- Existe quizá: El laboratorio de la física de Astro de Stanford Univ está investigando creando mayor exactitud de punta (para el aterrizaje de aeroplano).

- Sistema útil especialmente: reducir los costes (cada uno parte separada puede determinar más barato elementos de la distancia que vía los gps); facilita las situaciones donde la azotea o la otra obstrucción puede limitar la comunicación/el acceso con el satélite (gps).
- "Localizador" y "Distancer". Eg.:
- Número de los estudios de u (usuario)/de gente/de animales, para la investigación, ajuste de la HVAC (véase el producto relacionado de Mitsubishi según lo preparado en uno de los periódicos ingleses de Japón cerca de 92- '93).
- Localizaciones de [gente, animales y artículos termógenos (las máquinas, ennegrecen los objetos coloreados que calientan para arriba más que el ambiente en el sol)] identificado por los sensores del calor (cualesquiera hechos nunca por Takenaka Engineering Co, Japón). Las localizaciones exactas se pueden determinar por el análisis de sensores múltiples de modo semejante de: receptores múltiples de la radiofrecuencia que identifican objetos según lo explicado en estos papeles.

encargado de registro de 3E-020 GPS: Expedientes automatizados del sistema de custodia de registro donde estaba el usuario cuando y para qué propósitos. GPS y tiempo de registro y lugares del reloj. Llaves del usuario en sus actividades. El sistema es portable, y o conectable al vehículo. Usos: negocio y custodia de registro del IRS; hacia fuera en la custodia de registro científica del campo. Ahorrador de tiempo.
- "Analizador": estudios de sistema la "cuenta", "estado" de objetos, en términos de su w5, uip, etc.

D1: ~ C (computadora del usuario o de la unidad = del analizador del ~ del tr del `) = gps = M.
D2: determinando si el tr portable está dentro/hacia fuera: portable el tr = transmite la señal (en curso) (si dentro o hacia fuera) = receptor (de interior) recibe = entonces sabe que el objeto que se supervisará es o que no es próximo.

D3: juegos de interior/al aire libre el jugar: los jugadores/sistema saben donde están otros jugadores - > los jugadores/sistema (sistema) responden por consiguiente.

Archivo: I misceláneo/3G

ARCHIVO 3G

<2.75, 3, (2-Saunders), 4>

anillo Delayer del teléfono 3G010: Para las situaciones donde puede tardar el tiempo para que uno conteste al teléfono, el llamador puede no oír el sonido durante algún tiempo (durante cuál comenzará el teléfono del receptor a alertar el receptor de la llamada entrante). Los llamadores quieren en espera de la golondrina de mar más de largo para que el teléfono sea cogido.

Usos importantes:
- Contestadores automáticos: el teléfono del programa para tener espera de los llamadores hasta persona puede conseguir llamar por teléfono. El contestador automático del teléfono sabe cuándo el dueño es casero o no: tiene automáticamente dos modos de contestación.
- Intercomunicadores: da a dueño más hora de contestar.
- Si el llamador consigue un ocupado, la compañía del teléfono puede todavía ponerlo en asimiento. El llamador sabe su posición de la señal sin partido de recepción que disturba.

Funciones misceláneas:
- Los llamadores mientras que están guardados en asimiento pueden oír/leída: música; número de gente o de llamadas a continuación; el horario futuro así que el llamador de la persona de la blanco pudieron revisar , intentar la comunicación.
- Todas las funciones existentes del correo de voz se aplican, eg.: Los llamadores pueden optar dejar un mensaje algo que esperan.
- Los tiempos de conexiones pobres pueden informar a partidos en otros extremos: espera; naturaleza del problema, eg.: calidad de transmisión pobre. El usuario o el sistema puede seleccionar o uno mismo-determinar la naturaleza del problema, en golondrina de mar da (nr, oscilador) "estado aplicable".

- Llamadas entrantes encaminadas cerca: identificación de llamador, número de extensión pedido.

El sistema conoce la localización del dueño/del usuario vía:

1] compensador basado en los satélites de la obstrucción de 3E210 GPS; 2] determinadores localizados de la localización (KN (invención)) en: calzada del garage, jardín, cuarto de baño (ducha), banco de trabajo ruidoso; 3] "sensores" "que analizan" para la actividad en la vivienda, eg.: vibraciones humanas, hablando; abertura de la puerta principal - analizada con la combinación de otros sensores;] el dueño 4 selecciona a partir de diez mensajes de salida más, eg.: "Estoy en patio trasero, dejo el mensaje o llamo detrás en una hora", "yo estoy conduciendo to/from trabajo/casero"; 5] llamadas entrantes (ya que están) se remiten. 6] El usuario acciona el pequeño dispositivo portable (pares como: paginador, abrelatas de la puerta, teledirigido, reloj, organizador) cuál activa el tipo aviso saliente.

Problemas: Necesidad de autorizar probablemente para telefonar monopolio. ¿Pero barato apenas conseguir patente entonces autorizar? Necesidad de hacer relaciones públicas para conseguir a compañía telefónica adoptar el sistema. Probable alguien pensó en esto en la industria apretada de la telefonía con los jugadores de gran alcance.

Delayors también para:

- Campanas de puerta
- Luces de calle (para las ambulancias, vehículos de transporte total que consiguen prioridad, eg.: Autobuses holandeses para los cuales las luces cambian al verde).
- La temperatura del horno reduce temperatura cuando el "cerebro" sabe que los "sentidos" u (usuario) van a ser atrasados/salida de la casa. Internar, el alimento puede cocinar para más de largo y ser caliente listo más adelante sin la quema.

- OTD D2: Este ~ C (computadora del sistema de N (invención) (sistema) (delayer del anillo de t) del `) = Fax (el sistema coge el fax más adelante); ACCESO (); ANALIZADOR (); AP (); ARTISTA (); BALANCE (); CEREBRO (); BVA (); C (); CÁMARA (); CARRO (); COMPOSICIÓN (); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MES (); RATÓN (); MQ (); MULTIUSOS (); nr (notificador) (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (u controla el sistema: retardo del anillo cuando u (usuario) está lejos de t); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); TR (); U (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

- el llamador no oye los anillos durante los primeros (dos) anillos.

. - señales generadas de matriz del microteléfono o de conmutación.

- si puede hacer del microteléfono: no necesitar preocuparse del monopolio del teléfono. Fácil descubrir.

--difícil descubrir si: La matriz de conmutación del teléfono Co descargaría la llamada si no consiguió un anillo detrás señala w/in cierto tiempo. Pedir el teléfono co.

- el llamador puede conseguir el sonido/el oscilador que dice la espera (iniciada después de seguro # los anillos).

- todo el software ejecutado sin importar encima de donde la señal de t que es escogido se genera de).

- dar más tiempo entre los anillos.

H:

- Dibujo #1: llamador = t ~ C () del `/intercomunicador de la computadora = compañía C (computadora del teléfono del `) que procesa la red (analizador) = ~ C (computadora de la American National Standard del teléfono del ~ de t del `) = [pobres/tipo analizador de la conexión]/analizador de la localización del dueño

- Dibujo #2: diales del llamador ascendentes = c (la banda por t) del receptor = llamador oye que el sonido retrasado/receptor oye el sonido inmediatamente

- trabajos con el fax/los contestadores automáticos también

- el término "llamador" se puede substituir por "uno quién está haciendo el contacto inicial"; "dueño" con "uno quién recibe la comunicación"; "llamar" o "llamada entrante" con la "acción del remitente".

- el GPS dice el sistema del teléfono (sistema) donde está u (usuario), por lo tanto el sistema de t (sistema) reacciona por consiguiente.

- problema: ¿señal generada por la red de conmutación? ¿El teléfono co la alterará para usted? La estación de conmutación recibe la señal con./desc. del gancho del teléfono (la C.C. señala?). ¿Llevar a cabo la patente hasta que el teléfono co abra su mente?

- OTD D (dibujo): T/este N (invención) sistema ()/C del sistema =
ACCESO (estado del dueño de la llamada limitado a ciertos partidos); ANALIZADOR (naturaleza del problema/del estado: donde está el dueño, que el llamador es (vía el uip o el acceso de este 3ultimo)); CARRO (localización del dueño, tipo oscilador u opciones de la VM); M (uip, paradero del dueño, gps); MIC (t, intercomunicador, sistemas de radiobúsqueda); MULTIUSOS (cada número de la telefonía puede: encaminar/distinguir entre diversas llamadas entrantes (vía la identificación de llamador, tener acceso; distinguir para quién está la llamada entrante, vía: número de extensión, reconocedor de la voz);

NOTIFICADOR (anillos del teléfono; las cuentas miden el tiempo o los anillos de número hechos por el llamador - simultáneamente o después de que paren (hung-up)); OSCILADOR (anillo del teléfono, estado para el llamador, dueño); Banda (); Picosegundo (); Q (cómo el llamador/el dueño puede mejorar uso altera el sistema); S (); CUENTA (número de mensajes); SENSOR (); ANALIZADOR de SONIDOS (las ayudas determinan el nivel de transmisión de la calidad); ESTADO (); TDS (VM); T (); UIP (); WA (t).

- OTD D (dibujo): Este N)/C (computadora) del `[línea (de la invención) (de T del anillo Delayer dibujada a cada uno debajo de N#] =

Cámara accionada por control remoto -2E251: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

Notificador móvil de la localización del teléfono -3E010: Entra efecto cuando el "analizador" de este N# determina para: banda, uip. Eg.: cuando u (usuario) es alrededor entrar en área de recepción pobre, el sistema permite el sonido extralargo (receptor, los mayo o mayo no saber esto).

Teléfono -3E040 con el ruido seleccionado cancelado cuando más allá de distancia señalada: Teléfono -3E041 con el ruido seleccionado cancelado cuando los sonidos ambientales están de frecuencias indeseadas:

Correlador y regulador de la circunstancia de -3E151 GPS: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

Compensador basado en los satélites de la obstrucción de -3E210 GPS: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

Palillo teledirigido -5E020 con el interruptor: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

grabación +-5E040 incitada sobre la presencia de ciertos sonidos: Entra efecto cuando el "analizador" de este N# determina para: banda, uip. Eg.: el usuario está lavando los platos, tomando la ducha, ya en el teléfono, roncando, durmiendo.

El explorador del canal -9G220 salta las estaciones que tienen Commericials: el sistema deja la comunicación entrante (t) venir en más tan durante commericials.

<3.5, 3-MarkP, 2-Saunders>

3G050 llamada Rerouter: Si la persona consigue disconnected y marca de neuvo detrás, el sistema (vía la identificación de llamador) encaminará llamada al mismo número de extensión dentro del sistema de teléfono grande si la línea de extensión está libre. El llamador consiguió encaminado alrededor vía recepcionistas, después no sabe la extensión que consiguieron conectados con. Entonces conseguido disconnected, pueden marcar de neuvo. Para cualquie suscriptor o dentro de organizaciones gigantescas, eg.: gobiernos, G.M.

Problemas: Ver el anillo Delayer del teléfono 3G010. ¿La cooperación con el teléfono co puede permitir mejor el seguir entre la mayoría del tipo de sistemas del teléfono?
¿Puede ser hecho?

Existe: Los recipientes pueden volver llamadas a los números que faltaron; identificación de llamador

Misceláneo:
- El recipiente pudo mantener su línea libre de llamadas entrantes afinando en la computadora que sienten que eran disconnected.

==

- Saunders: ventaja incremental minúscula; hay 700 # ' s, email.
- Asher: cómo hace el sistema (sistema) conocer al llamador consiguieron desconectado: el llamador o el receptor tiene que presionar algunos botones, eg.: "consiguieron cortado". Puede ser puesto desde provechoso ya estar en el negocio del teléfono.
--si el receptor presiona el botón, éste (mejor) permite que el llamador vuelva.

- Tipo función del PBX de memoria. Cómo saber quién es si llamador no vía el PBX - integrar con la identificación de llamador (CID).
- el llamador inicia la llamada de vuelta.

Conrado:
- el teléfono del receptor envía la señal (a m) del llamador/teléfono co indicando su número de extensión.
--pudo necesitar controlar todo el sistema de los sistemas w/in del teléfono del PBX.
--no necesitaría (todo el esto) la red de teléfono de w/in uno, eg.: cada llamada está a un número de extensión.

- redial: incluso si no está desconectado.

Pandescio:
- ejecutado fácilmente. Los expedientes del hardware cómo el remendar fue hecho, después éste pueden replegado.

H:

- OTD D (dibujo): T/C (computadora del `) =

ACCESO (); ANALIZADOR (identificación de llamador; el sistema (sistema) sabe la llamada entrante fue reencaminada, por lo tanto el marcar de neuvo hecho posible (vía memoria también)); CARRO (localización, extensión del receptor); M (encaminamiento de la llamada); MIC (); MULTIUSOS (distingue entre diversas extensiones, teléfono # ' s de recipientes); NOTIFICADOR (anillos de t); OSCILADOR (); Banda (encaminamiento); Q (permite el usuario o el programist: reencaminar la llamada; estudiar las organizaciones de los patrones de la llamada (dentro)); S (); ANALIZADOR de SONIDOS (sonidos de los convertidos vía el synth para hacer más apelar); ESTADO (); SYNTH (); TDS (w5 de llamadas); T (); UIP (comportamiento de la encaminamiento de la llamada para cada llamador, cada recipiente); WA (t).

- Dibujo #1: llamador = t/c= compañía telefónica = (centralita telefónica de t en)/c = T. del co del recipiente.

ARCHIVO 4E

< (Conrado: ¿2.75 palmadita, 4 mk), 4, 3, 3 > barato frecuencia intermedia?

baterías accionadas movimiento 4E010: Insertar la batería recargable en el dispositivo de carga atado con correa al cuerpo humano. El cargador consigue su energía del movimiento. Buena excusa para el ejercicio mientras que ahorra el ambiente y la cuenta eléctrica. Basculadores inducidos a guardar paso constante por accionar de su radio del walkman (wa).

También agregar el convertidor a:

1] Puertas: movimiento más grande externo del oscilación de la parte w, o en o con la bisagra.

2] Equipo del ejercicio: Ruedas de ardilla (en sistema de la golondrina de mar requiere electricidad de less/no funcionar); Equipo del edificio del músculo: el nivel o la resistencia es alterable, y la mayor resistencia empujada contra, cuanto mayor es la energía desarrollada, eg.: campanas de la barra, tipo equipo del nautilus

3] Raquetas de tenis: o cualquier objeto que recibe la presión de golpeo.

4] Bolas: tenis, baloncestos, golf, béisbol, zapatos del etc. 5], palillo de Pogo, bastón: también enjaeza la energía de la presión a la baja. El adolescente puede accionar para arriba sus baterías del walkman con las zapatos tenis del diseñador.

6] Convertidor de la vibración atado a: los automóviles, trenes, terremoto dividen la iluminación en zonas encima de ciudades enteras sin la energía (broma).

7] Mobiliario de oficinas: teclados, grapadoras, cajones, plumas.

8] Juguetes: automóviles (existir?); muñecas (energía de sus movimientos del accesorio); pistas de la raza y del tren; yoyo (KN)

9] Rodillos, ruedas: bicis, automóviles, carros (compras).

10] Pasos de la escalera, calzadas: mientras que uno reduce, la energía creada da a algunos alza ascendente al caminante humano, dando por resultado menos esfuerzo humano total de la energía.

- Usos más seguros: Ejercitar los paso-molinos (tipo rueda de ardilla) con las barras del asimiento. Enciende para arriba la escalera. La presión necesaria es grande empujar hacia abajo algunos milímetros, por lo tanto superficie de tierra más estable como el acolchado de la alfombra.

11] Perros de animal doméstico. "Rover" nombra para la marca. Batería usada para accionar el sistema que acompaña el animal. Eg.: acciona (supervisión) el sistema atado a los animales (en salvaje, bajo estudio). Reduce necesidad de substituir las baterías.

12] Convertidor de los sonidos: ¿los convertidos suenan energía en electricidad? Ninguna pista si los encargados habladores podrían impulsar alguna investigación necesaria. Fijación: micrófonos, teléfono, "sensores sanos". ¿Broma?

13] Giro y broche de presión del yoyo al alcanzar el extremo de la secuencia. Los cabritos pueden accionar para arriba su juguete, baterías del juego video. ¿Consiguieron a padres tradicionales comprar un juguete no-CRT, puesto que el cabrito necesitará el yoyo antes de que él pueda jugar al juego?

"Cuenta": Más o más difícilmente el artículo empujado, movido, golpe, más alta es la "cuenta". Dejarnos la sensación del usuario: mejorar, más masculino, más fuerte, productivo. También demuestra llano del ejercicio (fuerza), calorías del número quemadas.

- La pantalla demuestra se está generando cuánto energía por la cual tipo acción. El software compara los resultados (calorías quemadas, energía generada) para las actividades de diferenciación.

Cómo fijación: lugar en objeto donde hay el potencial más grande del movimiento, eg.: el más lejano hacia fuera (con el oscilación más ancho); señalar adonde la energía más grande puede ser creado, a veces cambiando para la manera más fácil en la cual puede ser utilizada todo, eg.: más seguro, menos presión requerida por el usuario, producto funciona más cercano a cómo funcionaría normalmente sin el convertidor de la energía por ejemplo con menos obstrucción, y menos bulto o materia (alambres, enchufes, convertidor, batería) pegándose hacia fuera.

Misceláneo:

- mecanografiar el recharger (modo) usado depende del tipo movimiento anticipado. En golondrina de mar, el sistema puede mejorar energía del movimiento del arnés cerca: (uno mismo) ajustando sus piezas móviles. ¿- barato fabricar? ; puede ver a muchos compradores.

- La energía enjaezada puede también: - > encenderse desarrollado en lámpara, hacen los sonidos (oscilador) que duran para cierta duración después del movimiento, reducen el consumo de energía para gestionar un sistema (simultáneamente).

- Movimientos del cuerpo: el activar, el caminar, yendo de excursión, aeróbicos, nadando (impermeable), tajando (alimento, madera), trabajando (construcción de la casa, cultivando), bailando.

Problemas: Requeriría mucho ejercicio accionar la batería. ¿Puede desarrollar un buen movimiento al cociente de conversión atrapado de energía? ¿Probable alguien lo concibió ya?

Existe: relojes basados resorte rewindable. Alternador (coche).
Si cuestionable es patentable, discutir la necesidad del producto.

H:
- el oscilador suena (los zumbidos agradable) (más ruidoso) según tipo/llano/intensidad del ejercicio.
- amplía vida de batería. Acompaña el otro sistema del suplemento de la vida de batería, eg.: energía solar.
- La batería de la sacudida y su sistema alrededor en 1,000's de maneras y energiza la batería, eg.: correa al tobillo y al trabajo (mientras que pierde el peso); fijación a la rueda de la bici/del coche.
- da excusa adicional al ejercicio; mejoran quizá a los mecánicos levemente sobre tal sistema de batería similar usado previamente para los relojes en los años 70, años 80.
- D1: el giro (rueda) = da vuelta mientras que movido = causa la fricción = la superficie del punto de contacto = del convertidor (fricción a la electricidad) = tr = los battery~c~s (cuenta: nivel de la vida de batería)
- Fijación a cualquie objeto móvil, sistema: las cosas que giran/giran (los neumáticos), las cosas que vibran (excesivamente, eg.: máquinas de la fábrica).
- Se adapta a cada tipo ejercicio. Diversos dispositivos o el dispositivo ajusta su manera de enjaezar el tipo movimiento como su suceso.
- Baterías generalmente recargables.

- OTD D: Este N sistema ()/C del sistema de la carga de batería =
ACCESO (); ANALIZADOR (cómo la batería (mejor) está consiguiendo su suministro de energía; cómo su que es utilizado); CARRO (la batería sí mismo es el carro que las ranuras/los agregados al sistema que golpea ligeramente el movimiento y convierte a la energía para el almacenaje en la batería); EDUC (s demuestra se está generando cuánto energía por la cual tipo acción (w5 aparece simultáneamente/más adelante (vía memory=c))); M (analizador); MIC (energía sana del convertido - > energía de batería); MULTIUSOS (las demostraciones/memorizan del sistema (c) que y la energía w5 fue obtenido y vía qué medios (actividad, índice de generación de la energía)); NOTIFICADOR (u dicho cuando la vida de batería es almacenaje del final cercano/de la batería en la capacidad máxima); La generación de exceso de la energía (más allá de almacenaje máximo) (poder) activa: oscilador (música), calor, refrigerador, el otro sistema de la banda/función); Banda (batería w5 que recarga para ocurrir; u puede sacar el convertidor del sistema cuando (w5) eligen); Q (el sistema pide u w5 con referencia al sistema; u pide w5 q); S (cuenta); CUENTA (batería w5 que recarga:

cuando, el where%, cómo (tipo, índice, duración de la actividad), qué (fue cargado, porque qué uso/era batería usada (revelador uip); SENSOR (es mechanical/el; sistema (automáticamente, (vía u que hace el ajuste mecánico) se ajusta manualmente para mejorar el golpecito en el tipo movimiento); ESTADO (batería llana); TDS (cantidad de energía recogida cuando (w5)); UIP (); WA (agregados del sistema de la batería al wa).

=

- OTD D2: (Cuerpo/producido por máquina) movimiento = este ~ del sistema de N (batería accionada movimiento) C =

ANALIZADOR (banda para cómo el sistema mejorará la energía del convertido (movimiento) controlada cerca: "cerebro" /k/ (movimiento) "sensor").); AP (la energía no se almacena ideal pero inorder inmediatamente usado para reducir pérdida de energía - > los usos: energías para arriba: luces/oscilador/el sistema sí mismo del EL); CÁMARA (); CARRO (); DISTANCER (); EDUC (); GPS (); K (); MQ (tipo de movimiento); MULTIUSOS (cada u se mueve diferentemente; diverso u determinado vía: k/access); NR (cuando la energía (usable) máxima no se está generando, o cuando u está haciendo demasiado poco/mucha energía. La "cuenta" sabe el nivel de energía necesario para el ejercicio); Q; R (); CUENTA (); ESTADO (nivel de energía (necesario) que es generado); TDS (energía w5 hecha = cuenta); T (las energías suben t); TR (EL, t); U (seres humanos, animales); UIP (analizador para maximizar energía); UQ (); WA ((las ayudas) accionar cualquier EL portable N).

- Asher: existe: las zapatos tenis que se encienden para arriba como camina, indican quizá accionado.

Conrado:

- Ciclo vital: pantalla llevada w hecha de la bici de ejercicio accionada poniendo pedales.

Pandiscio:

. - Seiko tiene reloj del cuarzo: reloj para no enrollar el resorte principal (no enrollar el movimiento principal). Las corrientes eléctricas van a través (cuarzo). Los convertidos indican a la energía eléctrica. Diferencia de Rolex. Esto pudo hacerle menos probablemente al patet esta invención.

. --Los relojes de Rolex, consiguen el movimiento cinético - > aprieta físicamente el resorte del reloj mecánico.

< (Conrado: 2.5 palmadita, 4 mk), 3.5, 3, 3, mf-cheap>

verificador del contenido 4E020 y de la fecha: Cualquier acontecimiento en el universo que puede entonces ser registrado numeró básicamente se almacena. El sistema entonces mide el tiempo de estampillas de fecha los datos mientras que hace el contenido de la ocurrencia inalterable. Registros: los documentos electrónicamente enviados, la telecomunicación verbal, los acontecimientos capturados vía búsqueda de la cámara de a/v, de los "analizadores" del etc. de los "sensores" y entonces colocan ciertas ocurrencias que emparejen los criterios del software vía el monitor inteligente 2E251, un software más simple.

- Valor: este sistema ayuda a probar qué contenido fue enviado contra apenas, eg.: compite con el servicio de noche de Federal Express; incluso el llevar un notario no prueba que el artículo fue enviado.

Usos:

Documentos: Enviar electrónicamente y tener tales transmisiones y su contenido colocados. El sistema de correo certificado de la oficina de correos no permite fácilmente a remitentes probar el contenido del envío. El ordenador principal central almacena tiempo de transmisión, contenido, y tiempo recibido o archivo abierto. Enviar vía email, fax, el etc.

- Verificación impresa de la comunicación: De la actividad bancaria al comprando las casas a la ley de contrato general relacionaron materias. En negocio, los términos de contrato especifican cómo los avisos deben ser enviados o ser recibidos. Si la oficina de correos es el mercado, la obtención de un contrato de fuente podría ser difícil, pero no necesita la oficina de correos. Uno puede tener este sistema de la verificación incluso para la mayor parte de una comunicación de la semi-rutina de los negocios.

- Transferencias de alambre del dinero (existe?), boletos de línea aérea, visas del pasaporte.

- Reporteros de las noticias que envían la información: los receptores quieren estar seguros que las bromas no están enviando los datos incorrectos para la publicación del mundo.

- Verificación de firma:

Verificación audio/visual de la ocurrencia:

Todos los acontecimientos que se pueden convertir a la forma digital se registran, después se almacenan para el registro inalterable.

- Tipo funciones:

1] Lanzamiento todavía/película móvil que se transmite (vía el módem) para el registro.

2] A/V y resultados técnicos (de las reacciones químicas) de los experimentos científicos registrados. Eg.: para el FDA.

3] Todos los acontecimientos que están ocurriendo, eg.: en el ensayo de corte, acciones de la investigación relacionadas con "primero para inventar", depositando, procedimientos de laboratorio, supervisión de la calle. También utiliza el monitor inteligente 2E251.

4] Comunicación verbal (con o sin el modo visual): teléfonos (t); discurso vivo registrado sobre el micrófono. - "palabras habladas convertidos del analizador de sonidos" en el texto [al igual que técnico factible]. Usos: permite las búsquedas de la palabra clave para el texto; el texto de la lectura es más rápido/más fácil que conversaciones ampliadas audiencia.

Organizando, procesando datos:

- Reduce el factor de error humano para las ocurrencias mislabeling para: tiempo, tipo actividad (w5), uip. Las computadoras pueden más fácilmente: localizar, utilizar, entender, alterar, "analizan", "cuenta", los datos del "estado".
- Las ayudas se convierten: bases de datos; uip; estado.

Comercialización: Los clientes envían simplemente datos a nuestra compañía vía fax, email, correo aéreo, entrega, el etc. Entonces almacenamos datos electrónicamente y en la forma de papel.

- Retransmitiendo al destinatario final: 1] Correo aéreo registrado: nuestro vendedor lleva la oficina de correos, consigue una cierta certificación del envío. 2] Email: Utilizar los modos de verificación existentes. 3] Fax: Utilizar los modos de verificación existentes, a saber tienen estado de los testigos que miraron la transmisión verificada según lo transmitido por fax para trabajar a máquina.

Probando quién creó el material y W5: Verificar datos fue enviada de, y o creada realmente por el sistema particular de u/clients/(cliente) (c, la cámara, mic, monitor inteligente 2E251) /w5.

- Verfies del sistema (en la organización de servicio del registro (c)) que los documentos particulares fueron recibidos de remitente vía: 1] identificación de llamador (CID, MES); 2] "acceso" (contraseña: identifica el remitente/no prohibe a remitente el tipo particular (uip) "acceso" en la computadora del prestatario de servicios (c). Todas las acciones por el remitente (c) son = seguido = c = memoria. Marcar (la etiqueta, el código, el acceso con etiqueta) (automáticamente) enviado con la comunicación del remitente (todos) (al prestatario de servicios).
- verificando la firma "acceso" (contraseña, identificando el código del remitente): estaba con el documento (a partir de la época de la transmisión - > rc del prestatario de servicios y tds del donante). El contenido es difícil de tratar de forzar. El seguimiento de datos de las demostraciones w5 era: enviado (por quién, cuando (tds), cómo (módem, fax, email), qué (contenido de datos: texto, a/v), donde (de enviar el punto, CID, acceso (solamente trabajos cuando está enviado de detalle: localización ()/c/interruptor (que de los gps no se puede duplicar/copiar (permiso especial, acceso del wo), y si están copiadas se siguen tales copias)).

O - (si) firma creada/firmada (EL): u = C. La velocidad/las pausas de la firma "se analiza" (w emparejado uip de u, acceso) para cómo las maneras de escribir el fósforo w de la firma cómo u firmó documentos antes: al firmar para arriba servicio de w, cómo sus estilos/velocidades de la firma han cambiado en un cierto plazo mientras que u utilizó el esto/el otro (c) sistema.

UIP

Determinación de la autenticidad de la identidad del remitente:

UIP de U: el sistema "analiza"/empareja tantos datos sobre u (su comportamiento - uip) por todas las fases durante las cuales se creen = se almacenen = se envíen los datos = al prestatario de servicios. "Cuenta" para como de bien el uip del DB del prestatario de servicios de los fósforos de u del uip del u se genera.

el Anti-tratar de forzar: Hacer difícil alterar en memoria electrónica, y o papeles archivados qué fue enviada (w5). Propia computadora de cada usuario pudo registrar los mensajes enviados/recibidos también. Cualquier demostración hecha que trataba de forzar que trataba de forzar fue hecha (w5).

- Esto enviado/recibió el Info almacenado en sight/c del remitente/del receptor útil: u suscribe al sistema, en este caso no pueden tratar de forzar el texto entrante de w, pero puede copiar de él. Estancias en memoria, ayudar a servir como evidencia (recibieron o enviaron).
- hace más barato registrar los granes números de mensajes.
- el cliente envía el mensaje vía usuario de esta patente.
- un sistema de grabación del Internet.

¿- Patentable? Conrado: las computadoras locales (redes) w5 de registro, entonces apenas agregan un sistema de seguridad a esto para evitar tratar de forzar de: fechas enviadas, recibido, contenido.

nodo de +-develop en el Internet vía el cual los mensajes más allá a través a nosotros, entonces nosotros envían vía el correo aéreo (MCI Mail) y o Internet o fax, o combinaciones allí de. Las letras del correo aéreo registradas en la oficina de correos (vía empleado auxiliar humano) mientras que el contenido se almacena en empresa de servicios.

- Cortar y pegar las firmas vía la computadora: substituye necesidad de hacer de nuevo firmas. La misma firma usada siempre para enviar particularmente medios, o las circunstancias, ayudando reduce fraude, y cualquier estudio subsecuente o el retroceso.

Prevención del registro: Más allá de la legislación.

- Como el bloqueo de la identificación de llamador (CID), ciertos usuarios pueden pedir (electrónicamente) que sus acciones (enviadas los mensajes, comunicación verbal) no pueden ser colocadas (como siendo recibido).

Problemas:

- Secreto: Perder el secreto porque el Info consigue almacenado en alguna parte. Los datos pudieron ser patentables si estuvieron almacenados y mantenidos confidencial en la misma hora.
- Misceláneo: ¿Cuál es "cómo"? Su la gran necesidad que haría este patentable, contra la evidencia de la solución.

¿- Los servicios onlines y los militares tienen sistemas de las verificaciones del mensaje, con todo verifican el contenido sin el riesgo de tratar de forzar? ¿Demostración en línea si la persona adecuada consiguió el mensaje, o mensaje entero?

H: verificador del contenido 4E020 y de la fecha

Previniendo el registro - continuo de antedicho:
- Bloqueo hecho cerca: afinando en el código (el access%), quizá en cualquier momento antes, durante o después de la acción o de la transmisión.
- Los elementos limitados se pudieron registrar según lo programado por el remitente o el receptor, o el tipo situación (uip).
- El remitente o el receptor sabe si la comunicación is/was que es colocada. Puede remontar quién (w5) colocó datos. Un código se genera para instigar a modo del registro, por lo tanto cogiendo este código, después permite que el trazalíneas siga cómo los datos con su código (que se diseña para dejar un rastro rastreable de la computadora) se movieron alrededor; o fue alterado y en qué forma (w5, uip).

Software para los documentos totales de la comercialización vía medios electrónicos: Resultado: es la capacidad de enviar una gran cantidad de documentos vía fax o email con las firmas en un modo más rápido que haciendo individualmente, eg.: vía fax estándar. Ninguì□n solo software sabido consigue fácilmente firmas sobre los documentos y hace la función de la fusión de correo del software, dando por resultado el tiempo excesivo perdido por el mundo, impresión para enviar una letra por fax firmada.
- Detalles en cómo esto pudo ser hecha: 1] que consigue la firma en la computadora fácilmente, vía: explorador, ratón, recibiendo una firma enviada por fax. 2] Insertar la firma en el documento primario. 3] Tener el número de fax en un campo particular de los archivos del destinatario. 4] Fusión de correo, creando letras de forma múltiples con la información de diferenciación del destinatario. 5] El software busca el campo particular para el número de fax, y envía documentos automáticamente en las horas señaladas.
- Nos han dicho que esto se puede hacer alterando software existente, pero que no ha visto esta tarea relativamente fácil resuelta.

- Organizando y procesando los datos D:
OTD D1: Este sistema de N (C=SW para organizar y procesar datos. /Monitor inteligente C/2E251) del verificador de la acción/=
TENER ACCESO (mejor determinar quién puede acceder, trabajando w: analizadores del uip, de la representación visual, sanos y del comportamiento); ANALIZADOR (cómo archivar w5); CARRO (datos que

se colocarán); EDUC (); M (almacenaje para: registro, DB); MIC (); MULTIUSOS (procesos diferentemente); NOTIFICADOR (cuando uno o más elementos w5 de la ocurrencia de a (almacenada previamente) como banda se resuelven por requerimiento por u); OSCILADOR (); Banda (cómo procesar, organizar, colocarse, los datos del nr; controlando qué incluso para registrar y cómo (w5)); Q (); S (); CUENTA (las cuentas de diferenciación determinan cómo los datos/los archivos organizados/procesados, eg.: por el uip, requisitos del DB o de la banda); ANALIZADOR de SONIDOS (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); ESTADO (); TDS (); T (datos del tr vía el módem, el fax, el email, paginadores, el etc); UIP (); ANALIZADOR VISUAL (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); WA (sistema de los controles).

- Utlizes "perseguidor" (nueva parte IMI).

- OTD D2: U (enviar/recuperar el Info; acceso) = este N sistema ()/C del verificador del registro = TENER ACCESO (expedientes w5, eg.: datos de a/v sobre quién caminó cerca); El ANALIZADOR (1] determina qué archivos son más importantes para la memoria. 2] El sistema aísla las actividades particulares para el "análisis". Aislamiento vía: uip/analizador visual/analizador de sonidos/comentarios de los observadores vivos (k)/de las palabras claves. 3] esta piscina limitada de datos después del aislamiento da menos datos para estudiar); AP (vagos); CEREBRO (decide (automáticamente/como banda) qué registro/"análisis" de las necesidades basó encendido: palabra clave/acceso ()/uip (u/material) de u/material; reduce costes de la mano de obra; compila los datos para el uip/el analizador según lo necesitado para los propósitos con excepción del registro (eg.: la patente busca, "juego estratégico".); C (); CÁMARA (2E251); CARRO (véase la sección del sistema de seguimiento); DISTANCER (que sigue (carro en esta sección de OTD)); EDUC (estudio de la gestión de la información/de la seguridad); GPS (); K (acceso - quién puede utilizar el sistema); M (carro de este OTD); MIC (); MES (no central c = m/source c); RATÓN (); MQ (); MULTIUSOS (anti-cortando el interruptor); NR (cuando el cerebro determina probablemente (cuenta) que el pirata informático está en el sistema del co); OSCILADOR (); Banda (); Picosegundo (); Q (); R (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); TR (); U (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

- sinergiza con el monitor inteligente 2E-251.
- este sistema tds cada tipo de actividad supervisada: email, monitor inteligente.

UIP continuo para 4E020

Nota: este del UIP de la característica complejo también.

- UIP también usado a: guardar hacia fuera people/u ("teniendo acceso") del sistema ilícito que introduce, eg.: piratas informáticos de computadora que controla; pistas que está desarrollando los datos (w5) del concepto de la idea al registro pasado (prestatario de servicios de w).

-1] "acceso"; la congruencia del 2%] del tipo datos/A/V u está generando w sus últimas actividades (enviadas al prestatario de servicios); 3] interruptores usados por el sistema de u/del u; matriz de la fecha del contenido 4] 4E020: Los registros y organizan ocurrencias anteriores que ése llevó a los datos actuales archivados. Vía: búsqueda de la palabra del kew/imágenes que emparejan antes de w después de (analiza para las semejanzas en iguales/otros sistemas de las imágenes w/in de datos (visuales) del texto.).

- D: entrada = analizador = memoria de datos (el mfh, carro, reconoce multiusos) = analizador = salida = función de datos

- OTD #1:

consejero 5A-810-042003: compila y analiza la información de usuario.

- OTD #2: c; pp y programa de la P.M. cómo quisieran que el sistema recogiera, recuperar y analizar los datos en base de datos; Reino Unido; tds (cuando y cómo ocurrieron los elementos); m (DB); cuenta (la información de la cuenta se puede procesar para la base de datos del pi; y el pi puede ayudar a generar cuentas deseadas); carro (para los datos adicionales para la base de datos; y o softwares para procesar la base de datos); uq (la base de datos del pi se utiliza para ayudar a generar respuestas alrededor, eg.: sobre el usuario más allá de preferencias y o de actividades); P.M. (la base de datos y o el software puede ayudar a preguntas pronto, eg.: para ampliar la base de datos, dirigir a usuario en la pregunta correcta si el sistema primero consigue la información correcta); tener acceso (los límites tienen acceso a la información delicada dentro del todo o una parte de la base de datos (con referencia a: uip) a la gente con la contraseña correcta).

- Artículo en "americano científico", p.64, abril de 1995. Título del artículo: "Máquinas que aprenden de indirectas" ("analizador"). Su alrededor: El aprendizaje de máquina mejora perceptiblemente aprovechándose de la información disponible de indirectas inteligentes; discute el proceso del algorythm de modo general; da ejemplos de diferenciación, eg.: juicio de las computadoras cuánto crédito dar a los usos de la tarjeta de crédito basó en las últimas historias de la otra gente similar.

- Pieza #1 de OTD: El dispositivo electrónico obtiene la información sobre el usuario por uno o más del siguiente: recordar el funcionamiento anterior del usuario, eg.: sus capacidades en esto, o dispositivos relacionados (que transmiten datos del uip a otras unidades vía el alambre, o %wireless); pidiendo preguntas del usuario, o "M"; El dispositivo reconoce a más de un usuario por multiusos, eg.: sus códigos usados para acceder en el dispositivo. La información personal se almacena en memoria y es utilizada por el dispositivo más inteligente al sastre sí mismo a las necesidades particulares del usuario.

- Pieza #2 de OTD: el usuario puede llevar su carro (su uip personalizado para todos los productos idénticos o relacionados) de la máquina la máquina - el sistema del interno sabe quién es el remitente, o limita el othewise del "acceso"; uip de diverso del carro usuario de los efectos diferentemente con los cambios correlacionados en funciones; tipo cambios del carácter según el uip (si se utiliza una exhibición ("S")); fecha; los datos del uip (material que es colocado) pueden ser vistos en la exhibición ("S") y o ser impresos; el uip se utiliza para

aumentar el cociente de la satisfacción del usuario, eg.: entretener, (^possibly cerca: la manera de la cual la función funciona, sonidos, luces, palabras se utiliza para crear mejor el tipo del efecto electrónico uip indica es más probable aumentar la reacción positiva del usuario a usar el producto [los estudios de la prueba se conducen para considerar las reacciones de la gente en estudios del caso de prueba de 50 - 1000 personas]); "C"; % del uip pueden apoyar interactivo (dando los datos adicionales necesarios para mejorar la invención del sastre al usuario; % de los datos obtenidos para la memoria del uip del micrófono ("mic") (reconocedor de la voz); ratón; P.M. (cómo material registrado); multiusos (quién envió/material recibido/registrado); la base de datos del uip dirige las funciones de sistema (determina el tipo (cómo material registrado), manera (registro), midiendo el tiempo (registro), independientemente de si notificar, del mq, oscilador, synth; pp (registro); del uip de la base de datos de las influencias de la impresora del impreso los parámetros, cuenta, discurso, vc, incita - acepta - el uq de los procesos; tds (registro); Reino Unido. Los datos (material registrado) son via^ también obtenido: "Reino Unido", "carro", "teléfono", "MES", explorador; UIP (de: el material/u (los que deveoped, utilizado, sierra Info) se puede programar/entender con la ayuda de: psicólogos (analizador del comportamiento), sociólogos, expertos de comercialización; Ciudad del u (código de área del teléfono/código postal)/identificación de llamador (pistas w5 de cualquie ocurrencia).

- D: entrada de datos (registro) /output = para el "analizador": tr/rc=c
- utiliza lógica confusa
. - El sistema analiza las acciones del u - > base de datos (comportamiento). Eg., computación ubicua: u lleva (minúsculo) "c" en que comunicar con la otra "c" encajada: aplicaciones, t, coches, paredes, KN. Eg.: Lengüeta de Parc de Xerox, y otros productos mencionados en "ciencia popular" el febrero de 95 de p.47.

el sistema 2D-021 reacciona (el monitor inteligente 2E251, decide cuál debe ser colocado automáticamente) a los productos externos según w5 que él es:

Eg.:

- Entrante-Llamar el identificador - cribador/identificador externo del elemento: "tener acceso".
- Las llamadas de números deseados del teléfono tienen un diverso anillo. El llamador sabe por este medio si coger la llamada o no.
- (Señalando diverso tipo conexiones/llamadas (entrantes) relacionadas con otras de nuestras ideas?): el sistema responde diferentemente dependiendo de cuál quiere el otro producto de N/sys/existing "obra recíprocamente" con él.

--el sistema sabe identidad de la otra parte/sistema vía su: ""/código/teléfono del acceso #/uip (características del comportamiento de N, o U: cómo se mueve/las funciones/responde (a los stimulae de "C central" o de "M")/analizador visual/analizador de sonidos.

- D: Producto central/sistema = C = sensor/pieza del sistema de la identificación del analizador/de llamador del analizador/uip = tr/rc = producto externo/sistema.
- OTD: ACCESO (); CID (); CÁMARA (LENSE) (monitor inteligente 2E251); CARRO (tipo uip o sentidos o datos (registro) buscados); INFORMACIÓN RETREIVAL (registro); K (); MFH (registro); MIC ();

RATÓN (registro); P.M. (); MULTIUSOS (); NOTIFICADOR (cuando el contacto deseado se ha hecho con (registro)); Banda (registro); Picosegundo (la localización del producto externo (material registrado) es un factor de determinación en decidir a si se va cualquiera/el tipo conexión/contacto/registro "acceso" a ser hecha); R (); RANURADOR (producto externo de las rutas por su tipo naturaleza); S (estado de las demostraciones); CUENTA (tipo registro); ANALIZADOR de SONIDOS (análisis material registrado: material de a/v); TDS (registro); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (registro de la comunicación de t); UIP (); Reino Unido (); ANALIZADOR VISUAL (registro); CORREO de VOZ (registro)

. - Un sensor que conecta con u (cuerpo humano, eg.: abrigo del dedo; animal) para leer las señales electromágneticas generadas por la piel. El software propietario interpreta esas señales y las traduce a acciones. Siendo investigado por la compañía: Other 90% Technologies Inc., Sausalito - ver Wall St. Journal 1995 (quizá artículos de 6.95) titulados: Juegos de mente: Pronto usted zapping a chicos malos sin la elevación de un dedo. El ver del abrigo del dedo venderá para $100-$200.

- Final de UIP - subdivisión. verificador del contenido 4E020 y de la fecha

"TENER ACCESO" para 4E020

- "Tener acceso" tiene muchos usos: restringiendo quién tiene acceso a la visión/a la revisión/al cheque.

ACCESO (4E020) = OTD: 1 accede vía afinar en la combinación alfanumérica; 1 o, inserción dominante; o, 1 con el telecontrol ("R"); el acceso 2 se puede cambiar vía pp, P.M., carro; carácter 25; 1 palmada; 24 tds (cuentas w5: cuando, cómo, qué, %why, que ganó "acceso" en sistema - [puede también ser utilizado para uip [base de datos]]; 25 "S"; el distancer del 23% activa/desactiva la cerradura; la cerradura del acceso 123 puede ser una comprobación y o barrera del software; 245 "C"; el 245% interactivo (activa/desactiva el acceso). 13 señales para la activación/la desactivación del acceso se pueden recibir y o activar vía: micrófono ("mic") (las señales de sonido activan/desactivan el acceso); teléfono ("T"); MES; tr; %fs (imagen correcta eg.: firma); alejado ("R"); inclinación 2; distancer 2 (eg.: chapaleta); P.M. 245; 24 mq (antes de la activación/de la desactivación; para la mejora de la base de datos del uip); 24 multiusos (el individuo requiere para poseer la contraseña o el otro activador/deactivator para acceder); notificador 245 (quién, qué, cuando, está accedido %where, porqué, y o está utilizando el sistema); oscilador 25 (si la contraseña o el otro activador/deactivator efectuado desearon la función, eg.: accedido); 24 uip (el acceso dibuja en la base de datos del pi al mq antes de permitir el acceso de usuario al usuario; 24 preguntas para el cambio del acceso según uip del usuario (mq un usuario de la acción hecho en sistema en una de actividades anteriores [importantes]); 24 pp; 24%score. 2 la necesidad para la característica del acceso es normalmente triviales, pero ayudas en la comercialización, y las ayudas organizan diferencias entre multiusos; uip.

1 que el tipo código usado en la contraseña (una serie de sonidos, las luces, las combinaciones de la letra o del número, etc) activa y o que desactiva la función correspondiente reservada para los individuos equipados de la contraseña.

24tds del usuario más allá del acceso se utiliza desarrolla su uip. El uso excesivo o escaso puede excluirlo las aplicaciones de alguno/de todas las funciones, accionar el "notificador", e informar al supervisor del usuario vía el teléfono ("T"), MES, email.

24 el tipo de uq puede por lo tanto (según uip del sistema, P.M., pp) afectar/control el tipo de contraseña/de manera necesarias para activar/desactiva; altavoz 5.

. - 1R-45 "verificación de firma dinámica": Escribir en su contraseña. El sistema también identifica el estilo del cursivo del usuario. [Convertido cerca: Communication Intelligence Corp, secoya apuntala, California/Riley que el diseño se asocia, San Mateo, CA 4.94 picosegundos]

Cerradura de la transmisión -4C-020, con otros modos diversos del "acceso".

INVENCIÓN DE EXTENSIÓN:

- El prestatario de servicios puede ser: compañía que recibe/el material de los almacenes/registers+; software y o m que hacen la vista con./desc. del registro automáticamente/en c del u (interruptor).

=

- Saunders: <1> 4e020: verificador contento. Lo vio quizá en NYT, pero no sabe si manejó el contenido. Tan porqué estaba esto una 1 cuenta, quizá comerciabilidad: mercados estrechos, necesidad de enseñar a compradores con referencia algo que nunca querían antes.

- Asher: su hacer qué computadoras saben ya hacer; pudo existir dentro de las compañías en alguna parte; podría ser puesto sobre Internet como servicio (técnico posible, o algo interesante hacerlo patentable).

--quizá haciendo más patentable: el poner sobre Internet; haciendo contenido - alguien en Internet pudo aprender cómo romperse en código - imposible por lo tanto inalterable imposible inalterable probablemente - > entonces la copia dura se certifica ante notario (por lo tanto mejora seguridad);

--búsqueda de la patente: mirar más en literatura de la computadora que la base de datos.

--mejorar cómo hacer el material inalterable. Sucede automáticamente. Eg.: la copia dura es tds, después limita (así que no puede substituir las páginas). Poner el material sobre el CD-ROM, la cinta, o el disco duro - sostener en cada vez, o una vez diariamente; no perder de vista quién accede en el sistema - piratas informáticos de cogida).

--método de acceso: prevención del acceso a los piratas informáticos. "Tener acceso" para los usuarios legítimos.

Conrado:

- Patentabilidad: ésta es automatización de la tarea manual/mecánica sabida. Torcedura aseada de la necesidad que trabaja el email de w. De América los almacenes en línea más allá de los mensajes que fueron enviados, solamente las cuestiones de la aislamiento están allí.
Los sistemas del acceso de la tarjeta dominante existen que guardan expedientes de quién entró a través de puertas. Las cámaras pusieron la fecha sobre el cuadro (no hecho probablemente por el revelador de la película).
- Cómo podemos enangostar abajo este y 2E251.

- el mundo es email que va.
- en el mundo físico difícilmente para verificar cualquier cosa. En mundo de la comunicación electrónica, verificación más fácil.
- al recibir los datos, estados de la letra también fue enviada al servicio de la verificación.

Pandiscio:
- La cuestión legal podía ser pesadilla para el servicio co.
- Patentabilidad: ¿Nadie otro haciéndola? La retransmisión de datos ayuda a patentabilidad. Discutir la necesidad verdadera de ella. Puesto que nadie pensó en ella y hay tal necesidad de esto, demuestra su no obvio.
- servicios que friegan el mensaje, identidad del remitente. Él está en Suiza, haciéndola para libre. Pero él no la archiva. Opuesto algo de este N.

4G280 - Tipo invenciones del disco volador

DE NATHAN FOMENTAR: Hay actual discos que vuelan iluminados en el mercado para la venta. Típicamente el uso OLED o el fotón bombea para una fuente de luz.

Cosas a tener presente. Los sensores que contienen piezas móviles afectarán al vuelo del disco. Recomendar el usar de los sensores ópticos en lugar de otro. También considerar usar "persistencia tecnología de la imagen" para exhibir el texto y otros mensajes.

Nada encontró con referencia a: discos de alta tecnología actuales del vuelo. Ésta aparece ser bastante zonas abiertas.

Gente en golf del disco del juego de Michigan. El juego vino se juegue con solamente un disco pero los juegos serios tendrán a menudo varios discos que tengan diversos pesos y equilibrios como los clubs de golf. Éstos

caerán cantidades serias de efectivo para un sistema de discos. Considerar desarrollar un sistema de sonorización automático para este juego. Esto se podía hacer fácilmente usando RFID y no se debe costar probatorio. EXTREMO ADOPTIVO.

ARCHIVO 5E

<3, 4 acarician, 3, 4>

palillo teledirigido 5E020 con el interruptor: Controlar cualquier dispositivo vía la posición del palillo en aire. Señales innovadoras del comando creadas por los ajustes de interruptor simples, y o cada posición general en el aire (determinado por el sensor llano). Puede controlar: los juguetes móviles, juego funcionan, realidad virtual, etc. Especialmente útil al controlar cualquie dispositivo que requiere grados de alteración, eg.: ventanas de abertura levemente, ajustando posiciones de objetos alejados. Permite la mayor libertad que mandos a distancia y los palillos de alegría. Construcción del dispositivo es decir: Cada posición de interruptor permite diverso efecto de la función. Eg.: el palillo se puede sostener en 5 diversas posiciones reconocibles, y hay tres interruptores, en golondrina de mar allí es 5 x 3 es 15, tan 15 diversos tipos de las señales que pueden ser creadas, por lo tanto 15 funciones. Se ata con alambre el palillo o radio.

. Existe:

- Palmadita Sheehan: cosas que funcionan según la colocación relativa.

. Misceláneo:

- Comercialización: Las Guerras de las Galaxias tienen gusto - del ng; tiene súplica de sexo.
- ver 5E120

. Versión de la marioneta: cómo la marioneta que controla es controlada - > función deseada en los elementos controlados (piezas).

--control electrónico de la marioneta; el palillo podría estar en la forma de la marioneta (mano del movimiento en teledirigido, en juguete del control de la golondrina de mar).

--D: accesorios (movibles)/piezas = mitad de cada marioneta que controla del "distancer" = marioneta que se controlará - sus piezas alterables = "distancer". D2: el distancer = C (computadora del `) = k/causes desearon la función (oscilador, movimientos (vía modo mecánico)).

--la marioneta se puede substituir por cualquier objeto tridimensional las piezas (movibles) múltiples (de w).

. Funciones:

- generación de los sonidos, comandos "alejados", etc.
- también controlar cerca: donde/cómo el palillo es held/w5
- la manera de la cual este R (`teledirigido) está doblado - > acciona señales de control asociadas.

Mecánicos:
- diversa pieza del palillo (w cada propia k) puede controlar diversos productos/porciones de productos, eg.: la tapa controla el aterrizaje/las alas, velocidad inferior de los controles.

El palillo también viene en formas de:
Buñuelo; bola; disco; de alambre espeso flexible; muñeca.
- Cualquie objeto, por el que cómo se altera/se mueve genere una señal que se interprete de manera programada, eg.: siempre que se encienda la vuelta de las ruedas de coche del juguete las luces del coche automáticamente - 5E021.

Dependiendo del ángulo del palillo en el aire, controles cualquie producto electrónico. Puede haber sobre 20 posiciones tridimensionales del aire, juntadas con tres o más ajustes de interruptor, teniendo en cuenta (20 por 3 60 diverso tipo de igualación señales).
- la virtualmente misma N es 5E020.

. Usos. Controles del palillo de las cosas:
- El palillo controla la música (el componer) eg.: Miburi de Yamaha.
- Aeroplanos (del juguete), barcos, muñecas, robustezas.
+ uso de los juegos video: el jugador representa el suyo/las posiciones del opositor/del otro jugador vía el palillo (s).
- actúa como C (computadora) del `el "ratón"
- el control de cualquie dispositivo (EL) como pudo ser generado vía (algo simple) señales electrónicas/controles, por ejemplo vía los interruptores/los teclados/etc. Eg.:
- salida - niveles de la luz (el brillo de los cambios de la luz mientras que la mano mueve su distancia), de sonido (decibelios), de etc.
- el jugar de la música (tambores/%key (tablero) s del juego en aire sin el tacto cualquier cosa). (Tener esta N anterior?)
- temperatura del agua (del grifo) - mover la mano a la derecha para un agua más fresca
- de volumen del control (de la unidad de T, audios/visuales, de la "estereofonia").
- dando vuelta cualquier cosa con./desc.
- alterando el ángulo de la exhibición (CRT) ("S")
sonido de +-adjusting (balance; "balanceador"; triple; bajo...)
- estaciones cambiantes de tv/cable; actúa como control "alejado".

- Indicador: el palillo actúa como el compás, su posición es interno transmitido/reflejado sobre: tablero/reloj (tiempo del reajuste, tiempo de la alarma).
- abertura/cierre/aumento de: ventanas, cortinas, puertas, alzamientos.

+-Position de (palillo) genera una señal.

+--Cada posición, juntada con la colocación de los interruptores ("k") aumenta el número de señales potenciales de cada posición (su sostenido en el aire).

generador de +-Signal: posición de la mano (objeto (llevado a cabo a mano)) en lo referente al "sensor" determina la señal. Esta señal se puede entonces interpretar de cualquier manera deseada.

- esta N (invención) copió a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verla para las actualizaciones.

--puede tener posiciones 100+ reconocibles.

- más de un mano/objeto puede ser utilizada. Diversos objetos pueden reflejar las señales (luz) del tr diferentemente al receptor, por lo tanto creando diversas señales resultantes.

--algunas señales se pudieron crear solamente usando dos o más palillos de las manos/objects/el.

- Ajustar/alterar/control el el tipo/llano (de salida deseada) según la posición de la mano en lo referente al "sensor".

- para determinar en qué punto debe accionar la mano/el objeto que alcanza el "sensor", el "sensor", las opciones incluyen: las respuestas del "sensor" a la mano/al objeto del punto del armario vienen; otra señal simultánea (pedal del pie) determina en qué punto y cómo la mano/el objeto (de mudanza) debe accionar la señal.

- activar/desactivar las funciones alejadas de este sistema vía: cambiar (k)/la función teledirigida, eg.: sacudir tres veces en 45 grados por los ángulos de 45 grados (mano de hora del reloj en el 2:30 P.M.), 30 cm lejos.

- osc/nr deja u (usuario) sabe que (que comando) el sistema (el sistema) reconoció la entrada de (y en golondrina de mar realizará) (sobre cuaesquiera comandos adicionales necesarios del usuario/de pasos/de procesos)

- el palillo/el otro objeto se puede atar con alambre/radio

- D: la mano/el objeto = "sensor" = c (analizador) = hizo salir (la luz)

. - marcas: Control del deseo.

. - incluido en IMI& (r)

- copiado para mejorar el archivo 1.95 de N (invención)

- OTD D1: U = este ~ C (computadora del sistema de N (sistema) (palillo) del ') =

- este artículo explicó anterior (los medios tienen una INVENCIÓN anterior #, eg.: 1G010?)

D: 1sensor = 2computer = 3transmitter = 4receiver =5function/6other

Notas sobre D (dibujo): 1: para/vía de los sentidos: a] el ángulo a el cual se lleva a cabo el artículo; "/"del distancer de b] "GPS". 2: memoria. 3: transmite vía la radio, luz, las frecuencias del etc (la parte #1 puede ser saltada por el que la luz (laser) u otras ayudas de la transmisión identifique la localización/la posición/el modo del palillo. 4: recibe la luz, radio, señales del audio.... 5: estereofonia/sistema del "sintetizador" del tablero del mic/del record=playback /key (estéreo). 6: computadora "mfh" /connected a 5 "pi".

-5E020A: Cualquier cosa acciona cualquier cosa: Cualquier acción acciona el "sensor aplicable" que en respuesta deseada de los disparadores de la golondrina de mar. En este caso, cualquier acción es una acción teledirigida (r). Las acciones incluyen: discurso, eg.: aplaudiendo (chapaleta, "voz"); diodos de la luz laser de la travesía; puertas del cierre/de abertura; el sentarse en la golondrina de mar que acciona la presión "sensor".

-5E020B: Luces del coche del juguete cuando las ruedas dan vuelta.

siempre que se encienda la vuelta de las ruedas de coche del juguete las luces del coche automáticamente.

- OTD D (dibujo): Este N ()/C (computadora) del `[línea del palillo dibujada a cada uno debajo de N#] = monitor inteligente 2E251: cualquier acción 5E020A puede accionar el monitor; 7G052 dobló el notificador llano.

- OTD D (dibujo): Cualquie acción: el hablar, caminando, moviéndose (parte del cuerpo), ""/este de la voz sistema/C de N =

ACCESO (); ANALIZADOR (); CARRO (); EDUC (); M (); MIC (); MULTIUSOS (); NOTIFICADOR (); OSCILADOR (); Banda (); Picosegundo (); Q (); S (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); SYNTH (); TDS (); T (); UIP (); ANALIZADOR VISUAL (); WA ().

<3, (Bob 4-Pat verde, 3 mk), 1>

el uno mismo del sistema 5E080 analiza la mejor síntesis para la acústica del sitio/del pasillo. Solamente idea agradable, sin tener metodología.

Cómo trabajos:

- Dibujo #1: diversos micrófonos - > analizador de sonidos = oscilador (c)
- Dibujo #2: oscilador - > el sonido refleja de nuevo al "mic" = C (computadora) del `(sonido analyzer1) = oscilador (ajustado por c; synth).

--Notas: 1: el analizador de sonidos intenta difundir en diversas frecuencias - > el analizar del interno qué resultados cumplen mejor requisitos según lo controlado cerca: (fabricante) banda, uip.

- El "analizador" ajusta el sistema según: "multiusos"/tipo música/uip/tipo uso, eg.: sonidos para alzar ventas, o para hacer que la gente siente en el país.

¿- cómo técnico posible? El método extraordinariamente importante para determinar patentabilidad. - El sistema se modifica vía cualquier regeneración consigue de sitio. Control de frecuencia auto. Como una característica Dolby estándar incorporada a productos.

- frecuencia intermedia quizá barata una vez que la viruta se convirtió
- El usuario puede también alteración sana del oscilador (del complemento) vía el K. del sistema.

- OTD D (dibujo): Este N (invención) sistema)/C (computadora (del sistema) (de sitio de sonidos analizador del `) =

ANALIZADOR (); CARRO (); M (); MIC (); MULTIUSOS (); OSCILADOR (); Banda (); ANALIZADOR DE SONIDOS (); SYNTH (); UIP ().

Funciones adicionales:

- "Analizador": para reducir el sistema del ruido (para los vecinos) (sistema) alterará automáticamente los sonidos más penetrativos, eg.: un bajo más fuerte, sacando los elementos más ásperos (que reducen el bajo).
- Hacer una búsqueda de la palabra clave para las INVENCIONES con el "synth". Eg.: para los usos.
- trabajos con la venda sin hilos de la música 5E090.

- OTD D2: Este ~ C (computadora del sistema de N (invención) (sistema) () del `) =

ACCESO (); ANALIZADOR (donde colocar altavoces, cómo fijar los ajustes (electrónicos) del EL del oscilador (según lo determinado por el analizador)); AP (estéreo); BALANCE (); CÁMARA (); CARRO (); COMPOSICIÓN (manera de: 1] grabó de antemano el fabricante registrado música (CD, cinta,)/2] u de la memoria usando su sistema que compone, = determina cómo el sistema sano del ajuste del oscilador (sistema) se debe analizar); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (los altavoces del oscilador = el analizador del mic = de sonidos = el sistema (sistema) ajusta cómo el oscilador puede hacer mejor el goind saliente); MQ (para los gustos del usuario (más o menos bajo, uip)); MULTIUSOS (cada u (usuario) tiene poseer ajustes preferred); nr (notificador) (cuando el sonido se puede mejorar más lejos); OSCILADOR (); Banda (); Q (); R (); CUENTA (estudios del analizador de sonidos cómo el buen sonido está vía circunstancias differenting: w5); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (analizador); DISCURSO (); ESTADO (analizador); ESTÉREO (); SYNTH (); UIP (); UQ (); VR (); WA ().

< (3.5-pat, 2.5 mk), los terminales sin hilos de 3.5> 5E090 conectan con el sistema central.

Venda sin hilos de la música: El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades portables múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. Mayor portabilidad, libertad, sonido que hace la experimentación, una grabación más barata.

- Mercado limitado: apunta a jóvenes - el mercado grande, "quiere ser ejecutantes", los profesionales no necesitan ni utilizan a personal sano profesional.
- el sistema puede también ser un accompaniement (necesitar a pocos jugadores); no limitado a la fijación/a alterar su música pobre.
- la característica del tratamiento de señales es qué haría esto patentable
- puede reducir al volumen de jugadores particulares.
- "cojín del aire"

Otros usos: cualquie portable N ()/característica de la invención del sistema de N.

- "juego": cada jugador conectó vía (radio) el tr con la C. central.
- "c portable": cuadernos
- t = sistema principal de t (sistema) recepcionista (automático) (de w, KN relacionado (invención))

Terminología:

- unidades externas: las unidades móviles/portables que están conectadas con el sistema central (sistema) (c=brain) vía (radio) el tr.

