); IMPRESORA (); Picosegundo; R (); S (); CUENTA (); ANALIZADOR DE SONIDOS (); ESTÉREO (); SYNTH (); TDS (); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (); UIP (); Reino Unido (); ANALIZADOR VISUAL % (); CORREO DE VOZ (); MODULADOR DE LA VOZ (); VR % (); WA % (). Los siguientes de esta sección son parte de los ejemplos adicionales:

El BALANCE = según la localización del paladio (GPS), los altavoces del teléfono y otras funciones balancean por consiguiente. El sistema del picosegundo puede utilizar la localización del paladio para hacer lo que quiere según el software usado.

- transactable de las llamadas entrantes/salientes basada en la localización de los tel=pd.
Eg.: los usuarios #10 y #40 pueden marcar solamente cierta área y o el teléfono # del sitio #20.
- D: paladio = telecontrol ("R") = mm~c~t = oscilador
--OTD: uip (estudios w5 del usuario) = mfh
- Milímetro: Visualizar a usuario de sus diversos ángulos según su posición en lo referente a su vídeo tel. La posición del objeto efectúa el modo audio también (el instrumento del tarareo demostrado sobre el lado izquierdo de S, tiene los locutores hacia la izquierda que tararean más ruidosamente que otra (speakers/%vibrators/%notifiers))
- cámaras múltiples que tiran de diversos ángulos

El BASIC = se aplica a todos los productos de la telefonía. #1 cualquier unidad portable (microteléfono) usada por U es solar accionado también. (Apenas dejarlo se sientan en sol.)
- D: dispositivo de telefonía (c) = línea del teléfono = convertidor del receptor = de señal = c = oscilador/mic = línea del convertidor = del teléfono de señal = dispositivo de telefonía (c)

BVA = analizador del comportamiento de la voz.
D: BVA = C = T

- OTD: ACCESO (el acceso se da a esa gente que exhiban los comportamientos/las voces que cumplen los requisitos (qué acceso tiene en el UIP del u en su memoria); ARTISTA (); BALANCE (); CID (); La CÁMARA (LENTE) (el efecto visual en el milímetro tr, se altera según el bva/uip del usuario); CARRO (cada cart^: las búsquedas para diversas señales en la determinación del comportamiento del u/tienen diversa banda que tome y después procese las señales de BVA por consiguiente); PALMADA (); COMPOSICIÓN (); CONFERENCIA (); EDUC (); EJERCICIO (); FS (); JUEGO (); K (); MFH (); MIC (); RATÓN (); P.M. (); MULTIMEDIAS (); MULTIUSOS (); NOTIFICADOR (); NOTIFICACIÓN DE LLAMADA (); PORTABLE (); Banda (); IMPRESORA (); Picosegundo; R (); S (); CUENTA (); ANALIZADOR DE SONIDOS (); ESTÉREO (); SYNTH (); TDS (); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (); UIP (); Reino Unido (); ANALIZADOR VISUAL % (); CORREO de VOZ (mientras que u está en asimiento/ser llamada los encaminó oye los sonidos/Info adaptados a su comportamiento/uip. Un partido puede señalar lo que consigue el otro llamador mientras que están en asimiento, eg. ; según su comportamiento/uip/qué u quisiera que el oyente comprara y o hacer); EXPRESAR EL MODULADOR (); VR % (); WA % (). Los siguientes de esta sección son parte de los ejemplos adicionales:

G. Agente de la voz: El sistema analiza el comportamiento de los altavoces (llamadores/receptores de llamadas) (vía "analizador de sonidos"). En golondrina de mar sus voces se modulan para ayudar a alcanzar los efectos deseados (boost^: las ventas, funcionamiento de trabajo, mejoran informe, hacen llamadas más largas del teléfono).

- El sistema que modula sonidos responde rápidamente y es controlado por C (UIP/objetivo británico de la comunicación), que analiza sonidos y hace modulaciones resueltas de la voz.

~ "analizador del "discurso" del G. de sonidos" (que determina los modos del comportamiento del altavoz) = UIP.

Usos: si está mintiendo el usuario y que las palabras atan al modo del comportamiento de mentira; alzar las ventas

- OTD:

. - ^D: 1uk (2pp/3mp)/4remote (2pp/3mp)/5clap (6 " discurso " /pp/mp)/%7 [las señales tr entre otras unidades (relacionadas)/]/8mfh/9mq/10uq del producto de las piezas = 11 [tr/rc] = 12+C = 13 [tr/rc] = las funciones deseadas de la descripción de producto 14+applicable son controlados/15other desearon/16 el carro " del ~ usos de la " cuenta " del ~ 17 del " notificador " (oscilador) 18 "/19/21 " impresora " de la " exhibición/20UIP ".

- Notas de D: 1/4/5/6 ^ del sistema de control (de las ayudas) (sistema de las vueltas en y de/controles otras funciones):

- Ver Parts& para los detalles menos cruciales

G. Mfh de los accesos de usuario para los "efectos deseados" vía el "teléfono". Effects^: mecanografiar los sonidos/música. Con el UIP el sistema puede bien diseñar los efectos sonoros deseados. analizador de la voz 5A-880: dice a usuario que el altavoz del comportamiento del modo estaba adentro mientras que dejaba el mensaje.

- el usuario puede optar tener análisis en el comando de botones
- D: speaker~tel=mic=c (sonido analyzer/UIP) ~mfh=osc/notifier.
- la llamada del teléfono se encamina en sistema del teléfono según el perfil del llamador (UIP, cliente valorado conocido vía tel#, código de área). Esta función está en N. anterior.

analizador de la voz 5A-910: la "exhibición" demuestra que el nivel adicional de modulación de la voz (inflexión) necesitó alcanzar puntería. El nivel adicional necesario puede ser basado en lo que equipa la sintetización necesidades de hacer, o cómo el cantante con solamente sus necesidades naturales de los medios de hacer alteraciones

- la puntería puede ser via^ resuelto: selección de la opción en menú; PP; UIP
- ap: bueno para la educación de la música; útil en mi producto musical automatizado del instructor también; enseña gente a cómo ser más cortés (teléfono con./desc.); analiza si el altavoz es bastante bueno ser empleado para el trabajo; análisis del altavoz útil para desarrollar el UIP.

analizador de la voz 5A-940: reconoce la emoción de la voz y analiza la sensación y o el comportamiento del altavoz. Éste es parte de un producto más grande con otras características.

reconocedor de la voz 5A-800: transmite las palabras del altavoz sobre grito. - convertidos en idiomas de oyentes

cribador y director de la llamada 4C-090:

De acuerdo con los sonidos del comportamiento de la persona en el teléfono, eg.: el tono, sistema dirige a llamador a la persona aplicable (eg.: psicología del llamador de los fósforos con voz de los representantes de las ventas (vive o la máquina) y el patrón del comportamiento. Alza ventas. También defiende hacia fuera llamadas indeseadas en la trampa del correo de voz, el etc.

- Relacionado con: analizador de la voz 5A-880-04200A: dice el usuario que el altavoz del comportamiento del modo estaba adentro mientras que hablaba, o dejar el mensaje en el contestador automático.
- el usuario puede optar tener análisis en el comando de botones
- relacionado con 5A-940

CÁMARA (LENTE) = integrado en el milímetro T (teléfono video). Ambo la persona en el otro final de la línea del teléfono, y de U puede verse y el otro U.

- D: lens=camera=recorder= tr a S de todo el U conectado
- Cámara de vídeo ("R") del control alejado C34 - cámara de los movimientos en ángulo deseado. 20 de diciembre de 93 X.C34 = ~remote del "teléfono" (control vía el teléfono)

El CARRO = puede hacer el sistema de C~T en un producto totalmente nuevo. Uno o más ranuras en el teléfono toman a uno o más diverso CARRO. Ejemplos de lo que puede hacer el CARRO:

- D1: c/mfh/tel = línea del teléfono = =cart del tr=tel=c~ (display/uk/osc/printer/mfh)

- Si no, el teléfono puede convertirse en un CARRO en los sistemas mencionados abajo.

--D2: =cart del =c~ del sistema (categoría de producto mencionada abajo) (display/uk/osc/printer/mfh/mq/uq/pp/mp/uip) (teléfono (radiofrecuencia tr/rc) /mo) = línea del teléfono = c/mfh/tel

- OTD: la combinación/interconexión de la categoría con el teléfono se hace o vía el CARRO, y o tapando los sistemas en uno a via^: alambre/datos sin hilos tr; una "c" está situada en el "teléfono" y el producto de la categoría, cada uno que tiene sus softwares compatibles/que integra con las otras partes de los sistemas enteros.

--Porqué el teléfono combinó el producto de w: La función del "teléfono" sirve muchas aplicaciones posibles al producto de la categoría, uno o más del siguiente puede apply^: datos del mfh (regeneración/acceso del uip/de base de datos/almacenaje y recuperación de la memoria); permite el control del sistema de la localización distante ("telecontrol"); conveniencia del tener un "teléfono" también. En el tiempo señalado TDS, el sistema comunicará el hecho vía el "teléfono" /tr. La "cuenta" es tr vía el "teléfono". Dos o más de estos sistemas pueden "obran recíprocamente" vía el "teléfono", con o sin la ayuda del mfh.

--Misceláneo: la C encontró en cada unidad/subunidad principal del sistema tiene en cuenta la inserción del software (CARRO).

- para los detalles adicionales en los usos para cada producto de la categoría, ver las limaduras el demostrar de cómo se utilizan estos productos.

CID = sistemas de identificación del llamador (identificación de llamador, Ammie):

- D: Llamador teléfono = tr su reconocedor de CID = de CID = C~T.

sistema entrante de las ventas del teléfono del <> 5A-900: La identificación de llamador determina cómo la llamada se maneja dentro de redes grandes del teléfono:

Las llamadas entrantes a las redes grandes de las ventas se encaminan según la identificación de llamador del llamador demostrada aumentar ventas.

Los usos incluyen:

1] Las llamadas se encaminan al representante de ventas que maneja el territorio del llamador.

2] Mientras que en asimiento, los llamadores oyen noticias de una difusión de la estación de radio de su código de área; o (producto/noticias) información según su UIP.

3] La voz del altavoz se modula levemente, demostrado crear mayor informe, según el acento regional del código de área del llamador/del comportamiento del llamador (analizador BVA-Del comportamiento de la voz).

4] Las llamadas de números de teléfono con última historia de cliente favorable se encaminan a la gente más eficaz de las ventas. La demostración de los estudios gente de algunas ventas es más eficaz con las ventas mientras que otras son una venta más eficaz a los clientes establecidos, todas de la llamada fría dependiendo de las características de la persona de las ventas.

5] El UIP/BVA determina si las habilidades suaves o duras del teléfono son necesarias (para el servicio del soporte técnico) y: a] encamina llamadas a la gente w tales habilidades; receptor de la llamada de las señales de b] antes de que la llamada se conteste en cuanto a el tipo habilidad necesaria para obrar recíprocamente llamador de w.

6] Según la información que es alimentada en sistema de la computadora ("C") (durante la interacción de la telefonía) sabrá mejor las respuestas (posibles) que se harán por el ser humano/el sistema.

7] Las llamadas menos deseables son: a] puesta/guardó en la parte posterior de la señal de los llamadores que esperaban en asimiento; personales de baja calidad dados de b] (ventas). Especialmente conducente a los números de teléfono nacionalmente promovidos, donde no dan los clientes especiales números especiales.

Notas: . - se modula la voz del altavoz. Eg.: los llamadores de los E.E.U.U. meridionales tienen diversas preferencias sanas que norteños. Paso 1 de D: paso 2 del llamador id=tel. D: el speaker=c (modulador de la voz según la identificación de llamador) = moduló la voz transmitida sobre línea del teléfono

. - el llamador identificó el via^: código de área; identificación de llamador (uip (historia de clientes)).

- la "identificación de llamador" y los conceptos relacionados se pueden substituir en las descripciones de esta limadura como cualquier manera vía la cual marcar a un llamador con etiqueta, incluyendo su: PIN, nombre de cliente (que se pudo mecanografiar adentro por el recipiente/el llamador (cuando comienzo de la llamada)), código de área, % del tipo actividad (servicio/producto) deseada/que es conducida.

Ajustar psicologicamente al tipo llamador: Expresar sintetizado para los propósitos apuntados (la identificación de llamador/el UIP señala el tipo llamador). Convertir las voces en las de las cuales crear las sensaciones: la pasión, la amistad, la energía, la inteligencia, la impaciencia y la expectativa que el oyente realiza su pozo del trabajo (los estudios demuestran que el discurso a la gente en ciertos tonos de la voz tiende a crear mejores resultados del trabajo de ellos)

-- eg.: el sintetizador del departamento del servicio de atención al cliente modula sonidos por los volúmenes, triple, el bajo (si sobre cierta gama)

- OTD: el cambio de los sonidos puede ser (P.M.) /PP automático

- usos:

--C decide al tipo frecuencia de voz deseada para los usos particulares. 1] El UIP determina frecuencia (en ventas, la identificación de llamador del cliente etiqueta frecuencia deseada); 2] K211-5A-890 - los convertidos mecanografiaron palabras en sonidos.

- O-Modular las frecuencias sanas de llamadas para inducir llamadas más largas y más repetición llamada. Eg.: eliminar algunas de las frecuencias sanas desagradables; sintetizar en sonidos agradables. Satisfaciendo ambos lados de la conversación, las llamadas se pueden aumentar, desarrollando actitudes más favorables hacia el otro partido y el teléfono sí mismo.

- también: las llamadas to/from regiones particulares se pueden modular por consiguiente, eg.: las llamadas del norther los E.E.U.U. (conocidos para sonar rígido) se pudieron dar las modulaciones leves de un /other del "sonido vibrante" para hacer la súplica de las llamadas más a los habitantes del sur.

¿Debajo se relaciona con arriba o? Debajo estaba el revelador 3.94:

¿<> 5A-900? La identificación de llamador determina cómo se maneja la llamada:

- la identificación de llamador del o se puede incorporar en el sistema también D del picosegundo: PD~Tel (identificación de llamador que identifica la transmisión) = picosegundo (reconocedor de la identificación de llamador) = c (analiza/el proceso [remite llamada del teléfono] /uip]. Ejemplo: la localización del usuario y la identificación de llamador son to^ usado: tratar este partido por consiguiente/desarrollar el uip o anotarlo.

OTROS USOS PARA T (TELEFONÍA): LLAMADOR IDENTIFICACIÓN = C~TEL = TEL~C:

ACCESO: la identificación de llamador actúa como una de las formas de un código de acceso.

ARTISTA: los artistas múltiples pueden hacer el arte junto (multiusos) en verdadero o tiempo del paso, vía línea de tr/tel, el sistema reconoce a llamadores y tiene UIP según la identificación de llamador del llamador/del usuario y o el código de acceso;

CARRO: ; PALMADA: ; COMPOSICIÓN: los compositores múltiples pueden hacer la música junta (multiusos) en verdadero o tiempo del paso, vía línea de tr/tel, el sistema reconoce a llamadores y tiene UIP según la identificación de llamador del llamador/del usuario y o el código de acceso;

BASE DE DATOS: Emparejado con la identificación de llamador/el su PIN/nombre de cliente/el otro tal elemento taggable. Búsqueda de la palabra clave de Uses^ para localizar todos los datos aplicables en llamador/cliente deseados. El cliente puede tener múltiple teléfono # ' s/los pernos. Utilizar las bases de datos nacionales también, eg.: de Dunn y Bradstreet, bases de datos del número de teléfono (de proveedores de servicios del teléfono), etc.

EXHIBICIÓN ("S"): (demostraciones: el llamador teléfono #, y cualquier otro Info sobre usuario de la persona está hablando con (cualquier usuario llamó los/los llamó a usuario) por ejemplo su: dirección, cómo su número del teléfono se enumera con el libro de la compañía/teléfono del teléfono, by-lines del anuncio y o descripciones sobre el otro partido (en la manera prevista vía el UIP); ENTRETENER: ; FS: atado al teléfono en diagrama; JUEGO: (la identificación de llamador de cada participante actúa como uno de sus códigos posibles del "acceso"); MFH: (UIP: desarrolla el análisis de llamadores (según W5 de su llamada)), puede ser conducido por la línea abastecedor (los E.E.U.U. Baby Bells) del teléfono);

MAÑANA del <>: cada identificación de llamador consigue diverso tipo de interacción también según su UIP; PP/MP: ; MQ/UQ: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; PD/GPS: C (UIP) analiza la

localización de ambo usuario (pd=tel) con su identificación de llamador; IMPRESORA: ; Telecontrol ("R"): ; CUENTA: ; ESTEREOFONIA: ; SYNTH: ; TDS: ; Teléfono: ; TGH: ; JUGUETE: ;

<>+ UIP: las ayudas de la identificación de llamador que c/mfh identifican a llamador, y por lo tanto que desarrollan/que proporcionan la información referente a UIP, D: llamador teléfono = su llamador identificación = tr = teléfono = c~mfh = uip; Reino Unido: vía C el usuario puede levantar la información sobre un particular teléfono #/el nombre de usuario/función y conseguir datos sobre su: la historia y la otra información del UIP; El teléfono de WA tiene identificación de llamador, D: wa=tel.

el <> 5A-900 relacionó el sistema entrante de las ventas del teléfono del N.: Identificación de llamador

Comportamiento del cliente del estudio vía (UIP) combinándose después de data^: artículos comprados sobre línea del teléfono, compras hechas con sus tarjetas (tarjetas de crédito, otras tarjetas relacionadas del miembro) en otros modos también. Los vendedores de esta manera desarrollan cálculos detallados sobre usuario/mercado general: cuál esa persona es probable comprar; más allá de, corriente y tendencias del futuro.

- de este modo, los vendedores pueden fijar a compradores potenciales del punto sin la inundación de ellos con el material que no son probables comprar dando por resultado la exposición excesiva del anuncio de sus marcas de fábrica y costes perdidos; y los compradores comienzan a ver tales marcas de fábrica en una luz más atractiva (esa marca de fábrica cabe su forma de vida).

. - estos datos del UIP se pueden compartir entre alguno o muchas firmas, cuanto compartiendo el el más grande y más complejo el el sistema de base de datos, y más exacto en la determinación de características del cliente.

el o "analizador de sonidos" también ayuda en analizar el comportamiento del llamador a un cierto grado, y éste puede anuncio al banco de datos del UIP del Info.

cribador de la identificación de llamador del <> 6B-020: Las llamadas indeseadas se acanalan al modo del contestador automático del teléfono. Existe.

- El sistema de identificación del llamador da a ciertas llamadas entrantes del teléfono (basadas en su teléfono ninguì□n) la grabación del contestador automático del teléfono. Identificación de llamador: el sistema responderá al número del teléfono del llamador como el usuario programó:

- el teléfono nunca suena cuando usted recibe llamadas de gente indeseada (da siempre un mensaje a ésos que usted desea no hablar con, de modo que usted no tenga que incomodar el coger del teléfono o el comprobar para ver el número del teléfono de llamador en la exhibición ("S"). deja a usuario coger el teléfono en otras veces con menos riesgo de discurso a la persona que ella desea evitar)

- da diversos mensajes a ciertos números del teléfono que llaman adentro

- tiene opción por el que el usuario incluso no tenga que oír el mensaje del llamador si el usuario desea al dispositivo de programa tales. Eg.: el llamador piensa que se está registrando su discurso; o el dispositivo registra con todo el oyente necesita utilizar llaves adicionales para recuperar estos mensajes menos deseables (deseados y mensajes indeseados se almacena en diversos lugares)

- Al recibir otra llamada en el teléfono, la onda de radio, el etc la primera, o en segundo lugar entrante llamada exhibe su número del teléfono, la identificación del llamador, el etc. permitiendo que el receptor elija contestar a la llamada.

- Debe llamar sea indeseado, el receptor puede optar tener comunicación entrante manejada por un contestador automático del teléfono o un dispositivo relacionado. O para mantener cosas simples, cualquier llamada por contestar va automáticamente al contestador automático.

Notas al pie de la página: Los mensajes indeseables se pudieron borrar automáticamente después de una hora o después de usuario cogieron el teléfono, que sucede nunca más adelante; Piezas: todos; exhibición ("S"); pp; P.M.; Reino Unido; fecha; interactivo; "mic"; synth; mfh; oscilador; vc; carro; acceso.

Grabación saliente personalizada 4C-042-000000 del o:

Estados de la identificación de llamador de los cuales la llamada es. Si el receptor no quiere tomar la llamada, pueden fingir no ser en el país pero haber creado un mensaje especial para este llamador. El aspecto importante es que una señal sonora sigue el mensaje espontáneo hablado por el usuario en el "mic", de modo que el llamador piense recibieron una grabación personalizada solamente. Incluso el mensaje audio oído por el llamador podía perder algo de su calidad para ayudar al llamador a sentirlos alcanzó una máquina.

. - trabajos con 4c-040, 4C-041

- OTD: exhibición ("S"); pp; P.M.; Reino Unido; tds; básico; oscilador; vc; discurso (dice para de quién es la llamada y quién); vc; el score%; teléfono del SP; cp; uq; el pi%; multiusos; notificador.

. identificación avanzada del teléfono del <> 8B-170-083001: Saber más sobre con quién usted está hablando. Ejemplo: su dirección y a quién el número del teléfono es mencionado, etc.

- se aplica si el otro partido le llamó, o usted los llamó. Conseguir más Info sobre partido que usted llamó sin incluso la necesidad activar la campana de su teléfono; apenas entrando base de datos usando su número del teléfono

- Identificación del receptor: saber si el teléfono que usted está marcando es un celular/teléfono móvil y o si está siendo llamada remitida y o el número o el tipo línea del teléfono del teléfono a los cuales la llamada está siendo llamada remitida.

- los recipientes pueden optar por tal información que no se dará hacia fuera

- H [las disposiciones gubernamentales pueden no permitir todos los aspectos de la idea, dependen del país] 83

- también aprender arriba y el número siguiente sobre el número del teléfono que usted marcó, o del teléfono que le marcó: el nombre en el cual el teléfono es mencionado, su dirección, cuando el servicio del teléfono comenzó, cuaesquiera quejas importantes contra la compañía, estado de la compañía - por ejemplo si ha archivado para la bancarrota.

- también aprender: cuántas llamadas nunca hicieron de ese número que day/wk...

- OTD: exhibición ("S"); "C"; pp; P.M.; Reino Unido; tds; básico; au; mfh; discurso; vc; cuenta; carro; teléfono del SP; (también identifica los números del teléfono para los módems, y los faxes); uq del cp; mq; acceso; uip; multiusos; notificador

A2-310 teléfono Regionalizer: el llamador oye el acento y la música populares para su región de país, según código de área del teléfono mientras que pasa a través de correo de voz o en asimiento. Si el empleado disponible con ese acento toma llamada (quizás el número central transfiere llamadas a la misma región de país en donde el empleado allí toma llamada).

teléfono activado del altavoz de la identificación de llamador 4C-040-103005:

El sistema pone automáticamente llamadas de la gente especial sobre el altavoz. Las tomas del contestador automático llaman si el usuario está hacia fuera o no contesta.

- Cuando las llamadas vienen de cierto teléfono numeran, el altavoz que el teléfono coge automáticamente la llamada.

. - trabajos con 4C-041, 4C-042

- OTD: exhibición ("S"); pp; P.M.; Reino Unido; fecha; tds; básico; sistema de identificación del llamador (identifica el número del teléfono del llamador); "mic"; synth; portable; au; punto de ebullición; oscilador; balance; discurso; vc; el score%; el cart%; teléfono del SP; cp; pi; flotador (flotadores del sistema de la mano); multiusos (se emiten las diversos señales sonoras, etc dependiendo de los cuales se está llamando el receptor; identificador del anillo 4C-041 - si "multiusos" entonces antes de la activación del altavoz de la voz del llamador, hay una señal sonora cifrada o un aviso audio que indica para para quién la llamada está; cc; alejado; notificador.

- identificación de esa gente (quién del teléfono de los pp del usuario no importan el hablar vía el teléfono del altavoz)

identificador del tablero de interruptor 8B-150-083008:

El recepcionista que recibe llamada, codifica el instrumento del teléfono del respondedor aplicable (para quién la llamada está) con código/la información de declaración puesta en palabras de la grabación sobre el llamador, eg.:

. –naturaleza del llamador (cliente o surtidor); nivel de importancia, urgencia; longitud del tiempo han estado en asimiento; si su una llamada local o interurbana; persona y u organización; mecanografiar la personalidad (agradable...). - El receptor de la llamada consigue esta información sobre la exhibición ("S") del teléfono; o computadora ("C") (puede entonces almacenar tal información con o sin ningul□n Info adicional introducir por el receptor (la persona con quien habla y las manijas llaman - ahorra el tiempo que afina en el Info, más receptor no pudo poder afinar todo a tiempo y u olvidar después de la llamada, especialmente si hay otra llamada que viene pronto después de eso). El receptor puede oír o leer esta información antes o durante de la llamada del teléfono.

- toda esta información se puede retransmitir encendido a la tercera (o cualquie subsecuente persona) tomando llamada (la persona no era quizás anteriormente a la derecha una para manejar la situación.

Notas al pie de la página:

Exhibición ("S"); "C"; pp; P.M.; fecha; todos; mfh; cuenta; uq; mq; uip; carácter.

. - A2-310 teléfono REGIONALIZER: el llamador oye el acento y la música populares para su región de país, según código de área del teléfono mientras que pasa a través de correo de voz o en asimiento. Si el empleado disponible con ese acento toma llamada (quizás el número central transfiere llamadas a la misma región de país en donde el empleado allí toma llamada).

cribador y director de la llamada 4C-090:

De acuerdo con los sonidos del comportamiento de la persona en el teléfono, eg.: el tono, sistema dirige a llamador a la persona aplicable (eg.: psicología del llamador de los fósforos con voz de los representantes de las ventas (vive o la máquina) y el patrón del comportamiento. Alza ventas. También defiende hacia fuera llamadas indeseadas en la trampa del correo de voz, el etc.

- Relacionado con: analizador de la voz 5A-880-04200A: dice el usuario que el altavoz del comportamiento del modo estaba adentro mientras que hablaba, o dejar el mensaje en el contestador automático.

- el usuario puede optar tener análisis en el comando de botones

- relacionado con 5A-940

- Correo de voz y secretaria virtual: identifica llamadas entrantes importantes y o toma un mensaje o los remiendos llaman al recipiente si están en el teléfono o en otro teléfono a otra parte. - notifica cuando el "teléfono" está sonando. D: c5=tel/tr=remote
- Nivel de sonido de G. y instrumentos llanos de la vibración: El usuario alertó el to^: llamada de t/tipo entrantes de llamada (llamador, naturaleza de la llamada (llana de urgencia)) via^: luces de la vibración/el destellar, u otros modos del "notificador". Útil para los que son deseo de la grabación situations/do de deaf/in no para disturbar otros.
. - si es sordo, utilizar una de mis otras invenciones para continuar comunicaciones.
- Correo de voz y secretaria virtual: identifica llamadas entrantes importantes y o toma un mensaje o los remiendos llaman al recipiente si están en el teléfono o en otro teléfono a otra parte. Para los detalles en la llamada 415 834-9453 del reguero de pólvora, o el REGUERO DE PÓLVORA 800. Ver el artículo en SF crónica, P.D los 1, y de junio de 16, 1996.

NOTIFICANDO LLAMADA = D: Llamada entrante (CID) = C~T~ " notificador (Display/OSC) " llamada saliente automática del <> 5G:
- teléfono call/TR del o A hecho automáticamente en ciertas circunstancias,
sobre alarma/acto/la terminación de la tarea, el sensor hace llamada. Ejemplos:
- which^ de los PP del contador de tiempo del ajuste (TDS): el usuario de las alarmas a la necesidad hacer una llamada/entonces marca hacia fuera la llamada (y activa el teléfono del SP)
. Usos:
El <> si el usuario no se ha levantado de cama tales llamadas puede ser activado. La determinación del levantamiento está en mis últimas invenciones: el 1] disparar de la luz laser demuestra a persona salida de cama; 2] sensores (para la presión) en usuario del sentido de la cama todavía están en cama;] la alarma 3 (cerca localizado/muy lejos de cama) no fue desactivada.
+-call va: despertar el servicio (mfh/persona) que sabe los modos W5 de conversación/de sonidos para despertar a persona (qué/cuando/cómo decir qué (las noticias colocan; la "buena mañana, despierta") /why (la psicología));
--si alguien suena su timbre, y usted no está allí, el teléfono del SP allí TR a la localización del usuario
--los sonidos particulares en las localizaciones en donde no localizan al usuario en ese entonces (ruido extraño), sistema en golondrina de mar "notifican" al usuario/a policía vía TEL/beeper/monitorer (policía). El "analizador de sonidos" es PP/MP para ciertos sonidos (perro del descortezamiento; fractura del vidrio; determinación apagado de alarmas particulares; fuego; salida del agua; ruido excesivo del bebé/de niños; rotura adentro y entrada)
- D: user=sensor (mic) /uk/remote=c=tel (teléfono) del SP /transmitter (radio)
=transmission=rc/tel/person=c~mfh

- OTD: operaciones simples/complejas posibles. Simple: el activar (línea de contestación de la llamada/el conseguir para marcar hacia fuera). Complejo: marca/que pone transacciones a disposición cualquie otro instrumento sofisticado del teléfono.

beeper de la emergencia 3A-W20 (portable/no portable): si se acciona la alarma o cualquier otra emergencia sube el beeper de la persona se enciende automáticamente. Código/tipo del beeper (eg.: mecanografiar la señal o la luz o la naturaleza de las demostraciones de la exhibición de la palabra ("S") del problema, por ejemplo: tres emite un sonido breve y agudo medios que su abuela está pidiendo ayuda)

- Uso: para difícilmente de la gente de la audiencia (sorda); los padres que quieren saber de cualquier ruidoso suenan/los desplomes en dormitorios (el dispositivo se puede diseñar para no hacer caso de voz ruidosa de la frecuencia del niño, o los padres pueden querer saber sobre esos gritos también - si oyen el grito pues el padre de las alarmas del beeper sabrá la naturaleza del problema y puede decidir sobre elegir comprobar).

- H-Bruce Dunn indicó que él sabe del dispositivo ese enciende luces cuando el teléfono suena

. ¿- 8B-350 +? Notificador: si el teléfono móvil de la persona, teléfono, paginador, película hablada guerrera, o como el dispositivo de transmisión-recepción las está llamando y están ausentes, el su reloj o el otro dispositivo portable más pequeño pudo alertarlas vía la vibración del sonido, ligera o reservada.

- el dispositivo pudo notificar lo si hay algunos mensajes en el contestador automático o el correo de voz, y o el número de mensajes. Tal aviso pudo ocurrir con o sin la petición de usuario tal información.

- el usuario pudo saber el teléfono del llamador o el número de identificación; entonces el usuario puede dejar quizá un dispositivo de contestación tomar un mensaje

OSCILADOR: información de estados sobre la llamada entrante vía el OSCILADOR "notificador" vía el llamador ID^ del llamador: A] teléfono #; El nombre de B] del sistema del receptor del llamador (el sistema recuerda quién cada pertenece el teléfono # según a a] que tenía tal información entró adentro; b] vía la computadora de la mazorca del teléfono ("C"). Naturaleza de C] de la llamada según el recepcionista/Info "Reino Unido" adentro por el llamador.

- Auriculares/audífonos: WA deja a usuarios hablar/escucha las conversaciones del teléfono.

- D: t~c (banda) = oscilador

teléfono del sonido 3A-360: ¡presionando los botones crean los sonidos que agregan a la diversión creativa de la llamada telefónica del hogar/de la oficina! Grande para los adolescentes y los adultos creativos.

- El uso para preparar para arriba, los compañeros de trabajo de activación, los artistas, los inventores, los viajantes de las ventas, la gente triste, enferma o aburrida con aclamaciones en fondo, los etc. consiguen fluir creativo sano de los jugos.

- Dispositivos para desarrollar excusas para conseguir del teléfono. Sonidos: campana de puerta (excusa para, "oh tengo que ahora ir"); sonido de otra llamada del teléfono que suena en la segunda línea; sonido del tecleo en esperar de llamada; registrar sus propios sonidos sobre microprocesador, [eg.: la mamá que dice "viene por

favor abajo y me ayuda"; el perro/el gato que raspaba para para ser caminado o para ser alimentado o dejó hacia fuera; los sonidos falsos del teléfono preocupan en la línea .....]

- los expedientes de usuario poseen efectos sonoros

- puede iniciar en el principio de la conversación para ganar comienzo interesante a la conversación, esté alguien con excepción de se

H sonidos de la naturaleza: monos juguetones; pájaros; sonidos de la selva; lluvia;

- Sonidos de la broma del h: bebés tontos; bebés risueños; bebés gritadores; oraciones extrañas cortas de la risa, del etc; ¡la voz de la señora gorda salvaje "bien conseguí ahora conseguir del teléfono, hablo con usted más adelante! " 'etc.

anunciador del anillo del teléfono 3A-361: sonidos únicos: música, campanas de iglesia, sonidos del pájaro, monos que juegan, bebé que grita, sonido verbal del mayordomo que indica el "teléfono" o .....

- Palabras claves: el teléfono, adorna = (decorativo y o decoración), juguete, diversión, novedad

acelerador del volumen del anillo del teléfono 3A-362: cada anillo sucesivo consigue más ruidosamente. Alerta a los que no pudieron oír el anillo. ENCIMA de la característica en la activación y selecciona volúmenes. La aceleración sana pudo estar en el solamente un o cada anillo sucesivo.

- el usuario puede seleccionar los sonidos alternativos que substituyen el anillo

- la continuación del sonido relacionado de sonido pudo continuar después de cualquier contestador automático escogido encima de llamada

identificador del anillo 4C-041-000000: existe

Si los "multi-usuarios" utilizan la misma línea del teléfono; entonces según el llamador identificación #, habrá un diverso anillo cuando viene la llamada adentro.

. - eg: la persona #1 programa su deseado teléfono # ' s y cuando la persona #2 oye el anillo para la persona #1, la persona #2 deja la persona #1 o el contestador automático tomar la llamada. El llamador está desprevenido de este sistema.

- OTD: exhibición ("S"); pp; P.M.; Reino Unido; tds; básico; oscilador; vc; discurso (dice para de quién es la llamada y quién); vc; el score%; teléfono del SP; cp; uq; el pi%; multiusos; notificador.

--D: C28=tel~remote

El RANURADOR = TR entrante se encamina según la banda.

- D: llamada entrante (CID, UIP (dado por el recepcionista/vía la base de datos del sistema del receptor)) = t~c~mm

- localizador de la llamada del <> 1C-291-083001:

Para la gente que pasa mucha hora en diversas partes de la oficina. Anillos del teléfono en ciertos patrones, señalando para quién es y cómo es urgente. Las llamadas para el anillo de la persona solamente en el teléfono están los más cercanos a.

Seguidor del teléfono: El teléfono suena para el usuario en el teléfono más cercano a la localización de la persona.

. - Relacionado con el producto 1C-290.

- el sistema se simplifica para el uso fácil. Por ejemplo: las transferencias del teléfono se limitan a los teléfonos particulares dentro de la oficina/del lugar; cuando llega la llamada entrante, puede indicar en nombre de la exhibición ("S") o la llamada de la persona está para

- Usos: este sistema se limita en uso a ciertos tipos de oficinas donde está la gente a menudo lejos de sus escritorios dentro de un área general. Cabe estilos particulares del trabajo de oficina, no se significa para cada uno.

el tiempo de +-saves de tener que tener algún otro conseguir su teléfono

identifican a la persona de +-needed vía:

--diversos anillos del teléfono pueden también aplicarse en cuanto a para quién está la llamada, o diversas melodías cortas

--la importancia de la llamada puede dar lugar al anillo más ruidoso o al otro significar

--los locutores pudieron anunciar para quién la llamada está....

--luces que destellan particulares

--la exhibición en la pared o la otra localización cerca del teléfono

- el sistema puede después de substituir el uso de los beeperes, sistemas de radiobúsqueda

Usos:

- dicen el recepcionista para quién la llamada está, después transfieren la llamada poniendo en código correcto qué transferencias llaman automáticamente a la sección del co donde la persona trabaja; en golondrina de mar el sonido, el etc señalados se emana señalando para quién es la llamada. La persona aplicable o cualquier persona puede tomar la llamada (pero la interrumpe a pocas personas si la gente acaba de conseguir las llamadas ellos mismos), si la llamada no se contesta, después el correo de voz registra el mensaje del llamador (el sistema de contestación automatizado existente del teléfono)

oficina u hogar de +-for: el teléfono suena solamente en el sitio donde está la persona, no disturbando otros. El sistema reconoce la presencia de la persona por su transmisor. Este transmisor puede tener muchas otras funciones para los sistemas que identifican donde están dentro de una vivienda, según otras características en producto archiva A, B, y la C.

- Notas al pie de la página: alejado ("R"); exhibición ("S"); "C"; pp; P.M.; Reino Unido; fecha; todos; "mic"; synth; mfh; alerter; oscilador; vc; cuenta; teléfono; teléfono del SP; tr; MES; fs; RPC; uq; acceso; uip; carácter; chapaleta; distancer.

Opción: solamente los llamadores con la identificación de llamador particular (según el UIP del receptor/del remitente) conseguirán sus llamadas acanaladas a través de este sistema de localizador; por el que otros llamadores pudieran pasar a través de los canales normales (eg.: recepcionista - > correo de voz/contestador automático si el usuario está lejos de su localización principal)

3G050 con referencia a (ranurador) para T/C (M, autopista de la información): 1] vuelve a conectar u de nuevo a la extensión del número de teléfono que fueron transferidos a pero que desconectados más adelante de. 2] Actúa como señal en volver a poner donde estaba el usuario en la autopista de la información o el M.

Para los detalles en la llamada 415 834-9453 del reguero de pólvora, o el REGUERO DE PÓLVORA 800. Ver el artículo en SF crónica, P.D los 1, y de junio de 16, 1996. "ruta" = reguero de pólvora

CUENTA = D: cuenta = c~t

- El teléfono C1 marca las cargas del teléfono, exhibición ("S") demuestra cuánto cuesta la llamada. antes de 92 frecuencia intermedia. Probablemente Sony, el otro manuf ahora también.

ANALIZADOR DE SONIDOS = D: convertidor del mic = de señal = t~c

- Analiza faltas mecánicas y todo lo demás emisión aplicable/los sonidos únicos según los fenómenos. El uso en ("R") localizaciones alejadas, transmite vía TEL/TR.
- G. sabe lo que está mecanografiando el usuario sobre su computadora ("C") en el otro extremo de la línea del teléfono vía el "analizador de sonidos" que coge de las señales generadas como tipos de usuario - > UIP. El "analizador de sonidos" también estudia el cualesquiera/la mayor parte de los otros sonidos generados en el otro lado del tr (en la localización del otro partido), eg.: cocinando, conversaciones del fondo.
- usos: datos sobre el otro partido para el curioso; para desarrollar la base de datos del UIP.
- BVA utiliza el "analizador de sonidos" para ayudar a entender el altavoz (su perfil del comportamiento).
-1R-54 T acepta comandos de la voz. Hablar el nombre de la persona, y el sistema marca el número del teléfono de la persona. [Sharp Corp, 22-22, Nagaike-cho, Abeno-ku, Osaka 545 06-621-1221 NK]
- OTD:

ACCESO: (vía el analizador de sonidos (solamente ciertos comandos verbales/voz de la persona permitida); CÁMARA: (cámara del control: eg., ángulo de la lente vía comandos verbales (vía tr/t) (para ("R") la cámara alejada)); CARRO: (); ENTRETENER: (); MFH: (); MULTIUSOS: (el sistema reconoce diversos altavoces, y funcionará diferentemente incluso si las mismas palabras son habladas por diversa gente, eg.: coge en sus acentos regionales/voces masculinas/femeninas); NOTIFICADOR: (); OSCILADOR: (); Banda: (); R: (); S: (); CUENTA: (tds); SYNTH: (); Teléfono: (tr); UIP: ().

ESTEREOFONIA = D: estereofonia = mm~c~t

. Estereofonias del <>: El teléfono del altavoz es parte del vehículo/del sistema "estéreo" casero/de la oficina.
- D: teléfono (altavoces de la unidad del microphone~main (microteléfono/altavoces de estereofonia).
¿- existe?

SYNTH = D: synth = mm~c~t

TDS = tds = ~t~mm de c (banda)

TELEFONÍA = D INTERSISTEMAS DE TRANSFERENCIA: ~ del sistema 1 ~ C. de C = del sistema 2.
interruptor del teléfono del `8B-16:
El dispositivo transfiere una llamada entrante del teléfono móvil a un tel. regular.
- Propósito: ahorrar el dinero. Para los que la llamada comenzada en oyente móvil del.tel. no necesite saber el interruptor está ocurriendo.
posibilidades de transferencia del método: tener línea regular dial del teléfono en la línea celular del teléfono en qué hora asumirá el control la línea regular del teléfono llamada. El teléfono móvil de recepción debe tener característica especial para permitir esto.

UIP = D: uip = c~t

- La información sobre cómo eso usuario habla con alrededor sí mismo, se recoge (en un cierto plazo). El UIP consigue el Info de: el "analizador de sonidos" = desarrolla perfil de la personalidad en C; qué usuario "Reino Unido" = C.

la computadora %-o-C112 ("C") predice error humano. Entrada UIP (condiciones de trabajo de la persona). El sistema predice errores que son probables hacer. El 30 de sept. 92 yarda.

- Envía la advertencia vía el "teléfono". D: C112=tel/tr=osc (alarma) /notifier

5A-720 supervisa el número de llamadas y longitudes de la conversación entre ciertos departamentos. Una base de datos de la computadora ("C") puede demostrar todos los tipos de gráficos para los propósitos diversos, eg.: qué departamentos pudieron necesitar moverse más cercano a otros (durante o sin cualquie reestructuración corporativa), los planes futuros, viendo los valores y los flujos de departamentos, el etc.

REINO UNIDO = D: Reino Unido = t~c~mm

- Tabletas escritas mano de la entrada de la imagen: números del teléfono del dial (Reino Unido) escribiendo el número sobre la tableta.

- Lectores de clave de barras - escritores: los datos leídos/recibidos son TR; C puede decir al escritor W5 imprimir qué claves de barras. D: lector de clave de barras/escritor = c= tr/tel = c/mfh

- Exploradores de la imagen: los números/los códigos del teléfono de la exploración a conseguir/compilan números del teléfono. La parte de Info necesario se puede también explorar y después emparejar con otros datos, eg.: explorar los nombres de la gente, y la memoria de sistema sabe sus números del teléfono. Por lo tanto el usuario puede entonces desarrollar rápidamente la lista deseada del teléfono para c "teléfono".

- Pantalla táctil para - la televisión, dispositivos de entrenamiento de la computadora ("C"), realidad virtual, intercomunicadores:

Usuario Reino Unido (los tactos desearon los números para entrar en contacto con el otro partido (vía el teléfono) (conseguir más información, ponen una orden, una charla amistosa). - Ordenador portátil C32 ("C") con construido en impresora (el "cojín del aire" ACEPTABLE también, pero se cerciora de su built-in). IBM piensa el cojín 550BJ... Fecha de lanzamiento X.D de enero de 93: C32 = ~remote del "teléfono "

- dial de la música de la crepe o-C99. Cada modulación sana de los controles de disco diversa. Sony. El 15 de marzo de 94 "Brutus", p.24 publicó en Japón.

D: uk/remote (C99) = tel. (el dial/recibe llamadas del teléfono girando la crepe marca (el sintonizador rotatorio no clásico del teléfono con los 10 agujeros)

teclado del laser del <> 5A-710: disparar la luz para el número específico querido. La invención tiene diez lasers (para 0 a 9)

- gran novedad

- el "teléfono" es uno del ^ de los usos: grande para la gente rica en cocina que quiere hacer llamada saliente del teléfono de altavoz con las manos sucias; artistas y escultores de la arcilla; científicos y doctores que no deben de-esterilizar sus manos

Las luces laser se pueden también dirigir hacia fuera en espacio abierto (se dirigen los lasers (los pp) así que el usuario puede las funciones de control de cualquier producto de su asiento preferido wo que necesita cualquier aparato (alejado). D: Transmisores del laser = (la persona puede disparar cualquier luz aquí w el "código deseado ") = receptores = sensor = c = control del laser del producto deseado.

- "código": cada laser se puede pegar como el "código Morse" que genera 100 el tipo posible señales de cada laser; la combinación de códigos de cada laser puede ser (para tres luces laser 100 por 100 el tiempo 100). El código total (hecho a partir de 1 o más laser) hace tan el control deseado, eg.: modos con./desc./del cambio/etc.

- "oscilador" (señal sonora: mismo o diverso sonido según el código/laser) se hace cada vez usuario: el laser de las huelgas/genera código reconocible.

- lista parcial de productos que el teclado del laser puede controlar:

Contestadores automáticos; etc.

- este producto se describe en mis otros archivos, eg.: Piezas

- D: diodo láser = tel~c = exhibición ("S")

- OTD (usos del teléfono):

ACCESO; BALANCE; CARRO; PALMADA; "Composición" = teclado del laser (5a-710) = teléfono; Exhibición ("S") (demostraciones W5 de qué está sucediendo); EDUC (puede reprogramar (los pp) qué cada laser representa (para la generación de señal; EGH); ENTRETENER; EJERCITAR (dial cuando es mojado: en sauna, cuando sea mojado, mientras que en la máquina que activa); FS; MD (oscilador); MFH; MAÑANA; PP/MP; MQ/UQ; MULTIUSOS; NOTIFICADOR; OSCILADOR; IMPRESORA; Alejado ("R"); CUENTA (longitud/coste de la llamada; tabulación del UIP); TELÉFONO DEL SP; sintonizador del laser (5a-710) = ESTEREOFONIA; SYNTH; TDS; Teléfono; JUGUETE; UIP; Reino Unido; WA 5A-930 consiguen señal para marcar vía ""/"del telecontrol palmada", después hablan a usuario conocido de la persona quieren llamado.