- OTD D2: (Múltiplo) U = unidad externa/este ~ C (computadora del sistema de N (invención) (sistema) (5E090) del `) =

ACCESO (); ANALIZADOR (cómo cada unidad externa obra recíprocamente con el eachother y o la central c); ARTISTA (fabricación del arte del grupo - cada u (usuario) tiene poseer la unidad que agrega al arte del grupo, eg.: 1] cada jugador dado solamente ciertos colores/formas/modos de escritura/los plazos - en cuál para hacer lo que (arte, el compose%) él desea.); BALANCE (los promedios/consideran del sistema cada localización de u/player.); CEREBRO (determina son qué piezas externas: comparativamente más importante para las funciones señaladas que consideran (w5); para comunicar con qué partes del sistema, eg.: unidades externas #2 y #99 y c central; volumen audio que se oirá por cada u; volumen audio que debe ser generado (a la otra u) por cada unidad externa); C (computadora del `) (cada unidad externa puede asumir el control (muchos de) las funciones de C central (computadora del `) vía: tener acceso, consenso de la otra unidad externa (su u), tds (franja horaria) de esa unidad, uip/cuenta = "juego": quién está ganando el juego); CÁMARA (); COMPOSICIÓN (palillo 5E020, Yamaha Miburi); DISTANCER (); EDUC (que aprende el terminal); K (); M (); MQ (); MULTIUSOS (C central (computadora del `) distingue entre diversas unidades externas vía: acceso/uip/analizador); CUENTA (juego, uip que se convierte); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); TR (sin hilos, celular, infrarrojo); U (jugadores, receptores de servicios/de transmisiones (la unidad externa puede ser (bastante) voz pasiva)); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

<4, 3, 4, demostraciones de la exhibición de 2-Martin> 5E120 cómo el dispositivo o el palillo de alegría teledirigido es dispositivo que controla. Ejemplo: cómo se está moviendo el palillo del aire y en funciona qué modo, y en golondrina de mar el su controlar. Utiliza 5E020.

- Martin: "parece como el interruptor estándar (software) del `(software) función".

Los terminales sin hilos -5E090 conectan con el sistema central = s/el cerebro/el perseguidor/banda/cuenta/estado/uip/wa.

ARCHIVO 5G

<Scores para 5G061 más arriba que 5G060>

ventana rectora de la dislexia 5G060: La ventana cuadrada mecánica clasificada ajustable deja a lector limitar la cantidad de material impreso que ven inmediatamente. Razón: el material impreso excesivo encima complace sentidos del individuo dyslectic.

Misceláneo:

- ver que a través el plástico w o la frontera del wo puede tener diversos colores w/in la ventana sí mismo. Eg.: la frontera blanca de la cartulina y el lado izquierdo de la ventana w/in es amarillos, mientras que el derecho es rojo.

--otras combinaciones de color de la ventana: rayas 2+ de los colores, cada letra de la anchura una de la raya o más de par en par; forma (puntos grandes sólidos, líneas periféricas de otras formas) todos con el claro o el fondo coloreado.

- cambios del fondo del color en un cierto plazo (porque): ojos que consiguen alza de la necesidad o el cambio del color cansada.
- las funciones pueden estar en el interruptor también, consideran 5G061.
- muchas características explicadas en 5G061.

<3, 3, 4 palmadita-interruptor-versión, 1.5 mk, 3>

software de la dislexia 5G061: La gente con dislexia necesita nuevas maneras tener imágenes de la letra entradas en su cerebro, cada letra puede ser demostrada en la dimensión tres, eg.: la letra tridimensional "b" tiene luz vertida en ella de la izquierda, y "d" tiene luz demostrada de la derecha. El software altera letras y colores según el tipo experiencias del usuario del problema, eg.: diversas letras tienen diversos colores. La característica opcional expresa el texto, mientras que el usuario lee la mejora de la comprensión mientras que dyslectics encouraging para no dar fácilmente el estudio.

Buscar y substituir/las alteraciones/Adustments:

- Programas de usuario (pr) cómo el software hará las alteraciones deseadas (nr).
- Las búsquedas del software entonces alteran las palabras particulares que causan problemas.
- Modos adicionales de la alteración:
- puesto que la gente con dislexia necesita nuevas maneras tener las imágenes entradas en su cerebro, cada letra se puede demostrar en la dimensión tres, eg.: la letra "b" tiene luz vertida en ella de la izquierda, y "d" tiene luz demostrada de la derecha (o de la iluminación opuesta).

- ciertas letras se pueden alterar según el "UIP". Eg.: el usuario tiene dificultad "b de desciframiento" y "d", por lo tanto tales letras se tratan diferentemente:

--"b" y "d" tienen diverso colorante; las letras difíciles todas se destacan/se colorean diferentemente del texto restante.

--esa gente que puede mejorar su lectura puede entonces lentamente hacer las designaciones de las letras/de las palabras difíciles hacer cada vez menos distintas todo el texto es tan gradualmente igual. En días difíciles las distinciones se pueden hacer otra vez.

--construction^: el software busca para las letras/las palabras señaladas (según el UIP/los PP), después altera imágenes apuntadas por consiguiente.

- imágenes (del fondo) controladas cerca: uip/banda/qué vino texto de w cart/el. Eg.: leer la ficción de la selva y ver/para oír los leones rugido y monos que hacen pivotar de árboles.

Modo del OSCILADOR mientras que lee:

- El sistema sabe que la letra /word/line/paragraph u está leyendo en el momento. En golondrina de mar, el sistema leerá esas palabras (que los problemas del lector de la causa vía pr/uip).

Patentabilidad: (60-70% versiones del interruptor o del pvc de la ocasión). El tratamiento de señales del software es la edición patentable a un cierto grado.

- Ver simple (mecánico): colocado sobre el texto impreso. ¿Puede explorar el texto a mano a mano sobreescrito o a mano la versión eléctrica menos patentable?

. - Búsqueda de la palmadita: necesitar comprobar las capacidades del módem de los dispositivos disponibles para asistir a avistadas parcialmente para leer.

Misceláneo:

- versión del interruptor: Info dado electrónicamente: explorado/en línea/carro (diskettes, cd) - > el interruptor convierte el texto - > s/impresora.

- El software utiliza la versión simple (5G060) también. Cosechadora con el producto 5G070.

Software/versiones plásticas de la ventana rectora 5G060:

- Ejemplos: ver apenas uno o más letras, palabras, oraciones, párrafos a la vez.

- la ventana puede tener claro y o cambiable coloreada para ver a través el plástico. Ciertos fondos de los colores pueden realzar la lectura y o aumentar comodidad

- ciertas formas y o las letras en las áreas del recorte pueden ser demostradas, si es provechoso. Eg.: el usuario tiene apuro el distinguir entre "b" y "d", así que la tapa del área (en blanco) cortada tiene uno o más letras de "b" y la parte inferior tiene uno o más letras de "d". El usuario puede referirles siempre que necesiten recordar mejor sus distinciones.

- construcción del plástico y o de la cartulina. El tamaño de la ventana del cuadrado creado cerca ajusta a partir la uno a tres de los lados.

El sistema analiza la velocidad del lector vía:

- globo del ojo "analizador": el movimiento de ojo del reloj, cada movimiento representa: una letra, sílaba, palabra, grupo de palabra; calcula matemáticamente vía la configuración (triangular) qué ojo está viendo, vía su posición al texto demostrado (s).
- el lector golpea llave mientras que progresan cerca: letra, palabra, oración, párrafo.
- el usuario enrolla el texto

Misceláneo:

- enseña a gente a enfocarse; los actos como el entrenamiento ruedan para los principiantes de la bicicleta, usuario consideran poco a la vez, aumentando la cantidad demostrada, así que no consiguen abrumados.
- Las imágenes del interruptor se pueden también demostrar entre líneas, con o sin un forro coloreado especial para estas imágenes implantadas.
- hace que el usuario siente más seguro en los remolinos de la impresión
- el sistema puede tener el contador de tiempo y u otros análisis electrónicos para cómo las habilidades de lectura del usuario están mejorando, eg.: velocidad de la lectura; aumentos de tamaños de ventanas.
--el sistema puede forzar/sugiere a usuario para acelerar tamaño de la ventana de la lectura/del aumento

H:

- este N# cambió de 5G060 a 5G061 7.95.
- Versión del programa también. D: interruptor = c = exhibición (efectos deseados y 2.as (o 3D) imágenes). Tiene iguales y más funciones que la versión mecánica.

- D1: (en electrónico) versión plana:

.....

. .....

. 1.

. -------.

. .....

.....

Los gráficos impresos sobre la tarjeta están en el perímetro externo. El perímetro interno es el considerar con área. Las barras a través de la demostración media que una posición posible en la cual la ventana se cierra parcialmente con el material opaco coloreado (puede todavía leer quizá fácilmente con él). La puerta deslizante (viene de la parte inferior).

- colores usados en el obturador opaco/cualquie cubierta de la ventana (1); más los colores para el perímetro externo se pueden elegir por los psicólogos/dislexia experts/u, según los colores (combinaciones) los mejores resultados de esa demostración/preferred por el U.

- D2: .....

: b d:

: .....:

: .....:

Notas: El diagrama tiene cuadrado grande, con un cuadrado más pequeño dentro - etiquetado 1. ventanas cortadas 1=; las letras b y d se imprimen sobre (no-cortar) el área externa, lado sobre/below/to de la ventana (de la lectura).

. - La epilepsia y Parkinson tienen síntomas similares a la dislexia. Por lo tanto estos productos mencionados como ayuda de estos problemas se pueden aplicar a ayudar las otras enfermedades. Eg.: vía la alteración de la manera de la cual centran sus mentes.

- OTD D: Este ~ del sistema de N (interruptor dyslectic) C =

ACCESO ("interno" de los estudios del analizador del comportamiento (comportamiento de la lectura): solamente permite que a ésos el estilo de lectura de w (dyslectic/inusual) acceda); ANALIZADOR (el sistema ajusta sus modificaciones según las necesidades/los comportamientos/uip/pr del u); CARRO (texto de la lectura, interruptor, efectos multi-media, uip, acceso); EDUC (mejora la lectura, hábitos del estudio, la lectura de la velocidad); M (texto, uip, acceso); MULTIUSOS (la lectura de diferenciación de cada u necesita encontrado); NOTIFICADOR (cuando lector que no lee rápidamente bastante/según lo necesitado); OSCILADOR (); Banda (cómo alterar el texto); Q (); S (); CUENTA (velocidad, retención de la memoria de las pruebas del material leído); SENSOR (velocidad de la lectura del u); ESTADO (); SYNTH (ajustar el oscilador según: uip, analizador del comportamiento, banda, texto); TDS (velocidad, cuenta de la lectura); T (MES); UIP (el sistema estudia el estilo del lector (lectura), eg.: velocidad, comprensión = formación más mejor/programas de ayuda de ofrecimiento (interruptor)); ANALIZADOR VISUAL (movimientos de ojo del lector).

=

- OTD D2: Este ~ del sistema de N () C =

TENER ACCESO (la contraseña demuestra el interruptor necesario/el uip actual y la cuenta de u); ANALIZADOR (que adapta el uip a cómo mejor de los datos presentado); ARTISTA (); BALANCE (el oscilador ajusta sonidos según el uip del u según cualquier tipo problema de la audiencia/necesitó ayuda, eg.: sonido siempre más ruidosamente en el oído izquierdo del u); CÁMARA (explorador); CARRO (arte, interruptor preceptoral); EDUC (tgh); K (palillo de alegría); M (DB del uip); MES (); RATÓN (); MQ (); MULTIUSOS (); NR (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (); CUENTA (los estudios nivelan de la situación (problema dyslectic, interés del u en material, comerciabilidad del material) vía: hacer preguntas (dyslectic) de u determinar: el retension de la memoria, la velocidad de la lectura), utiliza la existencia dyslectic/las pruebas de lectura (los interruptores)); DISCURSO (); ESTADO (compara las cuentas del u en un cierto plazo, curva de la mejora del u de los gráficos; el analizador = sugiere que los tipos futuros de actions/sw u puedan utilizar para alcanzar mejor punterías deseadas); TDS (); Público objetivo de U (dyslectic, general de la gente no impared); UIP (lectura/hábitos personales (del interés)); UQ ().

Usos adicionales para el software de la dislexia 5G061:

- el sistema adapta la presentación del material (interruptor (texto, las imágenes)) según: uip. Propósitos: mejorar la comercialización/la súplica al lector/a la legibilidad (para u) no-dyslectic/reduce el bordom (en material de lectura vía el mismo estilo/manera)
- U solamente considera/las experiencias (vía: el oscilador, los datos de los modos de a/v) que necesitan/quieren. Investigación de datos vía: uip, palabra clave, analizador visual, cuenta (del nivel emparejado U de w de dificultad del texto disponible de diferenciación).

O - El sistema tutors a artistas en la mejora de su fabricación de la imagen:
- D: Artista = analizador = C = U (artista humano). U extrae sobre C/material explorado por C/carro (del)/tr del trabajo de arte de otro C = C = los parámetros solicitados (como banda) se seleccionan = los parámetros comparados de w del interruptor preceptoral (banda) = cuenta/analizador = las sugerencias hechas = los ejemplos visuales/comentario escrito/hoja de la cuenta/sugirieron los libros para leer (seleccionado vía emparejar del uip del artista del UIP w del libro (en ese tiempo que anota)).
¿- Esto un KN viejo?
- similar al instructor de la música, con todo a éste es más en el modo visual.

<3, 3, 2 acarician, 1.5 software de la lectura de la velocidad del mk> 5G070: Las ayudas del sistema retardan velocidad de la lectura del aumento de los lectores (del dyslectice). Cada palabra (o el grupo de palabras) se destaca, con o sin el texto circundante demostrado. La característica opcional expresa el texto, mientras que el usuario lee. Otros usos: aprendizaje de las segundas idiomas (pronunciación, velocidad), lectores normales que intentan aumentar la velocidad, prueba psicologica (eg.: el modo verbal del efecto tiene en la comprensión y la velocidad de lectura). Cosechadora con el producto 5A060.

- para la patentabilidad (ocasión 60-70% para el interruptor).
- el tratamiento de señales del software es la edición patentable.
- Los disl3exicos tienen velocidades lentas de la lectura, por lo tanto esto complementa 5G060.

Dirección especial de la palabra particular:
- las palabras largas (automáticamente) se escriben con guión/están rotas hasta reducen largo de una palabra.
- se marcan (coloreado/subrayado) o se delinean otras palabras que u tiene continuamente apuro con de cierta manera (coger la atención del lector). Encontrar tales palabras vía: la búsqueda del interruptor y substituye/altera.
- Palabras más largas pueden recibir más tiempo. Esta característica se puede dar vuelta con./desc., desde el donante de un tiempo más largo puede animar a lectores a retrasar.

El OSCILADOR da a señal sonora tempo de ayuda sano de la lectura del lector w: un golpe por palabra/línea/párrafo/la página. La velocidad de la señal sonora puede ser banda.

- OTD D: Este N sistema ()/C del interruptor de la lectura de la velocidad =
ACCESO (los lectores incapaces de leer/responden a los avisos del interruptor de c rápidamente bastante no pueden acceder, esto hacen más difícil para que los piratas informáticos de computadora accedan cuando/donde (w5) los inician menos en las funciones del sistema; ésos que intentan acceder (entonces fallando en ensayos iniciales) se marcan con etiqueta más de cerca (el monitor inteligente 2E251) durante cualquier tentativa subsecuente del acceso que puedan intentar); ANALIZADOR (velocidad del lector determinada por el interruptor vía: posición del cursor, rueda de la pantalla [up-down], vuelta de páginas, cómo u clasifica su propia velocidad); CARRO (texto que se leerá, interruptor); EDUC (mejora la velocidad de la lectura, comprensión (interruptor del entrenamiento especial)); M (); MULTIUSOS (ajusta a las necesidades de cada lector, uip); NOTIFICADOR (cuando el lector no está haciendo bien, eg.: retardarse también); OSCILADOR (); Banda (); Q (); S (); CUENTA (velocidad, comprensión); ESTADO (); TDS (); T (módem a los datos del tr que se leerán/ser convertido); +UIP (el sistema ajusta a las necesidades únicas del usuario: apresurar, mecanografiar la lectura/el desorden del comportamiento); ANALIZADOR VISUAL (el reconocimiento óptico del interruptor altera las imágenes (palabras, cuadros) para adaptarse a las necesidades del uip del u); WA (s en unidades portables).

Cada palabra se destaca/se encajona (con o sin el otro texto circundante demostrado) de una manera sincronizada. Usuario/sistema selecciona la velocidad del movimiento, permitiendo que el usuario mejore el foco en una palabra a la vez.
. - el usuario puede alterar velocidad, y o el botón para que el sistema continúe redactando después

- relacionado con 5A-060

. - más tiempo se puede dar a las palabras que son más largas, o que son señaladas por la base de datos como más difícilmente para leer (basado en el toda la población o de estudios con la gente dyslectic).

lector de la fonética de +-Dyslectic:

Los puntos culminantes/las demostraciones del sistema cada letra/palabra/oración dividen en párrafos a la vez. El material destacado entonces se habla hacia fuera. También útil en la inicial que aprende etapas, los lectores de ayuda utilizan la fonética para leer. Reduce la hora necesaria para el instructor vivo.

- relacionado con 5A-060.

ARCHIVO 7G

PVC ALERTER

<3, 3.5, 3.5, 4, 3>

el PVC 7G050 (eg., guantes, condones) alerta a usuario cuando ha estado perforado o contacto entrado en con ciertos productos químicos:

Versión química: la capa interna está de diverso color en la golondrina de mar que se expone, o la capa interna emite la sustancia coloreada cuando está pinchada. Versión electrónica: el sensor notifica si cualquier contacto se ha hecho con los productos químicos específicos en superficie interna, externa o superior. Ambas versiones analizan el tipo de ocurrencia en términos de cuando, y cómo un tipo particular contacto químico fue hecho. La ventaja más grande es la característica de la seguridad para la humanidad.

SE DEMUESTRA QUÉ

Cualquier tipo de usuario de la ocurrencia quiere "notificado" se demuestra. Ejemplos del tipo ocurrencias:

- Condiciones de la calidad del PVC demostradas: agujero; rasgón; (menor de edad) estirando que podría llevar más adelante al rasgón verdadero debido al área débil creciente; si entró en el contacto con la sustancia corrosiva (que podría debilitar (thinnen) el pvc), puede haber corroído ya la capa externa de pvc; si el pvc se está estirando más allá (deseado/banda) de capacidad, eg.: dar la superpresión demasiado grande para el guante, o.

- Edad (del uso): si el pvc es demasiado viejo, o expuesto al aire/al producto químico (demasiado de largo/más allá del plazo de pr/tds).

- Temperaturas demostradas: cambio en temperatura para contenido (tubería, envases,)/ambiente de las tapas. Temperaturas represenent de diversos colores diversas.

--si la temperatura ha excedido una temperatura mínima y máxima.

- Cambios biológicos demostrados: Cambios del minuto en temperatura resultando de comportamiento del microorganismo. Mecanografiar los organismos y o en cuál él es hacer (w5) demostrada - > su efecto mensurable del "nr" de la causa de las actividades (los productos químicos excretados por la actividad del tipo organismo, temperatura, pvc llano del movimiento (cantidad de fricción/de vibración) reciben, etc.) - > reacción (química) (pvc) - > nr.

--resultados llanos de la fricción - > cambia en condiciones químicas del pvc/de cambios químicos resultando de mezcla de sustancia (de mudanza) estudiada con el pvc.

- Tipo químico contacto demostrado: diversos colores representan el tipo contacto w: ventilar (calidad), nivel del pH, producto químico específico querido (ser evitado). Porcentaje del contenido químico particular: cómo está deshidratado, sulferic.

- diversos lados del pvc tienen nr de diferenciación (notificador) según lo que entra en ese lado el contacto con lo que (w5).

. Identificando el tipo contacto hecho por el PVC:

Comprobar el PVC más adelante: El PVC tiene bolsillos minúsculos que se sostengan/interactivo con el tipo condición buscada = el ojo/EL (electrónico) "analizador" del u = estado en tipos de contactos hechos w5.

- el pvc incluye los productos químicos diseñados para obrar recíprocamente con las sustancias apuntadas. La reacción química puede ser inmediatamente considerado/adelante/cómo la banda - w5.

. --cualquier elasticidad necesaria todavía se encuentra en el pvc.

- ciertos tipos de contacto cuyo nr (notificador) no sea fácilmente prestable a la inspección por el ojo humano sin ayuda pueden tener guante: sostenido debajo del microscopio (con: ciertos filtros de la "lente"/ven en cierto fq, eg.: luz ultravioleta).

- Eg: el contacto sulferic hecho hace 5 horas por 8 minutos, nivel de contacto/de porcentaje sulferic de la sustancia que era sulferic en aquel momento (w5) era 40-50%.

2] pvc = EL (electrónico) "sensor" = C (computadora) del `(analizador/memoria/estado) attacheable a pvc = s/C ()/m/carro/guantes/pvc de la computadora del `

] pvc puesto 3 en las situaciones que causarán reacciones químicas subsecuentes - > ver/"para analizar" el tipo pvc del contacto tenía w5.

- Eg: colocar el guante en las soluciones químicas/el tipo específico luz/cierto nivel del calor.

--Es decir: el pvc especialmente diseñado de a] entra en el contacto con su potencial de las sustancias diseñado para - > el pvc de b] después se altera/se efectúa de cierta manera para crear la reacción química sobre vía la cual el tipo ocurrencia (eventualmente) se considera fácilmente: el ojo sin ayuda/la razón adicional del proceso químico/del microscopio/etc. de pasos adicionales es: el coste o el nivel de sofisticación no permite una lectura inmediata para el tipo contacto w5; mayor exactitud (estado, nivel, w5) para el tipo contacto; las compañías pueden recoger todo el final de los guantes (nombre del u de w) de cada vez que el período y las procesa en hornadas más grandes - > entonces el nr (notificador)/dice u (usuario) de cualquier tipo exposición o uso para el

estudio de la investigación, eg.: como las tabletas contrarias de semi-geiger usadas por la gente en reactores nucleares.

3] Hornadas: para mejorar el tipo exposición del acertain w5, diversas hornadas de los productos químicos usados en el pvc se diseñan para un efecto de la cápsula del semi-tiempo (cada hornada se hace eficaz en las horas de diferenciación, por lo tanto más reaccionar accionado las hornadas/para no reaccionar, una más lectura del precide en cuanto a el tipo acontecimientos (cuando, cuánto qué, w5).

- diversas hornadas pueden el nr (notificador) (búsqueda a demostrar): tipo múltiple contacto por el tipo químico/w5.

- diversas hornadas se pueden atar sobre el pvc/tomar o pelar apagado/activatable cerca: tirando de la lengüeta/del color/poniendo el pvc anterior en el tipo solución (el pvc diseñó sostenerse o trabajar con eficacia así que el paso anterior hecho es útil para cualquier futuro que identifica para el tipo contacto.

- la combinación de diversas hornadas y cómo se activan puede pintar un mejor cuadro para: mecanografiar el contacto químico/w5. Eg.: la sustancia con dos productos químicos puede ser identificada cuando cada lengüeta diseñada para cada sustancia se ha efectuado/nr.

- las lengüetas/las hornadas puestas sobre el pvc son: absorbente para uno o etapas múltiples para determinar el tipo contacto. Puede comprar lengüetas por separado del pvc. El PVC diseñó mejorar el asimiento/el trabajo con la lengüeta/hornadas cerca: el mejor pegarse con la lengüeta (permanece tan en/puede salir); las hornadas no tocan el eachother: (los marcadores colocados en el pvc donde cualesquiera/ciertas lengüetas pueden ser puestos, marcadores para las lengüetas fijan en localizaciones menos probablemente para tocar el eachother basado en para lo que se diseña el pvc, eg.: guante (que evita los puntos donde los dedos tocan otras partes del guante.

EXTENSIÓN DE N

--NR de extensión: el cambio del color es "nr". "Nr" puede también estar vía: cambio (superficie) del PVC físico, eg.: las burbujas, consiguen más difícilmente/más suave más o menos flexible/excreta las sustancias (líquido, polvo, olor. Cada tipo de situación se puede representar en tipo de diferenciación de acción del "nr", eg.: azul contra el rojo para la temperatura, el olor del hedor para el peligro, y el perfume para una situación más segura.

--PVC de extensión: Esta n se puede aplicar a virtualmente cualquier material, eg.: vidrio, metal, madera, piedra, cement+. El PVC se puede inter-substituir por uno o más de otras sustancias. el nr (notificador) se demuestra simplemente en tales sustancias.

---Las lengüetas se pueden poner en el material (siendo estudiado). Los productos existentes que los cambios de la medida de cualquier tipo se relacionaron con qué se describe en esta N, son aplicables a este N. general Eg.: lengüetas que miden (los cambios adentro) temperatura, el pH, el etc.

---Cemento/pintura: el nr (notificador) altera vía cambio del color; cambio de la textura superficial (corrosivo (mirada), burbujas para arriba)

---El vidrio/ve a través el PVC: nivel de opacidad (coloreada) = de nr

USOS

- Manipulación de materiales de los peligros, sondeando en fábricas de productos químicos y refinerías, basuras municipales, guantes del dentista/del investigador. Mercado enorme.
- cuando consigue al nivel del peligro, el "nr" necesita ser muy identificable, eg.: muy brillante contra colores no sensibles. Problema: animase a u (usuario) se pudo que confíe en n, incluso si forwarned sobre el peligro.
- Guantes/condón/PVC: demuestra llano de uso/del frotamiento/de la fricción. La capa externa de guante usa hacia fuera demostrar su hora de cambiar el guante. Si usa por tiempo largo/rasgón de menor importancia, estirar.
- esas partes del pvc que consiguieron mayor uso ya - > nr, pueden dejar uso de u (usuario) otras piezas de separar el área del uso/del desgaste.
- demostraciones "nr" del material de cubierta. Abrigo del material de cubierta/pvc para: asiento, paños de tabla, delantal, sombreros, cubierta sobre la ropa, manija de la pluma (existe: pluma que mata los gérmenes en contacto). Actos también como la demostración del desgaste de la gente de las divisas con qué productos químicos han entrado en el contacto.
- el PVC mata los gérmenes: en contacto/sobre (semi) la penetración (puesto que la capa protectora externa cubre (posiblemente) los productos químicos peligrosos para anestesiar.

NR: Cómo está demostrado

- Los síntomas múltiples son nr: se demuestra el nr de diferenciación (no-en conflicto) (notificador), eg.: 1] dos diversas rayas coloreadas; 2] C (computadora del `) = nr; 3] dígitos particulares/los efectos visuales aparecen en el pvc (en lugares de diferenciación).
- U siente algo (picadura, prickle, ácido) sobre/después de la perforación/de la fractura. Las ayudas encajonan u (usuario) que no mira el guante.

--D: perforación/fractura del pvc - > sensor/reacción química (exposición/contacto del aire entre aislado previamente (capas)) - > químico lanzamiento ()/oscilador del ácido

MISCELÁNEO

- Semejanzas en productos existentes: hay muchas cosas de dos capas en mundo, eg.: al doblar una capa, exponer otras capas; tarjetas de crédito que cambian color después de clavar nombre mecanografiado. Por lo tanto, 7G052 pudo ser más patentable porque su más complejo.
- La etiqueta en pvc (guante, condón) explica:

el "nr" no debe ser confiado sobre; el "nr" puede dar difícilmente para identificar el aviso a u; ninguna advertencia pudo ser dada.

--la idea es el efecto del nr (notificador) es mejor que no teniendo ningu□n tal nr.

- MK: Mucha gente es absolutamente temerosa de la contaminación, el número de tal gente crece probablemente anualmente debido a la sofisticación cada vez mayor de la población. Reduce la ocasión de: separando microorganismos nuevamente dirigidos, enfermedad (VIH, cáncer, quemaduras (del producto químico)). Los sueldos para el producto químico/Biotech aventurado/los trabajadores médicos son más altos, usar tales guantes reduce riesgos y excepto en nóminas de pago. Con la publicidad, los empleados exigirán los guantes. El envío, la dirección y los costes de fabricación pueden ser bajos.
- Palabras claves de búsqueda de la patente: el pvc, cloride polivinílico del vynle, caucho, guante, caja fuerte, germen, penetrat-, advierte, hospital, investigación, rotura, rasgón, capas múltiples.
- atar con alambre/el otro PVC de on/within de los "sensores" cuando estaba disturbado/alteró/efectuado en cualquier w/in descrito manera esta N, acciona la señal (nr) que demuestra llano/tipo situación/problema.
- los usuarios que intentaban guardar abajo de costes (del guante), pudieron usar el guante claro sobre el guante de esta n. Por lo tanto: hacer los guantes que usan sobre este guante difícil vía: ineficacia del nr (notificador) en tales circunstancias (las necesidades ventilan en la perforación - > nr); fricción que consigue el segundo guante sobre el guante de esta n; la función del nr (notificador) reduce en eficacia después de cierto plazo usado guante (tener nr (notificador) el demostrar de la edad del guante); ¿el gobierno permitirá todos estos factores del estímulo de las ventas que comprometan la seguridad para los cortadores del presupuesto?
- sección de cada pvc (eg.: el dedo del guante) tiene diverso color. Usos: las ayudas identifican qué sección del pvc tenía que mecanografían la ocurrencia (w5).

- OTD D1: Esta N (invención) (sistema (PVC)) ~ del ~ C (computadora del `) (7G051/7G052) = ACCESO (u limitado (usuario) puede saber: estado, nr; o sistema del uso); ANALIZADOR (condición w5/estado de la condición del pvc); CARRO (interruptor; el enchufe pvc = ata con alambre = los elementos (electrónicos) = c) del EL; EDUC (para la investigación educativa; uso del laboratorio); M (analizador, DB); MULTIUSOS (); NOTIFICADOR (); Banda (cómo analizar los datos); Q (u pide con referencia a la condición del pvc); ANOTAR (# el pvc de las épocas era: penetrado, dañado, y w5); El SENSOR demuestra la corriente/el pasado/%anticipated (analizador, uip): (la presión, vibración, puntura, rasgón, estiramiento, calor, frío, nivel de la humedad, edad de las demostraciones del pvc (kn) cambia en la coloración, el otro contacto químico, el nivel de corrosión); ESTADO (); TDS (ocurrencia de cualquie elemento w5); UIP (para qué sistema (electrónico) del EL (sistema) debe tener cuidado (tipo problema/situación/actividad); Guante de VR (VR "Educ"/herramienta de la investigación, "obran recíprocamente" con los productos químicos/los microorganismos mientras que usan VR (analizador visual)).

- cuaesquiera contaminents/nr de las causas del material de los productos químicos (no lavados apagado) (pvc). Las ayudas u (usuario) saben la limpieza de la superficie/del área de trabajo. Esta función del nr (notificador) se aplica a: pinturas, barnices, formica, papel (tablero), pvc (caucho, vynl, bolsos, envases (de la tapa)...

- OTD D2: Este ~ C (computadora del sistema de N (invención) (sistema) (guante) del `) =

ACCESO (antes de que (mano) pueden comenzar el trabajo/entran en (el tanque), del "analizador" de los sistemas los sentidos del "sensor" = si el tipo correcto guante de la seguridad se está utilizando vía la lectura del guante: reflejo de luz ultravioleta, lector de clave de barras); ANALIZADOR (); ARTISTA (cada dedo crea diversa tinta del color (sobre: s de papel/interactivo) vía: el dispensador de la tinta en cada dedo/reacción química de la superficie tocada con los productos químicos de diferenciación por el dedo, y las partes de superficie entradas en contacto con/la carga del EL o el producto químico (electrónico) de diferenciación de cada dedo y cómo s interactivo o la otra superficie avanzada obra recíprocamente/lee cada dedo); C (computadora del `) (); CÁMARA (el monitor inteligente 2E251 sigue solamente el guante particular, porque el guante tiene: tr (picosegundo), cierto color); CARRO (c/el microchip = "analiza el tipo (producto químico) ocurrencia diferentemente. Tinta. Productos químicos para causar reacciones químicas de diferenciación (por el dedo)); COMPOSICIÓN (guante KN (invención) de la música); K (como guante de la música, excepto ninguì□n teclado necesario puesto que el sistema (sistema) analiza cómo el dedo toca diversas superficies - KN (invención)); M (analizador, DB); MES (c); RATÓN (c); MQ (ocurrencias w5 buscadas); MULTIUSOS (); NR (); OSCILADOR (); Banda (); R (k); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); SYNTH (); TDS (); T (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

NR: cómo el tipo ocurrencia notifica U:

- la superficie del rasguño/lleva a cabo la lengüeta para considerar: cambio del color/de la textura, fraseología impresa (esa aparece dependiendo del tipo ocurrencia).

- Notificador del PVC del extremo 7G050.

<3, 3.5, 3.5, 4, 3>

el PVC 7G051 alerta a usuario cuando se ha agrietado, o ha doblado más allá de cantidad deseada, en la golondrina de mar que lanza la sustancia coloreada. Ver 7G050. La exposición de la sustancia interna al aire induce la descoloración.

- ESTA N ES SUBCONJUNTO De 7G050.
- Usos: Tubería del PVC. Mercado enorme.
- analogía: cortar adentro la piel, causa la sangría, debido a la exposición del aire - > cambio químico - > cambio del color (en área/líneas próximas a través del pvc/(nr = oscilador)).
- Semejanza: Martin - "similar a uno-utilizar los calibradores para determinar la tensión que un paquete se ha sujetado a al enviar."
- Demostraciones hasta dónde él: ha estirado ya, y o cuánto puede ser que estire más lejos antes: fractura, partiendo, no pudiendo dar más. Cada etapa del estiramiento puede causar cambios aplicables en la coloración.

<1, 3, (3-mk, palmadita 4), 3.5>

7G052 dobló el notificador llano: Hacen el usuario enterado el número de épocas excesivas y el grado de material de doblez emprendió más allá de niveles deseables. Usos: alambre, bisagras (existe?), el cubrir flexible (vinilo). El sensor electrónico analiza la situación: cuando, donde, qué, cómo algo fue doblado. Útil en laboratorios del R&D, eg.: prototipos de prueba del nuevo producto, usos de los específicos no identificados. Reemplazos costosos o peligrosos de la característica del equipo: aeroplanos.

- analogía: cortar adentro la piel, causa la sangría, debido a la exposición del aire - > cambio químico - > cambio del color.
- frecuencia intermedia para este más alto que 7G050 o 7G051
- utiliza las invenciones para las piezas del pvc que cambian color cuando: necesitando la reparación, más allá de cierta edad, del etc.

objeto de valor de +-system cuando (pvc, caucho) los materiales usados no son tipo para demostrar fácilmente desgaste excesivo y rasgón, u otros sufrimientos.

- R260 "sensor" que juzga w5 de la naturaleza flexible del elemento,
no ES.
- el objeto de los jueces w5 del sistema (el alambre/el otro material flexible) estuvo doblado. Eg.: # de épocas dobló (más allá de parámetro señalado) - > nr.
- usos: útil en la determinación del futuro posible/de las faltas actuales del sistema (sistema) (debido a los alambres (rotos) culpables/a los elementos flexibles).
- del sensor búsquedas también para otras características para las cuales puede ser mirado (en tales panoramas potencialmente culpables), eg.: temperatura alta-baja excesiva; (señalado) contacto químico; sobre exposición a tiempo ()/etc. de los elementos # elemento de las épocas fue utilizado o correctamente no usado/incorrectly/at todo.
- DIBUJO del EL: el sensor = el analizador = C (computadora del `) = s/osc/data tr a la base de datos (m)/sw sostiene o analiza datos/la cuenta.
. - DIBUJO químico: (excesivo) doblando = la reacción química (cada vez) = con la acumulación del residuo de la reacción química = del color/de la sustancia cambia (aspecto).

Usos: máquinas importantes/valiosas donde está preocupación la seguridad importante; aeroplanos; centrales eléctricas; redes del co del teléfono y del cable; automóviles.

Cómo problemas identifiedrawing: utilizar la luz especial del color (ultravioleta) para ver para los problemas - subsistencias él más difícilmente para que la gente copie/robar la invención.

- OTD D1: Esta N (invención) (sistema, pvc, alambre, u) daño Alerter del PVC del ~ 7G050 del ~ C (computadora del `) =
ACCESO (); ANALIZADOR (); CARRO (); EDUC (); M (); NOTIFICADOR (); CUENTA (); SENSOR (); ANALIZADOR de SONIDOS (el sistema busca los sonidos que pudieron implicar la alteración (de la negativa) del material en la pregunta, eg.: sonidos del rasgado, quemando, el hacer estallar, rasgando); ESTADO (); SYNTH (analizador de sonidos (monitor inteligente 2e010) = synth - > los sonidos de las respuestas de la manera de la banda así que de u/sys pueden mejorar "analizan" estado/qué happed (w5)); TDS (); UIP (); ANALIZADOR VISUAL ().

Invenciones audios

Instituto de la innovación

Cancelación sana

MS01: Métodos sanos de la selección:

Decide qué sonidos a cancelar.

- Las ayudas de la invención descifran sonidos importantes de ruidos de fondo.
- Notificador del `: Para ayudar a designado qué sucedió, los sonidos sin relación externos se anulan. Alguien mejor sepamos qué sucedió (W5) cuando hay muchos diversos sonidos. EG.: Puede centrarse en donde el sonido viene de también.
- sabe jugar sonidos traseros.
- con menos alboroto sano, el reconocedor sano/los oídos de los seres humanos puede (una mejores) naturaleza de la descifración/tipo de sonido (siendo) generados.

. - El dispositivo de cancelación sano cúbico de la oficina existe. Avlelec.com

. - esta invención pudo estar en una más viejas bases de datos de la invención de Steven de Kays'.

-

Ediciones MS01:

- lentitud en reaccionar (inmediato hecho) a los sonidos.
- conectado con MSA02

Detalles técnicos de revoltijo (véase el archivo señalado de las piezas para las piezas abreviadas).

. DIBUJO DE OTD: U = este ~ C (computadora del sistema de N (invención) (sistema) [métodos sanos de la selección MS01] del `) =

TENER ACCESO [] AL ARTISTA (musical) de // [] /CART [sonidos almacenados en el MP3, el etc] // EDIT [texto correlacionado con los sonidos] // EDUC [aprender el componer de diversos sonidos, eg.: diversos sonidos del motor (del coche) (que se puede cancelar)] // MULTIUSOS [cada cancelar usuario/sistema/de las búsquedas los sonidos señalados búsqueda] // nr (notificador) [] // OSCILADOR [la forma de sonido a comunicar puede (no) sea oída por los partidos señalados (con su propia cancelación del sonido (los protectores), BÚSQUEDAS de // de la CUENTA de // Q [] // R [] // // de la Picosegundo-Zona]/banda [] // [] [la semejanza del sonido al patrón señalado se anota] y REACCIONA [el sistema responde a cualquier sonido que se convierta a una señal señalada, eg.: encender las luces cuando camina cierto pie de la audición] SENSOR de // [los sensores usados en la ayuda determinan qué sonidos (la O.N.U) seleccionar, eg.: las fases señaladas exterior de los sonidos sin embargo se seleccionan cuando el reconocedor visual coge el rojo de a (mudanza) (la camisa)] PISTA de // TDS del ANALIZADOR de SONIDOS de // [] [todas las ocurrencias son TDS estampado y almacenado en base de datos] // T [los sonidos relacionados se aplican] // de la telefonía [seguir a los objetos/a gente con los sonidos señalados - KN (invención)] ANALIZADOR VISUAL de // UIP [aprende que qué señaló los sonidos (fuerza) sean] // [] // VR [las aplicaciones/los convertidos señalaron sonidos (ambientales)] // WA [sistema sano móvil de la selección].

Acceso sano MS02:

El transmisor del usuario envía sonidos múltiples para acceder, pero solamente ciertas frecuencias camufladas dentro son necesarias - ocasión de reducción al mínimo para que otras copien el sonido; los sonidos (innecesarios) pueden ser alterados periódico. Si un sonido omitido se utiliza para acceder, un notificador puede ser accionado.

- conectado con MSA01

MS03: Supervisión sana seleccionada:

Acceso de la supervisión/de la seguridad': el sistema puede supervisar los tipos diversos de sonidos, aislando cada uno, y reaccionando según lo señalado. EXISTE.

--eg.: el padre puede oír sus gritos del bebé, mientras que ahogaban hacia fuera (más) otros sonidos, entrenaron al sistema para buscar y a reaccionar/cancelación.

--las ayudas combaten contra las situaciones/los bandidos que intentan engañar analizadores de sonidos haciendo los sonidos extraños/en conflicto diseñados para sonar a camuflaje una acción.

- una característica realzada del reconocimiento sano.
- relacionado con la supervisión visual seleccionada KN (invención) (invención anterior). MS0

Alarmas selectivas de la mañana MS04:

- Las pulsaciones (sonido y vibratorio) usadas para despertar a alguien, pueden estar de menos disturbio a otros vía los dispositivos de la cancelación de la pulsación. DEMASIADO SIMILAR A MS03

. --Es decir: La forma de sonido a comunicar puede (no) sea oída por los partidos señalados (con su propio sonido cancelando (los protectores), eg.: conseguir adentro despertada la por los sonidos/las pulsaciones que otro ha anulado.]

- (Tecnología futura) deja a persona sobre el lado derecho de cama/de sitio/de casa oír los sonidos (de la alarma), de que puede ser cancelado/ser amortiguado en otras zonas.
- Crea mejores relaciones. Eg.: el hombre que pudo tener que despertar la alarma determinada de la fuerza anterior anterior, para íntimo abrazar a su esposo (quién no fue sacudido por una alarma, pero despertado suavemente).

MS05: Mejora de la práctica del V-Cuarto:

- crear una firma acústica conveniente (tiempo toma para que el sonido despida de una pared en un cuarto). EXISTE.
- hacer que el sitio suena como una catedral, teatro, cuarto de baño (la práctica del V-Cuarto (nombre de producto) existe de la mirada de wengercorp.com debajo de sus productos acústicos). Sonidos indeseados de la cancelación para mejorar mejor efecto sonoro.

--V el sitio que es vendido es un cuarto construido, contra el tipo estéreo sistema solamente.

MS06: Audición - conversión sana deteriorada:

- De alta frecuencia del convertido a las frecuencias bajas. Audición - deteriorada oye mejor bajo. EXISTE.
- Mayo no hace caso de las frecuencias bajas (que se pueden oír ya).
- El desplazador de la echada utilizó.
- Dejar a persona saber cuáles son los sonidos oídos, eg.: Código Morse que hace un ejecutor de la señal.

MS07: Canceladora seleccionada de los sonidos:

(UIP) sabe cancelar qué sonidos indeseados a cancelar: PATENTAR LA BÚSQUEDA.

- Enseñar al sistema para reconocer sonidos específicos eg.: perro del vecino.
- por frecuencia
- por la localización (vía los micrófonos múltiples, picosegundo).
- duración
- patrones de sonidos: tiempo, frecuencia y volumen

- el usuario enseña al sistema para aprender (la O.N.U) sonidos queridos
- muestrear hacia fuera el sonido del fondo, durante épocas más reservadas.
-SonicStudio.com tiene producto para cancelar sonidos seleccionados del material previo.

MS08: Cancelación del sonido de la ventana:
Los sonidos que lo golpean (semi) están cancelados. PATENTAR LA BÚSQUEDA: el revés de esto existe (la ventana es un altavoz existe.)
- aplicar a locutor visualmente claro; o cojines de los sonidos (es un altavoz sí mismo que transfiere el sonido sobre la superficie atada).
- Invención de Matt Stamos' (solamente la suya).
- programa para señalar hacia fuera ciertos sonidos, eg.: el perro del vecino, pero puede oír a cabritos en patio trasero.
- Vidrio del susurro: utilizar la ventana como altavoz - existe.

Misceláneo

Pregunta - ondas:
- Muchas del audio y de la necesidad de las invenciones que pulsa simplemente de incorporar el audio y las calidades de la invención que pulsan descritos, si solamente el audio o las pulsaciones era mencionadas. Esto se aplica solamente menos así que a las ondas del color en sistemas de reconocimiento visual.
¿- Cómo ampliar las invenciones que toman en cuenta esto? Incorporar quizá el audio y las vibraciones en "pulsaciones" que es una palabra comercial de activación para las invenciones también. ¿Entonces utilizar solamente los términos más estrechos del "audio" y de la "vibración" cuando ambos no se aplican?
- La representación visual puede aplicarse a menudo tiene tan quizá términos como: P = audio, vibración, visual; ¿y P>Visual = audio, vibración pero no representación visual? ¿O "P" pudo ser "W" para la onda?
- los códigos ayudan cuando viene hora para hacer diagramas y escribiendo ideas muy largas - si no - éste pudo ahorrar 10%+ del wordage innecesario.
¿- Ajustar quizá esto antes de elegir en una enumeración/un sistema clasificador?

Nota: sin conseguir alarmada, para no sacar mejor invenciones relacionadas con la seguridad fuera de los E.E.U.U., hasta que seis meses después de que la solicitud de patente se ha presentado, a menos que la oficina de patentes indica de otra manera.

Muchas de las invenciones incorporadas tienen más viejos números de la invención, y Steve no seguro cuáles son. Tendremos que tan realmente claramente especificar vía el extracto qué invenciones entrarán nuestro acuerdo, para evitar conflictos con otras invenciones que se autorizarán. Está a menudo demasiado difícil encontrar donde/qué estas invenciones pudieron ser en la base de datos de KN.

Nuevas piezas audios
Agregado a otros archivos de las piezas

Puerta: elimina sonidos debajo de cierto decibelio. Salidas.

Ducker: rechaza el sonido de otros cuando una persona señalada es discurso/que hace el sonido. Existe.

Coctelera del extremo: Coctelera baja. frecuencias bajas de las transferencias sobre una superficie. Existe. "Coctelera del extremo - TM". Utiliza los amplificadores (del audio disponible).

Código de la vibración: comunica vía vibraciones, eg.: Código Morse.

Intelligability: estados del metro cómo es comprensible es un sonido/una vibración, eg.: para un estadio grande - existe. Sugerirá cómo fijarlo.

Analizadores de sonidos: mide el sonido. El sonido de Meyer en Berkeley tiene sistema de Sim. Pieza "SA de las' invenciones' de Steve Kays - el analizador de sonidos" no distingue necesario entre los reconocedores y los analizadores sanos.

Reconocedores sanos: dice cuáles es el sonido, eg.: reconocimiento de discurso.

Desplazador de la echada: sonidos de los cambios a otros echada.

Transductor: torneado de un sonido en corriente eléctrica; o corriente eléctrica en sonido, eg.: micrófono, altavoz ruidoso, comunicador vibratorio.

Fase anti: la fase es la curva del sonido/de la vibración determinados en horas extras. Antifase es el contrario que anula una fase.

Ver otras piezas (audios) aplicables - agregar por favor a la lista principal.

¡Creativo combinar las piezas!

Invenciones que pulsan
Instituto de la innovación

Comunicación que pulsa

Existe: patente que comunica por código de la vibración.

MS20: Vibraciones/combinaciones sanas del código Morse:
- Dejar a persona saber cuáles son los sonidos oídos, eg.: Código Morse que hace un ejecutor de la señal. EXISTE.
--códigos simples para (diez)
- el teléfono celular vibra para el código Morse; la identificación de llamador y las llamadas bloqueadas tienen diverso código.
--las vibraciones múltiples (liso, dentado, profundo, bajo, etc) se pueden utilizar como una plantilla alfabética.
- diversos tipos de vibraciones significan si están utilizando al Morse o el otro código.
- encontrar las maneras de reducir curvas de aprendizaje, a las cuotas de mercado del aumento para las invenciones.
- Las palabras convirtieron al texto (SA), de que se convierten en código de la vibración.

MS21: Lengua de la vibración:
Palabras convertidas a la vibración. No tranferible suena como letras: c, d, f, h, k, s, x se podría convertir a otro sonido (que el usuario podría aprender). EXISTE.
- como el aprendizaje de un nuevo estilo del cursivo para los pilotos de palma.

- colocar el transductor vibratorio en cuerpo (del ser humano), encendido (cráneo en la derecha más baja de oídos.

-

Usos MSP02 de la lengua de la vibración:

- la audiencia deterioró: traducir. Utilizar algo con excepción de las luces que audiencia - a menudo deteriorado uso.
- sistema de alarma: NR
- gente ocupada visualmente, eg.: conductores.
- vibraciones del reloj de la muñeca
- conseguir las comunicaciones que otros no sabrían alrededor.
- vibrar en la hora
- acariciar la comunicación, ponen debajo de la estera del sueño
- el despertador sacude la cama - existe
- enviar el mensaje de texto, "hola miel te amo". Solamente una persona tiene quizá acceso para enviar el mensaje. "Golpecito del amor - TM". Onda celular (una comunicación unidireccional). Recibir reservado.
- la línea sujeta del email se vibra sobre el teléfono celular
- campana de puerta
- notificador del `: cocinar la alarma; alarma del fuego/de la emergencia
- el resto de las formas electrónicas de comunicación a los seres humanos/a los animales/a los organismos: ¿qué más???

Lengua de la vibración MS22:

Diversos diodos colocaron (en cuerpo). Cada diodo puede tener (cuatro) tipos de patrones de la vibración, con cada patrón representando un dígito alfanumérico, o término. EXISTE.

- Los elefantes comunican grandemente en base. Investigación amplia del estudio aquí.
- Las maneras del estudio de los lingüistas que la gente comunica, ella pudieron tener gusto de explorar estas invenciones nuevas; y sugerir que las maneras que los seres humanos pudieron aprender mejor/que se adapten a las posibilidades de la comunicación, y qué esas mejores formas de comunicación pudieron ser.

Notas sobre MS22:

- Marcas registradas posibles: V-Comm; Vication; Vimunation (juego de la comunicación); Vimmunation; Comunicador del ms [señal múltiple].

Usos de la vibración:

- masaje

- acupressure y terapias relacionadas

Lector de MS23Vibration:

Reconoce vibraciones, y reacciona.

- Existe: Actuador de la conducción de hueso.
- Aplicaciones médicas: detecta los golpes de corazón/respiración (obstruida) de pulmones.
- Máquina/diagnósticos autos: identifica problemas.
- (El fabricante pudo) enseñar sensor de la vibración a cómo buscar y reaccionar.

Vibración Relayer:

- Como el relayer teledirigido existente, puede continuar en las señales vibratorias (electrónicamente recibido/vibrationally zonas de otros lugares las'.
- Juguete (para los cabritos/los animales domésticos): responde de nuevo a cómo los juegos del animal doméstico/los empujes/vibran (con qué covers/is conectó) el sensor de la vibración. El sistema juega de nuevo o altera lo que lee el lector de la vibración; y puede alterar respuesta vía el UIP (del animal doméstico, del profesor, del usuario).

Invenciones que pulsan - otras

MS30: Señales del reconocedor visual del convertido al código de la vibración:

- el `notifica para las emergencias. PATENTAR LA BÚSQUEDA.
- cada color/forma/objeto tiene un diverso código
- explorar la imagen en la vibración
- vibración de convertido en imagen visual

MS31: Canceladora de la vibración:

Puede reducir la vibración de vibraciones constantemente existentes de una máquina. Reduce los costes de fabricación para la máquina. EXISTE.

- las funciones tienen gusto de la canceladora de los sonidos. El sonido es un tipo de onda/de vibración.
- poner algo de fase; inversión de la polaridad
- los sentidos entonces cancelan las vibraciones.
- Existe: Presión que detecta control activo: patente pendiente. Medidas del micrófono y vibraciones de los controles con la presión.

- Coctelera baja: recibiría enfrente de señales de la fuente vibrante (conectada con ella).
- Medida: fuente de la vibración, y vibración que es sentida. La fluctuación entre los dos es lo que antifase (poder) no conseguir. Poner el sensor en todas las piezas aplicables; entonces combina los dos
- seleccionar que (de muchos) las vibraciones están canceladas. El usuario puede utilizar/foco en vibraciones restantes.
. - puede utilizar pero no requerido: resortes, amortiguando los dispositivos. Las ayudas alcanzan resultados (donde la invención puede no trabajar completamente).
Anti-vibrador del soporte del altavoz: reduce los sonidos enviados a los vecinos.
- Mirada a continuación (existe): el lector (sano) sabe qué será oída delante de tiempo.
- analizador de la vibración de las aplicaciones: datastick.com. Sabe qué vibraciones (cancelar) ser.

NOTIFICADOR de la CUERDA 6J040

Extracto:
La invención alerta a usuario cuando la cuerda de la energía eléctrica se acerca a la longitud máxima de la extensión disponible.
Otra versión notifica cuando las cuerdas que atan con correa algo abajo están consiguiendo soltar.

Es decir: cuando la cuerda (para la energía) viene cerca de su longitud máxima "notifica" usos del U.: aspirador; cortacéspedes de césped eléctrico; dispositivos eléctricos al aire libre del corte, eg.: podadoras del seto, otras sierras; etc.

Notifica cuando (correas, la cuerda, los alambres, el %screws, el otro %fasteners) utilizado para asegurar abajo de un dispositivo conseguir demasiado flojo.
Notificaciones también disponibles cuando la cuerda está en: situación peligrosa por el que pueda conseguir separada, o raído.

Esta invención parece tan obviamente necesaria y es quizá demasiado simple. ¿Ninguì□n inventor anterior?

Usos - tipo cuerdas:
- aspiradores
- cortacéspedes de césped eléctricos
- dispositivos eléctricos al aire libre del corte, eg.: podadoras del seto, otras sierras; etc.
- teléfonos de la cuerda

Notificaciones de la desconexión - dicen el usuario de las maneras que la longitud disponible de la cuerda está acercando al extremo:

- cuadernos de la computadora: el sistema puede notificar a usuario si salió la cuerda, puesto que la batería del cuaderno puede morir sin el usuario que es consciente.
- el grado a el cual puede ser tirado se filtra. Es decir consigue más difícilmente tirar más lejos (menos cuerda hay).

--un método es utilizar un cierto tipo de dispositivo mecánico que aplique más presión en la cuerda [mecanismo de liberación] que menos cuerda se deja para sacar.

El sistema de maneras identifica cuando las correas están consiguiendo flojamente:

- el sensor' analiza' el nivel de tensión para la correa/el sujetador; entonces notifica cuando consigue demasiado flojo o firmemente (algo puede encajarse a presión/rotura). ¡Otras maneras!

Versión electrónica D (dibujo): dispositivo = sensor = cuerda eléctricos = enchufe eléctrico.

Notificador que dispara de la cuerda - el sistema notifica cuando nunca una cuerda puede estar a punto de ser:

- disparado sobre
- cuando un cuerpo móvil (persona, robusteza) es alrededor tirar de la cuerda hasta ahora que la cuerda sacará de la pared o el dispositivo (diseñado automáticamente para hacer tan en tales circunstancias)
- hay un riesgo algo que baja (que se ata a la cuerda, o acercan al dispositivo corded)

Sensores que alertan partidos móviles a los peligros:

- Notificador del excursionista de la luz laser: esto se coloca cerca de las cuerdas y la gente de los notificadores que pasan ser cauteloso (de la cuerda, o trabajo u otros peligros en curso).

Tipos de cuerdas:

- cables eléctricos
- seguridad/dispositivos antis del hurto [con los notificadores electrónicos (activados sobre lanzamiento de una cuerda o de un adminículo)].
- cuerdas para transmitir o recibir [datos, otras frecuencias].
- pipas para: cualquie líquido; alambres; recorrido (como en túneles).
- cualquier cosa ayudar a establecer estabilidad
- Misceláneo: correas; secuencia; cuerda; alambre
- cuerdas de la transmisión de datos: óptico, de cobre, cable, etc.

Cuerdas de la cerradura y otros instrumentos:

- correas; secuencia; cuerda; alambre; etc
- Notifica cuando sus funciones deseadas señaladas no son nunca una operabilidad máxima. Eg.:
--[sobre conseguir] flojo
--cortar o rayéndose o debilitándose
--incapaz de adquirir [nivel de modificación de] la tensión [al dispositivo que está asegurando].
--% [inflexibles] de las correas o instrumentos fuertes [colocados fuera del dispositivo que es asegurado]. Eg.: madera, metal, barras plásticas, tiras, pilares u otras estructuras.

Se notifica qué:
- las cuerdas diseñaron ayudar a establecer estabilidad, tal como cuerdas. El sistema puede alterar cuando el sensor observa estas cuerdas está desatando, consiguiendo raído, o simplemente corte.
--un alambre eléctrico puede necesitar funcionar a través de las cuerdas [tales] [como o característica de sensores].
- cuando las cuerdas en espiral están consiguiendo más tensas, es decir consiguiendo más cercano a perder su elasticidad llegando a ser más recto.
. - cuando se utiliza la cuerda incorrecta: no diseñado para el uso señalado de la energía, o el tipo [datos] transmisión.
- cuando la cuerda está no más en la operabilidad máxima: transmisión pobre; cuerda raída
- cuando las cuerdas [de la energía] consiguen demasiado flojas y están poniendo alrededor. Esto pudo ser una situación peligrosa. El sensor anota simplemente el nivel tenso; y si demasiado es flojo [el sensor puede no saber sin embargo cuánto está poniendo la cuerda adicional alrededor]; el analizador da instrucciones el dispositivo de la retención para tirar adentro de más cuerda hasta el nivel tenso señalado.

Cómo se analiza y se anota el tautness:
- el nivel de tirón de la cuerda o de su alambre interno debe permanecer [constante]. Cualquier aumento/disminución indica el cambio que las necesidades de ser analizado. Tal análisis en golondrina de mar decide a cómo reaccionar, y si se autoriza una notificación, por ejemplo basado en la cuenta (para cómo es malo la ocurrencia está) de la incidencia.
- el sensor en el cual las cuerdas entran se programa notificar cuando cae nunca el nivel tenso exterior el parámetro señalado.
--% que el nivel de tolerancia al nivel tenso puede variar según el UIP, viento, hora (cuando el sistema es más probable conseguir agitated), u otros criterios relacionados con la seguridad ('acceso).

Misceláneo:
- El dispositivo puede apretar automáticamente la cuerda al tautness deseado [sobre el usuario que presiona la palanca o el botón]. Eg.: la cuerda de la holgura [energía] puede ser tomada extraordinariamente, pero el nivel

tenso de diferenciación deseado para esta función es tal que no causará una desconexión [sacando la cuerda de la pared] [puesto que la cuerda está contraída lentamente] en este tipo circunstancia.

- Un código especial es necesario antes de la desconexión. Existe: dispositivos que alertan cuando el cable eléctrico se saca del enchufe, como dispositivo anti del hurto; para desactivar la alarma el usuario debe utilizar cierta contraseña.

Búsqueda de la patente de los E.E.U.U.:

- palabras claves: la cuerda, tirón, contrae, retención, notifica, advierte, alerta, tenso, viento
- estrategia de búsqueda en las cuerdas retractables: cord y contraer y (el tirón o contrae o conserva o retención o notif o advierte o alerta o tensos)
- estrategia de búsqueda en las cuerdas alteradas:

cuerda y tenso

--otras palabras claves: reaccionar o responder o alertar o notif

- Patentes de los E.E.U.U.:

Aparato 4177963 de la bobina de la cuerda; 4326339.

. OTD D (dibujo): U = este ~ C (computadora del sistema de N (invención) (sistema) [ocurrencia que efectúa la cuerda = reacción = la cuerda del analizador la '] del `) =
TENER ACCESO [] A LAS BÚSQUEDAS MULTIUSOS de // de la CUENTA de // Q [] // R [] // de la Picosegundo-Zona de la banda de // del OSCILADOR de // del nr de // EDIT [] // [] // del CARRO de // de los VAGOS de // (analizador del comportamiento del `) [] [] (notificador) [] [] [] // [] [] y REACCIONA [] la PISTA de // TDS [] // T [] // del SENSOR de // [] [] // UIP [].

Diagrama #1:

persona que tira = cuerda = bobina de la cuerda restante = del sensor o del otro dispositivo mecánico reactivo que reacciona al cambio en cuerda restante = la reacción: la notificación o la capacidad de tirar de la cuerda consigue más difícilmente pues hay el menos permanecer de la cuerda.

Diagrama #2:

la ocurrencia que altera la condición de la cuerda o la correa = (sensor del alambre de metal) analiza que hay apuro = notificación hecha o la cuerda es apretada automáticamente más lejos por el analizador del sistema al nivel tenso señalado [por programa].

NOTIFICADOR de la CUERDA 6J040

Ésta podía realmente ser dos tecnologías separadas.

1ros) Muchos materiales exhiben un cambio en resistencia cuando bajo la presión o tensión. Una cuerda se podía hacer que los objetos expuestos un nivel de resistencia cuando pulla y un diverso nivel cuando no. Una pequeña carga eléctrica sería aplicada para rope supervisado en el otro extremo. Un cambio en resistencia podría indicar que la cuerda es no más segura. Otros factores podían cambiar resistencia también.

2cd) Dispositivo de seguridad a prevenir sobre la extensión de cuerdas. He visto esto hecha como sigue. Una cuerda de extensión a 9.5 la" cuerda se ata 10". La cuerda más corta guarda la cuerda más larga de ser extendido demasiado. Otros métodos incluyen la adhesión de una bola más grande o paran a la cuerda. La bola que es interna hace el dispositivo evita que la cuerda sea extendida demasiado debiendo a grande pasar con la abertura para la cuerda.

Los usos más probable para esto serían en las situaciones del hazmat donde el overextension de la cuerda podría tener resultados serios.

Invención 3E061 - Profesor particular del movimiento del cuerpo humano

No saber factible sería esto. La tecnología para esto ya se ha desarrollado mucho según lo descrito aquí por Hollywood. Se utiliza para capturar los movimientos humanos para animaciones más realistas.

No han oído hablar de ninguna aplicaciones terapéutica. Sería costado muy probablemente algo prohibitivo por los cuatro o cinco años próximos. Los juegos llenos del movimiento del cuerpo pueden ser 100k+. Los guantes que capturan movimientos de la mano y de la muñeca son alrededor $100 - $1000 dependiendo del número de sensores etc...

La manera alterna quizás que se convertía de capturar datos podía llevar a una tecnología más comprable.

También quizás la tecnología se podía autorizar para desarrollar usos de la terapia física. La tecnología médica ha tenido tradicionalmente siempre precios más grandes. No puede ser factible para el uso casero sino podría estar para el uso clínico. El dinero sería hecho apagado del uso del sistema de la captura de movimiento algo que el sistema sí mismo.

Ver http://www.vicon.com/applications/life_sciences.html

Los sistemas de medida máximos del movimiento de Vicon se han utilizado en centenares de laboratorios clínicos y de investigación, de centros del funcionamiento de los deportes, de universidades y de otras instituciones en más de 50 países por todo el mundo.

Combinando la tecnología marcador-basada óptica del MX 3D de Vicon de la alta calidad con la 2.a y la tecnología de video digitales establecidas desde hace mucho tiempo 3D del funcionamiento máximo, el pico de Vicon ofrece una gama única de soporte físico y de software para adaptarse a sus necesidades tan bien como su presupuesto.

Si usted quiere el mundo la solución marcador-basada óptica más exacta y más de gran alcance o la flexibilidad incomparable de una solución video digital, el pico de Vicon entregará las medidas de calidad que hacen sentido y el software que le deja tener sentido de ellos.

Si usted tiene cualesquiera preguntas o necesita la información adicional sobre el uso de los sistemas máximos de Vicon en ciencias de la vida, entrar en contacto con por favor su oficina máxima más cercana de Vicon - apenas chascar aquí para la información sobre cómo entrarnos en contacto con.

Archivo: I ajustador 5J07 del retraso misceláneo/de jet

ajustador del retraso de jet 5J07:

Comprable fabricar la invención acclimates a viajeros que van a y que vienen de nuevas zonas horarias. Los usuarios de las ayudas ajustan gradualmente horario el dormir para adaptarse mejor a los cambios de las zonas horarias. La lámpara del lado de la cama, y las alarmas del tiempo se alteran por consiguiente.

- Ajuste de épocas: Prepara a usuarios antes de llevar sus viajes mejor acclimating sus ciclos de la estela/del sueño la localización nuevamente destinada. También facilita a usuario de nuevo a sus ciclos de la estela/del sueño de la naturaleza sobre hogar de vuelta.
- Iluminación: La exposición de la demostración de los estudios a la luz en las ayudas correctas del patrón ajusta más rápidamente a usuario a diversas zonas horarias. La luz [del portable] para el usuario es considerablemente más brillante durante horas señaladas, y ajusta los tiempos del mayor brillo según el régimen diario del día.
- El usuario que las llaves en el sistema del zone= del tiempo de su hogar (sistema) entonces ajustan gradualmente sus sugerencias según el comportamiento cambiado del usuario en un cierto plazo (día por día) = nr ajusta sugirió tiempo de la cama y despierta tiempo correspondientemente (por una hora por día hacia sus nuevas zonas horarias). u (usuario) puede programar el sistema para acelerar o para retrasar el modo del ajuste.
- La gente cualquiera es generalmente demasiado perezosa u olvidadiza forzarse en un régimen alterado. La invención es su guía.
- Ganchos de la invención en los dispositivos electrónicos controlando sus funciones [dar vuelta con./desc./alterar] para ayudar a alterar el comportamiento del usuario [zonas horarias basadas]. Estos dispositivos incluyen:

--consumición de épocas: evitar irse a la cama con el estómago lleno dando por resultado un sueño más difícil; y tal es menos sano.

--jugar música que calma al acercarse a tiempo de la cama. Conecta con la estereofonia.

--otros estudios últimos y del futuro [encontrados en tela] que factores de la demostración [probada] cuál ajuste de la zona de la ayuda a tiempo.

- Alarma ligera gradual de la mañana:

[15 minutos] antes de la alarma, la luz se adelanta gradualmente para reducir al mínimo el choque del ajuste a despertar a la vez eso esté fuera de ritmo con el cuerpo. Este aspecto que despierta ligero gradual existe como soporte solamente, pero puede ser conectado con esta invención para la ventaja agregada.

- % trabaja con la gente que tiene problemas físicos o mentales con de una naturaleza del ajuste del tiempo, eg.: desordenes durmientes.

- Ajusta antes/durante/después de viaje.

=

Detalles:

- %See: calculadora del tiempo del mundo 6B310: El sistema más exacto para saber la época para cada región del mundo. Soluciona el apuro que los hombres de negocios internacionales tenían con cada país que comenzaba y que terminaba sus programas de tiempo del ahorro de la luz del día diversas fechas.

Posición - Punto de los sistemas de la compra:

Invención que es convertida por Nathan Foster y Steven Kays

Sistemas repetidores de la contraseña:

Fácil generado del sistema recordar contraseñas. Las contraseñas numéricas/alfa repetidores son recordar más fácil/mejor/tipo/prevenir el "hombro que practica surf".

. Son más duras de agrietarse, porque:

1. los piratas informáticos pueden no saber que el sistema repetidor de la contraseña es en funcionamiento.
2. es más duro conjeturar qué dígitos son repetidores
3. más dígitos en una contraseña el más duro agrietarse; pero la repetición la tiene es ventajas.
4. memoria humana compatible.

5. el hombro que practica surf es más duro en las pantallas táctiles porque hay menos movimiento del dedo.

Teclear método:

. la forma de movimiento/de tacto es una contraseña.

UIP: Sugiere qué transacciones de venta pudieron ser útiles/necesarias.

Acceso: con cómo el dedo se mueve o sin las contraseñas adicionales necesarias.

Invenciones (de la mejora): Electrónica, plásticos

Introducción:

El producto existente de la muestra enumerado para cada uno de nuestros números del producto, es solamente uno de los puntos de la referencia de los cuales se hacen las invenciones. Ese producto desarrollado puede be^: enteramente/parcialmente, incorporado/combinado; alterado; y o caído totalmente, dependiendo de la variación de nuestra invención.

. - Citadas son también las tecnologías sabidas para ser utilizado en las categorías de producto dichas. Las ayudas existentes del producto también clasifican categorías de producto correspondientes.

- Puede haber fabricantes múltiples, el que está enumerado no es restrictivo.

- Disposición de N: Primero el producto existente, seguido por la información sobre fabricante, siguió por KN (invención). KN sigue los corchetés con el identificador del artículo de diario. Nota: su KN, no ser confundido con NK, que es "semanario de Nikkei".

. - Sistema de numeración de N:

los primeros tres a cuatro dígitos, eg.: R22 puede tener un vástago N, eg.: R22-1. R22-1 utiliza todo el o cualquiera R22. Hay posibilidad de menor importancia del error en una creación de dos diversa N (invención) R22-1 etiquetado. De todos modos, toda tal N es la misma familia inmediata de R22 N. Muchas tales subdivisiones se pueden crear de N # pero no son.

. - Este archivo comenzó en noviembre de 1993, desde ampliado y retitulado.

Abreviaturas del diario:

Códigos para los periódicos que dan los detalles y cómo conseguir más información sobre los productos:

La puerta automática del animal doméstico R111 se abre cuando identifica el transmisor del animal doméstico. Noviembre de 93 X.

(relacionado-c) - localizador del animal doméstico 8B-010-083004: Saber donde está su animal doméstico, y encontrarlo.

- (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.

- La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera.

- el collar del animal doméstico tiene transmisor que demuestre si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la exhibición especial ("S");

- + el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala si el dueño está consiguiendo más cerca o más lejos de animal.

- útil para localizar a niños. Animales en parques zoológicos grandes; áreas de la naturaleza; etc.

83

- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral

- el collar del animal doméstico también tiene un altavoz del analizador del receptor..... Esto hace los sonidos diseñados para llamar el perro, eg.: "silbar", o el animal oye su nombre.

Nota al pie de la página:

Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; localizador

- OTD:

ACCESO: ; CARRO: ; PALMADA: (para que animal haga el sonido: maullido, corteza...; Exhibición ("S"): (cuenta en el animal (su localización)); "M": cuenta; "mic": ; Paladio: usado por el animal; PP/MP: ; MQ/UQ: ; MULTIUSOS: (multi-animal (cada uno usa diverso paladio w posee el tipo código que es transmitido); NOTIFICADOR: ; OSCILADOR: ; TELECONTROL ("R"): ; CUENTA: ; TDS: ; UIP: (usuario que es animal, eg.: para el estudio de laboratorio de los movimientos animales/comportamiento); Reino Unido; %WA usado por el animal (hace el sonido si caminan demasiado lejos; hace los sonidos interesantes (animales salvajes para excitar el animal doméstico).

> + buscador del animal doméstico R111-1:

Saber dónde se localiza el animal doméstico. No necesitar preocuparse si se pierde el animal doméstico. Localización del animal doméstico conocida vía uno o más de modos siguientes: el transmisor del collar del animal doméstico envía señales al receptor dentro de la casa, si su hogar; el receptor de la puerta del animal doméstico sabe si salió el animal doméstico por último adentro o; una versión no electrónica de la puerta del animal doméstico es tal que es la manera que se cierra así que demuestra salió qué animal doméstico de la manera (estes 3ultimo no patentables?).

Guía del ritmo R131-10:

usos de o: jugar el instrument^ (electrónico):

--musical (tablero dominante; piano; arpa (laser) [ver mi N del dir de A/B/C]

- c/máquina de escribir k (teclado estándar)

- ^ de las ventajas: un mejor control (los sonidos mejoran (música)), pocos errores (demostrados psicologicamente reducir el número de errores); velocidad total de los aumentos (el mecanografiar/música)

. - el ritmo de mecanografiar se interpreta en el tipo comportamiento de mecanógrafo: "analizador " ~sensor=c=notifier/osc del comportamiento. (Creatividad de los aumentos/de las disminuciones según lo descrito en la "ingeniería intercultural" (sube creatividad, comportamiento del control de calidad). El movimiento/la posición del cuerpo de los correlativos del sistema en la ayuda llega la conclusión del "analizador del comportamiento", uip.

--las ayudas del movimiento/de la posición del cuerpo desarrollan el uip. El UIP puede ser constantemente un cambio (base de datos/cuenta) para (el egh)

- D: el dispositivo de /music del "compositor" de ~c~analyzer~clock~s~uip=printer/del " sensor " del k=/el otro uso deseado del producto

- OTD para el aspecto del notificador de este sistema:

CARRO: (); MFH: (uip); MULTIUSOS: (cada usuario consigue efecto de diferenciación según su "acceso" /uip); NOTIFICADOR: (); OSCILADOR: (); Banda: (el usuario/el facilitador programa el tipo efecto del notificador); IMPRESORA: (qué puede aparecer en s); Picosegundo: (cada localización tiene efectos de diferenciación del notificador); Q: (el usuario puede pedir el sistema para aclarar lo que él está haciendo bueno incorrecto); S: (); CUENTA: (tds; reloj; últimos funcionamientos; egh); SYNTH: (oscilador de los efectos); UIP: (); WA: (picosegundo).

OTD general:

- OTD:

ACCESO: (); ARTISTA: (analizador visual/studies^ del comportamiento del analizador: imágenes hechas por el usuario; su ritmo; la manera (orden/velocidad) en las cuales las imágenes se hacen (encerrado in/brushed en (electrónicamente)/cortado y pegar) = en sistema de la golondrina de mar "notificará" a usuario = alcanzando efecto deseado en usuario. Resultados: sube creatividad, y otros resultados deseados explicados en la "ingeniería intercultural "); CÁMARA: (analizador visual: estudios electrónicos/más analyzer=uip=notifier =behavioral de 3 dimensiones impresa de los objetos del texto (arte)); CARRO: (); COMPOSICIÓN: (); ENTRETENER: (); K: (r); MFH: (analizadores del comportamiento/visuales; uip); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Q: (); S: (); CUENTA: (tds; egh); SYNTH: (synth del control del analizador del uip/del egh/del notificador); UIP: (); WA: (r).

Amaestrador del flujo de +++ que mecanografía R131-1-1: Entrenan a los usuarios para mecanografiar con incluso el flujo de dedos, porque tal hábito que mecanografía se demuestra reducir errores tipográficos y aumenta velocidad. Programa de los programas informáticos.

o enseña al usuario a moverse (las manos en el tablero dominante/dominante; cuerpo (piezas)) con ritmo/la presión deseados.

- D: el dispositivo de /music del "compositor" de ~c~analyzer~clock~s~uip=printer/del " sensor " del k=/el otro uso deseado del producto

+-analyzer (c) determina la tarea deseada (ritmo/movimientos dominantes correctos para el instrumento musical/el cuerpo que colocan) = (vía uip/pr/cart. Mientras que la situación del usuario cambia (egh/los usos de diferenciación uip), el sistema compensa (egh). Ejemplo: para aumentar comportamiento del control de calidad, el ritmo y la velocidad de mecanografiar necesita estar en 300 movimientos dominantes por minuto a una velocidad sin la desviación mayor el de 8% a tiempo entre (conclusión de) cada movimiento/huelga dominantes. A la creatividad ascendente, el sistema requerirá enfrente de: (los movimientos dominantes deben ser sobre el 8% diferente a tiempo entre cada espacio de uno o más anteriores movimiento de la llave (patrones) - patrones de llaves (una palabra en la máquina de escribir es un tipo patrón) deben cambiar en modos no repetidores - cuanto mayores son los cambios cuanto mayor es la recompensa del "notificador", y dificultad del egh.

---útil en el entrenamiento en cualquie maquinaria entre donde está "ser analizado" la sincronización o la secuencia de señales creadas por el usuario entonces "anotado".

- UIP: "egh" (la educación consigue más difícilmente): pues la capacidad del estudiante aumenta, el sistema "notificará cada vez más" /respond a parámetros más estrechos a las alteraciones en deseado: velocidad del tempo.

- "Notificador" (cuando el usuario (w5) está siendo favorable/desfavorable): los zumbidos/(suavemente) dan una sacudida eléctrica a usuario (vía k (shocker=key de c=vibrator/electric). Transmite al usuario vía at^ puesto cojín: parte de la tabla conmovedora del brazo o de una mano más baja; asiento; cojín colocado en las partes del cuerpo. El notificador trabaja vía uno o más modos (simultáneamente/consecutivamente).

--oscilador ((sonido/alarma screeching/de perforación) sonido negativo de /positive)

--"s": la exhibición del sistema da imágenes para ayudar a moldear el comportamiento del usuario

- usuario: insecto humano/animal

MAÑANA: (movimiento apropiado del cuerpo (los movimientos dominantes apagan la alarma; ver el dir de A/B/C); MULTIUSOS: (cada usuario tiene diverso acceso del uip//deseó la meta (favorecida comportamiento/el patrón)); Picosegundo: (diversas localizaciones del efecto del paladio cómo la banda efectúa a usuario, eg.: en la zona #4, el usuario debe ser más cauteloso (el comportamiento del control de calidad));

El cardiógrafo portable R132, tiene memoria (datos de los almacenes sobre la cinta de cassette). 30 de diciembre de 93 X.
- memoria de los almacenes digital (c)

> + R132-1 comportamiento - analizador médico del síntoma: El sistema correlaciona a paciente del comportamiento con sus síntomas médicos. El gráfico del paciente para cambiar el estado emocional se empareja con los gráficos del síntoma del cuerpo, dando a investigadores análisis necesario adicional. La invención es la combinación del software de datos.
- movido a los "vagos" 6.96

> + R132-1-5 retroacción biológica - analizador de la función del cuerpo: El usuario puede mirar sus analizadores médicos y ver cómo son/se realizaban (psicologicamente).
- movido a los "vagos" 6.96

Vibraciones de la sensación R133 de la música en asiento.
[El pionero tenía antes de 92, Yupiteru 92 frecuencia intermedia, 23 de agosto de 92]

El paginador R134 integró con el organizador del bolsillo. ¿(Cojín del aire del cheque, alejados) Casio? 5 de enero de 94 X y FRECUENCIA INTERMEDIA.

---

integrar el "teléfono". Existe en un cierto formato (pero sin todos mis códigos), eg.: AT&T
D: c27 = tel/c27/mfh~remote

Funciones de Miburi de R135 Yamaha: sensores en ambas muñecas, codos y hombros. Muñeca: volumen de controles, dando vuelta muñeca adentro - cambios vol. al julio de 93 frecuencia intermedia.

Calculadora R136 con el despertador. 22 de noviembre de 93 X.

Ordenador portátil R137 ("C") con el lector de clave de barras. 9.93 X, lanzado 10.93 X.

Cámara de vídeo R138 que imprime la foto sobre el papel regular. 28 de enero de 93 FRECUENCIA INTERMEDIA. (Comprobación para de OTD "impresora" conjuntamente con cámara).

Ordenador portátil R139 ("C") con construido en impresora (el "cojín del aire" aceptable también, pero se cerciora de su built-in). IBM piensa el cojín 550BJ... Fecha de lanzamiento X. de enero de 93.

Silla de rueda activada por voz R140. 18 de octubre de 93 X.

R141 cámara de vídeo teledirigida - cámara de los movimientos en ángulo deseado. 20 de diciembre de 93 X.

La grapadora R142 perfora las puntadas acuncadas del agujero entonces, ninguì□n metal necesario. (El golpecito de Ur # es B no A). Noviembre de 93 X.

La oscilación R143 canta a niño al sueño, sentidos cuando grita el bebé, entonces enciende (con.) sonidos previos de antemano, o la voz previa de antemano de la mamá, y la horquilla de las rocas. 5.93 X.

El reloj R144/el reloj consigue su tiempo comprobado vía la transmisión de radio. La radio tiene tiempo perfecto y fija el tiempo del reloj si es incorrecto.

Regulador del TELECONTROL de la muñeca de R145 Casio ("R"). Los controles TV, VCR, tienen reloj.

El sistema R146 limpia la calculadora impermeable del agua de baño (archivamos quizá una patente en esto, éramos #28) (cheque OTD). Enero de 94 X y frecuencia intermedia.

R147 Fuji-Xerox: El traductor Handheld habla oraciones. X diciembre de 93.

Ajustador audio del teléfono R148 ("T"): Cuando los anillos del teléfono ("T"), los productos de la hospitalidad que son utilizados en ese entonces automáticamente más bajo en volumen.

Detector de mentira del teléfono R149 ("T"): Juez vía la tensión de la voz de la persona en el teléfono ("T"), si son honestos o mentira.

Estereofonia de adaptación del automóvil R150: la llave en código y sistema de área del teléfono templará automáticamente en estaciones de radio en área. Vencedor Co. 03-5684-9311. Yomiuri edición del 4 de julio de 93. Ninguì□n arte. recortes.

Libros personalizados R162 de la historia. El cabrito puede ser carácter en su libro especialmente impreso. ¿Tenemos quizá versión del programa? Diciembre de 93 X NK

Carro eléctrico de R163 Driverless: sigue la línea en piso. Febrero de 94 X NK

El sistema trae el teléfono ("T") (llamada del teléfono) a la persona señalada: c58 = "teléfono". Uno fue necesitado en el fiasco muy último de junio de 96 de la estrella de deportes que conducía el carro en el aeropuerto de SF Int'l.

Tipo del ruido R164: el sistema activo de la cancelación del ruido reduce ruido indeseado, eg.: tráfico. Aspectos originales - 1: utilizar los auriculares, 2: utilizar mientras que escucha el sistema/el walkman de la música.

> R165 los olores/incienso dijeron alterar la tensión/el comportamiento. 17 de mayo de 93 NK
- movido al "tgh" 6.96

Funcionamientos electrónicos de la muestra R166 en energía solar. 5 de mayo de 93 NK

Robusteza de la lucha R167 que perfora. 21 de junio de 93 NK

Vídeo teléfono ("T") datación servicio 21 de junio de 93 R168 NK

Sistema de altavoz esférico R169: difusiones en todas las direcciones. 7 de junio 93 NK

El juego de fútbol electrónico R170, controla a jugadores defensivos y ofensivos. 7 de junio de 93 NK

R171 la puerta automática infrarroja "sensor" "lanzó el junio de 92". 19 de julio de 93 NK

Purificador del agua R172 para el fabricante de café. 26 de julio de 93 NK

Función del zumbido R173 en los retroproyectores (eg.: comprobar para que cualquier capacidad manipule imágenes). 26 de julio de 93 NK

> la computadora R174 ("C") comprueba la huella digital de la persona antes de dar un plazo "acceso" del 2 de agosto de 93 NK
- movido al "acceso" 6.96

El dispositivo R175 emite frecuencias, ayuda al usuario a dormir. 16 de agosto de 93 NK

> juego del arma del laser R176: el chaleco del usuario reacciona al laser cuando consiguen golpe. 30 de agosto de 93 NK
- movido al "juego" 6.96

La luz portable R177 va en automáticamente cuando está acercada. El 6 de sept. 93 NK

El reloj R178 dice el tiempo. El 31 de sept. 93 NK

Peatones del punto de lasers del coche R179 y otros coches. 4 de octubre de 93 NK

La computadora R180 ("C") convierte "Reino Unido" en la exhibición de la lengua de muestra ("S") para la gente sorda. Hitachi. 4 de octubre de 93 NK
ver 5A-800

> el despertador R181 muerde la mano de la cual botón de empujes para darle vuelta. - movido a la "mañana" 6.96

R182 convierte la corriente eléctrica del coche a la corriente de la casa, así que puede utilizar más productos de la batería de coche. 13 de diciembre de 93

El dispositivo R183 advierte a usuario si olvidaron trabarse para arriba al irse. La puerta es azul cuando está trabada, rojo cuando está abierta. 20 de diciembre de 93

El sistema R184 convierte palabras habladas en palabras legibles en la computadora ("C"). 14 de marzo de 92 NK

Comunicación video portable del teléfono R185 ("T"). NEC 11 de abril de 92 NK

La cámara R186 almacena las fotos en del disco blando. Cañón. 25 de abril de 92 NK

La bañera R187 tira el agua y burbujas en la sinc. con música. 2 de mayo de 92 NK

El banco guarro R188 cuenta su dinero. 23 de mayo de 92 NK

Juguete: c83 = "teléfono" = mfh = "teléfono" /caller/letter que crea la máquina. Envían el cabrito las letras que indica el equilibrio de su banco guarro (guardado en el país).

> la alarma antirrobo del coche R189 memoriza la posición del coche [eg.: conseguir N para el distancer usado para los coches].
- movido al "picosegundo" 6.96

El traductor electrónico R190 habla palabras/frases hacia fuera deseadas. Fuji/Xerox 29 de agosto de 92 NK

Expedientes electrónicos de la cámara R191 todavía y imágenes móviles. Ricoh 3 de octubre de 92 NK y 8 de marzo de 93

El visor de la videocámara R192 coge programas de la TV si se utiliza un adaptador opcional. 5 de octubre de 92 agudo NK

> el navegador de coche de R193 GPS da comandos verbales de dirigir el conductor. 2 de noviembre de 92 NK
. - movido al "picosegundo" 6.96

R194 impermeabilizan los libros para baño (no electrónico) el 30 de noviembre de 92 NK

> sistema gestionado huella digital de la entrada R195. 25 de enero de 93 NK
- movido al "acceso" 6.96

Las microondas de la máquina expendedora R196 su alimento congelado, entonces dispensan el alimento. 25 de enero de 93 NK

Los olores R197 se emiten para emparejar escenas en películas. 22 de febrero de 93 NK

El globo del helio R199 vuela alrededor de sitio sin la cuerda; ajustar los pesos para alterar la altura. 8 de marzo de 93 NK

La máquina de fax R200 defiende hacia fuera mensajes indeseados. Ver el fax en la exhibición ("S"), los faxes deseados impresión. NTT 29 de marzo de 93 NK

Juego video R201: lanzamiento mientras que conduce. 22 de marzo de 93 NK

Cuerda retractable del auricular del walkman R203. Sony 14 de marzo de 92 NK

Los anteojos R206 contienen las pantallas miniatura de la TV. Sony 23 de noviembre de 92 NK

Saco hinchable R207 para los pasajeros autos del asiento trasero. Nissan 23 de noviembre de 92 NK

R208 TV transmite audio a las estereofonias sin los alambres. Sony 7 de diciembre de 92 NK

La robusteza de la máquina expendedora R209 decide a qué tipo producto a dar; un tipo de juego. MF=Kokoro. 1 de febrero de 93 NK

La calculadora R210 calcula unidades de tiempo. Casio. 15 de febrero de 93 NK

R211 suprimió debido a ser la misma idea que R202.

Los cambios del sistema de iluminación R212 a crear desearon la atmósfera. Mitsubishi Electric. 26 de abril de 93 NK

R213 se movió desde: 2G22-C107 TV: pequeño y impermeable. Sony 20 de octubre de 93 también incluye otras funciones. D1: S=C.D2: uk/remote = c~c107 = teléfono/estereofonia/aplicaciones de cocina (horno, fabricante de café)/abrelatas de la puerta/otros productos

El proyector R214 proyecta imágenes de objetos sólidos en una exhibición ("S"). Fuji-Xerox. Del 8 tiempos de sept. 92 (JT) Japón, Tokio

=

movido desde: el proyector 2G23-C108 proyecta imágenes de objetos sólidos en una exhibición ("S"). Fuji-Xerox. El 8 de sept. 92 yarda (diario de Yomiuri, Tokio).

D: c~c108=tel=c~c108. Transmitir deseó el elemento quiso ser proyectado vía el teléfono ("T").

El reloj R215 exhibe ("S") la hora local para las ciudades importantes en mundo. Seiko. 10 de diciembre de 92 YARDA

> los juegos video R216 ligaron al teléfono ("T"). AT&T, Sega. Junio de 93 yarda
. - movido al "juego" 6.96

R217 movido a R122.

Piano silencioso R218: El teclado tiene auricular. Yamaha agosto de 93 yarda

Teléfono sin cuerda del reloj R219 ("T"). Similar a CMD10 de Casio excepto esto es el teléfono minúsculo ("T"). [Panasonic 5 de junio de 93 yarda]

La televisión por cable R220 deja a usuarios selectos cuando quisieran que el programa comenzara. AT&T 3 de junio de 92 YARDA

Televisión por cable R221 sobre línea del teléfono. AT&T 20 de enero de 93

> la tableta manuscrita de la imagen de la entrada de la computadora R222 saca en tapa el teclado. 27 de mayo de 93 agudo JT
. - movido a "k" 6.96

> el "oscilador Uno mismo-que apunta R223" gira automáticamente según la música y el tamaño del sitio. Vencedor 29 de julio de 92 JT
- movido al "oscilador" 6.96

R224 movido a R205.

Correa R225 para el ordenador portátil. Correas a la pierna mientras que se sienta. "Brutus" 15 de marzo de 94 (del compartimiento japonés), P. 53

R226 movido a R216.

Dispositivo teledirigido R227 controlado por las señales del sistema nervioso humano. Uso en los juegos video. [Crónica del 2 de julio de 95 S.F., P.B1]

- esto es ya una datación de KN (invención) antes de 1995. El Info de siguiente pudo duplicar limaduras anteriores.

- cómo el sistema (sistema) distingue entre el sudor (w sus productos químicos) causado por la tensión/la glándula/los cambios de la adrenalina en sudor de la temperatura ambiente = "analiza" para el múltiplo otras señales (el uip, otros productos químicos, el otro EL pulsó cogido de cuerpo).

- OTD D (dibujo): Este ~ C (computadora) del `(R/estado/cuenta/señales del sistema de N (invención) (sistema) (R controlado por el sistema nervioso) excreciones del cuerpo del organismo del ~ (eléctrico, químico, analizador del comportamiento, analizador de sonidos) UIP =

ACCESO (); ANALIZADOR (cuenta); + VAGOS; CARRO (funciona diferentemente por el usuario: multiusos, uip, k, acceso); EDUC (el uip/el tgh = el sistema (sistema) ajusta al "humor" de u); M (DB); MIC (analizador de la voz); MULTIUSOS (); NOTIFICADOR (); OSCILADOR (juego video); Banda (cómo las señales de proceso cogieron de u); Picosegundo (); Q (); S (imágenes alteradas por el estado de la mente del u); CUENTA (juegos); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); SYNTH (); + R; TDS (); T (MES = m);

UIP (modo del interruptor influenciado por el estado mental/físico de u (usuario)

--(fondo del color; synth llano de la agresividad (de jugadores del juego video); cómo es interactivo con el carro)); ANALIZADOR VISUAL (monitor inteligente 2E251); WA ().

Final de las invenciones de la lista de R

Etiqueta 7J01 del envenenamiento de los mariscos

Las Sensor-Etiquetas colocadas en el alimento (del mar) tienen indicadores el notificar del siguiente:

- se anota el nivel del deteriation del alimento.
- edad del alimento
- si la temperatura excedió nunca cierto punto (y durante cu3anto tiempo).

Etiquetas múltiples para los pescados grandes. Etiquetas consolidadas atadas a los pescados (aleta/cabeza), los pedazos (rotura/cáscara) apagado para las piezas individuales (puestas con (bandejas plásticas)). Todos tienen mismo comienzo (tds, sensores, cuenta).

UIP: las características del alimento se analizan para qué ayudará a determinar los desperdicios posibles del alimento, eg.: productos químicos emitidos para el tipo de pescados o de cerdo - los indicadores/los sensores tan aplicables pueden ser utilizados. Nivel de tolerancia de los desperdicios para los seres humanos u otros animales que comen el alimento.

Para todos los tipos de alimento: especialmente productos animales. Versiones químicas y electrónicas.

Diagrama: alimento = indicador. Piezas: sensores, tds, notificadores.

Archivo: I misceláneo/VA Outsourcers

Guía de la lengua y analizador de la voz:

Enseña los principiantes de lengua a cómo pronunciar nuevas palabras. Un amaestrador 7J02 del acento de la voz

Extracto: Educa a usuarios para mejorar sus acentos, a través del analizador de la voz. Ayuda a los principiantes de nuevas idiomas perfeccionan su pronunciación; y los que son discurso impared.

Algo relacionado existe - por el software real de Micaela C. - distribuye. Trabajos claros del discurso - nombre de producto. SunburstMedia.com/CSW.html se convirtió en 1994.

Antecedentes:

. Los usuarios = anotaron según cómo está cercano sus acentos son similares a la pronunciación señalada.

. Pronunciación señalada: puede tener en cuenta dificultades que los tipos particulares de gente tienen en el discurso de un idioma extranjero. Por ejemplo, los nativos franceses pueden tender a tener un mayor sonido nasal en su discurso = por lo tanto un nivel señalado de nasal se analizan como siendo parte de una buena cuenta de los sonidos.

. Cuenta: el nivel de desviación del acento del usuario, se anota. Una versión simple puede tener luces verdes, amarillas y rojas. Los usuarios recompensaron/castigado (financieramente) cuando las cuentas medias van más allá de un nivel medio señalado = según lo determinado por el analizador del comportamiento.

. El analizador del comportamiento ajusta el VA a U: Los vagos VA = analizan la voz del usuario = entonces: 1. Cuenta por consiguiente (el anotar consigue más resistente mientras que u (usuario) progresa en la educación VA)/2. ajusta según todos los tipos de altavoces basados en sus acentos (regionales)/los deterioros del discurso o de oído.

. Guía: U puede oír el correcto contra el acento incorrecto (él habló).

Aparato de lectura: u (usuario) puede conseguir educado después de que él hablara (y cuando las líneas del teléfono no están ocupadas).

. Acentos ideales de la blanco: El Bavarian contra los acentos alemanes norteños (Hoche) es diferente, por lo tanto africanos contratado para hablar alemán es educado/anotado según el acento regional señalado de la lengua objetivo.

Término "acento":

utilizado para significar particularmente la región geográfica hablada acento estandardizada de un grupo de lengua, eg.: Scot contra el inglés Galés. El "acento" también significa el "acento extranjero" oído a menudo cuando uno habla la lengua objetivo como altavoz extranjero. Los Bavarians y los alemanes norteños que aprenden hablar inglés de Brooklyn, pueden tener un diverso sistema de sonorización como los Bavarians pueden mispronounce en diversa manera de a levemente (cuenta) que alemanes norteños.

Métodos del acento que anotan: Los niveles de diferenciación del acento ideal se anotan vía:

1. grados variables de registración de acentos = anotándolos (por el ser humano) en diversos niveles del acento ideal.

2. El VA puede analizar los acentos según los cuales no emparejar exactamente cada variación: nivelar en cuál es el acento entre un u otro acento irregular, eg.: una cuenta negativa de 2.5 implica el acento oído está entre una mala variación de 2 y 3; y una cuenta de 2.3 sugiere que el acento esté más cercano a 2 que 3.

3. La mayoría de las palabras importantes: Registrar las palabras lo más comúnmente posible más probablemente habladas, con énfasis especial en las palabras para ser falta pronunciada, y o usada con frecuencia. Tales palabras pueden tener una mayor variedad de diversos acentos, por los cuales el VA llegará una cuenta más exacta.

D: Los usuarios = corrigieron por VA = educando = cómo mejorar la pronunciación del usuario.

CARPETAS DEL DIRECTORIO DE LAS INVENCIONES DE "J"

Archivo: J/carpeta KN de J

"ARCHIVOS DE LA CARPETA DE J": 2J&, 6J, 7J, MARKABLE CD.

ARCHIVO 1J

1J082 hielo Poppers: Sobre el hielo que derrite a su base, el hielo reacciona cerca: fabricación de un sonido que hace estallar; o emitiendo una sustancia sabrosa/colorida, riéndose de consumición hasta el extremo.

. No la versión basada hielo puede hacer esto. Ver las bolas calientes del hielo 7G.

ARCHIVO: 2J - ELECTRÓNICO GENERAL

CAMBIADOR AUTOMÁTICO de la MÚSICA 2J-01:

Tipo de los cambios de sistema de música cuando el uip del perfil del sonido no se está resolviendo.

- Appl: radio; cartuchos de los sonidos; información puesta en palabras: el analyzed= vía uip = C (computadora del `) altera/"corrige" = oscilador

WINDOWS de las COMPUTADORAS 2J-04 ABIERTO Y BOTONES CERCANOS que se hacen más grandes. El usuario puede seleccionar el tamaño de estos botones y o de los iconos. Estos puntos pueden tener todas las mismas características que disponibles ahora o en el futuro; tamaño creciente que es más funcional.

- D: u (usuario) = interruptor interactivo del ~ del icono (software) = C (computadora del `)/deseó la reacción en sistema a los comandos del u.

Archivo 6J

CAMBIADORES del COLOR de la TINTA de ++ 6J010: Tinta del uso de las muestras que cambia color en las temperaturas señaladas. ¿Está esto un más viejo kn?

. Usos:

- Las advertencias aparecen cuando las temperaturas exceden umbrales altos o bajos,

O entrar dentro de otra zona señalada. Valor en eso lectores

Puede acostumbrarse a ver la misma muestra cuando las temperaturas están en normal dividir y no prestar la atención en zonas cuando la mayoría necesitaron.

- Declaraciones impresas muestra:

--Advertencias para el contenido en envase o el ambiente cuando

las temperaturas exceden niveles señalados. Por ejemplo alimentos o

sigue habiendo los productos químicos pueden las precauciones especiales de las necesidades o no pueden existir adentro

en ciertas temperaturas.

- La muestra puede tener tinta visible en todos/la mayoría de las temperaturas también.

. Búsqueda de la patente: tinta y color y (alterar o chang)

- Búsqueda del mercado para la existencia del producto: muestra del contacto compañías [por el email también...?]

. Técnico: ver el cambiador del color del cubo de hielo 1J080

- Quizás el texto es visible en todas las temperaturas, pero el cambio
de temperatura destaca y u ocurre en solamente porciones de
firmar, por ejemplo como fronteras llamativas para conseguir la especial atención.

CAMBIADOR del COLOR de la TINTA de la PLUMA 6J020: Pluma con la tinta cambiante del color debido a las temperaturas de diferenciación:
. escribir las letras cuya tinta:
- Es visible solamente dentro de ciertos parámetros de la temperatura.
- Colores de los cambios cuando cambios de temperatura
--Eg.: poner cerca de luz incandescente (para el calor) y de cambio del reloj a [rojo]; poner en refrigerador y cambios a [verde].

INDICADOR de ESTADO QUE ESPERA de LLAMADA 6J050: Al conseguir a una llamada entrante el tipo de señal sonora señala el nivel de importancia para tal llamador.
. Las latas receptoras remiten/manija llamada entrante, pues tienen gusto.
Ejemplos: las llamadas poco importantes van al correo de voz; hay una gama
de las cajas del correo de voz en las cuales el recipiente puede afinar su teléfono
(sobre el recibo de la llamada) = según el tipo llamador.
. D (dibujo): llamador = etiqueta que demuestra a su llamador identificación = identificación de llamador del recipiente
El analizador = el analizador = el oscilador del estado señala el tipo señal sonora =
el oyente oye y responde mientras que él desea

CD CAPAZ de la MARCA de la MANO 6J060 PARA las CANCIONES DESEADAS: Marca sobre el CD para demostrar a sistema se desean qué canciones. Los sistemas existentes requieren el CD ser programados por la localización específica en el estante.
- Opción 1: Los vendedores CD salen de un lugar en el CD (centro) para
marcas: completar los pequeños círculos para (no) las canciones deseadas.
- Opción 2: El fabricante del lector de cd ofrece manera de imprimir
deseabilidad sobre el CD. Ejemplos:
--El usuario aplica manualmente la etiqueta engomada ((exacto) centrada en centro),
entonces designación de las marcas del usuario o del sistema.
--el sistema grabará al agua fuerte en el código directo sobre el CD (el borde externo,

Centro) en (pequeñas) marcas legibles. El etcher puede ser a diferente o el mismo sistema del lector de cd.

- Mejora sobre sistema existente: Si el usuario quisieron tomar El CD a otra localización, reprogramando será necesario. También está más fácil mover el CD alrededor dentro del estante del almacenaje del CD.
- Uso en el CD para: música, datos, juegos, etc.
- 'Corregir los elementos señalados out/in [imágenes del `, canciones, formas de sonidos sintetizados `].

ARCHIVO 7J:

AMAESTRADOR de la LENGUA 7J02 y ANALIZADOR de la VOZ: Enseña los principiantes de lengua a cómo pronunciar nuevas palabras. Un amaestrador del acento de la voz. Adaptado al tipo de usuario de pronunciación, entonces dirige por consiguiente.

NOTIFICACIÓN de 7J03 PRE-ACCESS: Como un individuo perjudicado puede requerir más hora de llegar al cuarto de resto, pueden enviar una señal. Ver la sección de la desventaja.

7J04 ANALIZADOR del VESTÍBULO PRE-ACCESS - "BARBAS del CAT": La invención analizará la disponibilidad del espacio para las sillas de rueda o el otro equipo lisiado de la ayuda. Ver la sección de la desventaja.

LOCALIZADOR del ADA 7J05: Sistema de la cuenta de la accesibilidad del ADA de la localización. Ver la sección de la desventaja. [`Picosegundo] las ayudas de la base de datos modifican el recorrido de la gente para requisitos particulares para cualesquiera limitaciones del recorrido pueden tener, eg.: vista/audiencia - instalaciones deterioradas, etc.

7J07: AYUDA DE LAS COMPRAS DEL UIP: sugiere lo que puede querer el usuario para comprar. Un agente de las compras. Útil en lugares tener gusto de EBay.com y de Amazon.com. Ver nuestras invenciones relacionadas del GPS.

- Crear un público y (más) un perfil privado.

EFECTO MARCADO con etiqueta 7J08 de la CASCADA: Las piedras de afilar del sistema adentro en una frecuencia (sonido), y anulan otros sonidos para hacer el sonido marcado con etiqueta están más claras. El sistema reacciona cuando ocurre la acción marcada con etiqueta clara. Piedras de afilar adentro en cualquier cosa que efectúa los sentidos del hombre cinco: Colorear [brilla luces para ahogar hacia fuera [no] colores deseados; otras imágenes; Tacto/vibración [vibratorio indeseado de las cancelaciones [patrones]]; Olores

- Paso #1: Identificar la frecuencia: el analizador identifica ocurrencia de la frecuencia señalada.

- Paso #2: Cancelar las frecuencias de interferencia indeseadas: piedras de afilar del sistema adentro en el sonido, el color o la otra frecuencia. Ahoga otras frecuencias relacionadas emitiendo enfrente de las frecuencias para qué pudo interferir con el proceso que marcaba con etiqueta. Todo o las partes este paso general puede ser saltado. Es más necesario compensar dificultades del sensor del analizador de la frecuencia las' en la distinción de estímulos ambiente.

- Paso #3: Reaccionar por la adaptación.

. - La idea primero vino a Steven Kays por una mañana ideal del 30 de marzo de 2006.

. Adaptar la ocurrencia [disparador] cualquier manera programable. Ejemplos:

- Gojeando: Chirridos del pájaro de la muchacha del animal doméstico que buscan a compañero. El reconocedor sano cancela [el tráfico, el hogar, el otro bird%, aplicación] ruidos ambiente. El gojear automatizado del pájaro del muchacho reacciona gojeando [oscilador del `]. Se puede programar para emitir el pájaro del muchacho el saltar después de las ocurrencias relacionadas designadas [5-10 boquetes en gojear (cada boquete/período que gojea que dura durante 5 minutos)].

- Juegos del `: cuando está señalada la entidad actúa en la manera señalada; puede [ayuda] distingue hace entidad marcada con etiqueta; entonces reaccionar cuando la entidad marcada con etiqueta hace algo. A (el gato salta), B (la puerta se abre) y o C (computadora del `) (la puerta sigue siendo abierta durante un minuto); o dibujo (el jugador principal tiene un nivel señalado de la cuenta en aquel momento) y E (el juego ha excedido 8 minutos); o A si no F (sobre tres jugadores [con las cuentas medias excediendo el nivel determinado]); o cada tercera ocurrencia de B si F es ausente; etc.

--El `Taggable y las acciones identificables incluyen: imágenes o sonidos [del cambio] con rasgos editable señalados; la historia traza/las escenas [cuando la entidad A viene cerca de la entidad B [por los segundos 5+] [entonces árbol] de los saltos o de las subidas de A [entonces cara/ojos del b sigue las acciones de la a].

- El UIP entró: se afilan con piedra adentro en las acciones/ocurrencia menos confusable con los estímulos externos; proporcionar tan rasgos más confiables Info.

. Éste es subconjunto para las piezas: el analizador, suena el reconocedor, contenta el analizador, lo corrige, orden y sincronización, dispositivo de colocación, búsqueda y o reacciona, lo encamina, marca con etiqueta, adapta, lo sigue, analizador visual.

. D (dibujo): U = este VAGOS de // de N~C~ANALYZER = del ACCESO [hace clarificante qué señales pueden determinar el acceso] [] (analizador del comportamiento) [las piedras de afilar adentro en señales se relacionaron con el comportamiento, eg. ; cabrito de risa feliz // EDIT [ahogarse hacia fuera se señala qué; alterar qué fue afilada con piedra adentro en CUENTA // SA (analizador/reconocedor sano) // del

RANURADOR de // [rutas señaladas entidad o función] de sonidos [la cuenta señalada `es un elemento considerado al decidir a lo que a la piedra de afilar adentro encendido] // BUSCA y REACCIONA [] el SENSOR de // [dispositivo que busca] del `// TDS [la acción buscada debe have/be que ocurre en las horas señaladas].

CD CAPAZ de la MARCA de la MANO 6J060 PARA las CANCIONES/los DATOS DESEADOS:

. Marca sobre el CD para demostrar a sistema qué canciones o tipos de datos se desean. Los sistemas existentes requieren el CD ser programados por la localización específica en el estante.

- Opción 1: Los vendedores CD salen de un lugar en el CD (centro) para las marcas: completar los pequeños círculos para (no) las canciones deseadas.

- Opción 2: El fabricante del lector de cd ofrece manera de imprimir deseabilidad sobre el CD. Ejemplos:

--el usuario aplica manualmente la designación de las marcas de la etiqueta engomada ((exacto) centrada en centro), entonces del usuario o del sistema.

--el sistema grabará al agua fuerte en el código directo sobre el CD (borde, centro externos) en (pequeñas) marcas legibles. El etcher puede ser un diferente o el mismo sistema del lector de cd.

- Mejora sobre sistema existente: Si el usuario quiere llevar el CD otra localización, la reprogramación será necesaria. También es más fácil mover el CD alrededor dentro del estante del almacenaje del CD.

- Uso en el CD para: música, datos, juegos, etc.

-' Corregir los elementos señalados out/in [imágenes del `, canciones, formas de sonidos sintetizados].

. Ediciones para la acceptación en el mercado:

- Para los compradores menos sofisticados, más países del 2do y tercer mundo.

- Los que copian el CD podrían comprar a lectores de cd especiales para esta función. ¿Tales compradores pudieron apenas como fácilmente tomar sin embargo música convertida a digital?

- Los editores de música no comenzarán fácilmente esto; Las copiadoras CD podrían más fácilmente.

. Qué usuario puede seleccionar de disco:

. - En otras palabras: Qué usuario puede corregir [cualquie tipo de] de disco [como el A.C. La D. u otra se relacionó [óptico legible] el diskette [futuro].

- ciertos aspectos del software pueden [de] ser activados.

- escenas del videodisco

. Tipo del disco blando y de la cinta [discos no ópticos]:

- los datos pueden ser seleccionados marcando encripciones en la capa [externa] de la cubierta del almacenaje de datos.

- el lector del sistema puede comprobar para ver si cualquier cosa se fija en una localización comúnmente señalada en la cubierta y utilizar esto para ayudar al sistema de la guía en cuanto a cómo el sistema debe corregir o alterar de otra manera cómo (`W5) los datos deben ser utilizados.

. Búsqueda de la patente de los E.E.U.U. en demanda simple del CD-ROM solamente:
Kilovatio: ¿CD, C.D., disco compacto, marca, grabado de pistas? escribir, seleccionar, elegir, elegido, pluma, rasguño, desir, ahorro, excepto
- y no: ¿copiar, portable? ¿decreto judicial, médico, dental, paciente? ¿manufactur? ¿TV? ¿televisión? ¿VCR? radio, hurto, vehículo, coche, expediente [grabación]
- estrategia de búsqueda muy estrecha: (CD-ROM o "disco compacto ") y (la marca o el grabado de pistas o selecciona o los choos o elegido o pluma o lápiz o decreto judicial o rasguña o rasguño o desir) andnot (portable o médico o paciente o radio o hurto o vehículo o expediente)
- STR: "fill$ en", pluma, marca (marca capaz, markable)
+. Ventajas en códigos que cifran fuera de datos principales - es decir porqué los códigos se pueden almacenar por separado de los ficheros de datos principales:
- el valor aquí es que uno no necesita cifrar tal Info sobre el almacenaje de datos [cinta] sí mismo. Tales pueden ser imprácticos de entrar por ejemplo ellos requieren un dispositivo [inasequible] especial; limitaciones de la seguridad [acceso del `].
- Protección anti del virus de computadora:
miedo de trastornar las informaciones en bruto puras; protección contra virus [eg.: el usuario pudo apenas haber podido leer los archivos sino haber temido para incorporar cualquier Info/cambio sobre los archivos reales].
--Bastante de la información necesaria se puede proporcionar sin el riesgo de trastornar otros datos en virtud de virus, de error humano, de error de la computadora, del etc.
-' Acceso: el software y los datos que requieren un visto bueno de seguridad más bajo pueden hacer esto más práctico.
--hace más duro para que los piratas informáticos de computadora tengan acceso a otras secciones confidenciales de datos

Tipos de paredes entre las zonas de informaciones:
- la invención es de una perspectiva limitada como datos sobre dos o más los discos separados; si un disco consigue corrompido, los otros discos esperanzadamente permanecen en tacto [a menos que...].
- discos de la crepe: para guardar la información junta, los discos [registrables] múltiples se pueden mantener iguales [el plástico (desmontable)] cubierta. Eg.: diversos discos de los mismos tamaños en tapa la otra se separaron cerca [plástico] con la capacidad para que el sistema lea cada disco, eg.: por 1] que puede [parcialmente] expulsar hacia fuera los discos deseados, o 2] que tienen bastante sitio para que el lector quepa adentro con el boquete entre diversos discos.
- solamente datos legibles más simples [grabados/grabados al agua fuerte/escritos] sobre la cubierta o la superficie de datos.
% de los campos múltiples de los datos que necesitaban la separación se pudieron almacenar en el exacto el mismo medio, con la barrera solamente siendo software/código de computadora relacionado; eg.: diversos nombres del archivo, o los datos en diversas formas que requieren software de diferenciación leer/las utilizan

son la forma de separación. ¿Este aspecto existe? , pero esto se puede atar quizá con algunos de los otros aspectos únicos.

- el tipo de lector necesitó leer uno o el otro tipo datos [definidos por la forma física de almacenaje, o nombre de fichero, etc] pudo diferenciar según el tipo datos deseados.

--Valor: cada forma de acceso/de recuperación/de uso de la computadora de tales datos es [esperanzadamente] bastante diferente de modo que una forma corrompida de recuperación no dé lugar a corromper los otros modos de la recuperación. Eg.:

---Los virus no pueden separarse fácilmente a partir de un modo de la recuperación a otro

---' Tener acceso en limitado a una forma de recuperación por el usuario señalado [s].

. Tipos de datos/de usos en el campo separado:

- instrucciones en cuanto a qué secciones de los datos están disponibles para el acceso, eg.: qué pedazos musicales se señalan como deseable [sin importar utilizan a qué lector de cd, mientras los jugadores de diferenciación utilicen tecnología similar]

- actúa terminantemente como barrera para los propósitos del acceso de la seguridad, eg.: donde el usuario pone en su contraseña

- visualmente algunos de los datos [elementos, códigos, marcas escritos mano] pueden decir a usuario el estado, eg.: cuál/se desean cuántas canciones.

EXTREMO Del CD CAPAZ de la MARCA de la MANO 6J060

Mejoras en invenciones archivadas y nuevas invenciones

BALÓN (DE FÚTBOL) CON LA CUENTA QUE GUARDA EL DISPOSITIVO:

- Caso/cubierta transparentes sobre' pedazo que anota. Puede cambiar manualmente o por teledirigido (sin la necesidad de una cubierta abierta del tirón).

- Tirón/broche de presión/diapositiva de tragante abierto

invenciones relacionadas de la nieve 6J080

Embarque de la nieve, esquí, etc.

Nieve 1 - Profesor particular del movimiento:

Dirige a' usuario en cuanto a qué movimientos del cuerpo pueden mejorar snowboard, el esquí, y cualquier otra técnica del movimiento del cuerpo. Los sensores en cuerpo se utilizan para analizar los movimientos del cuerpo.

Detalles:

- Relacionado con profesor particular anterior del movimiento del cuerpo.

Piezas:

- Tipos del sensor:

--RF: la imagen de las demostraciones/analiza de cada proyectil el movimiento del cuerpo.

--Distancers: las medidas/analizan distancias cambiantes entre cada distancer puesto correctamente en cuerpo (tal como codos y otros puntos fijos del cuerpo).

- Orden y sincronización: analiza cambios en el movimiento del cuerpo, para cada partes del cuerpo, y la' función señalada que es analizada.

Nieve 2 - El un tomar de la foto de la mano:

Chascar los interruptores para tomar las fotos del grande al aire libre. Ahorrarse de necesitar dos manos.

Localizaciones montadas de la cámara:

- Tablón del esquí: atado directo al tablón, o levantado sobre él vía el poste (que guarda más nieve fuera de lense).
- Casco:
- Poste - de mano:
- Vidrios de los anteojos/del ojo
- Correa (hebilla)

Limpiador de la nieve de Lense:

- el dispositivo de cierre quita nieve y el agua.
- evitar rasguñar el lense de la ruina cerca: un vidrio más fuerte; lense o cubierta fácilmente substituido del lense (por el usuario)
- puede abrirse solamente por algunos segundos durante tiempo del shooting, después se cierra.

Detalles: La cámara' incluye: vídeo digital; registrador audio

Nieve 3 - Señal de vuelta Alerter:
Dejar a esquiadores detrás de usted saber la dirección que usted piensa en tomar. Reducirá accidentalmente el ser ocultado por los esquiadores del principiante que necesitan más hora de ajustar sus patrones del esquí. Especialmente útil en cuestas apretadas durante fines de semana. Ha ha.

Opciones de la representación visual:
- parte posterior y lados del casco
- trasero de la chaqueta ha encendido la flecha (que usa electrónica)
- luces que demuestran en cualquie ropa exterior - si las luces en el derecho, entonces usuario están dando vuelta a la derecha.

Mecanismo de control: Control (del telecontrol) en la manga del guante/de la chaqueta; en bolsillo; lado de pantalones en o debajo de cadera. Pequeño dispositivo teledirigido portable. Uno o más botones. Diversas señales creadas del mismo botón, basado en el número de épocas presionaron. VA. Ver "K", y "R", y el" UIP".

SEGURIDAD MODIFICADA para requisitos particulares 1G080 de la PUERTA: En caso de urgencia, las puertas cierran automáticamente el aislamiento manifestaciones del fuego, del producto químico, bacterianas o de las otras indeseadas de la extensión.
- Applications^: bibliotecas, hospitales, y laboratorios. ¿Existe?

- D: "sensor" = c = dispositivo = función (de cierre) mecánicos (cierra la puerta, abre/cierra las ventanas, seres humanos de las alarmas en premisa/departamento del fuego.

ROBUSTEZA 1G10: los movimientos de la manera tienen gusto de todo el juego de niños de las maneras, eg.: jugando con las bolas (lanzando, cogida, golpeando con el pie en direcciones deseadas); gyms de la selva que suben... Tiene usos del anuncio publicitario y del juguete.

- D: robusteza = (c = (carro, uip, banda))

1G11 IMPERMEABILIZAN y los sistemas a prueba de golpes eléctricos - una característica adicional: Sistema de KN para el uso adentro o el water^ cercano: baño, cuarto de baño, piscina, lago, océano, corriente, regaderas del agua, lluvia, pantanos. Uno o más del siguiente se pueden combinar en un solo producto y o sistema:

- Contestadores automáticos; Accesorios del equipo de la difusión; Calculadoras: productos más que también actúan como calculadoras; Videocámaras; Cámaras; Sistemas de tarjeta; Lector de cd; Alarmas del reloj; Fabricantes de café; Dictáfonos; Goniómetros; Abrelatas teledirigido de la puerta (eg.: abrir la puerta principal para el amigo mientras que su adentro baño); Tambores electrónicos; Hospitalidad electrónica; Joyería electrónica; Traductores electrónicos; Facsímil; Dispensadores del alimento/de la bebida; Juegos electrónicos; Guitarras eléctricas; Bigudíes de pelo - secadores; Tabletas escritas mano de la entrada de la imagen; Auriculares; Audífonos; Inhaladores; Productos interactivos: televisión, dispositivos de entrenamiento de la computadora ("C"), realidad virtual; Intercomunicadores; Regulador de la palanca de mando; Las plumas ligeras/las plumas que lo escriben sin embargo y la superficie de la escritura (papel) son mojadas; Relojes más ligeros (relojes de tabla con los alumbradores de cigarrillo); El marcado equipa; Máquinas del masaje; Micrófonos; Ratón - dispositivo punteagudo de la computadora ("C"); Sistemas musicales del acompañamiento - Karaoke; Centros de música; Computadoras de la música - sintetizadores; Sistemas de la llamada de la enfermera; Sistemas de radiobúsqueda: personal/público; Proyectores; Radios - novedad; Equipo de la comuncación por radio; Refrigeradores; Teledirigido; Robustezas (para los juguetes, entusiastas de la manía; excluye el trabajo de asamblea); Sistemas de entrada de discurso; Locutor - megafonía; Altavoces; Parar los relojes; El estudio equipa; Máquinas de cinta: microcassette, detección de la voz; Telecomunicaciones; Televisiones; Termómetros; Dispositivos que miden el tiempo: relojes, relojes principales, relojes de tabla, relojes de recorrido, relojes, relojes del juego; Tacto que detecta los paneles; Sistemas de la traducción electrónicos; TV - Interactivo: sistemas de conferencia; sistemas del teléfono ("T"); Juegos video; Vídeo: accesorios de la cámara, corrigiendo las máquinas, generadores video del efecto; La voz que sintetiza equipa; Walky-películas habladas.

- D: cubierta impermeable del plástico/plástico y o metal y o caucho = producto = funciones de la transferencia del producto a través de la cubierta eg.: Reino Unido; oscilador; s.

HIEDRA CRECIENTE de la PARED 1G18: La patente similar existe. Los plantadores se incorporan a las paredes, interno permitiendo una nueva pared más rápidamente a la cubierta sí mismo con la hiedra. La hiedra crece de las cavidades en los lados y mismo la tapa de la pared. Hecho de ladrillos del cemento o de la arcilla. El suelo llena porciones de pared entera permitiendo que las raíces alcancen la base de pared de cerco del suelo. La pared también tiene cuerdas que absorban más fácilmente la humedad a las cavidades de las paredes de la parte superior; estas cuerdas son plásticas cubiertas solamente en regiones más bajas de la pared. La poder de riego también se haga vía las pipas superficiales below con los pequeños agujeros. Para la fuerza, la pared puede también estar en diseños totales de diferenciación, eg.: más de par en par en la parte inferior, o tener diseños creativos del contrafuerte.

- también hace que alguna hiedra de ayuda de la construcción de terrazas se establezca. Otras plantas pueden crecer ascendente de tapa (si restricciones de la división de t del gobierno las' en alturas de paredes no lo hacen incluyendo crecimiento de la pared).

- esta N copió a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verla para las actualizaciones.

- Riego ayudado insertando el material absorbente que toma la humedad de la tierra abajo debajo hasta de la pared. El suelo puede estar en toda la/parte pared interna. Funcionar con la manguera encima de la pared con muchos pequeños agujeros para regar en esto también. La pequeña barranca especial para sostener esta manguera (en disfraz), esta manguera es reemplazable.

- los agujeros en pared permiten que la hiedra crezca a través al otro lado, mientras que los agujeros son tan cuando uno mira adentro fuera del agujero se inclina hacia la tierra (no pueden parecer horizontalmente internos)

- depósito usado automáticamente a las plantas de agua

. --(cuando el suelo es seco - con alimentadores existentes del agua del tubo con los enchufes de la absorción colocados en suelo - cuando el suelo seco, el enchufe de la absorción extrae el agua de depósito para manchar su en contacto con.)

. - tecnología: material hecho de: cemento/arcilla/plástico - materia prima (prueba del tiempo, prueba del sol (no se descolorará, grieta)). Los bloques ligaron el cemento de w (como la pared de ladrillo del edificio), o los pegamentos plásticos.

- la otra pared de vida en/el by% de las formas de vida: flores, arbustos, árboles, cactos; vida acuática (pescado, plantas, caracoles) con las ventanas incorporadas a las paredes.

- otras aplicaciones para la pared: divisores para: cuartos de interior, carreteras; porciones vacías, trituradores de viento.

- Misceláneo: las ventanas en pared pueden permitir el viento, una visibilidad más fácil - viendo cuál está en el otro lado de la pared.

- Los aparatos crecientes pueden (portable) ser hechos de: cemento, ladrillo, plásticos, piedra, (tratada) madera.

- versiones portables: la humedad se lanza/se absorbe de la tierra en la cual N puede mentir. N puede también guardar exceso de agua/para tener sistema de uno mismo-riego que almacene el agua.

- Estrategia de búsqueda de la patente: (wall+ o walls+) y (planta o plantas o hiedra) y (cavit o agujero o pote o envase)
- No. de la patente de los E.E.U.U.: Material de la pared 5213857+ para las plantas crecientes - pero no las cavidades; Fieltro 4932159 de 5099009 de D323133 D258255 potes de la planta 5042197 5044120 D323133
- + 4658541 plantadores que se enclavijan, porque uso en la erección de las paredes decorativas (las piezas de KN pueden enclavijarse/reemplazable; el agua escurre para bajar regiones; KN de hecho de un material más robusto; KN también utilizó donde está necesario el material robusto: guardar hacia fuera los intrusos/las estructuras de edificio de ayuda)
- Utiliza el envase KN de la planta en directorio de G.
- existe: los enrejados pusieron contra la pared; potes de la planta con los agujeros en el lado usado para producir las fresas.
- MK N a la frecuencia intermedia (comercialización a los fabricantes): comunicados de prensa; organizaciones arquitectónicas
- uso en cualesquiera [superficies emparedadas]: escritorios; oficinas; revestimiento de madera de la pared del edificio de interior/al aire libre; paredes reforzadas; paredes de la aislamiento; cercas de la madera/del metal/del plástico.

> 1G21: ANALIZADOR DE SONIDOS Y WA: Sonidos seleccionados permisos del walkman que se oirán por el usuario. KN: ¿2D-170, también E Dir?

Cualquier sistema se diseña para que al portador oiga todos los sonidos ambientales más música sin disturbar otros. O, el sistema vía el ruido que cancela tecnología permite que las frecuencias sanas seleccionadas sean oídas por el portador. También, la forma particular del paso de aire frecuencia de mejores permisos del oído a cierta suena con los métodos sabidos, el factor único que es la combinación con el walkman. Existe: Canceladora del ruido conectada con el walkman.

- cortar y se movió a la canceladora 7.95 del ruido del teléfono 3E041: ¿por lo tanto más Info falta para esta N? El T N aparece obvio, así que necesitar estos datos detrás.

% del Lollipop y Popsicle pegan el sostenedor: permite a gente con sus manos ocupadas gozar de los alimentos diversos en los palillos sin usar las manos. Los usuarios pudieron ser: en el teléfono y la escritura; usar ambas manos para el teclado (k); invalids: tener manos con vendaje; perezoso; aventura que busca.

- Alimentos: kabob del shish, pollo (pierna), caña de azúcar (forma natural).

ARCHIVO 2G MISCELÁNEO

Toda la (o la mayoría) N aquí está en archivo de la R-Lista.

NOTAS: Un cierto movimiento hecho 6.96 a archivar: c:\r\r - lista. Extensiones simplemente movidas alrededor de de docena N que no estaban en r-lista. Este archivo está de los productos investigados como sea posible siendo copiado. La N existente fue situada en Tokio durante 12.93 - 3.94. La única carne aquí es posiblemente algunos pedacitos que fueron faltados. Este archivo 2G es ensuciado que probablemente cualquier otro B - directorio de E del N.

Los REALCES EN PRODUCTOS ENCONTRARON Del ARCHIVO 2R

Adiciones posteriores a este archivo en R \ R-Lista (a partir del 12.94)

INTRODUCCIÓN:

Debajo de códigos describir donde localizar los fabricantes de los productos existentes.

Códigos: El C# es # asignado a la N del proceso en el cual comprobamos para ver si el producto era una copia. Por lo tanto las ayudas adicionales de este segmento de C# (C aquí no significa la computadora) localizan la fuente de material impreso en el producto manufacturado.

Fecha del producto. Las demandas de la frecuencia intermedia = del fabricante eran las primeras con este producto en tal fecha. X = artículo de la fecha fue encontrado sobre el nuevo producto en la publicación (eg.: periódico). Con todo no somos cierto 1] si producto publicado fabricante antes, 2] si había otro producto relacionado antes. La confiabilidad de la frecuencia intermedia y de X no es absoluta hasta la posterior investigación. 3] NK - "periódico del semanario de Nikkei" de Tokio. Yarda - periódico de "Yomiuri diario" de Tokio. 4] Los productos son normalmente de las secciones del nuevo producto de los periódicos. (Yarda publicada generalmente el Sun, entonces el lunes a partir de cerca de 1993). Si no se imprimió ninguì□n código de la publicación, asumir que es o "Yomiuri diario" o "Japón mide el tiempo".

- #, eg.: C1 se marca en mi copia del artículo referente a esta tecnología existente del producto.
- "---" Algunas rociadas separan el golpecito existente arriba de mi N abajo

MISCELÁNEO:

$ 2G5-C3 abren el abrelatas electrónico de la puerta vía teledirigido. Existe: la puerta se abre sobre la recepción del transmisor del collar del animal doméstico.

- La puerta automática del animal doméstico se abre cuando identifica el transmisor del animal doméstico.

Noviembre de 93 X.

El usuario activa vía el "telecontrol".