- deseado el teléfono # puede también ser "palmada" (hacer las explosiones de sonido, eg.: tres señales sonoras = el número 3 de teléfono #)

Cojín dominante activado por voz: haciendo monotones claros en explosiones solas o del múltiplo su acto dominante correspondiente como si esté presionado en el cojín dominante normal. Los sonidos pueden estar de ciertas letras para facilitar la memoria para la gente en cada grupo de lengua. Para la gente que no puede tocar llaves:

- científicos, doctores: no puede desensibilizar las manos

- artistas, gente de cerámica, gente rica que cocina en la cocina y otras con las manos sucias

- activar el sistema vía el interruptor triggerable del pie o del codo

- el sistema puede emitir un sonido breve y agudo sonidos y o luces significando que se ha activado la llave {eg.: similar a conseguir un tecleo cuando presionar un sistema de las demostraciones de la llave adentro

suficientemente lejos} acepta el Info. Cada sonido/respuesta ligera pudo ser diferentes como con los telclados numéricos del teléfono

llamadas entrantes/salientes del teléfono del altavoz 3C-010 (; marca (ciertas palmadas señalan dígitos del número del teléfono)

cojín de tacto del teléfono 3C-120-08300Q:

Presionar el cojín suave y la manera de la cual usted la presionó se transmite al receptor. Esto permite algo más cercano a contacto físico mientras que habla con sus amigos. Solamente popular para las culturas razonables

- el tacto superficial de las manos se diseña para maximizar placer humano, y reduce cualquier sensación de la humedad.

- si la otra persona presiona, usted puede presionar en el mismo punto también. Esta tensión agradable permite que el más fuerte de las dos personas fuerce detrás a la otra persona - apenas como dos manos que juegan junta.

- Nota al pie de la página: P.M.; todos; juguete; ejercicio; cr y cp; tel.

el <> considera debajo de la sección para las piscinas---

el teléfono del altavoz 5G activado por otro da medios libres:

- GEN: Métodos "alejados" BRITÁNICOS de la activación/de la marca/de la desactivación:

Los botones BRITÁNICOS se separaron/atado a: Teléfono (el teléfono se puede substituir por el otro dispositivo de comunicación (walkie talky, TR)

- Pedales del pie: o utilizar el otro instrumento a la línea BRITÁNICA del teléfono que activa (llamada de contestación), marca, colgando para arriba.

. --el código del ^ usado al paso en pedal representa cada uno de las actividades de la llamada: activación; cada uno # tiene diverso código (la marca se pudo incluso hacer en uno o más pedales separados); desactivación de la llamada.

- "telecontrol"

- botones montados pared (por la cama).

- la pieza de los botones de otro sistema/activa otras funciones: eg.: luces, estereofonia, hospitalidad.

- lado de la piscina del <> (esas piscinas de w son ricas y desean el lujo de poder permanecer en piscina para manejar llamadas)

--manijas sanas de la modulación del sistema que salpican el so^ del agua: reduce sus sonidos; reduce cualquier conflicto en la audibilidad

--otro: impermeable; unidad portable (el sistema/la parte separados puede también entrar el agua

--para el uso en piscinas de interior; saunas también

- área de la manía (persona que hace cerámica)

. - cocina, sauna, jardín, automóvil, garage, zona industrial/de peligro.

- C: (no dejar la computadora ("C") para ir contestar al teléfono). Opción: sobre Reino Unido C, C pudo registrar/tabula score/UIP de la conversación del teléfono. D: UK=C=TEL. Las voces entrantes/salientes se pudieron modular/interpretar/traducir (simultáneamente) según lo deseado a la derecha en DISPLAY/PRINTER de la computadora.

- botones que chascan en la pluma/watch/PD

- D: línea del tel=tel de user=uk/remote=c=tel/sp

El ^ controla al volumen de O-the del altavoz: el número de explosiones/tipo palabra hablada cuando se está activando el teléfono (1 banco es más reservado de 3 explosiones)

ANALIZADOR VISUAL.% = D: ~recorder binocular/de la cámara (lente) = tr = c~mfh~display~uk~remote.

- Prismáticos: el material visto es TR vía los controles del usuario de la onda de radio/tel. ("telecontrol") qué se ve (ángulo de cámara/foco) de sus ("R") localizaciones alejadas.

VM/CORREO DE VOZ = D: mm~k~t~c = tr (interacción de la telefonía) = t~c~mm~k

tenencia de la llamada 5A-870:

El oyente pide el tipo música/noticias que desean escuchar (o ningúno) durante su estar en asimiento

- el código de área de la ciudad/del país de la identificación de llamador (demostraciones su UIP) /caller puede ayudar a determinar el tipo música que preferirían

- si está deseado, el usuario puede programar de su teléfono para tener la continuación de cuál él era audiencia/ver transmitida a él en su localización (su teléfono) sobre la terminación de la llamada del teléfono; o PP cuando el TR debe ser hecho.

--el usuario puede incluso conseguir el canal de los "mfh" (su teléfono #) así que el usuario puede 1] contacto del acceso repetido 2] el vendedor que puede vender el servicio para el sistema del teléfono de su propio co 2B-250 entró verbalmente la información (en correo de voz) que entonces se encamina automáticamente al receptor en forma verbal o escrita. El correo de voz sabe encaminar el mensaje simplemente indicando para quién el mensaje es para en el aviso.

. - Entrar verbalmente la información que entonces se encamina automáticamente al receptor en forma verbal o escrita. El correo de voz sabe encaminar el mensaje simplemente indicando para quién el mensaje es para en el aviso.

Todas las invenciones consiguen gente interesadas más en dejar un mensaje, y las hojas menos de la sensación impersonal. Pone a adultos creativos. Incorpora todas las funciones estándar del contestador automático: fecha/grupo fecha/hora...

- Todas las características razonablemente disponibles del contestador automático pueden ser opciones para cada invención

- Todas las invenciones aplicables para los contestadores automáticos del teléfono también

. - 2B-250 entró verbalmente la información que entonces se encamina automáticamente al receptor en forma verbal o escrita. El correo de voz sabe encaminar el mensaje simplemente indicando para quién el mensaje es para en el aviso.

. - 6B-010 = 6B-1 (era 6A-1) si el llamador deja el mensaje, recipiente deben volver llamada para conseguir el mensaje. El recipiente que quisiera que los amigos sintieran voluntad cómoda tuvo que llamar detrás y por lo tanto llamador pudo sentir un mensaje que se iba más cómodo. El recipiente pudo después conseguir a llamador y hablar con ellos directo si el llamador original está en su tel.

- La pantalla táctil permite que los usuarios seleccionen del menú tr del correo de voz por tel~c. del otro partido (esto se hace simultáneamente con la comunicación de voz (en la misma línea del teléfono)).

Correo de voz del final

MODULADOR DE LA VOZ = D: sonido - > convertidor de señal - > k~c~synth - > convertidor de señal - > tr - > t/osc

- Persona que sabe sobre la modulación de la voz: Wendy Rocchi 303-488-5713 AT&T (Tu-Fri 0600-1400 MST)

- cada persona pudo tener poseer el módulo de la voz porque cada persona habla diferentemente. Es utilizado por los vocalistas ya. Esto se podría también hacer en el tronco de la línea del teléfono (si el usuario cambia localizaciones, después su "código de acceso" /cid pudo emparejar las modulaciones necesarias de la voz).

- Utilizar el codificador vocal (tipo de "synth" donde la persona habla en sistema), se beneficia: expresar los sonidos más bonitos (dar a voz un sonido más completo, dar un cierto reverb, quitar un cierto reverb, hacer que suena más grave (el sonido está roto en pedacitos)). Aunque es más difícil el "ataque" de la voz se puede modular también.

--El "filtro" (potenciómetro y bobina templada) filtra hacia fuera frecuencias indeseadas

--"Canceladora del ruido": bloquea frecuencias indeseadas, y o decibelios de los bloques excesivamente - los altos.

. - 8B-330 según el tipo uso, voz de la persona se cambia por consiguiente, eg.: su voz para anunciar el plano está lista para el embarque, el plano es atrasado (la frustración, o la cólera en la voz del locutor que tiene miedo de ser atacado con cólera de pasajeros y que en golondrina de mar es semi hostil en voz como protección - ésta es malas), etc.

alternador del acento 5A-950: cambiar su voz a la de la persona con otro dialecto de la misma lengua los sexos de +change, suenan más domineering, apacible, el etc.

RETORNADOR de la FRECUENCIA del teléfono A2-720: el fq registrado, entonces música/sonidos del llamador en fq similar, tensión, felicidad, nivel/tipo de sensación es oído por el llamador mientras que están en asimiento. Propósito: hace que el llamador siente a la una con el otro partido. e m pudo hacer alteraciones para cambiar el comportamiento del llamador.

8B-330 según el tipo uso, voz de la persona se cambia por consiguiente, eg.: su voz para anunciar el plano está lista para el embarque, el plano es atrasado (la frustración, o la cólera en la voz del locutor que tiene miedo de ser atacado con cólera de pasajeros y que en golondrina de mar es semi hostil en voz como protección - ésta es malas), etc.

(necesidades más trabajo) voces del convertido 5A-90 en los de las cuales crear las sensaciones: la pasión, la amistad, la energía, la inteligencia, la impaciencia y la expectativa que el oyente realiza su pozo del trabajo (los estudios demuestran que el discurso a la gente en ciertos tonos de la voz tiende a crear mejores resultados del trabajo de ellos)

5A-91 que el nivel adicional de inflexión de la voz necesitó alcanzar puntería. El nivel adicional necesario puede ser basado en lo que equipa la sintetización necesidades de hacer, o cómo el cantante con solamente sus necesidades naturales de los medios de hacer la alteración buena para la educación de la música

5A-920 modulan su voz en el teléfono/el intercomunicador según las situaciones wo que se levantan su propia ansiedad psicologica, eg.: 1. encima de su volumen, 2. más intensos sanos (crear la ansiedad en oyente)

- muchos no incomodan sonar trastorno en el teléfono (forma de motivación) porque causa su propia tensión para los padres cansados de decir embroma para ser reservado. Método #1: presionar deseó el botón para el aviso verbal querido.

Los botones del volumen - seleccionar fácilmente con un tacto cómo usted quiere ruidosamente ser oído. ENCIMA de declaraciones salientes.

Método #2: el dispositivo hace su voz más ruidosa para reducir su tensión en la griterío. Puede ser usado alrededor de cuello también, o ser guardado en la tabla.

- diversos noticiarios están disponibles según UIP (código de área del teléfono) también
- puede haber la otra N relacionada con esto

analizador de la voz 5A-94: reconoce la emoción de la voz y analiza la sensación y o el comportamiento del altavoz. Éste es parte de un producto más grande con otras características.

Traductores electrónicos del <>: interpreta/traduce para el usuario sobre líneas del "teléfono".

- D: translator~display=tel=tr system~clap~electronic del reconocimiento de user=uk/mic=voice
- Ejemplos:

--uk/speaks deseó las palabras/texto, después el sistema imprimirá y u oscilador a party/c en el otro extremo

MODULADOR de la VOZ del TELÉFONO A2-140: mezclar el corrector de la mente de w, selector de la música, CD personalizado. Demasiado o demasiado poco de cierta terapia del sonido de la necesidad del fq. MFH escucha voz entrante y la su saliente. Conseguir las terapias mientras que usted está en asimiento o cuando usted pide él o él golpea con el pie adentro (quizá - si usted quiere) cuando es necesario basado en su voz saliente, o cuando el encargado del co juzga apropiado. Entrar el Info personal para activar. Puede también aumentar sensaciones de la seriedad, control de calidad, éxito...

Extremo del modulador de la voz.

VR % = D: VR = mm~c~t

WA % = D: wa = mm~c~t. G. WA (walkman) que es tel. móvil/sin cuerda.

MISCELÁNEO: Octel Communications Corp se puede señalar revelador del R&D adicional y fabricante para cualquier invención de la telefonía de KN. Están en Milpitas, California.

EXTREMO DE ESTA SECCIÓN DE LAS SUBPARTES DEL `T
Archivo: Introducción/IMI 5 de las características

EL TELÉFONO PARTE (LAS CARACTERÍSTICAS)

Introducción y: Los usos/las adiciones ampliadas de estas piezas se encuentran debajo del #1: Títulos principales de la parte; #2: cómo la pieza se utiliza en otros productos y piezas.

^ del ACCESO:
MACHINE^ DE CONTESTACIÓN:
^ del ARTISTA:
^ del BALANCE:
BVA^:
- El producto de la telefonía de "Confidencer" se puede colocar en el "mic" para analizar los sonidos del u (voces) más exacto. Las ayudas de Confidencer bloquean el ruido generado lejos del "mic" (ruido de la calle, etc).

CID^:
- CID no se restringe apenas a la línea interurbana # al recibir llama de las compañías (incluye el específico # del llamador también).
- puesto que la gente múltiple puede llamar del mismo #/tronco del teléfono ("T"), alto - el uso sofisticado BVA % de los sistemas [y cuaesquiera elementos útiles del uip] de ayudar a la determinar/descifración que el altavoz es (de otros que usan # dicho/tronco del teléfono ("T").

^ DE LA CÁMARA (LENTE):
CART^:
CLAP^:
- la manera de la cual U "aplaude" (intensidad, tono de la voz, la velocidad de comandos (ejemplifica el índice de inteligencia/el conocimiento del sistema)) efectos cómo el sistema interpretará el UIP del u.
^ de la COMPOSICIÓN:

CONFERENCE^:

EDUC^:

- los programas educativos se adaptan al uip. Eg. los siguientes se alteran en el programa: calidad de sonido, gráficos, contenido intelectual (opciones/orden de la presentación), longitud del menú del programa.

EXERCISE^:

^ del FLOTADOR:

FS^:

- convertidos cualquie imagen del milímetro sobre: papel, medio electrónico almacenado

GAME^:

INFORMACIÓN SUPPLIER^: la presentación utiliza modos de EDUC

K^:

LOCATOR^:

MFH^:

- datos/programas (complejos) de los almacenes. Eg.: EDUC, "surtidor de la información", banda de BVA, uip

MIC^: Conectable al codificador vocal

MOUSE^;

MP^:

MULTIMEDIA^:

MULTI-USER^:

NOTIFIER^:

NOTIFICACIÓN DE CALL^:

PD^:

PORTABLE^:

PR^:

PRINTER^:

PS^:

ROUTER^:

S^:

SCORE^:

SONIDO ANALYZER^:

^ ESTÉREO:

SYNTH^:

^ del TDS:

TELEPHONY^ INTERSISTEMA DE TRANSFERENCIA:

^ del UIP:

- la velocidad en la cual los usuarios k necesitaron dígitos (por requerimiento por el correo de voz/para los #s de la extensión) las ayudas determina el comportamiento del u. Eg. ^: la entrada lisa rápida es inteligencia/la familiaridad w co o el sistema, k lenta que es el contrario; el flujo desigual de entrada está siendo inseguro.
- Las llamadas entrantes en redes importantes se marcan con etiqueta según la identificación de llamador. El programa encamina llamadas según la información tabulada en el llamador. Los usos diversos, cuando están utilizados correctamente, se demuestran alzar beneficios de la compañía.

Telefonía de las ventas (UIP)

Los números nacionalmente des divulgación de las ventas del teléfono encaminan automáticamente llamadas más valiosas a la gente apropiada de las ventas.

- La programación de muchas opciones dejó llamadas entrantes ser marcada con etiqueta según lo necesitado. Ejemplos:
- El número de teléfono del llamador es emparejado contra números de teléfono de últimos llamadores, o bases de datos que describen la mayoría de los números de teléfono por toda la nación por ejemplo por tamaño de compañía. Encaminan a los llamadores preferidos al personal con mejores habilidades de las ventas, que se pueden también entrenar mejor en el tipo necesidades del llamador. - La telecomunicación norteña encamina ya llamadas en Canadá a los bilingües según la región del llamador. En los E.E.U.U. podemos emparejar las llamadas que vienen de regiones particulares tales como California o el sur, con el personal entendido en los dialectos y la perspectiva mental del llamador. Esto se demuestra facilitar informe.

Telefonía de la ayuda de la tecnología (UIP)

Las llamadas de clientes con las mejoras de una compra de la historia del software se encaminan a un mejor personal entrenado. Las llamadas de clientes difíciles, o las regiones como Nueva York se encaminan al personal con "habilidades duras del teléfono". Verbal y de comunicación de datos puede también ser encaminado según el número de registro de usuario, afinado en el principio. Los llamadores difíciles pueden también ser guardados en el extremo del que que espera más de largo.
- Los resultados de la investigación extensa sobre la programación de la información de usuario de la telefonía están disponibles. Otros sistemas desarrollados por Steven Kays están siendo utilizados por Baby Bells y el NTT.

Telefonía Q:

HIZO: dirigir en número de teléfono del dial

Aire muerto: ninguna música mientras que en asimiento

CODIFICADOR VOCAL: (tipo de "synth" donde la persona habla en sistema), se beneficia: la voz suena más bonita (dar a voz un sonido más completo, dan un cierto reverb, quitan un cierto reverb, hacen que suena más grave (el sonido está roto en pedacitos)). Aunque es más difícil el "ataque" de la voz se puede modular también.

LIMADOR: (potenciómetro y bobina templada) filtra hacia fuera frecuencias indeseadas. Pero por sí mismo hará que la voz suena como algo falta. Éste es parte del codificador vocal.

CANCELADORA DEL RUIDO: bloquea frecuencias indeseadas, y o decibelios de los bloques excesivamente - los altos.

Mazarota Q:

- llamador:
- receptor:
- mientras que en asimiento

--poner el asimiento

- encaminamiento de la llamada, según: CID; base de datos de sistema en CID; encaminamiento de llamada dentro de la oficina durante la misma llamada

CONCLUYE ESTE ARCHIVO: ARCHIVO INTRODUCCIÓN/IMI DE LAS CARACTERÍSTICAS 5

Archivo de las CARACTERÍSTICAS PRINCIPALES: Introducción/IMI 26 de las características

Versión de diciembre de 2006

NUESTRO ARCHIVO DE LAS CARACTERÍSTICAS PRINCIPALES

Para las actualizaciones y más visita www.LicenseItToday.com. Teléfono (+1) 707-428-5000.

Introducción: Este archivo importante explica nuestras características a un nivel moderado. Más adelante más detalles se pueden leer adentro nuestro archivo de las características principales. Las características se pueden también ver como piezas o funciones. Ver más adelante el contenido para más viejas y menos usadas características.

LAS CARACTERÍSTICAS:

El ACCESO = accede vía una amplia gama de medios a nuestras invenciones electrónicas. Los métodos incluyen el donante de contraseñas, o hacer su huella digital analizar. Como la palabra "acceso" sugiere, él ofrece formas de acceso incluyen: Contraseñas, admisión, teniendo una licencia de utilizar o de producir una invención, conectando, contacto. Tener una licencia. Incluso las exploraciones visuales de huellas digitales, podían ser consideradas. Para los detalles en esto y la mayor parte de nuestras otras características, visita bondadosa que la sección detallada de las características enumeró en el contenido.

ADAPTANDO el ™ = la invención determina cuál es necesario, y después se adapta automáticamente. Un ejemplo común es cuando se adapta a las necesidades de usuario. Puede también ser llamado adaptación o programación de la información de usuario. Detalles en el UIP abajo. Entonces más Info en la sección detallada de las características.

ANALIZADOR = una característica importante. Como la palabra "analizador" sugiere, piensa sobre cuál es necesaria, y reacciona. Es decir es un sistema que intenta emparejar el cerebro humano en tomar decisiones. Las decisiones se toman de una opción de reacciones posibles preprogramadas. Hace el análisis necesario según lo diseñado. Usando lógica confusa, adquiere las funciones necesarias del software, como ser necesario manejar las tareas aplicables pedidas.
. Para Techies: Formas de análisis: la estimación, predice, imagina, examina, interpreta, investiga, juzga, resuelve, escudriña, %test, piensa a través [las opciones del menú], diseca, divide, revisa, la lona, formula, [intento a conectar] las asociaciones [entre los archivos convertidos a digital que representan materias de la vida real], explora. Ver nuestros archivos relacionados de la inteligencia artificial.

El ANIMAL = las invenciones se adaptaron para los animales domésticos en una amplia gama de maneras.
Leído más adelante: Cosas que nuestras características pueden hacer para los animales incluyendo animales domésticos: Analizar las, y su comportamiento. Seguirlos. Su comportamiento modificado vía: comunicación con ellos; el obrar recíprocamente; educación de ellos; guardar el animal lejos de ciertas zonas. Ver nuestras carpetas para: acariciar las invenciones, los analizadores del comportamiento, siguiendo los dispositivos, el etc.

El ARTE/el ARTISTA = software opcional puede alterar imágenes. Cuadros del sastre a su gusto. Una herramienta multi-media útil. Puede corregir automáticamente imágenes según lo programado, o el sistema puede ayudar al usuario de la guía en la alteración de imágenes. El analizador visual del sistema con energías

amplias, determina las características de la imagen que se alterará. Más adelante leer más detalles en la sección detallada de las características.

LA ASOCIACIÓN/EL ASOCIADO/SE ASOCIÓ/FÓSFORO =

Como un cerebro humano, hace asociaciones entre las situaciones múltiples. Una forma de inteligencia artificial que confía en lógica confusa. Mirarla tienen gusto de un sistema listo que pueda encontrar concordancias y conexiones entre cualesquiera dos o más cosas. ¿Cómo usted utiliza los términos en su vocabulario? Ése puede ser cómo también definimos este características útiles.

. LEÍDO más adelante: Las funciones tienen gusto de cómo un ser humano o un animal dibuja asociaciones entre las cosas múltiples, gente, acciones, las características [experimentadas por cinco sentidos (sensor del `)].

. Memorias asociativas [AI]: Pasos del ejemplo: En el país: 1. El perro del dueño raspa demasiado ruidosamente o demasiado de largo mientras que el dueño es hogar, mientras que el sistema y el perro del UIP están en el país. 2. adaptarse dibuja memoria auto-asociativa, emparejando lo que oye su analizador de sonidos. 3. adaptarse (UIP) castiga levemente el perro. Hacia fuera en público: 1. Los sentidos del sistema está fuera del hogar. 2. adaptar (UIP)' el analizador de sonidos de s determina algui□n perro ha raspado. 3. Vía memoria hetero-asociativa realiza que hay un perro. 4. Vía memoria asociativa que la determina está el perro del dueño. 5. adaptarse (UIP) responde al perro del dueño que raspa diferentemente que cuando en el país.

VAGOS/ANALIZADOR/BVA del COMPORTAMIENTO = analizador del comportamiento. Esta característica importante utiliza medios múltiples en la determinación del comportamiento de quién o de cuál es observación bondadosa. Esta información está disponible para el sistema que desea adaptar una función para los gustos del usuario. Ver la sección detallada de las características.

™ del BALANCE/del BALANCEADOR = la manera inventiva de la cual el equilibrio audio de los altavoces sus volúmenes así que usted siente usted todavía está en el centro (punto dulce) como usted se mueve alrededor.

C = ve la "computadora"

CÁMARA/LENTE = el registrador electrónico del ojo y de la representación visual del sistema. Leído más adelante: Las pistas y analizan cambios en sus campos de visión. Es información visual de las alimentaciones del analizador: analizador del comportamiento; notificador; otros' analizadores; activador de la función cuando ha sucedido la ocurrencia señalada [de la representación visual]. La lente se ajusta a la actividad visual de la mejor captura, e.g.: para la distancia, siguiendo el objeto móvil.

El CARRO/el CARTUCHO = apenas se imagina un cartucho que dé funciones necesarias apenas haciéndolo estallar en una invención. Puede ser software y o una licencia automática.

Para Techies: Cualesquiera de nuestros números/funciones electrónicos de la invención son [también] [la O.N.U] enchufable. Conectar/no relacionado/activar una invención según lo necesitado. Los cartuchos son nodo de a [tipo de] en la unidad sistema de las invenciones'. Los cartuchos se pueden insertar/conectar en [la invención] sistema [secundario]. Puede contener software/bases de datos/características útiles.

- Arreglo para requisitos particulares del `: Utilizar los cartuchos modificados para requisitos particulares a la función señalada; y o el cartucho hace las características que modifican para requisitos particulares incorporar. Puede requerir el acceso [contraseñas/los privilegios de la autorización de activar].

CARÁCTER = gráficos Animated usados en software.

Leído más adelante: Los carácteres retratan: "humores", personalidades, expresiones faciales, facial/movimiento del cuerpo. Ver: + "corrige" "imágenes"; Ver "S" para otros detalles. Una entidad del juego [normalmente no persona viva ellos mismos en carne].

CARACTERÍSTICA = facetas que distinguen algo. ¿Cómo usted utiliza la palabra "característica"?

Leído más adelante: Los rasgos o las marcas de distinción [de otras invenciones, rasgos de la entidad del juego], los rasgos idiosincrásicos son más distinguibles, qué abarca la entidad o el carácter de la invención, característica, disposición, única [humor del `, el corregir, forma de educación o dirección.

PALMADA = chapaleta. Activar las características electrónicas por sus sonidos de fabricación. Cada combinación de sonidos de palmadas de la mano o de sonidos verbales/discurso controla una diversa función.

. Leído más adelante: Permite que el usuario controle la invención sin el tacto. E.g.: vía comandos que aplauden o verbales - > mic - > sistema de reconocimiento sano - > c (computadora - en el centro del sistema) - > activa la función. También: el reconocimiento vocal reconoce discurso humano (sigue los comandos de la palabra hablada).

COMUNICAR = imaginarse la gente y o las invenciones electrónicas que comunican con uno a.

. Leer más adelante: Cuando cuaesquiera dos o más personas, otros organismos, y o los dispositivos comunicar con uno a de cualquier manera. Los modos de comunicación incluyen: El OSCILADOR (comunicador sano saliente) pudo hablar palabras a un ser humano, a transmisiones electrónicas, a señales, algo experimentada por cualquiera de una persona o de un animal cinco detectado (la luz de los sonidos o el destellar - ver Animal-Para

comunicar subparte), a un notificador, a un etc. que una cierta reacción se espera normalmente en las contrapartes de la comunicación, pues podría haber un propósito a la comunicación.

¿COMPONER = pudieron qué sonidos usted tienen gusto de componer? ¿O usted tienen gusto de una invención que ha aprendido sus gustos, entonces de sintetizar algo para sus gustos? ¿Usted prefiere el tener más o menos de niveles normales de bajo o triplica? Puede incluso hablar con usted tiene gusto de un agente preferido. Composición de música electrónica: El producto se puede también utilizar para crear música o sonidos interesantes.

+ COMPUTADORA/C = computadora. Unidad central de proceso de este sistema y de sus invenciones.

ANALIZADOR CONTENTO/CA =

El sistema determina la naturaleza de una sustancia. Pensar en una sustancia que usted quisiera haber analizado para su contenido. Recordar que el mundo tiene una gran variedad de maneras de analizar apenas sobre cualquier tipo de contenido. Él se extiende de radiografías al equipo de prueba del suelo. Él también incluye nuestros analizadores de sonidos (SA) y analizadores visuales (VA). También: nuestros analizadores del olor, analizadores del movimiento y analizadores del gusto.

. Resto posterior LEÍDO de esta descripción central: 1] Analizador contento físico: Exploradores del CAT, radiografías, escalas. 2] Analizador contento de la base de datos: Los tipos de bases de datos analizadas incluyen: vago-DB (base de datos); pista-DB (base de datos). adaptarse (UIP) - desarrollo del DB es un tipo de analizador contento. Usos: desarrollar la adaptación (UIP) - DB (base de datos) o adaptarse (UIP) - sastre.

El COORDINADOR = esta característica coordina diversos partes y aspectos dentro del sistema electrónico. Los seres humanos se coordinan naturalmente, como sus ojos, postura, manos y cerebro como leen sobre invenciones interesantes adjunto. Ejemplos de la característica: 1. Si sube el volumen de un sintetizador de la música, puede refrenarse de permitir que el bajo consiga demasiado fuerte, evitar dañar los altavoces. 2.. Windows se cierra automáticamente cuando consigue frío, pero si una maceta o algo se deja accidentalmente en el windowsill debajo de donde está bajando la ventana; la ventana se cerrará solamente suficientemente lejos como no estropear. 3. Determina qué funciones son más valiosas para la persona, y adapta por consiguiente.

MODIFICAR para requisitos particulares = iguales que sastre, adaptarse, y adaptarse (UIP) (información de usuario que programa). Los términos se adaptan y el sastre es mejor que modifica para requisitos particulares. Se utiliza este 3ultimo mientras que el término puede acortar las descripciones del texto, porque requieren pocas palabras de acompañamiento, e.g. "modificar para requisitos particulares" es más corto

que "adaptarse al usuario" o a los "sastres él para...". No conseguir pegado en la palabra "modifican para requisitos particulares", palillo con "adaptan" concepto.

™ de D = dibujo figurado. Ver el archivo de dibujo figurado que explica los códigos fáciles utilizado en nuestros dibujos. Los dibujos con frecuencia fueron llamados Diagrams hasta 2006. . Leído más adelante: El diagrama del término: Puede también ser representado por el "diámetro" o el "diag" o el "diagrama". También ver la partición del "teléfono".

La telefonía es la vieja y raramente usada abreviatura para "D". La vieja definición para D era telefonía. [Puesto que "D" para el diagrama es fácilmente comprobable debido al contexto, e.g.: fue seguido normalmente por dos puntos y después diagram con las piezas alineadas junto con "=" símbolo.] Ver por favor "T" para la definición de la telefonía.

La DANZA = las cosas son accionadas por cómo usted mueve su cuerpo. Un sensor de movimiento interpreta cómo usted se mueve. Imaginarse el tener de sensores en los accesorios de su cuerpo; entonces una computadora podría ver qué fue movida.
. Leído más adelante: El sensor dirige a usuario en el movimiento apropiado del cuerpo para la terapia física, o para aprender oscilaciones del golf, el movimiento del etc. del cuerpo/el device% genera sonidos. Incluye Miburi de Yamaha, que copia KN.

DB = base de datos. Almacena la información necesaria: como brevemente o archivos de la memoria de largo plazo. La base de datos es importante en funciones del análisis de los sistemas las'.

SEÑALADO = se ha seleccionado qué. Refiere a un panorama que cae dentro de una gama especificada. Ha utilizado como la definición de "señala" en cualquier diccionario.
- Ejemplos:
--' Intentar y reaccionar las aplicaciones designadas para buscar cierta ocurrencia o estado de estar dentro de parámetro definido de a [pre].
- "Tener acceso" permite contraseñas señaladas
- "Analizador del comportamiento": perfiles del comportamiento señalados
- "Educación": las búsquedas del sistema señalaron a usuario de la información necesitan estudiar (de Internet).
- El "analizador visual" busca ciertas imágenes
. - Los parámetros del programa informático necesitan elementos dentro de los límites de características señaladas.
- Diagrama: entrar las señales electrónicas del ~ - ~ del >c (computadora) (analizador de los criterios de la designación) = paso siguiente: después de que los criterios de la designación se cumplan después de la acción puedan ocurrir.

El DIAGRAMA = considera "D" para el dibujo figurado.

El ™ de DISTANCER = las señales o sistema responde siempre que cuaesquiera dos o más porciones: separarse o tocar o altera en ciertos dominios algorítmicos del tiempo o del espacio. Notifica cuando se han resuelto ciertas funciones algorítmicas, eg.: separado por cierta distancia; para los palmos del momento específico más de largo que. Ver el sistema de +Positioning, y +PS-Zone.

El EDIT/el REDACTOR = altera el texto y gráficos según lo deseado. Puede ser hecho automáticamente según lo programado. Alteraciones de la muestra: inserciones u omisiones; el destacar; cambio.
. Leído más adelante:
- Ventajas de corregir: Adapta datos; Artista de las ayudas y proceso de la educación.
- Corte y gomas de palanca del múltiplo. Cortar y pegar la memoria de varios diversos elementos, sin pérdida de memoria después de pegar. Accionar la palanca entre los elementos múltiples que pegan/que activan. El accionar la palanca controlado cerca corrige, educa, ADAPTA (UIP) la adaptación. Una función separada controlable por el usuario humano.

EDUC/la EDUCACIÓN/EDUCAN = enseñan el usuario se señala a qué. Puede enseñar el usuario a cómo utilizar y beneficiarse de características. Entrenamiento basado del software.
. Leído más adelante: Educativo: también utilizado como programa o experiencia opcional de aprendizaje. Enseña a habilidades (vía modo preceptoral del software separado). Funciones de la guía de los traslapos.
- Educativo: se puede también utilizar como un programa o una experiencia de aprendizaje. Enseña a habilidades (el software tiene modo preceptoral). (Ayudas) substituir a instructor humano. EGH [educativo consigue más difícilmente] es subconjunto de "Educ".

EGH = la educación consigue más difícilmente. Compensa a usuarios para su funcionamiento mejorado. El sistema recuerda el funcionamiento del usuario y se hace más o menos desafiador por consiguiente. Ver TGH (la terapia consigue más difícilmente) y los archivos de la educación para los detalles.

ENTRETENER/HOSPITALIDAD = los usuarios pueden también deriva placer de la invención.

PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = nuestro sistema monitor esperanzado de la poder sí mismo y o el ambiente. Puede ajustarse para que haya el mayor EP. El analizador utiliza los sensores para determinar qué está sucediendo. Busca y reacciona a las situaciones señaladas.

El EJERCICIO = dirige y permite que el usuario utilice la invención en una manera nueva para el ejercicio y la buena salud. También pudo funcionar como el compañero, la guía, o el organismo provechosa de la regla en ejercicio físico. Movimientos de la persona de la cuenta.

. Leído más adelante: También pudo funcionar como el compañero, la guía, o el organismo provechosa de la regla en ejercicio físico. Dibujo: 1 - > 2 - > 3

- Para Techies [OTD (otros detalles técnicos)]: u (usuario) se mueve desde la postura/el punto 1 a 2 del cuerpo mientras que el usuario está obrando recíprocamente con el producto en 1 y 2; la persona 3 continúa el ejercicio (123456...); el sistema es bueno para la persona que se mueve alrededor en por lo menos una manera de menor importancia, aunque no no necesario requiriendo actividad física vigorosa.

- "Facturación": cuentas. Ver: Tuvieron acceso a las características para el movimiento y los VAGOS (analizador) del comportamiento (analizador del comportamiento): mecanografiar los fósforos del motion= necesitó perfil del comportamiento tener el "acceso".

- Mecanografiar los movimientos ("anotado" (vía los "sensores")): "Danza"; Vibración (KN); Picosegundo-Zona; Tuvieron acceso al "movimiento"; Cómo objeto (hecho (por u) "flotar".

La EXPERIENCIA = la persona experimenta la parte o todo el sistema por sus sentidos físicos. La alegría de la experiencia es una de muchas ventajas de la invención.

JUEGO = definición común del juego. Juegos de video. Juego de la arcada, de la computadora, electrónico, móvil y sin hilos. También potencialmente practicable en las computadoras [móviles y sin hilos], Nintendo™, Playstation™, Xbox™, y o nuestra invención señalada [hardware]. Las invenciones tienen funciones relacionadas juego adicional. Ver nuestras muchas variaciones de la invención del juego en la carpeta de los juegos.

GPS/picosegundo (sistema de colocación) = sistema de navegación mundial. Estudios cualquie movimiento de uno o más objetos/partes en lo referente a cualquie rejilla de la comprobación o del tiempo. El movimiento se correlaciona con otras bases de datos. Ver el picosegundo (sistema de colocación).

. Leer más adelante: Recibir la dirección para lo que usted hace y donde usted va. Por ejemplo, nuestras linternas controladas del GPS: notifica qué está subiendo, eg. ; curva en camino. Dice a usuarios qué manera de dar vuelta. O comunicar cualquier información según lo programado. La luz/el sonido/la vibración se pueden emitir de cualquier manera [a los conductores del conductor/de los pasajeros/del asiento trasero].

El ™/la DIRECCIÓN de la GUÍA = actúa como la guía personalizada del usuario. Los usuarios de las ayudas aprenden cómo utilizar la invención, adaptando la dirección a los intereses del usuario. Usuarios de las ayudas de la manera que entenderán mejor, especialmente en áreas necesitan más ayuda.

. LEÍDO más adelante:

- Ejemplos: 1] Sugerir cómo mejor utilizar el sistema para emparejar los requisitos particulares, los rasgos o las preferencias del usuario. 2] Educa cómo utilizar el sistema. 3] Sabe cuando y cómo incitar la persona así que los puede mejorar uso y o aprende el sistema.

. Sastres sí mismo a las necesidades únicas del usuario: cada usuario y situación o tarea es diferentes.

- Sugiere cómo los usuarios pudieron proceder [cuando está pegado o tenido otro apuro (con el sistema)].

- Guías del sistema/usuarios de los avisos para cuando/cómo (w5 (qué, donde, porqué, cuando y cómo)) pueden ser "educados".

ICONO = una imagen en una pantalla de ordenador. Representa uno o más características que puedan ser activadas cuando están chascadas.

IMAGEN = pintura gráfica de A en una pantalla. El artista y corrige puede alterar imágenes. El icono es un tipo de imagen.

OBRA RECÍPROCAMENTE/INTERACTIVO/la INTERACCIÓN % = interactividad. Sistema interactivo.

Cómo el sistema responde a la persona. El interfaz útil ofrece maneras múltiples de utilizar las características de la invención.

. Resto posterior LEÍDO de esta descripción central: Las alternativas avanzadas del sistema pueden acercarse a realidad virtual. Sastres sí mismo para mejorar el interfaz con los usuarios para: ser más fácil, o más emocionante utilizar, o una mejor ayuda logra la tarea deseada del usuario.

. Modos interactivos de activación: Activa una señal vía uno de los métodos siguientes sin el tacto de un botón. El usuario activa vía modo alejado, eg.: el usuario hace el sonido vocal, chapaleta, activa un distancer), toca una pantalla de ordenador.

. Cubiertas del interfaz: Cómo el interfaz de la persona y de sistema busca y reacciona el uno al otro, centrándose en las funciones de sistema. Manera en la cual interfaces utilizador con el sistema. Cómo el sistema "reacciona" "a"/cómo el "del usuario usuario" "reacciona" al sistema.

K = teclado. La persona entra cualquier tipo de información vía lo que los medios electrónicos. Esta característica (también vista como parte) se puede substituir por la partición teledirigida.

Imágenes "interactivas": para las computadoras o las pantallas interactivas: Puede utilizar llaves o iconos "interactivos" (en la pantalla).

KN = una de nuestras invenciones en este o limaduras anteriores de la patente concibió por Sr. K una y S.

La invención demuestra que tenemos el mismo o la invención similar. la invención es un subconjunto de N (una de nuestras invenciones). N = invenciones en este o limadura anterior, y u otras invenciones y productos no-patentables.

LICENCIA/CONCESIONARIO/LICENCIADOR = teniendo acceso a las características señaladas. Facturación: Concesionario del usuario mandan la cuenta al' normalmente para el pago, basado en criterios relacionados acceso. Pago [pueden ser considerados los derechos]. Sigue a concesionario [uso llano (en zonas/regiones señaladas del mercado)].

El LOCALIZADOR/LOCALIZA = localiza lo que usted busca, y puede ser encontrado. Aplicaciones GPS y otros sistemas de colocación de identificar donde algo se basa en su etiqueta.
. LEÍDO más adelante: Localización del objeto de las demostraciones (o su de la persona atado): Correlaciona la localización de un objeto en lo referente a la de otros objetos del sistema, eg.: otros dispositivos de colocación, sensores (fijos) de la localización. Demuestra la localización. El receptor del sistema (a) identifica la localización de sus dispositivos electrónicos relacionados (b) que puedan ser separados.

M/MFH = el ordenador central está conectado con el sistema.

FÓSFORO: Ver a "asociado"

El MIC/el MICRÓFONO = el micrófono registra sonidos sobre el microchip o la cinta. Tales sonidos se pueden estudiar por el analizador de sonidos y utilizar según lo señalado.
- El micrófono se ajusta a la dirección y la distancia y el tipo sonido, para maximizar capacidad de registro.

Sistema de la MAÑANA = de alarma de la mañana. Notificarse de maneras creativas. También funciones como una alarma creativa de la mañana.
. Leído más adelante: Wakens únicamente encima del usuario por ejemplo vía alarma de la mañana, puede requerirlas después actuar de cierta manera para traerlas al wakefulness completo, eg.: requiriendo una cierta tarea intrincada [en su de computadora personal] de desactivar la alarma. Un pedazo común de hardware para el software es el P.C. popular. Puede alertar uno en cualquier momento, y pudo requerir una manera nueva de desactivar en una orden especial y una sincronización. Dibujo: =c de tds/uk/remote (computadora) = alarma.

MQ = el sistema hace preguntas de la persona, permitiéndose ser ajustado mejor a las necesidades de la persona. Es una guía instructorial) para el usuario; con los menús de ayuda. El analizador de MQ estudia el

comportamiento del usuario para permitirse mejor ganar la información señalada como ser provechoso para el interfaz utilizador. Ésta es una secundario-característica de la característica de la adaptación.

Milímetro/MULTI-MEDIA = efectos audio-visuales emocionantes. Grande para el interfaz de la invención. Realza la experiencia del usuario de muchas características de la invención. Los sonidos, los gráficos, la tipografía y otras imágenes se adaptan para interesar al usuario.

MULTIUSOS = la invención se adapta diferentemente a cada usuario, que es porqué ha llamado a Multiusos. Cada usuario puede alcanzar una diversa ventaja y experiencia, pues esas características, que son necesarias, serán ofrecidas diferentemente en como base necesaria.

. Resto posterior LEÍDO de esta descripción central: El sistema se programa para distinguir entre los usuarios del múltiplo (u), y el sastre sí mismo necesidades de cada a diversas usuario. Cada u (usuario/persona) se distingue de otros vía su: características físicas, VAGOS (analizador) del comportamiento, código de acceso.

N = invenciones en este o la limadura anterior; y u otras invenciones y productos no-patentables.

Notifican al usuario del NOTIFICADOR/NR= cuando sucede algo. Se alertan a la ocurrencia de cualquier acontecimiento señalado. Determina la naturaleza y el grado de urgencia, y cómo mejor alertar al usuario.

. Resto posterior LEÍDO de esta descripción central: U (usuario) es nr (notificado) vía: sonidos, luces, información sobre la exhibición de computadora, vibración (del cuerpo conmovedor del dispositivo).
- El sastre o los usuarios del `señala lo que: las ocurrencias hacen el notificador reaccionar, y se notifican W5 (qué, donde, porqué, cuando y cómo).

™ de la ORDEN y de la SINCRONIZACIÓN/O&T = analiza patrones en la orden para cómo ocurren los acontecimientos. Diversos patrones se interpretan por separado de otros patrones. Por ejemplo un golpe lento de tambores diferencia de un golpe rápido. Cada patrón acciona un diverso acontecimiento. El mundo de acontecimientos se llena de tales patrones. Estos patrones junto con lo que puede coger el sistema por sus sensores disponibles ayudan le a analizar qué está sucediendo, así que le pueden reaccionar por consiguiente.

™ del OSCILADOR = comunicador sano saliente. Función audio. Los locutores del sistema comunican con los usuarios en palabras o sonidos. El sistema adapta su comunicación a las capacidades que escuchan y a las preferencias del usuario, e.g. ofrece un volumen más alto cuando el analizador de sonidos determina allí es ruido de fondo.

OTD = otros detalles técnicos. Qué se puede leer quizá más adelante. Generalmente para ésos interesados en los aspectos tecnológicos. Este término es simplemente un jefe usado para las piezas. "Para Techies" pueden estar iguales que "OTD". Más adelante leer más sobre él en la introducción.

™ del paladio = dispositivo de colocación. El elemento cuya se está identificando localización. El GPS es unidireccional seguir la colocación. Unidad portable, que difunde su localización al picosegundo (sistema de colocación). Ver: Picosegundo.

PORTABLE = Portable. La versión portable separada puede ser mitad del peso, y dos veces tan acuerdo, y a prueba de golpes como variaciones no-portables. Puede ser utilizado como caminata sobre la invención.

Para Techies: Dibujo: c (computadora) = batería = cubierta protectora alrededor del producto = de la manija . Correa de WA: utilizar el producto mientras que camina alrededor, puesto que la correa se celebrará en el lugar en el usuario: pierna superior, parte superior, un brazo más bajo, cintura (uso apenas rechazando la cabeza), collar, o correa de hombro; punto de ebullición. los terminales sin hilos 5E090 conectan con el sistema central.

PREDECIR que el ™/la PREDICCIÓN = el software predice qué sucederán o actuará cómo usuario. Su análisis de los últimos patrones de la acción, permite que proyecte los patrones probables futuros. Más información tiene patrones alrededor de últimos que mejor predirá. La anticipación de probables ocurrencias futuras permite mejor al sistema adaptante manejar las situaciones futuras.

LEÍDO más adelante:

Es decir probablemente las ocurrencias, o el comportamiento de otros se anticipan, un mejor sistema de permisión para responder a o para manejar situaciones previstas.

- Por característica de ejemplo puede predecir: 1. qué tipo de usuario de la dirección necesita llegar a ser mejor educado con las capacidades de la característica. 2. Lo beneficioso de invenciones autorizadas. 3. Capacidad para que esta solicitud de patente pare quizá a infractor de usar nuestras ideas, e.g.: este uso pudo demostrar diez, ciento, mil o más ejemplos para cómo describimos nuestra invención en nuestra estructura del acoplamiento.
- La predicción trabaja vía analizar: orden y sincronización; comportamiento; adaptar-DB (base de datos); (`anotado) +patterns; otros algoritmos.

. Algoritmo de la predicción: El paso 1] recoge la información histórica. El paso 2] identifica (más allá) los patrones, buscando especialmente para los parámetros según lo señalado. El paso 3] determina presente y o los acontecimientos o los parámetros (sabidos) futuros. Paso 4] Completa los elementos que falta del paso 3 de las predicciones múltiples para cada ranura. El paso 5] cada panorama adentro anticipado llenado del paso 4 se analiza y se anota para la probabilidad de su ocurrencia (como en pasos 2). El paso 6] cada predicción se anota

para la probabilidad. La predicción del paso 7] puede optar utilizar las predicciones con las cuentas más altas. 8] Las funciones señaladas se alteran por consiguiente.