D: 2G5-c3 (puerta) =tel/tr = telecontrol ("R").

la computadora 2G6-C7 ("C") pronunciar el discurso que entrena a hearing-impaired. Una computadora-semejanza de labios y una lengüeta mímico los movimientos correspondientes de los labios y de la lengüeta de un aprendiz. Para practicar cantar, las notas musicales de la canción anotan, se forman como pájaros. Si la echada vocal de un aprendiz está correcta, el pájaro abre su boca. $400. Marzo de 93 X.

. El entrenamiento se puede conducir sobre el "teléfono" (el usuario c = mfh). D: c7=tel~remote

2G9-C19. Atonta/da una sacudida eléctrica a gente que le hace llamadas de acoso. Enero de 93 frecuencia intermedia y X.

D: c19 = remote~tel

2G10-C22. Respuestas del teléfono del altavoz cuando el recipiente dice "hola". 1 de noviembre de 93 FRECUENCIA INTERMEDIA.

D: c22 = c~remote~tel

2G11-C23. Distancer. Taiyo Elecs Co: alejado ("R") suena si el niño es 2 - 7 metros de ausente. Diciembre de 92. II palmadita Appl del ruso: 045892 23 de sept. 93.

. Usuario de las llamadas del sistema (mfh/ps) (padre) en el "teléfono" que da la "cuenta" en la persona/el artículo (que caminaron demasiado lejos/usuario buscan la "cuenta" encendido). Aquí la "cuenta" incluye: su distancia de un cierto otro punto (unidad central del picosegundo); el W5 de las actividades de la persona.

D: c23 = tel~remote

usuario de las subsistencias 2G12-C24 despierto: el "sensor" fija de alarma si el dedo no se mueve. 6.92 X.

. El teléfono ("T") suena cuando se cae el usuario dormido; el mfh da la grabación (UIP) para despertarlos up/alert ellos D: c24 = tel~remote

el paginador 2G13-C27 integró con el organizador del bolsillo. ¿(Cojín del aire del cheque, alejados) Casio? 5 de enero de 94 X y FRECUENCIA INTERMEDIA.

: Integrar el "teléfono". Existe en un cierto formato (pero el wo todos mis códigos), eg.: AT&T.D: c27 = tel/c27/mfh~remote

calculadora 2G14-C29 con el despertador. 22 de noviembre de 93 X.C29 = ~remote del "teléfono "

ordenador portátil 2G15-C30 ("C") con el lector de clave de barras. 9.93 X, lanzado 10.93 X.C30 = ~remote del "teléfono "

silla de rueda activada por voz 2G16-C33. Silla de rueda del 18 de octubre de 93 X. (c33) = ~remote del "teléfono "

carro eléctrico de 2G19-C58 Driverless: sigue la línea en piso. Febrero de 94 X NK. El sistema trae el teléfono ("T") (llamada del teléfono) a la persona señalada: c58 = "teléfono"

el banco guarro 2G20-C83 cuenta su dinero. 23 de mayo de 92 NK. Juguete: c83 = "teléfono" = mfh = "teléfono" /caller/letter que crea la máquina. Envían el cabrito las letras que indica el equilibrio de su banco guarro (guardado en el país).

2G22-C107 TV: pequeño y impermeable. Sony 20 de octubre de 93 también incluye otras funciones. D1: S=C.D2: uk/remote = c~c107 = teléfono/estereofonia/aplicaciones de cocina (horno, fabricante de café)/abrelatas de la puerta/otros productos

CONCLUYE el ARCHIVO 2G

ARCHIVO 8G: PVC/ELECTRÓNICA/MECÁNICO

INTRODUCCIÓN: Las invenciones son del "R archivan original".

espejo de inspección UTILIZADO 8G010 del ojo R261, ES 95

- combinar este espejo w (de la pequeña circular): lupa (cada uno es los mismos tamaños encima de uno a, cada doblez hacia fuera del otro, eg.: como un eclipse con un punto donde se ligan los dos.) Uno o más lupas en unidad.
- Las cosas múltiples en una son más prácticas.

CAMPANAS 8G020 (cascabeleo/oscilador) if/when el automóvil golpea el topetón. Enseña a conductores a conducir mejor. Atar la campana a cualquier pieza inmóvil del coche (interno). D: indicar el "sensor" = C = oscilador

8G040 los objetos INTERESANTES (PVC) cubrieron en (PVC) (como tuerca en cáscara), no pueden saber necesario cuál está adentro, hasta que la parte externa salga vía: disolviendo en (H20,)/que saca de los productos químicos vía: rotura/tracción/rasgado/consumición/que aspira (caramelo dulce); vía: el poner en la roca que pule como el vaso (esto da un uso adicional a los vasos existentes de la roca).

- juego del juego' que conjetura adentro. Puede haber pistas al contenido por afuera, eg.: tamaño, color, forma, etc.

LAVA LITE de 8G060 R244: Con el reloj; el sistema del EL ajusta según: uip; "humor"; banda; m. ES 95

™ de la ESCULTURA del ENREDO de 8G070 R245: estructura movible tridimensional hecha de girar los acoplamientos conectados, fácilmente twistable, dado vuelta, doblados. ES 95

- altera forma según: uip; m; banda
- cuando la forma alteró: genera electricidad
- la alteración de la forma es un sistema vía el cual a los productos del EL del control (r). Cada colocación (total) de uno o todas sus piezas corresponde con la señal particular - > los controles se oponen (juguete, robusteza, movimiento de la antena.
- el enredo plegable puede llegar a ser pequeño (para la cadena dominante)
- las piezas pueden ser extendidas/estiradas

TAPAS de GIRO de $ 8G080 R247: Genera señales mientras que hace girar/según cómo está hecho girar (velocidad, las curvaturas, la superficie en las cuales él hace girar, eg.: áspero/alisar). 1signals = oscilador (estereofonia; música); comandos de %r; usos científicos: (w5/cuánto tiempo vueltas según w5 de la situación), el tr señala (vía r) a c/m.

- señales también generadas vía la aerodinámica (solamente): cómo el aire acomete con crear del chisme (silbido como) suena.
- colocar los chismes (balanceable) de diferenciación sobre (tapa de) tapas - > creando (aerodinámicos/oscilador) sonidos correspondientes de diferenciación.
- las tapas pueden hacer girar dentro de los surcos (puntos (agujeros)/minúsculos grabados al agua fuerte en zanjas (de clases)) = el contacto (del tipo) con los agujeros/las zanjas = (""/"del analizador sensor") = OSCILADOR. Los agujeros tienen = tener "sensores" construidos dentro de ellos.

--los surcos/los agujeros se pueden hacer en los tableros "portables" con quienes se puede conectar = la C.

- fabricación: las versiones no electrónicas de memoria son más baratas producir. Considerar tener versión no electrónica sobre la cual el fabricante pueda agregar versiones electrónicas.

KITS de la BÓVEDA GEODÉSICA de $ 8G090 8R249: Construcción de sistema de Knex ES p23

- cuando los pedazos se caben juntos en uno o más (vía instrucciones) los diseños señalados, el sistema: encender para arriba/activar el oscilador/la otra función. El tipo reacción depende del tipo de diseño que se enclavija construido.

- diseños creatable en: animales, árbol de navidad, muestras de las muestras de la marca registrada o de la compañía, planas o tridimensionales, (juguete, muñeca) casas, vehículos, aeroplanos, gyms de la selva.

--D: fuente de energía - > palillos/pedazos usados para construir la estructura (bóveda del geo, casa, coche, muñeca, robusteza, montaña rusa (ES), muebles) - > analizador del rc~' = control del ~ de "c" (carro, interruptor) de la función o del objeto deseada.

PALILLO ESTÁTICO de 8G100 R250: Parte de 5E020. ES 95. Señales creadas según (moviéndose) (no horizontal) la colocación del palillo.

KITS del TRUCO MÁGICO de 8G110 R251: Parte de 5E020. ES 95. Señales creadas según (moviéndose) (no horizontal) la colocación del palillo.

GENERADOR ELÉCTRICO de la MANIVELA de 8G120 R253 (MANO): Bomba (de la mano) accionada (luz (de destello)): ¿ahora existe a partir por lo menos de mediados de 1995 [quizás esto fue archivada antes de competidor? Sierra en el recortes ahorrado del catálogo.] ES 95

-4E010: el movimiento del objeto (juguete, vehículo) activa: luz/nr/oscilador. Fuente de energía: batería/bomba - > electricidad/carga de batería

ARCHIVO del EXTREMO 8G

ARCHIVO 9G: PVC/ELECTRÓNICA/MECÁNICO

MUÑECA 9G010: De los lanzamientos pieza hacia fuera de sí mismo. Obvio y o existe - el interruptor aty. los lanzamientos (delanteros) del brazo hacia fuera, y se mantienen atados a la muñeca vía la cuerda. La hace la parte menos que probable será perdida.

D: dool = expulsando dispositivo ()/cuerda = brazo/bala del botón.

- la taza de la succión puede estar en el extremo del proyectil. Jugar a un juego: golpe de la blanco.

- manejar las ediciones de la responsabilidad por la fabricación de un producto.

- shooting del elemento hacia fuera: el brazo, la pierna, la cabeza, el pelo, los ojos, la nariz, la flecha, el arma, las balas (tamaño grande), la bola, la otra herramienta o juguete.

el MOVIMIENTO de la MUÑECA 9G020 OFRECE ALTERATOR: repliega expresiones/los movimientos humanos/animales. Facial: ojo (tapas), mejillas, boca, gritando.

- Caminando, hablando, doblando...
- D: [k=c]/controles manuales (palancas, perillas) = movimientos faciales mecánicos = cubierto por la piel (pvc)/la ropa/la piel.
- Imágenes de S = de las demostraciones de cambiar expresiones faciales, el etc.
- tener versión del interruptor, eg.: el mímico de labios humanos - existe probablemente.

MUÑECAS GEMELAS 9G030: función en unísono, eg.: sacudir las manos, caminar, hablar, y gritar. Probablemente no patentable.

Ambos comienzan simultáneamente, o cuando uno comienza envía la señal que hace la otra muñeca seguir o intercambiar.

- GEN: Sacudiendo la robusteza/las muñecas de las manos actuar en unísono:

Las manos (movimiento) abrochan la otra mano de la muñeca/de la persona (vía los "sensores").

- también caminatas; (la tenencia da ayudas para apoyar para arriba las muñecas).
- puntos de contacto actuales de tr/rc usados para comunicar entre las muñecas para coordinar: (el caminar/el hablar/que grita) movimientos.
- D: dool=hand=rc/tr=hand=doll=hand=rc/tr; muñecas múltiples = c (banda, carro)
- movimiento efectuado cerca: música/sonido - > sensor; c; k; palanca de mando; mecánico (palanca).
- cuando una muñeca habla - > responde el sensor = después muñeca: negociaciones, movimientos...
- simultáneamente ellos también: hablar o hacer los sonidos (oscilador), eg.: grito; jugar o responder a (los "juegos").

ARAÑA 9G040: tener piernas múltiples (de longitudes de diferenciación). La curva (en uno o más puntos) con las tazas de la succión en el extremo. Todas las piernas ensamblan en el punto central como un asterisco. Araña que camina.

--dependiendo de succión de la distancia la taza de pierna particular es del cuerpo, la altura de esa pierna (su rodilla...) es más alto o más bajo, el interno que crea efectos artísticos.

. --colocar la araña sobre frig, el escritorio, el etc.

- se enciende (según) cuando camina
- pudo caminar abajo de puerta del refrigerador, vía: tazas de la gravedad y de la succión en el extremo de piernas.

ÁNGULOS de la MEDIDA de $$ 9G050 De SUPERFICIES EXCÉNTRICAS: Medir el ángulo de superficies inusuales. Los dientes múltiples se colocan en una progresión toxicológica del granito áspero de la roca. Esto soluciona la dificultad de poner el aparato de medición del balance de un carpintero que requiere una superficie plana.

- La tapa de la superficie que es medida es la desviación media de las formaciones de la superficie áspera.

. Las extensiones creativas incluyen:

- Usos electrónicos y no electrónicos.

- Usos para la invención que pudo beneficiarse alterando la idea de la invención. Ejemplos: Puede ayudar a un artista a colocar pedazos de su escultura en ángulos deseados. Otra manera de ayudar a determinar el mediados de punto de la gravedad de una invención que pudo ser de otra manera difícil de balancear en la su mano o el otro dispositivo. Sillas de la creación u otros dispositivos en una playa.

¿- Qué productos portables pudieron beneficiarse de tener cierta versión de la invención incorporada a ella?

Es decir: Determinar la llanura relativa de una superficie inusual como el del aparato de medición del balance del carpintero con una pequeña burbuja en un tubo; cuando la burbuja está en el medio del tubo, el dispositivo se considera plano. Otros tubos se colocan para demostrar si el dispositivo está perfectamente a un ángulo de 45 grados. Esta invención es mejor en que se aplica a las superficies no planas también usando los dientes para saber la posición media del dispositivo que es medido.

- Método para que robustezas naveguen [fuera] caer.

- En la nave o la otra situación donde la posición [horizontal] [puede ser cambiado], el sistema analiza para el promedio/las posiciones horizontales [medias] previstas [sobre un gráfico del tiempo]

- Cada pierna alcanza a un diverso punto que analiza para:

#1: Cómo es la superficie llana. Diseñado especialmente para las superficies no planas (tener curvas, topetones múltiples). #2: También comprobaciones para el grado a el cual la superficie es horizontal/vertical (en relación a perspectiva deseada, eg.: columna diagonal, tirón de la gravedad). #3: Mide la exactitud para el grado a el cual deseó ángulo es lo que debe ser.

. - nivel de la consistencia en los puntos señalados.

- D1: piernas = punto central (c, sensor).

- versión electrónica: las luces y los ángulos se adaptan a [demostrar].

- D2: niveladores existentes múltiples que se encuentran junto (como la letra X o la forma de la estrella)

- Estrategia de búsqueda de la patente: level+ y (medida o medidas o medición) y (carpent u hous o de madera).

- No de la patente de los E.E.U.U. [a partir antes de 1990]: 4850491 4182046

- Técnico - cómo KN mira: posiblemente una burbuja circular (con (es) la tapa plana) = bolsillo de aire dentro de la burbuja plástica que sostiene el líquido = movimientos de señalar enfrente de donde hay la mayoría de la inmersión/del ángulo.

- Utilizado para la medición llana estándar, eg.: de izquierda a derecha y o frente a la parte posterior o a otra.

+ grado de las medidas a el cual el ángulo está en el grado deseado, eg.: u quiere ángulo de 45 grados: colocar llano en (plano) el rotate= superficial del then= después chascar en lugar la burbuja plástica en el point= de 45

grados dando por resultado la burbuja plástica que es perfectamente horizontal si el chisme principal está en 45 grados (en términos de gravedad de la tierra). Fijar llano para medir la exactitud del ángulo de cualesquiera (incremento de cinco grados).

- demandas: los viejos niveles utilizaron los frascos en vez de burbujas plásticas más redondas que miden el frente al norte al sur o al oeste al este o al nanovatio al SE...., mientras que KN también puede manejar ángulos señalados en relación a hasta abajo mientras que también comprueba para saber si hay otros ángulos (incongruence), eg.: (superficie plana) el ser torcido de cualquier otra manera de la manera deseó.

- Relacionado con la guía del movimiento del cuerpo humano de la invención 3E061. Esa invención mide los ángulos a los cuales los miembros del cuerpo se están moviendo. Sugiere los ángulos alternativos por ejemplo a los cuales los miembros se pueden sostener para evitar síndrome de túnel de carpal.

. --Una adaptación puede estar en que el aparato de medición del ángulo superficial 9G050, podrá calibrar el ángulo en el cual se coloca un miembro humano, puesto que no hay posiciones planas respecto al cuerpo humano.

+ COLOR 9G060 QUE FILTRA EYEWEAR

Los vidrios filtran hacia fuera ciertos colores, haciéndolo más fácil ver a través el alboroto. El ™ visual del analizador conectó con el eyewear identifica qué necesita filtrar o realzar.

- Pep encima de su humor seleccionando qué colores deben ser alterados, con los cuales los colores preferidos.

- Los filtros y o realzan: El humo (algo) se filtra hacia fuera, mientras que realzan a la gente y el ambiente físico. Los objetos señalados se realzan, haciéndolo más fácil buscar con el alboroto para las llaves, una parte específica como el" tornillo 2.

- Un uso para la realidad virtual eyewear.

- UIP: imágenes de las guías/de los controles que son corregidas [vía eyewear].

- Otra forma de ™ visual del analizador para: robustezas, gente que es daltónica o de otra manera vista deteriorada.

- Cualquier señal audio/visual se puede corregir [(en forma viva) para los usuarios] con el VA y el SA.

OTD: Ambiente: Luz de interior o al aire libre (puede tener colores la diferenciación si es de interior o al aire libre (eg.: luz indirecta) incluso si los niveles ligeros son iguales/similares. Solicita material no o semi opaco, como el vidrio [ventana].

% de los colores de qué lentes que miran efecto su color. Tecnología polaroid de las gafas de sol utilizada. también como el juguete/mordaza (para los cabritos). La diferencia es tipo color, no (necesario) opacidad. Costoso producir.

- En otras palabras: Los vidrios (de Sun) cambian el color (tipo color/cortinas de cualquier color) según nivel ligero, eg.: va de amarillo al verde.

. Estrategia de búsqueda de la palmadita: vidrio y (cambio del color near5)

- Números de patente de los E.E.U.U.: 5184156 vidrios con las lentes color-cambiables, de varias capas - para la protección agregada cuando se levanta el nivel de radiación.

- Realidad virtual del `relacionada: el color del shading se diseña para dejar elementos señalados en área visible [no] se destaca.

FREGADEROS AUTOLIMPIADORES de $ 9G070, TAZONES DE FUENTE de TOCADOR. Cargar eléctricamente la superficie a: matar los organismos (las ayudas esterilizan), superficies limpias (el EL carga sustancias libres de las ayudas de permanecer atado), ayudas eliminan colores/olores sucios.
- el EL o el otro fq aplicado a la superficie puede ser constante (las ayudas inhiben la suciedad, el etc de atarse), o girado cuando es querido por u (usuario).

DISEÑADOR del CHAPOTEO 9G080: Crea deseado salpica. Tipo chapoteo/burbujas del programa deseadas. El sistema entonces crea tales formas o efectos.
--el movimiento del agua/de aire controlado vía ventanas de las aplicaciones del interruptor U como el interruptor/la pantalla interactiva para escoger/crea efecto deseado.
--los efectos incluyen: el salpicar, burbujas, oscilador, luces (en el agua), kn: magia del agua (sonidos del agua de convertidos vía synth).
- excerciser: la mudanza de ellos requiere energía; correa/lugar sobre cada mano, brazo, pie, pierna, codo. Más lejos se está conduciendo el agua arroja a chorros el más ejercicio (con la fuerza).
--D1: c = dispositivo que controla del mechanicle = dispositivo del mueble del mechanicle

SALPICADEROS PLÁSTICOS 9G090: El kit de piezas plásticas, cada tipo señalado de fabricación salpica/burbujea (los efectos cómo sale el aire soplado adentro (vía boca, la máquina) (en el agua).

TRAJE DE BAÑO INFLABLE 9G110: <Pat: varios aty dieron las cuentas bajas para la palmadita y la comercialización y el liability> del producto. El uno mismo infla tirando de cuadro actúa como conservante de vida que salta bulto innecesario. Puede también envolver alrededor de objetos debajo del agua y traer para emerger bombeando abajo del aire. ¿Las funciones de inflación quizá fáciles del dispositivo como los chalecos de la línea aérea, y pudo guardar hacia fuera regaron? Mantenido lugares donde están factibles los chalecos del toda la vida, eg.: riesgo de ahogamiento limitado también. ¿Aprobación del gobierno probable?
- Flotador del usuario de las ayudas. El producto puede acompañar el chaleco de vida (inflable) también, ayudando al usuario a mantener equilibrado agua. La pieza usada del torso puede ser uno de los diseños del traje de baño de cualquier señora: juego del sujetador o de la una sola pieza - también usable por el hombre.
- emergencias: inflarse/tiene tubo el alcanzar de soplos del usuario de la boca en.
- infla automáticamente cuando los tirones/se giran de u: tapa/interruptor/dispositivo. Aspira en aire por sí mismo (w o sin (adicional) que sopla/de bombeo u). Puede utilizar el tipo fácilmente dispositivos inflables de la línea aérea. Pudo ayudar a guardar el agua hacia fuera if/when u infla mientras que en agua.
- tal juego de nadada puede ser un inferior/sobre la ropa usada por la gente a riesgo del ahogamiento.

- ventajas: utiliza la facilidad del movimiento del cuerpo; enrarecer el material (hasta llenado de aire).
usos del ahorro de vida del o-non: el anillo/el abrigo alrededor de los objetos que uno puede no querer hundido en el agua, infla cuando está necesitado; inflar vía la bomba de aire a los objetos sunken, que internan subida para emerger cuando tener bastante aire.
--no consigue de la manera (tanto) mientras que uninflated.
- D: dos capas de material, aire van mientras tanto, eg.: dos líneas paralelas tienen gusto: ll, aunque de largo/más de par en par planos completamente paralelos, cortados y sellados en formas de: juegos de nadada (hombres, mujeres), pantalones, chalecos, pantalones, sombreros (con las correas principales).
- existe quizá; ¿el gov't de los E.E.U.U. la aprobaría?

MECANISMOS ANTIHUMEDAD de la ACUMULACIÓN de la MÁSCARA del AGUA 9G120: utiliza uno o más de siguiente.
- Limpiadores de cristal (limpiadores de parabrisas del coche) encendido dentro de (afuera) de la máscara
- aire (caliente) de los soplos sobre (adentro) del vidrio, como en el coche
- la superficie de cristal cubrió con la sustancia anti de la acumulación de la niebla
- la temperatura de cristal guardó la temperatura por encima de la superficie, reduciendo cualquier acumulación del vapor.
- D: vidrio = superficie interior = limpiadores/ventilador/capa/regulador de temperatura.
¿- mucha gente estudió este campo?

9G130 MODIFICÓ la ILUMINACIÓN de la BÚSQUEDA para requisitos particulares: Luz de la búsqueda atada (debajo del agua) a la máscara. Libera las manos del usuario.
- luces múltiples posibles (una en cada extremo de la máscara). Las búsquedas señalaron imágenes de las formas las' = analizador visual.
- D: mask=light=switch

9G140 BINOCULAR/MÁSCARAS del AGUA de la LUPA: u puede accionar la palanca en medio o simultáneamente poder ver vía diversos modos visuales con una máscara. Funciones adicionales: microscopio, zumbido, normal.
- hecho vía: mecánico/electrónico (demostraciones de la pantalla del carro cómo el sistema del EL convierte las imágenes de la "cámara"). U puede considerar vía modos múltiples simultáneamente: diversas piezas de la máscara/de la pantalla tienen modos de diferenciación.
- D: máscara = vidrio = prismáticos/lupas = controles

9G150 QUE CONSIGUE el INFO DURANTE los ANUNCIOS DE TELEVISIÓN: El modo del normal TV se pone en una pequeña ventana w/in el s, y u puede ver otros programas de a/v durante este tiempo.

- el sistema colocará automáticamente el bookmarker de donde u deja programa a la vuelta de nuevo a programa principal (después de que se acaban los anuncios publicitarios).

- otd: u/el sys% decide a cuando los anuncios publicitarios terminaron.

--% del sistema sabe los anuncios publicitarios terminados sobre el rc tr a partir de la 3ro empresa privada que señala cuando un canal particular ha cambiado (véase el kn).

- D: antena/canal de cable/plato basado en los satélites = c (k) = crt/tv = s

- referencia hecha al "redactor".

PLÁSTICOS de $ 9G200: Los chismes plásticos ataron al exterior del sonido entrante del efecto del "mic", en la golondrina de mar que creaba barato efectos sonoros deseados. Mercado de blanco: los cabritos, presupuesto importaban de aficionados a los hobbys. Eg.: se acentúa/se amortigua el viento/otros sonidos.

- D: cualquier forma (cambiable) (con el paso de aire al micrófono) = se encaja a presión sobre el micrófono = el mic.

- los sonidos generaron/cómo los sonidos alteraron (synth): los sonidos del viento acentuaron (contrario de los silenciadores existentes que ayudan a reducir sonidos del viento); combado; suena como el sonido que viene dentro de la manta o caja o el tanque (con agua - causando ecos); ruidos de la carretera; las voces de mujeres suenan como hombres, y el versa de la visa [producto electrónico] del teléfono del consumidor existente popular %.

- atar el dispositivo al tipo siguiente mic: colocarse solamente, el receptor del teléfono, mic = C, juguete ("entretener"), dispositivo del "juego".

el EXPLORADOR del CANAL 9G220 SALTA las ESTACIONES QUE TIENEN ANUNCIOS PUBLICITARIOS:

Difusión de códigos a partir de los 3ro de la fuente estados constantemente que los canales son en modo comercial a cualquier momento. Esta N es una sección importante de la pieza del "redactor", tomando quizá sobre 20 páginas.

- El receptor para esta información está conectado con el selector teledirigido/de canal (explorador).

- la compañía a parte del canal/del cable co de la hospitalidad puede difundir vía el aire/el cable.

- se bloquea qué: los anuncios publicitarios/los créditos dados al principio y al extremo de películas/cualquier otra cosa u quieren omitido, eg.: los deportes/las noticias en general mecanografían los programas (horror, serie televisiva particular, etc). Puesto que esta información está cambiando constantemente a tiempo - u no puede bloquear simplemente los canales particulares que pueden más adelante tener lo que quieren.

- D: el reloj de los monitores humanos/escucha todos los tipos de la hospitalidad (cable, TV, radio, autopista de la información, etc) = código es k para el tipo que programa en aquel momento = estación de trabajo = m = tr (vía el aire, el módem, el cable, el etc.) = rc (en el país) = k (selector de canal) = artículo que es mirado (w) obrada recíprocamente: cable, TV, radio.

- la propaganda para este producto puede indicar: el "__% de su tiempo de observación se está perdiendo", "si usted mira la TV y la hora por día, después le ahorraremos 5 horas al mes...".
- también ver: 9G150 que consigue el Info durante los anuncios de televisión
. Movido desde 1G070:
- Durante usuario de la interrupción puede estar libre de su sistema de la hospitalidad (TV, el otro programa de la carretera del Info). Una empresa de servicios revisa todos los programas, y envía estas señales a suscribir a clientes. El sistema programa de copia hasta que el usuario vuelva, después el usuario rápidamente remite lo que él faltó hasta que alcancen y después goce al usuario a la velocidad estándar. Remotamente posible que las compañías de la hospitalidad pudieran comprar esta invención para guardarla del mercado.
- Esta señal viene del interventor que revisa toda la televisión, cable, radia y así sucesivamente difusiones de la hospitalidad.
- el interventor puede ser humano (o automatizó quizá?) quién presiona el botón que dice cuando los anuncios publicitarios comienzan y terminan. Esta señal - > sistema del usuario. Commerical comienza - > señal - > "notifica" a usuario del programa de /changes está experimentando - > extremo del anuncio publicitario (señal) - > las vueltas de nuevo al programa principal que es mirado "notifica" a usuario.
+-Auditor puede ser el servicio de a (separarse) vía el cual "transmite" sus señales - > radiofrecuencia/línea del cable/teléfono... El interventor podría incluso ser manejado por esfuerzo de grupo dice: vecindad/estudiantes en la universidad importante que toma la observación/que disfrutan de las vueltas de programa mientras que revisa también.
- este producto sostenido de para no encolerizar a publicistas.
- U chasca ciertos botones - > entonces programa de copia de la poder del sistema si u no vuelve a tiempo después de anuncios publicitarios. - > entonces u puede repetirse (a una velocidad más rápida) (mientras tanto sistema todavía que copia). - > entonces u puede reasumir para mirar (y u obrar recíprocamente) en la velocidad normal.
- D: el interventor determina cuando los anuncios publicitarios comienzan y la parada/el anuncio publicitario tiene la determinación de los códigos cuando comienzan y la parada = señal transmitida = c = convertidor de señal = transmitido al vigilante (de la TV) = oscilador (el notificador de cuando los anuncios publicitarios comienzan y o para y o es funcionamiento/manipula el sistema de la hospitalidad (TV, la radio...) por ((templando en) otro programa hizo disponible (durante los anuncios publicitarios)

Concluye el archivo 2E

GRABACIONES MINIATURIZADAS 3E-090 de SONIDOS: Un tipo de "carro".

Cuadro alguien que pone en sus dispositivos del bolsillo el tamaño de las monedas del dinero, que son música previa. Llevar fácilmente éstos alrededor. No rasguñan y el título del pedazo está en el exterior. Para los detalles en contenido, eg.: en los títulos y los tiempos el jugar para cada pedazo, pegar el pedazo en el jugador y ver la "exhibición".

. - puede estar en todos los tipos de formas: los discos planos, anillos de espuma, cubos, bolas %-such pueden también llevar a cabo la memoria para el software, las bases de datos, los números del teléfono, las instrucciones, los mapas y los datos para el GPS.

- los dispositivos también llevan a cabo el software, información de base de datos.

SUBARCHIVO 4E

ARCHIVOS MOVIDOS:

> + baterías recargables accionadas movimiento 4E010:

- copiado para mejorar el archivo 1.95 de N, ver la versión ampliada a partir del 6.95. Movido al directorio "me"

> comunicación registrada 4E020 de los medios electrónicos: Movido a propio archivo.

> respuesta inmediata del teléfono 4E-050 ("T")

4E-040 VR (crear las imágenes deseadas para su durante/antes de usar de la experiencia de la realidad virtual, eg.: tener un tipo pintura de la realidad virtual de la experiencia - esto puede inspirar su creatividad);

INGLÉS 4E-060 EN PROGRAMA JAPONÉS:

Las palabras inglesas adoptadas en japonés utilizan letras de las "katakanas". La katakana es similar al inglés o a otros idiomas extranjeros pero diferente pronunciados. Diversa gente interpretará el deletreo de las katakanas de palabras importadas diferentemente. Por lo tanto el software se convierte en la autoridad en el deletreo correcto.

- se aplica a todas las importaciones de palabras de cualquier lengua en cualquier otra lengua, eg.: Inglés/francés/ruso/latino/italiano - > chino/coreano/árabe

- el usuario mecanografía adentro el deletreo extranjero y consigue katakanas correctas, o mecanografía adentro katakanas para conseguir la palabra importada correcta

- si el deletreo incorrecto de las katakanas se mecanografía en entonces sistema demuestra los errores posibles encadenando deletreos incorrectos de las katakanas al deletreo correcto.

--puesto que diversas palabras extranjeras tienen con frecuencia el mismo deletreo de las katakanas, el usuario debe seleccionar de muchas interpretaciones posibles de la palabra de las katakanas. El sistema primero demostrará la lista de palabras más probable, si no las prensas llave encontrado, del usuario y hornada siguiente de las búsquedas de palabras posibles, y así sucesivamente.

- D: Reino Unido = computadora ("C") = hacia fuera/discurso/mfh de la exhibición/de la impresión

4E070: WALKMAN CON EL MICRÓFONO AL AMBIENTE:

El usuario oye qué se está encendiendo alrededor de él, mientras que en la misma hora, no disturbando a otras que no pueden oír la música del usuario. ¿Patentable? KN más viejo similar. Ver 2D-170 también.

- Uso: tener un walkman sin los problemas asociados a no poder oír qué se enciende alrededor de usuario, eg.: campana de puerta, anillo del teléfono, alarma. Sistema para u que quieren oír la música/los sonidos/news/TV demuestra/etc sin disturbar otros.
- esto es probablemente un NK antes de 95 (y antes de 4E070) en diferente N #.
- sonar en sitio - > mic ("analizador de sonidos"; canceladora existente del ruido (tipo sano)) - > WalkAbout (estereofonia, walkman, m (oscilador), TV o radio o VCR u otro difusión) ~c.
- este KN también en directorio temprano de G.
- Estrategia de búsqueda de la patente: auricular y (seleccionar o revisar o cancelación)

Kilovatio: walkman, auricular.

- No. de la patente de los E.E.U.U.: sonido +5138663 que cancela el sonido de los auriculares +5134659 que cancela los auriculares

CARPETAS DEL DIRECTORIO DE LAS INVENCIONES DE "D"

Contenido para los archivos de la invención de "D":

. Los archivos 1D y 2.o no se podían abrir en este tiempo.

. 2.o

Archivo: DD/2.a

ARCHIVAR el 2.o

(Archivar antes 2C)

Introducción: Todos los productos son electrónicos, o como la segunda opción, electromecánica salvo especificación de lo contrario, u obvia. Otras versiones del producto se pueden desarrollar sin electrónica en lo posible con tecnología actual. Las abreviaturas para las descripciones están en el archivo titulado "los códigos de la especificación de producto". - Los diagramas primero desarrollaron 6.95

- Este archivo no es mucha parte del directorio de "D" desde que era antes el archivo 2C. Por lo tanto cualquier comentario sobre directorio de "D" generalmente es decir la unidad de diversos números del producto, refiere al archivo 1D en directorio de D.

CONTESTADORES AUTOMÁTICOS:

- Todas las invenciones consiguen gente interesadas más en dejar un mensaje, y las hojas menos de la sensación impersonal. Pone a adultos creativos. Incorpora todas las funciones estándar del contestador automático: fecha/grupo fecha/hora...
- Todas las características razonablemente disponibles del contestador automático pueden ser opciones para cada invención
- Todas las invenciones aplicables para el correo de voz y los contestadores automáticos del teléfono "T"

2D-01: CARACTERÍSTICA QUE ESCUCHA FÁCIL:

Presionar un botón para iniciar escuchar de los mensajes entrantes. El término dentro de esta descripción de producto para "transmitir" significa: aplaudir o silbar o utilizar teledirigido para manejar los mensajes entrantes sin tener que correcto en el contestador automático. El usuario puede volver llamadas vía el uso del transmisor. La conversación está en el teléfono "T" del altavoz.

- Quizás cuando la persona vuelve a casa, la primera cosa que lo hacen es consigue desnuda de los juegos de negocio, comienza a cocinar, etc; mientras tanto la gente es impaciente escuchar los mensajes. Esta invención deja a usuarios escuchar las llamadas con mayor facilidad.
- Cada transmisión puede ser: un código para el número de palmadas o de silbidos para igualar un mensaje, eg.: tres medios de las palmadas, juegan el mensaje pasado otra vez.
- Después de que la audición del mensaje querido, usuario puede almacenar transmitiendo. Tales mensajes entonces se mantienen el banco de memoria separado así que el oyente entonces puede escuchar otra vez más cuidadosamente; o recordar qué llamadas desean volver
- Otras transmisiones pueden ser: fast-forward el mensaje (tan rápidamente que puede o no puede ser entendido), en la opción del usuario
- El dispositivo se vende con un cuadro que se pueda fijar sobre el interior de la puerta del armario (se abre mientras que el usuario está cambiando en la ropa casera,)

Notas al pie de la página:

Los pedazos de joyería pueden también ser transmisores;

- D: clap/r = sensor = machine/t/c de contestación

2D-02: RECONOCEDOR FUTURO DE LA VOZ: El llamador pide persona deseada, o habla hacia fuera el número de extensión. Si el sistema no puede entender, después pide que el usuario mecanografíe el número del teléfono en su telclado numérico del teléfono "T".

--Es un producto usuario-más amistoso.

- Si el llamador menciona su nombre, el sistema sabe quién para pasar como un rayo sin pasar a través de un operador.
- D: analizador del mic = de sonidos = t

el SISTEMA 2D-021 REACCIONA A LOS PRODUCTOS del external SEGÚN W5 que SON:

Eg.: Entrante-Llamar el identificador - cribador/identificador externo del elemento.

Las llamadas de números deseados del teléfono tienen un diverso anillo. El llamador sabe por este medio si coger la llamada o no.

- (Señalando diverso tipo conexiones/llamadas (entrantes) relacionadas con otras de nuestras ideas?): el sistema responde diferentemente dependiendo de cuál quiere el otro producto de N/sys/existing "obra recíprocamente" con él.

--el sistema sabe identidad de la otra parte/sistema vía su: ""/código/teléfono del acceso #/uip (características del comportamiento de N, o U: cómo se mueve/las funciones/responde (a los estímulos de "C central" o de "M")/analizador visual/analizador de sonidos.

- esta N (invención) es un tipo de UIP, "ranurador".

- Si el usuario camina encima al dispositivo, el número del teléfono del llamador y o el nombre... aparece en la pantalla ("S").

- D: Producto central/sistema = C (computadora del `) = sensor/pieza del sistema de la identificación del analizador/de llamador del analizador/uip = tr/rc = producto externo/sistema.

- OTD: ACCESO (); BVA (); CID (); CÁMARA (LENTE) (); CARRO (tipo uip o sentidos o datos buscados); PALMADA (); DE RECUPERACIÓN DE LA INFORMACIÓN (); K (); MFH (); MIC (); RATÓN (); P.M. (); MULTIUSOS (); NOTIFICADOR (cuando el contacto deseado se ha hecho con la parte o el organismo); Banda (); Picosegundo (la localización del producto externo es un factor de determinación en decidir a si se va cualquiera/el tipo conexión/contacto a ser hecha); R (); RANURADOR (producto externo de las rutas por su tipo naturaleza); s (pantalla) (estado de las demostraciones); CUENTA (); ANALIZADOR DE SONIDOS (); TDS (); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (); UIP (); Reino Unido (); ANALIZADOR VISUAL % (); CORREO DE VOZ ().

CÁMARAS 2

- todas las opciones adaptables para las operaciones inmóviles de la vida son aplicables para las cámaras inmóviles de la vida también

CÁMARA de la EMERGENCIA de la CADENA DOMINANTE 2D-030:

Los cuadros minúsculos y crudos se pueden tomar para las situaciones de emergencia.

No puede mirar fácilmente como una cámara, fuerza incluso tomar cuadros en infrarrojo, o tener opción de la manera de la cual los cuadros se toman según nivel ligero.... D (dibujo): "cámara" = cadena dominante/k

- KN similar (invención) existe en directorio de A o de B o de C.

+ ™ del IDENTIFICADOR y del RESPONDEDOR de la DIRECCIÓN 2D070:

Saber la dirección de la cual aerotransportado y o regar las partículas natas, y están viniendo los sonidos: contaminación, fuego. Dispositivo automático de la supervisión de la contaminación. El ™ programado de la información de usuario predice: la búsqueda necesaria y reacciona funciones; cómo adaptar el sistema para los gustos del usuario; quién necesita ser notificada [basado en el UIP].

- Protección del medio ambiente: apunta los agentes contaminadores problemáticos más rápidamente, e.g.: derramamientos de aceite, incendios forestales incontrolados.

- Localizar cualquier cosa que es emitida que se puede rastrear por los sensores, e.g.: donde la mamá ocultó las galletas frescas.

. Extensiones creativas:

- Explorar en su mente, qué conocimiento ganó de un asistente automatizado pudo ser útil y porqué.

- El `sigue [más allá] las ocurrencias para W5.

- "sensor": juzga la dirección del viento. Tres o más sensores pueden decir como la dirección que tiene dos oídos en que el primer sensor para recibir estímulos identifica en qué dirección, basada cuando cómo los sensores subsecuentes detectan una ocurrencia.

. --más es tales sensores mayor es la exactitud en la determinación de la dirección.

--combinación con el analizador del olor [existencia y quizá versiones de KN (invención)]

- "analizador": los trabajos w otras fuentes de información (mejores) determinan la dirección/la naturaleza de las emisiones del olor. Eg. el sistema (sistema) "coordina" la información de fuentes de información actuales/futuras del tiempo M para determinar la dirección.

. - dice la cantidad de partículas aerotransportadas; y o tipo sustancia; tarifa la cual las partículas están llegando; registros (cuentas: w5 de índices de partículas que llegan).

- búsquedas: el polvo, generado humano (el cuerpo) huele...

- D: oler el "analizador" = C (computadora del `) = tds/determinador de la dirección de viento

- OTD: ACCESO: (para activar el sistema, o leer resultados, o la banda); CÁMARA: (analizador visual: dirección de partículas visibles (en viento), vía el microscopio que mira que es soplada cerca); CARRO: (tipos de analizadores del olor); K: (r); MFH: (base de datos de los olores); MULTIUSOS: (desarrolla el uip en los hábitos (potenciales) de diverso contaminador); NOTIFICADOR: (para exceso de la contaminación, del fuego); OSCILADOR: (); Banda: (); Q: (); S: (); CUENTA: (tds; niveles de la contaminación (uip del contaminador apuntado)).

- Usos: contaminadores (ilegales) del retén/del monitor (2E251); identificar la fuente de contaminación/de basura/de accidente (peligrosos).

- Para las sugerencias en los tipos de sustancias peligrosas también ver 7G050, y el recubrimiento de los manuales aerotransportado (los agentes contaminadores) (de fábricas/de laboratorios).

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (olor del olor de la contaminación) y (flujo de aire) y dirección.

2D-090 TOMA LA FOTO de la PERSONA, después le extraer de la foto como base. El sistema puede también tomar el cuadro de la sombra de la gente, de la silueta, del etc

- D: foto (electrónica) = s interactivo

2D-120 ANIMÓ A FABRICANTE de la HISTORIA y amaestrador y traductor electrónicos de la lengua: Desarrollar la historia con el texto y los gráficos. El texto puede (automáticamente/manualmente) ser traducido a idiomas múltiples.

- Carácteres (animated) visuales de las aplicaciones para las historias cortas o largas. Uso con las porciones escritas y verbales de comunicación en propio y o idioma extranjero.
- D: k = C (computadora) del `(interruptor)

++ 2D-140 ENVÍAN IMPRESIONES NECESARIAS vía fax u otros medios electrónicos. Cada grupo del color está vía diversa transmisión. Esto entonces se puede producir en color.

- Iguales que un KN más viejo (invención) - colorear el fax (dir de B o de C), aunque hacen no si describió el transferir de color vía el EL (electrónico) (no modo fax), eg.: Email, C (computadora del `) = C (computadora del `) (pero no fax).

¿- Tan simple y objeto de valor debe existir?

- Usos/métodos posibles:

--si hay cuatro (básico) colorea: fax/TR (transmisor) (electrónicamente (vía el módem)) cuatro diversas transmisiones para cada color (grupo).

---sistema del color del pixel (sistema) cuando hay colores múltiples dentro del mismo espacio: las transmisiones múltiples tienen la misma forma pero pixeles de diferenciación señalados dentro de las formas dichas.

- las funciones tienen gusto de una planta de impresión, u (usuario) pueden transmitir simplemente contra llevan las páginas/los datos de cuál debe ser impreso.
- D: el proceso de conversión del interruptor = los datos (EL) de imágenes se convirtió = TR (transmisor) = rc = C (computadora) del `(gráficos interruptor, carro) = impresora
- Estrategia de búsqueda de la patente: color de fax+

MISCELÁNEO:

. micrófono teledirigido 2D-230: El regulador selecciona que los micrófonos a activar y a desactivar. (Otra N?) D (dibujo): r=c=mic

calculador portable del tiempo 2D-210: Por las ondas de radio, usted puede llamar en la computadora "C" para conseguir el tiempo hasta la fecha, noticias... D (dibujo): r = m

. científico detective 2D-250: El juego deja a usuario encontrar al bandido vía todas las pistas y herramientas proporcionadas en el juego

- incluye el microscopio. Relacionado con el juego antedicho.

- opción: una persona, eg.: la madre puede poner alrededor de la casa todas las pistas según las instrucciones del juego. Eg.: las instrucciones dicen cuál es el sitio 1, 2 designados...

. ratón del microscopio 2D-260: ¿existe?

Con el tipo ratón de la computadora "C" hacer los usos de siguiente en las localizaciones deseadas: Rebanada; Cortado; parte movible; inyectar las sustancias; expulsar las sustancias en la superficie; estiramiento; muestras de la toma; enviar las señales eléctricas deseadas; alterar el tipo/la cantidad de luz; cambiar la temperatura;

- el ratón con la computadora "C" deja a usuario seleccionar el tipo de actividad en la localización deseada

- Artículo de la exhibición que es visto sobre la pantalla ("S").

- D: k/r (control vía la localización distante (vía t/modem tr) espectador/magnifier/c = manipulante del pedazo de /mouse = de s/eye del objeto estudiado (cortador/motor/papel secante)

. 2D-270; explorador médico 2D-200

. attractor del microscopio 2D-290 - reflector:

Ap: atrayendo o rechazando los organismos, células vía: fabricación de sonidos, de los productos químicos, de los sonidos, de los movimientos, de las vibraciones, de las temperaturas, del etc. sexuales.

AUDIOS DIVERSOS 2D-310/la REPRESENTACIÓN VISUAL/COMPONEN SISTEMAS.

Características opcionales estándar para cada invención electrónica:

- sintetizador, capacidad de transferir la señal al audio o a la videocinta, CD registrable.

- Las señales creadas se pueden sintetizar en imágenes de vídeo. El dispositivo puede imprimir el musical y o las creaciones video en fotografías del color/del negro y del blanco, imágenes o códigos.

- tiene exhibición "S" el demostrar de las señales que son recibidas, cómo se están convirtiendo, almacenado, enviado.

- el sistema sintetiza, archiva en memoria, y corrige todas las señales de cualquier manera que la tecnología ahora permita

- las señales se pueden convertir a también controlan luces según sonidos, ritmos, el etc. correspondientes (eg.: el destellar, mudanza, alteraciones del color vía la rotación de la hoja multicolora translúcida de la empanada, o uso de bombillas coloreadas deseadas, alteración del color ligero por el cambio en las señales electrónicas de los transmisores que generan diversas frecuencias ligeras de la misma fuente general - eg.: la misma pantalla ("S") o bulbo o pieza del bulbo

- las señales pueden crear las vibraciones que corresponden al sonido, al ritmo, al etc, efectuando: cualquie massager portable o inmóvil estándar, eg.: massager de control manual para todo el o cualquier parte cuerpo, asiento, cama, masaje del agua de la piscina del giro, etc. Estos massagers emiten en explosiones, velocidades, ciclos, rotaciones, el etc.

- señales de alertar al usuario de cuaesquiera estímulos externos vía los efectos resultantes uces de los descritos en esta categoría de producto, eg.: notificado de la vivienda que entra de la persona, sitio; fuego; ladrón; problema con el niño - gritando, despertó, alarma del tiempo, teléfono que sonaba, campana de puerta, o cosa activando cualquier llamada para la comunicación o la ayuda con o sin el usuario que sabía el tipo de situación con un código para el tipo situación. Tales señales pueden ser el único propósito del producto, o sean una característica, que interrumpe cualquier otro sistema descrito adjunto u otro (eg.: sistema de la hospitalidad, TV, juego video, etc). También aplicable para los minusválidos físicamente, ayudando saben el what que sucede, o utilizado como la rehabilitación/terapia físicas/psicologicas.

- jugar con el instrumento de percusión del laser (el laser substituye solamente el palillo), los "cojines del tambor" responden a los lasers (cada laser "palillo" que tiene diverso efecto). Libera a jugador de estar en la localización del sistema

- alternativo, el dispositivo se puede hacer en el instrumento manualmente conducido con un "mic opcional" y sin un sintetizador

SISTEMA de la AISLAMIENTO 2D-250: Los altavoces se pueden poner cerca del vigilante, de esta manera usuario pueden escuchar en un volumen más bajo de sonidos, sin tener que sentarse demasiado cerca a la pantalla suavemente radiactiva ("S").

- tv/stereo - > TR sin hilos (transmisor) - > oscilador (altavoces).

SISTEMA TELEDIRIGIDO del PELIGRO PARA EL MEDIO AMBIENTE 1C-100: ¿<3, 2, 2, 2 Mk? >

Para los artículos que necesitan ser activados en el frío extremo y o los ambientes calientes, y o ésos donde hay el alto polvo y o la arena y o la humedad u otros artículos que pueden interferir con un mecanismo normal del interruptor, eg.: en sauna, regiones de la tormenta de desierto, Siberia.

Se aplica a los productos existentes:

(El uso de los medios de los interruptores allí es una manera para los malos elementos eg.: arena a conseguir adentro)

Se aplica a las versiones existentes de este producto:

. - Direcciones del desarrollo de la patente: encontrar las patentes existentes para los productos básicos y atar ("R") la característica alejada del control. Entonces demostrar cómo este ("R") mecanismo de control alejado se pudo considerar patentable.

Esta ("R") adición alejada del control hace el siguiente: da vuelta con./desc.; efectúa el nivel de operaciones como (la intensidad [tal como volumen, brillo...])

- Aplicaciones 1C-260

- Notas al pie de la página: alejado ("R"); exhibición ("S"); "C"; pp; P.M.; Reino Unido; fecha; todos; punto de ebullición; alerter; oscilador. Ver 1C-26. PATENTES: palabras claves - vía www.qpat de la palmadita 1977-1.97 de los E.E.U.U.:

- (peligro o peligro) y (control alejado del ajuste)

NOTIFICADOR del LASER de la UNIDAD MÓVIL 1C-160: se alerta <4, 3, 2, tren 2> cuando se bloquea la pista próxima. La emisión del laser se refleja de nuevo al tren que significa la manera está clara. Funciona durante día y noche.

- Los trenes se notifican de un bloque para arriba a continuación cuando varios del reflector de la luz laser de la pista del tren/de vehículo se bloquean. También se aplica a el resto de los vehículos automatizados.

- Si la transmisión del laser no se vuelve de varios reflectores sabe de una obstrucción.

- Notificador del laser del tren: El tren inminente transmite el laser a los receptores para arriba a continuación la pista. Cuando hay una interferencia que bloquea la vuelta del laser, el conductor es notificado por la alarma de los sonidos que algo está bloqueando el receptor, cualquier un coche, el sistema del etc. puede aumentar el tiempo de reacción del conductor durante el día o la noche.

. - hay por lo menos dos tipos de receptores, esos ascendentes más cercanos; y ésos en el extremo de una curva (curva) en el tren siguen significar al receptor del laser que éste debe ser el laser pasado dentro del alcance para el tren

. --la manera de la cual se refleja la luz determina.

. - naturalmente puede haber los bromistas (vándalos) que cambian, cambia los lasers, consecuentemente:

--el conductor necesita tomar la decisión final en cuanto a cualquier obstáculo real en pista

--los reflectores necesitan ser atados a la pista y o al carril de tal manera que es casi imposible sacar, y si está sacado se daña el reflector (eg.: el reflector consigue doblado fuera de forma y después suelta su capacidad reflectora)

--uno recuerda que la basura puede cubrir los reflectores, consecuentemente el reflector pudo también ser poco encendido el exterior de cada carril también

. - la altura del transmisor del tren necesita ser ni demasiado baja ni demasiado arriba...

- también aplicable para los coches y otros automóviles. Pueden buscar una tira especial en el camino y alertar cuando se bloquea cerca: otro automóvil, piedra en el camino, etc. (guardarse de la basura - el sistema alertará tan quizá solamente si la obstrucción cubre bastante un grande de un área)

--el reflector puede ser pintura especial (eg.: con muchos reflectores minúsculos dentro de la pintura)

- otros usos: artículos que viajan abajo de las bandas transportadoras; las pistas y el coche de carreras del tren del juguete fija (incluye el camino-carretera plástico

- OTD: exhibición ("S"); C; pp (ajustar los niveles de sensibilidad y de otras materias); P.M.; Reino Unido; el date% (expediente de las subsistencias de cuando está viajado y donde (eg.: con nuestro otro producto basado en los satélites del localizador); básico; punto de ebullición; alerter; oscilador; cuenta (las demostraciones del sistema cómo es bueno un conductor usted está por hasta dónde conductor se desvían de línea señalada).

Nuevo a partir del 5.96:

- Str 12.95 de la búsqueda de la palmadita:

- ((ondas del radar adj3) o laser) y (advertir o alertar o notif) y (movimiento o movimiento o movimientos o mudanza o tren o vehículo o coche o carro o carros)

Actúa como guía del movimiento para las robustezas y otros movimientos automáticamente controlados.

- Evita el disparar: los objetos (no normalmente) en la tierra = se notan por laser = "notifican" = u (usuario) que camina cerca. C (computadora del `) = UIP "analizaba" (el "analizador visual" = qué objetos están normalmente allí, eg.: mobiliario, plantas; pero notifica sobre las herramientas y la basura a la izquierda que mienten alrededor.

--usos: la fabricación/investigación y otras vistas con muchas herramientas y objetos se movió alrededor; hogares con los niños o envejecidos.

--dice u (usuario) cuando es seguro/no seguro caminar: Palmadita de los E.E.U.U.: Sistema de alarma 5406276 del paso de peatones.

- Patentes de los E.E.U.U.: 5465142 5406276 5371581 5314037 5293162 5388048 5467283

El movimiento se altera según la presencia de otros objetos (de mudanza): objeto potencialmente obstructor = "analizador visual" ("sensor" = este laser KN) = "analizador que controla" del movimiento = regulador del movimiento = movimiento del objeto móvil alterado.

--alteraciones del movimiento: los reductores de velocidad o retrasan (no no necesario terminar la parada) en lo referente a: velocidad del otro objeto (y qué se predice para evitar la colisión); el donante de bastante tiempo así

que del objeto percibido (peatón, objeto móvil, coche) puede salir de manera en sus los propios; dar bastante tiempo para el montar a caballo humano en vehículo automáticamente controlado de asumir el control y de dirigir claramente de obstáculo, eg.: conductor despertado de siesta cuando el nivel de la seguridad de vehículo ("cuenta") consigue alto.

<3, 2, SELECTOR INTERACTIVO de la HOSPITALIDAD de 2> 1C-180 PARA las PATATAS del COCHE: Cuando usted le consigue abajo, el proceso de la invención es a menudo mucho más desafiador que siendo puesto en la situación pasiva de observar la hospitalidad previa. Los estudios de la hospitalidad necesitan la ayuda que captura las patatas del no-coche a y pagan honorarios del cable, o consiguen sus anuncios con nuestras funciones programadas del ™ de la información de usuario. Hospitalidad modificada para requisitos particulares.

. Radiar, las difusiones de la película y la otra hospitalidad se anota según sus gustos. Sus preferencias son determinadas por cómo usted contesta al cuestionario del software, y o los programas reales que usted decidía observar. Los espectadores pueden también clasificar programas.

. Opciones del menú:

- Las estaciones se anotan para los multi-usuarios encendido: interesar llano por criterios señalados como valor educativo; contenido llano adulto; violencia; el por ciento del contenido pasado en anuncios; conservador a los niveles liberales del pensamiento; cantidad de interés que tendrá para los pensadores inventivos basados en su tema y o la manera nueva de acercarse el asunto. Una lista puede ser obvia.
- El sistema observa los interruptores del usuario del momento algo más interesante. Analiza porqué eligen que nueva estación. Cada segmento [del programa de la hospitalidad del `] se puede anotar encendido sobre 1000 elementos variables [que efectúan interés del usuario/educación del placer la', el etc].

. Las extensiones creativas incluyen. Foco:

- Beneficios del locutor de impulso.
- La gente de la ayuda aprende, e.g.: el sistema compara el nivel informativo de la demostración, con lo que prueban los espectadores de las cuentas recibidos de tomar en "hechos sobre el mundo" y tal.
- Medios de la no-hospitalidad que anotan.
- Cómo el anotar puede consolidar el pensamiento creativo.

. Más:

Menú selectivo de la estación: Seleccionar fácilmente deseó programa del cable o de la difusión según sus requisitos del gusto.

- Al ver la TV, escuchando la radio, "obrando recíprocamente" con la "hospitalidad", el etc. las preferencias para otras estaciones (basadas en el tipo estilo, modo preferred por el usuario) que cuando voluntad disponible para aparecer en la pantalla (estados el tipo programas/canciones/pedazos disponibles.

--TV: una barra en la parte inferior de la pantalla

--radio: la exhibición ("S") demuestra los números de estación de interés

- existe?: el sistema de radio auto, que deja tipos selectos del usuario de música, deseó según la región. Pues viajan a las nuevas áreas, el sistema seleccionará el tipo estaciones de radio que el usuario quiere, ahorrándolas tiempo de la búsqueda alrededor.

- UIP: memoriza las preferencias de usuario en el sistema y usadas en proceso de selección. La hora/los acontecimientos externos influencia encaminamiento de la compra de componentes de la estación/de la música/de la película/de las noticias/Info la'.

+ O - la orden en la cual las estaciones se ofrecen para la opción pone prioridad en los estilos preferred, algo que la pedido numérica de los canales.

--función: saltos del usuario de la estación a la estación (muestreo hasta que elijan permanecer o saltar después estación).

---A tiempo el usuario irá al final de las opciones del canal (los canales del extremo son el menos favorito).

. ----Si la selección de canales es demasiado grande para el usuario, después pueden limitar el número de canales dentro del lazo de estaciones. Tal limitación se puede hacer vía el número del sistema de canales máximos (puede ser cambiado a partir de minuto al minuto); y o conjuntamente con un factor numérico de la preferencia - por el que haya un equilibrio entre esas demostraciones con altos grados según el "pi" y un número excesivo de estaciones. Si hay demasiadas estaciones en una buena hora; entonces el grado de la preferencia necesitará estar más arriba y también habrá más estaciones a seleccionar de. En las horas pobres, la cuenta de la preferencia se cae así como el número total de estaciones.

- puesto que es difícil juzgar el "uip exacto" para cada usuario: fabricante de película y o código del locutor los elementos del "uip" para sus películas, programas radiofónicos.... Por lo tanto cuando encuentran al usuario para preferir ciertas demostraciones, aunque no lo marcaron en su base de datos del "uip"; la invención por consiguiente anuncio y o las preferencias de la cancelación. Eg.: Los estados de usuario tienen gusto de las películas de la comedia, y tienen aversión romances. En realidad, no favorecen el tipo de productores del humor se están convirtiendo y o están difundiendo, y por lo tanto el usuario no sabe realmente sus preferencias según las opciones del menú de la cultura. El usuario pudo sin embargo percibir romance como solamente siendo clasificado "x", y en actualidad fue encontrado el mirar de tales estaciones del romance (eg.: el romance estaba en el extremo de su lazo de la opción de la estación).

- los abastecedores de las demostraciones de hospitalidad tabulan cambios en las preferencias del vigilante por las producciones próximas futuras los suyos. Algo como el programa del almacén de Safeway en Maryland, juicio de los E.E.U.U. qué productos los usuarios están seleccionando, cuando, y en qué combinación con otros productos, y cómo los sucesos actuales efectúan sus selecciones. Notas del sistema cuando la selección de la preferencia fue hecha por el usuario y o el sistema - el tal ser útil para los productores, y en el juicio de hábitos cambiantes del usuario también.

- D: la estación de difusión envía el código adicional que etiqueta su tipo programa, eg.: clásico o música country - > receptor - > "analizador" - > el sistema (sistema) selecciona y permanece con programa deseado.

- Notas al pie de la página: exhibición ("S"); pp; P.M.; Reino Unido; fecha (de demostraciones); todos; vc; uq; mq.

Str de la búsqueda de la palmadita:

--(televisión o TV o radio) y (seleccionar o elegir o eligiendo o escoger o preferir) y (canal o estación)

- Patentes de los E.E.U.U.: 5361401 + 5323240 - y otros productos relacionados/investigación de Sony + 5317403 531592 5261117 ++ 5466488 TV programaron la señal de la distribución que tenía capacidad para bloquear selectivamente el material sin programar, eg.: anuncios publicitarios (u paga $ adicional cada vez "corregir" ocurre, induciendo a espectadores que miren los anuncios publicitarios = dando por resultado rédito al locutor del espectador o del publicista). 5333091 4605964 4259889 3721757

- Los padres/las comunidades/las compañías/los institutos (clases) pueden restringir qué sus niños/miembros/otros/ellos ellos mismos - el deseo a mirar = Reino Unido deseó parámetros ("corrigiendo")

- "corrigiendo" = entrada de cuaesquiera señales: ()/texto (interruptor del fq de la "hospitalidad" basado) = de: m/locutor/carro/explorador/rc.

- retén apenas las porciones deseadas de programas deseados.

- Str 6.96 disco de la búsqueda de la palmadita del babero: (interactiv o sastre) y (TV o televisión o radio): 5504896 5502504

Televisión interactiva +5446490 con la programación adaptada. 8.95 publicados vía AT&T

Sistema 5319455 para distribuir los anuncios publicitarios modificados para requisitos particulares a los espectadores de TV.

Un str más corto de la palmadita: (televisión o TV o radio) y (seleccionar o elegir o eligiendo o escoger o preferir) y (canal o estación o advertis)

Str de la palmadita: (televisión o TV o radio) y ((diseño o programado) near8 (seleccionar o preferir o elegir) u obran recíprocamente o

sastre). Nota: interactivo trae en el 75% de patentes.

1C-181: SERVICIO DEL GRADO DEL SELECTOR DE CANAL:

A partir del 5.96: Locutores de la tarifa de los partidos privados y otros abastecedores de los datos por cuaesquiera criterios. Selección de canal de la influencia de los grados alternadamente/investigación de los suscriptores al servicio del grado.

- D: los canales/los locutores/los editores/los transmisores = tr/rc = el suscriptor de los códigos del rater combina los programas de los códigos w del rater (con) = sistema de la selección/de la investigación (sistema) (1C-180) = las opiniones de u (usuario) materiales.

¿- KN anterior?

- usos: valor del grado (negocio/educativo/científico) de datos encendido: Internet/difusión (especialmente si no hay autocontrol para su calidad);

--los grados se pueden dar para cada aspecto dentro de cada canal o la vista en Internet: selecciona aspectos de la película o el juego/selecciona diversos artículos que w/in dijo vista en Internet.

--los comentarios del rater = pueden ser (s) visto por = u

. Para Techies: la "ruta", "corrige", "cuenta", %tds, analizador.

+ <3, 3, 4, 4 BALANCEADOR AUDIO AUTOMÁTICO de Not$> 1C-290-083004: El volumen de los altavoces ajusta según donde la persona se sienta. El sistema utiliza el punto central para dos o más personas. Ejemplo: estereofonia del hogar o del coche. Detalles movidos.

+ SEGUIDOR 1C290 y BALANCEADOR AUDIOS: La salida de altavoces ajusta y es equilibrada según su localización con el dispositivo teledirigido. Dondequiera que usted sea, suena como usted está en el medio del sistema de sonido. Camina a su escritorio y goza de similar el mismo anillo - efectos sonoros que usted tenía mientras que delante de una TV (locutores de nacróticos a las masas - no pudo tener gusto de esto).

. Las señales audio-visuales señaladas siguen según UIP (™ programado de la información de usuario), e.g.:

- Los segmentos marcados con etiqueta como anuncios publicitarios se corrigen hacia fuera.
- Ajusta según la audiencia - deteriorada, o el tipo de dispositivo de la audiencia que es utilizado en un o ambo oídos.

. Se aplica a cualquier función audio de la comunicación. Ejemplos: los juegos video educativos, sistemas de entrenamiento de la realidad virtual que enseñan a la compasión a los criminales del núcleo duro, estereofonias, TV, vaina echan. Una lista puede ser obvia.

. Las extensiones creativas incluyen:

- Cuando y o cómo el sistema elige selectivamente funcionar, basado en criterios automatizados. Para los juguetes, los juegos, el etc.
- Consolidar el pensamiento creativo.
- Características adicionales para generar mayor impacto o experiencia en oyentes.

. Según la localización del usuario, los altavoces balancean sus sonidos por consiguiente.

- transmisor del usuario; o el detector de movimiento de los sistemas determina el lugar de personas y decide a qué altavoces necesitan más o menos sonido.

--si hay más de una personas, entonces los balances de sistema suenan según el centro áspero de la gente múltiple

- ap: televisión, radio, cualquie otra música o dispositivo de generación sano

Lo que sigue era el número 1C-050 del producto: Caminata de los sonidos alrededor: continuar oyendo el sonido de lo que usted está escuchando sin importar donde usted entra en la casa o la otra premisa.

- cuando en el teléfono del altavoz ("T"), usted puede continuar hablando a la persona a través de su sitio/premisa puesto que el área cubierta tiene los micrófonos y altavoces múltiples

- cuando la observación de la televisión o el escuchar el sistema de sonido, usted puede oír casi igualmente también sin importar donde usted va. Incluso diversas pantallas del "notificador" de c/tv/(s) pueden ir automáticamente en cuando usted entra en una diversa localización. (La gente ecológico importada no quiere las TV múltiples encendido en la misma hora).

Ap: teatro en donde ciertos sonidos pueden desear ser activado de diversas regiones de etapa

- juegos

- conseguir la información mientras que camina abajo de vestíbulos

- los altavoces pueden ser portables, así como los micrófonos

- pares como sistema de radiobúsqueda en edificios grandes: el sistema (sistema) sabe donde está u (usuario), hence^: difusiones solamente en el área del u; "notifica" u (usuario) allí vía (oscilador, las luces que destellan)

- la posición de la pantalla de la televisión ajusta a la mejor posición por donde están las personas.

- el sistema identifica a persona, localización del animal vía los sensores del movimiento; entonces puede anunciar declaraciones vía altavoces lo más cerca posible su localización

- el mismo producto se pudo también utilizar para difundir vía los altavoces según el control central del producto (no basado en la colocación de seres humanos

Relacionado con el producto 1C-291

- la persona que da une vuelta tiene transmisor el identificar de su localización y o el transmitir de su voz saliente vía su "mic". Mientras que camina la persona, los altavoces cerca de ellos se activan.

- no relacionado con el producto ninguÌ□n 1C-110

. Para Techies: ("R") control alejado del balanceador; pp; P.M.; fecha (a veces el balanceador se programa para eliminar donde está la gente y tiene un equilibrio del sistema que sea necesario); el interactive%; básico; vc; el score%; md; cp; mq; acceso; uip; palmada; distancer.

(véase el diagrama en "papel de las especificaciones de producto")

- Str 6.96 disco de la palmadita del babero: (sonido o audi) y (balanc o (seguir near8 (oyente o persona o usuario))

- Patentes de los E.E.U.U.: sistema de sonido 5386478 teledirigido con el detector acústico.

EXTREMO Del ARCHIVO 1CE

Archivo: UN B C/IC1

ARCHIVO: 1CI

COLECTOR del CRITTER 1C030 - cucaracha pulida:

Fórmulas químicas deslizadizas usadas para la guarnición interna de las latas de basura. Guarda insectos del arrastre de la poder si no es totalmente llena. Esto soluciona los problemas de tener que con frecuencia sacar la basura, especialmente por la tarde.

- Similar en idea a la planta de jarra que tiene pelos que atrapen insectos en su hoyo que se llene generalmente de agua y del producto químico para digerir los insectos.
- La versión no electrónica del producto fue probada, él realmente los trabajos.
- El `modificó los sonidos para requisitos particulares [oscilador] del `, olores atrae [relacionado sexual] insectos señalados. El arreglo para requisitos particulares puede ser basado en lo que analiza la pista de su sensor' es el tipo/el número/el tamaño/los comportamientos de los organismos.

AJUSTADOR de los SONIDOS 1C-040:

- Amplificar el timbre siguiente; la microonda y o el otro zumbador del fabricante de la cocina o de café que significa el alimento está listo; ladrón de la premisa y o alarma de incendio: cuando solamente la audiencia - la persona deteriorada está en el país, o cuando hay un partido grande, o cuando la gente está en el patio trasero de la casa, etc.
- El volumen audio de cada dispositivo entra encima cuando está programado tales individualmente, o cuando es el comando central así que programado, en de golondrina de mar todos los dispositivos conectados para arriba y más bajo su volumen por consiguiente
- Ap adicional: teléfono ("T")
- Para Techies: exhibición; pp; P.M.; Reino Unido; fecha; todos; "mic"; punto de ebullición; alerter; oscilador; cuenta; acceso.

MENSAJEROS VIDEO 1C-070:

- Dejar los mensajes para la persona sobre la cinta video o almacenada en "C". La CRT anunciará mensajes verbalmente y visualmente en un rato preprogramado

Usos: eg.: cuando la mamá quisiera que su cabrito hiciera algo en el tiempo señalado, eg.: decir a su hija poner la empanada en horno antes de que la mamá vuelva a casa de trabajo; decir a esposo cuando usted será detrás casero; dejar el mensaje para el empleado en el trabajo; el presidente puede enviar el mismo mensaje a mucha gente inmediatamente - tiempo del presidente del ahorro y conseguir buen impacto

--Sistema de intercomunicación

- Ver la actividad de la oficina de su dispositivo (también actúa como tipo de seguridad), puede ver quién está en la puerta principal también
- El usuario puede también pedir para conseguir sus mensajes
- Para Techies: exhibición; "C"; pp; P.M.; Reino Unido; fecha; indica la hora y la fecha de mensajes entrantes/de salida automáticamente; interactivo; juguete; todos; hospitalidad; "mic"; synth; mfh; punto de ebullición; alerter; oscilador; vc; cuenta (número de mensajes); carro; teléfono ("T"); teléfono del SP ("T"); tr; MES; fs; cp; mq; acceso; carácter; chapaleta (la grabación activa otros artículos, eg.: estufa de la microonda)

CONTESTADOR AUTOMÁTICO VIDEO 1C-071:

Dejar los mensajes video para la gente en su oficina u hogar. También tiene característica del vídeo interactivo, por el que el usuario pueda hacer preguntas y conseguir más información.

Como un contestador automático del teléfono ("T"), dejar los mensajes audios/visuales en la máquina de otra persona transfiriendo datos vía el alambre o las ondas.

- Todas las operaciones son básicamente similares. Eg.: el aviso saliente se puede recibir vía audio, o audio/visualmente en el dispositivo del llamador; el dispositivo de recepción incita a llamador enviar sus señales de a/v (solamente el audio puede ser aceptado sin embargo también si el sistema del llamador es más limitado).

- Puede trabajar con los teléfonos video actuales más crudos, y con modelos futuros más sofisticados.

Notas al pie de la página:

También actos como un fax que recibe la máquina.

. - si el dispositivo del llamador no permite la transmisión visual, o si hay falta técnica, el sistema trabajará apenas en modo audio

. - ap adicional: recibir los videoclips en cualquier momento de (las demostraciones, naturaleza educacional [el usuario puede pedir de instrucciones detalladas del fabricante en cómo funcionar, reparar, del etc su producto])

. Para Techies: exhibición; "C"; pp; P.M.; Reino Unido; fecha; indica la hora y la fecha de mensajes entrantes/de salida automáticamente; interactivo; juguete; todos; hospitalidad; "mic"; synth; mfh; punto de ebullición; alerter; oscilador; vc; cuenta (número de mensajes); carro; teléfono ("T"); teléfono del SP ("T"); tr; MES; fs; cp; mq; acceso; carácter.

CONTROL de LUZ de TEATRO 1C-101:

- relacionado con un producto del HACHA

- caminata sobre la etapa y sin iluminación del disparador del público que sabe diversa - ahorra en costes de trabajo del ser humano para moverse y apagar se enciende. También se aplica a los interruptores ligeros normales.

Se aplica a las versiones existentes de este producto:

- Direcciones del desarrollo de la patente: encontrar las patentes existentes para los productos básicos y atar ("R") la característica alejada del control. Entonces demostrar cómo este ("R") mecanismo de control alejado se pudo considerar patentable.

Esta ("R") adición alejada del control hace el siguiente: da vuelta con./desc.; efectúa el nivel de operaciones como (la intensidad [tal como volumen, brillo...])

. Para Techies: alejado ("R"); exhibición; "C"; pp; P.M.; Reino Unido; fecha; todos; punto de ebullición; alerter; oscilador.

FUNCIONES de CONTROL del TELÉFONO 1C-102 ("T"): el activar: teléfono de altavoz, control de volumen para la voz entrante o saliente, botón del asimiento

Se aplica a las versiones existentes de este producto:

- Direcciones del desarrollo de la patente: encontrar las patentes existentes para los productos básicos y atar ("R") la característica alejada del control. Entonces demostrar cómo este ("R") mecanismo de control alejado se pudo considerar patentable.

Esta ("R") adición alejada del control hace el siguiente: da vuelta con./desc.; efectúa el nivel de operaciones como (la intensidad [tal como volumen, brillo...])

. Para Techies: alejado ("R"); exhibición; "C"; pp; P.M.; Reino Unido; fecha; todos; punto de ebullición; alerter; oscilador.

SONIDOS ACTIVADOS MOVIMIENTO 1C-103: Los cajones de la abertura, cajas, ventanas, puertas con o sin un sistema adicional/opcional de la cerradura con una combinación necesitaron

Se aplica a las versiones existentes de este producto:

- Direcciones del desarrollo de la patente: encontrar las patentes existentes para los productos básicos y atar ("R") la característica alejada del control. Entonces demostrar cómo este ("R") mecanismo de control alejado se pudo considerar patentable.

Esta ("R") adición alejada del control hace el siguiente: da vuelta con./desc.; efectúa el nivel de operaciones como (la intensidad [tal como volumen, brillo...])

. Para Techies: alejado ("R"); exhibición; "C"; pp; P.M.; Reino Unido; fecha; todos; punto de ebullición; alerter; oscilador.

AYUDA de la DESVENTAJA 1C-104: Páginas de torneado en el libro para el interno inválido o con el brazo quebrado; gente con ciertos tipos de artritis...

Se aplica a las versiones existentes de este producto:

- Usos para nuestras invenciones relacionadas: encontrar las patentes existentes para los productos básicos y atar ("R") la característica alejada del control. Entonces demostrar cómo este ("R") mecanismo de control alejado se pudo considerar patentable.

Esta ("R") adición alejada del control hace el siguiente: da vuelta con./desc.; efectúa el nivel de operaciones como (la intensidad [tal como volumen, brillo...])

- Para Techies: alejado ("R"); exhibición; "C"; pp; P.M.; Reino Unido; fecha; todos; punto de ebullición; alerter; oscilador.

1C-161-083007 El OJO de "C": El producto memoriza el ambiente y sabe moverse o funcionar dentro de él.

- Unidad móvil (eg.: el tren, automóviles, aeroplanos, naves (según las estrellas, al atracar en número señalado del puerto y del muelle, el etc) puede también utilizar las cámaras infrarrojas (cuando la visión real diferencia de la visión preprogramada [qué sistema de la cámara se ha entrado para esperar considerar] que se apaga una alarma; calentar la detección de las cámaras que detectan para los coches, los ciervos, el etc.

. - los sistemas concurrentes múltiples reducen las posibilidades del error, por lo tanto éste y otros sistemas pueden acompañar 1C-160 en circunstancias limitadas.

- futuro: los coches que viajan abajo de las carreteras, del etc sabrán si algo es inoportunamente si la representación visual es diferente: usos: recorrido común; mantenimiento de la calle que comprueba para saber si hay muestras que falta, luces, seguridad culpable que se atrinchera, etc

--uso para los automóviles en los caminos en el futuro para: automóviles a continuación, rocas en el camino...

--el sistema puede dirigirse en bosques, selvas, caminos de tierra, espacio, edificios, el etc. analiza cualquier visión desconocida pidiendo su "C" para comparar la visión extraña con toda su memoria, después el sistema sabe actuar por consiguiente

---el sistema puede moverse en territorio totalmente nuevo cuando su "cerebro" (computadora) puede actuar como un ser humano y saber responder a cada visión, eg.: sabe los diversos requisitos de movimiento para un charco de la calle del charco de un camino de tierra; o un cometa de otro objeto que vuela sabido; o hierba mojada corta, de la hierba seca alta; tipos suelo; etc.

- requiere memoria extensa de "C"

O-Si el analizador es inmóvil, se utiliza para analizar lo que ve y después actúan por consiguiente. ¡Muchos usos!

- Eg: identifica a gente mientras que ella entra, si no reconocen a la persona no puede entrar; los retenes hicieron incorrectamente los productos, piezas; búsquedas y artículos de los hallazgos; hace la fabricación pudiendo ver; etc.

SISTEMA ALERTER de la HOSPITALIDAD 1C-200:

Programar los sistemas de tv/cable/music del usuario para alarmar a usuario cuando: medir el tiempo del tiempo designado de los golpes; anillos del teléfono ("T"); persona en la puerta (el timbre se enciende)

- el producto que desarrollamos sería vendido como parte de un sistema más grande
- existe: producto de la hospitalidad cuyo volumen cae cuando el teléfono ("T") suena

Nota al pie de la página: pp; P.M.; fecha; hospitalidad; alerter; oscilador; vc; cuenta; UIP.

ACTIVADOR de la CRT 1C-280:

Se activa la pantalla de la TV cuando la persona se está colocando en frente y o está viniendo hacia la pantalla. La "c" puede/puede no permanecer encendido. Ahorra energía en los tiempos conscientes ecológicos.

- Las pantallas pueden estar para el hogar, terminales de exhibición públicos - eg.: horario del aeroplano
- los sistemas pueden apagarse si no hay cualquier persona allí durante 2-8 minutos
- reduce desgaste y el rasgón en la pantalla
- similar a la idea que la pantalla se encienda en el tacto de un botón
- el sensor que detecta la presencia de persona activa la pantalla vía: estándar - detectores de movimiento
- ap: consigue las atenciones de la gente cuando está girado, útil para las ventas...; personaliza la sensación de las computadoras para el público; las direcciones que dicen a gente donde está algo (algo substituyen la sensación personal del tener recepcionistas costosos)

O-puede poner en palabras la información; tiene función del reconocimiento de discurso que las guías "C".

- Para Techies: exhibición; "C"; pp; P.M.; Reino Unido; fecha; todos; "mic"; mfh; alerter; oscilador; vc; cuenta; teléfono ("T"); MES; fs; cp; cm; uq; mq; acceso; uip.

MEDICIÓN 1C-320 De la TEMPERATURA:

La taza del café/de té, vidrio cambia colores y o su exhibición demuestra la temperatura - toda de acuerdo con la temperatura del contenido.

- Bueno para los envases que sirven los alimentos para niños; los ancianos que pueden no desear arriesgar el quemar (especialmente el senil); esos invalids en hospital, el etc.

- No se aplica a las cucharas que miden temperatura: este producto fue investigado, resulta ya no claro.

- Para Techies: exhibición; portable; punto de ebullición; SP; cp.

ARCHIVO 1CI del EXTREMO

Archivo: UN B C/ICQ

ARCHIVO 1CQ:

ALARMA del ACTIVADOR 1C-060:

La unidad central activa deseó productos según la hora fijada por el usuario. El tiempo de la alarma es alterable sin el reajuste de las alarmas para estos productos.

. - eg: Despertar por mañana al producto electrónico, eg.: televisión que se enciende.

. - puede alarmar activan los productos individualmente o vía unidad central (esta unidad puede dejar al usuario selecto se desean qué artículos y en qué horas)

--los artículos pueden encenderse automáticamente o estar listos el cierto número de minutos después de la alarma usada para despertar a usuario

- los productos siguientes se pueden activar por consiguiente:

--microonda (artículo querido puesto en allí noche antes, despertando al desayuno caliente...); alistar al volver a casa

--el agua caliente de la bañera está lista en la temperatura deseada

--secador eléctrico (porque la ropa permanente, especialmente la prensa permanente necesita ser sacada enseguida cuando está terminada para reducir arrugas.) El ajuste aquí se puede activar para comenzar y final cualquier momento se espera que al usuario vuelva a casa (de compras, trabajar...).

--computadora: el sistema puede incluso tener el software y la impresora deseados para arriba y alistarlos.

- ap: los siguientes también se activan a su estado deseado: saunas

PARA TECHIES: alejado ("R"); exhibición ("S"); pp; P.M.; Reino Unido; fecha; todos; hospitalidad; oscilador; vc; cp

1C-050 y 1C-120 CALLAN la VECINDAD: Silencia animales ruidosos en vecindad vía las ondas acústicas inaudibles al oído humano. Los sonidos del dispositivo inducen a animales que dejen el área y o reduzcan sus emociones agresivas.

- Paz - silenciador animal: Callar abajo los perros, los gatos y los pájaros ruidosos en su jardín o vecindad.
- causar los organismos indeseados a llegado a ser más reservado y o dejar el área emitiendo las frecuencias del aire que hacen las callarse abajo y o licencia. Tales frecuencias se pueden diseñar para influenciar cualquier otro efecto posible, eg.:

--ser más relaxed, más o menos hambriento, más o menos sexual agresivo, morir o más largos vivos, mejoran salud...

¿- su vecino tiene un perro ruidoso, o usted desea reducir su ruidosidad? Emitir simplemente los sonidos que enseñan al perro a reducir su descortezamiento

+-dogs que raspa automáticamente da lugar a: 1] sistema que genera la respuesta saliente, puesto que su receptor oye el descortezamiento; o] el usuario 2 elige manualmente activar el sistema

- las emisiones pueden ser: los sonidos dentro y fuera de la gama de audiencia de un ser humano tal como descortezamiento de ciertas variedades y o de "C" generaron los sonidos de tonos/de las frecuencias monótonas, múltiples, de los etc que son desagradables para los animales.
- establecimiento científico de los datos de la necesidad: qué sonidos disuaden el perro que raspa y está "probablemente con buena razón" no un peligro a los animales domésticos, a los seres humanos o a las plantas comunes.
- los vecinos con sus perros ruidosos no necesitan saber el sistema son en funcionamiento
- del uso en laboratorios científicos también
- se aplica a cualquier otro organismo: animales (pájaros indeseados, gatos que luchan, etc), insectos (grillos - a menos que usted tiene gusto de su sonido), etc.
- el primer sistema emite sonidos para reducir su agresividad, si éste falla (el "mic" del sistema - > analizador de sonidos) determina si los ruidos han parado, y si no intenta el modo sano opcional siguiente: induce al animal que deje área. El tipo sonidos es automático o controlado por el usuario.

+ verbalmente dicha la tecnología existe, pero el uso pudo ser único.

. Para Techies: alejado ("R"); exhibición ("S") (tipo de las demostraciones de sonido por decibelios, etc); pp; P.M.; Reino Unido; fecha (expedientes cuando los sonidos se hacen, como evidencia de la policía, de cortes para quejarse por animal ruidoso); todos; "mic"; portable; punto de ebullición; alerter; oscilador; vc; cuenta; tgh (hace sonidos para ahogar hacia fuera el tipo de malì□n ruido); carro; cp; uq; uip.

1C-170 NOTIFICADOR - alarma video: Una representación visual y o de respuesta audible entra efecto cuando el anillo siguiente: la puerta, teléfono, alarma del reloj, contador de tiempo del alimento, partido va encima de la calzada de la vivienda.

1C-210 PANTALLA - CRT del holograma: para la televisión y o la representación gráfica de computadora, el etc.

- acompañar con música, eg. para el gráfico - vídeo musical

GENERADOR SALIENTE de SONIDOS 1C-230 - generador de la voz: Convertidos afinados en palabras a la voz. Y el versa de la visa, debe existir: palabras habladas en el texto.

- Registrar la voz de una persona que hace muchas sílabas. Entonces el sistema generará las oraciones deseadas basadas en los pedacitos de la voz de sílabas registradas.

--usando un vocabulario muy grande sobre de 20.000 palabras, el sistema puede tener cerca de discurso natural.

---el conocimiento del sistema de la gramática lo dejó generalmente saber donde están los acentos correctos en la oración, eg.: la conclusión de la oración en una pregunta se trata diferentemente.

- La voz de registro de amigos y o de otros, y el sistema pueden entonces alterar las voces en gran parte de modo que la voz de la persona registrada aparezca ser generado del discurso deseado

. - tal entrada de la voz puede necesitar ser hecho diferentemente según el nivel de tecnología deseado:

. --requieren al locutor indicar cualquier número de sílabas, "C" entonces genera sonidos por consiguiente

--la computadora estima el tipo de voz que recibe (según su software, que clasifica voces por el tipo y entonces el "tipo voz" es una vez resuelto, después puede sintetizar sonidos para resolver las diversas características de la voz del altavoz

- el usuario selecciona el tipo de la lengua, del acento o del otro patrón de discurso/estilo, de sexo o de tipo carácter (eg.: jefe, madre, vendedor...) deseado

O-traduce idiomas: mecanografiar adentro el texto en cualquier lengua, después señalarlo que el discurso de la lengua se deba hacer adentro

- sintetizador: el usuario sabe hablar en el texto deseado para outputted en la voz alterada

- Nota al pie de la página: exhibición ("S"); pp; P.M.; Reino Unido; fecha (cuando las grabaciones deben ser jugadas, longitud de época de grabaciones,...); interactivo; educ; juguete; todos; hospitalidad; "mic"; synth; portable; sst; impresora; mgh; punto de ebullición; oscilador; vc; carro (idiomas, música de fondo/sonidos)...; funciones con los dispositivos de las telecomunicaciones; fs; uq; mq (eg.: qué lengua); tener acceso (si el audio está para el lanzamiento público)

- ap: dispositivo que traduce portable (llave adentro y habla para usted); tutoring, dirigiendo, sistemas educacionales; conseguir la información audio sobre líneas del teléfono ("T"); ayuda para el sordo

. PATENTES: las palabras claves buscaron vía www.qpat de la palmadita 1977-1.97 de los E.E.U.U.:

- (la voz o el sonido o el discurso o hablan) y (convertido o translat) y (computadora o software o eléctrico) no extranjero

SINTETIZADOR de la CARICATURA 1C-240:

Incorporar la imagen visual del carácter (ser humano, historieta, etc) y entonces ordenar/modificar la imagen para requisitos particulares al acto según deseos: la sonrisa, risa, caminata, salto, guiña el ojo.
- programa en el texto que se hablará y fregaderos del labio del carácter entonces (los labios se mueven en el movimiento de los sonidos para cualquier lengua sabida [o inventó lengua]). ¡Ahorra cantidades enormes de tiempo y de problemas!
- también se aplica a los animales, caricaturas de la historieta, cualquier otro gráfico
- aplicaciones numerosas: personajes de dibujos animados pronunciar discursos en el disco; utilizando las personalidades famosas para las cuales han consentido los derechos reservados de sus imágenes que se utilizarán cualesquiera propósitos, especialmente considerando pueden estar demasiado ocupados hacer todo personalmente, eg.: tienen un lema estándar e insertan el nombre/la dirección de la localización particular de la dirección de un almacén importante particular

SEGURIDAD MODIFICADA para requisitos particulares 1C-260: ("R") interruptor de seguridad alejado del control: La maquinaria peligrosa es desactivada por un observador distante, si algo es incorrecta. El analizador anota los niveles de la seguridad basados encendido: sensor, analizador del comportamiento, y boquete en el conocimiento requerido para utilizar el sistema con a lo que ha enseñado la guía usuario.
- si el usuario utiliza un dispositivo y hay un peligro evidente de el cual el usuario los mayo o mayo no saber, el observador distanciado puede apagar la maquinaria y o enviar cualquier otro tipo de señal al usuario de ser consciente del peligro y o de necesitar divertir su atención a una cierta otra materia que no sea peligrosa
--alertar a usuario se puede hacer vía: el apagar o rechazo (reducción/retraso/etc) de la máquina del usuario
--el chasquear de luces en sitio; una señal sonora en la máquina; luz que destella en la máquina; etc
Ap: trabajo con electricidad; trabajo con los animales peligrosos; corte de árboles grandes y de otros dispositivos del corte y de la perforación; usar la otra maquinaria peligrosa; etc
- cuando el sistema se ha utilizado más allá de la hora máxima para el usuario particular, el sistema advierte el usuario u otro partido para que ese miembro pare el usar del dispositivo
- Notas al pie de la página: alejado ("R"); exhibición ("S"); "C"; pp; P.M.; Reino Unido; fecha; todos; "mic"; punto de ebullición; alerter; vc; cuenta; cm; uq; uip.

EXTREMO Del ARCHIVO 1CQ
Archivo: Un B C/3CE
ARCHIVO: 3CE

+ contadores de tiempo automatizados del cocinero 3C141: <4> <2#, 2#>
El sistema analiza cuando los alimentos se cocinan completamente al nivel deseado. Llaves del usuario en el tipo alimento, y tamaño (eg.: carne asada gruesa de los 5cm), y deseado llano de cocinar (eg.: pozo - hecho). El

termómetro colocado en alimento debe alcanzar temperatura mínima/máxima sobre cierta duración, en golondrina de mar que el alimento se juzga listo, el usuario notificado por la alarma o el paginador. El calor puede [automáticamente] ser reducido para calentarse cuando el alimento está listo. Paginan el cocinero cuando el alimento está listo. Es ideal para las aves de corral y los platos grandes.

- el horno puede refrescarse abajo algo si el termómetro pasa por encima temperatura deseada. Utilizar uno o más termómetros con este fin. el sistema (sistema) "analiza" la mejor temperatura para el alimento a través del curso del ciclo de cocinar, eg.: el calor pudo ser más alto en el principio (trampa en jugos de la carne). sistema (temperatura del horno de la banda)/u (usuario) del sistema (w w5) (y qué temp en la cual tiempo en ciclo).

- Telecontrol que cocina el "analizador":

- (versión "alejada") cuando la porción interior de alimento ha cocinado hasta el nivel requerido

- Métodos:

+ un termómetro insertado en el centro del alimento, significa cuando el alimento se cocina completamente

- Patentabilidad. Existe: el plástico hace estallar fuera del pollo, usuario después sabe que el pollo está listo. La porción del paginador aparece patentable, así como "analizar" y los modos "interactivos" [que alteran las temperaturas para la situación automáticamente].

- el horno cambia temperatura en las horas ideales, eg.: cocinar el pollo en una temperatura más alta en el principio es cierto método. Eg.: u (usuario) banda = C (computadora) del `(tipo alimento, tamaño, receta, etc de k) = cuenta (contador de tiempo, tds) = notificador.

. - Cada alimento, eg.: cocineros del pollo diverso debido a: volumen de pollo (más grande dura para conseguir caliente)

- "Nr": La señal se envía a una alarma cerca de la estufa, o al usuario con su receptor inmóvil o portable, y o el dispositivo de cocinar alarma o hace el aviso o el código de las señales sonoras para el estado.

. - programar el transmisor para alarmar después de que su temperatura haya estado sobre cierta temperatura mínima más allá de cierto plazo. Si el alimento/horno consigue más caliente que el mínimo, después el plazo antes de que se reduzca el alarmar. Puede conseguir un más caliente debido a: cambio de la temperatura por u (impaciente); horno que funciona incorrectamente.

. --la programación pudo ser hecha colocando el transmisor en: un dispositivo más grande con su teclado, "S", etc. D (dibujo): u=k=c (analizador, s, interruptor (software) (menú de las opciones del alimento, opciones del tamaño del alimento, cómo el alimento quiso cocinado, etc)) = TR (transmisor) (transmisor) ()/regulador de temperatura (del alambre/de la radio del horno) = termómetro (temperatura del tr (alimento del interior) a c)/calentador (del horno) (EL, gas)

+ también: hacer estallar hacia fuera el artículo pudo ser disponible y cuando hace estallar, hace un sonido particular que active la alarma. Permite que el fabricante inserte tales poppers baratos, no electrónicos. D (dibujo): sonido o señal que hace estallar/otro que crea el dispositivo = el sensor (mic) = analizador = C (computadora del `) = pager/nr.

. --los consumidores pudieron conseguir la alarma libre después de que la "compra de ahorro selle" en el 2582 paquete de cada artículo. Los trabajos del dispositivo que hacen estallar con o sin (el usuario ve la cosa hecha estallar hacia fuera...) alarma.

- el calor puede ser apagado automáticamente o ser reducido (mantener el alimento caliente) cuando el alimento está listo.

. Para Techies: "R"; "S"; pp; P.M.; fecha; tds; todos; "mic" (para el tipo sonidos que identifica el progreso del alimento); "M"; alerter; oscilador; vc; cuenta; cm; uq; mq.

- D: contador de tiempo de cocinar automático 3C141 =

ACCESO (evita que los cabritos usen el sistema)/CÁMARA (jueces visuales del analizador cuando el alimento está listo)/CARRO (interruptor para el tipo alimentos)/PALMADA (el horno de la vuelta con./desc. o altera temperatura)/FECHA (el contador de tiempo controla cocinar el ciclo)/s (pantalla) ()/EDUC (enseña a cómo cocinar/sistema del uso; q)/K ()/M (base de datos de la receta del alimento)/MIC ()/MES (girar el horno de la posición remota, vía c) MQ (usuario de los avisos si el req del u aparece impar/impráctico)/MULTIUSOS (memoriza uip de cada u (sus gustos de cocinar, eg.: la persona #5 tiene gusto del pollo cocinado más de largo que la persona #82). Acceso determinan diferencia entre U.)/NOTIFICADOR (tiempo a cocinar partida/parada)/OSCILADOR ()/banda ()/Q ()/R (`teledirigido) ()/CUENTA (alimentos del pasado comidos (para los propósitos de dieta))/SENSOR (termómetro)/ANALIZADOR de SONIDOS (los sonidos de cocinar el alimento (ayudas) determinan cuando está listo, eg.: mayor salpicando de aceite por 175% demuestra su listo)/DISCURSO ()/ESTADO (hasta dónde alimento de listo; qué está sucediendo (w5 del alimento); información alimenticia (y cómo cambia a través de cocinar el ciclo))/TDS ()/T (llamadas u cuando) listo/UIP (carro) del alimento.

- D: calor cambiante del alimento - > termómetro - > sensor = analizador = tr/rc = C (computadora) del `(interruptor, uip) = s/pager/osc/[mecanismo controller->heating] del calor /r/k/ MES m

- Otras cosas que necesitan el nr cuando están listos: los productos químicos han cambiado como señalado (del experimento), cualquier otra condición requerida han sido envase interior resuelto según lo medido por ""/"del sensor analizador".

- str de la palmadita: (cocinero u horno) y (analy o alarma).

-5341728 patente de los E.E.U.U.

. - qué cocinaron, y bajo qué circunstancias:

cualquie tipo de: carne, cazuela, etc; cocinero vía modo lento [comienza automáticamente anterior [mientras que u está en el trabajo]] para cocinar de la baja temperatura; si u no vuelve el sistema del home= (sistema) ajusta el alimento automáticamente cuando: 1] alimento se cocina bastantes; 2] u no volvieron 30 minutos antes de que su listo y [u programado] cocinar cambiados al modo de la baja temperatura puesto que u (usuario) no quiere el alimento listo cambiado al modo caliente para mantener el alimento caliente.

+ ver "para reaccionar": el sistema responde y "obra recíprocamente" con un arsenal diverso de acontecimientos según lo programado.

. PATENTES: las palabras claves buscaron vía www.qpat. Palmadita 1977-1.97 de los E.E.U.U.:

- los tirones demasiadas patentes a menos que estén enangostados por el año de patentes buscan.
(alimento o carne) y (cocinero u horno) y (páginas o paginación o estudio o estudios o analyz)

la fantasía del agua 3C400 juega el ™: + <3or4, 4, 2>

Los niños pueden desnatar la invención a lo largo de la superficie del agua de la piscina. El agua es forzada a través de los tubos de la invención, y aplasta en el aire. Encajar a presión la invención hacia una diversa forma y crear las nuevas formas del agua.

. Los sonidos interesantes se activan según la forma actual y la intensidad de la invención del agua que aplastan a través de sus tubos. Cada sensor del agua tapa adentro el módulo crea sus propios sonidos. Manera de la diversión para que niños aprendan cómo pueden controlar los elementos de su ambiente.

. Extensiones necesarias para incluir:

- Utilizar la fuerza del agua de la invención para accionar los adminículos a base de agua. ¡Una fuente energética alterna para los juguetes, más.!

- Las formas del agua crearon: el paraguas tiene gusto de la fuente; burbujas de aire en el agua. Usos: juguetes de giro; la fuerza del agua difunde el alimento de pescados u otros elementos en el aire, o debajo del agua; ¡más.!

los dispositivos de +-Protection contra los cabritos que mandan el agua demasiado lejos, como ella pueden aterrizar en gente u objetos secos.

+-Attach a cualquie dispositivo o vehículo móvil del agua, eg.: tablero de resaca, barco de vela, o a la parte posterior de un snorkeler.

. Cuando las corrientes o los movimientos, hacen sonidos interesantes debido a la forma de los túneles de agua o los micrófonos y los sintetizadores. Método para arrojar a chorros el agua sin usar el disparador de la mano, juntado con el sintetizador posible que emite sonidos según cómo se está arrojando a chorros el agua.

- El micrófono (necesario si los deseos de u (usuario)) a coger en salpicar el agua, en golondrina de mar sintetiza los sonidos y las difusiones más ruidosamente que salpicar real.

. Otros métodos para generar sonidos del agua:

-/agua que soplan vía el dispositivo para producir burbujas.

--los dispositivos incluyen: paja; agujero; el otro (agua/viento) instrumento musical jugó con agua; instalado tubos en agua o aire (bajo alta presión), eg.: de la manguera del agua de la casa o de la bomba de aire común.

. - insertar y mezclarse con el agua que atraviesa el dispositivo: colorear los dados; aire (burbujas); calentador de agua...

. - Cuando en baño, la mujer creativa puede salpicar un poco, y ésta hace sonidos encantados interesantes.... más interesante y divinamente que un baño de burbuja

- los sonidos también se hacen según cómo se generan los sonidos mientras que toman la ducha; agua corriente; fuente de agua (en jardín, fuente de consumición); arroyos (próximos).

. - también "synth"/sonidos de las máscaras (kn Soundbuster/ruido que cancela los dispositivos) de: naturaleza (pájaros); sonidos del fastidio (perros, tráfico, contaminación sana de interior (refrigerador, voces), la mayoría del todo lo demás banda (por u/mf)

- D: fantasías del agua 3C400 =

BALANCEADOR ()/BVA (para la caracterización: el sistema (sistema) identifica vía tipo del analizador de sonidos de fuente sana, eg.: pájaro)/C ()/CARRO (cómo sonido alterado/synth/uip)/COMPOSICIÓN ()/LOCALIZADOR (el synth en efecto solamente donde u va/viaja vivienda de w/in)/M (analizador de sonidos)/MIC ()/MQ ()/MULTIUSOS (el sistema juzga identidad de u (usuario) vía los sensores: peso corporal (en baño) y o: tienen acceso, agua temp seleccionado, hora sistema utilizado)/NOTIFICADOR ()/OSCILADOR ()/banda ()/Q ()/R (`teledirigido) ()/CUENTA ()/SENSOR ()/SONIDO ANALIZADOR ()/DISCURSO ()/ESTEREOFONIA ()/SYNTH ()/TDS ()/UIP ()/VR ()/WA ().

. PATENTES: las palabras claves buscaron en www.qpat. Los E.E.U.U. abstraen 1977-1.97:

- agua y (el sonido u oye o escucha o audi) y (arrojar a chorros o kim o empujar o arrastrar o forzar o el forzar o juguete)

. agua Squirter del ejercicio 9G100: Plástico plano que es desnatado a través del aire de las fuerzas superficiales del agua en el aire vía los pequeños agujeros. Mayores resultados del ejercicio en un flujo más agua-aire. <3, (1.5-pat, 3 mk), versión simple de 1.5 pat>

- plástico de la onda a través de la superficie del agua - > los apretones de la presión de agua entonces arrojan a chorros a través el agua lejos - > vía embudo. Mayor es la presión de agua (velocidad más el dispositivo de la profundidad está debajo de superficie del agua) que más lejos el agua arroja a chorros lejos.

¿- técnico viable?

--D: agua < - un extremo más pequeño del extremo abierto del agujero del embudo móvil = del agujero del embudo - > agua que arroja a chorros hacia fuera. Barato para producir.

- la pieza estrecha del embudo se puede mover/atar al tubo movible - > el agua arroja a chorros en direcciones de diferenciación.

- Para Techies: las ayudas para que el dispositivo sea cierto nivel de profundidad debajo de la superficie para maximizar la cantidad de agua arrojaron a chorros por la unidad de energía usada para empujar el dispositivo. N (invención) es pedazos del "juego": jugado entre los jugadores humanos. +Attach a los juguetes de los deportes de agua. Esta N (invención) puede ser juguete: barco, mano, pies, aletas, tabla hawaiana, paleta, rueda de agua.

JOYERÍA SOLAR 3C420: <2, 3, 2, $> calienta para arriba en el invierno vía energía solar. Más interesante para los adolescentes que la joyería estándar.

+ los costes de fabricación demasiado arriba para el mercado del precio llevarían.

- calienta para arriba en invierno y las ayudas guardan le, los oídos, el etc se calientan. El panel en la joyería, la ropa, la joyería del etc. pudo incluso almacenar energía y hacer los sonidos, música previa, actuar como instrumento musical.

¿- La versión de la microonda calienta para arriba también, patentable?

- el artículo fue combinado con 4A280
- Activado por la combinación de aire exterior ligero y frío
- el nivel real del calor no pudo ser demasiado grande, sino es no interesante menos; no requiere las baterías
- es fresco en verano
- el cambio de temperatura es activado por el contacto con el producto químico u otras características corporales de la piel humana
- aplicable a otros artículos usados por los usuarios: zapatos, sombreros; (pantalones, camisas, chaquetas, algo usada sobre cuello, eg.: mecanografiar la bufanda...)
- probablemente salidas: aparatos de la calefacción con pilas para la ropa.

. Para Techies: fecha; todos; ejercicio (subsistencias usted refrigerador); portable; punto de ebullición; SP; carro.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1977-1.97 www.qpat:

- (energía solar del ajuste) y (joyería o paño o sombrero o chaqueta) y (el calor o se calienta)

ARCHIVO 3CE del EXTREMO

Archivo: Un B C/3CI

ARCHIVO: 3CI

PRODUCTOS DE LA CHAPALETA: Los puntos siguientes iniciales a desactivar y o a activar según conceptos dentro de invenciones asociadas incluyendo ésos en el archivo 2-A que funcionan aplaudiendo. Ver la chapaleta ofrecer también. Cuando se aplauden las manos las acciones siguientes pueden ocurrir. "Chapaleta" = "R" (dispositivo teledirigido). Sonido - > analizador de sonidos - > reacción - > la función accionó.

. llamadas entrantes/salientes del teléfono del altavoz 3C-010 (; marca (ciertas palmadas señalan dígitos del número de "T")

. puertas 3C-020: abrirse y cerrarse físicamente; sus cerraduras

. Identificación C-030: cada persona que camina compra hace su código verbal y el sistema de "C" registra quién era. Aplicaciones: localiza donde la gente pudo estar... Movido a la "pista"

. 3C-040 abre la puerta del animal doméstico para el perro o el gato que busca in/out to/from jardín. O el sistema pudo responder simplemente a la corteza del animal o meow o rasguñar o empujar. El sistema no pudo también permitir la operación en ciertas horas...

. 3C-050 giran la ducha o el baño. El sistema sabe ya en qué temperatura usted quiere su agua aplaudiendo.

- pre-seleccion la temperatura del agua deseada no es patentable por sí mismo

. 3C-060 que gira la televisión, VCR, estereofonia de la música aplaudiendo

OTRAS IDEAS (algunos abajo pueden utilizar la "chapaleta"):

BATERÍAS SOLARES 3C-080:

Dejar el dispositivo hacia fuera en el sol, y carga automáticamente para arriba vía energía solar. O la fuente de energía tiene células solares grandes y almacena la energía que en golondrina de mar se puede dar a los productos portables cuando ella está conectada por el tiempo requerido (como tapar en electricidad); o el dispositivo portable se debe tapar en este dispositivo solar y después los dispositivos recogerán la energía del sol y la transmitirán al producto portable simultáneamente.

- baterías ellos mismos cuando está ido en recarga del sol ellos mismos sin la necesidad de cualquie dispositivo de recarga - todo es un producto. Considerar sobre la calefacción en el sol también. Esto pudo ser bueno, incluso si lleva una semana o más la recarga.

. --simplifica las cosas para el usuario si tienen muchas tales baterías. Tales baterías pudieron caber solamente ciertos productos debido a la forma infrecuente. Grande para los productos ecológicos también.

- OTD: "S" (las demostraciones nivelan de carga en batería); juguete; portable; SP; cm.

ACTIVADOR TELEDIRIGIDO de los SONIDOS del JUGUETE AL AZAR 3C-100:

El control de "R" activa el siguiente:

+ el botón cuando está presionado causará la pista del tren que cruza para sonar a continuación, y cercano la puerta, luces de la pista del tren del flash; luces del tren de destello... Diversos sonidos y o las acciones ocurren (cuando se presiona R (`teledirigido)).

- el transmisor puede también causar el siguiente en el dispositivo del receptor en un arsenal diverso de juguetes:

luces que destellan; "s visual" que demuestra palabras o gráficos; movimiento físico, eg.: abriéndose/puerta de cierre, bola que cae para solar, etc

- el transmisor puede transmitir presionando del botón, o siempre que se mueva (interior tiene un detector de movimiento)

COJÍN de TACTO del TELÉFONO 3C-120:

Presionar el cojín suave y la manera de la cual usted la presionó se transmite al receptor. Esto permite algo más cercano a contacto físico mientras que habla con sus amigos. Solamente popular para las culturas razonables

- el tacto superficial de las manos se diseña para maximizar placer humano, y reduce cualquier sensación de la humedad.

- si la otra persona presiona, usted puede presionar en el mismo punto también. Esta tensión agradable permite que el más fuerte de las dos personas fuerce detrás a la otra persona - apenas como dos manos que juegan junta.

- Nota al pie de la página: P.M.; todos; juguete; ejercicio; cr y cp; "T".

FABRICANTE de CAFÉ MÓVIL 3C-150:

Hacer el café en coche mientras que conduce. Los conductores aman el café caliente. Dispositivo de seguridad pudo tener en cuenta solamente el abrirse mientras que:

el usuario ha parado el coche, o si el coche tiene más de un pasajero.

- puede enviar el líquido a los labios vía el tubo también para los líquidos frescos o calientes
- el líquido se puede dispensar en el dispositivo, que es casi prueba del derramamiento mientras que el envase está en sostenido en el lugar recepción del líquido caliente. Cuando se saca este envase, es algo prueba del derramamiento usando una tapa especial.
- el café está listo en cierto tiempo cada mañana así que el usuario lo consigue mientras que entran en el coche del frío. TDS.

FABRICANTES MÓVILES de la CITA 3C-160:

Los vendedores que viajan siempre en el camino pueden conseguir su calendario de cita llenado más fácilmente vía el método siguiente. Las negociaciones de la secretaria con el cliente y pueden concertar rápidamente las mismas citas del día (gran servicio de atención al cliente) comunicando con el dispositivo del representante de ventas (vía ondas de aire). Los dispositivos del vendedor almacenan su horario y tiempo aproximado necesarios en la cita y a y desde las localizaciones.

- si el vendedor necesita hacer algo diferente, piden su dispositivo si su horario permite. El dispositivo es razonable en la asignación del tiempo necesario. El dispositivo funciona mejor para ciertos tipos de gente de las ventas, especialmente las cuya hora necesaria para cada cita sea algo fiable. Recordar, allí es menos caos en el oeste, y la gente espera mucho menos en línea, el etc....
- también ahorra el tiempo del recepcionista requerido y del hombre que viaja en "T", tratando del recepcionista que está ocupado con otra llamada...

Características adicionales - objeto de valor para las aplicaciones empresariales limitadas:

- las llaves del hombre que viajaban en uno de los puntos siguientes necesitaron por el cliente: cantidades para las fuentes específicas; una diversa persona a salir y visita; etc

--este Info es almacenado por el dispositivo, después automáticamente transmitida la persona cada vez que viaja conecta en alrededor su horario

- el hombre que viaja pone el dispositivo en el zócalo de su coche que maneja automáticamente la comunicación con "C central". No requiere ninguna operación adicional
- tiene impresión fuera de citas, con direcciones, "T" numera, y quizá incluso un mapa del área, o de la página en el libro común del mapa del área, con los números coordinados dentro de la página (eg.:) Facilitación mencionada B-4 localizando la localización
- la secretaria puede notificar siempre (la señal sonora...) el hombre que viaja para llamarla
- hombres que viajan en el tipo de negocio que hace difícil saber exactamente cuánto tiempo tomará, puede afinar en su tiempo previsto de la terminación, y tiene horario que sean solamente uno o dos citas delante de la cita actual

Ap:

- Robaron a los mecánicos del cliente de la entrega del periódico que entregan los papeles a los hogares que faltaron su de papel (de puerta exterior, del etc)

- Reparar a hombres; los que llenan las máquinas para arriba expendedoras cuando se dicen la funcionaron de fuentes; los que tienen que entregar simplemente un artículo simple ellos mantienen almacenado en su carro; etc

OTD: "R"; "S"; c; pp; P.M.; Reino Unido; ratón; fecha; tds; "mic"; portable; sst; au; "M"; punto de ebullición; alerter; oscilador; vc; cuenta; tgh; carro; "T"; SP "T"; tr; MES; fs; RPC; cp; uq; mq; acceso (prevenir piratas informáticos de "C", el etc); uip; carácter. Modificado para requisitos particulares.

SONIDOS del COLOR de la CURIOSIDAD 3C-170:

Sonidos de los convertidos a las visiones: ¿otro número del producto?

- Acordando a los sonidos uno oye de la TV, de la estereofonia, del etc que los colores en la pantalla especial alterarán. Las formas diversas se pueden también crear con este producto, según el tipo sonidos.

- Los gráficos creados pueden también ser mantenidos memoria, y ser impresos más adelante en la impresora

REPRESENTACIONES VISUALES 3C-190 CONVERTIDAS A los SONIDOS: El sistema lee claves de barras y hace sonidos deseados. Ver las invenciones relacionadas y la partición vieja.

Una de mis viejas ideas (bajo claves o música de barras)

Puede también leer, algo como las 2.as superficies de una lectura del jugador de registro

CHAPALETAS de la PRÓTESIS de OÍDO 3C-240:

Conseguir la atención de una vieja persona apenas aplaudiendo sus manos. Necesitar no más tocarlas para conseguir su atención. La prótesis de oído entonces enviará la señal ruidosa al usuario. Relacionado con el diseño de producto 2B-12, sino el mecanismo de la chapaleta no fue establecido todavía cuando fue lanzado.

JUGUETE de la REALIDAD VIRTUAL 3C-250: (Distancer)

La pluma transmite cómo se está moviendo. Los altavoces del receptor separado transmiten sonidos según cómo la pluma fue movida.

- Controles del usuario cómo el receptor sintetiza las señales de la pluma. - Eg: un movimiento puede sonar como muchas campanas, o sonar como la pluma se está moviendo en arena, el etc.

. Otro: Grande para los cabritos. Aplicable a cualquie dispositivo (con o sin la pluma), eg.: palillo, bola, cubo, muñeca, coche del juguete, aeroplano del juguete... Relacionado con 3A-790

DIVERSIÓN del TECLADO 3C-260:

Como uno mecanografía en el teclado, usuario oye los sonidos para cada llave. El usuario selecciona el tipo sonidos, y cuando desean oír esta función.

- definitivamente un KN más viejo.

REGULADORES de la ETAPA del TEATRO 3C-280: (Chapaleta)

Aplaudiendo y o silbando, los agentes pueden hacer ciertas funciones suceder automáticamente, eg.: dibujo de cortinas; causar otros sonidos (lluvia, conduciendo para arriba del coche; anillo del teléfono; etc). Reduce el número de gente necesaria para efectuar un juego. Puede incluso ser hecho del hogar para la cámara de vídeo (una persona es necesaria para esto ya).

(Controlar luces está vía otro número del diseño).

GENERADORES del CONTACTO 3C-293:

Cuando el artículo entra en el contacto con, o pierde el contacto con la base, se genera el sonido.

- Usos: Cuando el aeroplano del juguete saca del aeropuerto (base) los sonidos del aeroplano, puede también tener diverso sonido mientras que está funcionando en tira de la tierra. Cuando la muñeca toca el correo del perro de juguete, el perro raspa o mueve la cola

3C-300 JUGUETE del CLIP DE PAPEL CHIRPER: Cuando los papeles se encajan a presión adentro o hacia fuera, hace un chirrido amistoso. Formar de la seguridad [que aseguraba fueron insertados en una carpeta/una carpeta/un chisme correctamente. RFID o los sensores en el papel/el rotura señalan. Cada componente electrónico - uno en la hoja el otro en el elemento obligatorio pudo encajarse a presión/cerradura hacia uno a, o esté dentro de la distancia requerida.

PERILLA de PUERTA de la FANTASÍA 3C-320: Mientras que se da vuelta, sus colores cambian en dos o más colores.

- En un color cuando se abre la puerta, en otro cuando está cerrado.
- el color en perilla cambia, y o en obscuridad la perilla demuestra una poca luz, y puede enviar la luz en el cuarto también

CABEZA del DISEÑADOR 3C-330 O AFEITADO CREATIVO: El afeitado diseña sobre la cabeza según formas deseadas. Hombres afroamericanos populares que usan el pelo muy corto.

- El capítulo se lleva a cabo contra la cabeza, después la máquina de afeitar se permite mover maneras laterales en cualquier dirección para las cuales se programe cortar el pelo para crear la forma deseada. El usuario decide cómo difícilmente empujar la máquina de afeitar en (protege la piel contra daño)
- el marco ajusta a la forma de la cabeza, y se mueve sobre el cuero cabelludo si el diseño necesita estar en más de una área general
- la función programada deja a usuario elegir una diversa forma que sería complicada también manualmente.

- acordando (los negros) a los gustos de compra afroamericanos solamente, esto debe esperanzadamente demostrar ser absolutamente popular. Cerca de las posibilidades cero de la comerciabilidad de otros mercados, excepto quizá: punkies y esa clase de gente.
- debe ser diseñado para ser tan seguro utilizar como máquina de afeitar eléctrica estándar
- el diseño se crea cerca: 1. seleccionando el diseño preprogramado en la memoria; 2. los diseños existentes de combinación con los propios del usuario crearon diseños; 3. el usuario crea propios diseños con el ratón.

PERSEGUIDOR 3C-340: Cada vez que una persona entra en un cuarto, el sistema sabe y envía la señal. Eg.: el usuario camina a través de una luz laser. ¿Obvio?

el asiento 3C-350 en el cual el jugador juega vibra según el tipo de actividad en la escena de la acción del juego.

- Puede también inclinar: cuando el usuario está siendo un conductor en un coche y da vuelta a una esquina; etc.

PRODUCTOS de la EMISIÓN del OLOR 3C-360:

+ diseñado crear sensaciones positivas en gente.

La cantidad real de olor es tan leve que puede ser que no sea consciente sensible, aunque ella influencia a la persona inconsciente.

- El olor viene de descarga electrónica, eg.: calentando un producto químico y dejándolo salir; un pequeño ventilador sopla hacia fuera una poco de la sustancia almacenada a la vez; una puerta de trampa se abre en ciertos momentos que dejan hacia fuera el olor (sin la necesidad de la quema o del pequeño ventilador)

Usos:

- al saludar a un cliente que incorpora o que sale el almacén, la oficina, el etc.
- cuando se presiona la estera de puerta o la campana de puerta
- cuando la caja registradora se suena para arriba

se abren los alimentos de +-when: la sensación real de un alimento es la combinación de olor y de gusto. Productos de la muestra: líquidos conservados, en botella; tarros que sostienen los alimentos; packagings secados del alimento; empaquetado de la bolsa de plástico que emite el olor cuando se abren ciertas costuras. ¿Otro producto #?

--la fuente del olor es no-carcinógena

--las muestras de fuentes posibles del olor son necesarias para la especificación pedida. Hablar con un químico.

TELÉFONO del OLOR 3C-370:

Cuando el jefe habla con sus subordinados, quisieran que la gente estuviera en un estado de ánimo de atención, la emisión del etc. de ciertos olores cuando el discurso en ciertas situaciones puede ser deseado.

- El sistema puede el mejor trabajo dentro de una red especial de "T".
- Usos para los tipos de olores que son emitidos cuando la gente está hablando en las situaciones siguientes, con: clientes; contabilidad; surtidores; la mamá llama a hijo mientras que ella todavía está en el trabajo; etc. Diversos comportamientos se requieren para cada situación.

OLOR del TACTO 3C-380:
Presionando un botón, usted puede elegir se desea qué olor. La longitud de programas del usuario o de máquina del olor del tiempo se emite. ¿Obvio?

REGULADORES del SEMÁFORO 3C-390:
De acuerdo con el volumen de tráfico que va cada manera, el mecanismo del control de tráfico decide a cuánto hora de la luz verde darán para cada dirección del tráfico.
O-Combinado con no siguiente: cambiador de la luz de calle de la emergencia 8B-120: las ambulancias y los coches policía pueden cambiar luces próximas para adaptarse a sus propósitos.

El dispositivo se diseña para trabajar bien delante de tiempo. Esta manera, hay una ocasión para el modo necesario de la luz ámbar, que entonces cambia al rojo (que bloquea el tráfico que pararía el tipo el automóvil de la ambulancia)
- Usos adicionales: para los coches importantes del gobierno. En casos raros la ventaja siguiente de la fuerza también: colección de basura; limpieza de la calle.

¿- Existe?
Las luces de la O-Calle están cambiando su color en el medio de la noche en que un coche está dirigiendo en la dirección de la luz - especialmente aplicable donde hay ninguì□n apaga los caminos, aunque da vuelta apagado a luces del camino podría también ahorrar la gasolina con este sistema.
- OTD: "C"; pp; P.M.; Reino Unido; fecha; todos; mfh; alerter; oscilador; cuenta; acceso (hacer alteraciones en la programación); "mic".

SISTEMA AUDIO DISFRAZADO 3C-430 del COCHE: hecho para no mirar como cuál es, tan menos probable ser robado. (Los ladrones no ven que hay un sistema de la música en el coche.)

CORRELADOR del FLUJO de la ENTRADA DOMINANTE 3C-470: El software hace música/sonidos según el flujo de letras que son afinadas adentro. Si hay cierto nivel de tensión, la carencia de la creatividad "C" nota y hace sonidos para realzar comportamiento positivo/el pensamiento. "C" pudo también sonar guardar a mecanógrafos el mecanografiar bien, incurriendo en pocas equivocaciones - los sonidos simples o rectos (mono frecuencias) esa subsistencia el claro de la mente del alboroto que causa errores).

ORQUESTA del JUGUETE 3C-480:

Dispositivos plásticos formados como instrumentos musicales. Transmite sonidos a la estereofonia cuando está activado. Crear a orquesta.

- este sistema permite: necesidad del cambio frecuente de la batería; control de volumen eficaz de los sonidos; muchos pequeños pedazos a jugar con; deja a cabritos primero comenzar a jugar con las piezas y descubren más adelante que pueden generar sonidos audios cuando son activados por el padre; menos restrictivo en la fijación de los instrumentos grandes; dar los instrumentos a las muñecas
- el padre o el fabricante limita el volumen máximo de sonidos sin el miedo del niño joven que hace el sonido demasiado ruidoso

Usos:

- el niño presenta muchos instrumentos en piso, y sobre el tacto o presionar de su botón (uno de uno o uno de muchos botones) crea algo como una orquesta de sonidos
- los cabritos dejaron sus muñecas jugar con los instrumentos; los cabritos saben jugar a menudo la música junta a través de sus muñecas
- Usos adicionales:

+ los diversos instrumentos musicales de "R" alrededor del cuarto se activan cuando el dispositivo de control central de "R" los activa. Estar en un cuarto de diversos instrumentos musicales.

+ activar los artículos para moverse (más fácil si dentro de la posición inmóvil) así como sonido: animales, muñecas....

OTD: "R"; "S"; "C"; pp; P.M.; Reino Unido; fecha; interactivo; educ; juguete; todos; "mic"; portable; "M"; punto de ebullición; SP; oscilador; vc; egh; cuenta; tgh; md; carro; cp; uip; carácter; distancer; receptor acústico del movimiento; flotador; cc; inclinación; composición.

ACTIVADOR del SONIDO del JUGUETE 3C-481: El transmisor de la onda del juguete activa los sonidos de otros juguetes. Ejemplos: La leña del arma del juguete causa el fuego enemigo; la granada que lanza activa sonidos estereofónicos.

- Similar a un KN más viejo: el juguete activa sonidos de diferenciación según la localización del juguete. Picosegundo-Zona.
- El arma del juguete cuando está presionado hace su propio sonido, pero por otra parte da lugar a: sonido de otros armas en las localizaciones de la distancia (de altavoz de "R"); el sonido de las personas que son golpeadas por el fuego del arma; sonidos del vidrio, del etc siendo destruido.
- sensor" de la granada del juguete el "transmite la señal cuando golpea la tierra (sensor de la vibración o de movimiento), o el niño puede presionar el contador de tiempo antes de lanzar que entonces active el sonido de la estereofonia alejada.

OTD: "R"; "S"; "C"; pp; P.M.; Reino Unido; fecha; interactivo; educ; juguete; todos; "mic"; portable; "M"; punto de ebullición; SP; oscilador; vc; egh; cuenta; tgh; md; carro; cp; uip; carácter; distancer; receptor acústico del movimiento; flotador; cc; inclinación; composición.

ABRELATAS MÚLTIPLE de la PUERTA del GARAGE 3C-520: Si la puerta del garage que usted intenta entrar tiene un coche, después otra puerta se abre para usted. Piezas: Tener acceso, multiusos, los sensores (para la presencia de coche en garage).

+ SISTEMA de RADIOBÚSQUEDA PERSONALIZADO 3C-540:

Los altavoces que difunden para la persona deseada se activan solamente si están cerca de la blanco deseada. Blanco deseada: en hospitales los equipos de gente están cerca de los ciertas carros, máquinas u otra móviles los vehículos del uso del interior; transmisor usado por la persona (en este caso hay ciertas razones por las que el beeper estándar no se utiliza para conseguirlos, ellos es doctor y no puede quizá esterilizar sus manos tocando el beeper); autobuses de la compañía.

- ap: si usted necesita solamente a una persona en el grupo; su no rentable o incómodo para que cada uno use un beeper puesto que el sistema se pudo activar por usuario demasiado infrecuentemente; la persona olvida/pierde a menudo su beeper
- teléfono: cuando suena para la persona, suena solamente en área donde están. El concepto de un anillo especial es opcional en este sistema. La opción del sistema depende de los gustos del usuario, estilos del trabajo...

. Para Techies:: U = este n~c~analyzer = acceso [solamente cierto u (usuario) puede recibir el nr (vía heuristically u otros medios)] wa multiusos de // uip [] // de la pista de // tds [] // t [] // del analizador de sonidos de // del sensor de // del s&r de // de la cuenta de // de la picosegundo-zona de // del oscilador de // del nr de // de los vagos de // (analizador del comportamiento del `) [el nr ajusta al estilo de la opinión del u] [] [] [] [] [] [] [] [] [usuario] [].

INHIBIDOR del HAMBRE 3C-590:

Los estímulos siguientes necesitan la investigación determinar cómo reducen hambre:

- sonidos; visiones; vibraciones de la máquina o de la silla del masaje; generaciones del olor (eg.: incienso).

Piezas: vagos; el uip ajusta estímulos a u (usuario) según efecto máximo.

PRIMATOLOGY:

Elementos en campo común a todas las invenciones del primatology:

- Dispositivo atado al primate vía: el atar con correa; inserción en cuerpo vía la operación.

. Las invenciones permiten que los científicos midan y que estudien el siguiente:

--efectos medicinales sobre primates, y en seres humanos de la golondrina de mar;

--cómo los factores ambientales, que influencian a primates, pueden internar a seres humanos del efecto: densidad demográfica; mecanografiar a compañeros de cuarto en jaula; toma de comida; temperatura; efectos sonoros externamente generados.

--otros artículos estudiaron: efectos de operaciones médicas

. Estas invenciones son aplicables a cualquier tipo (o quizá al ser humano) de actividad animal.

. Detalles técnicos obvios (véase el archivo IMI7 para las definiciones; estos elementos se incluyen solamente para la viabilidad técnica en vez de usos útiles)

"R"; "S"; "C"; pp; P.M.; ratón; fecha; TDS; interactivo; juguete; básico; "mic" (generación y correlativos de los sonidos del animal de las medidas con otros artículos que son estudiados); los sistemas enteros se pueden fijar afuera en naturaleza con los animales salvajes; sst; impresora; "M"; BP; alerter (para el animal y o el científico); OSCILADOR (para el animal y o el científico); egh; cuenta; tgh; md; tr; cp; cm; uq; uip (en el comportamiento del animal).

MEDIDOR del MOVIMIENTO 3C-600:

Atado con correa a partes del cuerpo, los movimientos del primate se miden según la agitación llana contraída al dispositivo.

- Uno de los métodos vía los cuales para medir la agitación: una pequeña bola por el cilindro; cilindros del mínimo nueve.

--la intensidad de movimientos se colocó según cómo la bola dura golpea los extremos del cilindro [sensor de la vibración].

--el transmisor del primate es registrado por "C" a través de su receptor

- usos: relación entre el nivel de movimiento del cuerpo a otros fenómenos que son estudiados, eg.: salud, enfermedad, cambios ambientales. "C" tabula y correlaciona el movimiento corporal con otros fenómenos simultáneamente de ocurrencia.

- mecanografiar los movimientos hechos:

--brazo, piernas, cabeza, cuerpo entero, movimientos del dedo

--tipos de movimientos enteros del cuerpo: saltando y haciendo pivotar, y distancia de cada acción

- ciclo el dormir de las medidas

Detalles técnicos obvios:

"C" "S";

DETERMINANTES TELEDIRIGIDOS del PRIMATE 3C-610:

Enviar las señales particulares receptor de los primates el', que en resultados de la golondrina de mar en la invención ató con correa al primate para crear el efecto deseado.

- Menú de efectos posibles: envía reforzadores del comportamiento positivos o negativos, eg.: vibraciones, cargas eléctricas del placer o dolor a las partes del cuerpo particulares

- Este producto trabaja conjuntamente con nuestra invención de la medidor del movimiento.

IDENTIFICADOR de la PREFERENCIA del PRIMATE 3C-620:

Saber qué varones o primate de las hembras prefiere, y cuantas veces los dos están cerca de uno a.