. El comportamiento probable de otros (en vida real) se anticipa, un mejor diseñador de permisión del sistema (del kn) para hacer que su sistema responde a o maneja situaciones previstas.

Banda/PROGRAMA = programa: Usuario y o programa del fabricante los programas informáticos del producto.

Picosegundo % = sistema de colocación. Un término general que cubre muchas de nuestras características. Utiliza los localizadores para identificar algo es posición. Los localizadores confían en un dispositivo de colocación como una unidad móvil del GPS para leer donde se localiza algo. Entonces esta información se puede enviar sin hilos al mayor sistema de colocación.

El ™/la ZONA de PS-ZONE = estudia cosas móviles dentro de una zona. El permiso para utilizar una invención puede ser zona restringida. Por ejemplo uno puede tener derechas de la autorización para una invención sin hilos en Palo Alto de Munich y de Silicon Valley.

Leído más adelante: Analiza la localización de los dispositivos de colocación, especialmente en términos de cuando y qué (w5 (qué, donde, porqué, cuando y cómo)) están haciendo en las zonas señaladas. Limita o permite el acceso a las funciones señaladas según la zona del usuario y o qué se ata al dispositivo de colocación.

Q/PREGUNTA/CUESTIONARIO = sistema hace preguntas para conseguir la información necesaria. El sistema que hace preguntas de la persona permite mejor la adaptación de él a las necesidades de usuario. El usuario puede hacer preguntas del sistema, por ejemplo vía un menú de ayuda del software.

LEÍDO más adelante:

. Usuario/sistema hace preguntas el uno al otro. Ver U (el usuario hace preguntas del sistema) y las funciones del mq (el fabricante hace preguntas del usuario para adaptarlo) para los detalles.

R = teledirigido. El usuario puede controlar el sistema vía teledirigido, o el teclado.

REACCIONAR/REACCIÓN = subconjunto de "búsquedas y reacciona".

El TELECONTROL = ve "R".

La RUTA/el RANURADOR = se imagina una llamada de teléfono el conseguir encaminados a través de una red internacional del teléfono. Los usuarios pueden también ser encaminados dentro de un sistema así que

pueden tener acceso a sus características deseadas. Los paquetes de datos se envían donde señalado dentro del sistema.
Leído más adelante: Método de encaminamiento del software. El sistema analiza las necesidades de usuario y las encamina a los puntos señalados, eg.: en la autopista de la información, o a los archivos señalados o a los programas dentro del sistema.

S/PANTALLA = pantalla de visualización. Hay una variante de la pantalla táctil también.
Leído más adelante: La máquina exhibe datos sobre la pantalla de la exhibición ("S"). La pantalla de visualización puede también ser pantalla táctil "interactiva" (la pantalla puede funcionar como el teclado "Reino Unido").

La CUENTA/las CUENTAS/QUE ANOTAN = se imagina un juego del fútbol o del tenis. El software guarda la cuenta. Anota apenas sobre cualquier acontecimiento que pueda ser cuantificado. Cuentas del ejemplo: 1. Los usuarios pueden anotar como de bien una invención adaptada para sus necesidades. 2. El sistema puede anotar la ocasión probable que un usuario está cortando realmente en el sistema basado en su perfil del comportamiento. Más.
Leído más adelante: La invención puede anotar quantifications numéricos de un producto; funcionamiento del usuario; o estado de la situación. La definición traslapa la función del "estado". El sistema reacciona según cómo es bueno es una cuenta, por ejemplo puede considerar algo con una alta cuenta más importante.

BUSCAR/BUSCADO = subconjunto de "búsqueda y reaccionar"

BUSCAR y REACCIONA/S&R = las búsquedas del sistema señaladas las ocurrencias, que internan disparadores una reacción automática. Hay dos pasos: Primero el software busca una ocurrencia señalada, después responde por consiguiente. Es como tener un mayordomo amistoso manejar materias mientras que suben las cosas.

El SENSOR = utiliza cualquier sensor disponible para determinar qué tiene o está sucediendo. Los sensores pueden anotar para la presencia de ciertos productos químicos. El sensor de movimiento coge el movimiento en el área. Los termómetros y el otro equipo meteorológico son también sensores. Muchos más sensores existen.

El SA/el ANALIZADOR de SONIDOS/el SENIOR/el RECONOCEDOR SANO = se imaginan el tener de sus oídos en posiciones remotas. E imaginarse que sus oídos podrían interpretar qué sucedió para usted mientras que usted está ausente. Esto es lo que lo hace el analizador de sonidos. Hay muchas ventajas, por

ejemplo: el sistema puede reaccionar a un acontecimiento basado en qué sonidos oye, por ejemplo encender las luces cuando oye sus manos aplaudir.

Leído más adelante;

. Es decir analiza el sonido. La base de datos memoriza diez de millares de sonidos posibles. Analiza el tipo sonido por frecuencia, volumen y o dirección y distancia de la fuente sana. El tipo sonido genera una característica que inicie la función correspondiente.

. Efecto marcado con etiqueta 7J08 de la cascada: Las piedras de afilar del sistema adentro en una frecuencia (sonido), entonces cancelan otros sonidos que hacen clarificante sano marcado con etiqueta. El sistema reacciona cuando ocurre la acción marcada con etiqueta. Piedras de afilar adentro en cualquier cosa que efectúa los sentidos del hombre cinco. el analizador contento, corrige, busca y reacciona, adapta, analizador visual.

BUSCAR y SUBSTITUIR = imaginarse una búsqueda del editor de textos y substituir la característica. Ejemplos más específicos incluyen: 1. Un niño que lee un storybook en línea hace su verde preferido del color insertar en el texto para substituir rojo, cuando suben las descripciones de juguetes y de otras invenciones; 2. Las características en esto accionado por el sistema por el software, pueden tener su código corregido; dando por resultado su que es adaptado mejor a las necesidades de usuario.

Leído más adelante: Los aspectos de la base de datos o de otros elementos del software se alteran.

. La gente que sucede tener dislexia puede hacer texto corregir así que es más fáciles para que lean. Cada persona tiene probablemente diversas dificultades de la lectura por ejemplo con carácteres específicos. El sistema se adapta tan por consiguiente. Ver amablemente nuestra búsqueda y substituir el archivo que estaba en la introducción.

. Corregir o el sastre altera cómo las secciones de la computadora, del código de la DNA o del producto químico se buscan y se substituyen. La fórmula sugerida se adapta a la necesidad señalada.

El ANALIZADOR/el SONIDO VISUALES SANOS RECONGINZER VISUAL % = se imagina despedir de rayo láser en una pantalla basada en los ritmos de la música. Convierte sonidos a los efectos visuales. O puede convertir inversamente efectos visuales a los sonidos.

¿El ESTADO = usted tiene gusto de automatizado atendido para decirle el estado de una situación actual? Es más barato que contratando a una persona viva. La característica determina el estado algo basado en han venido qué cuentas adentro. Por ejemplo: Esta invención puede considerar si una fábrica en Vietnam está infringiendo en sus invenciones y a qué grado anotando el volumen de sus exportaciones. Las figuras de la exportación se pueden obtener aduanas en Europa, o aún de investigadores en el país local.

Interruptor = programas informáticos. Esto puede controlar qué características se ofrecen al usuario, y cómo se adaptan. Uno puede autorizar el software que se inserta como un cartucho.

SYNTH/SINTETIZADOR = sintetizador de los sonidos. Se alteran los sonidos recibidos. Los "PP" y o la "P.M." selecciona el programa de sintetización y cómo procesa sonidos; micrófono ("mic"). Suena como música y la comunicación verbal es `adaptado a los oyentes basados en sus preferencias de la audiencia. Característica útil en música que compone, el etc.

T/teléfono = telecomunicaciones en sus varias formas está disponible. Teléfonos móviles (llamados "teléfonos celulares" en los E.E.U.U.). Teléfonos, Internet. El sistema y sus características pueden permanecer conectados sin hilos o vía líneas fijas.

¿La ETIQUETA = usted tiene gusto de saber qué está sucediendo algo cuando usted está ausente? Marcarla con etiqueta, y hacerla seguir sin hilos por su sistema. Detalles en el archivo de la característica de la pista.

ADAPTAR el ™ = ven la característica de la adaptación, y descubren cómo nuestras invenciones se adaptarán a ellas se adaptan a las necesidades de usuario.

Estampilla de fecha del TDS = del tiempo. El programa memoriza, las etiquetas, e identifica la sincronización de ocurrencias deseadas. Se colóca qué sucedió.

TGH/la terapia consigue más dificilmente = uso puede ser psicologicamente terapéuticos. Gente de ayuda de la máquina de la terapia. También, compensa a estado de ánimo del usuario y o Info personal actual, y o condición, basada encendido: qué usuario afina adentro, ser como de bien anotaron en la sesión de terapia física anterior.

INCLINAR el ™ =' palanca de mando teledirigida. Si no confidencial.

TR = transmisión: envío/que recibe vía: ondas de aire/alambre.
. Leído más adelante: Eg.: ondas de radio, cable de cobre/óptico de la luz infrarroja, línea del teléfono (si radio/alambre). Dibujo: producto/característica = transmisor/receptor = transmisor/receptor electrónicos = producto electrónico/partición "facturación": las cuentas por tiempo utilizaron/"tenido acceso", eg.: como cuenta del teléfono. Esta característica del TR se puede también referir por el término "comunicación" cuando está utilizada en el contexto electrónico. El TR es un componente necesario, eg.: para el secretario 4E020. El

signo de igualdad "= "en nuestras demostraciones de los dibujos (diagramas) donde los acoplamientos de la transmisión pueden estar.

1567

PISTA/PERSEGUIDOR = sistema de seguimiento. Pistas. El sistema marca entonces las pistas con etiqueta señaladas: persona, archivo, y tipo actividad. Puede desarrollar la adaptar-Base de datos en cuál es supervisar diseñada/estudio pues el elemento estudiado cambia o se mueve. Con programa de gestión. Ejemplo: un monitor inteligente que sigue qué archivos tuvo acceso una persona en una computadora; u otros tipos de actividad hechos por la persona. El GPS sigue adonde y cómo una persona o un vehículo viaja en el planeta. Sigue a persona mientras que intentan tener el "acceso", y qué hacen después.

RASGOS = características. Utilizado generalmente como características de un usuario, especialmente sus preferencias. Qué él quisiera que un sistema hiciera para ellas. Ver la información de usuario el programar (adaptarse) en cómo adapta sistemas a los rasgos de los usuarios y o de las situaciones.

U = considera a usuario

El UIP = considera para adaptarse

Llaves BRITÁNICAS del ™ = del usuario en la información. Esto combina el U (usuario) con la característica de K (teclado). O apenas llamar esta característica "K" o "R" (teledirigido) como un usuario es necesario utilizar cualquier método de acceso.

U/el USUARIO = el usuario pueden ser una persona que usa el sistema. Otra invención conecta a veces con nuestro sistema, en este caso el exterior (menos central al diseño total) se puede considerar un usuario también. Es generalmente la entidad autorizada para utilizar las invenciones y sus características.

VA/ANALIZADOR VISUAL/RECONOCEDOR VISUAL. La cámara puede analizar se ve qué. Su interpretación de la imagen se envía al sistema automatizado que puede reaccionar según se ha visto qué. . Leído más adelante: Imagen de los estudios a través de su cámara. "Analiza" imágenes. El sistema determina qué imágenes están presentes, después el sistema responde a las imágenes según lo programado. Ha adaptado a las imágenes señaladas pista. Visualmente imágenes señaladas búsqueda. Una versión visual de la invención marcada con etiqueta del efecto 7J08 de la cascada.

VR % = bienes raices virtuales. Uso futuro con la tecnología de la realidad virtual posible. El usuario pone anteojos y o guantes y o los juegos del cuerpo que los dejan virtualmente experimentar como una qué situación siente.

WA = caminata sobre la versión portable de la invención. Comunica sin hilos con el resto de sistema y/o de otros sistemas. El usuario obra recíprocamente con él también como manera portable de tener acceso a características deseadas (en sistema principal). Puede tener auriculares opcionales.

¿™ W5 (QUÉ, DÓNDE, POR QUÉ, CUANDO Y CÓMO) = cuál son las cinco preguntas básicas lo más comúnmente posible hechas del mundo? Esta característica pide 1. Qué sucedió. 2. Donde ocurrió. 3. ¿Por qué sucedió? 4. ¿Cuándo? 5. ¿Cómo?

El ™ de la ZONA = considera Picosegundo-Zona.

Archivo: Acceso \ introducción

TENER ACCESO A LA CARACTERÍSTICA

Contenido del acceso:
. Introducción

. Analizador del comportamiento para el acceso. Archivos: BA+, VAGOS, Vago-Autos, BA-SC, Vago-Adaptan, BA-IMI, Vago-Palmadita, VAGOS.

. Características comunes

. Las imágenes necesitaron para acceder

. Patentes y palabras claves

. Misceláneo: Acceso

Acceder a la función del producto electrónico con la contraseña correcta o la entrada creativa. ¡Utilizar nuestra solicitud de patente Masterminded de mejorar sus ideas del control de seguridad! Aprender sobre nuestras licencias rápidas y fáciles. Llamar (+1) 707-428-5000 www.LicenseItToday.com

Hay muchas maneras de dar el acceso. Saltar adentro y leer cómo.

Las formas de acceso incluyen: Contraseñas, admisión, capacidad de acercarse/interactivo, conexión, contacto, introducción - mayores niveles necesitan mayores contraseñas, permiten, imponen, infiltran, autorizan, agarran las palabras mágicas para la entrada, contraseña correcta/palabra clave, abracadabra, muestra secreta [imagen del `]. Permiso: alcanzar, comprar, coger, recoger, ganar, ganar, conseguir, tener, promover, asegurar, tomar, ganar [un juego], el reconocimiento, parlay, escoger [de menú], tener éxito para hacer algo,

Cualquie acción que un usuario pueda hacer y que es cogida por un sensor y un interno convertidos a las señales, por ejemplo: colocando un metro de un sensor del calor por 10 segundos, o centellando su ojo izquierdo dos veces.

- Cualquier ocurrencia puede convertirse en un procedimiento de acceso, si en forma de vida; o forma de vida que efectúa un "sensor"; u ocurrencia electrónicamente generada. Eg.: cualquier invención de "R" o de "K" o del "artista" también se utiliza para generar (en único una manera) las señales, que se interpretan posteriormente como contraseñas. Los ejemplos de maneras enumeraron en las características de los accesos (piezas).

- (Las contraseñas del término incluyen: Perfiles cambiables/comunes del Accessor del comportamiento)

+p--El observador ilícito inexperimentado puede no realizar que hay funciones de ocurrencia de la señal real diseñadas para tener el "acceso", e incluso si fue observado, puede ser difícil registrar tales acciones por el cortocircuito del accessor del tener una cámara del movimiento. Las acciones requeridas del accessor se centran especialmente en ésas menos fácilmente capaces por los observadores y los piratas informáticos. Ejemplos: acciones del movimiento o del comportamiento o del trabajo del cuerpo que pueden parecer algo ordinario o que no cogen la especial atención. Los procedimientos de la contraseña pueden parecer como comportamiento levemente peculiar de los observadores, pero el aviso especial no sería hecho posiblemente si se camuflan los procedimientos - ve "procedimiento de acceso de la piel".

- Las características más grandes (piezas) del "acceso" (en fecha 9.96) eran análisis de las imágenes dibujadas, y analizando el comportamiento del accessor. Los detalles de la mayoría de las características del acceso exponen en esto también.

- "Introducción de la alarma de la mañana": Éste es solamente uno de los muchos usos para el "acceso". Las "alarmas de la mañana" son sistemas creados para waken únicamente encima de los usuarios, y después para requerirlos que actúan a una cierta manera para traerlos al wakefulness completo, eg.: haciendo una cierta tarea intrincada en su de computadora personal. En caso de necesidad, la "alarma de la mañana" se puede no hacer caso para entender solamente mejor las naturalezas generales del "acceso".

bloques huecos mágicos 3C292: Cada combinación ha señalado resultados. Ver el archivo 3CE.

- Lector de huella digital A1-290-121001: Analiza el comportamiento de una persona por su huella digital. También empareja pares con las huellas digitales compatibles. Relacionado con los sistemas existentes de "C" basados en horóscopo, tipo de sangre. Los productos similares existen por lo menos en forma de la idea, ven la sección de los nuevos productos de la "ciencia popular" para una edición en 94 - 4/96.

El UIP (información de usuario que programa) del usuario puede cambiar de los datos recogidos vía el "seguimiento" del sistema. % "de la cámara" = "pista", % "del sensor" = "pista". El seguimiento por "C" originó señales (eg.: qué u (usuario) está haciendo en el EL el sistema (electrónico) (u=k=c)) se favorece que sigue modo, y más barato producir.

. - "Ranurador": localiza el then= recupera el data= necesario para esta partición.

TENER ACCESO para la investigación médica, y biológica:

= acceder a los controles de producto electrónicos con afinado correctamente en la combinación.

Cada tema (paciente/elemento que es estudiado/usuario (humano/animal/virus/%bacteria/%plant)) tiene un código separado.

- Cada tema tiene su propia manera de accionar el código. Ejemplos:

- llaves humanas en código

- las características del tema son resueltas (vía los sensores/uip), estas características por lo tanto accionan uno o más códigos aplicables.

--Dibujo #1: 1 sensor 2 de la característica (los cambios/identifican la identidad del tema) = = analizador 3 del tr (transmite) (transmite) = (uip) = c (memoria).

--Dibujo #2: D1 = tr (transmite) (transmite) = señales (eléctricas/los comandos de controlar o de cambiar el dispositivo (electrónico) que se diseña = efecto/altera los = 4 cambios sujetos en tema = detectado vía el sensor (D1) = D1.

4: característica, eg. ^ = (estado o cambio físico (producto químico, color, temperatura/tipo y o cantidad de virus presentes)).

4 = función de virus: velocidad del ^ de multiplicarse/desactivación/movimiento (velocidad/donde a y desde)/

4 = característica de los temas más pequeños de recibimiento sujetos del virus de un organismo más grande

4 = estado químico (un anfitrión/virus más grandes) del ^ sujeto: El contenido/temperatura del pH/de la sangre/sudó contenido

Esto y otras generaciones de la contraseña se pueden utilizar para el entrenamiento

animales. La invención puede cruzar las fronteras de la lengua, de la cultura, de la edad, de la inteligencia, de la desventaja física, y a veces incluso (mamífero/granja/animal doméstico) de animales.

arte sano 2B090: Convertir los sonidos en formas y colores (de dos dimensiones) interesantes. Programa cómo un sonido se convierte en un arsenal infinito de gráficos posibles. Las imágenes también bailan vivo a la consonancia del usuario del sonido generada.

- acceso móvil correcto del image=: u (usuario) puede considerar cómo sus sonidos están generando requerido (las 'imágenes), permitiendo un mejor control sano. La representación visual de sonidos es más fácil para U (usuario) de calibrar y de hacer cualquier corrección necesaria.
- ver 2B090 para los detalles.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (música sana) y (el convertido interactivo de la danza altera movimiento) y (color del cuadro de la imagen)

Tarjeta del tacto A1-540: Huellas digitales de la gente de los fósforos con su crédito y carnés de identidad.

- Los cheques la persona adecuada están utilizando su tarjeta emparejando huellas digitales. Usos: tarjetas de crédito, sistemas de tarjeta de la identificación.
- Puede tomar huellas digitales de ésos registrados con las agencias nacionales (interes), después usted puede ser que también mecanografíe un código, que ayuda a "C", encuentra su huella digital más fácilmente y como medida de seguridad también. Acepta a los que estén enviando sus pagos a tiempo.
- uso al usar tarjetas de crédito u otras tarjetas u otras situaciones/productos
- el ojo en máquina puede pedir que la persona ponga su dedo allí y compara la impresión con su memoria.

Archivo: Acceso \ CA-VAGOS +

ANALIZADOR Y PERSEGUIDOR DEL COMPORTAMIENTO DEL PIRATA INFORMÁTICO DE COMPUTADORA

Elementos de los CA-vagos de las cubiertas de este archivo (acceso del `- característica del comportamiento) etiquetados con "+", entonces corregido de allí.

Extracto: El analizador único del comportamiento que corta coge a piratas informáticos. Analiza cómo el comportamiento de un pirata informático se desvía de lo que se espera del sostenedor de contraseña legítimo. Esta invención del software es una defensa contra infiltrados internos y externos con [correcto] [los requisitos del acceso del `(contraseñas)].

Cuando está publicada, cada contraseña se anota para el nivel de visto bueno de seguridad permitido en cada categoría sujeta. La flexibilidad incorporada del software ahorra las horas de trabajo humanas de seguridad de vez en cuando permitiendo la transgresión de menor importancia en los archivos señalados juzgados levemente sensibles y de uso posible a la contraseña legítima. Señalan por medio de una bandera [`marcado con etiqueta] y así que se notifican a los piratas informáticos al sistema de seguridad cuando la información de los accesos de usuario [bien] fuera del uso normalmente permitido de su contraseña. El nivel de flexibilidad permitida para transgredir se incorpora a la contraseña. Puede ser el vivo o el protector de

seguridad automatizado que determina cómo dirigir' reacciona a usuario tan señalado por medio de una bandera de la contraseña.

Las contraseñas se asociaron más adelante a resultado irregular de menor importancia del comportamiento (por el usuario de la contraseña) en una baja del visto bueno de seguridad de la contraseña. Una desviación más seria da lugar a la revocación hasta que el sostenedor de contraseña pueda pasar pruebas diversas para authenticarse.

Arreglo para requisitos particulares del `: El mayor seguimiento se hace sobre el usuario cuyas cuentas sugieren que sean más probables ser ilegítimas. El sistema puede reaccionar ofreciendo las trampas que sugieren que el usuario esté consiguiendo la información que necesitan - mientras que el sistema adapta lo que él se alimenta. Los acoplamientos se pueden hacer a otro las invenciones/las características adaptadas [de las solicitudes de patente]. Manera de la cual nuestras características interactivas con el usuario [ilegítimo] se diseñan: necesidades de usuario del sastre/colocación de trampas/seguimiento.

- Se marca con etiqueta el usuario de los datos consigue/las transferencias [de modo que continúe siendo adaptada al usuario/se percibe qué mientras que la creencia del usuario para lo que posee la característica alcanzada [robada]. Estos datos pueden convertirse en software legalmente autorizado como el virus [que sale de un rastro] que pueda esperanzadamente ser desactivado más adelante if/when el tiempo correcto [pirata informático prendido junto con sus cómplices]. Esta necesidad de la solicitud de patente no tiene ninguna misericordia para los empresarios engañosos.

Los ejemplos adicionales de comportamientos irregulares de los usuarios de la contraseña incluyen:

- el comportamiento de la contraseña (usuario que utiliza contraseña específica) en no áreas delicadas se encuentra para ser irregular (muy difícil para que los infiltrados exteriores oculten). Es decir el patrón de comportamiento no empareja para arriba con sus últimos patrones de comportamiento.
- la identificación de llamador no reconoce la localización de llamador.
- Los infiltrados del exterior pueden desear reducir su riesgo del sistema que nota un uso simultáneo de la misma contraseña. Pueden buscar el acceso en las horas impares. Los tiempos de acceso por lo tanto inusuales cuando el usuario correcto no está generalmente en el sistema, caen la cuenta de la contraseña para los patrones legítimos del uso. Es decir el número de "puntos sospechosos" es acumulado por este comportamiento.
- El sistema anota centenares de otros comportamientos irregulares sutiles.

El analizador del comportamiento del pirata informático puede ser compatible con los sistemas de seguridad existentes numerosos, a ambos protege a la información valiosa, y a personal de seguridad libre para sus tareas menos automatable. La inhabilidad del pirata informático de saber necesario que existe un patrón de comportamiento requerido, aún menos funciona dentro de sus patrones intrincados, hace este software pendiente de la patente a protector seguro esencial.

Archivo del extremo: CA-Vagos +

Archivo: Acceso \ CA-Vagos

"ACCESO - ANALIZADOR DEL COMPORTAMIENTO"

Introducción: El sistema determina la identidad del usuario por su perfil de la personalidad, es decir su patrón del comportamiento en un dispositivo electrónico tal como una computadora puede ser analizado. El sistema substituye a centinela humano, que puede permitir el acceso y determinar si el comportamiento del usuario es apropiado. También utiliza lógica confusa.

Aprender sobre nuestras licencias rápidas y fáciles de tener acceso a las invenciones para su uso. Llamar (+1) 707-428-5000 www.LicenseItToday.com

La función del analizador del comportamiento: El software puede automáticamente información de bloque del accessor. El perfil de diferenciación del comportamiento de cada accessor, da lugar a anotar para cómo los archivos sensibles pertinentes están al accessor, permitiendo el sistema a la información de bloque juzgada menos pertinente.

La función del grado de la sensibilidad analiza los ficheros del sistema según cómo fue categorizada inicialmente por el personal de seguridad. Los archivos son categorizados por el tema, el nivel de sensibilidad, el etc. Este sistema de detección automatizado puede también analizar contenido vía: análisis de la palabra clave, y por ejemplo cómo la información se está utilizando por quién y para qué propósitos. La función del grado de la sensibilidad sigue cambios en el contenido o el uso del archivo para determinar automáticamente si un aumento o una disminución del nivel de seguridad es necesaria.

+ hacer: Tomar el material del UIP.

Las horas de trabajo humanas excesivas previamente requeridas actuales de la tarea. Sin embargo, puesto que no hay sistema automatizado perfecto, los rasgos de seguridad del sistema un de los se pueden programar como antes, o eliminar por el operador de sistema señalado.

Valores:

+-makes el sistema del acceso más misterioso para los piratas informáticos. Más cañizos.

- Requiere considerablemente más conocimiento alrededor: legitimar el sostenedor de la contraseña, cómo la compañía funciona. El pirata informático debe también jugar acto bien sobre y más allá de lo que él preferiría normalmente el hacer fingiendo utilizar contraseña legítimo. Limita el alcance de posibles piratas informáticos a ésos más cercano a entender ambo el sistema de sonorización de los comportamientos correctos y de los accesos. Con todo ninguno del antedicho es bastante bueno si es el sistema de sonorización firmemente bastante.

+-potentially menos incómodo o que molesta para los usuarios legítimos. Pocos cañizos de la entrada del acceso tienen que ser conducidos consciente por el usuario para continuar el acceso, si el sistema supervisa su comportamiento.

+-Employers puede disfrazar más fácilmente su deseo para limitar el acceso (previamente) de accessors legítimos indicando: del sistema la falta abajo, o el sistema de los "vagos" no trabajó correctamente (debido al uip=db incorrecto).

+ censura: Límite qué accessors pueden leer o "obrar recíprocamente" con, eg.: padres que limitan la experiencia de los niños de la "hospitalidad" y de los "juegos", por su contenido sujeto. Otros tipos de "restrictores":

--Limitando el material sensible al área el accessor es el accessor del interested= llega a ser menos sospechoso que el material que ven "se ha corregido" para ellos: Eg., clientes, investigadores, accionistas y periodistas intentando estudiar los materiales de la organización: temas cortados que son sensibles/qué periodista vía su contraseña puede "buscar".

++ inverso:

La manera de la cual uip-adaptar las funciones puede también ser una forma de control de acceso, en que las funciones y el material no presentados son también una forma de uip-adaptación. los vagos (analizador del comportamiento del `) pueden cualquiera "buscar" qué accessor necesita o se permite para ver; ambos que son similares.

- En otras palabras: el access=ba puede "buscar"/"corrige" la información para el accessor. Ésta es una forma de UIP-Adapta. Ahorra el tiempo del usuario.

- También utiliza el interruptor del Internet (software del `) que "busca" las noticias "señaladas"/el otro material que aparece después WWW.

- los VAGOS saben que lo que quiere el accessor "experimentar" W5 = uip-adaptan.

- Ver: "artista" "cortado y goma"; "corregir"; "búsqueda"; palabra clave "que busca"; ++ " uip-adaptan".

. "Educación": el comportamiento correcto enseñó al accessor= después de eso a tal comportamiento (correcto) requerido. "Educación necesaria" determinada por el comportamiento del accessor.

. --Alarma de la mañana: las "reacciones "señaladas"" de u (usuario) son "educadas " = tan en el futuro u: responde más fácilmente a la alarma (de manera positiva); les enseña a nuevas habilidades.

. Alarma del pisón: El sistema "busca" (con referencia a) la programación inusual/desautorizada de la P.M. del interruptor.

. --alarma de la mañana: el usuario legítimo no puede desactivar fácilmente la alarma así que pueden continuar durmiendo. Eg.: la reprogramación no permitida durante despierta el plazo.

. Multiusos: Cada accessor tiene procedimientos de acceso de diferenciación, y los protocolos de la seguridad, y los "vagos de los accesos".

--alarma de la mañana: cada usuario requerido desactivar la alarma de su propia manera uip-adaptada.

. El OSCILADOR (comunicador sano saliente) se utiliza para sacar las respuestas "señaladas" (comportamiento) del "accessor".

Usos adicionales: Ver el "juego". Monitoring= (más cercano) probable del disparador del hackers= del "perseguidor".

+ aprendiendo del comportamiento de piratas informáticos anteriores: El sistema protegido por el "acceso" es estadístico más probable conseguir el futuro que corta el behavior= relacionado en estilo con la actividad anterior del pirata informático.

- El comportamiento del hackers= anterior es mirado más cuidadosamente por la "pista". Es decir: la cuenta es más apretada para tal comportamiento/"encaminamiento " = si su visto otra vez.

Cómo "se utiliza el instrumento de la escritura del artista" = los acceso-vagos. desactivar la alarma de la mañana:

El material que se juzga restricto (para la contraseña "señalada") no puede ser: copiado, transferido, impreso, visto, "experimentó " = autoridad de alto nivel del wo (fuera).

Un contenido del sistema informático tiene información delicada bloqueada de accessors "señalados".

Las 'características del comportamiento y o la cuenta del visto bueno de seguridad del usuario se pueden integrar con la base de datos de a [privado los co o agencia o gobierno del grado de solvencia] de la gente:

- las ayudas del patrón determinan seguridad en la publicación de visto bueno de seguridad a los usuarios señalados.

- el Info del patrón compartido con el servicio de base de datos puede:

--la ayuda determina el analizador del patrón y de la base de datos en la determinación de la cuenta nueva/cambiada del usuario de la seguridad del grado.

--ayudar al banco de datos de la oficina de la base de datos, como Dunn y Bradstreet que venda el crédito Info, pero también lo recoge de los mismos clientes.

comprobador de ortografía: la misma gente hace a menudo faltas de mecanografiia idénticas. Las ayudas determinan si el partido correcto es el accessor.

El interfaz de la lengua pedido por el usuario puede también ser útil en emparejar al usuario correcto. Eg.: La contraseña de un accessor del francés indica su lengua de la preferencia; y una notificación será hecha si un interfaz español o ruso se hace nunca [y entonces utilizado realmente [por 5 minutos - necesidad de dar quizá el permiso para el buscador de la curiosidad]].

La edición es allí es dos características a KN, uno accessors que anotan, el otro que anota la información. profesor particular del movimiento 3E061: Dirige a usuarios para mejorar sus movimientos, eg.: el nivel correcto de movimiento accede. El sistema asume que los movimientos del usuario cambiará o que mejorará en un cierto plazo.

ARCHIVO DEL EXTREMO AC-BA

Archivo: Acceso \ CA-VAGO-Auto

ARCHIVO AC-BA-AUTO

sistema de la identidad del conductor 6B240: el conductor con llave puede activar solamente el coche si su peso corporal empareja la memoria del coche. El dueño programa el coche para uno o más ajustes del peso del conductor, o cambia en peso.

- integra con cualquier otro sensor o función relacionada de la contraseña necesaria para activar un dispositivo/un vehículo. EG.: va, sa, sensor de la huella digital.

- el `notifica U (usuario) del aumento de peso/de la pérdida; motivación de ellos en una mejor salud. El Uip/malo/haber aumentado/cualquier peso/salud-condición pudieron hacer que el dispositivo sugiera la caminata a usuario (más) (las destinaciones [próximas] en vez de la conducción).

. - dimensiones físicas (eg.: el peso corporal en el asiento de conductor empareja la memoria de "C" del coche): uip, acceso.

- "Banda": 1] El dueño de coche puede programar fácilmente un cambio si desean agregar o suprimir un conductor. Eg.: parar el permitir que de su hijo utilice el coche durante las horas de escuela (acceso = dispositivo que mide el tiempo).

- si el peso del conductor cambia y borde más cercano al parámetro permitido del sistema, un sonido amonestador y o "S" o la luz se enciende notificarlas de un cambio necesario.

- los cambios se pueden también realizar vía afinar en el special difícil agrietar código secreto

. - El sistema mide el conductor vía uno o más del siguiente: gama aproximada del peso, y o "C" del aspecto (ojo, pelo, color de piel, altura mientras que se sienta, etc) del coche físico general del fósforo. "Analizador visual"

. - si el peso es el aparato de medición, limitará el grado a el cual una persona puede experimentar agregando pesos adicionales. Ése es el peso no puede mantener el subir poco a la vez con la ignición entonces que comienza. Los conductores verdaderos deben estar en la posición sentada normal para activar el coche, después de eso su cambio del peso moviéndose, el etc no efectúan el sistema de ignición del coche.

--si u gana o pierde el peso, necesitan contraseña/llave de puente configurar de nuevo ("banda") el su nuevo peso o la otra característica física cambiada.

. - la seguridad se diseña para hasta 20 o más
conductores.

Para Techies: Todos; "S"; "C"; pp; P.M.; Reino Unido; comportamiento del usuario; alerter; oscilador; va; carro; acceso; uip.

- acceso = respiración humana "analizador" (respiración de cada persona posiblemente que es diferente). Existe: no puede activar el coche si el alcohol en la respiración. Patentes de los E.E.U.U.: número de licencia de 5519260 conductores que usan.

perseguidor de 6G241 GPS: analiza patrones del recorrido, y reacciona por consiguiente. Los patrones señalados pueden ser buenos/malo/otro. El vehículo/el dispositivo se desactiva en los criterios señalados zonas/w5. [detalles de esta característica en zonas].

- Solamente cierto u/passwords puede entrar en zonas señaladas. Usos: alquileres de coches; uso del empleado de vehículos/de dispositivos.

CONCLUYE EL ARCHIVO AC-BA-AUTO

Archivo: Acceso \ CA-VAGO-SC

+ "VAGOS = CUENTA DE LOS ACCESOS"

Introducción: Multi-media todo accesibles tienen un grado de la cuenta. Los medios son Archivos deseados y funciones (tipo comportamiento necesario para desactivar la "alarma de la mañana"). Sus cuentas deben emparejar las cuentas de Accessors si se va el acceso a ser concedido. Cualquier número de criterios se puede utilizar para desarrollar una cuenta, con más o menos o ninguì□n peso dado a los criterios posibles. El maì□n comportamiento puede ser similar a qué regulador del acceso piensa es el de un pirata informático, por lo tanto una cuenta más baja se da.

Cómo es multi-media se anota:

- Multi-Media = qué usuario quiere o las necesidades, a saber: archivos deseados y o funciones (del kn).
- Los medios nivelan de sensibilidad: piratas informáticos (daño a la compañía); inconveniencia: pérdida de distrust= del to= del acceso del regulador debido del acceso dando por resultado inconveniencia; número de gente que necesita la información (mayor es el número más ancha es la tolerancia de la cuenta?)
- Pertinencia al accessor y o su departamento y o su función (para cierto marco de tiempo, o vía el uso de seguro contraseña).
- Uso de los medios: frecuencia de medios del uso por (todos/"señalados") contraseñas. Mayor es el nivel de importancia o el applicability= el sistema que anota menos terminante estaría quizá. UIP-Adaptar.
- "Coordinador": la cuenta para una forma de medios (cuando su cambiado) puede efectuar la cuenta de otros medios relacionados.
- Sofisticación: eg., la contraseña de una secretaria que tiene acceso al material del nivel del PhD es causa para el sospechoso.
- "Sistema de la notificación" de la alarma de la mañana ": su nivel de pertinencia a las necesidades de usuario. Eg.: cómo es eficaz es en despertar al usuario, basado en uip-DB del usuario (vagos).

Cómo anotan a los accessors:

- Tiempo pasado: (el por ciento de) el accessor del tiempo pudo utilizar ciertos archivos y o a grupos sujetos. Están bajo utilizar el something= en este caso un pirata informático va quizá simplemente para lo que él quiere. ¿Están sobre utilizar algo? ¿Horas de operación (después de las horas de trabajo normales del accessor)?
- "Encaminamiento": ¿están los pasos del accessor con normal del sistema?
- "seguir" y la "cuenta" "analiza" el comportamiento del accessor.
- Normalidad de definido por el usario: 1] De acuerdo con la historia anterior del usuario, con el mayor peso puesto en una actividad más reciente. 2] Qué otros accessors legítimos están haciendo; quizá menos importante. 3] UIP-DB del comportamiento del usuario creado por el usuario/"/"del sistema/"del cuestionario regulador del acceso". 4] Dominios de la función de trabajo del empleado.
- "Identificación de llamador" del Accessor. ¿Es el su originar número de teléfono en los expedientes del sistema? Accessor requerido tener active de la identificación de llamador si él busca el acceso.

+-Peculiarities del hardware de usuario: las configuraciones (secretas) especiales en el interruptor (software del `) o el hardware mejoran el accessor de la etiqueta correctamente. Los Accessors (se requieren) tienen "etiquetas" en su hardware/
software.

- H: la invención "sensores" = analiza = perfil del fósforo (del comportamiento/en persona) del accessor. Ver otras características del "acceso".

- Patrón que mecanografía en el teclado - ver la invención en directorio de A o de B.

+--Cómo se utiliza "R", eg.: se mueve la palanca de mando de la manera.

. - El sistema "analiza" porqué el accessor está haciendo conclusiones de W5= entonces es analizado por el regulador del acceso.

- Los detectores de mentira, y (los vagos) accessor de los "cuestionarios" deben contestar correctamente.

actividades de +-Accessor fuera del reino de la contraseña: el sistema no sólo "analiza" qué accessor está haciendo dentro (su/cañería) de sistema alcanzado. Los VAGOS (analizador del comportamiento) también "siguen": otro sistemas "alcanzados"; El accessor W5 hace lo que él hace %;

¿+? --el sistema debe conectar ("coordenada") las funciones del accessor cuando son sistema (principal) con./desc. del acceso. Eg.: otros sistemas de la "pista" están conectados, y éstos registran cuando el accessor entra en/sale de la oficina/de la sala de ordenadores; informes (convertidos a digital)/resultados que someten, el sistema/el supervisor analiza si son pertinentes y o tiene calidad razonable (algo más difícilmente para que un pirata informático haga)

historia de +-Accessor antes de tener (cualquie tipo de) el acceso al sistema dicho. Su: antecedentes penales, comportamiento como algo determinable por su curriculum vitae; analizadores faciales %; informes intuitivos escritos por otros en el lugar de trabajo (sobre su
comportamiento/desvianza/potencial para cortar).

- Errores del Accessor: se refiere el accessor intenta cuanto más con frecuencia el acceso en los archivos donde la legitimidad del accessor, la cuenta más baja del accessor llega a ser. Cuanto mayor es la abertura, el mayor su gota en cuenta. Eg.: el sistema permite tres errores al día, maxing en cinco días consecutivos.

- Cómo el accessor "reacciona" (al"/las "de los avisos del sistema "preguntas")

. - "EGH" (la educación consigue más difícilmente): ¿Es el accessor normal de la curva de aprendizaje? De acuerdo con usuario de los medios "obró recíprocamente" con previamente. Eg.: las porciones de programas preceptorales alcanzados no deben ir normalmente de muy sofisticado, entonces meses más adelante a sofisticado menos demasiado a menudo.

- "Alarma de la mañana": wakefulness del usuario antes y después de la alarma; su behavior= según lo emparejado contra el modo de la notificación.

Grupo sujeto "designación": Los medios son anotados también por su tipo de categoría sujeta. También, anotan al accessor para cómo son probablemente pirata informático al lado del tema que abordan.

¿- El accessor tiene acceso cómo a menudo al material en nuestro exterior su tema permitido? Para el material que se puede "marcar con etiqueta" bajo categorías sujetas múltiples, cómo es importante es la categoría sujeta real en el material - esto sería medida por la frecuencia de los términos "señalados" utilizado en clasificar categoría del material.

. Es decir: La frecuencia de "señaló" las palabras claves (encontradas vía la función de la búsqueda de la sierra) de archivos, o las funciones (sus etiquetas, los códigos de comando, las instrucciones, "q").

- Asignan Accessor una lista de palabras claves, éstas y sus palabras relacionadas (encontradas vía el tesoro de la sierra) pueden ser utilizadas en anotar.

- El sistema puede (no) buscar una frecuencia limitada de estos términos usados en el accessor material (de los archivos) "busca " = y las aplicaciones.

. Las uno o más "etiquetas" asignaron a cada sistema de datos (dentro de un archivo), archivo, directorio, grupo de directorios, otras agrupaciones: vistas de la tela, computadoras particulares de la "unidad central". Las etiquetas múltiples dan un valor que representa diversos sistemas de sonorización, cada sistema de sonorización son aplicables para el mismo archivo. Es decir cada archivo puede ser clasificado diferentemente según se utiliza qué sistema de grado.

. Cómo el material fue utilizado: Quién/W5 utilizó los archivos - > "corrige" el label= de los archivos dichos; la puesta al día de archivos puede "corrige" las etiquetas de archivo; si los piratas informáticos tuvieron acceso al material previamente, o al "regulador del acceso" determina un grado más alto/más bajo de la seguridad es necesario.

- "Alarma de la mañana": es niveles de: eficacia, "hospitalidad", "educación", facilidad de manejo.

+ categorías sujetas que pueden tener cuentas más apretadas:

- finanzas; departamento de planeamiento de la compañía (nuevos productos, tendencias del futuro); cualquier cosa que puede ayudar financieramente al pirata informático, y o dueño del daño del sistema que es protegido por el acceso; archivo en el sistema del acceso, eg.: información sobre cómo cogen a los piratas informáticos; información que arriesga la organización o la paz del país o del mundo; información sobre comportamiento criminal (de posibles piratas informáticos), eg.: expedientes de la policía; cualquie otra información protegida comúnmente según lo indicado en artículos y patentes del software de encripción.

- "Alarma de la mañana": ésos con más dificultad en despertar.

Factores compuestos: Compuesto W5 de los factores usados en la determinación "accesibilidad":

- Cualquier o múltiplo descompone en factores el determine= "acceso": uno o cuentas múltiples; el tipo cuenta más aplicable lleva mayor peso; el sistema "combina cuentas" múltiples "".

- Lógica confusa: cuando el accessor no resuelve absolutamente el archivo o el sistema necesario del scoreof: El "regulador del acceso" puede ser más terminante; o para una mejor facilidad de manejo, más flexible. Todos dependientes en uno o variables múltiples.

- mecanografiar el behavior= (del extravagante) "resulta los sistemas de sonorización "señalados"" del in=. Eg.: el sistema "analiza" 7 el positivo, sistema behaviors=scoring irregular 3 para 3 el comportamiento negativo "etiquetas " = entra la operación.

+ diversos sistemas de sonorización aplicables (con independencia del comportamiento del accessor). Los sistemas de detección diversos pueden ser un protector seguro adicional, puesto que el accessor puede no saber la "orden y la sincronización" de los requisitos de sistema del acceso en todo momento. Qué puede accionar sistemas de sonorización de diferenciación: hora, mes, año; precios de las acciones; exceso de número de accessors registrados en el sistema (una manera de reducir la congestión); comportamiento del accessor; comportamiento del accessor legítimo ("comportamiento del grupo"), eg.: su "orden y sincronización" o tema o con (con) ese "están obrando recíprocamente"; mecanografiar las "indirectas" o los "avisos" usados; en la misericordia del regulador del acceso (del ser humano).

--Ruleta: process= al azar con (con) casi ninguÌ□n patrón perceptible para el selecting= protocolo de acceso que anota o el otro.

- Ejemplo: u tiene acceso a dos de tres archivos, que emparejan su "cuenta" y el tercer archivo está más allá de su gama al lado del sistema 30%= puede permitir el acceso. El razonar detrás de esto: el emparejar de la cuenta de otras ayudas de los archivos determina la legitimidad del accessor; el sistema puede enangostar el nivel de tolerancia para las cuentas irregulares para cada archivo si otros factores se consideran también.

- Compuesto de los factores especialmente útiles cuando: el acceso está durante la misma sesión (que el comportamiento que es analizado), o acercarse, o cuando conocen al accessor para estar en el sitio de la facilidad/de trabajo/la entrada del "acceso". Sabido vía: la "pista", teniendo "tuvo acceso" en el edificio.

- Compara UIP-DB del with= "cuentas" del accessor de qué está alcanzada.

. Sistemas de sonorización múltiples que funcionan dentro del mismo sistema.

- Factores externos de diferenciación. Ejemplos: Si los piratas informáticos son un porcentaje más alto de accessors después de horas de trabajo, el sistema de sonorización entonces llega a ser más terminante; Hay una cierta crisis en la organización o el sistema; El sistema se sobrecarga con los accessors, por lo tanto las necesidades de limitar el acceso a ésos con la precedencia más alta o las cuentas.

- Piensan al pirata informático (posiblemente) esté en sistema. Los intereses percibidos del pirata informático (eg.: vía los temas que buscan) = analyzed= "señaló" el sistema de sonorización decretado.

- Algo como un virus de computadora está probablemente en sistema. Este virus necesita un programa antivirus o relacionado del interruptor (software del `).

. - "Señaló" el sistema el anotar/de detección decretado según circunstancias. "Buscar y reaccionar".

- "Alarma de la mañana": requiere diverso modo de acceso para la mañana despiertan usos.

Cambios en "cuenta" del accessor (uno quién (las búsquedas a) acceder:

+ el sistema puede (lentamente) altera automáticamente el tipo cuenta del accessor. Es decir: como changes= del comportamiento del usuario el perfil necesario del comportamiento a acceder cambios lentamente en un cierto plazo.

--Es decir [tercera re-explicación]: Debido a la inconveniencia en la necesidad tener regulador del acceso con frecuencia

alterar el password= del usuario como las funciones del accessor que uip= " analizador " puede del change= (automáticamente) "corrigen" la "cuenta" del accessor.

.- Las cuentas ataron a los cambios de las contraseñas del accessor con sus cambios naturales en el lugar de trabajo (como su trabajo/compañía/

cambios de la economía). UIP-Adaptar.

. - uno o más los criterios que anotan puede ser utilizado. Los criterios pueden cambiar por la contraseña/el comportamiento del accessor (cambiado). Si los criterios uno no son W5= convenientes entonces otros son (automáticamente)

adoptado.

El anotar acumulado negativa acorta el curso de la vida de la contraseña:

+ las contraseñas pueden haber limitado el life= activo medido por contraseña de la cantidad fueron utilizadas mientras que había cuenta negativa de a (semi) para el accessor/el material que tuvieron acceso.

+--también medido cerca: calendario o tiempo de uso; "comportamiento del grupo"; suspicacia que los piratas informáticos han penetrado (en pasado); otros criterios que anotan.

. - El usuario debe mantener contraseña viva por apenas (parte de) contraseña que activa si no están utilizando; después de dejar de usar, tener acceso al regulador

las necesidades de ser with= "obrado recíprocamente" reactivan ("corregido") contraseña. Unwatched/el cortar más propenso inusitado de las contraseñas (sin el aviso del sistema o del accessor), eg.: las "cuentas" se pueden cambiar por el pirata informático, pirata informático legítimo pueden no observar actividad inusual en su cuenta de la contraseña.

Misceláneo:

- cuando las funciones del accessor del needed= pueden tener contraseñas de diferenciación, un mejor sistema que permite para permitir el comportamiento del usuario, que puede alterar del papel normal del accessor.

- D1: accessor (cambiable) "cuenta" = k (entrada de teclado) = c)/"(de la computadora) (del acceso interruptor correlador" (compara cuentas del archivo del w= del accessor "buscado") = material (archivo).

- D2: accessor = [cuenta/carro del w= de la contraseña] = regulador del acceso = c (compara las cuentas ("coordenadas")) = los elementos (ser) tuvieron acceso.

- puede tener uno o contraseñas múltiples "señaladas" para las funciones aplicables.

- puede solamente utilizar contraseña máximo o mínimo número de época = tds () de la fecha del tiempo/cuenta de la matriz (del uso (del tipo)).

¿- Uso irregular? El usage= excesivo repentino pudo caer la cuenta.

. - los archivos pueden ser "marcado con etiqueta"/"señalado" cerca:] archivos reales 1; 2] directorios; 3] agrupaciones sujetas.

+ (el sistema de sonorización del Access') también se anota para: capacidad de guardar hacia fuera a piratas informáticos; facilidad de manejo; cómo es bueno uip-está adaptando; felicidad del usuario. También utiliza los "cuestionarios" contestados por los accessors en la determinación de cuentas finales; éstos preguntan a accessors sus: suspicacia intuitiva; facilidad de manejo; cómo alterar anotar; W5 del ajuste de las necesidades que anota. El sistema "combina"/"analiza" respuestas (con el regulador del acceso (del ser humano)).

- Las clases del sistema a través de diverso to= de los factores "señalan" que son mejores/peores/aplicables para bajar o levantar la cuenta.

Dibujo: ["Acceso" = "VAGOS" = "cuenta"] =

El "ANALIZADOR" = compara cuentas de la contraseña en un cierto plazo.

"CAMBIAR EL PROCESO DEL ACCESO" =

. - Una de las causas es cuando el sistema pregunta la legitimidad de la porción del accessor= como excusa para que vaya el usuario a través (seguridad
cheques y) proceso de conseguir la nueva contraseña (automatización del =via).

- "Alarma de la mañana": nuevas maneras interesantes de despertar cada día, contra acciones repetidores.

"JUEGO" = funcionamiento del accessor de las cuentas. "Alarma de la mañana":

"PROCESO del ACCESO de la PIEL" = 1] hecho que el sistema "que anota" es en funcionamiento. 2] "cuestionario".

La "INDIRECTA" = las indirectas al accessor que su comportamiento pudo necesitar la alteración conseguir/mantiene el acceso. Los "avisos" sugieren: archivos alternativos, W5 para las funciones del comportamiento. "Alarma de la mañana": cuando el usuario atasca

"HUMOR" = nivel del Accessor de: (feliz) "hospitalidad". Su "humor" es utilizado como cuenta. Humor determinado vía: las búsquedas de la palabra clave de qué accessor entró/"experimentó". "Alarma de la mañana": eleva el humor del usuario.

El "MOVIMIENTO" = llano de la desviánza del movimiento de la mejor trayectoria/% de " de la ruta " = es anotado.

- Tipos/niveles de la desvianza. También: grande o pequeño; rápido o lento; irregularidad (de: velocidad, forma).

- "Alarma de la mañana": requiere la acción física del usuario, eg.: la rueda de ardilla funcionada con, sale físicamente de cama.

El "NOTIFICADOR" = el grado de urgency= según lo medido por el score= da lugar a diverso tipo de señal generado de notificador.

- "Alarma de la mañana": sacuden al usuario mayor cuando: están excediendo los plazos para actuar; que el día "está señalado" como más importante.

"ORDEN Y SINCRONIZACIÓN" =

- Sincronización: las cuentas se dan a los diversos parámetros/duraciones del tiempo.

- Orden: El ordenar de acontecimientos abarca una cadena de bloques.

La colocación de bloques se puede medir por los bloques que preceden y que siguen/el número en el lugar según lo medido del frente o detrás.

- "Alarma de la mañana": crea el "humor "señalado"", eg.: el "humor que sacudía" creó por OSC (comunicador sano saliente) para despertar a usuario del sleepiness= seguido por requisitos más civiles si se ha presentado el usuario realmente, así que son también mentalmente más despiertos.

El "AVISO" = la cuenta/su uip-DB del usuario determina mucho el tipo de aviso que conseguirán.

"PS-ZONE" =

- ojo de toros: Como los círculos concéntricos, más cercano al ojo de toros que representa la mejor localización, más alta es la cuenta.

- colmena: diversos puntos esporádicos pudieron ser las mejores localizaciones.

. --en este caso las células centrales tienen grados más altos, las células vecinas pueden tener 50% del grado de la mejor célula, la grada siguiente hacia fuera que tiene el 25%, y después hacia fuera cero, y siguiente hacia fuera, menos el 10%, y así sucesivamente. Diversas células centrales pueden tener cuentas de diferenciación.

- buñuelo externo del anillo: cuentas más altas para "señalaron" distancia del punto centralmente medido.

- altitud: medido en el milímetro o el kilómetro

- ángulo: eg.: 45 grados del punto centralmente medido. Esto se puede combinar con distancia "señalada".

- profundidad: debe ser below o cubierto por algo (de sustancia señalada/de grueso; o cubrirse y de cierta distancia de la cubierta). Eg.: material enterrado "que busca".

- zonas múltiples: dos o más zonas "señaladas" deben ser activas/activadas/ocupadas: simultáneamente/en "orden y la sincronización señaladas" (el accessor de la trayectoria camina físicamente).

--cada "k" (llave) puede representar una zona. La "orden y la sincronización" de su ser activated= crea un patrón. La "llave" es un área muy amplia de usos. Ver: "componer", "ruta", "pista".

"PREGUNTA" = "MQ". "Alarma de la mañana": crea ""/"del humor hospitalidad" al awak DE = las ACCIONES del ACCESSOR: Qué mejora de la influencia:

El Accessor está trabajando con el material contra el robo:

- Los piratas informáticos quieren tomar el material, y están a menudo menos interesados en hacer otras cosas más allá del sabotaje: ¿La acción simple está robando? Si el accessor "está corrigiendo" el material, son más probables ser legítimos.

¿- El material se está compartiendo con otros sostenedores de contraseña, si tan W5? La distribución puede ser forma "de"/"de la interacción que corrige".

- El Accessor está trayendo adentro (legitimar (pertinente, virus libre, tipo material del no-sabotaje) y "combinando" la información con DB del sistema.

- los erases o los desperdicios todos/parte del accessor de archivos tuvieron acceso. ¿Para reducir la detección, puede ser que transfieran simplemente el material= entonces "cortado y lo peguen" qué se quiere en su sistema?

- el accessor tiene acceso repetido a la misma porción de archivo otra vez (si no la ahorraron ni transfirieron anterior).

. Normal Psico-Sociológico: Formar de w= "que obra recíprocamente" del usuario a otros accessors (es (sociológico) el normal):

- Un accesses= del empleado (líder) entonces siguió más adelante por otros (los subordinados).

- (La mayor parte de) equivocaciones que el accessor incurre en están de una naturaleza menos inteligente que los piratas informáticos elegantes no harían, eg.: el conjeturar en el software público sabido funciona hasta que lo consigan correcto.

--Los VAGOS no pueden "correlacionar" ninguna patrones anormal del accessor= con su (uip) DB (base de datos del ') del comportamiento anormal. Eg.: unsteadiness al usar el ratón/la palanca de mando ("inclinación").

- el accessor "obra recíprocamente" con (las respuestas) = "" del comportamiento/"de los cuestionarios educativo" (las pruebas). Especialmente cuando la cuenta del accessor cae. El material sujeto también "busca" de la información del accessor= sobre su identity= que ate uip-DB del regulador del acceso del with= del accessor legítimo.

- misceláneo: el material (frívolo) buscado por el accessor= no es del tipo buscado por más mentalmente - la enfermedad.

- "Alarma de la mañana": formar de las acciones de usuario con el sistema informático, u otros compañeros de trabajo son normal= implican de otra manera el funcionamiento en los niveles "señalados". El sistema pudo ser más tolerante durante otras partes del día si la "alarma de la mañana" es la función deseada principal.

. Los accessors legítimos (ayuda) cogen a piratas informáticos:

Diversa gente está aprendiendo de uno a, posiblemente implicando los partidos se conoce realmente; su también esperado eso

los partidos legítimos en la "interacción" tienen otras maneras (intuitivas) de detectar el hackers= que el "acceso" no pudo de otra manera tener. Eg.: Un user= humano de la contraseña "educa" otro accessor= mientras que están en el sistema, según lo evidenciado por la "pista".

- el sistema "incita" a accessors "interactivos " = de manera que los accessors legítimos/access= pueden coger a piratas informáticos. Legítimo

los piratas informáticos pudieron ser "educados" en piratas informáticos de cogida (sin arriesgar (demasiado de) cómo funciona el "acceso".

- Si el accessor legítimo es sospechoso de otro accessor: Confidencial cualquier persona puede "marcar" el hackers= con etiqueta potencial dando por resultado: su "" más bajo/sistema "de la cuenta que sigue" tal entidad más cautelosomente/del acceso del regulador del enfrentamiento del accessor directo/

corte del acceso (si el acceso tiene otras razones para creer que la suspicacia humana podría estar correcta).

- "Alarma de la mañana": los compañeros de trabajo "anotan" el funcionamiento del otro usuario. Eg.: tardanza, velocidad de la acción.

. Buenas características del comportamiento misceláneas:

Actividad frívola del Accessor: El Accessor es "dibujo", o jugando la computadora "juegos" (cuando deben trabajar), o porciones de acceso de Internet fuera del dominio de los accesos. Su sistema importante encuentra a accessors el ser frívolo puesto que los piratas informáticos están en una misión seria o asustado conseguir cogidos perdiendo el tiempo que hace tales. La otra actividad del accessor en la mayoría de la probabilidad no sería un qué pirata informático (riesgo) "buscando" o haciendo:

- Acceso de la información que es (fácilmente) conocimiento público.
- la "localización" del accessor es de buena "zona", eg.: buen código postal o prefijo del número del teléfono, o donde hay menos crimen, o de pocos estudiantes universitarios (más convenientes ser piratas informáticos?)
- las buenas interpretaciones (vía "analizador") del behaviors= reciben "" positivo/"de la etiqueta cuenta".

Qué elementos influencian el empeoramiento de cuentas

La cuenta peor es cualquier cosa enfrente de las cuales es o diferente de comportamiento deseable.

- Pedir el sistema para hacer o para dar algo que no es posible (con o sin la mejor contraseña) = puede ser indicativo. Los piratas informáticos pudieron poder menos tener el "acceso" al material "educativo" en cómo utilizar el system= desde entonces: tales instrucciones requieren procedimientos de acceso (adicionales); tener acceso a tales pudo ser sospechado.
- (comunicaciones/acceso) el software usado por el accessor es diferente de: cuál es estándar/sabe/asignado (a los empleados).
- dificultad en precisar quién el accessor pudo realmente ser: eg.: su identificación de llamador no empareja para arriba; su comportamiento no empareja contraseña.
- el accessor está funcionando a (grande) "cuenta" pagadera por el dueño del sistema alcanzado.
- protección de las aplicaciones del accessor a ayudar a ocultar la identidad verdadera del accessor, eg.: accesos vía números extraños del teléfono, o de la oficina exterior.
- toma las drogas relacionadas psiquiátricas
- cuando el material se transfiere a o "obra recíprocamente" el accessor la contraseña de w que: está con (con) una cuenta más baja; compañía exterior; o a la localización desconocida; o el sistema no sabe qué sucedió al material.
- cuando "obran recíprocamente" las búsquedas del accessor a w= el otro accessors= que no eligen responder/"interactiva" de manera completa (por requerimiento por el iniciador).
- el accessor no cuida sobre efectos negativos de sus acciones: ensucian para arriba archivan (han tenido acceso).
- Horas: si el accessor viene raramente trabajar antes de que 9 pero como pueden estar las estancias generalmente de vez en cuando hasta que la cuenta de 10 pm= sea más apretada en el acceso en el 8:30 entonces en 10 P.M.
- el material alcanzado estaba para el sys= del accessor= entonces no puede cuestionable "pista " = material más de largo.

- "Pista": el movimiento material "se sigue" vía: la identificación "marca con etiqueta" "ocultado" en material; búsquedas de palabra clave (para los aspectos "señalados" del material (menos probablemente "ser corregido posteriormente" por el accessor)). Email (entre los sostenedores de contraseña).

- La pérdida de rastreabilidad cae la cuenta del accessor.

+ los Accessors pudieron ser dados instrucciones/ser requeridos para guardar el sistema de los datos w/in. El intentar puentear esta regla es muy malo (sin el permiso del regulador del acceso).

Buenos y malos comportamientos misceláneos:

. Comportamiento del Accessor fuera del system= de que el "acceso" es protección/que supervisa cuidadosamente:

- Hace a accessor dan indicaciones que están cortando el sistema de otra compañía (también) = según lo determinado vía "pista".

- El otro DB: Antecedentes penales; expedientes de la escuela o de la universidad del accessor.

. Importación del Accessor del dominio exterior protegido por el acceso (de la cañería):

- archivos o software del dominio exterior protegido por el acceso.

- conectando con otros sistemas o ("interactivo") productos.

. "Multimedias": El sistema busca elementos del comportamiento inusuales del usuario en parámetros siguientes: Cómo el accessor (con referencia a) programa el interruptor; los tipos de las opciones u del milímetro seleccionan, eg.: selecciones de opción del color y del "oscilador".

. "Hospitalidad": El Accessor debe hacer llano "señalada" feliz del acceso (punto de la puerta).

- Métodos: "Juego": dejar triunfo opuesto; declaración de palabras correctas; "imágenes de "entretenimiento" de "dibujo""; "obrando recíprocamente" con (con) "imágenes interactivas" de la manera "señalada". La interacción puede ocurrir en el "lugar de reunión electrónica" de la hospitalidad.

. "Interactivo": El sistema "analiza" para el comportamiento "interactivo" inusual del "usuario".

. ""/"De K R" = usuario "obra recíprocamente" vía = los "VAGOS de los accesos"

. ""/"" del localizador/"" de la Picosegundo-Zona/"del Portable paladio": Las localizaciones inusuales o no programadas del usuario se utilizan en "anotar" si permiten al "accessor" continuó el uso del sistema.

--Ver KN (invención) (pre-1996?), especialmente Picosegundo-Zona.

. Qué accessor "obra recíprocamente" con o tiene fuera del sistema principal:

- Qué en la computadora del accessor: El sistema "analiza" (todos) los archivos de la computadora del accessor, si el accessor hace o no elige permitir que sean alcanzados por el regulador del acceso. Estas otras ayudas de los archivos desarrollan uip-DB del accessor.

- Qué accessor hace en World Wide Web: la tela avista tenido acceso/creado; mecanografiar el email enviado y recibido.

¿- el accessor está recibiendo el teléfono/el fax/la otra telefonía (en el trabajo) (de la naturaleza no relacionado con el material sensible)? "Pistas"

llamadas entrantes/salientes basadas encendido: CID de otros partidos; el análisis de la palabra clave estudia el contenido de la palabra.

. La gramática o el deletreo comprobó: El sistema compara el with= del conocimiento de idiomas del accessor (probado anterior) su capacidad real en sistema. Eg.: comprueba si accessor es o no es un nativo de la lengua usada, los piratas informáticos pudieron más probablemente ser nativos usando una contraseña del altavoz extranjero.

. Familiaridad del system= al accessor: Más familiar el mejor. Eg.: Velocidad del comportamiento del Accessor en el acceso. Los piratas informáticos son más probables ser desconocedores con no - las facetas público disponibles del proceso del acceso o del software relacionado.

- "Alarma de la mañana": la carencia de la familiaridad es muestra de no ser completamente - funcional.

. Existe: "Siguiendo" de los pasajeros de la línea aérea basados en sus perfiles del comportamiento, eg. su: país de nacimiento, historia del recorrido. Considerar los comentarios sobre cómo los terroristas pueden outsmart el sistema.

generador de la recompensa 1G22: Recompensa generada por Usage Level.

SUBPARTE DE LA CUENTA DEL COMPORTAMIENTO DEL ACCESO DEL FINAL

Archivo: El acceso \ CA-VAGO-Adapta

ARCHIVO ACCESS-BA = ADAPTACIÓN (ARREGLO PARA REQUISITOS PARTICULARES):

Introducción: Debajo se copia y se mejora de la sección del UIP del archivo IMI&8 antes de que el documento fuera aumentado. Adaptar también se llama información de usuario que programa, se adaptan, o modifican para requisitos particulares.

Para Techies: Dibujo: entrada = analizador = memoria de datos (M, carro, reconoce multiusos) = analizador = salida = función de datos.

. - consejero 5A-810-042003: compila y analiza la información de usuario.

- Para Techies: fd-hdd; pp y programa de la P.M. cómo quisieran que el sistema recogiera, recuperar y analizar los datos en base de datos; Reino Unido; tds (cuando y cómo ocurrieron los elementos); el educ%; M%; cuenta (la información de la cuenta se puede procesar para la base de datos del UIP; y el UIP puede ayudar a generar cuentas deseadas); cart (cartucho del software del `) (para los datos adicionales para la base de datos; y o software para procesar la base de datos); uq (la base de datos del pi se utiliza para ayudar a generar respuestas alrededor, eg.: sobre el usuario más allá de preferencias y o de actividades); P.M. (la base de datos y o el software puede ayudar a preguntas pronto, eg.: para ampliar la base de datos, dirigir a usuario en la pregunta correcta si el sistema primero consigue la información correcta); tener acceso (los límites tienen acceso a la información delicada dentro del todo o una parte de la base de datos a la gente con la contraseña correcta).

- Artículo en "americano científico", p.64, abril de 1995. Título del artículo: "Máquinas que aprenden de indirectas". Su alrededor: El aprendizaje de máquina mejora perceptiblemente aprovechándose de la información disponible de indirectas inteligentes; discute el proceso del algoritmo de modo general; da ejemplos de diferenciación, eg.: juicio de las computadoras cuánto crédito dar a los usos de la tarjeta de crédito basó en las últimas historias de la otra gente similar.

- UIP "pi antes titulado".

- Para la pieza #1 de Techies: El dispositivo electrónico obtiene la información sobre el usuario por uno o más del siguiente: recordar el funcionamiento anterior del usuario, eg.: sus capacidades y o dificultades en esto, o dispositivos relacionados (que transmiten datos del uip a otras unidades vía el alambre, o %wireless); pidiendo preguntas del usuario, o "M"; el usuario toma uno o más pruebas, el tipo y la cantidad es determinada por el uso deseado del producto; otra persona o dispositivo (m) da la información sobre usuario; etc. El dispositivo reconoce a más de un usuario por multiusos, eg.: sus códigos usados para acceder en el dispositivo. La información personal se almacena en memoria y es utilizada por el dispositivo más inteligente al sastre sí mismo a las necesidades particulares del usuario. La manera de la cual la invención se adapta a las necesidades de usuario puede alterar según: cambios pequeños o grandes en la base de datos del uip, págs.

- PARA la pieza #2 de TECHIES: D (UIP) =

"Mandando la cuenta"; El usuario puede llevar su carro (su uip personalizado para todos los productos idénticos o relacionados) de la máquina la máquina, eg.: % de la tarjeta existente usada a activan y seleccionan preferencias deseadas en sistemas estéreos del coche; uip de diverso del carro (cartidge del `para el software) usuario de los efectos diferentemente con los cambios correlacionados en funciones; tipo del "carácter" según el uip (si se utiliza una exhibición cambios ("S")); fecha; los datos del uip pueden ser vistos en la exhibición ("S") y o ser impresos; el uip se utiliza para aumentar el cociente de la satisfacción del usuario, eg.: entretener, (^possibly cerca: la manera de la cual la función funciona, sonidos, luces, palabras se utiliza para crear mejor el tipo del efecto electrónico uip indica es más probable aumentar la reacción positiva del usuario a usar el producto [los estudios de la prueba se conducen para considerar las reacciones de la gente en estudios del caso de prueba de 50 - 1000 personas]); "C"; % del uip pueden apoyar interactivo (dando los datos adicionales necesarios para mejorar la invención del sastre al usuario; % de los datos obtenidos para la memoria del uip del micrófono ("mic") (reconocedor de la voz); ratón; P.M.; multiusos; la base de datos del uip dirige las funciones de sistema (determina el tipo, manera, sincronización, independientemente de si notificar, mq, oscilador, synth; pp; del uip de la base de datos de las influencias de la impresora del impreso los parámetros, cuenta, discurso, vc, la manera de la cual funciona mientras que un semi-juguete, él incita - aceptan - el uq de los procesos; tds; Reino Unido. UIP-Adaptar y UIP-Sugerir:

. UIP-Adaptar = interruptor: Para: (automáticamente) sugiriendo cómo el sistema puede mejorar a sastre sí mismo a las necesidades/a las ayudas del u conseguir las ideas del producto/la buena inspiración de ayuda del usuario.

. Introducción a los sistemas de la generación de las fórmulas:

Software usado en las fórmulas el convertirse/el analizar/evaluación para el alimento, la química, los indicadores, el etc.

- el uip de la función deseada es matched= con (con) el uip de elementos/de ingredientes/de productos químicos/de elementos de diferenciación del alimento = dando por resultado fórmulas de los ingredientes que pueden (mejor) alcanzan meta deseada.

--las características de la meta son tied= vía uip = a las características de ingredientes disponibles/sabidos o (KN) sistema.

+ características importantes: UIP-Adaptar, 7G050, banda, Pista-Analizar (analiza para cuál es el mejor de seguir = DB), inspirándose el interruptor, 2E010 20 30 40 50 softwares de la receta.

. Ejemplos generales:

1] desarrolla un nr (notificador del `) para el uso deseado = alertando la presencia de sales/de ácidos/de elementos peligrosos = de in/for: líquidos/polvos/contacto de la superficie.

2] Otros usos para 7G050.

3] El sistema del interruptor (software del `) puede ayudar simplemente a u ofreciendo posibilidades sugeridas: fórmula/equipo/fuente de información (material de referencia,) en línea/tipo de las fuentes experimenta.

4] UIP-Adaptar = UIP-DB: ajusta a las necesidades del u. Da ideas a U (usuario) = de qué U (usuario) = entonces puede elegir el sistema reacciona por consiguiente ofreciendo tales funciones adaptadas.

- Ejemplo: u que usa software de la autopista de la información requiere a menudo más de dos minutos antes de que u requiere M (ordenador central) actuar = dando por resultado el interruptor (software del `) que pide u si todavía quieren permanecer conectadas = la frustración u requiriéndolo responder a tales preguntas pequeñas. Puede también ser problemático para que u localice donde en el software deben entrar parar tales avisos, pero si

el sistema fuera ofrecer una sugerencia tal como, usted tienen gusto del modo de defecto para darle 10 minutos antes de tal pronto (después del sistema ha determinado ("estado") el 80 por ciento de las últimas 50 interacciones entre u y el mfh (transmisión en circuito de la unidad central) era por lo menos 10 minutos sin (sin) actividad).

--Resultado: el sistema se adapta a u, por primer u de donante una opción en materia - u no quisiera quizá que el cambio ocurriera sin (sin) su reconocimiento. El fabricante determina a qué grado uip-adapta sugerirá o puenteará anterior y se alterará simplemente a la necesidad del u.

5] La constitución necesitó en resinas plásticas/metales/la cubierta del producto ("cm", el "cp") o características, porque = tolerando niveles señalados de: el estirar, doblez, tirando = dentro de ambientes señalados de la variación (extremo): temperaturas, luz, abuso, desgaste excesivo, plazo del uso del elemento (edad de N). 7G050 relacionado.

6] Estrategia de búsqueda de la patente para el sistema de la generación de la sugerencia de la idea: software y (fórmulas o receta o ingrediente)

7] Farmacéutico: ingredientes que se convierten para las drogas; ideas para la investigación.

- KN: el sistema del pronóstico médico que estudia todas las características de la enfermedad en la determinación del tipo de enfermedad = de 2E sugiere medicaciones posibles.

- Sugiriendo las combinaciones posibles para que la droga solucione señaló enfermedad/problema: el archivo para cada aspecto en la situación (uip-DB) emparejó con (con) = los archivos de la existencia/las drogas o los productos químicos futuros potenciales.

8] Reunión de reflexión: El software diseñó simultáneamente ayudar a investigadores a aumentar su (relacionado sociológico, psicologicamente) creatividad: KN

9] Generadores alimenticios de la receta basados en necesidades.

Ejemplos del indicador: 7G050

1] Tipo Suggester del indicador: El investigador los anticipa será entrando en contacto con (con) 7G050 relacionado: los productos químicos (peligrosos) diversos/los ambientes ásperos - > esos productos químicos/ambientes se afinan en la computadora - > c (computadora) "analizan" para el tipo indicadores que puede nr (el `notifica) más de uno de estos productos químicos/ambientes (sin relación) [el interruptor intenta encontrar los indicadores que pueden ser compatibles en buscar los productos químicos/los ambientes diversos] - > las sugerencias se hacen a u - > u necesidad de mayo próximo de hacer la investigación adicional vía: este mismo interruptor (software del `)/otras fuentes de referencias/hace los experimentos que prueban hacia fuera las hipótesis/los hechos indicados del interruptor.

2] Dispositivo de protección del cuerpo Suggester: Las llaves del investigador en ésa que trabajarán con tres productos químicos de diferenciación (de acidez de diferenciación) - > interruptor (software del `) sugieren qué 7G050 tipo guantes a utilizar para todos/cada situación/ocurrencia/tipo actividad (eg.: el trabajo con los objetos agudos en tales líquidos requiere guantes más gruesos) - > los guantes señalados se pueden identificar por el fabricante del guante/el número de modelo/el tipo genérico. El sistema puede también sugerir

el otro engranaje protector usado en situaciones peligrosas, eg.: los delantales, juegos del cuerpo, máscaras, anteojos, caretas antigás, zapatos, (reemplazables) filtran para HVAC [sistema de la calefacción, de la ventilación, del aire acondicionado].

- interruptor usado encendido caso por caso, día por base del día, o proyectos de largo plazo futuros del planeamiento, o + diseñando nuevos laboratorios de investigación, eg.: mecanografiar las superficies (pinturas, suelo, materiales de la tapa contraria, los filtros de aire....).

3] UIP: Las características de u (usuario) "se analizan" - > el sistema hace la sugerencia: El usuario tendrá ocurrencias probablemente señaladas (contorneadas en 7G050) = interruptor (software del `) sugiere: tipos de protección (engranaje protector); métodos de investigación (cautelosa) (protocolos) determinada ya para ser seguro vía los manuales.N-POS=30 de referencia en el tema o el interruptor (software) del `(DB).

"Banda": El interruptor (software del `) (con referencia a) se programa = según lo controlado por el UIP; el programador puede ayudar a dirigir/interruptor del control.

. PARA el dibujo de TECHIES: Usuario = este ~ c (computadora) del sistema de N (invención) (interruptor que sugiere fórmulas) =

ACCESO; ANALIZADOR; CUENTA; carro (cartucho del software del `); EDIT; EDUC; MULTIUSOS; banda (programa informático); Q (hace preguntas); RANURADOR; +SCORE (dado a cada aspecto = atado a cada elemento de: ingredientes de la meta y del potencial); SENSOR (7G050); ESTADO; tds (matriz) de la fecha del tiempo (cuentas de retraso de tiempo en conseguir efecto del nr (notificador del `)); PISTA (historia (producto químico/alimento) de los experimentos anteriores conducidos cerca: u, cuerpo de organización, DB, m); Usuario (investigador, estudiante = "educ"); UIP.

Descripción de D (dibujo) - cómo las características pudieron caber:

Para Techies: Dibujo: Usuario/otro (KN) sistema = este ~ c (computadora) del sistema de N (invención) (software usado en las fórmulas el convertirse/el analizar/evaluación para el alimento, la química, el etc.) =

. Picosegundo (sistema de colocación) - R (teledirigido) - inclinación:

Zonas - supervisión:

Zonas - utilización:

Acceso: u (usuario) necesita continuar generalmente desarrollando las fórmulas que emparejan eso u (usuario) desarrollado con (con) el sistema antes. Los bandidos sin (sin) la mayoría del conocimiento apropiado pueden ser notados (nr). El acceso permite porcentajes normales de casos con (con) los resultados negativos (causados por error humano).

Secretario -4E020:

Sistema del acceso de la entrada de la imagen -4E030:

+ indicadores: 7G: peligros, novedades, supervisión (electrónica) del EL de acontecimientos: fórmulas para los indicadores necesarios que se convierten desarrollados.

Técnico:

Con cómo los archivos en DB (base de datos del `) = fósforo/comparan para arriba (con)/relacionanse/cuenta con (con) = los datos proporcionados para comenzar búsqueda cerca: u (usuario)/otro sistema. Pasos en ejemplos:

Pasos del generador de la receta de la evitación de la sal:

Sugerencias en el reemplazo de la sal en sopa de habas:

1] El usuario puede preferir normalmente el gusto de la salinidad para comparar en 0.5% de volumen de la sopa para ser sal verdadera.

2] Este porcentaje preferred es resuelto vía: qué u (usuario) K ()/nr (notificador del teclado del `) puesto en sopa.

3] Harán, y enumera el usuario K (teclado) 2 litros de sopa volúmenes de ingredientes que componen 2 litros (ambos antes de combinar, después después de venir (y de la evaporación) - aunque estes 3ultimo se pueden calcular algo por el sistema). Ejemplo: agua de 1 litro, habas de riñón de .4 litro, patata de .3 litro.

4] El usuario deja el sistema recomendar otros ingredientes (si no hay sal verdadera realmente ser utilizado).

5] DB del sistema (base de datos del `) "analiza" /shows (s/printer) otro no los ingredientes de la sal demostrados para satisfacer estadístico un porcentaje grande de la población (en la zona del u) que están en dietas restrictivas de la sal. "Cuenta" para cada uno de esos ingredientes en valor de reemplazo de la sal. 6] Esos ingredientes que subieron en paso anterior son siguientes "anotados" para su compatibilidad con los ingredientes existentes u (bastante) decididos ya para mantener sopa. Cada ingrediente alimentario en DB (base de datos del `) tiene muchos subarchivos, cada subarchivo que es el tipo uso/situación/tipo alimento que tal ingrediente se puede utilizar en = y la "cuenta correspondiente". Ejemplo: las zanahorias consiguen la alta cuenta para las sopas generalmente con todo una cuenta más alta en secundario-secundario-archivo: sopas occidentales del vehículo o de la carne, pero una cuenta más baja en secundario-secundario-archivo en el tipo japonés sopa de la haba del miso.

7] La diferenciación "anota"" coordinado/"del are= "analizado" - > sugirió que los ingredientes estén agrupados en sistemas/archivos de diferenciación de ingredientes. Compatibilidad de ingredientes con uno a en sistemas señalados (ingredientes incluyendo requeridos por u) basado en DB (base de datos del `) del gusto estadístico del pasado estudian para cómo tales combinaciones (poder) satisficieron a gente.

8] Las demostraciones de S (pantalla)/de la impresora = sugirieron recetas = al U. La orden en con la cual se demuestran puede ser que sean ésas (con) más arriba "anotan" para el sistema, o por otros medios, eg.: costar, "anotan" para cómo todos los ingredientes están comúnmente disponibles en los supermercados de la zona del u, uip - DB (base de datos del `) para qué u (usuario) tenido gusto en el pasado, el etc.

. Pasos del generador de la idea del desarrollo del indicador: El interruptor (software del `) sugerirá que qué u (usuario) puede utilizar//substituir/alterar en su plan/estrategia/proceso (de la investigación).

1] Todo el tipo materiales en la situación es computadora entrada del into=, eg.: mecanografiar los materiales peligrosos (ácido, nivel del pH, productos químicos 7G050 enumerados). Eg.: tipo + guantes, tipo + envases

que llevan a cabo los productos químicos, + ácidos y donde están, donde los ácidos pudieron derramarse, efectos ambientales (temperatura, duración (en qué ácidos estarán en contacto), otras circunstancias.

2] Los archivos para las características para cada uno de estos elementos son cualquiera sabido por el sistema (uip-DB). Si existe el DB (base de datos del `) fue compilado cerca: el "análisis" del material de la investigación, exámenes de los químicos %, se convirtió por u (usuario) (o su compañía) para los usos futuros (por otros investigadores de la compañía).

- Cada elemento tiene diversos archivos, según la circunstancia de su uso. El "analizador" determina vía qué subarchivos ser aplicable, eg.: etiqueta del archivo, % de la búsqueda de la palabra clave, "estado", uip.

3] Se emparejan los archivos. Ejemplos: los solamente 2% de tipos del guante/del envase son convenientes para trabajar con los ácidos = interruptor (software del `) determina después tres mejores guantes/envases para el ácido dicho, enumerando mejor primero.

4] Si u (usuario) es incapaz/poco dispuesto de realizar cambios en guante/envase, el sistema puede sugerir los ácidos de diferenciación, o el plazo durante el cual el trabajo debe ser terminado.

5] Si todas las sugerencias por u son buenas, el sistema puede "anotar" qué u planeó hacer/todavía da otras opciones/precauciones mejores/buenas pero peores (si usa productos o no, y si es así cómo deben ser utilizados) = S/Printer.

6] Mientras que está ocurriendo la investigación = "sensor" = "analizador" = NR: cuando el sistema determina hay o podría ser (basado en cuenta) una situación que necesita la especial atención (peligro, pérdida de dinero, inhabilidad para que u consiga resultados deseados).

El diagrama grande comienza aquí: El "parte movible siguiente #1 del diagrama" está para el diagrama grande debajo de él, titulado: "D-#1". Para Techies: D debajo de "D #1" es un subconjunto de estes 3ultimo. Todas las características convergen en la computadora central en "D #1".

"Parte movible #1 del diagrama": Para +D-#1

Mecanografiar las sugerencias hechas por el sistema para alcanzar las necesidades indicadas por u (usuario) (así que el futuro sugerido N (invención) o las funciones del sistema según lo necesitado en la situación/el ambiente y capaz futuros de manejar ocurrencias señaladas según lo previsto por el sistema/el U.

Las sugerencias son hechas por el sistema: para uno o más de siguiente: tipo del nr (notificador del `) - 7G050. Con engranaje protector sugerida: contra (producto químico 7G050) peligros. Constitución de la resina/del metal del PVC. Fórmulas: farmacéutico, recetas del alimento, resinas del pvc. Otras fórmulas. Panoramas probables:

--cómo prepararse para: fuego y otros taladros de desastre natural/estado de preparación.

--accidentes: accidentes (químicos); vehículo; construcción (derrumbamiento);

- Efectos deseados: cualquier (EL) %KN, cualquier (EL) %N, según lo prescrito por UIP-Adapta

Movimiento NR del cuerpo -1J010: cómo el sistema puede adaptarse a diferente: gente clasificada/usos.

-2E010 20 30 40 50 softwares de la receta:

Encargado de registro de -3E020 GPS: qué registra pudo querer ser guardado, que las zonas son importantes, los límites de dibujo entre las zonas (basadas en el uip de la situación).

Alarma interactiva de la mañana -3E060: qué sistema de Q (hace preguntas) debe pedir = emparejado con (con) el uip de u (usuario)/qué u tiene que hacer más adelante que día [el sistema pone u en el humor para las ocurrencias previstas/trabajo]

Instructor del movimiento del cuerpo -3E061:

-3E150 "Picosegundo-Zona": qué zonas son importantes, los límites de dibujo entre las zonas (basadas en el uip de la situación).

Correlador y regulador de la circunstancia de -3E151 GPS: qué zonas son importantes, los límites de dibujo entre las zonas (basadas en el uip de la situación).

Localizador de -3E180 GPS: sugiere dónde comenzar a mirar o qué necesidades de ser encontrado y cómo.

Sistemas de facturación de -3E190 GPS: qué zonas son importantes, los límites de dibujo entre las zonas (basadas en el uip de la situación).

-3E040 y canceladora del ruido de 41 teléfonos: qué sonidos ambientales pudieron semi-ser cancelados (con riesgo de deteriorar a oyente en el otro extremo de la parte de la voz natural del altavoz).

Suplemento de interior de -3E210 GPS: donde/cómo el suplemento podría ser utilizado/ser colocado.

Alternador -4E010: qué acumulación de la energía de batería de la oferta de las actividades mayor

Sistema del acceso de la entrada de la imagen -4E030: qué imágenes el sistema puede utilizar para accionar señaló las funciones (acceso).

Varita mágica -5E020:

Anillo Delayer del teléfono -3G010:

Bola que anota aislada -4G190: cómo jugar/desarrollar los nuevos "juegos".

-4G200 fruta Encapsulator: cómo ajustarse para cortar adentro manera ideal. Otros métodos para la peladura, corte, procesando, cocinando, conservando los alimentos.

Interruptor de la dislexia -5G061: cómo u (usuario) puede destetarse del software; cómo el interruptor (software del `) puede ayudar a u (usuario) - eg: las pruebas u primero - > "anota" - > analizan - > sugiere - > s/printer.

Interruptor de la lectura de la velocidad -5G070: cómo u puede destetarse del software; cómo el interruptor (software del `) puede ayudar a u - eg: las pruebas u primero - > "anota" - > analizan - > sugiere - > s/printer.

Dibujo #1:

Para Techies: Dibujo: Usuario = (+ ver: "Diagram el ~ c (computadora) del parte movible #1") =

ACCESO: Tener acceso a las estrategias de la restricción sugeridas: el DB (base de datos del `) de la última actividad del pirata informático/del bandido = emparejó con (con) = DB (base de datos del `) de sabido/del existiendo/los remedios o las trampas disponibles = las estrategias sugeridas del control del "acceso" = [las sugerencias del encargado de seguridad = K (teclado) = acceso - analizador - sistema]: el sistema analiza cualquier entrada del mgr de la seguridad durante los pasos múltiples vía los cuales el mgr del w= del interruptor (software del `) junto se inspira para las estrategias.

ANALIZADOR; CUENTA; CARRO (cartucho del software del `); EDIT; EDUC; MULTIUSOS; NR (notificador del `); Banda; Picosegundo-Zona; Q (hace preguntas); RANURADOR; CUENTA; SENSOR; ANALIZADOR DE SONIDOS; ESTADO; tds (matriz de la fecha del tiempo); T (teléfono); INCLINACIÓN; PISTA; UIP; ANALIZADOR VISUAL; VR; WA (caminata alrededor).

UIP-Adaptar y UIP-Sugerir: ver el interruptor de la sugerencia (software del `) (siendo) convertido de los archivos 2E.

Se alteran + cinco sentidos de emparejar los gustos del usuario: Sentidos: imágenes (véase "para corregir"); sonidos (véase el sa); "vibración"; disparadores del olor (véase los detalles del "analizador" del olor mezclados a través de archivos; probar (véase el dir KN de A)

+ uso del "juego": Efecto "redactor" del juego del UIP: Piden el usuario experimentar diversos efectos como sonidos y mecanografiar imágenes. La respuesta del u "se anota" e interna los efectos del juego se adapta para conseguir una respuesta más deseable de los jugadores. Los aspectos de cada juego tienen opciones "editable" múltiples, y el sistema utiliza esas preferencias del mejor jugador que empareja.

- imágenes: ver "para corregir" = las imágenes; colores; texturas de la piel o de los objetos; tamaño
- sonidos: el sistema "sintetiza" sonidos (en su memoria); el sa anota sonidos.
- "anotando": para emparejar los gustos del u: ponen al cuerpo humano "sensores" en el jugador (piel) para calibrar niveles de la reacción; u (usuario) personalmente K (teclado) en su preferencia (de la opción múltiple) de efectos.
- Qué anotó: humor" reacciones "del usuario el "anotó"/"analizado": placer; entusiasmo; pasión; miedo; relajación (entre los episodios, el tipo de rotura para el jugador, así que ellas sobre no ejercen y tire= en la golondrina de mar que juega al juego más de largo).
- Cómo el sistema utiliza las preferencias del jugador: El usuario preguntado cuál de 12 efectúa saca la más grande: pasión. Entonces cuando los encuentros apasionados ocurren en juego, se utiliza eso "corregido"/versión del "synth".
- Efectos generados usuario: los jugadores pueden programar/crean/los efectos sonoros en el juego sí mismo del expediente (mic).
- Relacionado con el dir KN (invención) de A o de B donde los juegos se venden vía las máquinas expendedoras y se adaptan a los compradores.

. "Sintetizó" la música/los sonidos alterados.

Final de ACCESS-BA = UIP

Archivo: Acceso \ CA-BAIMI

CARACTERÍSTICAS COMUNES PARA EL ANALIZADOR DEL COMPORTAMIENTO DEL ACCESO: ARCHIVO AC-BA-IMI

El "ANALIZADOR " % = sistema "analiza" (criminal/acceso relacionado) el comportamiento

características del "accessor". Los métodos incluyen "análisis" vía:
uip; "analizador"; "acceso"; frecuencias de la voz del usuario ("sa"),
eg.: detectores de mentira de la voz. Sistemas más baratos pueden buscar simplemente colmo
frecuencias que representan la tensión.
- sa: "mic" - > "analizador" (el sistema analiza la voz de la persona) - >
sistema responde según banda (control)/u del programa informático.
- Dibujo: Voz = "analizador de sonidos" ("mic" = sonido al convertidor de señal)
/M = c (computadora) = función ()/oscilador del uso
. "Coordina" entre diversas características del comportamiento (de
accessor).
- Coordinador - cuenta: Cuenta: los coordenadas/hacen juegos malabares del sistema diferente
Características/comportamientos de los archivos según "la cuenta" del "accessor" =
coordinador-importancia/coordinador/corrector; la cuenta de
influencias de la ocurrencia cómo el coordinador coordina esa ocurrencia
protocols/sw señalado w= del sistema.

El "ARTISTA" = (método en quien) las imágenes generó = los VAGOS.

Ver: Sistemas de análisis de imagen del artista. Manera en la cual imágenes
se generan/algo "se corrige" = es único como el dedo
prints= según lo determinado vía vagos. El nivel y los tipos de estrecho
el anotar en el "dibujo" es ilimitado.
- "Carácter" = "imagen": 1] Diseñó retratar "señalado"
humor. 2] Accessor= selecciona un "carácter " = que esté conectado
características diversas del with=: comportamientos; niveles de acceso;
humores.
- "Alarma de la mañana": crear las "imágenes requeridas" en "señalado"
"orden y sincronización".

"ANALIZADOR DEL COMPORTAMIENTO" EN GENERAL

+ VER EL ARCHIVO GRANDE TITULADO C:\K\BA
- El comportamiento del usuario incluye. Su: sensación, estilo, concordancia de
acciones en un cierto plazo, ritmo del movimiento, movimientos preferred, y
patrones del pensamiento (según lo "analizado" por sus palabras claves).
- "Motivador del trabajo" de la alarma" de la mañana ".

"CAMBIAR EL PROCESO DEL ACCESO" =

Los parámetros (del comportamiento) para acceder pueden ser cambiados/
"corregido" (según w5/el uip (cómo el accessor se comportó, eg.: ellos
fueron determinados ser)/que creaba del pirata informático cañizos adicionales).

- Estos parámetros cambian (gradualmente) como el uip "analiza" a accessor
las funciones (del trabajo) están cambiando por consiguiente.
+ "cuenta": Tener acceso al procedures= llegan a ser más o /are menos terminante
altered= según comportamiento del accessor's=.
- El `modifica para requisitos particulares cerca [donante mayor/poca tolerancia para la desviación de requisitos previstos del comportamiento/del acceso del usuario].

El "EDIT" = BA=UIP-Tailor determina lo que ("hospitalidad") u (usuario) (el tema) debe experimentar. Se diseña el tipo experiencia "señalada " = para caber (uip-adaptar) el accessor= vía uso de "corregir".

- H: las "imágenes "corregidas" " = tientan el hacker= en "trampa". Material obligando al pirata informático es más probable tirar de ellas adentro.
- el accessor= de la forma selecciona el material "ser corregido " = estudiado por vagos.
% de los datos "corrigieron" para el uso de la "mañana".