- Metodología: utiliza un distancer para saber cuándo los monos están más cercano a uno a
- Analiza comportamiento antes de resolver el otro mono, eg.: cantidad de movimiento con el detector de movimiento. El movimiento se puede medir como "cortejando" antes de la reunión real, vía "C".
- Tipos de los correlativos de comportamiento con otros primates femeninos o masculinos según factores externos.

CORRELADOR del ENTUSIASMO 3C-630:

Correlacionar llano del entusiasmo del primate con los otros elementos que son estudiados.

- Un método para medir el entusiasmo: golpe de corazón mientras que el primate no está en el movimiento físico importante. La inactividad del detector de movimiento mientras que el ritmo cardíaco está batiendo más rápidamente que normal significa el entusiasmo del primate.

--el sistema memoriza el latido del corazón normal del primate mientras que es inactivo, y mientras que en diversos niveles de actividad. Si pasa a ALTO el nivel de curva del entusiasmo que la curva correlacionada normal del golpe de corazón de la actividad física, el científico puede ver que hay un nivel medio antedicho de entusiasmo.

. Usos:

- trabajos con las otras invenciones

--eg.: cuando el control de "R" se utiliza para generar efecto en el primate, capaz de medir el nivel del primate de entusiasmo

- las medicinas del efecto tienen en los niveles de entusiasmo, y la curva correspondiente del entusiasmo

ANALIZADOR de la SANGRE 3C-640:

El implante comprueba para saber si hay cambios en el contenido de la sangre.

- Métodos: "sensor químico" del dispositivo (laboratorio químico miniatura)
envía señales a su transmisor de enviar señales vía la radio
- cheques: temperatura; cuenta de sangre roja/blanca; productos químicos; anticuerpos; virus; Balance del pH; etc

. También analiza:

temperatura (también: frecuencia y longitud de cuaesquiera fiebres); respiración; orina; heces; sudor; movimiento de las tapas del ojo; frecuencia de la limpieza; analizador de la activación del músculo; estómago (frecuencia de la consumición; la longitud del contenido del tiempo está en estómago; Balances del pH; cuaesquiera trastornos de estómago...); frecuencia y duración de la masticación.

. Tabulador de la frecuencia del uso del producto:

Medir la frecuencia, la duración y el método en los cuales los productos fueron utilizados.

Productos: campanas para lanzar cólera, o utilizado para la diversión; dispensadores del alimento;

--- EXTREMO DE LA SECCIÓN DEL PRIMATOLOGY ---

EXHIBICIONES PROYECTADAS INTERACTIVAS 3C-660:

"S" se proyecta sobre cualquier superficie plana, eg.: pantalla, pared. El usuario puede obrar recíprocamente con el sistema y su "S" bloqueando la luz, que va del dispositivo a la superficie plana.

- Relacionado con un KN más viejo (invención) (quizá en C, y esta pantalla interactiva más vieja de los repartos w de KN (invención) (con) en el tablero de instrumentos del coche).

- El dispositivo sabe que se ha bloqueado una luz. Los sistemas de usuario el dispositivo de la distancia son de pantalla. Si el reflejo ligero (volviendo al sensor de recepción visual del dispositivo) observa que la vuelta de la luz es de una distancia más corta (el sistema cuenta el número de ondas de la luz)

O-otra señal interactiva que crea modos: bloqueando cualquie otro ligero (nuestras ideas del interruptor del teclado del laser o del laser)

--o la pantalla puede estar en ángulo que no envía la luz de nuevo al dispositivo, y bloqueando una luz con el dedo o cualquier otro dispositivo no-opaco, el dispositivo consigue la luz detrás para la parte particular de "S" que signifique lo que quiere el usuario.

---diversos pedazos opacos coloreados reflejan detrás diversa luz y el interno genera diversas señales

. ---defender el transmisor del proyector, y el receptor ligero visual (que analiza señales del bloque ligero...) puede estar lejos de uno a - para no requerir la pantalla ser en ángulo. O el proyector puede estar en ángulo.

. - el transmisor del proyector de la pantalla pudo ser dispositivo portable

. - algunas funciones limitadas dentro de esto sobre todo el arsenal posible de características: apenas ser un "S" que se proyecta sobre una superficie plana del exterior. Tal "S" puede siempre estar en ocurrencia mientras que el dispositivo es "ON", o puede ocurrir solamente en los momentos importantes.

- usos: jugar a juegos, eg.: cualquie juego de mesa - el ajedrez, inspectores, va, monopolio; juegos de tarjeta.

- "Localizador": la localización de la persona y o de sus dispositivos activa ciertas funciones, y o menús de los iniciados ciertos.

- OTD: "S"; "C"; pp; P.M.; Reino Unido; ratón; interactivo; educ; juguete; básico; juego; entretener; el exercise%; el portable%; el printer%; ch; au; "M"; punto de ebullición; oscilador; el balance%; discurso; vc; el egh%; el score%; md; carro; uq; mq; acceso; el pi%; carácter; localizador; multiusos; "R"; notificador; el composition%; cojín del aire.

("R") RATÓN ALEJADO del CONTROL 3C-670:

Tiene todas las funciones del ratón estándar, a menos que trabaje sin un alambre. Más tiene un teclado con 4 - 70 botones.

Está situado en el archivo IMI.

¡- este producto fue lanzado probablemente público después de esta limadura de la patente original!

ARCHIVO 3CI del EXTREMO

Archivo: Un B C/3CQ
ARCHIVO: 3CQ:

ANALIZADOR de la PARTÍCULA AEROTRANSPORTADA 3C-220:
Juzga el contenido del envase o del artículo que es envase exterior estudiado por los olores que emite (cantidad, sincronización, frecuencia...). Para los biólogos.
- el sistema analiza para la cantidad de partículas totales en el aire; el sistema también se pide comprobar para saber si hay el tipo particular sustancias
- el tds cualquiera cambia, y tipo de expedientes cambio
- el acordar al tipo cambio en el olor, sistema puede actuar según programa, eg.: cambiar la temperatura, dispensar los productos químicos...
--imprime gráficos de cambios en el olor (partículas aerotransportadas) y de cambios en el ambiente, eg.: temperatura, dispensación de productos químicos...
- existe: el oler trabaja a máquina, busca la anchura humana, bombas, calidad del alimento (eg.: probadores del gusto). Una nueva área floreciente.
. Para Techies: "S"; "C"; pp; P.M.; Reino Unido; ratón; fecha; tds; educ; todos; "mic" (cambios en sonido); alerter; oscilador; cuenta; carro (de las partículas aerotransportadas que se dispensarán por el producto); cp; uq.

JUGADOR de MÚSICA de 3C-270-083001 TOUCHLESS: Hacer los sonidos que imitan o que sintetizan sus movimientos. Los movimientos de los pequeños transmisores colocados en los brazos o las piernas son analizados por el receptor. Ejemplo: los tambores del juego con ambas manos sin tener que tocar cualquier cosa.
- relacionado con el guante existente de la música
- El usuario (de Distancer) pone transmisores en sus tobillos y muñecas, las danzas a la música de una cierta estereofonia o radio, después la muñeca del dispositivo bailará en estilo similar a la persona. El receptor de la muñeca reconoce las posiciones de cuatro o más transmisores el uno al otro, y se mueve por consiguiente.
. - Puede ser que sea provechoso tener un transmisor en la correa pues el punto central vía el cual las localizaciones de los otros transmisores están situadas.
Para Techies: venda de la mano con tal transmisor (abrigo sobre la frente)
- Existe: dispositivos que se mueven en ritmo a cualquier tipo de sonido. Eg.: puede doblar cada vez que hay un golpe a los tambores o al piano.

PANTALLA INTERACTIVA del COCHE 3C-580: Cualquier superficie semi plana en el coche puede tener las funciones de una pantalla interactiva de la CRT. Por el lugar apropiado conmovedor, el usuario puede hacer los comandos deseados.

- Lasers (invención de la arpa del laser) cuando demostración disparada donde el dedo tocó la pantalla.

. - pantalla interactiva: ventanas delanteras o laterales; el tablero de la rociada... cuando está tocado en cierto lugar, activa la señal (este sistema existe con los sistemas interactivos de la CRT)

- las marcas claras o débiles pueden estar en las superficies que señalan el sistema o que cambian menús y las opciones para esa sección de la superficie.

--si en ventana, puede utilizar ven a través la tinta

--la superficie real puede dar vuelta en un sistema de "S", que cambia imágenes según el usuario de la pantalla está adentro.

---superficies: ventanas (deja a gente ver adentro y hacia fuera también); surgir "S" del tablero de instrumentos...

- Algunas de las opciones del comando: sistema audio, calefacción, aire acondicionado, trabando puertas, opciones de conducción seguras

. - la gente quiere muchos productos para conducir, con todo ella es insegura utilizar. Esto es un sistema mucho más seguro y de uso fácil. Ninguna necesidad de doblar abajo y de seleccionar llaves complicadas. Los usos serán los, para las cuales se desean y compatible con la conducción.

--otras opciones interactivas están solamente para ésas en los asientos de pasajero

- producto aplicable en otros ajustes: hogar, oficina, laboratorio del R&D. Eg.: el panel de control está prendido (pared, tabla, ventana, papel, plástico (la hoja)) al control^: TV, estereofonia, aplicaciones de cocina, computadora (c), "t". Esta N (invención) es otra versión de "r".

- existe: pantalla táctil interactiva en coches en el tipo pantalla de la CRT

. Para Techies: "R"; "S"; "C"; pp; P.M.; Reino Unido; ratón; fecha; interactivo; educ; juguete; todos; hospitalidad del juego; portable (la parte o todo el producto se puede sacar del coche); impresora; "M"; punto de ebullición; oscilador; vc; cuenta; egh; tgh; carro; uq; mq; uip; carácter.

ARCHIVO del EXTREMO 3CQ

Archivo: Un B C/4CI y 4CQ

ARCHIVO 4CI y 4CQ

ADAPTADORES del ANILLO de OÍDO 4C-010:

Convierte los pendientes diseñados para los oídos perforados para ésos sin los oídos perforados. Guardar la belleza de las ganancias tapándolas en los imanes.

- relacionado con las ganancias del imán 5A-440: las ganancias del asimiento (no electrónico) sobre el lóbulo 2599
de oído sin tener que perforar los oídos por muy fuerte enfrente de los imanes.
- los pendientes pudieron destellar las luces según

LLAVE 4C080 ADENTRO PARA MEJORAR la CONEXIÓN:
Recipiente de cualquie comunicación, remitente de las señales para alterar cómo están transmitiendo. La meta es mejorar a la recepción para el receptor. El remitente puede (no) sabe que el receptor pidió a esto - la permisión de una mejor comunicación (sin la interrupción).
- Ejemplo de la opción del teléfono: El volumen de controles del oyente de registrado o vive información (que es el usuario que afina adentro dice a remitente en línea del teléfono alzar automáticamente su volumen) - no requiere el equipo complicado del oyente, apenas cierta llave del sacador en el cojín dominante de "T"
- las señales de la otra llamada son más ruidosas cuando el usuario presiona eg.: # en su teléfono (que no tiene la capacidad para hacer los sonidos entrantes de su sistema de t más ruidosos).
- menos necesidad de gritar en llamadas internacionales con la recepción pobre, o cuando está utilizado en los muchos países con las líneas pobres del teléfono (cuando hay una mala conexión).
- relacionado con el otro 4CG N.
- D: t (posición remota) = k (llave de los sacadores) = tr/rc = t (un sistema más complejo de t: recibe afinado en la petición de t alejado - > aumento/disminución/que altera (correo de voz) osc/pr (programa audio) según lo oído en el telecontrol t).
. D (dibujo): u (usuario) = este N~C~ANALYZER = ACCESO [] // MULTIUSOS [cada usuario que comparte el sistema en diversas horas tiene ajustes de la conexión/estilos preferred no similares de la comunicación)] // NR [el receptor notifica silenciosamente el remitente (transmisor del `s)] ANALIZADOR de SONIDOS de // S&R [maÌ□n modo para mejor] // de la CUENTA de // del RANURADOR de // R [] // del OSCILADOR de // [] [comunicación de la ruta para mejorar el canal] [tipo/calidad de la comunicación] de la comunicación [calidad de sonido audible] // WA [teléfono celular].
- Mejora: comprensión del usuario [audio/representación visual]; compatibilidad de sistema.

4C180 MODIFICAN MANERA para requisitos particulares que SE INCORPORAN los GOLPES DE TECLADO: Según la programación, la fuerza requerida para iniciar una llave se altera. Es decir, el usuario puede seleccionar cómo quieren difícilmente golpear las llaves para las computadoras, las calculadoras, el etc.
- programar la sensibilidad del tacto, programa si habría un sonido saliente en cada uno que presiona.
- costoso producir, pero quizá para la producción del gran escala
- la cuenta del `puede demostrar la intensidad del golpe de teclado para la educación: alguna gente golpeó demasiado difícilmente/demasiado poco, trastornando el sistema, e.g.: causar el doble golpea cuando solamente uno fue significado.

ARCHIVO 4CQ

teléfono ACTIVADO del ALTAVOZ de la IDENTIFICACIÓN de LLAMADOR 4C-040:

El sistema pone automáticamente llamadas de la gente especial sobre el altavoz. Las tomas del contestador automático llaman si el usuario está hacia fuera o no contesta.

- Cuando las llamadas vienen de cierto "T" numeran, el altavoz "T" cogen automáticamente la llamada.

. - trabajos con 4C-041, 4C-042

- OTD: exhibición; pp; P.M.; Reino Unido; fecha; tds; básico; sistema de identificación del llamador (identifica el número de "T" del llamador); micrófono; synth; portable; au; punto de ebullición; oscilador; balance; discurso; vc; el score%; el cart%; SP "T"; cp; pi; flotador (flotadores del sistema de la mano); multiusos (se emiten las diversos señales sonoras, etc dependiendo de los cuales se está llamando el receptor; identificador del anillo 4C-041 - si "multiusos" entonces antes de la activación del altavoz de la voz del llamador, hay una señal sonora cifrada o un aviso audio que indica para para quién la llamada está; cc; alejado; notificador.

IDENTIFICADOR del ANILLO 4C041:

Si los "multi-usuarios" utilizan la misma línea del teléfono; entonces según el llamador identificación #, habrá un diverso anillo cuando viene la llamada adentro.

- Los números sabidos y desconocidos (vía la identificación de llamador) se procesan diferentemente. Cada tipo de llamada entrante genera un diverso tipo anillo, ahorrando a dueño de tener que comprobar si la llamada entrante es de un número sabido.

- el dueño programa su "t" para deseado teléfono # ' s (el sistema busca llamadas entrantes particulares). Cuando viene la llamada entrante deseada, el sistema del receptor procesa tales llamadas (cuando está deseado) de diversa manera de llamadores desconocidos/de llamadas de números indeseados del teléfono.

--eg.: llamador deseado - > suena en el microteléfono del usuario; llamada desconocida/llamador indeseado - > llamada tomada por el contestador automático (sin el receptor que disturba)

. - la persona #1 programa su deseado teléfono # ' s y cuando la persona #2 oye el anillo para la persona #1, la persona #2 deja la persona #1 o el contestador automático tomar la llamada. El llamador está desprevenido de este sistema.

+ existe?:

¿- alguien dijo este producto existe, y que la utilidad para el recepcionista es solamente área quizá patentable?

- la segunda persona dijo: anillos diferentemente por el tipo llamada entrante. El campanero personalizado de la llamada entrante existe.

- OTD: exhibición; pp; P.M.; Reino Unido; tds; básico; oscilador; vc; discurso (dice para de quién es la llamada y quién); vc; el score%; SP "T"; cp; uq; el pi%; multiusos; notificador.

GRABACIÓN SALIENTE PERSONALIZADA 4C-042:

Estados de la identificación de llamador de los cuales la llamada es. Si el receptor no quiere tomar la llamada, pueden fingir no ser en el país pero haber creado un mensaje especial para este llamador. El aspecto importante es que una señal sonora sigue el mensaje espontáneo hablado por el usuario en el micrófono, de modo que el llamador piense recibieron una grabación personalizada solamente. Incluso el mensaje audio oído por el llamador podía perder algo de su calidad para ayudar al llamador a sentirlos alcanzó una máquina.

. - trabajos con 4c-040, 4C-041

- OTD: s; pp; P.M.; Reino Unido; tds; básico; oscilador; vc; discurso (dice para de quién es la llamada y quién); vc; el score%; SP "T"; cp; uq; el pi%; multiusos; notificador.

ARCHIVO 4CQ del EXTREMO

Archivo: Encantos misceláneos de un B C/de C

ARCHIVO MISCELÁNEO DE LOS ENCANTOS:
ANTES CONSOLIDADOS ARCHIVOS SEPARADOS.

ARCHIVO DE LA DIVERSIÓN

BARATIJAS DE FABRICACIÓN SANAS. Adminículos electrónicos que suenan como:
las campanas, palmada del clippity (tipo sonidos) doblaron los pedazos de metal, mordedores, silbidos, percusiones diversas.

- Pequeños juguetes musicales electrónicos con 1 o más botón, cada fabricación posee el sonido sobre empujarlo (jugarlos juntos pueden hacer que la música también, el etc. ponen todos en cadena/la secuencia para la pulsera, el collar, el etc y cuando se tocan hacen el sonido (juguetes incluyendo de la música electrónica). Cada forma tiene poseer el sonido: el loro, incluso se imagina como lo que suena una naranja, una pequeña casa de la escuela (el decir "nos dejó aprender" el donante de la buena primera impresión a los cabritos).
- Juego #1: Encantar los sonidos de los interruptores de los objetos, persona debe recordar qué objeto hace que suenan. Antes del juego siguiente, seleccionar diversa opción sana para cada encanto.
Juego #2: Tipo juego de Pascua. Cuando el usuario encuentra una sola pieza y presiona el botón de los sonidos del encanto, el primer sonido activa el encanto siguiente (que recibe el primer sonido) debe hacer un sonido, pedazo siguiente de los hallazgos de la persona y va al pedazo siguiente en círculo completo hasta todos encontrados.

- Aprender las idiomas: La forma de cada encanto puede asemejarse a la palabra que hace. Para los niños que aprenden sus primeras o segundas idiomas, eg.: frutas, animales. Opción: puede reprogramar encantos en diversas palabras y u oraciones

- Misceláneo: sonidos en dialectos estándar o regionales o en alguna parte mientras tanto; puede comprar, pedir prestado de biblioteca de escuela, o pagar alquilar

ALTERNATIVAS:

. los pedazos usados por los inventores para poner piezas juntas, en sus combinaciones producen los sonidos orquestrados, diseñados para obrar recíprocamente mágico con uno a. Marca: Bloques mágicos de la música.

. para la mujer cuyo amante o marido olvida poner el asiento de tocador en el suelo - el encanto alarma después de limpiar con un chorro de agua si el asiento no está abajo

. sonidos cuando tacto de dos zapatos

. fijación a los cajones, sonidos al abrirse. Especialmente para las chicas jóvenes.

. herramientas del carpintero: salen a menudo de las herramientas detrás. Hace un solo sonido corto si la herramienta está también lejos del bolso de la correa de la cintura del carpintero.

. para la caja del juego de niño, sonidos siempre que esté abierto: el cajón, pecho, caja del juego, caja vendió por el fabricante para sostenerse a

. broma: puesto debajo de la alfombra así que suena como el piso de madera está crujiendo gravemente

. sonidos de la ceremonia de boda: bromear para la datación de la gente, en luna de miel, el día de tarjeta del día de San Valentín, el etc.

OPCIÓN: hacer que los encantos creen sonidos sobre su laser de recepción. Hacer la música. El sonido puede continuar a partir de un segundo a varios minutos, permitiendo los sonidos solos o múltiples que ocurren simultáneamente. Una opción más barata: los encantos se pudieron activar solamente manualmente.

- opciones: tener muchos pequeños encantos del pájaro que puedan sonar simultáneamente. Comprar algunos y disfrutar, después volver almacenar de comprar más para el mayor efecto. ¡Gozar el tener de gojear entero del sitio o de la casa!

REGISTRAR EL ARCHIVO

TRANSMISOR del RELOJ B4-51: El usuario despierta una audiencia más feliz la alarma, el tiempo, el tiempo y el tipo noticias deseadas, sin anuncios publicitarios. Da un plazo de los minutos preciosos adicionales bajo cubiertas de cama. El producto único integra el reloj de la voz con en la línea tiempo y selecciones de las noticias. Incluye: "oscilador"; "tds"; funciones según: pp; P.M.; uip; carro. DETALLES TÉCNICOS:

OPCIONES DEL TIEMPO:

. Gancho en la línea telefónica, diales de reloj adentro para el Info. Recibe el Info numerado o puesto en palabras. El fabricante del producto puede proporcionar las líneas telefónicas de la información, que los diales de reloj que hablan en antes del tiempo que despierta programado.

. los estados resisten antes de dejar la cama ventana y o de abertura y o las cortinas. Saber vestirse antes de salir de la casa. El exterior del lector del tiempo (termómetro) se engancha en el reloj y da verbal leído fuera de temperatura y quizá, humedad.

OPCIONES DE LA INFORMACIÓN DE LAS NOTICIAS:

. El usuario oye solamente el tipo información que necesitan. Pueden seleccionar personalmente para oír: Noticias;

Mercados financieros: Promedio de Dow Jones, NYSE [la Bolsa de Nuevo York], Amex [intercambio americano] de los metales, informe de OTC, mercado de obligaciones, metales preciosos, informe de las materias; Deportes; Actualizaciones de la telenovela; Tiempo local, nacional e internacional; etc. Seleccionar lo que usted quiere a uno mismo del ahorro del bombardeo de los anuncios y del otro Info indeseado.

EFECTUAR 2 ELEMENTOS:

Habla con el usuario en gran medida por ejemplo cuando es hora de despertar e incluso da el tiempo afuera.

Cotizaciones:

. tiempo del almuerzo, tiempo del descanso para tomar café

. ¿Consiguiendo el trabajo hecho? (programado para hablar cada tan muchas horas)

. () minutos hasta: usted tiene que irse por trabajo/su hora de ir a casa/suegra viene/plazo (tan muchos días y horas ausentes)

. "Buena mañana Susan, Sr. y señora Tanaka, su hora de levantarse"

. ahora está (): medir el tiempo quizá con día, la fecha y el mes

. Etapa 2: usted tiene las citas siguientes hoy

ARCHIVO DEL TELÉFONO REGIONALIZER

A3 TELÉFONO REGIONALIZER

Los llamadores de los enchufes de ventas importantes del teléfono, del servicio de atención al cliente, del teléfono directo y de departamentos relacionados consiguen en tacto con la gente que puede mejorar ajuste sus tipos de personalidad. Cuando consiguen el correo de voz o están en asimiento oyen la música popular para su región de país.

El teléfono que recibe las centralitas telefónicas juzga la personalidad probable del llamador basada en sus expedientes para la historia anterior del número de teléfono de ese llamador con su organización. Para los números de teléfono sin historia sabida el código de área del teléfono (y quizá los primeros tres dígitos de teléfono # demostrando la región de código de área) determinan sus tipos de personalidad posibles (como las compañías de seguros que juzgan a gente por sus códigos postales). /

La legislación probablemente pronto permitirá que los receptores de las llamadas telefónicas sepan el número de teléfono de llamador. Tal es actual posible solamente dentro de. interior/de las llamadas

Para aliviar la situación ideal del hacer el teléfono contestar en las áreas regionales a escala nacional, el acento y o la música convertirá lentamente al estilo de la gente en el lado receptor. (Eg.: el llamador de Carolina del Sur llama Manhattan, primero oyen los golpes de Nashville, después los acentúan y la música comienza a acentuarse al dialecto de Manhattan. El equipo de teléfono también ajusta voz y la música hecha salir según el tipo receptor del negocio está adentro. Si empleado con ese acento (o más probable disponible, la disposición de la personalidad se adaptó más al área del llamador, eg.: conseguir a nueva persona de la edad tomar llamadas del oeste y del sudoeste; Bilingüe español para tomar llamadas de Miami, Puerto Rico, partes de Tejas; personalidades burbujeantes calientes para tomar llamadas del sur; preppies para tomar las llamadas de de nordeste, centro de los tipos de la manera para tomar llamadas del centro de América; tipos lujosos de la princesa o del príncipe para tomar llamadas del área del metro de New York City, y así sucesivamente./

- software de la blanco para los siete Baby Bells en los E.E.U.U. indicar que desarrollamos el ™ de Supernumber que era utilizado por Baby Bells - TM en Illinois el a principios de an o 80, S.

- investigación: ¿esto existe? ¿Cómo usted condujo la investigación?

Piezas: VAGOS, UIP, ranurador

DIARIO de la DIETA A3-6

Después de que sea extendido utilizar, el sistema dice el usuario cómo el alimento afecta a sensaciones, a comportamiento, a funcionamiento, a pensamiento, al sacador del etc. en humores, y los alimentos comidos. Puede comprar o pedir prestado de doctor, de terapeuta, del almacén a ayudar a evaluar los alimentos en emociones, de la capacidad del pensamiento creativo, funcionamiento, y se divierte capacidad, problemas del sueño, el etc. Utilizar por varias semanas a un año. La máquina recomienda qué prescription/OTC (sobre el contador) narcotiza para tomar, y se puede felicitar más a fondo con la máquina de la terapia para mayores alteraciones y entrada de los datos para los cambios deseados necesarios. Para seleccionar el alimento comido, la llave en la categoría del alimento, entonces usuario ordenó vía más subcategorías al alimento (y o marca de

fábrica común en país). Para las sensaciones del usuario, seleccionar de categoría general y o entonces de las subcategorías que describen mejor sensaciones. Virtualmente cada uno quisiera saber las respuestas. La información es lejos más fácil de calcular por la máquina.

Opciones:

recomienda dietas: alimentos negativos a los cuales puede haber una preferencia fuerte - sin importar su efecto negativo; producto alimenticio pobre del balance

DIARIO DIARIO DE AA3-6A

Puede mezclar idea con el diario #AA3-6 de la dieta. Medidas cómo influencian al usuario cerca: la música, las demostraciones de hospitalidad, la gente, las maneras o los tiempos particulares del recorrido, lectura o lectura del periódico, trabajando en la computadora, cualquier cosa las estancias del usuario y cuando es mejor evitar, resistir, encenderse, del sitio o del lugar, duerme, lee, o come en..., los colores, las actividades de interior o al aire libre, etc.

Aplicaciones de la investigación: bueno para el comportamiento de consumidor, comportamiento psicologico, sociológico, médico, científico, de organización, investigación del diseño de producto

Usuario de las ayudas sugiriendo: qué donde porqué cuando cómo hacer, observar, responder a las cosas (no) de maneras alteradas; hora en que su toma de decisión y o la intuición ha sido la mayoría del acertada (las llaves del usuario en el asunto de las decisiones tomadas, hora aproximada. El producto puede complementar la interacción con el psicólogo/el asistente social (socios).

Nota: El fabricante debe estudiar el comportamiento de la humanidad mucho antes software que se convierte. La máquina puede sugerir terapias en las áreas del arte, de la música, del juego, de cultivar un huerto, y del tipo manías...

Opciones adicionales:

La máquina pudo hacer los sonidos científico seleccionados/música, que pueden ayudar al usuario según su situación actual. Eg., música para hacerlos más salientes, creativo, despierto, positivo....

Recomienda qué actividades, alimentos a comer (y quizá incluso cuando) en general. Y o sugerencias apuntadas solamente para ciertas actividades, eg.: pensamiento creativo

Detalles técnicos: requiere a usuario afinar en todos arriba o cualquier número de influencias se estén comprobando que. Antes de autoanálisis del principio, el usuario pudo ser hecho preguntas (eg.: historia; ¿cuál hace usted tiene gusto más, a, b, c o d? ; etc) que demuestra su del comportamiento - estilos del pensamiento

¡El tipo productos del diario pudo ser software insertado en la PC casera, o aún el portable con construido en software! Cultural adaptado a las docenas de idiomas y de su tipo dietas, actividades.

Marcas registradas: Máquina de la terapia, gurú, ayudante personal, y guía personal

ARCHIVO del DIVISOR A4-70

Un sonido y o dispositivo ligero de la disección.

DIVISOR DE LOS SONIDOS:

Trabaja como el divisor ligero para los sonidos, éste de la prisma divide el sonido en diversas piezas que se oigan normalmente solamente simultáneamente. La gente de la reparación podría utilizar para diagnosticar problema de la máquina. Para la diversión de ella embroma puede estudiar sonidos de: refrigeradores, maullidos del gato, motores, música, divisoria del etc. por el fq o dimensión del tiempo. Identificar el objeto o el problema de la máquina --> la máquina dice a usuario cuáles es el resultado. Opción: una característica opcional para el sintetizador de los sonidos, G. omite ciertas frecuencias, guardando las otras. Para personal o, propósitos científicos. Al escribir la descripción, centrarse en usos del consumidor.

APLICACIONES DEL DIVISOR DE LOS SONIDOS:

reparación de o: los motores fuera de la alineación sana, por el sonido uno pudieron coger algo incorrecto también. Divisores del sastre a las funciones particulares de la reparación.

analizador del comportamiento de o (vía echadas de la voz)

el contenido de o de la materia por cómo golpea, sacude

analizador de la música de o - cómo efectúa a gente. Aplicaciones: cómo influencia a gente durante estudios, music/tv apropiado rápidamente que empareja suena a las inserciones del anuncio (el Info de la máquina es otro elemento para influenciar la decisión).

APLICACIONES LIGERAS DEL DIVISOR:

- puede leer los colores recibidos, o exhibir el espectro dividido de colores que su espectador recibe

o de una distancia: analizador contento superficial (contenido analizado según color y cómo las máquinas irradian, los lasers, la despedida del etc de nuevo al receptor de la máquina

o de una distancia: la máquina envía el sonido y el receptor analiza el contenido interno del artículo

o localiza la aguja en haystack en usos comerciales. Eg.: cuando el color del objeto empareja los criterios de la lente tira hacia fuera el laser para oponerse.

ARCHIVO DE LA RECETA

RECETA ELECTRÓNICA AA3-1

El sistema desarrolla/sugiere recetas/los elementos necesarios para sus alimentos deseados.

Programar el tipo alimento, # y el tamaño de porciones o el volumen/peso, asiduo - bajo - ninguna dieta de la sal, alergias, preferencia por más de cierto tipo hierbas, máquina del etc. dará a usuario las porciones exactas de

cada ingrediente adicional necesario. Ahorrar de porcentajes calculadores de cucharillas, de cucharas de sopa y de otros líos complicados. Conseguir la receta perfecta cada vez sin importar la porción del tamaño.

Terapia para tocar el punto derecho según cómo usted siente. Para los tallarines, las preparaciones (ensalada, etc.), beben. Puede tener líquidos también. Puede tomar sus propias fórmulas personalizadas también. Bueno para los almacenes que no venden las hierbas. El fabricante puede enviar las hierbas directo también. Concepto polaroid: chisme de la fuente de la compra de la necesidad del cliente - ningu□n relleno del uno mismo; la máquina de la venta en el precio bajo, hace el dinero en el suyo. Cliente mayo o mayo no poder agregar las especias particulares cuando funcionan hacia fuera. El precio para la fuente de la hierba puede levantarse más rápidamente que precio de la máquina. El impreso o la pantalla demuestra cuánto de la otra necesidad de las cosas u (usuario), eg.: los ingredientes para los aliños de ensaladas, mezclas de las pastas, bebidas, lasagna, guisaron el pollo, etc. M también se sostienen: las habas, los pequeñas vehículos y setas tajadas secadas y la carne junta las piezas, las bases de sopa, leche en polvo, tuercas, pulverizadas (la mantequilla, los pedacitos de las pastas, el etc. artificiales conecta con agua para dispensar, pueden también almacenar el agua embotellada. Produce los brotes.

Selector de la hierba; Hierbas del cocinero; Apenas la derecha; Hierbas principales; Mezcla mágica, terapia de la hierba. TT, LL, E, W2

SECRETOS de la RECETA 1A//: mezcla con el selector de la hierba. Sobre el alimento de dispensación cocina vía microonda o calor. u (usuario) puede llamar m remotamente y los pp qué comer. M puede sostener el alimento congelado en la sección congelada.

TM: Cocina/ing convenientes

RECETAS del MUNDO 1B//: secretos de la hierba del MI 1, secretos de la receta 1A. la categoría británica del país y del alimento y elige de opciones. De Op. Sys.: Receta de "S" solamente.
SELECTOR de la VITAMINA 1C//: da las vitaminas y o las sugerencias escritas del ao de las hierbas (y o) según la dolencia del u, deseo y también las fórmulas generales la base para el normal y el resto de los días

Marcas registradas: Selector de la hierba

Llevar a cabo el párrafo para el desarrollo posible de la etapa 2:

Los ingredientes vienen abajo de poco lanzamiento de cada hierba, se enciende que cuando el envase presiona contra él; o la mezcla entera viene abajo de un lanzamiento principal (mejor anterior). Hierba quizá exceso enviada para todos o las pequeñas porciones para la exactitud. Ciertas hierbas del uso frecuente tienen reservas más grandes (cajas). Substituir la colección entera de la hierba periódico en paso simple (excepto de substituir cada uno manualmente). Artículos de los asimientos 12 - 200. Opción de poner sus propias hierbas para propias fórmulas; dispensador de la mezcla de sopa (producto químico libre).

ARCHIVO DE LAS ESCALAS

Piezas para below: cuenta, tds (cuando píldoras dispensadas), uip (sugiere cuánto algo es necesario (basado en el tiempo, la vez última algo dispensados). Se anotan los elementos y analizado basado en su [cambiando/cambiable] peso, ese sistema [el `predice cómo a] modifica para requisitos particulares por consiguiente.

Escala de la píldora: las medidas aproximan el número de píldoras en envase. Ahorra de tener que contar píldoras. Del uso a la gente que necesita saber cuándo su hora de conseguir repuesios (grandes para los que se preocupan constantemente de sus píldoras que toman y materias relacionadas - la invención pudo enfocar algo de su nerviosismo más con eficacia) grandes para las farmacias, los hospitales, los laboratorios químicos, el etc.

El usuario pesa una píldora y pone el peso en la memoria de la escala. La escala entonces divide el número de píldoras posibles de la botella entera en escala. - verter el contenido de la píldora en la escala o cualquier otro envase. No necesitar ajustar el peso si el usar escala el envase. Los ajustes de menor importancia pudieron ser necesarios para los profesionales debido al desgaste y al rasgón en el envase - la escala permite tal opción.

- tener sistema de usar ciertos tipos de la botella y la escala sabe el peso de la botella por el usuario que afina en el tipo botella, o el usuario pudo conjeturar el peso de la botella para ser igual a cierto número de píldoras
- la escala se diseña para este propósito particular, facilitando el número de golpes de teclado necesarios, y esté de tamaño y de precisión apropiados. Cambiar el producto un poco del de tipo standard y conseguir más ventas de la escala.

Escala del pienso: los laboratorios que estudian el comportamiento animal pueden tener gusto de saber el peso de alimento seco a cualquier momento. La escala también memoriza los ciclos de las costumbres alimenticias del animal y puede demostrar el Info en su exhibición, o poner el disco de la escala en la computadora con el software apropiadamente diseñado para el análisis.

- si el animal come demasiado o responde demasiado poco durante cierta invención del plazo cerca: quitar el alimento para en caulquier momento la duración; donante de más alimento; alimento cambiante; la fabricación suena (eg.: otro o animales relacionados, llamadas de acoplamiento, música, voces humanas, sonidos no significativos que dan sensaciones de buenos o malos humores o cólera, etc); dispensación de líquidos, olores, ducha del agua sobre animal; jaula vibrante; puerta de abertura que deja otro animal adentro o el animal enjaulado hacia fuera; dando vuelta luz con./desc., o de disminución o cada vez mayor, calor, ventilador,

radio/tv/music/sound; alertar el investigador del animal doméstico/a tomador del cuidado; abastecimiento de cualquie otra sustancia para los propósitos de prueba.

Escala del zapato: mide el peso aproximado de la persona en su zapato leído. Leer los zapatos exteriores o interiores hacia fuera localizados: grande para el mercado de la zapato tenis.

Escala del asiento de tocador: mide el peso de la persona.
- las exhibiciones o imprimen el peso sobre tocador o el papel regular.

Escala de la persona oculta: aplicaciones Braille

SELECCIONAR EL ARCHIVO DE A/V

AA-B3 SELECCIONAN LA VISIÓN AUDIO (LA MÁQUINA DE LA REALIDAD PRE VIRTUAL)
Los vidrios especiales ven solamente lo que y cómo quiere uno para ver algo, o bloquea elementos indeseables de la visión.
- cambios todos o ciertos colores. Programado por el fabricante y o el usuario. EG.: todo pero el verde da vuelta amarillo, esto también permite un tiempo de búsqueda más rápido para una partición verde.
- da el sonido según el color que baja dentro del área de blanco de la lente. Puede también tomar una entrada general de todos los colores para un área más grande y hacer salir por consiguiente sonidos el emparejar. Eg.: en un cuarto con solamente el rojo de cereza (paredes, alfombra, muebles, etc) habría ("cereza") el sonido rojo puro. Fabricante o programas del usuario qué sonidos emparejan colores. El fabricante puede ajustar por área regional, las blancos de la comercialización de la categoría de edad, el etc.
- apenas escuchando y sentándose, uno mira dentro de los vidrios o la pintura sobre la representación visual para los colores creados por los sonidos.
- las versiones del producto de la hospitalidad permiten que el usuario seleccione el tipo formato por el cual los colores son emparejados a los sonidos -- variedad de los anuncios
- imaginarse las aplicaciones en juegos interactivos
- los artículos dentro del área de blanco aparecen flotar (los alrededores bloqueados, artículo de la experiencia como está en espacio)
- tipo visiones de la visión lsd
- agregar las visiones inmóviles que no existen, eg.: flores, ángeles de la fantasía...
- utilizar un interruptor para ver diversos efectos en el control de los usuarios

¡Sonido de los convertidos y o música en colores! Crea las formas, líneas, gráficos de barra (con el círculo del baile encima de cada barra). Cada bola bate simultáneamente o en orden consecutiva al ritmo.
Piezas: analizador visual; VR; artista; uip; educ; tgh

ARCHIVO DEL RELOJ DEL CIELO AA4-59

¿Curioso sobre el tiempo natural, o el fieltro como dejar su reloj en el país? Aprender la hora natural por el ángulo del sol. La máquina tiene capacidad de saber cuál es horizontal para el marco que se convierte de la referencia. Cada este u oeste del kilómetro tiene un diverso rato de levantamiento del sol y por lo tanto diverso tiempo. Inafectado por tiempo de los ahorros de la luz del día.
Técnico: el compás que señala al norte dice el dispositivo donde el pico del sol. En noches claras, busca las constelaciones de la estrella, juntadas con el reloj interno que sabe qué posiciones stars, está en la luna, etc debe estar con respecto al punto norteño. El reloj debe trabajar en días ligeramente cubiertos también. Modelos realzados buscan otras frecuencias del cielo y trabajan en cualquier clase de condición, de día o de noche del cielo.
Comercialización: Apuntar las High Schools elementales y secundarias, aficionados a los hobbys, entusiastas del marinero, caminantes.

ARCHIVO VIDEO

USOS DEL MUNDO AA4-67 VIDEO

Visualizar cómo otras culturas obran recíprocamente con los productos similares. Ver con cómo la otra gente obra recíprocamente, y o diseñar las cosas similares. Mirar usar/el obrar recíprocamente de los extranjeros con el artículo/el asunto del interés seleccionados por el espectador. El usuario selecciona asunto y después ve todas las culturas en fichero de datos automáticamente, o pueden optar por ciertas culturas solamente. El usuario experimenta el vídeo y o efectos audios (los sonidos redactan música).

Usos: Investigación y desarrollo y departamentos de nuevo producto (conseguir las ideas frescas); proyectos de la escuela del estudiante; agencias turísticas - demostrando a viajeros potenciales cómo diversas culturas manejan los intereses del cliente: manías, ocio, cocina, etc.

Para los publicistas, el académico, los departamentos del nuevo producto, el etc: Experimentar las interacciones sociológicas y psicologicas con los puntos dados del foco (eg.: aplicaciones de productos) ese comportamiento de forma-compra de la ayuda en países por todo el mundo.

Estadísticas comerciales: ciertos espectadores (especialmente ésos más cercano al lado de la distribución del desarrollo) pueden desear ver el volumen de consumición por mercado cultural (eg.: Ventas árabes). De menos interés para ésos que usan la máquina para generar el flujo creativo para las ideas originales del producto, que se pudieron alterar más adelante por otra persona que seleccionaba la opción de las estadísticas. Incluye: promedios para las rentas, los ingresos disponibles, los productos de competición, los márgenes de beneficio para las compañías relacionadas en mercado, el etc.

(Pequeño mercado del usuario) para los encargados de la hospitalidad: aprender integrar el estilo de su ejecutante con el de la cultura apuntada.

Detalles técnicos: Las culturas extranjeras a la cría del usuario pudieron ser menos extrañas en las expresiones faciales, el vestido, el etc centrándose en la novedad de los usos del producto. Esto ayuda a choque de la cultura de la facilidad. Por ejemplo: Los Británicos pudieron ser dados una sacudida eléctrica viendo japonés slurp alegre sus tallarines del tazón de fuente levantado mano al seleccionar las pastas, el restaurante de los alimentos de preparación rápida o las opciones de los utensilios del alimento.

publicidad: El "hombre ha aprendido históricamente de otras culturas." "El acertados son los más rápidos a aprender de otras culturas." "Otros países tienen una gran cantidad de ideas sin aprovechar en nuestro propio país." Para los americanos: "Es un mercado mundial." "Pensar global"

Marcas: 144 países, fertilización intercultural, idea, Europa de un vistazo..., manías de un vistazo..., mundo de un vistazo, usos del producto, usos creativos, posibilidades creativas

CONTESTADOR AUTOMÁTICO PERSONALIZADO 1B010: el receptor programa el contestador automático de teléfono para dar hacia fuera diversos mensajes, según el número de identificación del teléfono del llamador,

- producto muy relacionado en el archivo A6.
- (Los dispositivos especiales existen que permiten que el receptor sepa el número del teléfono del llamador.) El receptor puede entrar tan el hogar del llamador y trabajar números del teléfono, y da apenas llamadas del trato especial de esos números.

Posibilidades del trato especial: diversos mensajes de salida (más agradables o más negocio tener gusto, etc); cuando una llamada viene del número deseado del teléfono que el beeper del contestador automático puede entrar en contacto con a dueño del contestador automático o el dueño pudo conseguir una llamada del contestador automático con haber registrado o voz cifrada/sonido que indicaba que un mensaje del número deseado del teléfono fue recibido, después el receptor puede llamar la máquina y conseguir el mensaje, o la máquina puede dar el mensaje al dueño; las llamadas de números deseados son llamada remitida a la localización del dueño (el teléfono #1 llama llamada de las transferencias del teléfono #2, después del teléfono #2 automáticamente al teléfono #3 puesto que ésta es una llamada tan importante).

- para el dispositivo estadístico de los propósitos guarda los expedientes de todas las llamadas entrantes para las oficinas.
- Notas al pie de la página: diversa longitud del dispositivo del tiempo puede registrar mensajes entrantes.

. Para Techies:: todos; número del teléfono de las exhibiciones que viene adentro o siendo marcado; pp; P.M.; Reino Unido; fecha; interactivo; micrófono; synth; portable; mfh; vc; cuenta; teléfono; uq; pi; carácter.

DISPOSITIVO del REALCE de la CREATIVIDAD 1B120 (llamado antes, luz del cerebro): (Eran la invención # 1A-6)

La máquina mide las ondas cerebrales creativas de la persona y retroactúa la información para su desarrollo de capacidades creativas. Un barómetro claro de sus niveles de la frecuencia permite que los usuarios ganen mayor claridad para el control.

- movido al "tgh"

ALUMBRADOR de la PALMADA 2B-150:

Activa con una palmada o un silbido de la mano. Utilizar para encender un cigarrillo.

- Los alumbradores en las tablas pueden también ser activados golpeando ligeramente en la tabla - (los sonidos transmiten al sensor de la vibración).
- El compartimiento puede abrir a las cenizas, etc vía otro tipo de palmada o sonido. Entonces se cierra después de la época requerida de acabar de fumar el cigarrillo medio. O puede abrirse en el empuje del botón.

. OTD: Alejado ("R"); todos; pp; P.M.; fecha; juguete; hospitalidad; "mic"; t; punto de ebullición; SP; oscilador; cm; palmada.

EFECTOS INTERACTIVOS del OLOR 8B-100: Los dispositivos interactivos utilizan el olor para crear mejores efectos. Ejemplos: El juego video emite olores demostrado inducir el entusiasmo; también para
- el olor emite cuando: golpean a la persona o a la criatura; uno entra cierta área: pantano fofo, descarga de basura, sitio hediondo; uno viene cerca de criatura hedionda; cuando está al acecho el peligro; abertura del paquete, del etc; entrar en un restaurante; el cocinar; el conseguir sudoroso de actividad; el conseguir nervioso; etc
- los olores pueden también ser muy sutiles
- la cantidad real de olor pudo ser mínima.
- se aplica a otros paquetes audio-visuales del producto: Entrenamiento basado de "C"; vídeo interactivo (sistema activado por el usuario que toca un grito - los tableros dominantes pueden ser utilizados, pero no ser requeridos)
- oler a usuario del nuevo producto pudo desear comprar, eg.: dentro del nuevo coche; cuero del olor para los productos de cuero; olores también para los productos siguientes que son vendidos: alimentos, servicio de entrega de la flor, etc
- el producto fue combinado con el producto 8B-19.

. Para Techies:

"S"; pp; P.M.; Reino Unido; ratón; fecha; interactivo; educ; juguete; todos; juego; hospitalidad; oscilador; vc; cuenta; tgh; enseñar; md; carro del olor que causa elementos; acceso (si el dispositivo del olor se utiliza en las arcadas [lugares públicos con los juegos video]); uip; carácter; el sistema alerta a usuario que los productos químicos necesarios para causar olores están hacia fuera o funcionando bajo en fuente.

analizador de la máquina expendedora 8B-280: Comportamiento de la compra al por menor de los estudios. Conecta la época del artículo vendida con otros acontecimientos que suceden simultáneamente: la gente de la hora prefiere comprar, las noticias, etc.

- Estampillas de fecha cada venta. Esta información se incorpora en las computadoras, que corresponden esto con el tiempo, los sucesos actuales en el tiempo (especialmente como difusión/publicado en medios de comunicación). Entender la compra de comportamiento mejor.

. Para Techies: Algunos modelos pudieron también tomar el cuadro del comprador; "S"; "C"; pp; P.M.; "S"; básico; cuenta; carro; acceso

Excitador de los pescados B7-070:

¡Puesto algo excitar pescados en el su tanque! Sonido, vibración de menor importancia, olor, alimento, etc. Opción: puede cambiar fácilmente su aspecto y u oler que crea nuevas curiosidades
- También debe alimentar los pescados
- No necesitar ser electrónico

- Se aplica para pescar vendido lo más comúnmente posible en almacenes del animal doméstico
- No debe asustar la mayoría de los pescados.

Notas al pie de la página:

Todos; "S" (el efecto visual influencia pescados); pp; P.M.; Reino Unido; fecha (cuándo alimentar, o estimular pescados - hace tan periódico); educ; juguete; juego; hospitalidad; portable (a los otros tanques de pescados, mares, etc); "M" (para los estudios biológicos complejos); punto de ebullición; SP; alerter (si el pescado no puede realizarse, o es enfermo); oscilador (los pescados oyen vía la vibración de la molécula de agua); cuenta; carro (sonidos, olores, alimento).

RETARDADOR del REFRIGERADOR B7-110:

. Delayer del tiempo: no puede abrirse por cinco minutos y entonces no debe ser allí durante la segundo abertura 60. El control usted mismo (de ir al refrigerador) por estos sesenta segundos y usted no puede conseguir en la puerta sin el recomienzo de la opción de comienzo de abrir la puerta. Más el hecho de que uno tenga que pasar con este procedimiento está un inhibidor. Los comedores crónicos comen a menudo para evitar una sensación psicologica y venir un poco más adelante, el deseo de la espontaneidad puede reducir. Bueno para los caucásicos, que están a menudo sobre el peso (exportación del japonés a tales mercados, aunque comen más sano que la mayoría).

- también para otras cosas una quiere inhibir la abertura, eg.: gabinete de licor, puerta de la despensa.
- el dispositivo hace malos comentarios o sonidos verbales sobre la abertura - diseñó reducir el placer en la abertura
- si hay una emergencia para abrir el refrigerador, puede todavía ser abierto pero con una alarma horrible. Y si se abre antes de tiempo, el botón especial o la otra necesidad del disparador activó.

Notas al pie de la página:

Este dispositivo se puede utilizar apenas para ciertas secciones del refrigerador o de otras oficinas; todos; "R" (abertura de la puerta); pp; P.M.; Reino Unido (plazos según lo descrito en la descripción); ejercicio; alerter (si puerta abierta demasiado a menudo); cuenta (frecuencia de la puerta de abertura...); carro; acceso; uip; carácter.

EXTREMO DEL ARCHIVO PARA LAS INVENCIONES EN SUBARCHIVOS: 1BI, 2BG, 8BG, B7I

Archivo: Un B C/2BQ

ARCHIVO: 2BQ

INTRODUCCIÓN PARA ARCHIVAR las INVENCIONES 2BQ: Como en otros archivos señalados, estos productos responden a aplaudir humano generado, rotura de dedos, silbando, equipo o los objetos sanos de generación, etc. El sonido humano generado inicia la función deseada. Esta palmada que reconoce la parte se inserta en cada descripción de producto abajo.

Nuestro número de la invención precede cada invención.

- El buscador del analizador de sonidos del `causa la reacción. Reacciones a los sonidos en el archivo 2BQ. SA - > reacción - > función modificada para requisitos particulares. Utilizar la pieza básica del micrófono oye ciertas frecuencias sanas (palmada, el silbido...) y la frecuencia específica de cierta duración y o del número de ocurrencias activa o desactiva la operación electrónica.

2B-1: FABRICANTE DE CAFÉ DEL SILBIDO:

comienzo que elabora cerveza en el sonido de la mano natural del silbido o el aplaudir de la persona. La estela de la gente en diversas horas y él puede tener gusto de la libertad de tenerla en el momento en que él la quiere (un poco diferente cada mañana), también siempre que durante el día. El receptáculo puede sostener bastante agua para varios brewings. La vez última que una persona consigue el café, ellos puede depositar rutinas en el colector.

2A-2: SILBIDO: requiere el tono de los silbidos del usuario particularmente, que requiere vigilancia mental para que se apague la máquina.

2A-3: LAS MANOS LIBERAN: ¿sus manos atadas con algo (o no tener manos)? Silbar y cuando está hecho en ciertos códigos de Morse, puede iniciar los mecanismos simples para la robótica, las computadoras del escritorio, los artistas con las manos llenas, el etc.

2A-4: CÓDIGO MORSE: según el código Morse del silbido - lámpara se traslada a la posición particular - ideal para la persona cuyas manos se dedican afanosamente también. También, deja a usuario guardar su ojo en proyecto sin la mudanza.

2A-5: ANUNCIADOR: La huésped o el código Morse de donante residente del silbido sobre entrar hace su nombre anunciar. Grande para la gente que vive en el país y no quiere mencionar ella es hogar. Hacen los buenos amigos para sentir como tales cuando están dados su propio código personal - les no darían sin embargo un código para entrar puesto que los vecinos pueden aprenderla.

2A-6: MÚSICA QUE HACE PRODUCTOS: De acuerdo con el tipo de silbar o de instrumentoes de percusión, la máquina de la música responde con los sonidos programables sus los propios. Hacer que una venda de un

hombre se convierta en una venda múltiple del hombre. La mayor parte de la música del usuario no entregará comandos a la máquina de la música. Las percusiones solamente de ciertos instrumentos proporcionados y o el silbar del tipo, etc son lo que las notas musicales o los sistemas correspondientes del disparador. Compositor. . Memorizer de la música. Sonidos de los expedientes creados por los juegos del usuario y entonces del sintetizador detrás:

a: más rápidamente

b: más lentamente

c: más rápidamente

d: en diversas echadas

e: con los sonidos adicionales insertados.

RELOJES del JUEGO 2A-8: conseguir el tiempo silbando un código y oyendo tiempo en señales sonoras o el equivalente verbal. Grande para la novedad, las persianas, la gente que trabaja en sitio oscuro de la fotografía, el etc.

EQUIPO de la AGUAFUERTE 2A-10: El mismo principio que el arte sano, el este vez el laser o el otro dispositivo de la aguafuerte es dirigido por las creaciones de los sonidos del usuario.

AURICULARES de la REALIDAD VIRTUAL 2A-11:

Oír los sonidos alrededor de usted de nuevas maneras como usted da une vuelta. ¡Disfrutar de la nueva opinión de la realidad diaria sin la pérdida de funciones! - Cada sitio entrado crea un diverso sonido, eg.: nuevo sonido del fondo. Sobre re=entry al sitio, un nuevo sonido no oído antes es posible.

RECORDATORIO de la PÍLDORA 2B140: Dice a usuario cuándo tomar qué píldoras.

Se desactiva Alerter cuando se saca la píldora. Existe.

. Tiene el memorizer, que anuncia su hora de tomar la píldora o de hacer tarea necesaria. Grande para esos perder su memoria. Los modelos del diseñador pueden dar los mensajes cortos del amor amados a sus padres en las horas preprogramadas del día.

. - conectable al dispositivo de la prótesis de oído; sistema de alarma de la vida (gente envejecida que presiona el collar que pide policía o ambulancia vía línea del teléfono ("T"), simplemente presionando el botón).

¿- Existe? Notas al pie de la página: Todos; exhibición; pp; P.M.; Reino Unido; fecha; portable; alerter; oscilador; cp.

. Para Techies: Todos; exhibición ("S"); pp; P.M.; Reino Unido; fecha; portable; alerter; oscilador; cp.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- píldora y (la alarma notifica recuerda la alarma) y (calendario del reloj de tiempo).

CHAPALETA del TIEMPO 2B-16:

En la palmada o el silbido conseguir el exterior del tiempo: apenas temperatura o el resto de vitals. Fuente: de los alambres a los instrumentos de medida electrónicos afuera; o el módem que los diales encima del tiempo mantienen número y respuestas del teléfono su aviso sobre altavoz o consigue el Info en código y lo traduce al tipo verbal preferred por el usuario o como determinado por el tipo usuario del producto compró. Ahorra el tiempo en que usted está consiguiendo se vistió para ir al aire libre.

- Poner el dispositivo cerca de los armarios donde se guarda la ropa, capas, en el interior cerca de la puerta.
- Puede ser activado presionando el botón también

PETICIÓN de la PALMADA 2B-17: el aplaudir es más fácil para el viejo que alcanzar/que camina para el botón de un intercomunicador. El número de palmadas señala se quiere qué, lo ahorra en trabajo de la enfermera y el tener que mayor entonces explicar sea disturbado por la enfermera otra vez con qué fue querida en el primer lugar.

- Cada diversa combinación de la palmada (por el número de palmadas, de velocidad, de tempo, de etc) significa un diverso comando
- El usuario puede usar el dispositivo como joyería, eg.: collar, pulsera; mantener monedero, el etc.
- El dispositivo puede también tener botones como una medida de reserva (o ningu□n audio se utiliza en absoluto); cada botón representa diversa petición (el usuario o el fabricante decide lo que significa cada botón); o diversas combinaciones de botones se pueden utilizar para transmitir deseos básicos (eg.: un botón representa un palmada, etc.)

MICRÓFONOS 2A-17-1: Programado para comenzar la grabación en la palmada o el silbido. Ahorra de la grabación excesiva. Paradas en un código levemente más complejo que reduce al mínimo grandemente la ocasión de parar el registro en el centro.

METROS de RUIDO 2A-18: Saber cuando alguien se está acercando, aunque pueden no saber los están midiendo. Comprobaciones para del metro sonidos familiares eg.: mecanografiar o cualquier conducción de automóviles en la calzada;

- moverse al "analizador de sonidos"

SISTEMAS DE DIRECCIONES PÚBLICOS 2A-18: la seguridad se notifica después de aplaudir semi-complejo, silbando, "absolutamente" alarma de la frecuencia accionada (eg.: llevado por los altos profesores de escuela de Reino Unido, de los E.E.U.U.). El sistema conoce el sitio de la fuente sana inmediatamente.

ROBUSTEZAS 2A-19: vienen cuando usted aplaude, silban.

MAMÁ 2A-21: Escribe letras a su mamá. Tiene toda la mamá jugosa de las cosas como para oír pero para en cuál usted está demasiado ocupado pensar. Permite que el usuario personalice la letra también. Las letras se convierten mejor que el auténtico y la mamá no sentirán izquierdos hacia fuera.

TRÍPODES 2B-22 y CÁMARAS: Las cámaras inmóviles y las cámaras de la película señalan a la dirección de la palmada o el silbido o el disparador teledirigido. El código aplaude el punto él en direcciones preprogramadas. Ideal para los consumidores. En la palmada, la cámara tira cuadros. O transmisor del director (eg.: según lo utilizado por los dispositivos teledirigidos para la TV...) puede hacer la cámara señalar. Valor: los centros representan correctamente para los cuadros inmóviles y móviles; permite que la cámara se mueva entre los primeros y segundos tiros....

MONITOR 2B-23: En una palmada, el silbido, cambiar de teledirigido o el tacto del botón con el código posible para la persona buscada, una puede ver rápidamente donde está la persona querida y ver lo que él está haciendo dentro de las premisas cubiertas por las cámaras. Cada miembro usa una brocha... que sea cogida por el sistema.

- Mirar su niño (ren), los viejos padres, la gente enferma, el etc.
- Los niños no necesitan siempre saber que la joyería que están usando contenga un transmisor

CONCLUYE el ARCHIVO 2BQ

Archivo: Archivo: Un B C/6BE

ARCHIVO 6BE

GUÍA del ESPACIO de ESTACIONAMIENTO 6B210: Parquea automáticamente el coche. Los jueces del sistema para la distancia y dan instrucciones el coche para mover las ruedas correctamente. La idea se amplía en concepto obvio.

. - medidas el espacio disponible para el paralelo o el estacionamiento del estacionamiento. Las dimensiones aparecen en la pantalla.

. - conductor de las guías en cuanto a hasta dónde y cómo deben conducir y dar vuelta a la rueda; ¡o mejores parques para usted! El sistema mide distancias, sabe tan no tocar todo lo demás.

. - algunos encintados de la calle pudieron ser difíciles para que el sistema calibre, por lo tanto: 1. el sistema entra mientras que el encintado cercano lejano como otros coches (en frente y detrás) se parquea; 2. el conductor puede entrar si estos otros coches

. - es probable este producto puede existir ya (el foco especialmente en invenciones recientes de enero de 1990, habla con los expertos autos si este producto existe con todo no es patentable).

+ se aplica al estacionamiento de: barcos, naves; carros; autobuses; aeroplanos y otros vehículos.

. Para Techies: "R"; "S"; pp; P.M.

+ "inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (coche auto) y guía y (el estacionamiento del parque parquea)

- Patentes de los E.E.U.U.: 5011356 4145681 4641994 410186 3942257

MAGIA de la VENTANA 6B270: Las cortinas se abren y se cierran automáticamente en las horas deseadas. Activado por el contador de tiempo, o el "sensor ligero" para la salida del sol y la puesta del sol.

- abre las cortinas, persianas, ventanas (en verano - oír los pájaros) en el tiempo señalado. También tiene el tiempo "S" y sonido de la alarma.

- enciende luces en el tiempo señalado

- el "mic al aire libre" amplifica el sonido de pájaros a partir de tiempo señalado. Continúa según PARA ARRIBA, después apaga.

- las ventanas se abren bajo condiciones siguientes: no hay lluvia, y la temperatura sobre y debajo de ciertos niveles. Los metros exteriores son necesarios.

- el dispositivo es útil en que deja a persona dormir durante madrugada con las cortinas cerradas. El levantarse es más fácil con las cortinas, y... su abierto las ventanas la manera natural de despertar.

- el sistema electromecánico entero con las cuerdas para las cortinas se diseña

- otro utiliza: reduce crimen haciendo a gente piensan que usted es casero mientras que lejos el vacaciones.

- Después de que este producto llegue a ser muy popular, puede ser diseñado para cerrarse/se abre en diversas horas cada día mientras que el usuario está el vacaciones.

- puede ser diseñado abrirse breve por las tardes en que hay una Luna Llena (quizá, cuando la luna se coloca para verter la luz en el cuarto). Agradable para la gente - quién pudo olvidar apreciar la luna.

- cortinas abiertas con el dispositivo de control de "R"

- las cortinas se cierran cuando consigue obscuridad, o cuando los programas del usuario, o seleccionan para cerrar en todo momento el aviso

OTD:

"R"; pp; P.M.; Reino Unido; fecha; hospitalidad; el escritorio de los hoteles abre las cortinas en el tiempo señalado por el cliente (la alarma y ajusta a las nuevas zonas de épocas naturales [que solucionan el retraso de jet])

- ver KN (invención) en directorio de A.

. A1-240 Windows interactivo y cortinas: Programas del usuario que se abren y horas de límite. Ejemplos: se cierra automáticamente durante la lluvia, se abre cuando se levanta el sol o cuando las alarmas del reloj de la mañana.

- Cuando llueve, o el viento sopla demasiado difícilmente, las ventanas se cierra automáticamente. La gente puede ahora con seguridad dejar ventanas abiertas para el aire fresco sin el miedo del daño de la lluvia.

- reacciona a los cambios en temperatura exterior también

- se abre en la luz del día y cerca de oscuridad exterior, por los sensores o el pedazo ligeros del tiempo programado ya para las transferencias y posiblemente las latitudes del tiempo del ahorro de la luz del día - las ayudas evitan el cierre prematuramente o en absoluto en épocas nubladas. Bueno para la salud del cuerpo, despertando naturalmente, prevención del hurto. Puede ser un aviso para la hora (alarma), romper-tiempo (café), está en armonía con golpe de la música, da el nivel correcto de cortina para las plantas. Mezcla con la máquina de la terapia. Persianas del cambio por el botón o el control de "R" (usted puede permanecer tan en cama, en el escritorio, TV, silla). Este "R" es característica estándar en TV "R", y o teléfono; o es un tipo chisme del interruptor ligero que hace múltiplo o todas las ventanas en la vivienda.

- OTD: también activatable es la abertura/el cierre de las persianas, ventanas, puertas, calentando sistemas de aire acondicionado.

- "Inclinación": controla las funciones del sistema, eg.: posiciones de las ventanas.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- la ventana y se abren y se cierran y automáticos. 0 palmaditas encontraron.