"JUEGO" = juegos: Cómo el usuario juega los juegos de ordenador: donde en jugador del juego lleva su carácter, como la cueva secreta o tocando la manzana más alta en el tercer árbol. Ver el "juego " = el " acceso".
--Cómo un usuario juega un juego determina el acceso: 1] sistema estudia los u movimientos vía = uip, eg.: u (usuario) prefiere el usar del grajo en juego de ajedrez, y de u pudo acentuar sus estilos el jugar por consiguiente (si acceso negado).] el acceso 2 proporcionó if/when los triunfos/pierden de u el juego (en/ dentro del número señalado de movimientos. 3] Pedazo de los u (señalados) llega el cuadrado/el punto señalados/etapa en "juego".
- "alarma de la mañana": juego del juego correctamente o ganar y desactivar alarma.

+ "COMPORTAMIENTO del GRUPO" = del cómo los accessors se comportan dentro del contexto su organización. Mayor es el nivel positivo de su "interacción" con los miembros compañeros (véase por su contraseña/ "pista") = las cuentas mejores son de los accessors. Jueces del sistema para modos del comportamiento normales (basados en la organización/el departamento/ historia o "programa" del empleado). Los sistemas grandes son representantes de sistemas "interactivos" sociológicos importantes: los acceso-vagos deben buscar a los extravagantes peligrosos (como cómo la gente intuitivo juzga otra honradez en vida real fuera de a sistema informático).

Ejemplos:
- cada contraseña se etiqueta w: precedencia; su relación con los otros empleados y grado y tipo de importancia/de proximidad a

; novedad a la compañía (piratas informáticos más probablemente a ser nuevos infiltrados). Atan a cada accessor: contraseña, su historia, y perfiles del comportamiento normales. Ver el access=score.

Qué accessor hace con lo que fue alcanzado:

¿Quién transfieren los archivos? Hace a accessor tienen rasgos ¿ése puede ser dañoso o el contrario? Los rasgos del accessor incluir el grupo y los comportamientos orientados no-grupo.

"Motivador del trabajo" de la alarma" de la mañana ": requiere a grupo "señalado" comportamiento.

"OCULTAR EL PROCESO del ACCESO" = + el pirata informático que sabe sobre "acceso-vagos" y evita su "atrapa". Qué pirata informático puede intentar el doing= y cómo el acceso puede intentar repartir con ellos de todos modos:

- el manejo libera de archivos eso que sabe fijará definitivamente apagado "nr". El pirata informático puede querer tales archivos pero estancias con archivos más seguros.
- mezcla adentro la actividad que hace que el pirata informático aparece más normal, eg.: archivos de los accesos "señalados" para la contraseña que están utilizando.
- ver la sección del espejo de la "trampa".
- éste es un área difícil, y una que requiere más cerca el análisis, y o se puede "encaminar" a la versión humana del acceso regulador para una inspección más cercana.

"INDIRECTA" =

- UIP-Adaptar: son qué contraseñas/cuando (w5) ellos debe ser entrado.
- La ayuda de accessors con (con) anota solamente un poco fuera de línea: "Incita" u para alterar su behavior= si el ba= encuentra la cuenta del accessor es incorrecto.
- "Alarma de la mañana": qué acciones el usuario requiere.

"MANIOBRA" = cómo accessor: "indica"; "se combina"; + "encamina" sí mismo a través sistema o proceso principal del acceso; funciones como orden del by= anotado "y el medir el tiempo "; "repetición".

- cada faceta del maneuvering= tiene una diversa "cuenta " = combinado más adelante con el accessor's= otras cuentas.
- los patrones del movimiento necesitaron para: "r", "dibuja " %

"FUSIÓN" = cuentas que son mergeable:

- ésos tabularon en un cierto plazo (peso preferencial de w dado a estes 3ultimo).

- un o más scores= generado vía cualquier method= se combina.
- otros accessors en "comportamiento del grupo " = es a qué accessor "marcado con etiqueta". Si los comportamientos del otro accessor son changing= cada uno el sistema de sonorización del accessor puede cambiar por consiguiente, eg.: vía el hacer un promedio de esto y o de las cuentas del otro grupo.

Misceláneo:

- el accessor material "se combina " = W5 - > cuenta
- ejemplos de cuál es mergeable. Accessor: "artista", "grupo comportamiento ", "humor", "movimiento", picosegundo-zona, "señales científicas", "sensor", "pista", "analizador visual", "uip-DB", W5 del accessor otros comportamientos.
- Manera de la cual los archivos son vagos basados merged= del on=.

"HUMOR" =

El sistema empareja sus características con la de lo que determina el comportamiento del usuario está como.

. "Indirecta": el humor creado da las señales/los "avisos" para u (usuario) a la respuesta "pregunta" (necesitado ayudar a determinar al accessor autenticidad).

. - Éste es un ejemplo de un subconjunto de "humor". Y este "humor" es a subconjunto de "" del acceso = "VAGOS", que es un subconjunto "de acceso".

- La manera de indirectas es "editable" (según "orden y la sincronización" como guía/comportamiento del accessor).

. OSCILADOR (comunicador sano saliente) = ("aviso"): Fósforos/imitadores del OSCILADOR del sistema (comunicador sano saliente) el usuario voz para solicitar la respuesta deseada (emoción/sensación el informe/hace que quieren actuar de cierta manera (la compra/ productividad del trabajo, modificación del comportamiento). Psicólogos establecido qué tipo de voz/de frecuencias sanas es el más conveniente para alcanzar el efecto deseado según: circunstancias (UIP/ Estado de ánimo del u (en un rato particular)). TDS: sonido del oscilador la modulación se pudo efectuar antes el día (U puede necesitar energizándose en la mañana temprana).

. - De la manera similar, sistema genera un "humor " = el usuario que empareja perfil del comportamiento.

. H "trampa": hacen el pirata informático para creer que son legítimos accessor vía muchos métodos incluyendo "humor", "indirecta".

. "Señalando" cuál es el mejor "humor": desarrollar el uip=db de comportamiento del accessor.

. Creando el "humor deseado": "Corregir" (los efectos la representación visual aspecto/fraseología utilizada); Ver el "oscilador" arriba.

- % del lanzamiento del olor = analizador del olor; vibración emitida = vibración analizador.

. Dibujo: Accessor (comportamiento) = c (computadora) (señalada humor generado para accessor según: comportamiento del u/debajo del acceso del ~ de las características) = PROCESO // del ACCESO de la PIEL de // del PROCESO del ACCESO del CAMBIO de W5 // ORDEN y SINCRONIZACIÓN de // del NOTIFICADOR de // de la INDIRECTA (cómo "corrigió" el material se demuestra a la CUENTA PRONTO de // // del accessor).

La "ALARMA de la MAÑANA" = la manera de la cual el usuario tiene acceso al process= desactiva la alarma de la mañana.

+ ver: "Mañana". Tiene mucha información.

. - "Introducción de la alarma de la mañana": Éste es solamente uno del muchos usos para el "acceso". Las "alarmas de la mañana" son sistemas creados para waken únicamente encima de los usuarios, y después requerirlos actuar de cierta manera para traerlos al wakefulness completo. En caso de necesidad, La "alarma de la mañana" se puede no hacer caso para entender solamente mejor naturalezas generales del "acceso".

"MOVIMIENTO" = movimiento humano sobre premisas:

. Estacionamiento fuera de horas de trabajo:

- "visual"/[del analizador movimiento]' sensor = "sigue" números de matrícula.

- los piratas informáticos pudieron parquear a otra parte y caminar a las premisas. Por lo tanto el sistema está más sospechoso cuando alguien incorpora el building= sin (sin) accionar la entrada "sensor " = significando el accessor= condujo sobre lot= del estacionamiento a través de la entrada del "sensor". El número de coches en la porción debe emparejar número de gente/de usuarios en el edificio/en sistema.

- ver KN: sistema "que sigue" a empleados paradero (en un edificio)

. Movimiento/vibración: Tuvieron acceso al "movimiento": mecanografiar los fósforos del motion= perfil del comportamiento necesario. Formar del usuario que causa la "vibración".

- "Receptor acústico del movimiento": el "sensor" "busca" el movimiento inusual (del cuerpo).

Se sigue la "ORDEN y la SINCRONIZACIÓN" = la "orden y o la sincronización" en cuál utilizó el usuario diversos programas informáticos.

"PS-ZONE" = punto del judges= de la cuenta del access= por el U.

"PREGUNTA" = "MQ". Preguntas generadas UIP:

- El sistema "incita" a "accessor" "reacciona" a las preguntas o ocurrencias.

- Ocurrencias - general: Sin el accessor del knowledge= no pudo reconocer/saber la presencia de "ocurrencia", y el or= qué la "reacción necesaria " = por el accessor es.

- Tipo ocurrencias = cualquie cambio del interruptor (software del `)/"aviso potencial" eso el accessor debe guardar su ojo hacia fuera para.

--Eg.: cualquie "imagen interactiva" creatable por "artista" del "artista"/ "corregir"; cualquie occurrence= que pueda ser by= "buscado" "búsqueda y reaccionar"; cualquie texto o "imagen" que dirijan/"hacen alusión" accessor: otros "localización" en "c" (interruptor, archivo)/la "localización física".

- "Preguntas" planteadas al "accessor":

Requieren al usuario contestar a preguntas sobre su historia, o qué y porqué tuvieron acceso al sistema previamente.

. El sistema genera las preguntas que requieren correcto (cerca de correcto) las respuestas al aumento/mantienen el acceso. Seleccionado aleatoriamente desafíos de la autentificación.

- El archivo de las aplicaciones del DB del questions= elegido al azar = entonces "busca " = "reacción correcta" (respuesta).

--Existe: tener acceso al sistema ese demuestra lo hizo qué accessor previamente.

. - Dibujo: Las preguntas vienen del sistema que estudia u (usuario) = el crear/que delinea información en la pregunta/las declaraciones true-false = que debe u responder a.

. "Motivador del trabajo" de la alarma" de la mañana ": requiere "orden y la sincronización" de trabajo de la computadora del usuario.

. Se modifican para requisitos particulares las respuestas.

"REPETICIÓN" = una de las muchas maneras del juicio si el accessor es quién demandan ser. Accesos del accessor de los archivos y o la orden adentro cuál él está alcanzada se repite normalmente.

"SEÑALES CIENTÍFICAS" = señales del cuerpo del studied= del accessor y emparejado con (con) señales anteriores del accessor.

"SENSOR" = movimiento del cuerpo: la manera u (usuario) mueve su cuerpo/objetos en "s" o a disposición

= el acceso "analiza" su uip-DB para considerar si hay un fósforo. Otro

movimientos: dibujo, dando une vuelta.

"ANALIZADOR DEL OLOR" =

"ANALIZADOR de SONIDOS" = tensión de la gente del juez de los sistemas de comando de voz levels= que baja la cuenta para: comportamiento más arriba tensionado/de mentira, puesto que esto puede significar la presencia de pirata informático.

- el sistema considera: diferencias en los niveles de tensión para voces masculinas y femeninas (la contraseña demuestra el sexo); accessors de los plazos debe encontrarse; el nivel general del accessor de tensión es w= comparado nivel de tensión en la época del acceso.

"Teléfono" =

"PISTA" =

1] Comportamiento del u supervisado para ver si su comportamiento empareja perfil de sistema de su comportamiento: uip-DB.

2] Identificación de bandidos: Similar al anticuerpo inmunológico reconocedor. Concordancias de los bandidos "analizados" - > uip-DB de bandido; la vez próxima alguien intenta acceder con (con) señalado grado de sistema común de las características (de episodios anteriores) piedras de afilar adentro en ellos. alarma tratada de forzar 3A205. El bandido está generalmente desprevenido han sido identificados por el sistema.

3] El sistema supervisa las actividades del u. Códigos (automatizados) ocultados: encajado en datos robados: más fácil "seguir" donde van estos códigos; facilita el procesamiento de la corte. monitor inteligente 2E251

[El sistema "sigue " = " analiza" el comportamiento del u] = los vagos (analizador del comportamiento del `) = las conclusiones (Cuenta) utilizado por ""/UIP-DB del analizador.

. Misceláneo:

- información usada para supervisar y para determinar quién es el usuario y W5 están haciendo.

. "Pista": El sistema identifica vía una lista de tercera persona de gente potencialmente mala. Esta lista incluye a los que sean sospechado, procesado o condenado por: cualquie crimen, cortando, engaño, etc. El sistema principal de los "acceso-vagos" puede también concentrar información sobre accessors a esta lista de la tercer persona. Este sistema es absolutamente ciertamente ilegal en fecha este tiempo.

"TRANSMISOR" = dispositivo magnético

"ANALIZADOR VISUAL" = huellas digitales; cara; cuadros.

"UIP" = aprendiendo sobre Accessor: El Info aprendió sobre usuario se alimenta en el UIP.
Los datos existentes del UIP pueden ser: consideraba más o menos importante que
el análisis del BVA (en aquel momento de los u que interconectan) según
Banda. El sistema puede ajustar a los humores que fluctúan del u. También ver:
"Pregunta"; vagos; sa; uip=db; "pista".
- los resultados del comportamiento "analizado" se comparan a una referencia
nivel (para la función aplicable/uip del access=ba). Eg.: Palmadita de los E.E.U.U.
5461231

"UIP-DB" = "cuenta": "busca" para qué needed= de los elementos
el compilation= entonces organiza datos en el form= usable para UIP-Adapta.
--Notas: Búsquedas: vía los "cuestionarios", "vagos", "pista".
Organización de los archivos del DB: la información recogida sobre usuario puede ser
insertado en uno o los archivos múltiples según los cuales los archivos pueden
utilizar la información. Entonces UIP-Adaptar las búsquedas que los archivos ellos necesitan
para mejorar a sastre. O más trabajo se puede requerir para UIP-Adapta a
encontrar la información necesaria. Ejemplo: "Tuvieron acceso al DB de la cuenta de los vagos" -
compila datos para demostrar cómo el accessor es interno del rated= si el accessor
el good= cambiante de las estancias del grado uip-adapta/el "regulador del acceso"
acceso del permiso.

- si el sistema determina el uso de este usuario de un sofisticado
el sistema electrónico emparejó su perfil del comportamiento normal, cerca
utilización de ciertos archivos (confidenciales) o de funciones y no
otros.
- ver pregunta" de los vagos de los accesos la ".

. El usuario de la gente sabe: u (usuario) lee u oye las voces/información =
entonces u responde por consiguiente = y si u (usuario) tiene correctamente acceso.
Ejemplos:
- el _User debe reconocer voces señaladas (tales como su compañero de trabajo o madre) y responder solamente
a sus comandos. Después
tales voces, preguntas se deben contestar a la satisfacción como si
critiqued por la voz dicha. Los piratas informáticos pueden no saber
cuál es la voz correcta, ni ata la voz con el necesario
respuestas. Estas voces pueden no tener etiquetas tales como jefe o esposa.
--u oye tres voces, y uno es su esposa/compañero de trabajo = u
selecciona la voz familiar y el acceso continúa. La voz induce u
para trabajar difícilmente o tener mejor moral ()/induce del tgh humor, eg.:

dice el "trabajo más difícilmente", "le consiguen", "hacen porciones de la miel del dinero...", "usted vago perezoso".

--la "orden y la sincronización" de las acciones de tal gente necesitan ser hechas correctamente.

- el _accessor no pudo saber lo que le preguntará el sistema. El sistema puede tener entrada recibida de otras (conociendo al accessor) sin (sin) el accessor conocimiento (sobre su entrada). Tal información no pudo ser puesto a disposición cualquier persona excepto bajo circunstancias señaladas tal como tiempo (w5). Ver la "piel".

"UIP-TAILOR" = manera del producto del uso/de los controles de acceso: comportamiento correcto no solamente el access= pero él de los permisos puede controlar productos también. Esto es una combinación de los campos del acceso y el in= de los resultados del R. uip-adapta ajusta al comportamiento del accessor.

"W5" = acceso en el momento adecuado: temperatura señalada, tiempo, ciertas noticias en medios de comunicación, cuando otro u "señalado" (usuario) también tiene "acceso".

Final del acceso - características del analizador del comportamiento

Archivo: Acceso \ CA-VAGOS

Archivo: ANALIZADOR DE ACCESS-BEAHAVIOR

Información repetidor: Cualesquiera (fijar de señales) "analizados" por los "VAGOS" de qué vagos llegan una conclusión pueden alcanzar el "acceso". La conclusión de vagos actúa como tipo de puerta - uno debe hacer algo o actuar de cierta manera para tener el "acceso". Esto es un área muy amplia.

- Ejemplo: Los "VAGOS" determinan si u/el espectador tenía comportamiento bueno/indeseable (parámetros de w/in de los vagos del sistema de u) - > llano del acceso produjo fósforos por consiguiente. Eg.: cabritos de los límites que ven TV excesiva (violencia).

Str de la búsqueda de la patente (estrategia). Extracto 1974-7/96: (contraseña o acceso) no accesso y (comportamiento o personalit).

- str: (comportamiento o psych o personalit) y (software o computadora o acceso o accesos o acceso o contraseña o seguridad o protector)
- Patentes de los E.E.U.U.: sistema 5250946 de la mejora del comportamiento 4854877 5343871 5465729 5470235-Child 4741320 4013294= " juego " 5469506 4533244.
- Estrategia de búsqueda de la palmadita: (comportamiento o psycholog) y (acceso o accesos o acceso o contraseña) y (software o programa o computadora o eléctrico)

Los sistemas existentes usados para analizar el perfil psicologico de una persona se pueden utilizar, requiriendo respuestas semejantemente correctas.

Cualesquiera "señalaron" las señales generadas por el comportamiento del accessor = ""/nr/pista del acceso. La manera de la cual se acciona cualquier contraseña = las contraseñas necesarias = se puede generar o alterar según: UIP o VAGOS.

OTRO: Cada accessor tiene cañizos de diferenciación al pass= y accede. Las contraseñas necesarias (uip-se adaptan) a cada accessor= que ayuda mejor al accessor recuerdan contraseñas.

. - "Contraseñas cambiantes": Las contraseñas necesarias pueden necesitar ser alterado ("corregido") cada vez de diversa manera dentro de los perfiles del accessor = de vagos.

Debajo está la versión alterada de la sección de los "VAGOS" de IMI24. Adaptado al acceso = a los VAGOS:

Introducción: la mayor parte de los VAGOS originales de IMI20 fueron movidos a la sección de las piezas de los vagos de los accesos.

Las funciones +might del "acceso" del producto (levemente) se alteren según los u determinados (vía: Comportamiento de BVA/UIP).

- La calidad de sonido Del OSCILADOR (pudo ser) es así que excelente/similar en características vocales a u/listener que suena como la persona verdadera que habla al U. Los sonidos también tienen tal color, ellos: hacer que los oídos del u sienten como pueden visualizar el altavoz/la función (si hay o no es un S).

--El sistema "analiza" el tipo (sonido, del comportamiento) persona apuntada los archivos empareja mejor = entonces comunica w ellos para crear el impacto psicologico máximo (ventas, "humor") según lo determinado vía ""/K/banda del analizador. D: mic = bva/uip = c = oscilador.

. Para los techies: D: Organismo que es estudiado (ser humano, animal, otro) = este ~ del sistema de N (VAGOS) C =

TENER ACCESO (el sistema sobre el "acceso" supervisa el organismo (2E251)); ANALIZADOR ();

AP=Access (% científico, % psicologico, % médico, % de negocio de los proyectos de investigación); CEREBRO (); C (); CÁMARA (2E251 Monitor= inteligente " pista"); CARRO (interruptor, DB, carro de diferenciación para el tipo organismo o ap); EDUC (); GPS (); K (); M (DB, cerebro); MIC (analizador de sonidos); MES (); RATÓN (); MQ (); MULTIUSOS ("accessors de diferenciación" (u), organismos que son estudiados); NR (w5 requirió parámetros tiene/haber sido encontrado (vía "cuenta" = "analizador"));

OSCILADOR (); Banda (); Picosegundo (); Q (); R (); CUENTA (); SENSOR (movimiento); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); SYNTH ("analiza" para los sonidos organismos de esa mejores influencia (por pr/u/k)); TDS (); T (); U (investigador/organismo que es estudiado); UIP (uip del organismo/u (estudios/objetividad de las pruebas de investigadores)); UQ (); ANALIZADOR VISUAL (); VR (); WA (uso al aire libre).

- Subpartes: BA-UIP; BA-BVA; Vago-Etiqueta: las etiquetas (entonces pistas) señalaron a gente según ciertos perfiles.

Otro: "Ranurador": localiza el then= recupera el data= necesario para esta partición. Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado. Ver: "Tener acceso", "corrigen". "Bill"

. Dibujo #1: Mejora en patente de los E.E.U.U.: "Accessor" = [5377258 método y aparato para un sistema de dirección del comportamiento automatizado e interactivo: "trampa"; "indirecta"; u recibe los mensajes de motivación (oscilador) para mejorar patrones del comportamiento; incluye DB del cliente (uip); tensión "analizador" de la voz; respuesta del cliente requerida] =

= C =

= el ANALIZADOR de // del ACCESO () () // EDIT = "búsqueda y reacciona" = (el sistema corrige hacia fuera menos entrada necesaria de: la determinación si el accessor es) // legítimo NR (penaliza u cuando u actúa mal (comportamiento indeseable) = la descarga eléctrica al uso del sistema N del cuerpo/de la "hospitalidad" es limitada (véase KN)) Picosegundo-Zona de la banda de // del OSCILADOR de // (penaliza vía sonidos = synth ásperos) () // (u entrenó a donde no está necesaria su caja fuerte/u para el trabajo, eg.: dirigirse, sitio del café, sitio de reconstrucción, PISTA de // TDS (w5 u comportado - > acumula UIP-DB) // del ESTADO de // Q (construir uip-DB = necesitado por el sistema entrenar u) a la CUENTA de // R () // (como de bien el comportamiento de los u (usuario) está alterando) // del sitio) de TV (del comportamiento del u) () // UIP ().

. []/"De la colección del UIP = del DB pregunta" para determinar la autenticidad =

Ejemplo de la fuente que "analiza" comportamiento: ¿"Quién usted le piensa es? ", un CD-ROM publicó por Harper Collins interactivo. También leer su versión y bibliografía del libro, y hablar con los reveladores de este y los libros relacionados (según lo encontrado en la sección del tema de la Biblioteca del Congreso o de la impresión de Bowker los "libros en") para el tipo formatos dependieron de cada uso de KN.

+ "TELECONTROL": La manera del uso del usuario del dispositivo de control "alejado" es un patrón dentro de el cual las caídas o de "señalaron" patrones del comportamiento. El patrón del movimiento pudo ser "educado" al usuario, y o los "vagos" pueden coger en los movimientos únicos de los u (bastante), como analizar el movimiento de una persona para generar su firma.

+ utilización correcta del "telecontrol" - > "contraseña". Ver los detalles de la parte "alejada".

. Ejemplos:

- "Inclinación" (palanca de mando); "Danza". Interruptor del laser, chapaleta, exhibición proyectada interactiva, ratón teledirigido, etc.
- Cada apretón genera señales al dispositivo de control. Eg.: 4G010
- Ver 3C-290 animoso: Con cómo el objeto se juega.
- Activar, desactivar cualquier dispositivo electrónico y o controlar sus operaciones sin el tacto de la unidad principal (botones de la unidad).

Cerradura interactiva: El diálogo correcto activa la cerradura. Usos: los estudiantes pasan la prueba antes de poder activar sistemas deseados como las TV y las estereofonias; información diversa y cambiante se puede requerir del acceso que busca de la gente especial en premisas. 3A-891-042005

Pluma mágica del aire: Los movimientos de la pluma alejada se transmiten a la computadora. Hacer los movimientos en el aire o en cualquier superficie plana. Cada diverso movimiento crea una diversa señal. (Paladio) 3A-790-042004

- Cámara "sensor": Cambia en se ve qué puede representar cambios en comportamiento u otras (necesitado/probablemente) ocurrencias.

% del sensor ligero: Los cambios de los sentidos en luz midieron cerca: presencia o carencia de la luz, o más exacto la cantidad de luz; frecuencia de la luz, eg.: color; duración y o tiempo en los cuales la luz fue generada.

Sensor de la respiración: Soplar su respiración en el sensor en combinaciones del deseo. Trabajos con el sensor del olor, no permitiendo eg.: respiraciones del ajo o del alcohol; o puede ser activado solamente si el sistema puede distinguir entre diversa gente, eg.: masticación de cierto tipo de goma o de alimento. Jueces también para la presión de la boca y o de la velocidad del viento.

Interruptor del laser: Activar cualquier función solamente bloqueando la luz laser del interruptor con su dedo. 3A-751-042003 5A-460-042004 5A-710

El término - los medios están para los archivos o las funciones deseadas.

Debajo está la versión alterada de la sección de los "VAGOS" de IMI&10. Adaptado al acceso = a los VAGOS:

D2: "Analiza" = W5 de las acciones del Accessor =

1] analizador del comportamiento 4A09: (producto futuro) juzga la región [`GPS] de altavoz, y quizá la estatura social - basada todo en la opción de la palabra, el acento (sa), el etc. Puede buscar todas las preguntas posibles al comportamiento y al tipo psicología de altavoz actual capaz de ser hecho por el oído humano (como adentro sobre la conversación de "T").

2] sonidos 5A1090 y músicas y pusieron en palabras palabras y la criatura suena el "analizador": observa cambios en el comportamiento según tal que es emitido por el "accessor" y o causado por qué accessor está haciendo (sistema (cualesquiera)). "Sa".

analizador del olor 3] 5A1100: observa cambios en comportamiento sobre emisiones de cualquier olor (humo, flores, olores del sexo, etc) o de la materia que es estudiada.

analizador de la vista 4] 5A1110: qué "accessor" ve y cómo ellos responde a las visiones de exhibiciones, los cuadros. El via=" creado "de las "imágenes corrige".

5] Manera de cambios en el comportamiento = el acceso del teclado del accessor:

Software de la identificación de la actividad A1-320: dedos de los sentidos en el teclado y señales si usted no está escribiendo. Detecta cuando usted está careciendo en la creatividad, claridad, confianza por la manera de los ritmos dominantes del movimiento. Mezcla con la máquina de la terapia, máquina del taro.

. - "Inclinación": controla las funciones del sistema. Si "inclinación" no usada (correctamente) lo nr también.

6] VIGILANTE de la EMOCIÓN A3-13: le dice cómo es unrelaxed usted está por cómo: el producto (bola, tapa, muñeca, moneda, etc) hace girar en envase, en la CRT. Puede hacer salir las palabras, sugerencias, lemas.

Comprueba p cerca: u que toca un cojín que mide a su temp; detección de la tensión en voz (el producto existe) siempre que hable (y por lo tanto funciona siempre que la máquina encendido).

7] ANALIZADOR del CURSIVO A2-170: el interruptor estudia lo que escribe p sobre la exhibición especial ("S") o el papel (entonces leído vía lector óptico).

el 8%] Este aspecto repite la otra información:

ESCALADOR del COMPORTAMIENTO A2-610: como la "unidad central" que detecta si la persona está mintiendo por la tensión... en voz, detectar cómo:

a] sexual otra persona siente. Incluso intentarla en se para ver que trabaja. Saber si usted persigue otro por una fecha caliente.

b] confiable y o constante y u organizado y o confiado y o capacidad de seguir el plomo de o

9] R132-1 comportamiento - analizador médico del síntoma: El sistema correlaciona a paciente del comportamiento con sus síntomas médicos. El gráfico del paciente para cambiar el estado emocional se empareja con los gráficos del síntoma del cuerpo, dando a investigadores análisis necesario adicional. La invención es la combinación del software de datos.

10] R132-1-5 retroacción biológica - analizador de la función del cuerpo: El usuario puede mirar sus analizadores médicos y ver cómo son/realizaban (psicologicamente) a interno que el usuario se familiariza con mejor, interna a usuario es (intuitivo) psych mejor capaz ellos mismos para arriba de la manera deseable. Uso con el equipo que se divierte. Versión portable con la transmisión sin hilos. También puede desarrollar la base de datos del perfil físico del usuario.

Notas para el diagrama D2 sobre piezas: Esto se centra sobre todo en el tipo de accessor del analyzes= del access-ba= del comportamiento como exhibiendo (en respuesta a cualquie stimuli= creado por el sistema). La persona o la otra entidad mencionada es el "accessor". Las funciones deseadas del accessor son qué es controlada por el acceso. Estas piezas fueron copiadas y alteradas de IMI&9 en 9.96. Ver la descripción completa de estas partes en los VAGOS de IMI&.

Acceso = huella digital: Lector de huella digital A1-290: Analiza el comportamiento de una persona por su huella digital. También empareja pares con las huellas digitales compatibles. Relacionado con los sistemas existentes de "C" basados en horóscopo, tipo de sangre.

- fósforo del dedo (ing): el servicio de la datación que emparejaba tipos del comportamiento se asoció a la impresión genética del dedo. Fósforo genético del dedo (ing)

Si la seguridad carece los fondos, pueden fingir tener tal analizador de comportamiento del pirata informático dando hacia fuera a usuarios falsos de las señales [todas], eg.: de vez en cuando haciendo preguntas señaladas, según el comportamiento del usuario; aunque no sea tal información [siempre] [completamente] analizado.

EXTREMO AC-BA

Archivo: Acceso \ CA-Características

CARACTERÍSTICAS del ACCESO - archivo: CA-Características

Ejemplos para las características del acceso organizadas por categoría.

"TENER ACCESO AL REGULADOR" = "al regulador de la puerta del Access'" se notifica sobre el estado bueno o inusual de las funciones de cualquier accessor. La forma de notificación está vía "notificador", eg.: una señal alerta. De gente o de sistemas múltiples se puede notificar vía uno de modos múltiples. Qué decide al tipo acceso permitido. Éste puede ser algoritmo automático de a (bastante) y o el oficial humano a que (las ayudas) "designado" el nivel de acceso permitió. "La función del regulador del acceso" se sentó o con el punto de la entrada (donde está o se puede dar o negar el acceso).

. - Tener acceso al regulador puede ser: empleado (del mayor); protector de seguridad (trabajos sobre la computadora y manera física de la entrada al edificio o al sistema); policía; sistema o empleado de la inteligencia del gobierno; entidad del anti-pirata informático; uno quién controla el "seguimiento" del sistema (contra piratas informáticos).

- Dibujo del modo automático (diagrama): traba todos los/parte archivos/sistema al usuario (multi) "señalado"; disparadores "nr" - > regulador del acceso (del ser humano).

- Dibujo: Accessor - > puerta de accesos (regulador de los accesos = k/analizador "cuenta" (de los vagos)) = sistema electrónico que puede ser alcanzado.

. Cheques de sistema cómo es bueno es sí mismo: Access=BA: regulador de los analyzes=access porque: puede ser fraudulento/disfuncional un cribador pobre de los piratas informáticos/que causan los problemas excesivos para los accessors legítimos.

- los VAGOS analizan el access=ba de la cuenta consiguen en: piratas informáticos de cogida; siendo incómodo para los accessors legítimos.

"ACCESSOR" = Accessor. Uno quién intenta acceder.

- Usuario legítimo con el privilegio para el sistema de acceso; o el contrario puede ser un criminal, a saber pirata informático de computadora.

. Usuario: Cualquier persona que intenta utilizar una función o una característica del dispositivo o del sistema (electrónico). Ver la biblioteca y patentar el literatureon: encripción, contraseñas, control de seguridad (de los sistemas del EL). Este cualquier persona puede ser:

. Persona: Uno con la separación requerida de la seguridad o del uso; "Bill": uno quién tiene línea de crédito; empleado; amigo; familia (sobre cierta edad); uno quién ha ganado créditos del uso (vía "juego" o "cuenta"); dueño del sistema.

- Con/que carece de la persona habilidad/el entrenamiento/la contraseña necesarios puede (inadvertidamente) (no) estropear, incluyendo: uso del equipamiento médico, de la otra maquinaria costosa o peligrosa (en laboratorios químicos), dañando otros resultados de la prueba de la investigación.

. Animal: Guardando animales adentro y o hacia fuera (en las horas "señaladas"). Eg.: los animales del entrenamiento a comportarse en cierto by= de las maneras que tiene vagos determinan el behavior= deseado y si so= permitiendo el acceso. Ver: Animal de KN "que sigue" y "que analiza" sistemas; sistemas a motivar y o para controlar los comportamientos del organismo.

. Otro sistema electrónico: "Computadora" en WWW; "M". Un sistema o un KN utilizado para acceder. El otro sistema se puede diseñar para trabajar conjuntamente con otro sistema a el cual requiera procedimientos de acceso para que ellos "obren recíprocamente", eg.: computadoras en una red.

. Pirata informático: son indeseadas, pero pueden intentar disfrazar a uno mismo como usuario legítimo. Espías: pueden buscar la información sensible o confidencial. Su uso pudo causar mayor desgaste y rasgar en sistema. Uno quién intenta sabotear: el sistema sí mismo, otro sistema ató al sistema que intentan cortar, o a sabotear algo o alguien no atado al sistema pero puede ser atacado después de conseguir algo (información o función) de sistema cortado. Es una persona que es o debe incarcerated. Alguien que presenta como algún otro; por lo tanto el acceso "analizador" del sistema necesita ser /cautious/meticuloso/detallado muy buenos en sus requisitos del procedimiento de acceso. Otro sistema se puede utilizar para cortar.

- Cualquier persona que no puede correctamente (con referencia a) crea contraseña es probablemente un hacker= por lo tanto tratado probablemente como uno. Los sistemas pueden considerar permitir que el accessor pruebe posteriormente no sean pirata informático vía la generación de contraseñas correctas.

. El "acceso = los VAGOS" identifica no sólo piratas informáticos pero (semejantemente) también cualquier tipo "señalado" de: - empleados incompetentes/mentalmente - accessors enfermos de /legitimate de la gente/de los terroristas que (pudo ser el preguntarse demasiado curioso más allá de sus "localizaciones "señaladas"" en el sistema)/regulador del acceso ("pistas" W5 que monitors= castiga), puesto que no puede ser confiado en siempre tampoco.

- Determina tal tipo accessors basados en su: el funcionamiento o el trabajo resulta "cuenta"; errores que él hace; comportamiento sicopático; búsquedas de palabra clave.

Dibujo #1: El Accessor = utilizar/"/"del control del acceso que busca/"del programa corrige" el ~ C: Funciones de acceso: CUENTA de // de las SEÑALES de // del ANALIZADOR de // del ARTISTA () () de // del SENSOR () de // de las LLAVES () de // del SENSOR () de // de la FUSIÓN () de // del MOVIMIENTO () de // de la MANIOBRA () de la REPETICIÓN LIGERA INFRARROJA DEL COMPORTAMIENTO de // PS-ZONE () // () () de // SMELLANALYZER () // de SONIDOS del ANALIZADOR () de // del teléfono () // del TRANSMISOR () de //VISUAL del ANALIZADOR () de // W5 () // del CAMBIO del ACCESO del PROCESO () de // HIDEACCESS del PROCESO () de // de la INDIRECTA () de // del NOTIFICADOR () de // de la ORDEN CIENTÍFICA y de la SINCRONIZACIÓN ()/del AVISO () ().

Dibujo #2: El Accessor = utilizar/"/"del control del acceso que busca/"del programa corrige" el ~ C: CUENTA (); CARRO (recuperar el Info del carro); EDIT (); EDUC (); MULTIUSOS (); NR (); OSCILADOR (); Banda (); Picosegundo-Zona (); Q (); R (); RANURADOR (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); TDS (); T (); PISTA (); UIP (); ANALIZADOR VISUAL (); VR (); WA ().

"ARTISTA" = método en el cual las imágenes generaron el permiso "acceso". + ver la sección principal del "artista", especialmente él es subdivisión del "acceso".

. alarma de la inclinación 3D-010: Alarma de la inclinación en la posición correcta a desactivar. Los ángulos requeridos pueden que cambiar diario, requiriendo a usuario descubrir que la posición correcta mirando la exhibición opcional que demuestra el ángulo a el cual el dispositivo necesita estar desactivar.

- Usos: desactivar las alarmas de la mañana, las alarmas de ladrón, la entrada del aumento, o la cerradura o abrir todo lo demás prácticos.

- Dibujo: alarma = [activador/deactivator] = "inclinación" - para Techies: "Tener acceso" (la falta de desactivar la alarma/gira sistemas correctamente - > personal de seguridad de las alarmas) a la cerradura del laser de .6.96-Like 5A480, ambas requieren movimientos señalados.

- jugar la palanca de mando del "juego" (inclinación) para ganar el juego, por lo tanto el aumento el "acceso" o la otra función deseada.

+ requirió movimientos: Generación de la trayectoria/del algoritmo/de la imagen de acciones. Eg.: pueden ser esas u hecho en una cierta tarea anterior dentro del parámetro estrecho del tiempo, eg.: cómo controlaron un vehículo; palanca de mando anterior del "juego" que jugaron; replegando el movimiento (de la palanca de mando) hecho por el carácter visto en "S" (cerca).

--si las acciones no se hacen ni se repiten, el accessor puede generar el cuadro/la "imagen" de a (mudanza) del panorama. O, simplemente k /generating que el interruptor (software) cifra para el panorama en la "orden correcta &timing". Estos códigos mencionados son ésos generados después del accessor vallaron correctamente los obstáculos al acceso.

- estrategia de búsqueda de la palmadita: (inclinación) y (la contraseña o activa o acceso).

. R45 "verificación de firma dinámica": Escribir en su contraseña. El sistema identifica el estilo del cursivo del usuario también. [Communication Intelligence Corp, secoya apuntala, CA/Riley que el diseño se asocia, San Mateo, CA 4.94 picosegundos]

. Para Techies: ACCESO: (también permite el acceso con uno o más (adicionales) de following^: analizador visual (cara, huella digital del usuario), otros modos del" acceso ", (en la porción de la golondrina de mar como barreras adicionales de la prueba a la entrada)); ARTISTA: (el analizador del comportamiento estudia las imágenes hechas); CÁMARA: (); CARRO: (); K: (aguja; r); MFH: (base de datos para los analizadores visuales y del comportamiento); MULTIUSOS: (); NOTIFICADOR: (estado, cuenta, alarmas cuando acceso negado); OSCILADOR: (); Banda: (); IMPRESORA: (); Q: (); S: (); CUENTA: (tds); UIP: ()

acceso del "artista 4C210": Duplica el acceso de la entrada de la imagen 4E030, pero esto es más viejo KN #, por lo tanto guardado para la prioridad date.<1 (el aspecto del análisis de la firma es 1, excluye cuadros), 3 o 4>User deben dibujar electrónicamente el cuadro necesario para desactivar la alarma; o el cuadro del drenaje sobre el papel y tiene cheque del explorador si la imagen está cerca de bastantes al cuadro necesario (la máquina es el juez final) - exhibición puede demostrar el cuadro necesario para ser creado--el juez del sistema compensa diferencias del texto necesario y realmente sometido (dado por el ser humano). --muy similar a 4E030-may ser

cualquier texto (firma) puede ser dado por la persona, sistema apenas lo analiza para: complejidad; y o como de bien el cerebro está alerta (usando la base de datos con el analizador psicologico), etc.

- jueces del sistema para uip (análisis de la caligrafía) = el "analizar" (analizador visual del `) identidad-similar y compatible con "la invención de la cerradura de los sonidos" en el directorio de C, cerradura 4C190Smell. Invención existente que analiza huellas digitales/el diafragma del ojo para el "acceso"

. - patentabilidad?: el análisis de la firma por la computadora existe, análisis del thumbprint

. [O-Sistema exhibe una imagen, u debe dibujar tan de cerca como sea posible. Los ajustes I dentro de los parámetros correctos, sistemas analizan a usuario están muy bien físicamente. Eg.: están en espacio, y se juzga la privación del oxígeno. O cuadro bastante rápido - KN del drenaje, dentro de cierto patrón del tiempo. --para los conductores borrachos. Si es borracho, el usuario no puede mecanografiar la combinación rápidamente bastante para entrar en el coche.

- Arriba (para esta subdivisión) sobre todo de la marca Rossi marcha 1995.703-739-0220.]

. Dibujo: Los avisos de los sistemas u = u responden (escribe/dibuja a "artista") cojín = analizador = acceso =sensitive.

. Elementos cambiables de la contraseña. "Orden y sincronización" de: generación de la imagen. Las funciones correctas del "artista" desactivan la "alarma de la mañana".

"CAMBIAR LAS CONTRASEÑAS" = + para la seguridad agregada, sistema requiere las contraseñas de diferenciación para el usuario. Estas contraseñas nuevamente necesarias son las que el accessor sabe o puede para conjeturar, pero difíciles para que los piratas informáticos determinen. El subconjunto de "genera contraseñas".

- Valor en contraseñas cambiantes: u puede no forzarse para cambiar su contraseña oportunamente; guarda hacia fuera: los piratas informáticos, los que pudieron haber copiado o las contraseñas ilegítimo de otra manera ganadas, los usuarios que han expirado o su excedido "acceso" privilegian; hace que los accessors aprecian más alto: necesidad de la seguridad, valor en el acceso.

--. Pueden requerir a accessor sean más en sus dedos del pie/alarma/mantenido hasta la fecha (en negocio o el sistema) puesto que los cambios en contraseñas se pueden relacionar con qué y cómo y el accessor w5 hace su trabajo - por lo tanto las contraseñas nuevamente generadas puede ser uip-adapta relacionado.

- Métodos de cambio del acceso según cuaesquiera (al azar/"señalado") criterios, haciendo cañizos adicionales, eg.: si una persona ilícita ganaron la contraseña. Alterando respuestas a las preguntas de los accesos basadas en señal cuando tales alteraciones deben ser hechas. - ""/Señal de la indirecta determina cómo las contraseñas deben ser alteradas. Eg.: 1] si u recibe la llamada del teléfono (de la máquina) que indica la palabra "Apple" = u (usuario) sabe que la versión #35 de la variación de la contraseña está utilizada hasta = después tal llamada entrante del teléfono. 2] uip generaron las señales basadas encendido: qué u hizo anterior, su historia/manías/qué u debe saber basó en su trabajo. Si la declaración está correcta/de cierto asunto señalado variación de la contraseña es válida.

- Otras señales: día o semana o mes; tiempo (lectura da alta temperatura de ayer); cotización común para la compañía particular; mecanografiar la música jugada (estar atenta la segunda palabra en la canción (que podría

incluso ser una de contraseñas necesarias)); + las entradas del usuario de la palmadita 5442342 perjudican las respuestas basadas en señales, eg.: días de semana. 8.95 La palmadita de Hughes concedió.

- Patentes: código de acceso de uno mismo-modificación 5365587 para alterar capacidades.

+ camuflando al accessor de las contraseñas inscrito/cómo el sistema altera contraseñas: - Dibujo: Cómo u/sys = los cambios "corrige" contraseñas entradas.

. Ver "para corregir": cualquier texto/señal introdujo (kn, "artista", contraseña) en sistema se puede alterar según lo "señalado". Ejemplos:

- invertir la firma o las imágenes dibujadas. Ver el "access=artist".

- Alterando respuestas mecanografiadas o habladas: "corregir" - invertir la orden/la "orden y la sincronización".

- secciones del salto: primero/dígitos/palabras/secciones medios/pasados.

- hablar en diverso tono = "va" - utilizar el "synth" para alterar entrado sonido-responden en diversas idiomas (con diverso significado, o (cerca) la traducción idéntica).

- Combinación/orden alterada. Eg.: los cambios mecanografiaron contraseña mientras que substituían las luces que destellaban para el sonido inaudible, y tiempo de espera de los dobles entre la contraseña que mecanografiaba y el proceso touchless del acceso.

- Huella digital de diversos dedos/gente. Uno o la gente múltiple incorpora sus impresiones/otras imágenes en la alteración de la "orden &timing".

. Alteración de varias fases - desmodulador: el hw del sistema (hardware) o el interruptor (automáticamente) altera contraseñas entradas después de entrada. Contraseña solamente eficaz después de que esté alterado según lo señalado (dentro del tiempo señalado/w5):

.

- Hace más difícilmente para ésos sin (sin) este desmodulador (sistema de acceso de la posición remota). - La alteración hizo complexicated: contraseñas de cada u revueltas diferentemente; + el password= entró en sys/k= aparece en s/printer/etc= como siendo diferente ("corregido") de qué fue entrada. Propósito: espectadores del tonto/piratas informáticos (quién ven la historia de las actividades del accessor es decir qué contraseñas incorporaron).

- alterado diferentemente en diversas circunstancias (w5 de la entrada de la contraseña): reduce al mínimo la capacidad para que el pirata informático consiga el código para cómo la contraseña fue alterada. Alteración múltiple del paso: El sistema altera, después re-altera números de la contraseña de épocas antes de proceso de alteración que concluye.

. - Tener acceso necesario para cambiar o para hacer cualquier cosa. Eg.: la contraseña "corrige": El modo de la alteración tiene barreras a tener acceso de piratas informáticos, eg.: no puede tener acceso de la posición remota; ha reducido al mínimo puntos del acceso de dondequiera. Presencia de alterator ocultada.

- Estrategia de búsqueda de la palmadita - disco ~6/96 del babero de USPTO: ((el cambio o el cambio o altera) near9 (acceso o accesos o acceso o contraseña o verif)) y (computadora o eléctrico o software) no el alternativa- Usuario debe resolver uno o más los criterios (creativos) de diferenciación antes del acceso. Cada los criterios

pueden cambiar, eg.: está siendo el requisito/la duración de la actividad de los criterios/que u de varios debe resolver que los criterios/ritmo en los cuales se cumplen los criterios. De los criterios puede ser el factor que controla para otros criterios.

- "Corregir": las señales del u pueden necesitar alterar según lo "señalado". El tal corregir puede ser sistema o "carro" de w/in (llevado por User (como llave)). + causas del cambio en contraseñas necesarias: los "vagos" "anotan" el comportamiento del accessor (durante la sesión alcanzada) como cayendo (de sus) patrones típicos del uso. El sistema "incita" a accessor durante esto/más adelante el procedimiento de acceso para la contraseña de diferenciación.

- "Acceso" = "analizador visual": necesitar cambiar el aspecto "señalado" de la imagen. Eg.: la tercera línea de la izquierda del dedo índice derecho necesita ser borrada o "ser corregida de otra manera": para alcanzar la función 95thdesired.