CALCULADORA del TIEMPO del MUNDO 6B310: El sistema más exacto para saber la época para cada región del mundo. Soluciona el apuro que los hombres de negocios internacionales tenían con cada país que comenzaba y que terminaba sus programas de tiempo del ahorro de la luz del día diversas fechas. Substituye cartas impresas de las zonas horarias. Puede ser combinado con las calculadoras, organizadores electrónicos del bolsillo.

. - Diversos países van sobre tiempo de los ahorros de la luz del día en diversas horas y otros incluso no lo tienen, eg.: México, Japón, Hawaii...

. - Los investigadores buscaron un dispositivo, que calcula el exacto contra tiempo aproximado, pero no podrían encontrar uno para la venta, ni tenía cualquier persona oída hablar la otra para la venta. Los operadores del teléfono que miran sobre la información impresa sobre zonas horarias dan con frecuencia momentos inadecuados - puesto que la tabulación correcta es levemente complicada e información ligera del día no se imprime normalmente. Esto es un producto muy importante puesto que el mundo es muy pequeño ahora, y los occidentales están llamando siempre por todo el mundo. Los que lo hacen así que hacen los sueldos más altos también.

. - Decir el dispositivo advertirle cuando es cierto rato en el país deseado, después la calculadora convierte a su hora local, así que usted puede entonces hacer la llamada deseada. Al fijar la calculadora en el modo, le dirá cuáles será la hora local.

. --Puede también ser fijado solamente dando la hora local.

. - Fecha (véase el papel de la definición)

- el sistema puede tener la opción de las alarmas del ajuste en cualesquiera de tres diversas zonas horarias, eg.: si las zonas horarias de Nueva York se hacen active, alarmarán en el 08:00, pero no alarmarán en absoluto si se desactiva esta característica o si las zonas horarias de Tokio son en funcionamiento.

. - esta opción se puede incorporar en los organizadores electrónicos (diarios), que son computadoras básicas de cerca de 0.3 kilogramos populares en el oeste.

- una versión del hardware de este producto es necesaria para la patentabilidad, como con todos los productos relacionados del software

. - el sistema dice a hora donde está el usuario

- mecanografiando en el número del teléfono de donde usted está, primero el código de área del país, el dispositivo le dirá la hora natural que es, eg.: Yalta está al este de St. Petersburgo, pero sus relojes son una hora detrás - con todo está realmente (mirando la posición del sol) más adelante en St. Petersburgo. Este dispositivo está para la diversión curiosa.

- OTD:

Todos; "S"; "C"; pp; P.M.; Reino Unido; educ; hospitalidad; portable; punto de ebullición; alerter; oscilador; vc; cuenta; carro; cp; uq.

- copiado más adelante por Seiko y uno o más empresas de informática de la PC. Todo alcance del mercado de consumidores.

- ver: ajustador del retraso de jet 5J07: Los usuarios de las ayudas ajustan horario el dormir antes y después de la llegada en nuevas zonas horarias.

--Si los planes de u (usuario) en hogar de vuelta (dentro de una semana) los ajustes en las zonas horarias temporales no van hasta el final = dando por resultado el usuario que vive en zonas horarias entre ambas zonas horarias. Las ayudas u comienzan el ajuste antes de la salida de hogar.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (zona del tiempo near/6) y (tiempo ligero del ajuste del ahorro del ajuste del ajuste del día)

- Patente 4102121 de los E.E.U.U.

+ LUZ MÓVIL 6B780: El movimiento "sensor" ordena la luz para seguir a persona mientras que se mueven.

- conveniente; ahorra costes laborales en teatro; uso en las calzadas del jardín para el efecto dramático.

o cómo se identifica el paradero de la gente:

- el movimiento "sensor" puede utilizar disparar del sistema del laser

- los agentes usan los transmisores que identifican su lugar o son identificados por otros medios; reduce la necesidad de un hombre de la cámara y de los controles complicados que necesiten ser aprendidos y puede estar roto

. - sin embargo no puede estar para el ballet más sofisticado, hará para los juegos de la High School secundaria, el etc

. - el sistema es muy básico y económico: las luces vienen en uno de varios las medias cajas abiertas (que hacen instalaciones fáciles), cada caja pudieron tener uno o más luces por agente, dependiendo utilizan a cuántos agentes

. - también pistas: animales; objetos (vehículos); objetos llevados.

OTD:

Activar el movimiento de luces por la persona ligera que utiliza controles de "R" (ahorra de necesitar los alambres); "C"; pp; P.M.; controlar las luces vía ratón o el palillo de alegría; hospitalidad; juguete; todos (excepto: #6); juego; ejercicio; portable; índice de inteligencia; "M"; punto de ebullición; alerter (en el momento de la instalación, antes de sistema el comenzar [para el juego, el etc]), oscilador; vc; cuenta; enseña a actuación; md; carro (software y o soporte físico para la generación del efecto); cp; acceso.

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

- otros factores (que influencian cómo las luces son controladas): vagos; multiusos (vagos) de persona seguida; uip; tipo de situación (según lo determinado por los vagos, uip, multiusos, tds, sensor, analizador (de la representación visual)). --Eg.: si hay mucha gente cerca de la persona que es seguida (determinada por va o la hora w (con) mucha gente encontrada comúnmente) = la luz es menos intensa, o no funciona en absoluto, ni utiliza diverso sistema para seguir a persona.

. --Eg.: el tipo (color de) luz depende de persona o del segmento del tiempo del juego del teatro.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (laser de la luz) y (seguir el movimiento de la pista) y (teatro del agente de la persona) - kilovatio: sensor

ENMASCARADO SANO 6B840:

+ el sintetizador marcará con etiqueta especificó sonidos según su dirección, distancia, frecuencia y los altera según el UIP en cualquier cosa sintetización avanzada directa disponible.

+ puesto que puede haber un boquete de poca monta entre el principio de sonidos indeseados y de los sonidos que enmascaran, el interino entre los sonidos utiliza el "uip-DB" a partir de diez minutos anteriores para predecir probables sonidos futuros.

- abajo pueden todos existir:

Desarrolla sonidos especiales del fondo en el sitio, enmascarando ruido indeseado. El dispositivo desarrolla los sonidos diseñados para cubrir sonidos de la calle, de vecinos, de las impresoras de "C", del etc.

- el sintetizador funciona según el tipo sonidos que vienen del ambiente para el efecto máximo.

- Sonidos del fondo: Propósito: Para convertir y o eliminar sonidos indeseados. Convertido y o (o reducir) sonidos cortados de las direcciones indeseadas, frecuencias, distancias.

- el sintetizador balancea los sonidos indeseados; desarrolla los sonidos que hacen que el ruido indeseado aparece menos obvio, eg.: tráfico de coche (motores y neumáticos convertidos al viento; cuernos convertidos a los sonidos del pájaro); perro del descortezamiento convertido a los sonidos de la selva con los pájaros, monos, viento y lluvia ocasional o tempestades de truenos

- conversiones de la muestra: los sonidos exteriores de las construcciones se convierten a los sonidos de una fuente de agua; traficar los sonidos convertidos a los sonidos en el bosque, incluyendo los pájaros, agua, viento, sonidos caminando sobre las hojas secadas;

--Los sonidos se pueden también convertir en: ondas de océano con el griterío de las gaviotas de mar poco; tambores jamaicanos apacibles; etc

¡- hay un mercado enorme para este producto si es bueno!

- el usuario puede seleccionar a que el tipo de conversión él está buscando

- cualquier sonidos que enmascaran; o suena quizá el funcionamiento en frecuencias opuestas pudo ser utilizado

- Usos: hogares; ningul□n lugar en donde la gente quiere estudiar pero no puede conseguir reservado; restaurantes nuevos en el oeste; transporte público

. Para Techies: Control de "R" (el usuario puede seleccionar que las opciones ellas quieren el funcionamiento); "S"; "C"; pp; P.M.; Reino Unido; fecha; beh del usuario; interactivo; juguete; todos; hospitalidad; "mic"; t; "M"; oscilador; vc; cuenta; carro (posibilidades de la generación de los sonidos); RPC; uq; mq; uip.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- Sistema 1 y sistema 2. El canto escribe quizá todos en una secuencia debido al qpat.

--Sistema 1: (sonido del ruido) near/6 (el preceder anterior temprano anterior)

--Sistema 2: cancelar la máscara de la cubierta de la piel

- Palmadita de los E.E.U.U.: 5481192

CONCLUYE el ARCHIVO 6BE

Archivo: Un B C/6BG

ARCHIVO 6BG

CONTADOR MÚLTIPLE 6B080: El contador de la mano cuenta 5 tabulaciones múltiples simultáneamente. Ejemplo: el pulgar activa el número de gente que entra, el otro número de la cuenta de los dedos de gente que va a las secciones particulares del edificio.

- cantidades de las cuentas dentro de cada tipo categoría. Eg.: el dispositivo tiene cinco modos, y cuando en cualquier un modo, persona que cuenta a pasajeros que entran en el aeroplano para un estudio cuenta el número de gente con dos continúa bolsos, modo siguiente está para ésos que llevan tres cosas, etc.

. - los contadores convencionales manuales comunes apenas cuentan el número total sin importar tipo, eg.: un contador para todos los pasajeros, sin importar tipo

. - aplicaciones adicionales: el protector en la entrada del edificio cuenta el número de gente que continúa caminando en el edificio según qué sección están incorporando o su tipo de paso de la entrada, el etc.;

+ electrónicamente, el dispositivo se puede diseñar para manejar hasta 100 o más categorías. Vía: un botón que selecciona el mode= permite a los botones restantes tener modos múltiples.

. - también una versión mecánica con cinco contadores idénticos, cada contador tiene un número impreso sobre la cubierta para identificarla por separado. Diseñado tan puede ser utilizado con una mano y los cinco dedos. O si es fácil, habría cuatro contadores en lugar de otro.

. Nota al pie de la página:

. - cada cuenta puede ser con impresión horaria para desarrollar mejor cartas y el gráfico.

. - el número de categorías pudo estar cerca de infinito, si el usuario mecanografía simplemente adentro un código después de que cada cuenta (en otro archivo dentro de la invención, cada código puede ser explicado) Códigos: todos; "S"; Reino Unido; fecha; portable; t; "M"; punto de ebullición; oscilador (cuando cierto número deseado se ha alcanzado - demasiado grande, o demasiado grande en una categoría en lo referente a la otra categoría, etc); cuenta; cm. % "de la inclinación": el número de movimientos/tipo posiciones representa la cuenta de funciones del mecanismo.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (la calculadora calcula cuenta tabula) y dedo

GENERADOR ELÉCTRICO del SABOR 6B720. El alimento se sirve con el sonido y el olor que emiten efectos. Realza sabor y la experiencia del alimento sin la ingestión química. Crea el nuevo tipo gustos no posibles antes. ¿Las patentes relacionadas anteriores archivaron, más adelante unas copiadas?

- el gusto es la combinación de sensorio recibido por la lengüeta (limitada a cuatro sabores) y de las mayores variedades de olores perceptibles por la nariz

. - substituye limitaciones de productos químicos en alimentos (porque los agentes carcinógenos, las toxinas...); conseguir el impacto mucho mayor iguales/de otros productos químicos emitidos en aire por los gramos que se absorben en cuerpo vía nariz contra comido.

. - puede también ser vendido a la gente que carece tastebuds; querer experimentar con los nuevos alimentos, experiencias

. - olores que realzan o reducen el apetito (emitido con o sin el alimento y o las píldoras)

. - TM: alimento de la realidad virtual, realidad virtual del alimento, olor, alimento del olor

. - debe poder demostrar a un fabricante algo de los olores potenciales que pueden ser creados y de cómo; no debe utilizar ninguì□n agente carcinógeno sabido

. - los gustos w5 (automáticamente) se crean (para multiusos) vía: uip; vagos; humor; hospitalidad.

--las listas de productos químicos (con olores) que se sabe para ser sabroso a la gente (o a los animales) se pueden utilizar en ensayos para seleccionar los productos químicos factibles. Esta lista incluye: utilizado previamente/aprobó los elementos, prohibidos más adelante por los gobiernos (el FDA de los E.E.U.U.)

- los efectos (del gusto) pueden ser emitidos (solamente cuando): sensor del borde de cristal del tacto de los labios; tacto del utensilio del alimento (bifurcación, cuchillo, cuchara, paja, palillos) ['área señalada] de la placa o del tazón de fuente.

. --D: el utensilio o los labios - > activar el sensor - > C (computadora del `) = crea efecto 5 segundos después de cada activación.

. Para Techies: Efectos de emisión sanos; todos; efectos deseados pp; P.M.; Reino Unido; hospitalidad; portable; índice de inteligencia; t; punto de ebullición; SP; carro (del olor que crea elementos); (burbujas de las réplicas del oscilador) o el chisporrotear (de la carne).

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- (gusto del sabor) y (sensor electrónico) y (artificial emitir activan generan)
- Patentes de los E.E.U.U.: 5261424 5060671 4947875 4947874 4922901 4735217 4446747 4068672 3881059

INTERRUPTOR DISTANTE de 6B750 TOUCHLESS: Gente en un cortocircuito o una distancia lejana del dispositivo, unidad de control bloqueando uno o más rayos laser.

- mandar los lasers en distancia grande (o muy corta) el público y los miembros del grupo pueden disparar el sonido que crea ligero y o la música. Esto es o es similar al teléfono copiado existente del telclado numérico de la invención de la arpa del laser, y del laser de KN.
- cada secuencia (de rayo láser) tiene diverso sonido
- algunos botones o secuencias pueden también accionar sonidos del fondo, eg.: orquesta del fondo
- los modelos pueden trabajar en la luz y o la obscuridad
- modelos para uno o más jugadores: la distancia entre el transmisor y el receptor pudo ser ajustable
- cada secuencia pudo estar de diverso color: si la visibilidad de la luz es un problema para algunos usuarios, después una línea se pudo pintar sobre el fondo que demostraba la localización de rayo láser.
- puede ser diseñado como instrumento especial con opciones de 100 de sonidos, o ser diseñado representar a: la arpa, va (arpa japonesa como el instrumento que es tocado desplumando cada secuencia), etc.
- los lasers se pueden programar por el usuario: hacer un solo sonido en la viga del tiempo está quebrado por el dedo, el etc sin importar cuánto tiempo la luz fue interrumpida; o, el sonido continúa durante la duración entera de la interrupción ligera

. OTD: Los jugadores adicionales pueden jugar utilizando sus instrumentos controlados de "R" transmitidos en el receptor del dispositivo, que se pudo colocar lejos de la unidad principal bloqueada por el jugador. Códigos: "S"; "C"; pp (salidas sanas deseadas, etc); P.M.; Reino Unido; interactivo; juguete; todos; hospitalidad; "mic"; synth; portable; índice de inteligencia; "M"; punto de ebullición; alerter; oscilador; vc; cuenta; carro (tipo sonido que hace opciones); RPC; uq.

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

LOCALIZADOR de la TENSIÓN 6B820: sitúa qué músculos tienen más tensión y o ser más apretado.

. - estar del valor (no requerido sin embargo) si el dispositivo se podría utilizar por no los doctores (sin embargo podrían tener una licencia de practicar masaje después de un año de entrenamiento). Por lo tanto el artículo debe ser totalmente seguro de utilizar.

- la demostración de los estudios tal producto podría ser útil puesto que muchos usuarios no saben articular exactamente donde están los dolores principales; también del uso a los doctores para la diagnosis de dolencias

OTD:

Segunda parte de masajes del dispositivo. Códigos: "S": demuestra qué músculos son tensos; "C"; pp para las secciones del cuerpo que quieren ser comprobado; P.M.; Reino Unido; beh del usuario; educ; todos; hospitalidad; ejercicio; portable; índice de inteligencia; "M"; alerter; oscilador; cuenta; tgh.

. - también medidas que las partes del cuerpo (músculos) son fatigadas, sobre trabajado; músculos tirados o de otra manera funcionamiento en la manera óptima.

. - método de identificación (como existe), eg. diferencias en: la química o la fatiga o el otro condition= según lo visto vía cualquie de los exploradores existentes (CAT, va), (analizadores existentes del músculo); etc.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- el músculo y (tensión tensa) y (identificar localizan el aislante) los E.E.U.U. patenta: 5368042 4688581 4236528 4240444 4318301.

ANALIZADOR MÉDICO del OLOR 6B940: El dispositivo mide los cambios corporales del paciente cuando las sustancias particulares que olían encontraron para causar respuestas inusuales si la persona es ayudas de la reacción del paciente de Illinois determina el tipo enfermedad. Este sistema conjuntamente con otros sistemas que analizan se utiliza para compilar las listas de características del comportamiento en la definición de las causas de enfermedades desconocidas.

- el 'analizador = las cuentas = cambia en: humor; comportamiento [vagos] = cuando la persona huele ciertas emisiones de olor. Medida tomada vía: La exploración de CAT, los alambres enganchados sobre cuerpo, el nivel y el tipo de sudor (el contenido químico puede cambiar), el movimiento de ojos, la presión arterial, y los otros sensores y equipo diversos.

- Eg: reacciones positivas o negativas del usuario a la alergia potencial que induce sustancias. Incluso la repulsión (suave) se puede influenciar por los síntomas subconscientes u otros del cuerpo que intentan evitar sustancias negativas.

- Eg: puede ayudar a identificar sustancias adictivas según vagos, tales como golpe o neurosis de corazón del u sube, o el cuerpo suda más cuando hacen el usuario para pensar en o entra en el contacto con la mente que altera las drogas. Esto tiene que ser equilibrado contra el excitement= de la población sana que requiere los vagos adicionales (analizador del comportamiento del `) (escrito, psicologico) las pruebas y desarrollo del DB del uip- (base de datos).

- todo el útil desarrollada del DB del uip- (base de datos) para otras bases de datos: uip; vagos; investigación médica/científica general.

. - también probar las reacciones de todos los organismos vivos: animales, plantas, insectos, organismos acuáticos (las sustancias del efecto de las medidas en agua tienen en ellos).
- 'tracks= del analizador todas las reacciones de cada sustancia contra tipo: organismo/cantidad/frecuencia de contacto/de sincronización (patrón, tds) - > desarrollando un gráfico científico/DB
. Para Techies: Todos; "S"; "C"; pp; P.M.; beh del usuario
. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:
- (la contaminación del polen del polvo del aire del olor del olor inhala la respiración del inhalador) y (la reacción reacciona el apego del alergénico de la alergia) y (la medida de la prueba tabula el monitor del estudio de la cuenta identifica) y (medicina médica humana de la persona).
- kilovatio: detectar

CONCLUYE el ARCHIVO 6BG
Archivo: Un B C/6BI

ARCHIVO 6BI

FAX ALEJADO 6B410: de su dispositivo portable, llave en número del código y de teléfono o el código de recibir el fax o el dispositivo. Su código en resumen formará el mensaje del estado deseado transportado, sin la complejidad de tener que encontrar un "T" y entonces hacer la llamada, el etc, también ahorrándole tiempo, o allí no es quizá "T" alrededor
- el dispositivo que transmite puede ser: "t", o cualquie otro sistema transmisible vía el aire, o el dispositivo que el usuario puede poner hasta el microteléfono regular o del público celular "T"
- el receptor puede ser máquina de fax regular con capacidades de recepción especiales; un sistema de "C" que leerá los códigos y el "S" ellos o los interpretará para el lector en la recepción de la localización.
- El cojín en transmisor puede dejar a usuario escribir en los mensajes para la transmisión.
- El dispositivo portable, incluso sobre el tamaño del paginador común del bolsillo más un teclado minúsculo, puede enviar mensajes a una "C central" que entonces retransmita los mensajes a cualquier máquina de fax.
- Propósitos: decir el partido de recepción que usted está viniendo tarde, "hola mi amor", etc. Para la comunicación corta. Ahorrar de conseguir a una paga "T".
. Para Techies: "S"; "C"; pp; P.M.; Reino Unido; fecha; "mic"; impresora; punto de ebullición; alerter; oscilador; vc; carro; cp; acceso.

PAGINADOR VERBAL 6B411:
La llave en un mensaje, o habla un mensaje, después el dispositivo transmitirá a "C". Esta "C" entonces transmitirá vía línea de "T" la entrada memorizada.

Después de mecanografiar en resumen el mensaje, transmitir vía ondas de aire, la "C central" pudo también llamar el partido deseado y hablar hacia fuera una declaración registrada de la voz, eg.: "Hola Nancy, ésta es David, yo será hogar el mañana por la mañana" --(este tipo de grabaciones salientes es ya común en el oeste para otros tipos de situaciones, eg.: las compañías de la comercialización llaman hogares y dan avisos registrados de las ventas.

--si "C" no reconoce una palabra de su memoria (inverosímil), dirá que "explicaremos la palabra siguiente del mensaje...."

- las transmisiones en este sistema necesitan ser más baratas que vía "T celular".

- El golpeteo verbal portable puede recibir mensajes de la manera similar a.

. Para Techies: "S"; "C"; pp; P.M.; Reino Unido; fecha; "mic"; impresora; punto de ebullición; alerter; oscilador; vc; carro; cp; acceso.

FAX del COLOR 6B430: transmitir cada color por separado. Cada separación se cifra para el tipo color (y o parte o sección de la imagen). El dispositivo de recepción asigna el color y compila las imágenes múltiples en las combinaciones que crean color.

- Sistema similar para las transmisiones del módem (sea por línea o el aire).

- Ser extraordinariamente cauteloso: ¿obvio o tecnológico demasiado difícil? Muchos están pensando ya de cómo tener fax del color.

- apresurar una transmisión, usuario puede solicitar el dispositivo para combinar más colores que normal por el sistema de imágenes enviadas, eg.: el azul y el amarillo se podían separar normalmente, o combinar en un solo color, eg. una cortina particular del gris, o del verde - de tal modo apresurando y simplificando la transmisión

. Para Techies: "S"; "C"; pp; P.M.; Reino Unido; fecha; juguete; hospitalidad; portable; t; punto de ebullición; alerter; oscilador; vc; carro (con excepción de la tinta o del papel); cp.

TRANSMISIONES TRIDIMENSIONALES 6B440:

- transmitir las imágenes tridimensionales para el negocio, las persianas, el etc.

Vía el módem transmitir los códigos de Braille, el dispositivo de recepción crea en Braille sobre menos material costoso (PVC (plástico), tipo material del tablero de tarjeta, o pantalla de Braille (véase las notas).

Transmitir las imágenes tridimensionales, eg.: esculturas minúsculas de piezas, del etc. O enviar los códigos vía los cuales la recepción del sistema automatizado puede entonces hacer los mismos tamaños y las dimensiones en los materiales deseados, especialmente un cierto tipo del plástico o el metal

- puede ser hecho tallando las secciones indeseadas del bloque

- para una transmisión más fácil, considerar solamente enviar las imágenes para un lado de un artículo a la vez. Eg.: usted inventa un nuevo producto electrónico y quiere demostrar el diseño de cada uno de los seis lados en seis diversas transmisiones. Esto se podría también hacer vía usar 500 pernos, que pueden entrar hacia arriba o hacia abajo en diversas posiciones según el código digital.

- la nota, el producto siguiente existe:

Imaginarse el poner de su mano en la nieve, él deja una impresión. Imaginarse el poner de su mano a una toalla que sale de una impresión interior y exterior. Lo que sigue existe: poner sus manos sobre un dispositivo con muchos pernos (no lastima) y como usted presiona, el otro lado del dispositivo demuestra la impresión que usted dejó.

OTD:

Juegos; "S"; "C"; P.M.; encima de; Reino Unido; fecha; interactivo; educ; hospitalidad; índice de inteligencia; impresora; "M"; egh; cuenta; carro (para los tipos de comunicación); "T"; tr; MES; fs; RPC; cp; uq; mq; acceso.

ESTEREOFONIA PORTABLE 6B530: combinación de alarmas en auriculares si: su beeper/paginador se está apagando (alarmando); sonido del timbre; el sonido externo es alto (el sistema amplifica ruido exterior si su frecuencia o volumen adentro cierta eg.: sonidos de los cuernos de coche estándar, el screeching de los coches que vienen aprisa parar, etc).

- Lo que sigue existe ya: cuando el "T" suena, el volumen de su TV, estereofonia va abajo
- el sistema es un sistema de alarma también, con el ajuste de alarma programable ese usuario de las señales cuando es tiempo
- puede ser parte de walkman, de estereofonia, de etc

. Para Techies: Todos; "R"; c; P.M.; encima de (ser interrumpido para los ciertos sonidos o situaciones); interactivo; "mic"; "M"; punto de ebullición; alerter; oscilador; vc.

CÓDIGO de COLOR 6B590:

El explorador coge solamente ciertos colores. Permite que el usuario anote las cosas para ciertas aplicaciones con todo no deseadas para la entrada en "C".

- cada color (aspecto de la información) se puede separar fácilmente una vez dentro de "C", para corregir, el etc.
- Similar a la idea sobre las máquinas de la copia (eg.: Xerox) que no copia el azul del color.
- El usuario puede seleccionar colores al escribir sobre el papel, y o cuando da instrucciones "C" o el otro dispositivo para poner ciertos colores en el suelo.
- Muchas aplicaciones, por ejemplo:

--el usuario puede escribir en el azul (no cogido por el explorador) al hacer notas sobre el papel que no quiere cogido

--un ciertos datos son necesarios, otros no están para la ocasión particular (el usuario decide qué colores están o no se quieren para la ocasión).

- Las plumas se pudieron vender con el dispositivo, asegurándose que tal escritura no sea cogida

. Para Techies: "S"; todos; "C"; pp; P.M.; Reino Unido; educ; juguete; juego; hospitalidad; portable; sst; t; "M"; punto de ebullición; carro (eg.: para trabajar con ciertos colores); cp; uq; carácter.

PROTECTOR del OLOR del ™ de la MOFETA 6B660: emite el olor terrible para disuadir a la persona que ataca o que quiere violar. El olor se diseña científico para apagar a gente. No dañoso a los seres humanos.

- Ropa de la mancha de t de Doesn'
- algunas versiones pudieron permanecer con la persona que se rocía en por una época que es (como cómo una mofeta trabaja) ayudar a policía a identificar al bandido
- la dispersión del olor pudo también estar con la tinta (probablemente rojo), que también ayuda al bandido de la etiqueta (la tinta puede eliminar en lavadero)
- esto es diferente del gas lacrimógeno, aunque el olor se pudo mezclar con el gas lacrimógeno (los lugares donde está poder el gas lacrimógeno ilegal apenas tienen los productos químicos del olor)

. Para Techies: La poder de aerosol emite hacia fuera hasta 5 metros o más, trabaja así que no consigue el aerosol sobre el usuario; Todos (excepto esto no está un dispositivo electrónico, sin los elementos #6, #7, #8, #9 en "toda la" sección); portable; cm.

El usuario puede también botón lanzar el olor sobre bandido mientras que están saliendo de estancia. Eg.: el área de puerta de salida tiene movimiento "sensor" y lanza el olor o la tinta cuando las caminatas de la persona compran...

CONCLUYE el ARCHIVO 6GI

Archivo: Un B C/6BQ

ARCHIVO 6BQ (era el archivo 6A)

MENSAJE de TELÉFONO 6B010 RETREIVAL: si el llamador deja el mensaje, el recipiente debe volver llamada para conseguir el mensaje. El recipiente que quisiera que los amigos sintieran voluntad cómoda tuvo que llamar detrás y por lo tanto llamador pudo sentir un mensaje que se iba más cómodo. El recipiente pudo después conseguir a llamador y hablar con ellos directo si el llamador original está en su teléfono ("T").

CALCULADORA del RECONOCIMIENTO VOCAL 6B070: anunciar verbalmente los números que usted quiere calculado y cómo.

- PARA ARRIBA: La calculadora repetirá verbalmente detrás los números y el método de cómputo (asegura exactitud)
- la respuesta matemática se anuncia verbalmente y o se exhibe

DRAMA INTERACTIVO 6B090: el sistema hace a agentes preguntas; inversos con ellas; juegos con ellos; etc. La actuación del dispositivo conectado con la cámara viene en las cintas/los discos que pueden ser

comprados. Introducido le, verlo en la pantalla de la TV, y agentes puede responder. La versión final de la película demuestra las versiones preprogramadas y posteriormente desarrolladas en la orden deseada.
- esto da las ideas de la gente para la película
- cintas de la compra de la gente que pide que los usuarios (agentes) se rían; loco; cosas creativas; ejercicio. O práctica para: el solicitar un trabajo; ventas; entrenamiento del servicio de atención al cliente.
--la persona que ve la versión final, pudo poder juzgar cómo los buenos agentes están para los tipos particulares de trabajo - la persona que es calificada para juzgar comportamiento puede ver a más gente esta manera que personalmente
- bueno para la terapia. psicologico: actúan hacia fuera los comportamientos que ayudarán a la mente; comprobación: el movimiento de ayudar al cuerpo físico - el doctor del paciente pudo repasar las cintas para cerciorarse de que los movimientos del cuerpo se están haciendo de manera correcta - este sistema interactivo seguiría naturalmente personalmente sesiones de práctica.
- crear las películas bien hechas con los avisos diseñados para el sistema o el número flexible de agentes para completar.
- los agentes comienzan a actuar en el aviso del sistema, o el agente recibe el aviso del sistema después presiona una tecla de partida cuando está listo. El anterior es bueno en que induce a gente que actúe con la espontaneidad - la demostración de los estudios que cuando la gente tiene que elegir cuando ella comienza, su creatividad es más probable congelar.

("R") CONTROL ALEJADO 6B140: girar la cámara con ("R") control alejado. Ventajas: ninguna limitación de alambres (la longitud limitada, enredos, cuerda pudo demostrar debido a cámara)
- girarse de otro sitio, sin la persona que es vista siendo consciente

ESTIMULADOR del OLOR 6B150: hace a gente que es más fotogénico fotografiado sobre los olores que huelen emitidos. Diversos olores para diversos tipos de efecto deseado. Los olores pueden también ser similares a los de situaciones relacionadas reales, para ayudar a una persona a volver a vivir las experiencias anteriores relacionadas que tienen en cuenta una mejor actuación, eg.: piden los agentes imaginarse que están hablando con la persona encantadora y huelen el perfume o el cologne de esa persona.

EXHIBICIÓN de la CARRETERA 6B190 ("S"): demostraciones: velocidad y o densidad del tráfico a continuación (para el número señalado de kilómetro a continuación); el mismo Info para otro encamina un conductor pudo elegir hacer a continuación; velocidad del recorrido sugerida (existe)

6B230 TICKETER: si un boleto de cualquier tipo fue publicado contra el coche y o el conductor, limpiar los sacadores en llaves para efectuar en el coche sí mismo. Este empleado del gobierno puede necesitar llave

especial, el código, o dispositivo vía el cual para tener tal acceso en el dispositivo de la grabación (evita a vándalos).

- propósito: el dueño del coche sabe si el conductor hizo algo malo, y o está sujetando a dueño a las penas si el boleto era o no era pagado; sabrá si el boleto es pagado; el gobierno pudo encontrar tal organización en el coche sí mismo del interés (la custodia de registro)

SISTEMA de IGNICIÓN del CÓDIGO de ACCESO 6B250: Comienza solamente la ignición sobre afinar en código correcto, más el uso de la llave. Este producto pudo existir ya, habla con los expertos del coche y hace una búsqueda de la patente.

- marca: código del coche. ¿Obvio?

RELOJ de la LUZ del COLOR 6B290: emite luces múltiples del color en el tiempo de la alarma y o cada hora (o cuando ENCIMA DE).

- sonidos cuando está deseado

ESTAMPILLA de FECHA del TIEMPO 6B300: la característica obvia llama automáticamente en el número del teléfono ("T") o la otra fuente para conseguir el tiempo exacto. Hace esto periódico. Pudo ser hecho fácilmente simplemente con el acceso de un módem en un ordenador principal ("C")

ALARMA del FABRICANTE de CAFÉ 6B320: sonidos cuando está listo, o al casi secarse encima de la hornilla activa (este 3ultimo ocurre juzgando el peso)].

- el dispositivo apaga automáticamente sin la necesidad de la alarma cuando el peso de la jarra cae a cierto nivel; o el dispositivo sabe vía otros mejores medios cuando se va el líquido.

--sin este sistema, la jarra cualquiera se rompe cuando consigue caliente y vacia, o el dispositivo da vuelta apagado después a hacer el café y debe todo estar borracho antes de conseguir frío

- el calentador de la jarra reactiva cuando nuevo café o agua caliente plana

se hacen en el sistema

- "S" demuestra el número de tazas de la izquierda líquida (taza de café del tamaño estándar de las aplicaciones como medida). El cálculo se hace vía peso.
- "S" demuestra cuando el líquido fue elaborado cerveza por último (induce a gente que elabore cerveza tazas de café más nuevas, especialmente en oficinas con mucha gente, y cuando la gente no sabe cuándo fue elaborado cerveza por último.)
- hace un sonido cuando toda la cantidad completa de líquido caliente está lista, eg.: un sonido corto alegre del monosílabo

FABRICANTE de CAFÉ MODIFICADO para requisitos particulares 6B321: El nuevo café se hace automáticamente cuando 6B230 determina el café ha funcionado hacia fuera.

ANALIZADOR del COMPORTAMIENTO 6B330 y FACTORES AMBIENTALES: Interruptor que correlaciona todos los grados dados en las escuelas, universidades, funcionamiento del empleado con acontecimientos externos; cambios en hotel y reservaciones del recorrido; ventas de artículos; médico (comprobación y o salud mental); control de calidad en empleados; etc. eg.: nuevos políticas, acontecimientos de noticias, etc. El sociólogo, el psicólogo etc pueden encontrar este Info valioso para la organización específica y o las industrias o los tipos específicos de organizaciones en conjunto.

- UIP-DB. Los VAGOS utilizan este Info para el arreglo para requisitos particulares.

GONIÓMETRO 6B360: alarmas si una sección o una parte del producto no está en la relación correcta a otras piezas o a la pieza principal de la maquinaria, robusteza, dispositivo.

- El h esto es vago, encuentra los usos únicos (el tiempo mínimo del gasto)

6B380 PUERTA GREETER: sobre área que entra cerca de la puerta principal (el detector de movimiento detecta a persona), o, el carillón de puerta de sonido, sistema anuncia algo en palabras, o sonidos (eg.: música). Pueden indicar, el nombre de la familia, la compañía, hola, el fabricante del etc. o el usuario puede registrar el aviso saliente.

+ puede registrar el mensaje de la campana de puerta el sonido de la persona

- D: persona (del peso o de la altura mínimo) = sensor (movimiento/escala) = c = oscilador/S.

SISTEMA DE VIGILANCIA de la MANERA de la ENTRADA de PUERTA 6B381: búsquedas y bandidos de los retenes (el sistema es banda a buscar). Analizador visual.

- D: persona = cámara = analizador visual = analizador = oscilador/s/impresora/[t = llama = policía].

FAX de TIEMPO 6B400 Y de la ESTAMPILLA de FECHA: tiempo de expedientes del fax adentro y de la salida

- La persona de quien recibió (pudo saber vía el número del teléfono de remitente - en algunas regiones de mundo, de demostraciones del receptor su teléfono #); remitente que envió el fax.

- Aplicaciones la tecnología actual existente de la identificación de llamador (el receptor de la llamada del teléfono ("T") puede identificar el número del teléfono del llamador): si un mensaje de fax fue recibido pero no transmitido bien bastante, el sistema puede decir al usuario de donde vino el fax (el fax está faltando quizá el número del teléfono y o fax y o dirección del remitente debido a la falta mecánica o al mindedness ausente del remitente)

- copiado a: verificador del contenido 4e020 y de la fecha, secretario, el TDS% - 8.95

TRANSPARENCIAS del FAX 6B420: enviar y recibir las imágenes, que se pueden entonces demostrar vía un proyector ligero (luz de la demostración con imagen y proyecto sobre una pared). Puede requerir el proyector especial.

- enviar y recibir las diapositivas del cuadro (eg.: diapositivas de cuadros de la cámara). Proyecto vía el proyector de diapositiva.
- sistema similar para las transmisiones del módem.
- objeto de valor para las presentaciones del grupo

PANTALLA de 6B450 BRAILLE: dispositivo que hace estallar fácilmente hacia fuera los pernos que crean las letras que en golondrina de mar se pueden poner detrás abajo y hecho estallar retirarse otra vez = como una pantalla de la CRT para las persianas, etc.)

- Cada punto (varios o más los puntos hacen una letra o un número) se pudo crear por un o vario pernos muy finos.
- puede recibir la información vía el módem, computadora ("C"), reconocimiento vocal, dispositivo el tomar de cuadro (toma cuadros del ambiente o de palabras impresas), exploradores.
- la pantalla solamente pudo estar a parte de electrónica y puede ser llevada y o ser enviada (eg.: para las letras personales) y o producido en masa a partir de una fuente original. La pantalla pudo ser reutilizable (un poco como una cinta de cassette en blanco).
- Para [no] la vista deterioró a gente también; ver las cosas tridimensionales
- puede recibir datos de discos de la computadora ("C") también (la manera mucho menos abultada de ver las cosas tridimensionales)

DAR LAS TABLETAS ESCRITAS DE LA ENTRADA DE LA IMAGEN - TELEDIRIGIDAS/ACCESO:

. 6B500 controlado por menú: las opciones surgen en tactos de la pantalla y del usuario simplemente dentro del cuadrado para la opción deseada

. selector del color 6B520: pulsando la tecla del color deseada, de todos los movimientos de la llave, movimientos, etc estar en ese color hasta que se seleccione la otra opción del color.

- el mono cromo o el negro/el blanco es la opción si no se selecciona ningu□n color anterior

. 6B540 (era 6A-54) m+ consiguen vibraciones convertidas de sonidos. Los cojines de la vibración se pueden colocar en cualquier parte del cuerpo; silla; el panel de tacto en el portable o sistema no portable de la música, tactos de la persona para la vibración cuando sienten como él. Cierto porcentaje de la población disfrutará más lejos de la experiencia de la música, especialmente para la danza y los sistemas de la roca y del rodillo.

AUDÍFONOS 6B550: la emisión de olores particulares tiene ciertos significados, eg.: emergencia. El comunicador, ayudas substituye el oscilador.

- La vibración se puede dar para el efecto similar, y puede ser un sistema de alarma más rápido

RECORDATORIO de la PLANTA 6B560: ENCIMA de frecuencia el tipo planta debe ser regado. En cada uno que riega: presionan un botón; o sentidos del "sensor" cuando está regado (esta sección para una protección más fuerte de la patente). Demostraciones del sistema entonces
número de días hasta el riego necesario.
- alarmas si riega necesario o atrasado vía: luz que destella, sonido - puede ser continuo o por intervalos
. Encender las demostraciones cuando el riego es necesario. Provechoso para las áreas donde está difícil el drenaje, eg.: pasillos del hotel con los envases grandes del suelo

EXPLORADOR de la IMAGEN 6B570: convertidos dos y tres dimensiones en: sonidos, representaciones visuales, [olores, vibraciones], holograma (en aire o impreso). Por ejemplo, una calzada pebbled crearía un sonido agradable y o el arte abstracto (los mayo o mayo no estar en todo similar a la calzada del guijarro.
- salida efectuada por la constitución de la sustancia, eg.: una fotografía de una pintura al óleo creará diverso efecto de la imagen de la pintura al óleo original

VÍDEO del KARAOKE 6B640: la historia video preprogramada en la película consigue los clips insertados de usuarios. Los clips son insertados por el Karaoke que inspira y o el donante de la gente incita para llenar las secciones insertables de la película. Jugadores mayo o mayo no saber mucho o poco sobre la película que están haciendo (puede hacer la más interesante, y mayor sorpresa cuando está acabada - si se sabe menos)
- métodos que incitan: hace preguntas; pide que las personas digan, hacen, acto, sensación, demostración, sonido algo de cierta manera; la gente puede ser pedida dar a otra persona un aviso, aquí los mayo o mayo más pronto para no ser dado una indirecta (que requiere una poca creatividad de la diversión en la transportación de aviso)
- trabajos bien en los pequeños espacios, luz corta, mucho ruido de fondo (el micrófono es diseñado y o controlado por el usuario para registrar sobre todo solamente de ciertas distancias
- sobre la terminación, gente puede ver el producto final y o tomar una copia del hogar de la cinta
. "Corrigiendo" capacidades [para la hospitalidad]:
Karaoke que corrige, sintetizando características: puede alterar las imágenes de las maneras que agregan creatividad y reducen la imagen del comportamiento refrenado que algo pudieron tener, el llevar a la persona que quiere intentar el sistema otra vez puesto que vinieron hacia fuera mirando mejor que anticipado. La alteración puede ser: hacer que las imágenes el tiro parecen muy no de por vida como, y o semi-animated
- para cada parte movible, agente pudo hacer brevemente o la posibilidad muy remota que implicaba cualquier cosa de una experiencia facial particular hasta un discurso largo
- el usuario pudo escribir para poseer la escritura; insertar sus acciones y palabras; insertar de la reserva de otros clips, cosas como tiros de las calles muy transitadas, muchedumbres de gente, naturaleza, una casa, conduciendo un coche (como si él puede ser que haga lo, etc), estos clips están disponible en la memoria de

sistema, los clips adicionales se pueden comprar (creando la biblioteca muy grande) y o el usuario pudo crear sus propios clips también. Todo el esto se puede hacer a la una que se sienta. Una manera excelente de ser creativo.

- los clips pueden solamente estar de ésos con excepción de usuario (si están deseados tan)
- el sistema puede crear voces de las palabras afinadas adentro; el usuario (director) puede seleccionar el tipo patrón de discurso también, eg.: mujer buena, mujer fuerte, voz de la camarera, hombre del correo, doctor (varón o hembra), etc.
- las pinturas pueden todas ser vida real, vida semi-verdadera, y o animación (más fácil y más barato convertirse, y limita a usuario a comprar los clips, aunque él puede hacer quizá los clips animated en modelos más costosos)
- integrar con los juegos video, donde jugador (persona) que es tirado por la cámara, entran en juego/la interacción con sus imágenes
- alterar los juegos estándar en los formatos deseados, eg.: jugar el ajedrez por el que el caballero sea un caballo verdadero con el caballero, o un dragón. Todo ocurre vía la pantalla.
- cada marco tiene un número el correlacionar a la secuencia cronológica, a estos números provechosos para corregir y o a las piezas móviles alrededor
- El usuario puede seleccionar de diversas ventanas, que pueden demostrar que diversa película de las acciones/de las direcciones puede tomar. Cada ventana puede demostrar la acción adentro aún o la manera móvil, con o sin las palabras dando la información adicional sobre contenido dentro de la opción.

. Usos:

- puede estar el tipo de terapia incitando a usuarios y posiblemente dirigiéndolos y o corrigiéndolas. El dispositivo puede preguntar a usuarios cómo solucionarían problema de otra persona; posiblemente vía una selección determinada de opciones (que previenen demasiado loco de una respuesta)
- ciertas barras pueden hacerse en barras del vídeo del Karaoke; tener la presentadora, camareros, camareras, la ayuda de la barra, etc salvajes; alquilar o utilizar los trajes, avisos.
- aprender extranjero y poseer idiomas. El sistema puede incitar gente en términos de qué decir, a usuario después termina oraciones y o selecciona de la opción múltiple la respuesta correcta. Esto se puede juntar con progresos de argumentos
- instalar los dispositivos en barras; arcadas de juego video; lugares educativos; escuelas temporarias; estudios de la película que quisieran ver el ejemplo de la película antes de tirar en un modo más de alta calidad; agencias de publicidad para las muestras de anuncios antes de tirar; lugares en donde la gente está esperando; unidades portables y en-portables para el uso del consumidor
- los usuarios pueden componer sus propios juegos video

. Técnico:

- esta invención es compatible con otras características del Karaoke en mercado
- el dispositivo se puede poner en cada tabla con la pantalla incorporada a la tabla; los usuarios pueden seleccionar el tipo película, juego, característica deseada. Uno o más gente puede hacer el proceso de la

película. La cámara puede salir de la tabla (el shooting apenas hace frente quizá y o cuerpo superior), de la pared detrás de un vidrio, de un etc.

- los softwares y las películas pueden estar en discos de la computadora ("C"), los discos laser (registrables y no registrables), el vídeo y o [las cintas de la película]

- los efectos visuales crudos se pueden encontrar en modelos anteriores; las pantallas que retrataban representaciones visuales pudieron ser los mismos o la calidad levemente mejor que corriente la CRT de la computadora del color ("C").

- tiene una clase particular

- puede imprimir cada uno y o escenas seleccionadas sobre el papel

MÁQUINAS TOCADISCOS:

. (era 6A-65) selector de la música 6B650 y de la luz: seleccionar la música, los avisos, el etc; el tipo más se enciende (destellando y o moviéndose), que o ASCENDENTE responderá automáticamente a la música, los sonidos.

. 6B670 a la cerradura abierta, usuario debe también botón en la cadena dominante. Esto demuestra la época y la frecuencia de su unidad, etc. que entran (tiene la persona sida honesta sobre sus actividades)

. 6B680 Alerter: emite la sirena y o las luces que expresan la precaución del peligro

- Amplifica cualquier sonido creado, eg.: usted está gritando, gritando para la ayuda, el ruido del atacante

6B690 QUE ABONA el DISPOSITIVO: Los habitantes de apartamento pueden ahora ensamblar la cultura verde abonando sus basuras. Descompone los artículos que no se pueden descomponer en una descarga. El mejor sistema comprable en el invierno en que el abonamiento es más difícil para ésos con los jardines. Solar accionado.

. - da vuelta rápidamente a los desechos del alimento en el estiércol vegetal para el jardín o para las plantas nuevamente potted, el etc. buenos para las que 1. no quiera para ir afuera para la pila del estiércol vegetal, 2. querer el estiércol vegetal en efecto rápidamente, 3. quieren guardar hacia fuera las ratas al aire libre, cucarachas

- el dispositivo especial maneja el problema de olores

- pudo funcionar en energía solar

. - realizar que preparan a los occidentales para pagar los precios poco económicos valor ecológico (incluso si puede ser que sea tonto desde el punto de vista de un experto). Mirar Alemania que quiere pagar sobre $1.00 reciclar muchos del producto de consumo que empaqueta, aunque podría costar cerca de $0.03 para quemarlo o para descargar en lugar de otro. Hay muchos otros ejemplos.

. - es esencial esto es solar accionado. Queremos un anuncio que diga que "dar vuelta rápidamente a sus desperdicios en el estiércol vegetal con energía solar..."

. - para los artículos biodegradables: materia vegetal; el resto de la materia non-vegetable indicada por el fabricante como siendo biodegradable, eg.: plásticos, empaquetado non-paper.

- OTD:

PP; P.M.; todos; fecha; hospitalidad; índice de inteligencia; t; alerter (cuando el estiércol vegetal es listo, etc); cartuchos de las bacterias para apresurar proceso.

. - Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por el material (de los reactivo de este N) producto químico de w. NR demuestra qué productos químicos presentan W5. Esta N copiada al agosto de 95 7G050.

CONVERTIDOR del ALIMENTO de ANIMAL DOMÉSTICO 6B700: toma a ciertos desechos y convertidos del alimento en el alimento de animal doméstico vía:

- agregando sabores adicionales para tentar el tipo animal de la especie guardado como animal doméstico
- pudo poner en nueva forma, eg.: pelotillas
- pudo moler el alimento, el cambio de su textura
- pudo cocer al horno el alimento
- pudo la carne del anuncio, o el alimento de animal doméstico estándar de la poder o de la caja

TECLADO del LASER 6B760: mecanografiar la información disparando las luces laser de la manera correcta. Trabajar de cama.

- disparando un laser, sistema se gira rápidamente. Grande por notas y las épocas cortas en que es demasiado apuro para girar la computadora ("C") o la máquina de escribir.
- puede ser conectado con la computadora principal ("C"), o transmitir la información a ella
- puede también generar música, actúan como el teléfono ("T"), el paginador, etc

MÁQUINAS DEL MASAJE: Comunicador vía la vibración. Los cambios de la intensidad de la vibración según terapia consiguen más difícilmente.

. guante del masaje 6B800: manos de los masajes, pies, piernas, brazos...

. masaje múltiple de la dimensión 6B810: emite durante masaje: sonidos, música, vibraciones de la tabla o silla, representación visual ("S") en los olores de la pantalla de la CRT, sutiles o fuertes para hacer el masaje de más agradable y o de experiencia eficaz.

. Massager 6B830: eg.: Silla del masaje:

- decir la máquina continuar trabajando en la parte del cuerpo que está en (prolonga o continúa hasta pedido parar).
- pieza de programa del cuerpo es dar masajes con el plazo deseado

. 6B840 + luz de pulsación: emite las luces que mejoran la sensación o la eficacia positiva del masaje. Opciones ligeras para los efectos deseados de: relajación; energía; mejor interior de sensación; pasión; etc. Conectado con la función del masaje.

- un o más colores

. el dispositivo que mide el tiempo 6B850 apaga la máquina del masaje en el tiempo señalado. Las ayudas previenen a gente de excesivo haciéndolo, dando por resultado su trabajo, etc. que evitan.

6B860 PERSONALIZÓ a PROTECTOR del TIEMPO: Llave en lo que usted quisiera que el sistema le advirtiera para según sus estudios, etc agrícolas, científicos, eg. cambios en: presión de aire, humedad, iones del aire, temperatura, precipitación, luz, llave del etc. en software qué usted encuentra importante para usted. El sistema consigue su Info de fuente exterior vía línea del módem o del teléfono de los datos ("T") o de su propia estación meteorológica exterior

HISTORIA del TIEMPO 6B870: las demostraciones más allá de la temperatura, de la humedad, de la precipitación, del viento, de la memoria del etc. vuelven a partir del primer día que fue utilizada, o el fabricante pudo construir en tal información de promedios. La persona sabe cuándo mira lecturas actuales del tiempo, cómo ese día o mes comparó con otros días de r en el pasado. Para el hogar, escuela, uso de la oficina.
- reloj, alarma

REACTOR del JUGUETE 6B900: el juguete responde cuando está hablado a. Tiene uno o respuestas múltiples a cualesquiera o a sonidos particulares
- puede estar en sonido la respuesta más o no

ARTE de AIRE 6B910: Los sentidos y los expedientes de la computadora ("C") y en golondrina de mar hacen arte según cómo el objeto se lanza, cayendo y (con ASCENDENTE) aterrizando posiblemente en la tierra.
- Imaginarse un dispositivo electrónico que sea como el cubo o la otra forma ese las abolladuras según cómo baja

GRUPO FECHA/HORA Del ALIMENTADOR 6B980: cuando estaba la vez última alguien animal alimentado, bebé, niño; las plantas regadas, fertilizadas o el otro artículo botánico.
- TDS

ARCHIVO: 8BI

IMPRESORA de la CUPÓN 8B040: mientras que ve la TV, solicitar una cupón para ser impreso para usted. ¿Grande para el publicista, y puesto que tienen ya un grupo interesado, por qué no hacerlo fácil para que ellos hagan un paso hacia la compra?

- Info impreso petición de materias similares o posteriores
- TV o tablón de anuncios de "C", que demuestra los anuncios o los avisos rápidamente uno o varios a la vez (velocidad y selección del anuncio controlada por el redactor/el locutor o el usuario). Los anuncios no pudieron demostrar bastante Info a tiempo asignado, también usuario pueden pedir qué tipo de Info en materia anunciada quieren.
- la CRT pudo "S" Info adicional por requerimiento: la difusión todavía está o vida móvil
- el usuario pudo incluso tocar la pantalla para elegir lo que él quiere impreso (interactivo)

BEEPER 8B060: dan cada persona que espera para ser llamado un pequeño receptor. Cuando están listos para ser llamado, el transmisor envía la señal para el receptor particular, después el receptor: la señal sonora, luz, vibra, etc para notificar el sostenedór que se están llamando o que qué él está esperando está listo. Ahorra a gente de tuvieron que: leer continuamente un "S" para ver si se ha llamado su número;
permanecer dentro de la gama visible o de audiencia de anunciador o de demostración de "S" que ahora es su tiempo, eg.: la persona puede ir a hacer compras en alameda mientras que están esperando a sastre para hacer ajustes finales en la ropa, o a esperar para conseguir un boleto hecho, o a esperar para ver el doctor, el etc. El aviso se pudo hacer en términos de número de minutos aproximados antes de que sea tiempo ("S" del receptor puede demostrar el número de minutos, o dar un código en cuanto a: el tiempo es mucho a continuación, tiempo medio, o el venir se cierra, o ahora está....)

- la distancia de transmisión pudo también trabajar hasta muchos kilómetros
- pudo utilizar tecnología celular o del beeper, el etc.
- Si la persona va más allá de gama admisible, el receptor pudo demostrar esto cerca: el ir ligero con./desc.; emitir un sonido breve y agudo particularmente manera.

Usos adicionales: alimento que ordena en el restaurante (la mayoría de los restaurantes quisieran que los clientes permanezcan y que pagaran bebidas, con todo los restaurantes únicos con este servicio (especialmente ésos sin las licencias de licor) se placerán conseguir a clientes adicionales esta manera. Los clientes pueden dar un paseo en el parque, la tienda, el etc mientras que esperan. El zumbador dice a cliente que el alimento estará listo en alrededor minutos del _. También bueno para los miembros de familia con la gente por todas partes la casa grande, mamá consigue gente preparada a tiempo - dejar el proyecto del final de la gente que ella está despertando encendido, las manos de la colada, el etc.

. Para Techies:

"R"; "S"; "C"; pp; P.M.; fecha; interactivo; juguete; todos; hospitalidad; "mic"; portable; sst para modelos más complejos más grandes; punto de ebullición; alerter; oscilador; vc; cuenta; tr; RPC; acceso; uip.

8B070 REACCIONAN: Cuando el caminar en sitio, gira automáticamente todos los dispositivos deseados o aplicables, eg.: luces, música, altavoces (si música de otra fuente), sistema del intercomunicador o de radiobúsqueda y o "T" que recibe - el sistema identifica donde alguien (o si se utiliza el control personalizado de "R", donde está ese individuo), purificador del aire, calefacción/aire acondicionado, "C"
- el mismo resultado pudo ocurrir con encender de la luz o del otro interruptor.
- ENCIMA de lo que él quiere girado sobre entrada. Puede diferenciar de sitio al sitio.
¿- Todos los aspectos obvios?
- Transmisor localizado en: joyería, bolso, etc
- La luz laser que dispara, activa los mecanismos deseados
- Artículos adicionales a activar: música; grabaciones educacionales (la persona oye cómo hacer algo, qué a no hacer, eg.: tener cuidado de los productos químicos, etc...); luces; calefacción/aire acondicionado
OTD:
Todos; "R"; "C"; pp; P.M.; hospitalidad.

IDENTIFICADOR del TABLERO de INTERRUPTOR 8B150: el recepcionista que recibe llamada cifra el instrumento de "T" del respondedor aplicable con código o la información de declaración puesta en palabras de la grabación sobre el llamador, eg.: su naturaleza (cliente o surtidor); nivel de importancia, urgencia; longitud del tiempo han estado en asimiento; si su una llamada local o interurbana; persona y u organización; mecanografiar la personalidad (agradable...). El receptor de la llamada consigue esta información sobre "S" de "T"; o "C" (puede entonces almacenar tal información con o sin cualquier Info adicional introducido por el receptor (la persona con quien habla y las manijas llaman - ahorra el tiempo que afina en el Info, más receptor no pudo poder afinar todo a tiempo y u olvidar después de la llamada, especialmente si hay otra llamada que viene pronto después de eso). El receptor puede oír o leer esta información antes o durante de la llamada del teléfono.
- toda esta información se puede retransmitir encendido a la tercera (o cualquie subsecuente persona) tomando llamada (la persona no era quizás anteriormente a la derecha una para manejar la situación.
. Para Techies: "S"; "C"; pp; P.M.; fecha; todos; "M"; cuenta; uq; mq; uip; carácter, acceso.

ESCAPE 8B250: insertar el dinero y seleccionarlo deseó la característica (el usuario elige efecto total, o selecciona las piezas que hacen el excesivo todo el efecto. Piezas seleccionables: los olores, sonidos, música, las representaciones visuales, dando masajes, presiden la vibración que son relacionadas o elogiosas el uno al otro)
- bueno para el uso casero también
- comercialización: un escape agradable de la rutina diaria
- quizás especialmente popular en mercado japonés; ¿la gente será ciertamente bastante curiosa por lo menos intentarlo, por qué no?

ARCHIVO 8BI de los EXTREMOS
Archivo: Un B C/8BQ
ARCHIVO 8BQ

impresora del olor 8B-02: La impresora de color también tiene ciertos productos químicos que huelan sobre el rasguño. El usuario de los programas de la computadora ("C") donde quieren el tipo específico huele simplemente para ser impreso.

("R") impresora alejada del control 8B-03: ("R") el control alejado y o el receptor portable imprime la información que recibe a través del aire. El usuario pudo pedir el tipo información que quiere, después esto es se imprime qué. Eg.: cupones del anuncio publicitario de televisión
83
Información adicional disponible: mayores detalles sobre un anuncio, eg.: las descripciones de producto, listas de precios, mapas al distribuidor autorizado, sistema pudieron incluso identificar a la persona cierran a distribuidor autorizado basado en el lugar de su sistema, o por el usuario que mecanografiaba en código postal...

portero 8B-08: lleva artículos (eg.: las cajas) en un carro, en los brazos, el etc. - sigue adonde va el dispositivo que transmite (eg.: es llevado por la persona que dirige la robusteza)
- la robusteza evita las paredes, yendo demasiado cerca o también lejos del transmisor de la persona
- cuando está pedido, va a la localización deseada y coge y entrega el material

8B-09 Greeter: saluda a gente en la puerta. Programado por el usuario o el fabricante. Opciones:
- en la forma del ser humano, de la robusteza, del animal, de la planta, de la estatua, de la computadora ("C") con la exhibición ("S") y del altavoz
- los arcos, caminan, abren la puerta, se cierran y puertas de cerraduras
- pide quién está en la puerta, después lo permite adentro si ellas: es la persona adecuada, tiene código correcto, aparece no tener mucha tensión, deja cada uno en (persona los mayo o mayo sin embargo que entran no saber esto)
- el saludo saliente puede cambiar acordar: al día, la hora, usuario (o dueño) del dispositivo, la persona que se identifica, mecanismo de control utilizó por el dueño: el dispositivo puede ser cortés, sonido grosero, chistoso, profesional un poco, etc.
- sabe jugar la música previa, radio, TV, cable...
- armar o tal dispositivo puede sostener la capa de la huésped, bufanda, sombrero...

8B-13 mide el tiempo de cosas y de alarmas cuando el tiempo llevado se desvió más allá de cierto parámetro de la norma. Para los científicos.

interruptor del teléfono 8B-16 ("T"):
El dispositivo transfiere una llamada entrante del teléfono móvil a un teléfono regular ("T"). Propósito: ahorrar el dinero. Para los que la llamada comenzada en oyente móvil del tel. no necesite saber el interruptor está ocurriendo.
posibilidades de transferencia del método: tener línea regular dial del teléfono ("T") en la línea celular del teléfono en qué hora asumirá el control la línea regular del teléfono ("T") llamada. El teléfono móvil de recepción ("T") debe tener característica especial para permitir esto.

reconocedor de la voz 8B-180: las exhibiciones y o imprimen palabras de la TV, de la radio, de la música previa o del vídeo

8B-200 cuando los cambios de temperatura, el siguiente se pueden programar para cambiar automáticamente también: oler las emisiones, sonidos, música, vibraciones, luz, humedad
83
Usos:

placer del cepillo de dientes 8B210: Hace música y fragancia agradables.
Existe.
- Niza cepillo de dientes: emite el siguiente mientras que siendo utilizado: olores, sonidos, música. Hace el cepillado de dientes más agradable.
- comercialización: Mercado japonés
83
- comercialización: el otro asiático pone posible también, los mercados no occidentales
. - OTD: básico; entretener; portable; cp; receptor acústico del movimiento
- desde 1/1997
- mecanografiar los sonidos/los olores/las vibraciones determinadas cerca: uip-taylor (tipo de usuario dientes, horario de cepillado [necesitan quizá cepillar la motivación])
- el tipo de los sonidos es el movimiento o el tipo coordinatable vibración de la mano de w (con) del cepillo de dientes, eg.: el modo sano altera cada vez que el cepillo de los movimientos de la mano, o la vibración es magnificado por el sintetizador. D (dibujo): sensor de la vibración - > C (computadora del ') = synth - > oscilador.
. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-1.97 www.qpat:

- cepillo de dientes y (música sana de la melodía de la fragancia del olor del olor del perfume)

identificador de la placa 8B-220 (no electrónico!): la crema dental hace que el color muera que aparece donde la placa en los dientes tiene todavía ser cepillada apagado. Más fácil utilizar que la forma actual de la píldora.

principiante portable 8B-230: hace preguntas en lenguas extranjeras o maternas y quisiera que el usuario respondiera vía la opción múltiple o afinar en palabras correctas, o la fabricación de correcciones a la lengua pobre.
- aprender el vocabulario
- puede ser parte del sistema que traduce electrónico también

8B-240 palabras populares actuales, términos. Éstos van dentro y fuera de la manera rápidamente, se substituyen tan por los discos, los etc que se substituyen periódico (quizá vía la suscripción). Términos por ejemplo: "racionalización" que es actual un término popular en Japón. El altavoz aparecerá en una luz mucho mejor cuando han ido más más allá de lengua del libro de textos (mucho cuyo no puede ser ayudado, por lo tanto el valor de esto - así que la gente no puede como rápidamente decir, "ella habla inglés del libro de texto")

8B-260- desafiador: el usuario pone en dinero para comprar lo que él seleccionó. Después él puede ser hecha una pregunta o hacer una tarea (eg.: jugar el juego video, el juego) y si ganan, consiguen otro de mismo o de diverso artículo. Ésos que querían otra oportunidad pudieron comprar un segundo artículo para jugar otra vez.
- la ocasión media de ganar pudo ser el solamente 10%, el margen de beneficio en los productos adicionales vendidos pudo ser el 30%, y las ventas pudieron aumentar el 50%, dando por resultado mayores beneficios. Los precios para los artículos pudieron ser iguales o los 10% más altos que otros puntos de venta.

máquina expendedora del condón 8B-270: en la época de la venta, la máquina da consejo a los hombres en conseguir a su mujer en cama. Esto anima a hombres a comprar para la máquina y a utilizar el de goma para volverse y comprar más. El consejo pudo ser del tipo de la galleta de fortuna (el pequeño trozo de papel viene con caucho, o la información se pudo exhibir antes o después de ventas; o el cliente pudo hacer la pregunta y conseguir respuesta). El consejo pudo ser un poco serio, o solamente diversión.