. "Tener acceso al regulador" o el accessor legítimo puede alterar" contraseñas necesarias" para sí mismos u otros usuarios. Las limitaciones pueden incluir: El Accessor no puede alterar las contraseñas para esos su mayor (privilegios de acceso de w/higher); otros accessors pueden eliminar el cambio inicial de la contraseña vía: las contraseñas más de gran alcance adicionales /after "señalaron" el plazo u otros criterios.

. "Alarma de la mañana": diversas tareas requirieron cada (parte de) day=make él ambos más desafiadores/uip-adaptado a las necesidades o a la situación de usuario.

"GENERAR LAS CONTRASEÑAS" = los sistemas genera las instrucciones/tipo indirectas de la contraseña/de acceso. Ver las "contraseñas del cambio".

- el sistema estudia uip-DB/comportamiento (ba) y da la contraseña recordada más fácilmente y difícil para que otros conjeturen.

--ejemplos: "maniobra": las caminatas de u de la "ruta" de su oficina privada al punto de acceso se deben rediseñar por u para acceder: a] "" de la localización puede cambiar, por lo tanto el sistema "sigue" u (donde él está nunca (en el edificio)).

- Acariciar a 5398285 contraseñas de generación usando la criptografía de llave pública.

. Uno o las fuentes múltiples genera contraseña: Si cualquier un sistema /person es incorrecto/incooperativo = acceso negado. La orden en la cual los partidos cooperan puede ser esencial. Opción: el efecto que cada fuente tiene en la generación de la contraseña es geométrico, eg.: pone una torcedura/altera/"la corrige"/"banda re-" antes o después qué fuentes entrar = crear contraseña. Las cosas que causan "contraseña del cambio" se pueden también utilizar "generan contraseñas".

- Tamaño de la contraseña que genera los dispositivos: 1] pudo ser bastante grande para no escapar la detección por los protectores y los exploradores de seguridad de la entrada del edificio. 2] bastante pequeño u pueden ocultarlo tan de otros convenientes robarlo.

- Dibujo: accessor = analizador del ~ de la cuenta del ~ del uip = ~ C. del acceso.

- Destructibility de la contraseña que genera el dispositivo: desmontar difícil/sobre desmontar inoperable diseñada después de eso. Razones: el cortar/que desmonta de los límites para el hurto o el estudio de piezas. "NR" activado por la destrucción.

- el UIP/los VAGOS = utilizó/to= "analizado" "genera contraseña" (los cambios).

+ el sistema de las contraseñas genera (generalmente) fácil para que los accessors recuerden y duro para que otros conjeturen. Esperanzadamente substituye necesidad de anotar contraseña o proceso. Pero las contraseñas si son necesarias ser anotadas, son las que pueden ser anotadas más fácilmente en abreviado o la otra manera disfrazada tan otras que encuentren que no pueden entender fácilmente/que utilizan la información. Eg., la cerradura del laser requiere el movimiento de la mano en hexágono. El usuario escribe el laser de la palabra dentro de un hexágono.

--el sistema puede mantener contraseñas tal manera también = con un decodificador abajo de la línea para interpretar posiblemente w5 necesario.

+--uip-adaptar elige fácil recordar las contraseñas para la memoria humana del accessor.

--La naturaleza del acceso del comportamiento del proceso es tal que puede ser más fácil recordar que otros tipos de cerraduras, eg. - Cerradura del laser: mover la mano en la forma del hexágono = bloqueando luces laser múltiples en orden señalada.

. Elementos cambiables de la contraseña. "Orden y sincronización" de: cómo se generan las contraseñas.

"el PROCESO del ACCESO de la PIEL" = hace más difícil para la gente indeseada a cualquiera: saber que un procedimiento de acceso se está utilizando, y o para que lo lo documente. Ver: "generando contraseñas" y cómo el proceso de generación guardó secreto; "contraseñas cambiantes": el camuflaje de piratas informáticos de passwords.+ puede no realizar que el accessor está teniendo acceso: - Ejemplos: Cuando accessor: "Maniobra": los piratas informáticos pueden no realizar que lo que está haciendo el accessor está teniendo acceso realmente. Razón - el proceso del acceso no parece proceso del acceso. "Movimiento"; "picosegundo-zona"; "repetición"; "vagos"; "artista"; Contraseñas de Touchless: olor; movimiento; transmisor de u; Orden &Timing: Proceso de la entrada de la contraseña de la mezcla con no modos de acceso, eg.: procedimientos de acceso múltiple entremezclados con más actividad normal, eg.: mantener la conexión a los sistemas para el máximo 3 minutos hasta que las 4 contraseñas entraran. Repetición de últimos patrones para acceder: U menos probable anotará contraseña.

- Palmadita de los E.E.U.U.: 54997421 protege el secreto de contraseñas.

- Necesitar una contraseña conseguir su contraseña. Sobre entrada (por u o el sistema) a este archivo de "c", u debe saber w5 para encontrar contraseñas disfrazadas señaladas para las funciones de diferenciación.

- la contraseña entró por u diferencia de lo que demostrada en "S": Distinguiendo factores incluir: cuadro levemente alterado; demostrando letras mecanografió por el dedo para ser una llave lejos, eg.: u mecanografió el `2 ' pero "s" demuestra "3". Además, la contraseña transmitida del punto del u puede primero conseguir revuelta ser qué apareció en "s". La llanura posterior el proceso del acceso de la contraseña, sistema puede contraseña rescramble: código original mecanografiado/otro. "Corregir". Ver "la contraseña cambiante el afinar de manos de las pieles de la barrera 6B790 de las contraseñas" -: poner la mano en el compartimiento o el guante de los cuales pueden afinar en códigos (eg.: uno por el dedo) para mantener códigos confidenciales. Para requerir de las máquinas de efectivo: números de identificación personal; entrada en casa, oficina, el etc.

- la dependencia de usos y de la calidad de la tecnología, sistema puede" dar a punto " una mano de un individuo que intentaba una actividad ilegal; sostenido hasta policía venir (las llamadas de sistema para la policía) y lanza a persona sobre código correcto por la policía y o la otra fuente. Desalienta a los piratas informáticos y a otros que intentan actividades ilegales. Substituye las necesidades de los protectores que ahorran millares de dólares por la localización.

- el abofetear de la mano puede ser máquinas del ilegal-efectivo es utilizado probablemente por la mayoría de la gente en los países- ricos que ponen manilla pudo ocurrir, y entonces simultáneamente la mayoría de las partes expuestas de la máquina pudo hacer que su pantalla fuerte baje. No pudo haber bastante tiempo para que la persona puesta manilla piense de asir un arma para pegar la computadora ("C"), puesto que estarán en choque sobre su mano que es atrapada y se centrarán en conseguir sus reparten. Apenas la presencia de esto en algunas máquinas puede reducir grandemente hurto de la máquina de efectivo.

¿- obvio? puede también coger a bandidos emitiendo la tinta roja sobre ellos (lavable) - acarician a estrategia de búsqueda - el disco ~6/96 del babero de USPTO: (piel o pieles u ocultación o haber ocultado) near11 (los accesos del camouflag o del accessor o acceso o contraseña o verif) y (computeror eléctrico o software) - ciertos archivos se puede mantener cerrado o virtualmente ilegible (incluso al principal operador del sistema) a menos que cuando se han cumplido los criterios de un "acceso", eg.: tiempo en futuro. Ejemplos de tales archivos: ésos usados para generar las contraseñas futuras; la información sobre el accessor legítimo tal como ésos necesitó analizar si su comportamiento matches.+ "sensores" no puede ser substituido fácilmente: Los" sensores los procedimientos " de ese acceso del sentido/de la "pista" pueden tener sus propios métodos para guardar a piratas informáticos de conseguir sus propios sensores relacionados acceder. Eg.: los "sensores correctos" pueden tener códigos necesarios adicionales transmitidos con las señales creadas del accessor; o los sensores correctos pueden cifrar/"corrigen" los códigos generados por el accessor.

Presencia de ocultación de contraseña del Accessor: + las contraseñas pueden ser algo incluso el "accessor" son inconscientes de. Las contraseñas pueden ser algo que pueden habitual hacer de todos modos. No dándoles la contraseña, la "piel" es consolidada. - Tal necesidad del generations= de la contraseña de estudiar (vagos) = accessor.

- Contraseñas del ejemplo: --temas que tienen acceso o que se autorizan comúnmente a la precaución "analizador" de los access=access se accionan cuando el comportamiento está fuera de lo común.

--el mecanografiar en su nombre--localización del accessor: picosegundo-zona--estilo que mecanografía/ritmo/velocidad. Ver el analizador KN del estilo que mecanografía.

--"orden normal y sincronización" de las acciones del accessor.

--huella digital: u piensa que necesitan simplemente el botón (y calentarlo)--sa: el accessor piensa que el sistema necesita ser controlado verbalmente (sin realizar voz debe estar de la gente "señalada").

- otras ventajas: hace que los usuarios sienten más cómodos en no no necesario la necesidad de las contraseñas (deben recordar o aún saber fueron requeridos). + "indirecta": Los sistemas pueden hacer preguntas de u sin el accessor que realiza que las respuestas correctas son la contraseña.

. Las contraseñas no se pueden transferir de la computadora: el search= "de la "palabra clave del system=" busca" el digits= del acceso después bloques/el when= de proceso del nr que "se está transmitiendo" tal (vía el módem). Dibujo: Accessor (comportamiento) (presencia de contraseña ocultada del conocimiento del accessor) = CUENTA VISUAL de // del AVISO de // del &TIMING de la ORDEN de // del NOTIFICADOR de // de la INDIRECTA de // del PROCESO del ACCESO de // W5 () //HIDE del ANALIZADOR de // () () () de // del acceso del ~ de C ("analiza" si los parámetros correctos fueron resueltos) = del MOVIMIENTO de // de la FUSIÓN de // del SENSOR de // del ANALIZADOR DEL COMPORTAMIENTO de // del ARTISTA () () de la MANIOBRA () de la REPETICIÓN INFRARROJA de // PS-ZONE () // ()/del TRANSMISOR CIENTÍFICO del teléfono de // del ANALIZADOR de SONIDOS de // del ANALIZADOR del OLOR de // de las SEÑALES 0 0 0 0 0 // 0 0 0 0 0 0 0 0 0.

"INDIRECTA" = son qué contraseñas/cuando (w5) ellos debe ser entrado. - El sistema hace alusión son qué contraseñas/cuando (w5) ellos debe ser entrado. Indirectas de la contraseña de la palmadita 5425102 de los E.E.U.U.; 5345549 sistemas de seguridad basados las multimedias dan la señal basada en capacidad personal fuerte de memoria. 5454091- (el accessor recibe/pide indirecta) = (para) el password= de la necesidad para conseguir el for= de las indirectas necesitó posteriormente contraseñas.

. La manera de indirectas es "editable" (según "orden y la sincronización" como guía). + cómo el sistema determina cómo "hacer alusión" = "uip-adapta": ver: " generando contraseñas ", y otras secciones del acceso; qué accessor (véase la "repetición") usado previamente para desarrollar las preguntas para que accessor conteste para acceder; tuvieron acceso a la indirecta de los vagos.

- "Alarma de la mañana":

"INFRARROJO"/calor "sensor" del SENSOR = sensor infrarrojo: Calor del cuerpo de los sentidos del usuario y o cualquie número de gente requerida (cerca). Limita la capacidad de piratas informáticos de fingir estar en el punto de acceso. Infrarrojo: calor/luz del cuerpo.

- los movimientos de la gente deben estar en patrón señalado. Ver el modo de la generación de la imagen del" artista " para el "acceso".

. Patentes de los E.E.U.U.: de + aparato de seguridad 5406261 computadoras: accessorizes el transmisor infrarrojo sin hilos.

. acariciar a la estrategia de búsqueda del disco ~6/96 del babero de USPTO: el infrarrojo y (acceso o los accesos o contraseña) - cualquier señal generada por el behavior= del accessor (relacionado infrarrojo) "tiene acceso". Elementos cambiables de la contraseña. "Orden y sincronización" de: los metros de interior/al aire libre de emissions.+ de tiempo deben "anotar" el tiempo en los niveles" señalados", eg.: el termómetro del sitio limitaría a pirata informático durante no las horas de trabajo en que las temperaturas pudieron ser menos objetos "señalados" de controlled.+: formas/tamaño/tipo del calor que emite elementos: accesorio: dedo índice del accessor/mano correctos; animal doméstico (perro) en vecindad; cualquie otra criatura legged cuatro; (frío blooded) animales que intentan tener acceso a la puerta de agua (que guarda hacia fuera buscar humano de los zambullidores de equipo de submarinismo (recursos naturales)); (sol) reflector ligero; calor que emite los objetos (calor energía de la fuente generada o energía solar); plumas/lápices/aguja de la computadora/"R";

insecto 101 que garrapatea en tarro (en la manera al azar/recogido en o moviéndose hacia fuente del alimento); su temperatura puede ser sobre/debajo (vía refrigerante) de parámetros "señalados" de la temperatura ambiente w/in.

--objetos de la generación de la contraseña: crear los objetos vía la arcilla, moldeado plástico... Insertar cualquier temperatura necesaria que efectúa agentes (en ranura).

- VAGOS/movimiento "analizador": se presentan los objetos de los estudios W5: de manera móvil; "tipo movimientos de la cerradura del laser".

- "Imágenes" del "dibujo": "artista " = " imágenes" generadas en s "interactivo" por el dedo/el otro objeto. Uso del clavo del dedo o del otro acceso de los objetos de la temperatura ambiente (no) (según W5).

--el "sensor" busca la imagen dibujada vía: calor /presión "sensores" en la tableta; movimiento "sensor" del laser - ver la "cerradura del laser".

- infrarrojo/luz (del sol) = "sensores": la manera de la cual la luz brilla en sitio necesitó acceder. Eg.: ángulos ligeros; nivel de calor emitido de luz (sobre temperatura ambiente); cuál es W5 encendido.

--"orden y sincronización": la luz debe haber ocurrido sobre la duración del sistema antes del acceso "alarma de la mañana": el salir del movement= del cuerpo de usuario de la cama /doing "señaló" tarea.

¿"AFINA" = fecha del <origin R113? la llave >Intelligent de la habitación va más allá de viejas llaves de la tarjeta magnética, tiene viruta de circuito. Se puede programar con referencia a datos referente a usuario, a la facturación, al etc. el 18 de diciembre de 92 X.

- Para Techies: ACCESO: ; CÁMARA: se activa en el punto del cheque in/out; CARRO: ; PALMADA: para los códigos adicionales (tener el "acceso"); Exhibición ("S"): pantalla táctil (Reino Unido para el acceso); %GAME: ; "M": ; PP/MP: ; MQ/UQ: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: ; TELECONTROL ("R") ("R"): ; CUENTA: ; TDS: época de cada acción; Teléfono: ; UIP: ; Reino Unido.

- Llaves: llave metálica; tarjeta magnética de la entrada; "carro" (software de w/contraseñas necesarias, palmadita 5475839); otras cerraduras del estándar/del banco (combinación). 9G190 funciones del "carro" solamente cuando el sensor en él recibe estímulos correctos, eg.: huella digital de personas señaladas; "acceso". + el carro es una llave para el acceso. Entrar en lo que desearon los códigos cambiables en el carro. El carro puede ser un microchip colocado en llave tira (metálica/magnética) de a; por el que los códigos del carro sean necesarios acceder, así como otras características de la llave. La porción dominante puede ser cualquier tipo de tipo posible o de KN llave o de objeto del procedimiento de %access (que acciona el objeto duro). El carro pudo ser invisible, eg.: la llave puede conseguir copiada pero no funcionará; podría ser enterrada o ser ocultada por el material por el cual la llave es compuesta. --Explicación repetida: el carro también actúa como una llave a la cerradura del sistema: eg.: llave de tarjeta (reprogramable) (con código de la contraseña). =access de la llave del ~ del carro. El carro puede ser microchip incorporado a "llave".

- Objeto "infrarrojo" del "carro" = del "acceso" (llave).

- "Acceso": necesitar la clave (reciente) de la huella digital/de barras ="/"del explorador/"del sensor cámara" [para las imágenes de la lectura] = ~ del "analizador" UIP-DB = cerradura (se da U o "acceso negado").

. Dibujo: ACCESO VISUAL LIGERO DEL COMPORTAMIENTO de la PIEL de // del PROCESO del ACCESO del CAMBIO de // W5 (movido) // del ANALIZADOR de // del ANALIZADOR de SONIDOS de // del ANALIZADOR del OLOR de // de las SEÑALES de // %SCIENTIFIC de la REPETICIÓN de // PS-ZONE () // de la MANIOBRA de // del MOVIMIENTO de // del SENSOR de // INFRA-REDSENSOR () // del ANALIZADOR de // del =ARTIST del acceso del ~ del Accessor (“”/objeto del carro (cuya movimiento o presencia acciona “”/comportamiento del sensor) () = C (“analiza” si los parámetros correctos (del movimiento) fueron resueltos) (su movimiento) () () () () () () (el objeto emite olores) () (forma de los estudios del objeto o forma de sus trayectorias del movimiento) () ORDEN y CUENTA de // del AVISO de // QUE MIDE EL TIEMPO (cuándo a la llave de parte movible) (llave de // del NOTIFICADOR de //HINT del PROCESO () () // usada para generar la cuenta correcta, eg.: llave = " inclinación"). Elementos cambiables de la contraseña. “Orden y sincronización”: cuál “afina”/los “carros” fueron utilizados.

“Laser” = cerradura del laser de +p <3> 5A480: Activado disparando las luces laser en patrones señalados. Ver el laser de KN Harp y el teléfono como generadores de señal.

- Más seguro de otros el aprendizaje de la persona de la combinación está afinando adentro. Lasers múltiples activados en orden señalada por u que hace el movimiento de ciertas formas. - Eg: funcionar con el dedo a través de luz hacia adelante y hacia atrás tres veces, esperar tres segundos, después funcionarlos dos por más, esperar tres segundos [o más de largo - puede tener tiempos de espera mínimos variables, con tiempos de espera máximos flexibles] entonces {rápidamente} hacen pivotar fácilmente hacia adelante y hacia atrás doce veces. - las cerraduras de sistema para cierta duración sin permitir ninguì□n acceso si es el código frustrado de la entrada [incorrecto] o muy diferente de código correcto. Ayuda eliminar usos de la entrada ilegal. -: poner detrás de cualquier dispositivo electrónico (la computadora, manija de puerta del coche, de la manija de puerta especialmente diseñada del protector/de la cerradura edificio-electrónicos dispositivo-tiene los lasers múltiples para aumentar la complejidad de agrietarse código-Fácil cambiar la combinación.

- esta función como la mayoría de las otras funciones del proceso del comportamiento del usuario es tal que puede ser difícil que el observador exterior ocasional vea la combinación que es programada adentro, como con otras cerraduras de combinación.

- el doesn't requiere las tarjetas de seguridad, las llaves, el etc que pueden ser perdidos o ser robados.

- sobre el acceso, usuario tiene opción de no requerir la combinación para el reingreso (si su combinación) no les prohibe este privilegio. Útil con las puertas del coche y del edificio.

. - trabar la activación, característica de la desactivación puede ser dado vuelta en cuando el sensor de movimiento detecta a persona inminente (eg.: sensor infrarrojo conjuntamente con los sensores para los cambios en la vibración, el sonido, la imagen de la cámara).

.

-4C020 (cerradura de los sonidos) = 5A-480 (cerradura del laser vieja KN #)--el dispositivo teledirigido para abrir la puerta de coche existe, con todo puede no parar esta patente.

Para Techies: #1: +access; acceso: cada tipo acceso (hecho) - > base de datos - >uip; acceso = r (tr/rc fq); artista: la manera de la cual la frecuencia al acceso (del aumento) es tr se hace de manera artística/creativa:

"componer" los sonidos/las luces/la otra frecuencia - % (los sistemas (del comportamiento) "analizador" (las ayudas) determinan la entidad (que intenta acceder), según el tipo trabajo creativo, eg.: similar a determinar a compositores verdaderos /painters por características en su trabajo; balance: u debe crear oye sonidos en cierto equilibrio (no perfecto); access=bva (el sistema busca ciertos frecuencia audio/palabras/ritmos/decibelios); c=access; cámara: analizador visual (determina u (vía el uip/la entrada de las lentes actuales que emparejan con la base de datos de u)); carro: =access de c (carro); tarjeta (magnética)/interruptor (software) (códigos cifrados del cart= del u de w); palmada; fecha: tener acceso solamente a ciertos tiempos posibles de w/in/a diversas épocas requieren los métodos de diferenciación para acceder; exhibición: El sistema ofrece a u uno o más opciones para la selección del u de un menú más grande - > selección correcta por u - > acceso; educ: u aprende destrezas mientras que aprende métodos de acceso: respuestas a las preguntas de la historia/de la matemáticas/de la ciencia/de s de /organization de la seguridad ' (protocolo); gps: tener acceso a solamente posible con en las zonas geográficas limitadas/cuando u (sus gps portables) viajó un limitado (trayectoria/zona/manera/barra) al punto del acceso (llegar); k=access, manera de la cual los elementos mecanografiaron (la velocidad, ritmo, parada y va); localizador: Los hallazgos/siguen de los sistemas/estudian u según el paradero del u basado en lo que utilizó/utiliza el "acceso" (los códigos/los modos) u, eg.: u está en el ala del norte del edificio porque los puntos de control del acceso se pasan para salir en o de ala; o el usuario está en la base de datos del interruptor 40.o, y en golondrina de mar el uip en u se desarrolla por consiguiente.

- Existe: ¿IR? para las cerraduras que controlan, probablemente vía ultrasonido también (bien conocido).

- M = "ACCESO" (4C-020): La base de datos del m empareja datos/código/el proceso necesarios/etc antes del "acceso" permitido. =Access de artist=access=m. balance=access=m. bva=access=m. c=access=m. camera=access=m. cart=c=access=m. clap=access=m. composition=access=m. date=access=m. display=access=m. distancer=access=m. educ=access=m. gps=access=m. k=access=m. mic=access=m. mo=access=m. mp=access=m. mq=access=m. multi-user=access=m. notifier=access=m. osc=access=m. pd/locator/pp/pr/ps/r/score/sensor/soundanalyzer/speech/status/synth/tds/t/uip/uq/visual-analyzer = MFH. - MIC = ACCESO (4C-020): ACCESO/ARTISTA (imágenes del control vía)/BVA del" discurso" (voces de cierto u y o patrones vocales, eg.: cantan particular consonancia)/C/CARRO (base de datos de los sonidos, interruptor)/PALMADA /COMPOSITION/FECHA (w5 del) entrante/S/DISTANCER del sonido (u debe estar en cierta distancia del "mic" para activar el acceso. Espacio de u a = "sensor" (presencia de juicio la termal/del sensor del distancer/de la vibración/del otro sensor del usuario (s)) = "analizador" ~c)/EDUC/K)/M (base de datos (del control "mic" de los sonidos;)/MIC/MES /MOUSE/P.M./MQ/MULTIUSOS/NOTIFICADOR/OSCILADOR/PP/Q/R/RC /SCORE/SENSOR del analizador de sonidos/+ ANALIZADOR de SONIDOS: base de datos de los sonidos; =controls de los analyzer=access del sound=sound del u (analizador) señalados función (puertas abiertas; permisos u llenos o función parcial w/in un poco de teléfono señalado (sw) de los sistemas/del DISCURSO/SP/ESTADO//SYNTH ESTÉREO/TDS/T/TR/usuario/UIP/Reino Unido/UQ/ANALIZADOR VISUAL/VR = MIC sensor ligero: Los cambios de los sentidos en luz midieron cerca: presencia o carencia de la luz, o más exacto la cantidad de luz; frecuencia de la luz, eg.: color; duración y o tiempo en los cuales la luz fue generada. - Luces que destellan.

Dibujo: el punto de acceso = altera en patrones/colores señalados = de la luz "tr" del EL = c~r = código Morse del U.

. acariciar a la estrategia de búsqueda del disco ~6/96 del babero de USPTO: (laser o luz) y (acceso o los accesos o contraseña) - la luz/laser puede necesitar estar de distancia "señalada": si se utilizan dos o más frecuencias ligeras, el sistema sabe distancia de la fuente de luz, o puede saber vía el otro "sensor"/métodos (donde contraseña de los arrendatarios del acceso en la posición remota (picosegundo-zona)).

- Cualquier señal generada por el accessor (laser /light) relacionó) comportamiento = "acceso":. Elementos cambiables de la contraseña. "Orden y sincronización" de: qué laser luz son disparado/activó/desactivado/alterado (su) doblado luz/w5.

"MANIOBRA" = maniobrando a través de los pasos/de las etapas necesarios uces de los necesarios concluir proceso del acceso. El proceso de la "orden y de la sincronización" es el esencial, qué se afina realmente adentro en los puntos "señalados" que son el subconjunto. El maniobrar con imágenes/pantallas de ordenador y programas: U maniobra con imágenes en la pantalla de computadora, entrando capas más profundas hasta que hayan seleccionado la imagen señalada que es la contraseña. La manera del cursor móvil del u a través de la selva de imágenes, y la evitación de trampas permite el acceso.

Muestrear el estilo de la "encaminamiento" requerido de "accessor": 1] chasca encendido el icono de la flor - > los movimientos de u un carácter animated encima a la tercera flor de olerla - > u abre la colmena de la abeja - > u dirige la abeja a la 8va flor para la polinización - > resultando ve que plantado en la caja #10,303 del plantador - > el carácter chasca encendido la 75.a manzana del árbol de la semilla plantada - > "tener acceso más lejos" a los cañizos - > el "acceso" provided.2] chasca encendido "desactiva la caja de música" - > sin embargo caja de música se abre - canción de los juegos del >u 29na - > los juegos de la canción mientras que su fraseología demostrada - > u debe chascar palabra/frase/melodía encendido señaladas (en el momento adecuado) - cañizos del >further - > fomentar los cañizos del "acceso" - > "acceso" proporcionado

+Style de la respuesta/del terreno de la computadora en el cual u debe maniobrar puede ser diferente/cambiado según w5/"multiusos":

+-u debe saber/intuit cómo responder/se comporta.

+-uip: El sistema sabe bastantes sobre u correcto señalado para ajustar la trayectoria de las indirectas/del diseño de /make para que haya maneuvering= así que u sabe maniobrar a través de barreras. Basado en uip-adaptar, similar" generando al =uip-tailor de las contraseñas "). +-differences entre maniobrar correcto e incorrecto puede ser de menor importancia o principal, eg.: la flor olida sigue siendo 3ro pero cambios de rojo al color de rosa (mientras que otras flores cambiadas de rosado al rojo), dando por resultado la confusión para el pirata informático, eg.: el cambio de señalado codifica en software.

Misceláneo: el "maniobrar" es un proceso rápido (el "ratón" alrededor)

+ "procedimiento de acceso del cambio" = agregando en pasos adicionales:

. - paisaje/tipo que maniobra el cambio constantemente. Ejemplo "del proceso del acceso del cambio", y generando contraseñas.

+-As en semi ""/de "del juego" "interacción entretenimiento": cada tentativa subsecuente del acceso requiere la adición correcta a los pasos previamente sabidos.

+--Qué nuevos pasos pueden ser:

--- Los errores se pudieron tolerar en cada nueva etapa agregada sobre maniobrar previamente sabido; pero la tentativa siguiente del acceso requiere a la "repetición" aprendió previamente "procedimientos de acceso". O puede ser el accessor decide cuáles será cada etapa siguiente, y simplemente las necesidades de recordar (ejemplo del accessor que es el generador de la contraseña (en "proceso del acceso del cambio").

---El sistema "hace alusión " = no prohibiendo a accessor= cinco tentativas a intuiting procedimiento de acceso correcto.

---"Repitiendo" qué u hizo o experimentó en el past= atado para corregir opciones.

--ver: tuvieron acceso a repetir la sección; "drenaje" del "artista"; "pista" = " repetición"; "seguir" el ~ "vagos" = generando "hace alusión" para los pasos subsecuentes del u.

. - acontecimientos externos: época del año; acontecimientos en mundo o la organización.

. "VR": manera de la cual u se mueve - > acceso. Ver KN (quizá bajo "vr").

+ "correa eslabonada": Sistema que maniobra automático: Se diseña algo accionar el proceso que maniobra (en acontecimiento su demasiado incómodo para el accessor). Ejemplos: una banda del software activada por u; carro; el chascar del icono señalado (solamente disponible en las localizaciones/las horas señaladas). Ver "la correa eslabonada" del "artista": esto tiene una función sus los propios (puede ser accionado por u/sys).

. - La contraseña necesitó activar maniobrar automático. El usuario puede necesitar maniobrar la parte del curso = de tipo de contraseña, entonces proceso que maniobra =automatic.

. - "Orden y sincronización": La necesidad del usuario creó las imágenes señaladas ("artista") en orden.

- La secuencia aquí se define como la manera de la cual cada uno: 1] paso/movimiento en la generación de la imagen se ejecuta;] la secuencia 2 en la cual (total/parcial) las imágenes se entran/lanzó por el U.

. acariciar a la estrategia de búsqueda del disco ~6/96 del babero de USPTO: (movimiento o movimiento o mudanza o movimientos o maniobra) near5 (acceso o accesos o contraseña) - cuaesquiera señales generadas por el comportamiento que maniobra del accessor = " acceso ".

. Elementos cambiables de la contraseña. "Orden y sincronización" de: cómo el accessor debe "maniobrar " + ver "maniobrar" vía el carácter del "juego". La manera de la cual el accessor actúa es el patrón necesario para tener el" acceso". - Ver el "artista" = la "maniobra".

- U= necesita el know= donde encontrar lo que seeks= "pronto" ("haberse combinado") = para el "acceso". Donde o cómo mirar (para otros elementos que necesitan ser combinado: cómo "maniobrar"/juego "juego"/que archiva para comprobar.

"FUSIÓN" =

necesidad de +p de combinar cuaesquiera archivos múltiples. A saber, el accessor combina dos o más elementos en "orden y la sincronización señaladas".

- El Accessor puede necesitar emparejar (el icono o el archivo) (w "ratón" vía la fricción a través de s) cualesquiera (ocurrencia del pasado y las señales archivadas/elemento/archivo/texto del acontecimiento registrado con algo más: Ejemplos: - Voces: las voces múltiples se relacionaron de alguna manera (por nacimiento, el trabajo); las funciones o las respuestas típicas dijeron que la voz o la persona haría, o cómo responderían a cualquier panorama verdadero/imaginado (algo como un "juego" que juega).

. - la sinergia de una combinación = correa eslabonada" del "artista" del "acceso"/".

. - el subconjunto de la orden de "orden y de sincronización" puede ser una forma de combinación.

. Elementos cambiables de la contraseña. "Orden y sincronización" de: cuál es w5 "combinado".

- ver: "Fusión" del "artista"; Sinergia " % del "artista" "

Dibujo: "Combinándose" del acceso de los procedimientos de acceso = del ~ de C ("analiza" si los parámetros correctos fueron resueltos) (ofrecido/negado) = del ARTISTA () de // del ANALIZADOR () de // del SENSOR () de // de las LLAVES () de // del SENSOR () de // de la FUSIÓN () de // del MOVIMIENTO () de // de la MANIOBRA () de la REPETICIÓN LIGERA INFRARROJA DEL COMPORTAMIENTO de // PS-ZONE () // () de // de las SEÑALES () de // del OLOR del ANALIZADOR () de // de SONIDOS del ANALIZADOR () de // del teléfono (transmite señales de los procedimientos/CID/"fusión" de la contraseña con otras contraseñas) //TRANSMITTER () // del ANALIZADOR () del CAMBIO ACCESSPROCESS () // de // W5 () // % VISUALES CIENTÍFICOS NOTIFICADOR //ORDER DE // DE LA INDIRECTA DE // DEL PROCESO DEL ACCESO DE LA PIEL () () Y CUENTA DE // DEL AVISO DE // QUE MIDE EL TIEMPO () ().

El "MOVIMIENTO" = manera del movimiento del accessor accede. Los movimientos incluyen: "ejercitar", "distancer", "picosegundo-zona", "danza " +, los analizadores de la "vibración". esto se traslapa: VAGOS de los accesos: mecanografiar los fósforos del motion= necesitó perfil del comportamiento.

El "NOTIFICADOR" = + "acceso " = " notificador" es un subconjunto de "búsqueda y reacciona": Los usuarios ilícitos legítimos de los sistemas (del kn) causan una "reacción". Las reacciones incluyen: de de torneado/encendido del sistema; castigar u (que les niega el acceso futuro para la duración del tiempo del sistema u otro vía el otro modo de la "reacción w5").

- Las funciones del notificador como una alarma o la "reacción" sí mismo son un notificador (que coge la atención (de la seguridad (personal)).

- Ver la alarma del pisón de KN: "Nr" activó cuando cualquier cosa ha estado alcanzada ilegal.

- Accessor= genera contraseña/el "acceso"/" "señalado" del comportamiento/"del acceso del pattern=permit "nr "señalado"".

"ORDEN y SINCRONIZACIÓN" = cuando; Duración del tiempo: Qué; en fueron decretados los métodos de qué de la orden procesos del acceso. Pausas en la promulgación.

. 6B370: Pulsar las teclas señaladas longitud del tiempo por llave: + "acceso": debe presionar la longitud del tiempo señalada llave.

--o activar el código (por intervalos con el número señalado de pressings. Puede ampliarse para incluir: cierto tiempo cada uno que presiona se debe hacer con tiempo necesario de la pausa entre presionar).

+ el usuario debe saber w5 para incorporar datos señalados, con o sin (sin) avisos. Datos que entran en ritmo señalado.

--Eg.: llevar a cabo la llave 1.5 segundos y espera 3.1 segundos entre los golpes de teclado. La orden de los modos de acceso de KN altera cada mes [procedimientos de acceso múltiple].

. - Procedimientos de acceso múltiple: El usuario requerido utilizar uno o más tiene acceso a procedimientos del "kn".

. - Accessors requeridos responder rápidamente: Dificultad ilegítima del interruptor del accessor (software) en la lectura/la localización de "aviso" - > responde a los avisos del interruptor de c rápidamente bastante no puede acceder, esto hace más difícil para que los piratas informáticos de computadora accedan cuando/donde (w5) los inician menos en las funciones del sistema; ésos que intentan acceder (entonces fallando en ensayos iniciales) se marcan con etiqueta más de cerca (el monitor inteligente 2E251) durante cualquier tentativa subsecuente del acceso que puedan intentar. software de la lectura de la velocidad 5G070.

- Patentes: el carillón de puerta de retraso de tiempo de 5451934 de las características 6B370 veces de las medidas/k fue presionado. Significa frecuencia, el etc de los que no sean ese cierre que buscó la entrada del contactor. - el sistema pudo colocar además todas las veces que la puerta fue abierta si banda de U. Cada tipo de entrada de puerta significa diverso tipo persona.

- usos: "Pista": estaba la persona o el empleado honesto sobre qué ocurrió, custodia de registro, seguridad, evidencia (eg.: cuando algo fue entregado, cuando vinieron los empleados y o izquierdo, etc) - acceso de los límites u por cantidad o el tipo. "Tener acceso" restringido a las épocas del día/del año posiblemente conjuntamente con otros cañizos.

- Accessor= genera "orden y la sincronización" relacionó el acceso "señalado" del comportamiento" del permiso "del pattern=.

- Otros elementos que determinan la sincronización del acceso: Gravedad de la luna o planetas (véase a astrólogos); el señalar de las cartas astrológicas qué días son buenos/malo para cualquier criterio (accessor, compañía, amor). Horas "señaladas", días (fechas de nacimiento de la gente conocida).

- Ver: Analizador = orden y sincronización de los sonidos.

"AVISO" = qué incita U: para comenzar procedimiento de acceso. La "indirecta" edición-fijó de "aviso".

- cualquie tipo requerido señales (de u o del sistema). Tales señales pueden ser "acceso" señales (que necesitan simplemente ser "repetido"/"corregido" otra vez). - Dibujo: el accessor del prompt= genera el acceso "señalado" del comportamiento" del permiso" del pattern=.

- puede necesitar el "acceso" conseguir (siguiente) necesitó "aviso " = entonces incorporan avisos de access.+ puede ser disfrazado: para parecer algo con excepción de un aviso, eg.: "/five= del número etiquetado del "del huevo/"de la correa eslabonada juego" (para "maniobrar") dentro de la ventana número tres del interruptor (software).

- activar el prompt= entonces que es to= listo acepta contraseña.

- "Alarma de la mañana": user= de las pistas no saber "reaccionan" o función.

"PS-ZONE" = "Picosegundo-Zona" 3E150: u debe estar en los lugares limitados a acceder.

Estrategia de búsqueda de la palmadita de los E.E.U.U.: localización near5 (acceso o acceso o contraseña del accessesor)

- Palmadita de los E.E.U.U.: control de acceso alejado Localización-sensible de la base de datos 5243652.

- Accessor= genera el "movimiento"/el acceso "señalado" del comportamiento" del pattern=permit "de la picosegundo-zona. Elementos cambiables de la contraseña. "Orden y sincronización" de: qué zonas se entran/w5 activatable.

"REPETICIÓN" = acceso de <+> vía la repetición de últimos patrones: +1] Acción repetida: El usuario repite una acción que confiaron anterior. - Movimientos requeridos: puede ser eso u hecho en una cierta tarea anterior dentro del parámetro estrecho del tiempo, eg.: cómo controlaron un vehículo; palanca de mando anterior del "juego" que jugaron; replegando el movimiento (de la palanca de mando) hecho por el carácter visto en "S" (cerca).

- U oye que que algo que dijeron durante ("c") la sesión pasada, repetida de nuevo a ellos cuando acceden después. Este sistema existente demuestra si allí trataba de forzar.

+2] Copiado: El usuario ve algo y lo utiliza como señal para el proceso necesario del acceso. Ejemplos: - La contraseña se demuestra en "s", u debe invertir simplemente su orden, o no hacer caso de los tres dígitos pasados y primeros. Acariciar al str de la búsqueda (estrategia): tener acceso y (repetición o repetidor). Nada-comprensible encontrado.

+ patente: 5247497 sistemas de seguridad basados en el identificador único de la grabación para el aparato de lectura subsecuente. La información proporcionó por usuario-sistema cuando entraron por último se repiten así que el usuario sabe si accedió algún otro previamente. Cesionario: Octel [co grande].

--mejoras:

- U = este sistema de la invención (patente:) ~ 5247497 C = ANALIZADOR de // del ACCESO () () // EDIT () // NR (el nr de u cuando (w5) u no comprobó para considerar cuál era su "identificador único" (el tipo 5247497 entrado) durante su sesión pasada, los sistemas es inútil si u no comprueba, y mejor si los cheques de u cada vez) Picosegundo-Zona de la banda de // del OSCILADOR de // () () // (el sistema "sigue" w5 u movido y o lo que lo hicieron (uip, los gps) - > repite esta información cuando u tiene acceso repetido al sistema) CUENTA de // del RANURADOR de // Q () // R () // () (u anteriores la cuenta o el "estado" o el "TDS" (uso anterior) pueden ser un identificador único (contraseña) - esta automatización ayuda u) a la PISTA menos creativa/perezosa de // TDS () // T () // del ESTADO de // () () // UIP ().

- Acariciar a la estrategia de búsqueda - disco ~6/96 del babero de USPTO: (repetición o repetición) near5 (acceso o los accesos o acceso o contraseña) Accessor= genera repitió el acceso "señalado " del comportamiento" del permiso " del pattern=.

. Elementos cambiables de la contraseña. "Orden y sincronización" de: cómo accessor si "repetir" los aspectos de la actividad anterior (w5) "alarma de la mañana": hacerla para desactivar la alarma.

"SEÑALES CIENTÍFICAS" = señales del cuerpo. Señales del cuerpo: El sistema calibra las señales corporales únicas al individuo. Ejemplos: señales eléctricamente generadas naturales del cuerpo; química de la piel; patrón del golpe de corazón; velocidad del golpe de corazón (u trabaja en la rueda de ardilla para conseguir el corazón a la velocidad señalada = y u considera su tarifa en "s" y cuando alcanzar, pide el acceso en este tiempo.

- Dibujo: u = sensor = "analizador médico" de la "cuenta" = acceso.

- Estrategia de búsqueda de la palmadita - disco ~6/96 del babero de USPTO: (cuerpo de la señal near5) y (acceso o accesos o acceso o contraseña).

- Accessor= genera" el acceso señalado científico" de los patrones = del permiso ".

- La supervisión KN del animal/del organismo debe "detectar" el acceso señalado del criteria= (para el animal).

. Elementos cambiables de la contraseña. "Orden y sincronización" de: scientificsignals. "Alarma de la mañana": las señales del cuerpo deben implicar wakefulness (completo). El usuario está hasta psych encima de sí mismos al then= altera sus señales del cuerpo.

Cantidad de los =Limits de la "CUENTA" de acceso. Eg.: los cabritos no pueden ver la TV sobre 10hours/week el noches de la semana.

El carillón de puerta de los tiempos de las medidas -6B370 fue presionado.

- Cuentas w5 de la actividad que corta de la persona para permitir mejor la petición del querellante de la corte para condenar más tieso.

- UIP: 1] Los estudios si el comportamiento real del u empareja cómo el sistema piensa u se comportarían. 2] Identifica entonces a bandidos de las "pistas". 3] "analiza" contenido y restringe por consiguiente, eg.: limitación de los programas para los niños.

- "Corregir": Las funciones de límites disponibles basaron en"/"del estado de los u "cuenta".

El explorador del canal -9G220 salta las estaciones que tienen anuncios publicitarios: (el acceso/uip determina lo que (w5) necesita u ver (acceso), las comunicaciones/los datos que pueden seleccionado para incluir: t, datos del MES, material de a/v, DB, acceso de m, uso de las funciones de r. Bloques de sistemas: anuncios publicitarios, aspectos de los datos (que se cifran según lo restringido a u cifrado cierto acceso) - "Bill" - Accessor= genera"" señalado"/nr del acceso del permiso "del pattern= de la "cuenta ".

- "Pista": expedientes del sistema que accedieron (w5). Cada persona [o el departamento] tiene diverso código. "pista" = vagos = acceso.

- #A de los criterios, K: ritmo correcto de mecanografiar necesario; #B de los criterios: contraseña correcta necesaria; #C de los criterios: los datos (de la entrada) deben ser tr por el segundo de tres personas. Los sistemas del acceso = "analizador" = determinan aleatoriamente cuáles de los tres A/B/C permiten el acceso (en un mes por la base del mes para un u por base de u) - > procedimiento de acceso para la situación aislada: la 2da contraseña de u k (sin respeto al ritmo) - > 2do u mecanografía letras en cierto ritmo.

"SENSOR - MISCELÁNEO/PRODUCTO QUÍMICO" = el producto químico "que analizaba" los sistemas/:""/el probers% de los sensores con el cual detectar la presencia de cualquier objeto señalado "señaló" la constitución química. Eg.: sal; oro; agua; cuaesquiera "sentidos químicos del sensor del olor"; cualquie recinto (o recintos) químico dado en la "orden señalada &timing".

+ el producto químico líquido o sólido produjo por la compañía y los productos químicos competentes de w/similar vendidos por otras. Eg.: traer su Coca-Cola pero no Pepsi en objeto expuesto en el carnaval y conseguir la entrada libre. Necesita buenos usos si es patentable.

+ usos: - Zapatos particulares de los deportes (con único: colores, o constituciones químicas en la porción de zapato).

- Salsas particulares: eg., Kikkoman pero no otras marcas de fábrica de la salsa de soja u otras salsas asiáticas.

- Etiquetas en productos con los productos químicos señalados. Etiquetas sujetadas al producto. Eg.: Diskettes; "carro".

- Las contraseñas se pueden incorporar a la parte del producto. Solamente los usuarios de marcas de fábrica legítimas tienen el "acceso". Cada producto (número de modelo) pudo haber señalado contraseñas.

- El número de "accesos" pudo ser limitado. Habría un cierto contador/""/que desaparece de la cuenta (del producto químico) por uso (para el acceso).

- Usos adicionales para dar el tratamiento preferred al usuario de sus productos: Acceso a (libre): agua; dispensadores de la soda; acceso físico a la entrada del permiso en un área o un edificio bloqueada o zone= con los productos deseados/los servicios; "estereofonia"; "oscilador"; información; función del kn; o todo lo demás que pueden ser /quantified limitado/restringido a cierta gente (por ejemplo vía el "acceso").

- en el extremo o (funcionando) la raza, solamente ésos con las zapatos tenis de Nike puede conseguir la Coca-Cola libre, y con esta soda, ella consigue el acceso a la función siguiente.

- Funciones electrónicas del sistema solamente cuando está alimentado o dado tales fuentes o piezas de la etiqueta. Esto puede franjar en leyes de los E.E.U.U., por lo tanto los descuentos u otras preferencias pueden aplicarse.

- Presencia de ropa protectora correcta, eg.: guantes requeridos. Ver las formas de 7G de KN de protección blindada, de tapas contrarias, de envases apropiados, de etc.

¡- Otros usos valiosos deben existir! - Ésos con o sin la radiación excesiva prohibieron el acceso.

Indicadores KN de -7G: cualquier producto químico que se pueda "buscar" vía "indicador " = califica como for= "acceso" del agente que acciona.

- Existe: lectores de clave de barras para la "facturación"; tiras magnéticas en las llaves planas para el "acceso" y las tarjetas de crédito; microchipes incorporados a las llaves para el "acceso", eg.: en los coches de Cadillac.

- Patentabilidad: El sistema "busca" los elementos "buscados no comúnmente" después para el "acceso"; el proceso del acceso no requiere generalmente llevar de un objeto adicional, eg.: llave (puesto que la presencia de elemento (de la cañería) es bastante para tener el "acceso").

. Elementos cambiables de la contraseña. "Orden y sincronización" de: qué productos químicos son necesarios.

. Éste es un subconjunto de: Tuvieron acceso al "sensor misceláneo", y a indicadores químicos de KN's7G = "búsqueda y reaccionan".

"OLER EL ANALIZADOR" = cerradura del olor de +p 4C190: Abre solamente en presencia de cierto olor, eg. ; el usar del cologne. Si la receta especial del cologne de la persona es secreta, esto será una cerradura difícil a romperse, y será difícil incluso detectar que una cerradura del olor es el tipo de cerradura que es utilizada. El

usuario pudo usar los colognes irreconocibles a las narices humanas, en la golondrina de mar que engañaba a observadores que buscaban una manera de tener el acceso ilegal en cualquier sistema electrónico, eg.: computadoras, calzadas, cajas fuertes. Pares de la cerradura del olor con medidas de seguridad adicionales, eg.: contraseñas.

los olores de +p-some no son perceptibles a la nariz humana, por lo tanto usando tales olores, que son sensibles por el "sensor", seguridad de los aumentos. Los olores pueden ser enmascarados combinando con otros olores (perfumes) no (siempre) necesarios para el "acceso".

. - similar y compatible con "la invención de la cerradura de los sonidos" en el directorio de C, acceso 4C210Artist.

- tecnología-Dibujo existente del olor de las aplicaciones: perfume - > "sensor químico" = analizador = acceso.

- Olores generados de: velas particulares (olor del fieltro /elements en cera); cologne/perfume; aerosol de pelo; otros cosméticos; repulsivo de insecto; olor de cuerpo (el sistema avanzado identifica el olor de cuerpo único de cada u); carencia de ciertos olores (apenas que toman la ducha); las condiciones atmosféricas (olores enseguida después de la lluvia), por lo tanto "tienen acceso" limitado a las condiciones atmosféricas (o a las condiciones atmosféricas requerir el proceso de diferenciación del acceso).

- diversas combinaciones de procesos del acceso requeridos para los días/las situaciones de diferenciación/tipo acceso deseado.

- Situaciones peligrosas: el acceso pudo solamente estar/también se ofrezca solamente en tiempos de lanzamiento químico peligroso (por ejemplo escaparse a través de los umbrales controlados). eg.: derramamiento químico/lanzamiento radiactivo donde el sensor (del aire) coge en él. Razones: u no tiene tiempo para fumble con contraseñas. Las precauciones construidas contra ésas que buscan van acceden induciendo desastres, eg.: fotografían/no se permiten al accessor hacia fuera hasta visto bueno de seguridad.

- Olor "analizador". Ver el olor 4C190 trabarse: Abre solamente en presencia de cierto olor, eg. ; el usar del cologne.

- Estrategia de búsqueda de la palmadita - disco ~6/96 del babero de USPTO: (olor u olor o cologne o perfume) y (acceso o los accesos o acceso o contraseña) - Accessor= genera el acceso señalado" del permiso "del pattern= "del olor".

- el usuario debe soplar (vía boca o aventar o el viento natural) el aire/el cologne en "orden y la sincronización señaladas". Este proceso que modelaba pudo tolerar bosquejos u olores entre los tiempos el soplar/de transmisión (debido a los flujos de aire menos controlables).

- Los "cambios necesarios para el proceso del acceso" pueden ser: usar más/menos cologne; cologne de mezcla; cologne que no usa en las horas "señaladas" (se desea el acceso w5).

- Tipos del olor. Clases particulares de: flores; alimentos; especias; moho o putrefacción de ciertos elementos; tinta (líquidos); los elementos mantuvieron cápsulas y (tapado en el "sensor " = dando por resultado menos pérdida de olor para el uso subsecuente); olores minuciosos de las maderas, plásticos, metales, piedras; líquidos (con otros elementos); cera; otros productos químicos; productos químicos peligrosos (ésos mencionados en el archivo 7G de KN).

- El olor se puede substituir por los tipos particulares de tiempo: humedad; presión atmosférica; nivel de ionización; contaminación; altitud; longitud; latitud.

. Elementos cambiables de la contraseña. "Orden y sincronización" de: odorsare w5 dispensado.

. El olor puede ser lanzado solamente cuando el procedimiento de acceso anterior era interno del conducted= orden de los disparadores de este olor "y la contraseña necesaria subsecuente de la sincronización.

- Castigo: el procedimiento de acceso incorrecto puede lanzar whichcauses de un olor: sistema cierra/inhabilidad re-intentan acceso (W5) (durante)/nr/olor insoportable de la duración del sistema, eg.: mofeta.

- Esto generaciones otras de una contraseña se puede utilizar para los animales del entrenamiento.

--Eg.: las acciones del animal causan un animal del odor= después consiguen el alimento. El comportamiento pobre del animal causa olor incorrecto y ninguì□n sonido del alimento o eléctrico del descarga o piercing. ¡No importante! "Alarma de la mañana": ¿son los olores de cuerpo levemente diferentes por mañana? Si esto se puede utilizar tan para determinar wakefulness. ¿Aplicable a los animales que son investigados?

"ANALIZADOR de SONIDOS" = sintetizador: La contraseña es el ajuste necesario para alterar el sintetizador del u: la necesidad "synth" fijó de maneras señaladas de hacer sonidos oído audible/comprensible (del ser humano).

+ cerradura de los sonidos 5A500: Activar la cerradura emitiendo sonidos inaudibles especiales del dispositivo minúsculo del bolsillo. +-Key atado al transmisor de los sonidos.

+-sounds puede ser inaudible al oído humano, cerradura se abre. Las ayudas previenen a gente u otros sistemas de vigilancia de saber una cerradura de los sonidos se están utilizando. Tuvieron acceso a la "piel". El audible/fácilmente porción registrable de sonido no pudo ser el sonido necesario para acceder, los piratas informáticos engañosos, mientras que la presencia de este sonido funciona para dejar a accessor saber el modo sano fue activada (cierto plazo de w/in de cuando el sonido importante fue transmitido por el oscilador).

.

--hay las frecuencias que no se pueden registrar fácilmente por el equipo (copias ilegales de los sonidos para abrir). Su más difícil copiar y o saber sobre si el transmisor envía sonido de copiado en las frecuencias no audibles por el volumen humano del oído- se pudo fijar en cierto nivel, para complicar más lejos el copiado exacto/procedimientos de acceso necesarios.

- elementos cambiables de la contraseña. "Orden y sincronización" de señalado: sonidos; pausas; volumen; echada; bajo; w5 suena emitido.

- otros cerca pueden no saber la cerradura se abre, agregando tosecurity.

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" las ocurrencias (para el uip) "discurso": la voz que reconoce sistemas busca ciertos sonidos "sa".

.

- Patentes: El sistema de la verificación de 5450524 contraseñas basado en una diferencia de las cuentas ("cuentas") del tipo suena (SA); 5499318audible que pronuncia y que mide el tiempo de pronunciar.

- mecanografiar los sonidos. Diferente: acentos regionales; idiomas; voz de la persona; cualquier otro sonido distinguible de otros sonidos por ejemplo por su frecuencia, duración, patrón, volumen, echada, distancia del micrófono.

- Estrategia de búsqueda de la palmadita - disco ~6/96 del babero de USPTO: (verbal o sano o música o audi o voz) near15 (accesos del accessor o acceso o contraseña). - Patentes de los E.E.U.U.: Acceso Voice-controlled de la cuenta 5517558. teclado del hardware 5426450Hands-free. Información de acceso 550303

- AT&T 5335313 Voice-actuated, sistema de control altavoz-dependiente para la cama de hospital. 5309504.

- los sonidos se pueden utilizar para crear las imágenes del "artista" - > aumento "acceso": Manera de la generación de los sonidos (por u) determina el tipo imagen. Accessor= genera el acceso señalado" del permiso "del pattern= "de los sonidos".

. Elementos cambiables de la contraseña. "Orden y sincronización" de: se emiten los sonidos w5.

- "Alarma de la mañana": UIP-DB almacena los tipos de los sonidos de usuario cuando son despiertos = este against= comparado base de datos que esos sonidos vocales emitieron por el usuario por mañana. El usuario necesita traerse al wakefulness = alcanzar el "humor "señalado"" en el voice= del usuario según lo "analizado" por el "analizador de sonidos".

El "teléfono" = también ve el archivo: Parte-Telecomunicaciones para códigos más futuros de las piezas de las explicaciones usados. Eg.: para la telefonía, usos relacionados de la autopista de la información del "acceso".

. "CID": puede acceder solamente de números designados del teléfono. Si llamador no de señalado teléfono #: Usuario señalado como sospechoso. Tener acceso es limitado, eg.: por parámetros del tiempo; tema; contraseñas adicionales necesarias. Las llamadas de sistemas detrás u en teléfono # u deben llamar de, y cuentan con un busy signal. El acceso puede seleccionar incluso para no contestar/responde completamente a las llamadas de números desconocidos del teléfono.

- Acariciar a 5280581 llamadas de sistemas detrás el accessor.% misceláneo: canceladora del ruido del teléfono de 3E040 3E041: (las fuentes sanas identificadas por su tr (código del acceso/uip transmitido) se procesan/se manejan diferentemente como banda; mejor en/lejos de las piedras de afilar del sistema suena con o sin tales transmisores que marcan con etiqueta) - anillo Delayer de 3G010 T: (solamente para las llamadas que vienen de CID particular) - 4E020 colocó la comunicación de los medios electrónicos: (1] el material (registrado) "se analiza" para el uip/las palabras claves y este material analizado es entonces = marcado con etiqueta (uip) = interno tales ayudas que marcan con etiqueta en emparejar lo que (u que se está evaluando (para su acceso/uip) con el material (registrado). 2] "análisis" ayuda a control/a la guía 2E251 el monitor inteligente.) - "alarma de la mañana": el puerto del usuario conecta con la computadora de la "unidad central".

"TRANSMISOR" = transmisor de u (como u camina por el "sensor"); Dispositivo magnético.

. R127 [boleto de tren de viajero de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en puerta del boleto. JR (ferrocarril de Japón)]. También copiado al "acceso", "picosegundo", "cuenta", "pista".

. Dispositivo magnético: La presencia de un imán que toca, o no tocando dentro de algunos milímetros o del cm, activa y o desactiva. El tipo de diferenciación imanes u otros dispositivos que emiten otras fuerzas eléctricas da diversos comandos según el activador. Un activador puede tener la capacidad de transmitir uno o

más diverso tipo señales. El Accessor debe ejercer fuerza señalada, eg.: tipo imán y o distancia se colocan del imán del" sensor ". La distancia cambiante ("distancer") crea patrones necesarios = orden de los accesos la "y medir el tiempo".

. - copiado de la partición de IMI&8 "R".

- El imán (portable)/el objeto del Accessor puede también necesitar encontrarse después de parámetros teniendo/que es: un tamaño (ajustes en ranura); incluir un microchip con construido en contraseña; llave (del estándar); atado a otra contraseña del kn (invención) que genera el dispositivo. "Transmisor " = "llave" del Accessor.

- Dibujo: los imanes similares u opuestos = "sensor" = "anotan" el grado de tracción o de empujar = acceso.

- Radiación: la radiación necesitó acceder. Valores: tal llave no puede conseguir fácilmente sacada del edificio/del área puesto que necesita ser contenida en bastante grande un envase del plomo notado fácilmente, más seguridad en los cheques/las exploraciones de la entrada todos los paquetes/gente.

--Dibujo: radiación = contador de Geiger suaves "sensor" = acceso.

- Estrategia de búsqueda de la palmadita - disco ~6/96 del babero de USPTO: cerradura de la transmisión near9 (acceso o accesos u orverif del acceso o de la contraseña) y (computadora o eléctrico o software) 4C020 del imán: <1 (buena discusión), 1, 4, 4> activan la cerradura vía cualquier tipo de transmisión. La frecuencia exacta y las combinaciones de por intervalos activan las funciones deseadas. Las combinaciones pueden trabarse o abrir, encender las luces, seguridad de la llamada. Frecuencias del ejemplo: luz, sonido, o cualquie otra onda.

- activación vía vibraciones - el nivel de vibración (impacto /movement) y o el código determina el "acceso". El "código" se determina cerca: plazo de cada plazo del modo de la vibración/entre cada modo/llano de intensidad/de número y del tipo de la vibración de modos/conjuntamente con otros factores, eg.: otro "fq" ()/la llave/la combinación/la contraseña/el otro factor del sonido/de la luz de la entrada del "acceso". - más diferente factor, más difícil ganar entrada /crack código (para)/"del "acceso" acceso".

- (en vez de magnético...) cualquier frecuencia que no se puedan registrar fácilmente por el equipo (copias ilegales de los sonidos para abrir) - su más difícil copiar y o saber sobre el copiado si el transmisor envía el sonido en las frecuencias no audibles por el volumen humano del oído- se pudo fijar en cierto nivel, para complicar más lejos la copiar-transmisión exacta puede estar de cualquier otra cerradura electromágnetica del laser de las ondas: Activado disparando las luces laser. <3> 2] 4C020 < - 5A-480-042004. Los detalles de la cerradura del laser encontraron en archivo principal del "acceso".

- Accessor= genera el acceso señalado" del permiso " del pattern= "de la señal del transmisor ".

. Elementos cambiables de la contraseña. "Orden y sincronización" de: se transmiten w5transmissions.

La "TRAMPA" = + "maniobra" = "atrapa" (castigo para tener contraseña incorrecta): Tipos de la trampa: imágenes que hacen señas ("avisos") accessors con todo resultados en: - desactivación de la función deseada. Esta parte de esta manera no pudo ser utilizada.

- da bastante información/actos (casi) como cómo el pirata informático puede pensar sistemas si las trampas explosivas de work.+: los tontos "accessor" en que creía él accedió: la contraseña inicial mecanografiada en (si

está correcto o no) resultados en los sistemas que indicaban /implying tales era respuesta correcta: - con todo u dispara para arriba en alguno paso posterior (mientras que falso piensan tienen una de las contraseñas correctas).

- el sistema "sigue" (compila bastante información en pirata informático) para castigarlas: identificar a pirata informático (quién o donde él están/W5 él tiene acceso); "notificar" la seguridad; los vagos en el pirata informático a mejorar los cogen sobre cualquier tentativa subsecuente que puedan confiar en accessors principales "que fanfarronean" de hacking.+ - encendido: una cierta información delicada puede necesitar ser dado para continuar engañando al pirata informático en que cree ellos no se ha identificado como pirata informático. Dependiendo del nivel de sophistication= del sistema del acceso la "designación" entre el given=will sensible y no sensible y de la "interceptación" de la información mejor permite que los sistemas del acceso logren sus punterías: accessor de la "trampa"; parar los reattempts en cortar.

- Archivos usados para "fanfarronear": "señaló" necesidad de los archivos de ser accionado para abrirse cuando juzgan a los piratas informáticos presentes. Estos archivos deben ser accesibles de una manera realista, eg.: llaves de u en (otra vez) contraseña (iguales). Los archivos para "fanfarronear" se pueden alterar los verdaderos vía: "corrigiendo"/búsqueda y substituir/alteración manual.

--esperanzadamente no contienen la información (bastantes) para que el accessor imagine cómo a (W5): accede y no ser considerado un pirata informático; aprender sobre presencia/características "que fanfarronean"; confiar el sabotaje contra cualquier persona o cosa, incluso si su no sensible al dueño del sistema que es cortado.

- guardando a pirata informático el pensar de ellas se están llevando encendido: ninguna acción absurda (de la contraseña) del accessor no puede ser tolerada necesario.

. Tipos de información o de elementos de la "interceptación" dados al accessor: el teléfono numera para los accessors al call= que tienen CID (requisito de acceder) = entonces identifican a pirata informático; las otras fuentes o pirata informático de los lugares pueden visitar (por la "computadora" con su CID) (en WWW).

- interruptor (con los virus de computadora (que pudo ser desactivado mejor por el regulador de la manera de la puerta de acceso), el pirata informático que entra en contacto con este regulador humano puede llevar a identificar quién es el pirata informático (si el pirata informático es inconsciente el virus es realmente una trampa explosiva). El virus alcanzado del sistema puede tener la información/puntos de contacto para inhabilitarla.

- el sistema del pirata informático se etiqueta para todo el futuro "que interconecta" con otras computadoras, así que otros sistemas saben que el sistema a un pirata informático utilizó del pirata informático una vez.

--Eg.: 1] número del teléfono de CID del pirata informático se coloca en el DB del número del list>tel del <black. Éste es un ejemplo de cómo el engaño ocurre sin (sin) el conocimiento del pirata informático. 2] porciones de interruptor (software) o de hw (permanentemente /secretly) "se corrigen". Tal como porciones usadas para ayudar a sistemas informáticos a: identificarse; acceder; utilizar el módem; "obrar recíprocamente" con los nuevos datos/interruptor (software) (en Internet/m). Misceláneo: identificación - > "siguiendo" = piratas informáticos/piratas informáticos del nr/de la "interceptación".

- valor: el miedo (más lejos) del castigo ayuda a rechazar las tentativas que cortan subsecuentes del pirata informático; u legítimo sin procedimiento de acceso correcto (más) se fuerza para hablar con sus supervisores (antes de que el daño se hace de cierta manera (liberación de la información delicada; daño al sistema o qué está efectuando (por uso incorrecto)). + tentativas subsecuentes del pirata informático o de sus colegas en cortar: - la "pista" = los "vagos" son más en la mirada hacia fuera para los accessors similares otra vez. Las ocasiones son pirata informático probable tienen cierto patrón del comportamiento común (UIP) = que sea común en cada acceso (tentativa).

--si es UIP-DB en el comportamiento del pirata informático los sistemas del lacking= pueden continuar permitiendo que el pirata informático sea en creencia engañada ellos son acceso que el UIP =while aumenta su DB en piratas informáticos. Otro "atrapa" y los castigos: Cualquie otra manera sabida del "restricción"/que castiga a piratas informáticos humanos/equipo usado por los piratas informáticos, con o sin el conocimiento del pirata informático.

- Ver la base de datos de la patente: Palabras claves - (contraseña o acceso o accesos o acceso) y (la pista o castiga o atrapa o tonto). + construyendo una mejor defensa contra piratas informáticos: UIP en piratas informáticos probables: desarrolla el db=ba (qué comportamientos a buscar) contra (diversos) piratas informáticos futuros. Aprende qué es más sensible y solicitado por los piratas informáticos, interno que requiere defensas adicionales. Es decir: Tuvieron acceso al "analizador" que identificaba debilidades en sus defensas (así que los sistemas puede (automáticamente) repararse).

. Dibujo: "Trampa" = NOTIFICADOR CIENTÍFICO de // de la INDIRECTA de la PIEL ACCESSPROCESS () // de // del PROCESO del ACCESO del CAMBIO de // del ANALIZADOR de //VISUAL del TRANSMISOR del teléfono de // del ANALIZADOR de SONIDOS de // SMELLANALYZER () // de las SEÑALES de // del ANALIZADOR de // del =ARTIST del acceso del ~ de C (las "trampas explosivas" aparecen adentro debajo de piezas mencionadas que las piezas de /below se utilizan para hacer señas piratas informáticos/las piezas uip-se adaptan para hacer señas a piratas informáticos) () () de // del SENSOR () de // de las LLAVES () de // del SENSOR () de // de la FUSIÓN () de // del MOVIMIENTO () de // de la MANIOBRA () de la REPETICIÓN LIGERA INFRARROJA DEL COMPORTAMIENTO de // PS-ZONE () // () () () () // () () () () () // CUENTA de //PROMPT de la ORDEN y de la SINCRONIZACIÓN () () // (Accessor hecho para creer los tenían arriba una bastante cuenta o "estado").

"VAGOS": nivel de crimen o de daño conducido por el hacker= según ("analizador") = resultados en un nivel correspondiente de punishment= al pirata informático. Espejo: se permite al accessor (parcialmente) verse como el regulador del acceso los ve. System= después analiza cómo el accessor cambia su proceso del comportamiento/del acceso. Esos cambios "se analizan más cuidadosamente" para lo que pudo intentar el accessor para camuflar sobre sí mismos, eg.: su mal□n traits= que el sistema está intentando "seguir".

. "Siguiendo" el hacker= después de que se hayan identificado: - Las "etiquetas" se colocan en las transferencias directas materiales del pirata informático. Mientras que este material se mueve ("encaminado") alrededor (su/sistema principal/WWW) = la " pista" sigue el it= a: otros que colaboran con paradero del pirata informático/del pirata informático/mejor entienden el comportamiento del pirata informático. "Dirige " = los

"piratas informáticos " = en su "señalado " = "trampa". Alarma de la mañana: si el usuario apaga el sistema/desactiva castigos del manner= de la alarma in/on-authorized puede incluir: la pérdida de sistemas de alarma de las funciones de /other de los archivos se ata a. Ver que la información en el otro usuario de las maneras está castigada/que motivated= así que consiguen en y permanecer en un estado del wakefulness.

"ANALIZADOR VISUAL" = huellas digitales; cara; cuadros. Esta parte es muy relacionada a: Tuvieron acceso al "artista", y la "imagen" entró para acceder. + centelleo del ojo: patrón del centelleo - > códigos. Posiblemente solamente para los ojos únicos de cada persona (diafragma). Códigos de Morse de los centelleos. Otro ejemplo del movimiento del cuerpo que accede.

--el color necesario del ojo se puede alcanzar usando el Accessor coloreado del contacto lenses.+ debe usar/los colores (coordinados) particulares del presente para el acceso (entrada, uso). Ejemplos de la "imagen" del otro "artista": insignia de la compañía blasonada en el traje; la identificación del cuadro acortó en la camisa. Éstos son ejemplos de "imágenes necesarias"/de la "coordinación visual" necesaria para el acceso vía el va.

- ver las Software-Huellas digitales de coordinación de la imagen de R24-1 del "artista". También: Diversas huellas digitales genéticas = /scanned mecanografiado adentro; fotografías (caras, claves de barras, paisaje). Líneas también de: palma y cuaesquiera otras partes del cuerpo.

- "Analizador visual" para los objetos de 3 dimensiones externamente demostrados: Cara única del u; cualquie cuadro u objeto ellos = demostración "cámara". Los objetos pudieron necesitar ser dado vuelta/ser pescado con caña hasta 360 grados (a la velocidad señalada, por ejemplo poniéndola en una placa giratoria determinada de la velocidad).

- "Analizador visual" para las imágenes en superficie plana/tridimensional: - Generación de la imagen: ("Impresora") imprime una diversa imagen cada vez, basado en sus sistemas cambiantes = las imágenes de la creación de la contraseña explorados = c = acceso. --Fuentes múltiples que generan contraseña: El usuario pudo también ser pedido hacer todos/parte de la generación de la imagen, así que la salida de la imagen efectuó por la ayuda simbiótica de cada fuente. El interruptor geométrico del efecto (software) puede tener en la entrada de cada fuente en uno a causas un resultado casi incomprensible qué cualquier una fuente incorporó - de dificultad cada vez mayor en la identificación de la entrada de cada fuente.

---Dibujo: cada fuente (c (interruptor del generador de la contraseña)/u) = entra imagen dato/interruptor () del software/el etc = "analizador" = c integra ~alters entrados de los elementos según el integrador de las fuentes/c = contraseña final desarrollada (comprobado con minuciosidad para el visto bueno de la exactitud/de la funcionalidad/de seguridad) - > contraseña dada/impresa/indicada/tr a otra.

- Generado previamente/utilizó la alteración señalada necesidad de las contraseñas ("corrigiendo") del acceso subsecuente.

- Las imágenes incluyen: claves de barras; diseños/pinturas del extracto; solo o multicolor; colorante en cortinas/bloques del sólido o puntos (minúsculos) como en las impresiones a todo color de los periódicos.

Huella digital de la persona de los cheques de la computadora R174 ("C") antes de dar un plazo el" acceso" del 2 de agosto de 93 NK-se movió al sistema gestionado huella digital de la entrada de 6.96R195 del "acceso". El 25 de enero de 93 NK-se movió a la cámara accionada por control remoto de 6.962E251 del "acceso": (el

sistema supervisa a gente según su acceso/uip (código))software de la dislexia .5G061: (velocidad en que acceso resuelto del u dado Info: cualquier u consigue que Info rápido (inhibe piratas informáticos de computadora uninitiated que)/interruptor (software) retrasa cuando la necesidad de los protectores de c/security más tiempo "analiza" el "acceso" llano de u (se está preguntando quién (por c); software de la lectura de la velocidad 5G070)--formar en qué u envía/recibe. Acariciar a la estrategia de búsqueda - disco ~6/96 del babero de USPTO: (foto o dedo o (bacalao de la barra near2) o imagen o proyección de imagen o visión o representación visual o pictur o (código de la barra near2)) near9 (accesos del accessor o acceso o contraseña o verif) y (computeror eléctrico o software) Accessor= genera el permiso "acceso señalado del pattern= de la imagen del """". Elementos cambiables de la contraseña. "Orden y sincronización" de: imágenes w5 dadas. .ver: + "analizador visual", y "artista" = "VA". "Imágenes" del otro "artista" necesarias para acceder:. cualquie producto de la naturaleza con sus características visuales. Los sistemas pueden requerir la característica común a la especie o a la categoría científica de producto, eg.: la mano o el pedazo de oro de cualquier gato, o sea más particular eg.: la pata derecha delantera del gato específico, o el oro de 22 quilates en "señaló" forma. Búsquedas: color, textura, peso (del guardapolvo)) de objetos. Los requisitos del acceso alteran según criterios razonables, eg.: las plantas cambian su condición (inactividad) a veces del año; las manos son más frías en invierno (eg.: para el "sensor infrarrojo"); % puesto que no hay árboles de roble en Hawaii, hojas se deben volar adentro y por lo tanto perderán algo de su color en el interino. Los objetos se pueden poner en cierta manera por (analizador no visual) el "sensor". Ejemplos: - gente: cuaesquiera partes del cuerpo.

- animales: cuaesquiera partes del cuerpo.
- plantas: cuaesquiera partes del cuerpo: hojas (sus venas, forma externa, color (cambios por la época del acceso del año buscada), rama-organismos: cualquie tipo célula o "señal científica" que generan.
- productos químicos: fórmulas necesarias: porcentajes de la cantidad (total) de diferenciación de los productos químicos de cuaesquiera piezas. Acceso = " analizador contento químico ".

"W5" = acceso en el momento adecuado: temperatura señalada, tiempo, ciertas noticias en medios de comunicación, cuando otro u "señalado" también tiene "acceso". Ver de la sincronización del acceso el subconjunto de la "orden y".

- Accessor= genera el acceso "señalado " del comportamiento" del permiso" del pattern= W5.

CONCLUYE ESTE ARCHIVO de ACCESS-IMI (las piezas)

Archivo: Acceso \ CA-Imagen

Archivo: CA-Imagen. Sistema del acceso de la entrada de la imagen.

. P sistema entrado imagen del "acceso 4E-030":

El usuario o el quién desea acceder en un sistema debe hacer ciertos cuadros para acceder. El accessor debe crear una imagen con un ratón de la computadora, o vía otros medios; cuál debe emparejar el diagrama en la memoria de computadora. Esta imagen actúa como una contraseña.

- El sistema tiene una tolerancia señalada para las imágenes que diferencian de la que está en su memoria; el accessor puede dibujar el cuadro de una manera algo diferente cada vez. Esta forma de tolerancia puede por ejemplo buscar un cuadrado o un triángulo de cualquier tamaño aproximado.

- La imagen permite el acceso a cualquier privilegio descrito en la partición del "acceso".

. Los usos incluyen: (de) activar la alarma; verificación adicional de u (usuario) (persona que intenta acceder (vía las imágenes/los uip-vagos que emparejan (análisis de la firma N))); retrasa u (usuario) que los sospechosos del sistema sean piratas informáticos/bandidos; accede el into^: manera de la entrada; uso del producto (c, un cierto sistema (electrónico) del EL); uso del juego; niveles más altos de uso dentro del sistema; actividades bancarias: transferencia de fondos electrónica; acceso en el edificio o la C.

. Los tipos de la imagen necesitaron para el acceso:

- las líneas rectas conectaron a los ángulos; (u) cerró las formas dibujadas con las líneas, eg.: círculos, triángulos, cuadrados, rectángulos, pentágonos, hexagrams, polygrams...; (líneas de) puntea en las localizaciones señaladas (en S).
- el tipo imagen requerida a menudo será los para las cuales el analizador del sistema puede construir una tolerancia razonable para la diferenciación [si tales imágenes son entradas por la mano del accessor y no vía otros medios como un cuadro, un thumbprint, un etc].
- hacer similar o el cuadro relacionado o único, sistema puede dar las ideas (de los avisos) para el cuadro, eg.: unos que inculcan la idea de despertar como el funcionamiento para coger el autobús.
- mecanografiar los ejemplos del diagrama: adicional agregar en elementos se hacen a los diagramas anteriores
- para mejorar a usuario de la ayuda en recordar diagramas necesarios; los diagramas pueden ser de sistemas de cosas tales como vehículos (primer coche, autobús siguiente, aeroplano siguiente), o las formas de provincias o los estados, o las palabras (nombres medios de su familia); líneas del zigzag, eg.: tela de araña o dibujos del niño (requeridos longitud de líneas (rectas) con ciertos ángulos necesitó en las líneas de los puntos que la curva/se interseca.

el tipo imágenes/métodos/manierismos de +-Altering necesitó acceder, para evitar a piratas informáticos que conseguían un tipo no-cambiante imagen o método de la contraseña. El sistema determina (desde el punto de vista del pirata informático) casual imágenes necesarias w5 se cambia (según circunstancias).

--Para Techies: Dibujo: Usuario = este sistema de N (invención) (qué ayuda en la determinación ("analizador") para el tipo imágenes necesarias = % del tipo imágenes dadas (entrado); mecanografiar los avisos y u otros desafíos pueden ser cortar más difícil/grieta dependiendo de, eg.: las circunstancias (véase las características el seguir)/percibieron el ~ c (computadora) del riesgo para la seguridad (tipo u ()/tipo uso del usuario buscado por U)) =

ACCESO; AP (tipo uso de N); ARTISTA (si el tipo N (invención) del "artista" está conectado con N principal; capacidad del dibujo del u (uip, cuenta)); vagos (analizador del comportamiento del `); CARRO (entrado en el sistema por u); EDIT (que analiza imágenes entradas por u); EDUC (si el sistema necesita enseñar a u); Se reduce K (teclado) (si solamente el teclado es disponible/funcionamiento, después imágenes disponibles; o el sistema entero puede cerrar en este caso debido a riesgos para la seguridad más altos); RATÓN y R (teledirigidos) y K (teclado) y inclinación y T-anchura de banda (tipo ratón que es utilizado, sus limitaciones que son consideradas); MULTIUSOS; Banda (programa informático); RANURADOR (de donde en la autopista de la información/la tela u (usuario) vino adentro); CUENTA (funcionamiento anterior del u);

DISCURSO (analizador de sonidos); ESTADO; tds (matriz) de la fecha del tiempo (ocurrencia del pasado/de la actividad actual de u); INCLINACIÓN; PISTA; Usuario (quién son); UIP; UQ (el tipo pregunta u pedido/los errores que hicieron, ayudas crea un riesgo para la seguridad percibido de U).

+-3D: El usuario puede necesitar entrar/crea/responde a las imágenes tridimensionales (sobre "S "interactivo"").

"VR".

--el usuario puede necesitar obrar recíprocamente con la imagen 3D, tal como saber dónde en el laberinto 3D o el terreno la "puerta secreta" o la "llave" o la contraseña de ese día está situada.

---el accessor puede necesitar la primera contraseña conseguir en el terreno.

---demasiados errores en intentar localizar el acceso en este terreno invalidan la primera contraseña de ese usuario.

- Color: el color demostrado en S (pantalla) puede cambiar, aunque el código de color utilizó (vía K) es igual. Propósito: engañar a piratas informáticos que comparten la información con uno a de conseguir datos de sus notas que mencionen qué colores se utilizan/necesario/se responden/W5 alterado.

- Tamaño: cambiar simplemente el tamaño w (con) (más) otros aspectos de la imagen que siguen siendo iguales.

- U/el sistema puede saber/sugiere cuándo (w5) necesitó imágenes son ser cambiado.

- Dibujo: u (usuario) = K (teclado) = analizador visual = acceso (analizador, cuenta (riesgo para la seguridad)).

. El incitar puede ayudar simplemente a u a recordar la naturaleza de la imagen deseada, sin (sin) el donante de todos los datos sobre las imágenes.

. - U sabe que el 1] tema adicional y o] la manera 2 en los cuales representó el tema debe ser dibujado. Eg.: los estados pronto "fruta cítrica" = u (usuario) vía #1 recuerdan su una naranja (no el árbol o la hoja), vía #2 que la imagen se debe dibujar con las líneas finas o gruesas (causadas por el nivel de la presión/la manera de stylus/R (5E020)) y si la fruta se debe completar del shading/de los varios colores o apenas del esquema que se dibujará.

- Avisos: Para Techies: Dibujo: Usuario = este ~ c (computadora) del sistema de N (invención) (tipo avisos dados u determinado vía) =

ACCESO; ANALIZADOR; CARRO (cartucho del software del '); EDUC; mfh (transmisión en circuito de la unidad central); MULTIUSOS; Banda (programa informático); Picosegundo-Zona; Q (hace preguntas); CUENTA (funcionamiento anterior/avisos de u durante sesiones anteriores); ANALIZADOR de %SOUND; ESTADO; TDS (hora, longitud o nivel de visto bueno de seguridad para el tipo señalado acceso/tarea); UIP; ANALIZADOR VISUAL.

- Quizás solamente el "acceso que busca" de la entidad sabe qué escribir (las pistas/los avisos pueden ayudar a un pirata informático de computadora).

- muy similar a 4C210

. - elogios el otro features^ del "acceso": huella digital del u o scanning->c de la imagen de la bola del ojo (correlativos contra memoria); carro; contraseña; transmisor usado por u (usuario) (usuario) (entrada que busca).

- utilizar el sistema "para anotar" el comportamiento/la capacidad del u: uip; bva (éste es parte de bva); capacidad del u para las tareas específicas, replegando áspero el sistema psicologico/sociológico de la existencia de prueba (en el papel) que estudia el comportamiento del u; "analizador visual".

--hecho vía ayuda de: "analizador visual" (de las imágenes hechas por u para acceder, o durante la sesión del trabajo sobre C), "uip-vagos".

- D1: =c~access de los =s del u= (aguja/dedo) (pantalla táctil) = oscilador/printer/m/cart

- copiado para mejorar el archivo 1.95 de N (invención)

- Para Techies: acceso; "mañana": desactiva la alarma sobre la entrada correcta del u (llana de la semejanza controlada por la banda).

. - aplicaciones cuaesquiera "analizadores electrónicos existentes" que analicen firmas humanas/imágenes. También ver los números de patente mencionados. La oficina de patentes de los E.E.U.U. está trabajando en un sistema que analiza visual para su base de datos de la patente.

. PATENTES:

- Estrategia de búsqueda de la patente: #1: securit y (la firma o el drenaje o dibuja o dibujando o (creat de la imagen near5)). #2: (seguridad o (acceso del ajuste del aumento) y contraseña

Kilovatio: acceso

- Números de patente de los E.E.U.U.: método 5319797 5222138 4903991 4908861 4991205 + 5111512 para la verificación de firma - patente 1992. Tener acceso se da con la firma correcta.

4850018 4869946 4758718 4799258 4816653 4851937 4876717 4326098 4023139

- especialmente las patentes enumeraron/relacionado con el "analizador visual" y el "acceso"; y a un cierto grado "vagos" contra patentes de otras características para este KN.

Las demandas incluyen: las ayudas solucionan el problema que las firmas de la gente están a menudo comúnmente disponibles.

- los diagramas necesarios pueden cambiar en un cierto plazo y o después del número señalado de usos.

+ generando imágenes vía: "Ratón" de "C"; 5E020; tableta entrada de c (computadora) usando la aguja o el dedo o el otro palillo; "Artista"; R; % "del sonido al convertidor visual"; manera en cuál camina sobre cerca del movimiento "sensor" = "acceso".

- UIP/VAGOS: éstos también se utilizan en la determinación de si el acceso está permitido. El sistema "analiza" las imágenes últimas y actuales generadas por User y las estudia vía la palmadita no 5111512 de UIP-BA o de los E.E.U.U. en el juicio de cómo está cercano/disímil las imágenes/las señales recientemente incorporadas son de criterio necesario.

+ "artista": todas las maneras diversas (existentes) una pueden entrar/alteran/"corrigen" las imágenes/los dibujos, que fueron generados/comenzados por la persona (u, un "acceso que buscaba") o el sistema (vía sus avisos) puede ser utilizado.

- Ejemplos adicionales:

- Búsqueda de la patente para esta subdivisión del "artista": (artista o drenaje o (imagen del creat near3) o (cuadro del creat near3)). Kilovatio: crear puede ser w substituido: alterar, diseñar, corregir, hacer, convertirse)

Indicadores

- Sensores: peligros, novedades, supervisión de acontecimientos: el producto químico señalado necesita ser: insertado/colocó en/sobre el sistema; hacer el nr (notificador del `) cambiar.

generador de imagen posicional 3E152: Los cambios en la posición de objetos móviles son colocados por el sistema que el interno genera una imagen o la "pista" para los cambios dichos - > cuando tales imágenes emparejan los criterios del "acceso", se concede el "acceso". Es decir su patrón del movimiento vía las zonas/inclinación genera un patrón según lo percibido por el "sensor" - > las imágenes móviles o inmóviles de la C. son generadas por la localización de elementos en el tema que puede generar señales en "analizador visual".

- posición de cada elemento generado cerca: 1] luz/color/calor generado de la porción/de todo el objeto apuntado. /2] tr (transmite) objeto apuntado (de los transmisores (en la superficie/los accesorios/adentro). /3] "distancer". /4] localizador: Objetos de los hallazgos de KN (invención).

- Dibujo: señales que vienen (moviéndose/inmóvil) de objetos = "analizador" = generador de imagen/"pista" (cuenta, monitor inteligente 2E251, desarrollo uip-DB).

- esta parte es similar a muchas otras secundario-Características.

La contraseña "cuenta" necesitó la generación de la imagen del so= es color= deseado in= a acceder.

Pluma multicolora de la aventura del software -1C310: El dispositivo decide a cuando cambiar color en otro color que empareja. En formato de la pluma o del software.

Str de la búsqueda de la patente de los E.E.U.U.:

(acceso o accesos o teniendo acceso) y/adj15 ((acceso del aumento adj9) o entrar o contraseña o secur o proteger o authoriz

- Patentes de los E.E.U.U.: Dificultad de 5491752 aumentos de la contraseña que conjetura ataques.

--Str de la búsqueda de la palmadita: Trabajado con la base de datos disco de la palmadita de los E.E.U.U. del "babero" 4.96.

. Cifrado: cifrado con estado plus ultra.

- actividades del u: tener acceso a los procesos, a los archivos, al etc.

- sistemas/banda de la contraseña, o el hecho de que exista uno.

- Misceláneo: "Pista", "cuenta", "UIP" (uip-DB)

- la contraseña sí mismo cifró = y descifró solamente por analizador" del punto de acceso el "= determinar si el acceso permitió.

+ ver la imagen del "artista" el generar de modos: ninguno de estos poder crea las imágenes/los procesos necesarios para tener el "acceso".

Dispositivo de la palmadita 5486122 de los E.E.U.U. y método computacionales usables autónomos de expresión artística usando el "juego": Los dispositivos educativos que usan métodos educativos process-oriented se divulgan para preparar a niños para el teclado. El dispositivo incluye sistemas de guantes y de indicia aplicados a los dedos de guantes para proporcionar las representaciones ilustradas del teclado.

El Accessor selecciona las "imágenes" que "se corrigen" según lo "señalado"; o "corrige" el them= después tiene el "acceso".

- Iguales forma "corregida" no se pueden utilizar más de dos veces en una fila.

- las "imágenes" experimentan "corregir en curso " = accessor necesitan saber en qué punto en el acceso evolutivo del process= es viable.

. Hypervideo (existe): los usuarios chascan encendido (moviéndose) iconos de las imágenes los', y consiguen los videoclips encaminados/información (`adaptado a sus necesidades). El software del seguimiento de objeto (existe) hace (moviéndose) imágenes clickable.

--Usos de acceso: el usuario debe saber en qué cadena u orden y sincronización, en las cuales necesitan chascar imágenes, como ruta ellos mismos [ellas] en el programa a acceder. Las imágenes de Clickable pueden cambiar [en la manera adaptada], eg.: el usuario chasca solamente encendido qué él reconoce, eg.: las caras de la

gente/de objetos él es [íntimo] familiar con, o que tienen alguno [semi] - razón lógica para ser chascado encendido, eg.: argumento [basado en los vagos del usuario].

TUVIERON ACCESO a la información miscelánea: Archivo k \ ac&

Formas de acciones misceláneas permitiendo el "acceso":

- Formas de movimiento por el U. Ver Yamaha Miburi y KN relacionado de KN.
- Formar del usuario que causa la "vibración".
- La manera algo está montada o separada: alarma de 3A205 Tamperer. Cubo de las rúbricas.
- Procedimientos de acceso del movimiento: Movimiento correcto de la mano o de la palanca de mando. Tipo #1 del movimiento - > tipo #2 del movimiento.... - > acceso. Ver Miburi de KN de Yamaha y de KN relacionado.
- Sensor de la vibración: Detecta la vibración, eg.: si la persona es que camina o que se sienta en el sensor; o señales de la vibración de los sentidos que vienen de a otra parte.

Misceláneo: incluye (c) los sistemas sabidos que restringen el "acceso" de la gente/de otros sistemas: uso, EL particular del trabajo w (con) N. (electrónico).

Diagrama general para el "acceso":

. D1: 1 Reino Unido (usuario en el teclado) = 2 C (computadora) del `= 3 tr (transmite) = función 4 M/5. D1 para Techies:

Detalles:

+1: Passwording: acceder vía afinar en la combinación alfanumérica; afinar la inserción; vía el telecontrol ("R", contraseña tr (transmite) de R); huellas digitales, contraseñas, tarjetas dominantes, uip, otra C (computadora) del `(su interruptor), palmada

25: el acceso se puede cambiar vía pp, P.M., carro, u (usuario) con más arriba (acceso predominante, eg.: supervisor, sistema sí mismo de C (computadora del `)); carácter; 24 tds (matriz) de la fecha del tiempo (cuentas w5: cuando, cómo, qué, %why, que ganó "acceso" en sistema - [puede también ser utilizado para el contenido uip [base de datos], 4E020 y el verificador de la fecha]; 25 "S"; el distancer del 23% activa/desactiva la cerradura; 123 acceso cerradura puede ser físico (cerradura y)/barrera de la llave/del software de tarjeta (de la llave de la viruta programable de C (computadora del `)) = (quién puede "tener acceso" al monitor inteligente verificador/2E251 del contenido 4E020 y de la fecha); contenido C", 4E020 de 245 "y verificador de la fecha, monitor inteligente 2E251; el 245% interactivo (activa/desactiva el acceso, 2E251).

13: las señales para la activación/la desactivación del acceso se pueden recibir y o activar vía: micrófono ("mic") (las señales de sonido activan/desactivan access/2E251); teléfono ("T"); MES; tr; %fs (imagen correcta eg.: firma); alejado ("R").

2: inclinación (2E251 activado por el movimiento de la n); distancer (eg.: chapaleta); P.M. 245; 24 mq (la máquina hace preguntas del usuario) (antes de la activación/de la desactivación; para la mejora de la base de datos del uip); 24 multiusos (el individuo requiere para poseer la contraseña o el otro activador/deactivator para acceder); notificador 245 (quién, qué, cuando, está accedido %where, porqué, y o está utilizando el sistema); OSCILADOR 25 (comunicador sano saliente) (si la contraseña o el otro activador/deactivator efectuaron la función deseada, eg.: accedido); 24 uip (el acceso dibuja en la base de datos del pi al mq (la máquina hace preguntas del usuario) antes de permitir el acceso de usuario al usuario; 24 preguntas para el cambio del acceso según uip del usuario (mq un usuario de la acción hecho en sistema en una de actividades anteriores [importantes]); 24 pp; 24%score (2E251).

2 la necesidad para la característica del acceso es normalmente triviales, pero ayudas en la comercialización, y las ayudas organizan diferencias entre multiusos; uip.

1 que el tipo código usado en la contraseña (una serie de sonidos, las luces, las combinaciones de la letra o del número, etc) activa y o que desactiva la función correspondiente reservada para los individuos equipados de la contraseña.

24tds del usuario más allá del acceso se utiliza desarrolla su uip. El uso excesivo o escaso puede excluirlo las aplicaciones de alguno/de todas las funciones, accionar el "notificador", e informar al supervisor del usuario vía el teléfono ("T"), MES, email.

24 el tipo de uq puede por lo tanto (según uip del sistema, P.M., pp) afectar/control el tipo de contraseña/de manera necesarias para activar/desactiva; altavoz 5.

. Para Techies: dibujando esta pieza de la invención (acceso) =

- Palillo teledirigido E020 con el interruptor: (funciones de cualquier R (teledirigido) controlado por el acceso/uip)

El uno mismo del sistema -5E080 analiza la mejor síntesis para la acústica del sitio/del pasillo: (fósforos uip/acceso de u; u (usuario) puede no oír/cierto OSCILADOR leído (comunicador sano saliente) (sonidos/los datos))

Venda sin hilos de la música -5E090: (el acceso limita uso de cierto EL del portable N) (electrónico)

la perforación Alerter y 7G052 del PVC -7G050 y 7G051 dobló el notificador llano: (el tipo acceso determina: tipo de pvc necesario (para el suplemento/menos protección: para ahorrar el dinero/el apuro); qué tipos de ocurrencias (contacto, perforaciones químicos) necesitar el nr (notificador del `) a u/sys/monitor)

. "ACCESO": (sistema del acceso de la entrada de la imagen 4E030):

Para Techies: D: Usuario = este sistema de la invención (acceso: tales acciones (aumento) ~ C (computadora del "acceso") del `) -

Movimiento NR del cuerpo -1J010; Yamaha Miburi.

-1J080 hielo NR: 7G (los colores deben cambiar) = analizador visual (c) = acceso

-2E010 20 30 40 50 softwares de la receta: u (usuario) debe pedir/leída vía ciertas recetas del interruptor (software del `) = (pista) = accede

Notificador móvil de la localización del teléfono -3E010: el nr (notificador del `) funciona solamente para esos w (con) "acceso"; u debe estar en zona señalada (en cierto radio) antes de "acceso"

Encargado de registro de -3E020 GPS:

-3E150 "Picosegundo-Zona":

Suplemento de interior de -3E210 GPS:

Sistema del acceso de la entrada de la imagen -4E030:

Varita mágica -5E020: KN

Anillo Delayer del teléfono -3G010: KN

Alarma interactiva de la mañana -3E060: KN: contestar/pedir a Q correcto (hace preguntas) = acceso

Instructor del movimiento del cuerpo -3E061: el "educ" enseña a u (usuario) cómo moverse = el acceso futuro.

Secretario -4E020: el uip de u (usuario) debe emparejar DB (base de datos del `) = entonces tiene acceso

Interruptor de la dislexia -5G061: "corregir" los cambios según el tipo acceso del u

Interruptor de la lectura de la velocidad -5G070: la velocidad de la lectura del u debe emparejar = velocidad señalada por = acceso.

Ver el analizador de sonidos para: El reconocedor de la voz R54-1 distingue entre los altavoces múltiples

ACCESO = paso de las pruebas anotadas para el nivel de exactitud.

- Formas de acceso: Se alcanza el acceso cuando el sistema recibe las señales electrónicas correctas por ejemplo: en la orden y la sincronización correcta, y la duración de la señal correcta mecanografía.

--Licencia: teniendo una licencia apropiada la cual los derechos pagaron ser hasta la fecha. No excediendo los términos (límites) de la licencia, por el contrato de licencia. Las derechas de la licencia incluyen: territorios geográficos (zonas del `); uso de características, de funciones, y de invenciones señaladas; plazos; comportamiento apropiado del concesionario (según lo observado por el perseguidor y el analizador del comportamiento). Más detalles de nuestro contrato de licencia en nuestro Web site fijado, o ésos de uso general para la característica intelectual.

- señales de la frecuencia del `de: dispositivo teledirigido.

- otras acciones humanas o producidas por máquina correctas: eso se puede coger electrónicamente por los sensores para:

--sonido (del usuario o del animal o de la voz única o del sonido del dispositivo). Sonidos de diferenciación de tales tipos de diferenciación del permiso de las fuentes de acceso.

--imágenes visuales (para las huellas digitales, la retina del ojo, otros elementos del cuerpo). Las imágenes estudiaron por el analizador visual.

--temperatura: del accesorio humano tal como dedo o palma, o el otro dispositivo [calentado o refrescado], o la temperatura ambiente w/in señaló la gama.

Niveles de acceso cambiantes concedidos a los usuarios:

- analizador: acceso de las paradas sobre actividad sospechosa. Eg.: el cortar de la computadora - acceso frustrado en los archivos o las funciones para los cuales el sistema no ha ofrecido el acceso.

- la cuenta del `y el uip alteran el nivel de acceso, cuando (los patrones de comportamiento) de usuario estar adentro fuera de patrones (del comportamiento) señalados.

- Acceso concedido a todas las o a porciones funciones disponibles: W5: cada multiusos tiene poseer el marco de tiempo (TDS) para acceder. Las funciones deseadas de diferenciación pueden tener su propio tiempo de acceso/tipo parámetros.

- las formas de acceso pueden periódico estar completamente o cambiaron parcialmente.

. Cuentas de diferenciación: El tipo de cuenta alcanzó funciones como la entrada a las funciones señaladas asociadas a tal cuenta.

- Qué tipo anota oferta: Longitud de tiempo del acceso, o calidad de la función. Cuentas más altas pueden activar más o pocas funciones. Las cuentas de diferenciación pueden activar funciones señaladas sin una cuenta posible permitiendo el acceso a las funciones accesibles.

. El notificador activó si el sistema da una alta oportunidad de la cuenta que el accessor es ilegítimo.

- Diagrama: el usuario = el acceso = la computadora = resulta para el usuario

--"Conocimiento explícito": Info documentado accesible en cualquier momento por cualquier persona con o sin una contraseña". Esto se deja disponible como sistema en programado.

1.51

INTRODUCCIÓN - ADAPTACIÓN DE INVENCIONES A LAS NECESIDADES PERCIBIDAS

También llamado - programación de la información de usuario

Adaptar el contenido para los archivos múltiples

. Introducción y sastre

. Invenciones adaptantes

. Piezas secundarias

. Ampliarse

. Acoplamiento

. Artículo

. Patentes

. Cifrar las secuencias para el software y la DNA

. Otras adaptaciones

Aprender que es más rápido y más fácil autorizar de nosotros, que intentando evitar esta solicitud de patente revolucionaria. Este uso tiene tan muchas maneras de adaptación. Llamada (+1) 707-428-5000 www.LicenseItToday.com.

La adaptación adapta las características de un sistema para las necesidades únicas de usuarios específicos. La solicitud de patente entera demuestra ejemplos y la información relacionada.

ADAPTARSE = ™ programado de la información de usuario. También llamado adaptación del ™, o adaptación

adaptarse adapta el sistema a la situación. Un ejemplo común es cómo se adapta a las necesidades únicas del usuario. El sistema utiliza la información almacenada sobre el usuario, que entonces modifica sus funciones para requisitos particulares. Mejora funcionamiento de producto. Es decir uno mismo optimiza sus funciones, para adaptarse a la situación actual. Es a menudo característica opcional de la prima de una invención. ¡adaptarse es un tema central encontrado en nuestras invenciones!

- adaptarse es una forma de interfaz adaptante: El interfaz electrónico automáticamente y se adapta dinámicamente a las necesidades y a la capacidad del usuario.
- Las funciones adaptantes incluyen cómo adaptarse puede: acclimate, acomodar, acostumbrarse, alterar, cambiar, conformarse, conformar, revisión/armonizar/familiarizar con las necesidades de usuario, adaptar, adaptar, coordinar e integrar las materias para la mayor ventaja del usuario, ajustar, recoger y adoptar el Info sobre cuál debe ser adaptado.
- Incluye: ™ y jugador programados de la información del jugador que modelan el ™ para los juegos video.

- Ver el archivo 2E - software de la generación de la idea en directorio "yo" - pre 12.96 eficaces.

. -' Corregir o el sastre altera cómo las secciones del código de computadora se buscan y se substituyen.

Adaptar-Simultáneo: El tiempo relacionó [y adaptó] los acontecimientos [si no simultáneo] y cómo pueden ser adaptados. Cada función/ventaja que es adaptada puede considerar los rasgos para los rasgos de los otros elementos [siendo adaptado]. [No hacer] crear [algunos/mucho] sinergia entre cada [`adaptable] rasgo. Ejemplos:

- Efectos en la hospitalidad, juegos, el etc: Los efectos simultáneamente adaptados reflejan los rasgos de los otros efectos. E.G. Mientras que abre una invención enviada en un caso de madera, oler un poco de madera fresca mientras que la audición de la caja puso abierto. La robusteza del juguete que hace estallar hacia fuera obra recíprocamente con la caja como hace el resto de la salida, como los rasgos de una mariposa que viene libremente de su capullo. Efectos de A/V de las razas de coche. Servir de madre a la' reacción del S.A. /V a los pañales gritadores o de mojados del bebé. Ver la sección de las piezas del juego para los efectos.
- Multi-Usuarios: Las funciones que benefician a uno multiusos, se pueden comprometer para ayudar a otros: Características [[tratar el denominador común más bajo (para el 80%)] de los usuarios (pueden entender tan mejor [y ser educado]).
- Ambiente: refleja el humor de la hospitalidad.
- causa reacciones: Luz u oscuridad ambiente que tiene un efecto en la reacción de objetos virtuales.

Archivo: Adaptar/adaptar las invenciones

INVENCIONES ADAPTANTES

MANERAS OPCIONALES PARA USAR LA ADAPTACIÓN EN NUESTRAS INVENCIONES.

consejero 5A810: compila la información de usuario: fecha y hora (astrología) de nacimiento; toma el cuadro de la palma (o pide que el usuario identifique el tipo líneas que tienen en la palma o la computadora); tarjetas del taro (más opcionales).

Para los aficionados a los hobbys en el Numerology: numerology (tarda la vida importante de los números personalmente, eg.: el número de licencia de conductores, los números de "T", el número de la dirección, el etc y considera la significación en ellos, eg.: fuerza de "8" medios y "principio malo 1" o "10". Todos los números en un número del teléfono se agregan juntos, después el número final del dígito múltiple se trata como números de un dígito del múltiplo por el que todos los dígitos estén agregados otra vez juntos, por ejemplo - el teléfono número 222-2222 = 14 = 5) Numerology ha sido popular entre humanidad desde épocas antiguas.
- el dispositivo puede estar en el tipo máquina de la no-venta también, para el uso casero: la gente puede consultarlo cada día para la toma de decisión.
- comercialización: el uso (simultáneo) de los sistemas de medición múltiples (`que analiza al usuario Info) podría ser discutido en la publicidad como siendo más eficiente.
- el sistema puede dar el peso igual a cada método de predecir las situaciones actuales y últimas de la persona futura y que analiza. Y o, el usuario o el fabricante puede dar mayor peso a algunos modos que otros.

Naturalmente, el sistema debe aprender compensar épocas que un método da estar en conflicto/enfrente del consejo' predicciones' que dirigen/las sugerencias de otro analizador/usuario (Info que programa) - pero en tales casos, el sistema pudo simplemente dar a ningul□n comentario sobre área los dos métodos analizados.

Voz que reconoce la máquina expendedora:

Función #1: llaves de los estados de usuario' en qué y o cómo [w5] quieren algo proporcionado, eg.: temperatura del alimento o de la bebida servida

Función #2: reconoce a persona particular que usa el dispositivo, y [no dejar otros que no reconoce uso la máquina] se adapta por consiguiente.

. Otro: También para las máquinas expendedoras. verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

- "Hospitalidad"/cribador del programa (interruptor): 9G-220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

- Las guías/educan del `a usuarios [para que cómo mejore sus cuentas de las habilidades/de las funciones del juego'].

Computadora R53 que adapta: La computadora obra recíprocamente con los usuarios en un nivel que corresponde a su nivel de maestría de la computadora. ['egh]. El sistema también ajusta cerca: adaptación a las fuerzas/debilidad/intereses en diversos temas/tipo de las aplicaciones informáticas [juzga a usuario está más interesada adentro]. Usuarios selectos [de tres] diversos niveles de instrucciones de manejo. Se relaciona con los productos de Fujitsu Ltd, 1060-1, Marunouchi, Chiyoda-ku, Tokio 100 03-3216-3211 NK]

- aplicaciones R52, eg.: R52-1 + UIP

acceso: (); artista: (); cámara: (); carro: (); composición: (); entretener: (); "m": (); mañana: (); multiusos: (); notificador: (); oscilador: (); banda: (); impresora: (); picosegundo: (); q: (); r: (); s: (); cuenta: (tds); synth: (); teléfono: (tr); uip: (); wa: ().

- cualquier kn del EL sistema = "obra recíprocamente" con = según el nivel del u de maestría (al usar el producto/el campo del conocimiento, eg.: la medicina, el arte, el otro uso para el producto).

- el `adapta juego del principal las' a las habilidades de la entidad del juego [habilidades de las entidades del juego].

Predicción del error R122 (usuario): Compara la base de datos

- La computadora ("C") predice error humano. [UIP del usuario de los estudios primero.] 15B: La máquina de escribir automatizada da advertencias verbales cuando el usuario está a punto de borrar algo de memoria. [Relacionado con: 15A: Instituto de investigación central de la industria de la energía eléctrica, el 30 de sept. 92 yarda; 15B Toshiba 7 de febrero de 93 yardas]

. Para Techies: ACCESO: (); %ARTIST: (); CÁMARA: (del "movimientos inusuales visuales analizador" (notifica)) comportamiento del movimiento de /studies para el UIP; CARRO: (); PALMADA: (); %COMPOSITION: (); Exhibición ("S"): (); "M": (); MAÑANA: (); Paladio: (desarrollar el uip); PP/MP: (); MQ/UQ: (); MULTIUSOS: (usuario/observador (que analiza para otras desgracias potenciales));

NOTIFICADOR: (); OSCILADOR: (); IMPRESORA: (); TELECONTROL ("R"): (); CUENTA: (); TDS: (); Teléfono: (); UIP: (); Reino Unido: (); WA: ().

- utilizado también en: [A.I.] [predicciones del `] análisis heurístico.

- el `anota ocasiones del error en cómo el calculador puede ser incorrecto [en cómo una entidad del juego act/be débil].

A9-01 DESPUÉS del SOFTWARE de la VIDA: Hospitalidad.

Antes de que una persona muera, pueden analizarse profundamente en términos de cómo responderían a sus niños, esposos, empleados anteriores, preguntas del etc. La computadora inteligente podrá hacer cálculos aproximados en cuanto a cómo la persona pudo haber contestado.

o tiene un reloj en el cual la persona que es copiada pueda dejar ciertas declaraciones, recordatorios (eg.: tomar el cuidado de su salud, parar el beber de demasiado, de la subsistencia que estudia, del etc), los nuevos aspectos a su voluntad, el etc. mantiene a usuario enchufado y curioso.

la gente rica de o estaría dispuesta a poner su dinero en esto porque: ella no puede tomar su dinero con ella, quiere dejar una impresión (el deseo en la mayor parte de nosotros), quiere cuidar para sus amados, su novela, su la mejor cosa siguiente a estar con amada después de muerte.

- Más detalles en el archivo IMI25.

3J010: Lectura adaptada: La información sugerida se da al usuario (usuario) en formas de: en línea/hospitalidad de Compuserve del World Wide Web/del Internet/de América/del cable y o información (Viacom [compañía]).

3J020: Los anuncios/las descripciones/los comportamientos/las comunicaciones del usuario (usuario) se analizan y los fósforos del sistema que el usuario (usuario) con qué sistema piensa a usuario (usuario) (puede) querer: Las inserciones (clasificadas) del anuncio hechas por User (usuario) = analizado = sistema sugieren uno del siguiente que empareja a usuario:

- servicios existentes/compañías

- listas del correo directo; entra en contacto con quién puede comprar y o utilizar los servicios/los productos ofrecidos por el U.

- anuncios competentes de las demostraciones (de otras compañías)

- D: compara ("analiza") las palabras claves del usuario (usuario) (sus anuncios/co/las descripciones del producto/servicio) con = las descripciones de los anuncios/services/co (en directorio del DB/de negocio/servicios onlines).

- puede centrarse (solamente) en el material "se coloca" que (KN)

- Contratan a los especialistas de los hallazgos del sistema para las actividades U (usuario) a y para qué U (usuario) puede ser calificado menos. Los estudios del sistema trabajan historia/la prueba "anotan" de empleados de U (usuario) y = los fósforos con el curriculum vitae de otros compañía del u del exterior. El sistema "anota" la importancia de la función y si su digno de la incomodidad de conseguir maestría exterior. El sistema ofrece la información de contacto sobre expertos exteriores. El sistema se pudo ofrecer libremente por la compañía del servicio/interruptor (que hace el dinero solamente en los expertos utilizados). Esto sirve como

respaldo para la gerencia que sabe que sus empleados pueden tener demasiado miedo de contratar a expertos exteriores en caso que los forasteros sean mejores y que pueden quitar trabajos de iniciados.

3J030: Alcance de anuncios:

El UIP de la audiencia compilado = entonces los anuncios va solamente a la pauta señalada esos w/in del UIP.

- Medios: en línea, WWW, publicaciones impresas, hospitalidad del cable (anuncios de la televisión).
- El "acceso" de diversos espectadores que usan mismo sistema similar puede ser diverso interno, anuncios apuntados diferenciará. El código del "acceso" puede venir de la contraseña activar el sistema (televisión por cable/en línea) y o dispositivo teledirigido y o UIP generado por el programa/sistema de los accesos del sistema w5 (cuando, cómo) U (usuario).
- Los sistemas similares se saben probablemente.

3J040: Unidad emparejadora de la forma de vida:

Las características del ambiente se emparejan con las condiciones de crecimiento ideales de la cada planta o del otro organismo en la base de datos. El ambiente característica son entrado por U (usuario) (del)/sistema de la información sabida analiza características.

- Las características (de la planta) del ambiente incluyen: (promedio) diario temperatura fluctuación/humedad/precipitación/suelo humedad ()/tipo suelo (alimentos, elementos problemáticos de la retención, eg.: pobre pH, indeseable producto químico)/aire o agua contaminación/ligero nivel/profundidad de suelo/campo común (insectos/) bacteriano/viral/(de los parásitos disponibilidad legal de) los insecticidas/etc. cubren cada minuto del año.
- D: el uip de la planta DB = emparejado con = uip de la localización = las demostraciones de la "cuenta" como de bien se hacen los fósforos = un porcentaje de el 0% a la cuenta más alta de 100% se demuestra/carta/gráfico de barra/las explicaciones impresas.
- edad ideal de las demostraciones de las plantas para moverse/que trasplanta.
- cualquier forma de vida (otro) puede substituir la planta, eg.: animales, insectos, microorganismos. En este caso son otras funciones (también importante): jaulas/alimento necesario o dado.
- Coste contra la ventaja "analizador": las proporciones del valor de la ventaja y del coste para diversos tipos de alimentos dados/cómo es el objeto de valor la forma de vida (reducir los costes, cortando las esquinas que pueden ser pobres para la planta o la otra forma de vida, pudieron valerla).
- cómo maximizar productividad: cosecha de plantas o de organismos o maximización de la reproducción (sana) (descendiente).

3J050: Doctor de la forma de vida: Ajuste Suggester:

- relacionado con la unidad emparejadora de la forma de vida - sobre KN.
- cuando los organismos están en el ambiente/U (usuario) quieren ya organismos = el sistema señalados sugieren cómo el ambiente se puede alterar para mejorar crecimiento o salud.
- "analiza" soluciones a las enfermedades/a las enfermedades que tienen o pueden golpear organismos. Eg.: detención de epidemia; doctor del software.

- actividades sugeridas para el organismo: ejercicios para los seres humanos o los mamíferos malsanos; dieta cambiada; medicación; temperatura; niveles ligeros; otras terapias.

--(enfermedad/situación/ambiente) características = /k analizado = uip = sugerencias.

--aplicaciones relacionadas/KN (de médico) ""/"de la diagnosis que analiza" sistemas (sw).

- pistas" cambios del sistema las "en organismo/el ambiente = ""/hacen del nr sugerencias (en cambios necesarios (de sugerencias anteriores, eg.: más medicación, productos químicos, luz)).

+ 3J060: Ajustador de la fórmula: El sistema ajusta las fórmulas basadas en la programación de la información de usuario. Los usos incluyen: las recetas del alimento, los estilos de vestir para la ropa (del ser humano) adaptan. arquitectura (residencial), etc.

. Usos:

- Recetas: El sistema puede también ajustar para que haya la gente múltiple, escogiendo las fórmulas del alimento que pueden hacer un promedio mejor de los gustos de la mayoría de la gente. El área de los ingredientes no esenciales ajustó, eg.: para los omlettes puede haber más o menos queso, pero el huevo no se ajusta.

--El abastecedor del alimento empareja U (usuario) con el otro DB (vía el diálogo (los co)) ese abastecedor del alimento de las ayudas determina el uip en el U.

- Entrega de la pizza: si el usuario pidió previamente los salchichones en la pizza, y siguiente quieren la salchicha en lugar de otro, las ocasiones son U (usuario) prefieren la variedad más picante de salchicha y o de otros ingredientes de la pizza (eg.: una pimienta más roja, orégano, pimienta....). O, U (usuario) completa el tipo del uip de cuestionario. Las preguntas incluyen: ingredientes preferidos, alimentos, preguntas en el otro (UIP) KN. Los grupos grandes del viaje pueden tener su gente completar los cuestionarios = los abastecedores futuros del alimento proporcionan (carro del ala) el alcance de los gustos medios del UIP del grupo.

- Servicio de la compañía de la guía del restaurante: U (usuario) (clientes) completa el cuestionario. El interruptor empareja = U (usuario) con = el restaurante cuyo ingrediente/estilo (ambiente, tipo mobiliario) UIP empareja = U. O, la compañía de la guía del restaurante del intermediario = sugiere cómo el restaurante altera receta/el menú para U (usuario) = vía u "acceso" (el número de tarjeta U (usuario) demuestra al ordenar).

- KN utiliza la identificación de llamador de "CID" - para saber qué usuario de la pizza ordenó previamente (existe). Otras funciones son mejora de esto.

- La región de cliente que llama adentro (sabido por los primeros tres dígitos del número local del teléfono) aparece en la identificación de llamador; entonces el sistema determina gustos regionales y o formas de vida.

- La imagen' basó los sistemas informáticos (que adaptan de entonado de colores para el usuario, tal como decoración casera sugerida colorea, telas y diseños de los muebles.

. El sistema es una forma de colección/de adaptación de la base de datos del UIP. Diagrama: El UIP del usuario (cliente) = utilizó por el sistema para sugerir = receta del menú (cañería) de las alteraciones.

+ 3J070: Ajustador de los sonidos: ¿KN? Ver la música o el archivo del SA.

Cada pedazo musical que se jugará tiene UIP "cuenta" que se pueda emparejar con el UIP del humor deseado. Ejemplos:

1] acción del co que sube, así que emplea el ímpetu y la insinuación 1812 de Tsaichovsky del juego. 2] Es viernes y los empleados son menos serios, tan juego clásico contra música pop. 3] La gente es semi-cerebro muerto, tan el juego Bach que es cerebral y creativo más inspiración (según los cuestionarios - ver KN).

- Usos: música de fondo de la oficina; música mientras que la gente está en asimiento del teléfono; áreas públicas: estaciones de tren, restaurantes, pasillo del hotel o cuartos.

- D: El UIP de la situación (el sistema "analiza"/los datos de la persona k adentro) = UIP de la situación/del ambiente determinados = C = los fósforos UIP de la situación con el UIP de la música (del DB de la música) = el regulador = selecciona que (grabado de antemano/para ser compuesto (véase los pedazos musicales de la composición de KN N) están jugados y en qué orden (la orden tiene efecto como cualquier jinete de disco sabe que = los fósforos de este efecto UIP-apuntaron objetivo) = ""/oscilador de la estereofonia.

imágenes visuales de %-selected (también) exhibidas en "S" = UIP del u del fósforo. Ver KN.

el traje de %-suggested usado por el fósforo de los empleados = señaló la situación: clientes/tipo trabajo (peligros, 7G KN).

3J080: Correlador del tiempo del UIP:

Fósforos que las ocurrencias (que emanan del sistema, de w5 del u) consiguen a mayores efectos (deseados) y cuando. En golondrina de mar el sistema se ajusta poniendo hacia fuera más de los elementos (usos, funciones, efectos, resultados, información, oscilador) durante los mejores tiempos.

Usos:

- cuándo jugar música señalada/representaciones visuales señaladas demostración en el S. Sobre KN. Ejemplo: cuando qué música tiene mayor efecto en productividad (como medido por las velocidades mecanografiado medias de todos los empleados encapuchados en M).

- cuándo colocar que anuncios a las audiencias apuntadas. Sobre KN.

+ 3J090: El emparejar del perfil de la personalidad:

El sistema da a cada uno tareas del usuario y o preguntas. Basado sobre respuesta, el sistema consigue una mejor comprensión de cada del' entidad jugador del juego' del usuario que preguntas estandardizadas (de la opción múltiple).

. Cosas medidas:

- creatividad (véase el papel "ingeniería intercultural" de KN).

- manera de expresarse:

- temperamento: cólera; nivel de tensión (cuánto los estímulos una persona pueden tomar/los gustos) - > dando por resultado una de muchas reacciones del comportamiento posibles (tales como cómo el usuario fiable actuará/reaccionar en circunstancias señaladas).

- ver: "cuenta"; UIP

- el por ciento del usuario del tiempo pasa hacer diversas tareas (especialmente ésas que estén conectadas con un electrónico "siguiendo" el sistema), eg.: carretera del Info que cruza para las muchachas; de proceso de datos; juegos de ordenador; envío/letras/datos electrónicamente transmitidos de la lectura; financiero.

- aplicaciones cualquie (electrónico/interruptor) sistema/proceso que analizan del comportamiento actuales/futuros.
- humano regulador de sistema k qué desean sistema = sistema decide que qué necesidad ser medido alcanzar este meta = sistema determina qué dato es necesario (vía)/consigue del ser humano o del psicólogo de M datos vía cualquier medio (el UIP, M) = UIP-Analizador = hizo salir: sugerencias

-

. Usos:

- cómo predicen para actuar/reacciona al usuario en circunstancias señaladas.
- UIP que se convierte en el sistema para mejorar el interfaz con el U.
- sugiriendo con cómo una persona puede comunicar mejor/con/venta del trabajo/enseña: usuario/clientes señalados/asociados/estudiantes (del trabajo).
- se convierte un DB (base de datos) para el UIP.
- ver el UIP; banda; KN (que usa el UIP); otras invenciones del interruptor del UIP del archivo 3J
- servicio de la datación
- usuario que empareja (perspectivas del trabajo) con aberturas/tareas de las nuevas obras: consiguiendo a los que pueden hacer el mejor del trabajo; habilidades que emparejan y necesidades/características personales de la persona con tarea/trabajo
- evitar los problemas: fósforos pobres de la gente; reducción de riesgos (no permitiendo a gente con habilidades pobres o patrones del comportamiento a (toma en tareas aventuradas, eg.: la dirección química, hace decisiones económicas importantes si aparecen ser drogadictos o emocionalmente inestables, la selección experimental del aire).
- interruptor para la creatividad cada vez mayor: ver el papel cultural inter de la ingeniería de KN.
- resolución de conflicto: el sistema sugiere cómo hablar mejor con los antagonistas; cómo presentar ofertas constructivas, eg.: si es más emocional o intelectual, o está allí una mayor necesidad de la confianza en uno o más de los partidos.

. UIP - cómo su desarrollado:

- "cuenta" son convertido por usuario/grupo de usuario ()/tarea/región/interés/uso (geográficos) de la compañía/departamento (del programa o de datos) = "analizador" = hecho salir.
- ver el UIP

. Cómo responde el interruptor:

- piensa en todos los resultados posibles para cada acción propuesta por el interruptor, eg.: el gusto automatizó juegos de ajedrez con la computadora de IBM de la lucha de Gary Kasparov en febrero de 1996.

experiencia 4J030 su personalidad futura: Los estudios de sistema su personalidad y conjeturas actuales' predicen aproximadamente cuáles' los jugadores del juego serán como en el futuro. UIP, VAGOS, INTERRUPTOR.

- oír como lo que usted sonará
- visualizar lo que usted parecerá

- entender cómo su personalidad cambiará
- conjeturar cómo otros responderán a usted diferentemente según cómo usted cambia y el mundo cambia
- conjeturar cómo usted vivirá su vida diferentemente. Considera: viviendo en el país (aplicaciones, tareas, hospitalidad); "obrando recíprocamente" (electrónicamente) con = familia; trabajo (modernización, automization electrónicos); etc.
- D: +db (uip, datos compilados de expertos en cambios (mundanos) del futuro que predicen)/sa/tds (pistas cómo el usuario cambia en un cierto plazo - durante/antes del usuario comenzado a usar)/"del sistema" visual/analyzer+ = c~osc = U. del analizador.

. Base de datos del conocimiento sabido mundano disponible de los especialistas para entender a usuario ahora y estimar cambios probablemente correspondientes:

--Voz y visual aspecto (cara,)/comportamiento del cuerpo de U: utilizan a los doctores físicos y del comportamiento y a los audiólogos para crear el DB; los consultan para cómo humanidad (de las características del comportamiento/médicas/genéticas/de la familia señaladas de la existencia; cambio de los vagos) en un cierto plazo. "pista".

--Donde se dirige el mundo. + productos futuros/invenciones: ver KN+. Futurologists también consultados para las características actuales y futuras (vagos, analizador) en int'l: economía, negocio, política, leyes, cultura, relaciones de familia, etc.

- Cómo el interruptor piensa: Diferente el DB = se compara ("analizado") = con el usuario (su uip-DB). - > esto en golondrina de mar crea un sistema de parámetros (cómo se espera que al usuario esté en futuro). - > después: Cómo el mundo reaccionará al usuario cambiante/cómo el usuario reaccionará al mundo de cambio. [Es decir: El interruptor "analiza" concurrentemente cómo diversos factores cambiantes se influencian, y cómo se efectúan en efectos de la golondrina de mar cómo efectúan otros elementos. Éste es algoritmo del interruptor]

. - Ejemplo: Hombre de entrega del A. United Parcel Service de Juan. en el año #1. Por el año #10 él utilizará su parte posterior menos debido a los cambios tecnológicos futuros estimados (la gente entrega pocos productos/automization de la entrega), por lo tanto él sufrirá de dolores traseros y vivirá menos probablemente un más largo debido a su perspectiva más positiva el vida. Debido a otras características de Juan (su inventiva según lo medido por la personalidad de los "vagos"/la prueba de la creatividad) él en futuro tendrá más energía para inventar nuevas ideas (algo que cansado de trabajo exhaustivo, drenando su capacidad del pensamiento creativo). En golondrina de mar Juan deseará de comprar productos más nuevos para su hogar, y o después de conseguir un nuevo trabajo que trata de una esfera más creativa (eg.: publicidad (Juan tiene personalidad correcta para esto). Juan probablemente a conseguir casó y tiene a 2.5 cabritos (2.1 cuyo irá a la universidad en el mismo país), 1.2 cuyo permanecerá a 100 kilómetros del hogar de Juan cuando Juan es 65 años... Juan tiene menos tensión (que el 80% de otros en el año #20 porque él es más adaptante al progreso tecnológico en sociedad, éste que le da una mejor renta (una casa más grande, más productos, menos en valores familiares...)...

- Interruptor de la generación de la idea usado. El incluir, KN: 2E010 2E020 2E030 2E040 2E050, "analizador".

Patentes: 5410634 método Uno mismo-óptimo y máquina.

Ver la ayuda de las compras 7J07: sugiere lo que puede querer el usuario para comprar. Un agente de las compras. Útil en lugares tener gusto de EBay.com y de Amazon.com

Manteniendo identidad personal confidencial: La base de datos del UIP puede haber restringido el acceso (solamente para el usuario). Algunas porciones del UIP se pueden hacer públicas, eg.: para un Search Engine o (comercialización/Info que empareja) un sistema remotamente relacionado. Las redes públicas/privadas del acceso del usuario/los motores de la búsqueda pueden señalar ciertos secciones/archivos de su base de datos del UIP para el uso público (limitado) (como aplicable a la función necesaria).

La adaptación hace estallar para arriba interconecta: el tipo y la manera de hacen estallar para arriba se relaciona con el uip. La interfaz empareja las necesidades de usuario.

Siguiente desarrollado mientras que se centra en invenciones del aspecto del juego:

La goma entonces adapta: Aumentar la UIP-Base de datos pegando de otras fuentes qué uno encuentra.

Encontrar el material convertido a digital/digitizable, después copiar y pegarlo en UIP-Base de datos. Las búsquedas usuario/sistema' buscan los elementos que [no hacer] apelar a ellos/a otros' los usos señalados. El buscar puede estar para los tipos del UIP [parámetros estrechos] de: colores, objetos, invenciones, gente, terrenos, acontecimientos [basados históricamente] [y sus videoclips].

- la búsqueda del `puede encontrar qué se tiene gusto vía cualquier método investigable: hojeadores [google.com] cómo están hoy y mañana; búsquedas de la imagen y del audio vía el reconocedor audio y el reconocedor visual.
- Usos: UIP para uno o entidades múltiples; crear un menú para los datos uno/sistema puede seleccionar de cuando en modo de la UIP-Entrada; historias audios/visuales de %creating de pedazos montados.

Archivo: Adaptar/adaptar las piezas secundarias

ADAPTAR LAS' CARACTERÍSTICAS DE S

Las Secundario-Características para se adaptan con las ventajas específicas

UIP-BA/analizador del comportamiento: Estudios el comportamiento de usuarios. El sistema reacciona por consiguiente. Concluye con un perfil del comportamiento de la blanco, después puede reaccionar por consiguiente. UIP-BA o los VAGOS puede también ser sinónimos con el UIP [es decir los VAGOS del intercambio para el UIP son a menudo ACEPTABLES].

- El analizador del comportamiento reacciona a la situación:

--El sistema se adapta al usuario/a su humor'. Diversos humores del usuario (influencia de la ayuda) dan lugar a diversos códigos de comando en sistema que controla.

--El `se adapta al comportamiento del usuario.

--El sistema determina el comportamiento/el humor del altavoz, después reacciona según lo señalado. El comportamiento del user= es resuelto vía el analizador de sonidos. Diversos comportamientos dan lugar a reacciones de diferenciación.

- ahorra la hora para el ser humano o estudiar menos eficiente de la computadora.
- puede procesar mucho en tiempo dado
- ocurre automáticamente
- U/el cliente puede eliminar el interruptor; y o reprogramar el interruptor del UIP
- el interruptor también funciona encendido cualquier fundación (del campo común), eg.: Windows 95, ventanas, DOS, Unisys, MAC, otros y sus versiones futuras.

+ UIP-DB: El sistema de base de datos compila la base de datos necesaria de la cual incluye características: usuarios, ambiente, otros sistemas conectados, y sistemas recibiendo el UIP.
--El desarrollo y o utilización de la base de datos en las características del u: identifica/desarrolla diferencias entre el interno (multiusos) de los usuarios permitiendo que el sistema mejore a sastre sí mismo (UIP-Adaptar). UIP-Adaptar las aplicaciones el UIP-DB. Ejemplos: "Tuvieron acceso a VAGOS", "pista", "artista": las maneras preferred u tienen gusto de "imágenes" "corregidas". Ejemplos extensos en archivos de KN.
--Diagrama del interruptor (software): "busca" para qué needed= de los elementos para el compilation= después organiza datos (vía lógica confusa) en el form= usable UIP-Adaptan. ---Notas: Búsquedas: vía los "cuestionarios", "vagos", "pista". Organización de los archivos del DB: la información recogida sobre usuario se puede insertar en uno o los archivos múltiples según los cuales los archivos puedan utilizar la información. Entonces UIP-Adaptar las búsquedas que los archivos ellos necesitan para mejorar a sastre. O más trabajo se puede requerir para que UIP-Adapta encuentre la información necesaria. Ejemplo: "Tuvieron acceso a la cuenta de los vagos" --el DB compila datos para demostrar cómo el accessor es interno del rated= si el good= cambiante de las estancias del grado del accessor uip-adapta/"el acceso del permiso del regulador del acceso".
--Ver el analizador de la base de datos del analizador contento que traslapa UIP-DB.
- Encajar el UIP en un hojeador: donde puede ser recolectado, y ser hecho [en parte] disponible [a ésos con el acceso].

UIP-Corregir: El sistema corrige el material según las necesidades o las características de usuario. El material corregido incluye: texto, (porciones de) imágenes, (porciones de) pistas de sonidos, código de computadora, etc.
--Omite el material para emparejar DB del usuario (base de datos); UIP-Adaptar - altera el texto, ("hospitalidad") del material (9G220). "Corregir". El "ranurador" es un subconjunto de "corrige". Ver a artista.
. Hypervideo (existe): los usuarios chascan encendido (moviéndose) iconos de las imágenes los', y consiguen los videoclips encaminados/información (`adaptado a sus necesidades). El software del seguimiento de objeto (existe) hace (moviéndose) imágenes clickable. Usos del UIP: sastres sí mismo al usuario proporcionando las imágenes señaladas/Info vía w5 apropiado.

UIP-Conseguir-Más duro: El tipo de acceso en un sistema ajusta según la situación del usuario. EG.: el acceso al Info relacionado con otro usuario del proyecto está trabajando encendido en el sistema se pudo requerir para la información clasificada. Podía haber tres niveles de separación del acceso de sistema para un usuario: Nivel uno: todos los datos disponibles; Nivel dos: tener acceso requiere aprobación del UIP-Acceso'. Nivel tres: Ningul□n acceso permitido.

- Características del usuario (señales, UIP) "analizadas" a: determinar si permitir: "Tener acceso" (entrada, nivel/tipo u) permitida uso. Piezas a ver: + " VAGOS de Access',".

- Juegos del `: las acciones apropiadas alcanzan los puntos, más vidas.

--El método seguido `de jugar al juego es correctamente una contraseña necesaria [para cualquie tipo acceso en el mundo real (invención del `)]. El ganar no pudo estar vía la manera obvia de qué parecer conseguir la mayoría de los puntos [la manera de guardar a piratas informáticos de imaginar cómo jugar/pierde el juego para acceder]. El juego adaptado para el jugador así que no hay juego dos idéntico, y la adaptación tal que solamente el jugador legítimo puede saber jugar' reacciona/pregunta de la uip-base de datos de la respuesta, eg.: acariciar su perro o gato, sentándose cerca de 99 otros gatos y perros; entonces interactivo con el animal doméstico para hacer 1, 2, 3 pasos...

+ UIP-Guía/guía: El UIP sabe al mejor usuario de la demostración qué él necesita.

- Usuario de las guías para ganar más ventaja de las funciones disponibles. Sastres sí mismo a venir cerca en el reemplazo de uno en uno tutoring y a ayudar: centrándose en las necesidades de usuarios específicos, contra formas generalizadas de ayuda. Ver la guía.

UIP entrado: El sistema analiza el comportamiento/los gustos, después los archivos del usuario él para que la referencia futura se adapte. El usuario o cualquier persona entra sus rasgos, deseos. También ver la "entrada una vez llamada GA del UIP" del archivo

UIP-Acoplamiento: ACOPLAMIENTO del UIP = maneras opcionales de ocuparse de la situación cuando una función no está trabajando MUY BIEN. Compensa sugiriendo funciones y caminos alternativos. Ver el archivo del UIP-Acoplamiento.

Fabricación del UIP-Fósforo:

- La invención conecta y anota las características del uip para dos o más entidades (usuarios, compañías.

- Existe?: el interfaz de la tela sugiere cuál es el mejor producto en la localización cercana al usuario. El sistema entonces hace la conexión (teléfono). De inventor francés con la invención pendiente de la patente.

- Nuestra invención empareja las características de los gustos del usuario con los productos disponibles, los servicios, los estilos, y otras características señaladas.

- Los abastecedores pueden también tener acceso (el usuario/otros co) al DB del uip, a los clientes de la blanco/a otros partidos señalados.

- Las computadoras (con sus características del soporte físico y de software) pudieron buscar emparejar apropiado con el otro soporte físico electrónico y o el software. Usos: 1. compatibilidad que anota entre uno o más softwares y o soporte físico. Mejora a inspectores actuales de la compatibilidad; por ejemplo por cuenta el sistema da a la compatibilidad de aspectos señalados (el uip demuestra/las guías) de los fósforos. 2. notifica cuando (no) la compatibilidad (aparece) puede/ocurre (para los aspectos o las funciones señalados) (del sw/hw).

- Dibujo: u (base de datos del uip) = conexión (del Internet) = computadora/ISP = base de datos del uip del usuario/del abastecedor/cuál es necesario (por el usuario).

UIP-MQ = la máquina hace preguntas al usuario:

La máquina hace preguntas del usuario para obtener la información así que el sistema puede mejorar a usuario del servicio. Respuestas usadas para desarrollar "UIP-DB".

--Dibujo: sensor/analizador/analizador del software = tr = c = usuario de la exhibición/de los avisos permitiendo que respondan (vía Reino Unido) (si desean). OTD: situaciones del ^Sample: información personal; información sobre participantes del juego y elementos ambientales; incita a usuario para la información necesaria; etc. Un uso puede estar para que el sistema mejore la función adaptándose a las necesidades de usuario y o a los gustos. Esta característica puede también almacenar más información sobre el usuario para la base de datos del "pi".

Autoanálisis del producto: el ^system hace preguntas del usuario acerca de cualquier falta mecánica.

--Ver el "cerebro"; "Tuvieron acceso a VAGOS". "Corregir": determina el tipo preguntas.

- Pregunta a usuario si las características descubiertas por la entrada del UIP Info están correctas [vía menú (de la ventana) (con ejemplos visuales)]

UIP-Ranurador: Vía (software), dirigen al usuario a los programas o a las funciones señalados.

--"Encamina" u a los programas aplicables basados en el UIP.

El UIP busca la reacción: El UIP sabe "qué botones a empujar hacia adentro otros, conseguir la reacción deseada." Mesón otras palabras: Piedras de afilar del UIP adentro en una entidad o las características de la invención previstas para sacar la reacción señalada. Ver 2G330.

++ UIP-Adaptan: Ver el archivo de la subparte del sastre. Y cómo se demuestra amplio a través del uso pateent.

UIP-Pista: El sistema reconoce y es menos conveniente perder a la persona/al usuario que son seguidos. La UIP-Pista diferencia la blanco del ambiente por las características del usuario. EG.: la cámara existente de la computadora' sigue a persona en el sitio basado en el reconocimiento facial.

--"Sigue" u por las señales siguientes = las características de la persona; Monitor inteligente 2E251; "acceso"; "analizador visual"; "analizador de sonidos". Sigue a usuario para la compilación de la UIP-Base de datos del Info.

UIP-VA: ANALIZADOR VISUAL: Buscar para las imágenes señaladas, que se corrige' según lo programado. El sistema aprende/adapta' sí mismo saber qué imágenes deben: la pista, corrige', localiza para el usuario; eg.: aunque el usuario no sabe consciente exactamente lo que están haciendo compras para en línea, el sistema aprende que el usuario prefiere características señaladas basadas en qué usuario: comprado u ofrecido con el proceso de la pregunta de la máquina (UIP-MQ).

- ""/usuario del analizador = (automáticamente) asigna el código uip-basado deseado de características a las imágenes señaladas = tales códigos es cerca utilizada (cad) manipular/proceso/corrige las imágenes atadas a los códigos = a los resultados en las imágenes outputted/texto/sugerencias/datos técnicos mientras que u pidió/quiere (uip) = estos datos outputted (poder) tener códigos de características = así que tal salida puede ser alterada (como pedido anterior).

CONCLUYE ESTO ADAPTAN EL ARCHIVO DE LAS SUBPARTES

Archivo: Adaptarse/Adapat se amplían

EXTENSIÓN EN LA PROGRAMACIÓN DE LA INFORMACIÓN DE USUARIO

UIP DE ENSANCHAMIENTO - SOBRE LA VISIÓN: EXPLORANDO MÁS OPCIONES PARA ADAPTAR INVENCIONES.

Imaginarse sobre cualquier tipo de producto, verdadero o imaginario. Cada uno tiene diversas necesidades. ¿Cuáles son ellos, y cómo pueden un producto conceptual ser adaptados?

ENTRADAS: De quién Info/necesidades se utilizan/adaptó para beneficiar al usuario y o a otros. Bases de datos (ese sistema compila) sobre las características del usuario:

- Usuario:

los individuos (típicos) que consiguen productos para mejorar hacen lo que él quiere, permitiendo que los sistemas reciban el Info sobre sus comportamientos, necesidades, aspecto común UIP del etc.

- Amigos:

Las entidades con las cuales asociarse/conocen al usuario: abastecimiento de sus opiniones del usuario/de deseos del usuario

- Ambiente:

cultura (golpeteos cultural limitados del pensamiento, como la comunicación, o interfaces preferibles que emparejan emparejados a las mentalidades particulares); terreno (natural); tiempo (condiciones de camino); . --los sistemas automatizados que dan el Info para que el sistema (del usuario) se adapte/utilizan con la situación, y o el ambiente atado a la situación.

- Institucional/autoridades:

escuela, gobierno, aplicación de ley, funcionarios de la seguridad

- Patrones: funciones de trabajo adaptadas para el empleado (el interés del empleado de descubrir nuevas cosas sobre su trabajo, mejora la comprensión, foco, productividad, Q&A (calidad y aseguramiento).

- Padres

- Profesionales de salud/sistemas:

usuario de la guía de los sensores del `para la mejora de la salud, eg.: ver nuestra guía del profesor particular del movimiento, relacionada al instructor existente del oscilación del golf que confía en RFID (picosegundo).

- Usuario ellos mismos:

donante/que recibe de la persona, del grupo o de la compañía (vagos del `relacionados) datos.

- Vendedores/negocios

- Sistema a la interacción del sistema:

Características del extranjero/de otros productos/sistemas/software: El UIP recibe su (característica) entrado vía digital (paquete atado al producto extranjero; o el UIP analiza el producto extranjero y el Info relacionado para desarrollar una base de información del UIP.

- Realidad robótica/virtual:

Las robustezas que aprenden cómo obrar recíprocamente con la gente/los usuarios/los sistemas para de la robusteza de este 3ultimo las' ventajas la robusteza del S. y o' pueden tomar en todos (UIP relacionado) las características (del comportamiento) del ser humano de a (señalada). Cómo un sistema de robotic/vr obra recíprocamente con el otro modelo (similar).

- Analizadores del `: Analizador contento; Analizador de sonidos; Analizador visual; El anotar; Sensores
- La búsqueda del `y reacciona: el aspecto de la búsqueda, permite los aspectos de las ventajas.
- Etiqueta del `.

VENTAJAS/propósitos de la adaptación: metas; empareja las necesidades de usuario:

- Comprar/uso más algo: el usuario mejor consigue lo que él quiere (el emparejar calificado); aumenta ventas; reduce el hacer compras/tiempo/energía/los costes de la comercialización.
- Guía/que educa del `a usuarios: dirige a usuarios donde el usuario y u otros (los patrones/los vendedores/los padres) los quiere a go/experience/interface
- El corregir del `:
- El `reacciona: Respuestas automatizadas; Respuesta a las emergencias; Acceso.
- Consolida mejores (personal/negocio) relaciones
- Hospitalidad del `: otra manera UIP puede "golpear el punto dulce" del usuario.
- Juegos del `
- `GPS
- `Interactivo
- El `predice
- OSCILADOR del `: sintetizador
- TGH y EGH

Archivo: Adaptar/adaptar el artículo

Artículo adaptante de la tecnología: Mezcla el Info de otros con el inventor' S.

Tecnología adaptante (también se utiliza para los equipo y programas de computación permitidos perjudicados) y computación intuitiva.