8B-310 sobre la vivienda o el sitio que entra, dispositivo coge el distancer de la persona y los alertará if/when: 1. tienen un mensaje. La pantalla allí podía demostrar y o imprimir el mensaje en aquel momento, si las peticiones de la persona. 2. demostrar su calendario para el día, semana... las reuniones 3. se programan para 4. acontecimientos que podrían estar de interés a ellos
- la persona de la respuesta recibe pudo indicar llano de urgencia en la comunicación, eg.: menos urgente; urgente; muy importante. La persona pudo estar ocupada con algo en ese momento.

- comercialización: conseguir sus mensajes más rápidamente y fácilmente; notificarse cuando usted tiene mensajes importantes en vez de tener que vadear a través de mensajes menos urgentes a menudo. Las ayudas substituyen la necesidad de la secretaria.
- categorías: chimers de la puerta, puerta TV, contestadores automáticos, software, computadoras, paginadores, intercomunicadores .....

8B-330 según el tipo uso, voz de la persona se cambia por consiguiente, eg.: su voz para anunciar el plano está lista para el embarque, el plano es atrasado (la frustración, o la cólera en la voz del locutor que tiene miedo de ser atacado con cólera de pasajeros y que en golondrina de mar es semi hostil en voz como protección - ésta es malas), etc.

8B-340 demuestra la dirección en la cual la persona está caminando; velocidad. La exhibición ("S") pudo demostrar flechas y o el patrón del recorrido en carta.

¿8B-350 +? Notificador: si el teléfono móvil de la persona ("T"), el teléfono ("T"), el paginador, Walkietalkie, o como el dispositivo de transmisión-recepción los está llamando y están ausentes, el su reloj o el otro dispositivo portable más pequeño pudo alertarlos vía la vibración del sonido, ligera o reservada.
- el dispositivo pudo notificar lo si hay algunos mensajes en el contestador automático o el correo de voz, y o el número de mensajes. Tal aviso pudo ocurrir con o sin la petición de usuario tal información.
- el usuario pudo saber el teléfono del llamador ("T") o el número de identificación; entonces el usuario puede dejar quizá un dispositivo de contestación tomar un mensaje

proyector del tiempo 8B-360: los proyectos miden el tiempo sobre la pared o el techo.
¿- existe?

8B-370 aprenden el reloj: Hasta aprender las palabras, los hechos, las fechas, la exhibición del etc. ("S") hace estallar para arriba aprendiendo la función en la voluntad del usuario. También, pueden utilizar mientras que esperan, tomando el tren, el etc.
- bueno para aprender conceptos cortos. Por ejemplo, aprender: vocabulario en propias u otras idiomas, abreviaturas, términos eg.: científico, curiosidades (para la diversión - popular en los E.E.U.U.), fechas, capitales en todo el mundo, gente famosa, etc.

reloj médico 8B-380: Nombre del paciente (quizá con la dirección y el teléfono), tiempo, alarma (cuando ENCIMA DE, para tomar la medicación). Para el uso médico.

reloj del arte 8B-390: crear los diseños para la parte posterior del dial del reloj. Elegir de o crear para poseer los gráficos, cuadros.

Métodos:

- el diseño en sistema de la computadora ("C"), después transfiere gráficos vía disco minúsculo y los inserta en el reloj. El disco puede llevar a cabo diseños múltiples. El usuario puede entonces seleccionar de la selección del reloj; los diseños pudieron cambiar periódico según los comandos del usuario; [el usuario pudo el pedido por correo para los discos y hacer que hagan deseó cambios]
- El reloj pudo venir con las opciones del diseño incorporadas y el usuario selecciona y o altera; el usuario pudo comprar discos deseados
- si el disco se programa en el dispositivo separado, el usuario puede afinar en la información importante para aparecer en la exhibición del reloj ("S"), eg.: función de la alarma y para qué alarma está; cumpleaños; teléfono ("T") y dirección
- El reloj pudo también ser un reloj/una alarma portables

reloj del olor 8B-400: como alarma o en cada hora en la hora emite el tipo olor tenido gusto por el usuario. El reloj o el reloj puede tener diversos olores, perfumes, etc para cada vez, ocasión

- olores - los perfumes vienen en paquetes insertables
- entretener a amigos con su novedad
- tener olores agradables diseñados para despertar psicologicamente a persona para arriba por mañana
- dar como broma (por el que el portador no sepa la fuente de los olores). El donante posterior del regalo puede decir, mi, usted parece ciertamente poner hacia fuera olores (farts) en la hora untada, "apuesto que usted olerá otra vez en minutos del _!"
- oler el tiempo: para la novedad, los que son sordos y o las persianas.
- marca: Oler el tiempo

caja del juego 8B-440: (Patente de diseño - no electrónica)

Tiene área extensa donde todos los tipos de cosas se pueden almacenar para alcanzar el tamaño máximo permisible para la línea aérea llegan. Además, hay una sección donde el usuario puede poner en su ropa en las suspensiones (no dobladas antes de insertar).

vainas del vuelo 8B-450: ¿(basado en la nueva invención existente cerca, la marca Litos llamó el "Samara"? - él es comercialización hacia ejecutivos)

Cuando el entrar la invención del aire suena o hace música. Lanzar para arriba varios a la vez y crear un pedazo musical múltiple. La invención existente se diseña para flotar en el aire en la manera abajo - similar a la manera las tierras de la semilla del árbol de arce.

- en la obscuridad, se enciende para arriba cuando 1. en el movimiento, y o 2. cuando en el aire (que no toca algo)
- etiqueta en la publicidad de la compañía
- uso en juegos
- alarma del reloj: coger la al despertar, o el retén y o lanzar esto u otro objeto formado. Al lanzar conseguir en una cesta, y alarma se apaga en este tiempo - no prohiben el usuario tiempo reservado entre la alarma inicial y el tiempo requerido para lanzar algunas cosas en ninguì□n tipo cesta/bolsillo
- joyería, cadena dominante
- la pluma expulsable, el lápiz, el mercado mágico, la linterna, la llave, ("R") el control alejado, cepillo de dientes (el objeto externo tiene salidas de aire), etc. naturalmente, el objeto se deben balancear de manera para permitir capacidad flotante del aire apropiado
- galleta de fortuna: el restaurante, el almacén, la barra del Karaoke, el etc pueden lanzarlos. Partes movibles de la alternativa: cupones, cheques, efectivo, etc. Puede exhibir ("S") la información sobre la exhibición ("S") también (el artículo encajonado en material recubierto de goma)
- puede imprimir el vuelo, la manera de la cual circundó en aire y o el movimiento de cualquier curso central o medio del objeto. Atar a la impresora/a la computadora. Propósito: crear el nuevo arte.
- formado en el caramelo, chocolates, goma, galletas, píldoras, galletas animales

8B-460 componen la caja: llaves del usuario en el tipo de humor que quieren crear, y o colores queridos, y u ocasión. El dispositivo del sistema o de los programas del usuario para el lugar en el cual utilizó (compone se usa diferentemente en culturas diversas, o regiones de países también)
- la programación inicial del usuario pudo requerirlos afinar en el país y el código postal de su dirección para hacer el sistema funcional. El usuario pudo seleccionar de varios compone opciones después de afinar en sus deseos (tal selección se hace de muchas maneras). Portable (`W5).
- el usuario del fabricante pudo poder seleccionar de tipos de las tipografías, del pelo y de la piel
- negro y blanco (mono cromo) o la exhibición de color ("S") también indica que el tipo compone utilizado con o sin marcas de fábrica
- grande para las chicas jóvenes y ésas en los sus años 20 y años 30, más los que se aburran con sus miradas, y o los que amen creativo componer. Bueno para los sketches caseros (juegos)
- el usuario puede aplicarse compone en sus amigos; bueno para componer a gente de las ventas que va a domicilio (el sistema puede imprimir las cupones para la derecha compone) o que trabaja en un almacén
- música de los juegos mientras que está abierto; ENCIMA del tipo música - consigue uno en el humor creativo para poner componen
- las lengüetas del nr del lugar en la cara para determinar la constitución química antes o después de aplicar los cosméticos/los otros productos químicos = sistema del interno (sistema) "analizan"/el nr de la lengüeta (ninguì□n EL) qué tipo de balance/de tipo cosméticos del pH trabajará la cara de w.

--Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por material (de los reactivo químicos de este N) w (con). NR demuestra qué productos químicos presentan W5. Esta N (invención) copió al agosto de 95 7G050.

- el "analizador visual", uip-adapta

juguete 8B-470 para los niños o los adultos:
cuando el juguete ha cruzado cierta línea, o ha entrado en un campo dentro de un transmisor, sonará una vez. Suena solamente otra vez cuando está tomado fuera y entonces nuevamente dentro de la zona.

- movido al "picosegundo" 6.96

ARCHIVO: B7Q

ESTE DIRECTORIO ABARCA ENCANTOS

Sistema de numeración del producto: La "a" en "A7" fue cambiada a "B7"

A7-3 ROLODEX TELEDIRIGIDO: los números de teléfono de sus amigos, familia, etc surgen en su pantalla, después diales del usuario el número o apenas los puntos y los lanzamientos exhibidos para que el dispositivo alejado marque número también.

Opción: Rolodex se incorpora al microteléfono; o los números de teléfono queridos se proyectan sobre cualquier pared y la mayoría de las superficies planas vía cortinas de diferenciación de la luz

CALENDARIO de la ALARMA de SISTEMA de la HOSPITALIDAD A7-5: El sistema de la hospitalidad es programado automáticamente por el usuario para hacer una interrupción en el programa que indica que es hora de despertar, va a la oficina, alimenta el animal doméstico, el comienzo cocinando la cena para la familia, el etc. Para la TV, vídeo, radio, magnetófono, juego video...
Opción: si la unidad está apagada, se girará automáticamente, después va a la derecha apagado otra vez en sus la propia o con el aviso del usuario.

FRASE A7-8 del CLUB del MES

¿Qué productos podían integrar mensajes insertables enviaron a sus usuarios sobre una base mensual, o a unos adquiribles en los almacenes? Para:

. Contestadores automáticos

. Botones electrónicos del lema

EL MOVIMIENTO DE A7-9AA ACTIVA EL SONIDO: Ducha Rod Belces: ¡como la cortina abierta o se cierra, suena! Sonidos/música accionada en el momento de movimiento dando por resultado sonido del sistema, o el sonido creado según cómo estuvo abierto/se cerró. También se aplica a: puerta de la ducha; cajones del pecho; llave en cualquie tipo botones: computadora, otros dispositivos electrónicos; la manera una bola de la arcilla se mueve dentro de su piel

. Para Techies: El sensor de la vibración, OSCILADOR, reacciona.

JUEGO SANO DE LA MEMORIA DE A7-9B: Recordar qué correlativos del sonido con los cuales el botón/la llave/etc. suene al localizador se puede cambiar más adelante la correspondencia. Nuevo tipo de desafiador de la memoria. ¿La venta a la gente en campo de la música es un golpe seguro solamente? Versiones más fáciles pueden utilizar sonidos diarios fáciles normales/palabras, modelos más difíciles pueden tener sonidos levemente diversos. El fabricante o usuario según sus habilidades mejoradas puede ajustar quizá el nivel de la dificultad. Los botones pueden también venir en una esfera.

. El usuario puede cambiar pertenecen qué botones donde. Esto se puede hacer vía un proceso al azar hecho por la máquina.

HISTORIA ANIMATED A7-10:

Los carácteres de los movimientos de la computadora [juego del `] y hacen que hablen. Desarrollar un argumento en orden cronológica. Usted llama ciertos carácteres de una opción de posibilidades. Cada movimiento sería almacenado como unidad separada en máquina. Usuario que puede dividir cualquier número de unidades en cualquier número de capítulos.

Usos: para la diversión, jugado por la gente en la computadora; para la diversión y una herramienta en la cual para aprender simultáneamente nuevas idiomas o palabras difíciles en lo suyo lengua, o los términos en ciencia, electrónica, el etc.

. Para los usuarios [del inglés], anotar las cotizaciones de cada carácter (argumento).

Para el aprendizaje de idioma extranjero: el usuario desarrolla historia y escribe en el idioma extranjero. Opción: mirar la acción y la computadora hace preguntas del usuario en idioma extranjero, eg.: "Yoshiko, cuál es ése?". El ratón señala a la respuesta correcta o mecanografía adentro respuesta y la máquina corrige la gramática pobre, deletreando - da la respuesta correcta (entonces opción: solicita a usuario mecanografiar adentro la respuesta correcta, dando a usuario experiencia positiva del uso, después la computadora permite que el usuario proceda al paso siguiente).

. La conjetura cuál está dentro de una caja, detrás de una cortina, de un etc. recibe indirectas.

. Desarrollar las oraciones de cadenas de cuadros. Las cadenas de cuadros pudieron también acompañar las oraciones que eran doctas - aumento de la capacidad psicologicamente probada de la absorción de la lengua

. Enviar las notas del amor a los carácteres, o leer unos que son enviados

. Juego que conjetura: cada caja en la pantalla puede llevar a cabo un cierto objeto secreto. Cada persona debe recordar qué objeto hace que suenan. Antes del juego siguiente, seleccionar diversa opción sana para cada encanto. Las indirectas pueden estar en las palabras, representaciones visuales, sonidos, olores

alarma de 1B-080-032003 Dangly: La alarma de Dangly está para el consumidor creativo que necesita la ayuda que despierta en la mañana. La alarma innovadora le despierta colgando a una criatura sobre su cama. Puede hacer un sonido, hablar, o aún pedacitos de la gota del agua en __. La única manera de desactivar puede estar levantándose y comenzando su día productivo.

la magia 1B-110-032002 abotona la alarma de la mañana: La alarma mágica de los botones ayuda al consumidor a comenzar la alarma del día laborable. Usted tiene 3 segundos para apagar la alarma tocando la combinación correcta de botones. Hay una nueva combinación cada mañana. Un pequeño crucigrama.

alarma de la mañana de la demostración del concurso 1B-111-032002: En vez de su café de la mañana, hay una manera más sana de jump-start en su día. La contestación de las preguntas desactiva correctamente la alarma de la mañana de la demostración del concurso. Una alternativa sana al cafeína.

CONTESTADOR AUTOMÁTICO PERSONALIZADO 1B-010-032003: Para el hogar o la oficina, el contestador automático personalizado es un dispositivo útil que cada uno puede utilizar. El contestador automático de teléfono puede dar diversos mensajes según el número de identificación del teléfono del llamador.

IS-IS muy conveniente y dispositivo timesaving para el llamador.

alarma feliz de la mañana 1B-050-032006: El despertar a los mensajes felices es la mejor manera de comenzar el día. La alarma feliz de la mañana envía sonidos subconscientes y mensajes verbales en el tiempo de la alarma.

File1BI

dispositivo del realce de la creatividad 1B-120-032008: El dispositivo del realce de la creatividad es un dispositivo útil para el consumidor innovador. La máquina mide las ondas cerebrales creativas, después retroactúa la información creativa. Esto es una gran ventaja en mundo del rey.

Archivo 2BX

arte sano 2B-090-032002: ¿Convertir los sonidos en arte? ¡Sí! El arte sano es el dispositivo perfecto para el artista y el innovador. El arte sano puede convertir sonidos en las formas y los colores interesantes se imprimen que.

caleidoscopio de los sonidos 2B-091-032002: Con la nueva tecnología, los nuevos dispositivos se están individualizando. Esto es verdad para el caleidoscopio de los sonidos. Su opinión cambiará según los sonidos que usted oye. Cada sonido convierte diferentemente según la diferenciación
botones presionados.

recordatorio de la píldora 2B-140-032002: Cuando la enfermedad, nosotros no puede recordar siempre tomar nuestra medicina. El recordatorio de la píldora es un vital a su bienestar. Se desactiva un alerter cuando se saca una píldora. Esto simplifica esfuerzos asi que usted puede concentrar en conseguir sea
r.

Archivo 2BG

2B-120-032006 Alerter: Estamos haciendo una más vieja sociedad. Los ancianos están haciendo autosuficientes y el alerter puede ayudar en este proceso. Notificará a más vieja persona de emergencias oyendo señales sonoras. Las señales sonoras son parte del sistema de la prótesis de oído.
oirá el teléfono o el timbre sin demasiado esfuerzo.

alumbrador de la palmada 2B-150-032003: En estas épocas ocupadas, no tenemos tiempo para parar el trabajar por un minuto. Cuando usted necesita un cigarrillo, pero no tiene la época de encontrar un alumbrador, utilizar el alumbrador de la palmada. Se activa con un handclap del silbido. Fácil.

Archivo 6BX

cribador de la llamada 6B-020-083002: El contestador automático de teléfono eficiente puede ahorrar tiempo. Las llamadas de teléfono de pantallas del cribador de la llamada de cierta gente. El sistema anticipado reconoce
a ciertos llamadores usando tecnología de la identificación de llamador. Otro llama el anillo normalmente.

guía del espacio de estacionamiento 6B-210-083002: Para apretado-exprimir el estacionamiento, la guía del espacio de estacionamiento parquea automáticamente el coche. Con más coches en el camino y en el estacionamiento, cada espacio cuenta. Los jueces de este sistema para la distancia y dan instrucciones las
ruedas de coche

magia de la ventana 6B-27-083001: La magia de la ventana es un dispositivo útil para el hogar o la oficina. Automáticamente, las cortinas se abren y se cierran durante épocas deseadas. Éste puede ser una seguridad o un dispositivo recreacional que es activado por el contador de tiempo o por un sensor ligero de una salida del sol y o
y puesta del sol.

calculadora del tiempo del mundo 6B-310-083005: La calculadora del tiempo del mundo es una necesidad para los hombres de negocios que trabajan nacionalmente o internacionalmente. Este sistema innovador dice exactamente la época para cada región del mundo. ¡Otro dispositivo timesaving!

viajero de la realidad virtual 6B-630-083002: Un juguete a que ninguì□n niño dará vuelta nunca lejos. ¡Una nueva aventura cada vez! El niño experimentará diversos movimientos y efectos audio-visuales cada vez.

6B-690-083005 Composter: El ambiente es algo cada uno las partes. Ahora, los habitantes de apartamento pueden tomar una parte activa de abonar sus basuras. El Composter descompone la basura que no se puede descomponer en una descarga. Cada hogar debe tener esto solar
dispositivo accionado.

tapa interactiva 6B-710-083001: Este dispositivo de seguridad protege a nuestras familias. La tapa interactiva advierte cuándo han expirado nuestros contextos del alimento o del producto químico, si es peligroso abrirse, y/o si la tapa necesita ser sujetada mejor.

juego del arma del laser 6B-740-083004: El nuevo juego video, el juego del arma del laser, es el juego video del futuro. Usted golpeó objetos del vuelo con un arma del laser. Es mucho más complejo que los juegos video actuales.

regulador sano 6B-840-083004: El dispositivo perfecto que aumenta funcionamiento de trabajo. El regulador sano hace sonidos especiales del fondo para enmascarar ruido indeseado. Previene sonidos de la calle, de los vecinos, de la impresora de la computadora, y de las otras. ¡Grande para quién usted necesita el resto, también!

ratón teledirigido 6B-920-083005: El ratón teledirigido es un ratón sin hilos de la computadora. Evita síndrome de túnel de Carpal y otras lesiones del ordenador. Puede ser utilizado en la casa como dispositivo teledirigido para los aparatos electrodomésticos. El producto del futuro.

guante del laser 6B-970-083005: ¡Usted puede bailar y crear la música toda al mismo tiempo con el guante del laser! Cada dedo emite la luz laser. Usted crea sus propios sonidos con cada sensor portable. Grande activar otros productos en una distancia. Éste es un dispositivo recreacional y productivo del futuro. Progreso.

Archivo 6BG

contador múltiple 6B-080-083003: El contador múltiple es un dispositivo de seguridad que sale muy de poco para el error. El contador múltiple descifra hasta 5 tabulaciones múltiples simultáneamente. Esto es muy importante en nuestro mundo ocupado.

6B-11-032007 cámara Alerter: La película es una industria provechosa que necesita las cosas hechas a la derecha la primera vez. La cámara Alerter hace apenas eso. Señala el cameraperson cuando las dificultades técnicas ocurren durante la película. Pensar en el tiempo y el dinero que usted tiene. La cámara Alerter trabaja para inmóvil o indica cámaras.

sistema de la identidad del conductor 6B-24-083005: El hurto de coche está en un punto más alto. Incluso las alarmas del coche no parecen trabajar. ¡El sistema de la identidad del conductor es la solución! El conductor es identificado por el peso corporal que empareja la memoria del coche. Usted puede programar el sistema para adaptarse a más de un conductor.

alarma del fabricante de café 6B-320-083007: Nadie hace que el tiempo siente y que mire el fabricante de café. La alarma del fabricante de café suena cuando está lista o cuando es vacío en una hornilla activa. Esto es un dispositivo timesaving para el hogar y la oficina.

explorador de la voz 6B-580-083003: El explorador de la voz es una necesidad para los que no tengan tiempo para sentarse y para leer. El dispositivo explora la palabra, después los lee de un altavoz. Una gran ayuda para los cabritos y la persona con deficiencias visuales.

alimento virtual 6B-720-083003: El alimento virtual es sueño de cada dieter. El alimento se sirve con el sonido y el olor que emiten efectos. Ninguna ingestión química, con todo el alimento virtual realza el sabor y las experiencias del alimento.

interruptor distante de 6B-750-083003 Touchless: El interruptor distante de Touchless se utiliza para la conveniencia. Usted puede controlar una unidad bloqueando algunos de los rayos laser. Perfeccionar para los almacenes.

luz móvil 6B-780-083003: La luz móvil permite movilidad en teatro o película sin los alambres complicados o los controles. El sensor de movimiento ordena la luz para seguir los movimientos del agente. Gran instrumento recreacional.

localizador de la tensión 6B-820-083006: Ahora un dispositivo para librarle del dolor muscles. El localizador de la tensión encuentra los músculos que son extremadamente apretados. Un instrumento práctico que ayuda en la reducción de dolor y de la tensión.

abrelatas universal de la puerta del garage 6B-860-083003: Este dispositivo innovador hará vida más fácil. Ninguna necesidad de conseguir mojado o resbalón en el hielo mientras que abre el garage. Para utilizar el abrelatas universal de la puerta del garage, tocar la bocina varias veces. Provechoso en el país u oficina.

analizador médico del olor 6B-940-083003: El cuidado médico es un problema universal. Dispositivos de la necesidad de los doctores nuevos a ayudar a curar a pacientes. El analizador médico del olor mide los cambios corporales del paciente oliendo las sustancias encontradas para causar respuestas inusuales. La reacción de la patente determina la enfermedad. Este dispositivo ayuda a definir causas de enfermedades desconocidas.

retransmisor teledirigido 6B-971-083006: El retransmisor teledirigido es un dispositivo innovador. Permite la movilidad para el usuario. Usted tiene libertad a sentarse en un cuarto, con todo sea móvil. El teledirigido puede enviar mensajes al receptor y al retransmisor.

amigo del animal doméstico 6B-990-083003: ¡Los animales domésticos son gente, también! Necesitan los juguetes innovadores guardar su interés. El amigo del animal doméstico es hospitalidad para su animal doméstico y usted disfrutará de la diversión también. Se utilizan los ciertos sonidos y olores que el interés acaricia.

Archivo 6BI

6B-410-083007 Faxer alejado: La invención del fax aumenta funcionamiento de trabajo permitiendo que la información sea transmitida inmediatamente. Con el faxer alejado, usted aumentará funcionamiento de trabajo debido a la movilidad que permite a usuario. Este portable
el hielo le ahorrará tiempo y dinero.

paginador verbal 6B-411-083007: Mejor que el teléfono móvil, el paginador verbal nos deja llave-en o habla un mensaje. Entonces, el dispositivo transmite mensajes a la computadora inmediatamente. Con las ondas, la computadora habla la declaración registrada de la voz a
partido deseado e. Tecnología, personalizada.

fax del color 6B-430-083007: Los faxes no tienen que estar en blanco y negro más. La transmisión es perfecta para los propósitos e incluso la hospitalidad de la comercialización. Cada color se transmite por separado, teniendo cada separación cifrada para cierto color. El fax de recepción asigna el color y compila las imágenes múltiples para crear color. Este dispositivo creativo cambiará la comercialización.

transmisiones tridimensionales 6B-440-083007: Este dispositivo innovador transmite imágenes tridimensionales en negocio. La transmisión tridimensional también ayuda a la persona con deficiencias visuales transmitiendo los códigos de Braille a través del módem.

estereofonia portable 6B-530-083009: ¿Cuantas veces usted ha faltado a alguien en la puerta porque usted tenía sus auriculares encendido? La estereofonia portable es única. Le alerta del sonido externo amplificando el ruido exterior. Esto también ayudas en seguridad.

código de color 6B-590-083007: El código de color es conveniente para el usuario ocupado de la computadora. El dispositivo único permite que solamente los colores particulares sean explorados en la computadora. Usted escribe notas a se o a otros, pero no aparece a través del explorador.

protector del olor 6B-660-08300C: La protección es vital en este mundo creciente. Desafortunadamente, necesitamos protegernos contra contacto indeseado. El protector del olor puede ahorrarle. Emite un olor horrible que rechace a persona que ataca. Esto científico
el olor diseñado dará vuelta a gente ausente, pero no nos dañará.

registrador de tiempo de computadora 6B-730-083009: El registrador de tiempo de computadora aumenta funcionamiento de trabajo registrando el tiempo en la computadora. Grande para cuando usted está en un plazo apretado.

analizador de la voz 6B-830-083009: Un dispositivo único que ayuda en analizar patrones del comportamiento y de la personalidad de la gente y de animales. El escuchar la pronunciación de la voz de ciertas palabras hace esto.

Archivo 8BX

localizador del animal doméstico 8B-010-083004: Usted nunca se preocupará que su animal doméstico se ha preguntado apagado. Este dispositivo innovador permite que usted sepa donde está su animal doméstico siempre. El receptor del dueño coge si el animal doméstico está adentro o afuera.

sistema de equilibrio del altavoz automático 8B-110-083004: El sistema de equilibrio del altavoz automático individualiza su disfrute que escucha. Cada altavoz ajusta según donde usted está. Incluso ajusta a sus movimientos.

terapia interactiva 8B-140-083001: ¿Necesitar un hombro gritar encendido? ¿O necesidad alguien de escuchar sus problemas? La terapia interactiva está para usted. Su terapeuta personal analiza su voz para determinar la mejor terapia para usted. Usted nunca está lejos de un oído comprensivo.

identificación avanzada del teléfono 8B-170-083001: No más de llamadas de teléfono falsas. Ningunos retrasos. Con la identificación avanzada del teléfono, usted tendrá más información sobre el llamador. Esto también trabaja cuando usted hace llamadas de teléfono.

placer del cepillo de dientes 8B-210-083005: Este cepillo de dientes único hace el cepillado de sus dientes más diversión. Usted oye música agradable y huele una fragancia agradable mientras que usted cepilla. El placer del cepillo de dientes le tendrá el cepillar más de largo. Sus dientes le agradecerán.

escala de la radiografía 8B-420-083005: La escala de la radiografía es vital para el análisis de la subdivisión. Este dispositivo útil descubre las secciones internas de cualquier artículo por peso, de la densidad, y de otras características.

Archivo: 8BG

efectos interactivos del olor 8B-100-083006: Los efectos interactivos del olor son un dispositivo útil que está para cada uno. El dispositivo interactivo utiliza el olor para realzar efectos, por ejemplo en los juegos video o en entrar en un restaurante.

analizador de la máquina expendedora 8B-280-083003: Este nuevo dispositivo de la comercialización es útil para estudiar comportamiento de la compra al por menor sin un examen. El analizador de la máquina expendedora determina los artículos vendidos con acontecimientos simultáneamente de ocurrencia. Grande para entender
el consumidor medio.

Archivo: 8BI

impresora de la cupón 8B-040-083008: En este nuevo mundo interactivo, el consumidor tiene una gran ventaja. La impresora de la cupón ayuda al consumidor. Mientras que ve la TV, usted pide una cupón. ¡Fácil!

beeper 8B-060-083007: La nueva tecnología hace vida más fácil. Si usted vive en un mundo ocupado, donde está un regalo el tiempo, el beeper está para usted. Este nuevo dispositivo transmite señales a un receptor particular que, interno, señales sonoras, luces, o vibre que un mensaje fue recibido. Puede ser utilizado en todas las facetas de la vida.

telecontrol automático 8B-070-083009: El telecontrol no está apenas para la televisión. El telecontrol automático es un dispositivo conveniente que activa ciertos usos sin apenas la elevación de un dedo. El dispositivo personalizado es activado por la luz laser.

efectos del juego video 8B-100-083006: Los efectos del juego video son un dispositivo único de la hospitalidad. El efecto deja a usuario oler a las criaturas inusuales en el juego video. El dispositivo se puede también utilizar para otros productos audio-visuales, tales como vídeo interactivo del entrenamiento de computadora.

identificador del tablero de interruptor 8B-150-083008: El recepcionista puede ser la persona más ocupada de la oficina. El identificador del tablero de interruptor puede ayudar. Este dispositivo útil simplifica el trabajo recibiendo los códigos de la llamada que dan la varia información sobre el llamador. A
en el dispositivo timesaving.

escape 8B-250-083009: ¿Necesidad de escaparse? ¿Relajación del hallazgo en la oficina o el hogar? El escape está para usted. Este dispositivo permite que usted elija la característica deseada: olores, sonidos, música, representaciones visuales, masaje, y vibración de la silla. Relajarse.

8B-290-083008 el amaestrador: Este dispositivo de entrenamiento es vital en la anticipación de las situaciones y de las actividades futuras. El amaestrador mejora funcionamiento de trabajo representando las situaciones futuras por sugerencias, advertencias, o la alarma.

8B-410-083008 escala Alerter: La escala Alerter es vital para la buena salud. La obesidad y la anorexia son los problemas del peso que pueden efectuar su salud. La escala notifica w5 que predice cambios del peso en usted. También, puede ser utilizado para el estudio científico, el etc.

mezclador 8B-430-083007: El mezclador es un dispositivo timesaving para los que utilicen con frecuencia la escala. Este dispositivo combina los productos químicos múltiples. El mezclador es útil especialmente cuando el peso exacto y final no es crucial.

Archivo: Un B C/1BX

ARCHIVO 1BX

la magia 1B-110-032002 abotona la alarma de la mañana: Apagar la alarma por la combinación correcta conmovedora de botones en el plazo de 3 segundos. La exhibición demuestra a nuevas combinaciones necesarias cada mañana. Las ayudas despiertan la cabeza soñolienta.

. En la hora untada, la exhibición del reloj demuestra las combinaciones necesarias para ser afinado adentro para desactivar el reloj. Las ayudas de proceso hacen la alarma principal soñolienta.

- era 1A-4) DESPIERTA EL JUEGO:

Hacer las actividades de siguiente u otras unas de los sobre despertar para apagar la alarma. El trabajo requerido despertará a usuario.

. Las instrucciones de las maneras diferentes se transportan al durmiente:

- primero es sano que alerta a usuario - este sonido puede intensificarse en 30 segundos o seguir siendo constante, apaga cuando el juego se juega correctamente o bien bastante (arriba bastante cuenta)

Juego #1:

las demostraciones de la exhibición que abotona se deben presionar y en qué orden; entonces la exhibición puede las instrucciones de repetición repetidamente hasta que el usuario solucione problema (hace se requiere qué). Eg.:

- el usuario tiene 9 [3 filas de 3 llaves cada uno (o más)] llaves en pequeño tablero dominante; las demostraciones de la exhibición que afina se deben presionar y en qué orden poniendo un número en la caja de cada llave en la exhibición. El tablero dominante plástico sigue siendo igual diario, con todo los números en las cajas de presentación que representan las llaves del individuo y la orden en las cuales deben ser presionados cambian aleatoriamente cada día.

- todas las características de 1B-111 son mergeable con este producto.

- Cerradura interactiva:

La persona traba o abre el dispositivo usando las características de la desactivación de la alarma de la mañana. Puede utilizar para ganar la entrada, el etc.

- la manera de la cual los botones se deben afinar adentro para desactivar la alarma (pp, P.M.).
- OTD/: alarma de la mañana; exhibición; pp; P.M.; Reino Unido; fecha; tds; interactivo; básico; juego; entretener; ejercicio; punto de ebullición; oscilador; discurso; carro; pi.

alarma de la mañana de la demostración del concurso 1B-111-032002: Desactivar la alarma contestando a las preguntas correctamente. El humor de la vigilancia de las causas de las preguntas.

- Alarma interactiva de la pregunta: - el dispositivo pide preguntas del usuario, y respuestas del usuario mecanografiando en la información sobre el tablero dominante. La exhibición demostrará qué tecla necesita ser pulsada para seleccionar, eg.: sí, no, blanco, azul, rojo, pequeño, grande, los etc en contestación a preguntas tienen gusto: "usted ahora ve 14 coches en esta exhibición...", o "cuál es su favorito de estas opciones del color" o "usted prefiere perros pequeños o grandes", etc.
- las preguntas se diseñan psicologicamente para hacer que el durmiente piensa en patrón para apresurar su estado el despertar, y consiguen su curiosidad
- las preguntas se almacenan en el microchip por los 2 años próximos (reemplazables comprando cartuchos adicionales con preguntas)
- otras versiones pueden tener características interactivas: la pantalla de la TV pide y responde a las preguntas, eg. dice que "despertar la cabeza soñolienta, la respuesta es incorrecto!". El sistema interactivo utiliza el lector especial y discos del CD-ROM; o aplicaciones otros sistemas automatizados.
- esto y otras alarmas de la mañana se pueden desarrollar cerca o el uso TM: Alarmas de la mañana; Morning Alarm(s), Inc; Alarmas creativas de la mañana

Cada llave no puede ser diverso haber coloreado con todo tener ninguì□n número o ponerlo letras (las razones: deja a tablero dominante del uso del usuario para diversas opciones; mantiene el tamaño del dispositivo pequeño; hace que el usuario piensa), con todo otras versiones tienen uno o más sistemas de llaves con número o ponen letras a las impresiones.

Detalles adicionales:

Hay un botón en la parte inferior del dispositivo que puede apagar la alarma si el usuario no puede desactivar el sistema vía el método del juego.

El usuario querrá naturalmente evitar esto y tomar el desafío de dejar la máquina despertarlos. Requerido probablemente por estándares electrónicos del gobierno occidental.

- El tablero dominante es una unidad separada que comunica a la unidad principal vía teledirigido.
- El usuario tiene opciones sobre la manera que las preguntas de los cartuchos se tratan él, eg.: dificultad, número de preguntas cada mañana.
- Códigos: fecha

- Cerradura interactiva:

La persona traba o abre el dispositivo usando las características de la desactivación de la alarma de la mañana. Puede utilizar para ganar la entrada, el etc.

- si el usuario la despierta entonces es innecesario desactivar la alarma jugando al juego. Las desactivaciones unas de los del despertador de la mañana se pueden también utilizar hacia fuera de otros archivos, eg.: la canalización vertical.

Nota al pie de la página para 1B-11:

El dispositivo puede ser parte de otras características de producto, eg.: radio, opciones de tipo standard de la alarma. El sonido de la alarma pudo variar cada mañana. Desactiva cuando el peso de la cama se reduce. Códigos: todos; exhibición; pp; P.M.; Reino Unido; interactivo; educ; juguete; juego; hospitalidad; portable; mfh; oscilador; vc; egh; pruebas de la cuenta (como de bien usuario hizo adentro los últimos juegos. ; enseñar al carro (otro); RPC; PC; uq; acceso; pi; carácter.

Archivo 1BG

CONTESTADOR AUTOMÁTICO PERSONALIZADO 1B-010-032003: el receptor programa el contestador automático de "T" para dar hacia fuera diversos mensajes, según el número de identificación de "T" del llamador,

- producto muy relacionado en el archivo A6.

- (Los dispositivos especiales existen que permiten que el receptor sepa el número del teléfono del llamador.) El receptor puede entrar tan el hogar del llamador y trabajar números del teléfono, y da apenas llamadas del trato especial de esos números.

Posibilidades del trato especial: diversos mensajes de salida (más agradables o más negocio tener gusto, etc); cuando una llamada viene del número deseado del teléfono que el beeper del contestador automático puede entrar en contacto con a dueño del contestador automático o el dueño pudo conseguir una llamada del contestador automático con haber registrado o voz cifrada/sonido que indicaba que un mensaje del número deseado del teléfono fue recibido, después el receptor puede llamar la máquina y conseguir el mensaje, o la máquina puede dar el mensaje al dueño; las llamadas de números deseados son llamada remitida a la localización del dueño (el teléfono #1 llama "T" #2, después llamada de las transferencias de #2 de "T" automáticamente a "T" #3 puesto que ésta es una llamada tan importante).

83

- para el dispositivo estadístico de los propósitos guarda los expedientes de todas las llamadas entrantes para las oficinas.

Notas al pie de la página:

- diversa longitud del dispositivo del tiempo puede registrar mensajes entrantes.

CÓDIGOS: todos; número del teléfono de las exhibiciones que viene adentro o siendo marcado; pp; P.M.; Reino Unido; fecha; interactivo; micrófono; synth; portable; mfh; vc; cuenta; teléfono del SP; RPC; cp; uq; pi; carácter.

(era 1A-6) dispositivo del realce de la creatividad 1B-120-032008 (llamado antes, luz del cerebro):
La máquina mide las ondas cerebrales creativas de la persona y retroactúa la información para su desarrollo de capacidades creativas. Un barómetro claro de sus niveles de la frecuencia permite que los usuarios ganen mayor claridad para el control.

Técnico: la creatividad se pudo medir por uno del siguiente: presión arterial, medidas neurológicas de la frecuencia vía los casquillos del cerebro, receptores grabados sobre ciertas regiones de cuerpo, movimientos de ojo, u otros medios eficaces.

- Requerido ser simplemente un proyecto de investigación que correlaciona todos los millares de señales del cuerpo con los niveles de creatividad - el antedichos son solamente algunos de ellos demostrados ser relacionado. Una síntesis grande de señales divergentes puede ayudar a validar resultados.

83

Muy difícil verdad hacer operacional. Hay bastantes estudios para demostrar que ciertas ondas cerebrales están relacionadas con el pensamiento creativo, otras medidas posibles (dilatación frecuente de pupilas, del golpe de corazón rápido mientras que está asentado). Todavía las características físicas a comprobar para son probablemente limitadas. Realizar esto antes de tomar esta idea interesante del producto.

- Propósito principal: Creatividad cada vez mayor identificando cuando usted es creativo. Alcanzan en el momento y olvida a la gente a menudo saber qué se está encendiendo dentro de sí mismos... Por ejemplo, una luz verde pudo ir en cuando está actuando la persona creativo. Realizándole es creativa, será probablemente más fácil para la gente más consciente a puesto nuevamente dentro de este estado de ánimo. Controlar su pensamiento de proceso y la guía de ella en el modo creativo pueden algo subconsciente ser dirigidas, y teniendo la luz decirle cuando usted ha cruzado la línea o no, hace quizá más fácil cruzar la línea con frecuencia.

- Otros propósitos: para los científicos que estudian el proceso del pensamiento creativo; la gente de ayuda corrige desordenes mentales del pensamiento.

Notas al pie de la página:

Exhibición; "C"; pp; P.M.; Reino Unido; fecha; beh del usuario; interactivo; educ; juguete; juego; hospitalidad; ejercicio; portable; impresora; mfh; alerter; oscilador; vc; egh; cuenta; tgh; enseñar; md; carro; RPC; PC; uq; mq; pi.

(Esperanzadamente el antedicho fue traducido ya a ruso en 8.93 tempranos)

FILTROS de CAFÉ 4A050 Y COMPRESOR de la RUTINA: Hace la dispensación más fácil. El tubo de la máquina sale lanzando el líquido de la rutina hacia fuera exprimido.

. - "Inclinación": controla las funciones del sistema

LIMPIADOR del CAFÉ 4A060: Señales cuando la máquina del café requiere la limpieza. El usuario activa el sistema autolimpiador fácil. Conseguir un mejor café de la prueba.

- La exhibición/la luz demuestra cuando la máquina del café necesita ser limpiada. Puede hacer que el mecanismo de la limpieza de uno mismo sea activado por el usuario, o limpia después de cada uso.

- Los depósitos químicos se acumulan en sistema y necesitan ser disueltos y ser enjuagados
- OTD: "S"; el c%; P.M.; el pp%; Reino Unido; fecha; TDS; todos; alerter; oscilador; cuenta; carro (de los productos químicos de la limpieza); cp; el cc%

TERRARIO 4A160; ACUARIO: crecer el pequeño camarón (tamaño de pulgas), las plantas acuáticas, el etc adentro ven a través la joyería - pulsera gruesa, el anillo grande...

MONITOR del PRODUCTO de la PÍLDORA 4A170:

Método 1: dispensador de la píldora insertado en la boca, debe permanecer por la duración en la cual la píldora disolvería si no tragado, y quizás incluso un tiempo más largo. Para los pacientes que son incooperativos en tomar sus píldoras - ahorra el dinero en tener que contenerlas y supervisarlas que están tomando la prescripción. Si las píldoras no tomadas, quizá los cheques de bienestar, los desiertos, el etc pararon como castigo. Marcas del calendario del dispensador cuando píldora tomada, y usuario de las alarmas en cuanto a la hora para tomar píldoras. Puede dispensar prescripciones múltiples en cada propio calendario asignado. Dispositivo usado alrededor de cuello, o guardado de otra manera por el paciente.

Técnico: el dispositivo debe colocar la saliva y o la temperatura del cuerpo específica para activar completamente hecho de que la píldora fue tragada. Dispositivo de tamaño/forma que no puede estrangular a paciente.

Método 2: Monitor de la saliva: Cada píldora puede dejar los productos químicos en saliva; por lo tanto, el monitor comprueba la saliva a veces que comprueba para saber si hay producto de la píldora. Opciones: Supervisar las alarmas pacientes en la píldora que tarda tiempo, dispensa las medicaciones, alarmas pacientes por tiempo de la supervisión.

Técnico: el dispositivo puede tener fácilmente parte insertable aplicable para el tipo píldora tomada. Las píldoras pudieron venir con otros ingredientes naturales inofensivos que aparecerán fácilmente en la saliva que ayuda a asegurar que la píldora fue tomada, si el ingrediente principal se coloca mal. O, el dispositivo puede dar el placebo requerido para ser tomado con la píldora verdadera, por el que el paciente no sea consciente en cuanto a cuál es placebo y cuál no es. O, una gota química se puede poner sobre cada píldora (para el producto químico marcado con etiqueta) sensible por el monitor de la saliva.

Usos: desamparados y mentalmente - la gente enferma fuera del confinamiento tiene que ser guardada a menudo bajo supervisión; o visitado por el empleado del hospital. ¡El producto no pudo ser perfecto, con todo ahorra el dinero!

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias.

BARÓMETRO del COLLAR 4A180: el tamaño compacto da el Info necesario en los cambios futuros del tiempo que suben. Puede también medir cualquier otra medida estándar del tiempo, eg.: temperatura, humedad. Puede ser el objeto separado del pedazo de la no-joyería.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias.

4A210 COMPOSTER: los productos químicos, y o el compartimiento y las instrucciones proporcionaron así que las virutas del lápiz se pueden hacer en la buena tierra vegetal. Estiércol vegetal in/outdoors. Las semillas de las plantas que están particularmente bien adaptadas a tal suelo se pudieron mencionar/incluido. Grande para los cabritos - pudo incluso hacerlos más impacientes al usar sus lápices.

- Bueno para otros artículos de la basura también

JOYERÍA 4A230: funciones como control de "R".

- anillo de oído, anillo, pedazo del collar, hebilla de correa, reloj, venda principal. Insertar las opciones estándar del dispositivo de control de "R" dentro para: televisión, radio, Cd, cinta, expediente, VCR.

. - "Inclinación": controla las funciones del sistema. La "inclinación" está en forma de la joyería.

4A240 LEVANTA LA TAPA de la PODER de BASURA en el silbido o la palmada de la mano para cierto número de segundos.

- el compartimiento de basura con el sello apretado diseñó guardar hacia fuera pequeños insectos. O-utilizado por municipal (gobierno) para recoger basura de las latas diseñó guardar hacia fuera: gente, animales, insectos. Puede ser que sea demasiado fuerte para que se abran.

- posible conseguir la basura adentro con facilidad relativa.

. - "Inclinación": controla las funciones del sistema

CHAQUETA SOLAR 4A260: Luz de convertidos externa de la guarnición al calor.

- calentado por los paneles de energía solar atados a la capa. El resto de la capa puede ser cualquier color/material, eg.: nilón/algodón negros. Los paneles pueden ser muchos pequeños duros, o de una naturaleza flexible. Actos como una manta eléctrica.

- opción: funcionamientos en solamente/también de las baterías

- OTD: hospitalidad; el exercise%; termómetro (para la temperatura interior y exterior) %; carro (del calor que crea los productos químicos) %.

SOMBRERO SOLAR 4A270: Luz de convertidos al calor.
- calienta la cabeza en climas fríos
- el refrigerador vía energía solar existe
- OTD: hospitalidad; el exercise%; termómetro (para la temperatura interior y exterior) %; carro (del calor que crea los productos químicos) %

4A290 tiemblan monitor: ¿El conseguir viejo? Medir cuánto usted es temblante con la joyería atada a su dedo, muñeca, y cuello. Aprender identificar el temblor como un problema y trabajo para reducir síntomas.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias = "análisis" por el doctor.

CONVERTIDOR del DIALECTO 4A320: el dialecto de la persona de convertido (del producto futuro) en sus el propio sin importar si están llamando de Escocia, Brooklyn, Mississippi, tecnicidades del etc. pudo limitar el grado de la conversión. El SA, teléfono, adapta sonidos.

teléfono disfrazado 4A340 del coche: "t móvil" hizo para no parecer el teléfono, reduciendo al mínimo potencial del hurto. Eg.: en coche hizo para tener gusto su de una pieza del automóvil; para caminar hizo para parecer caso cosmético, la linterna, el etc. ¡Nueva clase de prevención del hurto!

termómetro del traje 4A360: cuando la temperatura golpea ciertos puntos cambia aspecto o mueve un accesorio o envía un flagger. Especialmente cuando ha caído bajo cero, o está alrededor (para los jardineros que necesitan ahorrar las plantas de helada), los golpes debajo de cero (f), o pasan ciertas temperaturas calientes.

4A390 Camouflager sano: sobre la elevación de cualquier tapa del tocador, el comienzo sano automático así que otros no pueden oír a persona el "hacer de su negocio" en tocador. Posibilidades sanas: precipitación del agua (en muchas frecuencias, especialmente sonidos mejores en enmascarar sonidos deseados; viento; selva;

música; etc. Más eficaz que la agua corriente, y ahorra el agua (especialmente para las áreas secas como la Arabia Saudita, California, España, el etc.)

ahorrador del agua 4A480: funciona solamente cuando la boca coincide con cierta área cerca de tromba marina.

- Opciones: Omite la necesidad de presionar el botón. Ahorra esta agua para: jardín, tocador que limpia con un chorro de agua, etc. La mayoría de los otros fregaderos del agua admiten el agua del jabón por lo tanto son problemáticos. Esta función realizable con las fuentes de agua nuevas y viejas de la idea. verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip). "Inclinación": controla las funciones del sistema

Archivo: Introducción a la palmadita/5AX

ARCHIVO 5AX

Nota: El archivo 5A-Old fue ampliado más adelante en el archivo 5AX. Algunas invenciones no fueron transferidas.

reloj de tiempo alejado 5A200: Registra las horas trabajadas cada día. Simplifica el cálculo del sueldo.
- actúa como las horas de registración del sacador del tiempo trabajaron. Rápidamente registros que ha accedido.
- demostrar sus claves de barras de id/badge cuando in/out que va. "C" recuerda y tabula sus horas trabajadas.
- ahorra tiempo y molestia en la parte del empleado que es registrado, y el tiempo del empleado necesario para tabular las horas trabajadas

5A260 o personalizó el cuerno de coche, y las alarmas y los avisos internos del sonido (eg.: señales sonoras porque la correa no está prendido, o alarma verbal que está pasando a BAJO el gas, etc): Hacer el sonido que usted quiere oír.
- los sonidos están dentro de los parámetros de las regulaciones del diseño del coche del gobierno (diversos coches de la nota hacen que diversos cuernos del sonido - ahora elijan lo que usted quiere!)
- vendido como opción por la compañía de coche, o por la compañía del accesorio del coche

Karaoke auto 5A280: Cantar mientras que conduce. También, versión para los grupos del viaje del autobús.

- sistema para los conductores de coche que cantan mientras que están en coche.

¡- Versión especial para los jinetes de autobús japoneses de viaje también!

- OTD: "S"; "C"; pp; P.M.; fecha; el interactive%; juguete; básico; "mic"; synth; portable; sst; punto de ebullición; vc; el score%; md; carro (posibilidades de generación sanas); cp; cm; uip.

accidente de automóvil 5A290 Alerter: El conductor oye que el sonido en la dirección del peligro posible si la velocidad y la dirección del conductor son tal que presenta de riesgo elevado él chocará con otro automóvil a una velocidad, a una dirección, y o a una distancia peligrosa.

- el dispositivo calcula vueltas él u otros están haciendo

- el hecho de que él o el otro conductor puede ser que decelere es una indicación importante que están notando otro vehículo, peligro potencial

Comercialización: incluso si el coste excede un nuevo coche, alguna gente rica que es así que propenso a los accidentes comprarán uno, puesto que puede ser que ahorre: 1) teniendo que comprar varios coches; 2) las primas de seguro debido a a) bajan accidentes, b) el descuento del asegurador para tener dispositivo, 3) algunas personas mayores no conducen simplemente para el miedo de su capacidad de conducción, con todo se sientan en millones de dólares y no quieren tuvieron que siempre confiar en chófer.

- el sistema "analiza para cualquier tipo de en potencial/w del accidente: lugar de trabajo (piso de la fábrica); cuaesquiera vehículos.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip); las ayudas demuestran quién (w5) era más culpable en accidente

nota 5A300: el dispositivo de la grabación para el usuario de las ideas consigue mientras que conduce.

teléfono estéreo del coche del coche 5A301: oír a persona el hablar con usted en la estereofonia del coche. El usuario puede cambiar entre los altavoces o el modo conversacional determinado de la mano.

reloj del mundo 5A310: Anuncia la hora en cualquier lengua.

- anuncia verbalmente que la hora en cualquier usuario de la lengua selecciona de "c" 'menú de s de idiomas.

- Grande para los entusiastas de la lengua y eso a menudo pensamiento en el recorrido. El producto deja a usuario sentir un poco como están en el país extranjero de su selección. La programación mantiene sonar verbal la misma lengua hasta cambiado por el usuario. Del interés para los niños también.

=

- Reloj que habla: habla en los acentos diversos, tipos de sonidos (el domineering, apacible, extraño, etc.).

- ENCIMA de la opción del tipo formato del sonido, o del tiempo dado visualmente y con la alarma de la señal sonora solamente.

escala de la placa caliente 5A340: apaga la hornilla cuando la escala lee la jarra está cerca de vacío. Viejos modelos en el mejor de los casos: apagar en dos o tan horas; utilizar el thermos que las subsistencias por varias horas y no pueden quemar, sino pueden romperse fácilmente.

- si el café, té ha estado en la hornilla por una absolutamente cierta hora, el dispositivo calcula fácilmente el nivel aproximado de la evaporación y agrega el agua/el líquido al nivel contrario de la evaporación

vibración 5A350: emite esto vía llaves y o la silla, escritorio para:

- realzar el control de calidad (pocos errores)
- mayor capacidad mental
- sensaciones agradables

página Turner de la computadora 5A360: El software emite los sonidos de papel naturales de las páginas de cambio cuando la pantalla va a la nueva página. Como la persona progresa a la nueva página, oír el sonido del torneado de páginas.

- sonidos de papel para progresar a diversos capítulos, e incluso más ruidoso más ruidosos al comenzar o acabando el libro/el directorio

- Uso: consumidor, anuncio publicitario, estudiantes estudiando en juegos de "C", de "C", el etc.
- OTD: "S"; "C"; P.M.; pp (tipo sonido querido, con./desc. de audio); demuestra la página, el volumen y o el archivo #, directorio.

paquete del arroz de la microonda 5A370: verter a cocineros del agua y del horno a la perfección.

No electrónico.

- puede tener muchos otros ingredientes populares en diverso tipo cocinas. Ninguna mezcla sucia, limpiando. ¡Conseguir la receta perfecta!

- cualquier otro tipo alimento que necesite/no necesita el agua agregada

protector del humo 5A390: cocinando el dispositivo apagan automáticamente sobre la detección de la cantidad mínima requerida de humo. Para las microondas, gas/estufas y hornos eléctricos, tostadoras, pequeños hornos, cacerolas de fritada eléctricas, placas calientes, etc.

puntos ligeros de 5A420 w (con) en la dirección del calor y o movimiento y o localización del transmisor portable de la persona y o en que los asientos se están sentando

reflectores del "sensor" del movimiento 5A430: La luz sigue automáticamente los pasos de la persona. Para una entrada dramática a los clubs de noche exclusivos, la escuela juega, etc.

- Sigue los pasos de la persona mientras que caminan. La tierra coge los sensores. De interior/al aire libre.

- ahorra costes laborales

pendientes del imán 5A440: Tener la mirada perforada del pendiente sin los oídos perforados.

- los pendientes del asimiento (no electrónico) sobre el lóbulo de oído sin tener que perforar los oídos por muy fuerte enfrente de los imanes.

- las ventas grandes golpearon para los hombres occidentales. Quieren la mirada perforada del oído pero muchas se refrenan debido a la marca permanente del oído.

competencia del Karaoke 5A450:

los participantes ganan según cualesquiera de un número de categorías mensurables por frecuencias, golpes, el etc. También el regulador del Karaoke, o el examen de votos de observadores y o de participantes puede clasificar a contendientes. A menudo el ganador puede ser la persona que la gente quiere seleccionar para la diversión, propósitos amistosos.

. Criterios de prueba: persona que ríe lo más a menudo posible; voz de la echada más alta; la voz más profunda; el más lento (con pocos cambios en la frecuencia/ritmo); lo más rápidamente posible (también medido por cómo pueden terminar rápidamente palabras y todas de la canción); número de bebidas borrachas durante la canción/el juego/el proceso; más original; la persona muy probablemente a tener/tenía la mayoría de los socios de sexo; el más ambicioso; el más creativo; el más amistoso

la persona real seleccionada (ganador) pudo ser controlada por la presentadora de la barra, o esté por criterios al azar, o algo culpables. Sus todos para la diversión.

diseñador del laser del alimento 5A470: Para el cocinero del japonés que quiere ser creativo. El laser quema diseños preprogramados por la máquina (seleccionar de diversas opciones del diseño), o el cocinero utiliza su tacto artístico para propios diseños. Grande para el japonés: pedazos del desierto; insignia de la compañía sobre pedacitos del alimento; etc.

- Los fabricantes de alimentos pueden utilizar esto para la producción alimentaria que apunta cualquier hábito alimentario cultural. Pudo crear nuevas sensaciones en futuro.
- Característica opcional para la microonda/los hornos convencionales.
- Aplicable a los alimentos no comestibles (no enviar ni utilizar esto puesto que su otro producto que es dirigido por separado)

alarma de la tensión 5A530: cuando su o la voz de otra persona está creando las frecuencias que representan la tensión probable, las alarmas vía luz o sonido o voz. El usuario entonces puede intentar reducir su u otro tensión

- para la investigación/el "analizador del comportamiento": verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" las ocurrencias w5 (para el uip, vía vagos)

podómetro de 5A540 A/V: según cómo camina el comprador creativo del producto, las sacudidas, dispositivo emiten audio y o señales visuales en los ritmos correspondientes, intensidades, volúmenes.

- Las emisiones audios incluyen: mono y o frecuencias múltiples, ritmos; canciones
- Las emisiones visuales incluyen: Las luces, que permanecen constantes, cambian en intensidad, entran ritmo. "S" es una alteración de líneas, de gráficos, de puntos, de imágenes, de carácteres, de colores, del etc.

llamador de la camarera 5A560: presionar simplemente la luz secreta para conseguir a camarera, excepto el apuro de guardar su ojo hacia fuera para ellos.

. Los restaurantes innovadores de la diversión pueden atraer a clientes con esta novedad. Podía convertirse un nuevo golpe. El cliente pide simplemente camarera sin tener que guardar el ojo hacia fuera para ellos. Mejorar que teniendo una luz embarazosa sobre la tabla que se apaga conseguir a camarera. Solamente el cliente y la camarera saben que están preguntando a alguien.

- H-separar las llaves para diversas peticiones: regar, más café, la cuenta, querer ahora ordenar, etc.
- Mando a distancia
- (llamada) cualquie u

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

identificador alejado 5A570: Saber quién está viniendo cogiendo en su pequeño dispositivo que transmite portable. Cada partido sabe con quién está en vecindad próxima o sin las paredes. La porción de recepción de invención identifica el código de la persona y exhibe su número de código, el tipo frecuencia, y quizás su nombre correspondiente si la máquina sabe. Quizás el transmisor envía código con el nombre y cualquier otro Info del remitente sobre ellos, eg.: su afiliación del co, nacionalidad, etc.

- tener acceso a través de puertas, el etc se pudo determinar por el código enviado con tales constantemente o de vez en cuando (en el comando del usuario) los códigos que transmitían
- D: u (usuarios) (c=distancer=rc) = sabe otro = distancia; la persona que era "siguió" = "" portable/"" del tr/"del picosegundo cid" = RC = C (computadora) = persona de la supervisión.

colector del vándalo de la pintura de aerosol 5A590: el receptor especial incorporado a las paredes, al etc envía la alarma a la policía sobre la recepción de la pintura de aerosol

- sentidos del receptor vía partículas de pintura, o productos químicos usados para entregar la pintura (no pudo incluso tener que ser pintado encendido para alarmar)
- el receptor es fácilmente reemplazable, y mezcla fácilmente adentro las paredes que no son totalmente planas
- los receptores falsos de la alarma pueden también ayudar a frustrar de vándalos

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip); bandidos de cogida de la policía (servicios como evidencia de la corte). El sistema (sistema adaptante) "sigue" = movimiento "sensores" donde estaban los bandidos antes o después de cualesquiera/del crimen.

monitor inteligente -2e251

software del almacén de la invención 5A610: Caminata abajo de las islas del almacén dentro del tipo compañía que usted seleccionó. Conseguir las ideas alrededor, los nuevos productos, nuevas estrategias empresariales eg.: comercialización, empaquetando.

- desarrollar una tierra del producto de la fantasía

- OTD: "R"; "S"; "C"; pp; P.M.; Reino Unido; ratón; interactivo; educ; juguete; básico; juego; entrar; el portable%; impresora; "M"; oscilador; vc; egh; cuenta; el tgh%; md; carro; tr; MES; cm; uq; mq; uip; carácter; palmada.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

amaestrador de perro 5A650: Enseña a perros perezosos a raspar.

para los dueños del animal doméstico con los perros que son descortezadores pobres. Siempre que ocurra el sonido externo, los altavoces transmiten en frecuencias que perro de la causa de la ayuda para sentir como el descortezamiento. Éste es un cambio del comportamiento que continuará generalmente trabajando después de que se apague el sistema.

- los altavoces pueden transmitir en los sonidos audibles y no audibles a los seres humanos

- modelos más costosos tendrán micrófonos que cojan solamente los sonidos que son de ciertos puntos (eg.: evitar el coche suena lejos apagado, etc.) cuál en disparadores de la golondrina de mar los altavoces.

- el altavoz puede también hacer sonidos del descortezamiento

- OTD: "R"; "C"; pp; P.M.; Reino Unido; fecha; el interactive%; básico; "mic"; alerter; tgh; el score%; carro; cp; acceso; uip.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

- cosechadoras con los sistemas existentes que hacen animales reducir sus comportamientos negativos (descortezamiento) cuando la corteza (demasiado de largo/demasiado en alta voz). Agregado para archivar 5/96.

luz peatonal de la seguridad 5A670: momentos antes de escuela y después de la escuela, cuando el laser o la otra presencia media del sentido de persona que viene o que se coloca, luz da vuelta al verde para ellos a la cruz. Invención puesta dentro de parámetro deseado en todas las luces cruzadas peatonales.

- sin la invención: los cabritos pueden jugar mientras que esperan a la cruz y se caen quizá sobre la calle con la bola, el etc; puesto que más allá de parámetro deseado - la luz no da vuelta automáticamente al niño verde no

asumirá caminatas cruzadas siempre para ser verde, además, los semáforos cerca de escuela pudo de vez en cuando tener espera del niño para no construir la asunción que las luces serán siempre verdes, por lo tanto no la necesidad de mirarlas.

- si cualquier persona cruza la luz cuando aún el rojo, un sonido pudo alarmar. Puede ser utilizado en cualquier luz cruzada de la caminata (incluso en ciudad entera)

Walkietalkie de la combinación 5A690 - teléfono: "T" está con opciones sin cuerda y de la cuerda

regulador del niño 5A700: para activar [llamada saliente/el programa particular (TV)) la característica, primero presionar un botón especial (una vez o cualquie número de épocas repetidas en orden) que le deje conseguir [señal para marcar/programa]. El llamador debe marcar los números/código pronto después de eso o se pierde señal para marcar/la conexión/connectability/"acceso" y el cualquier presionar de otras llaves en el cojín se no hace caso.

- Además, habrá un anillo/señal sonora (oscilador) si (t/%program) viene un call/tr entrante y se puede escoger solamente encima de (si el microteléfono está de gancho) presionando iguales o el otro botón especial - esto previene a cabritos de [contestando al teléfono (si son demasiado jovenes)/mirando programas particulares].
- los padres no pueden controlar siempre a sus cabritos de usar el sistema ("T"), por lo tanto esto es una característica valiosa.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

- Cribador del programa de la hospitalidad: 9G-220: Las pantallas/seleccionan del sistema (sistema adaptante) (indeseado/querido) ocurrencias (dentro de programa)
- movido en parte "corregir"

sintetizador de 5A730 TV: programas del convertido a su estilo sano preferred. Ir más allá de la base tradicional, triple y así sucesivamente. Cambiar según el tipo acentos y expresar los estilos preferred.

- movido a 9G220 en 8/95

protector de 5A740 TV: Los estudiantes de las ayudas estudian más recortando su tiempo de visión de la televisión. El padre restringe épocas que el dispositivo puede ser activado.

- cortes de la televisión después de cierto plazo (ENCIMA de la duración permitida mirar). Ciertos modelos permiten que el usuario devuelva la TV encendido, otras no están permitiendo esto
- expedientes cuando la TV fue vista
- llaves del vigilante en su código para girar la TV. No se prohiben los minutos/día o mes del número limitado... La cantidad de tiempo dado un plazo se pudo determinar cerca: sus grados en escuela, el otro funcionamiento.... El padre que considera a más de una persona el ver de la TV sin cada uno de sus códigos afinados adentro puede hacer la TV no permita que vean la TV para cualquier plazo como castigo
- OTD: "S"; pp; P.M.; Reino Unido; fecha; tds (el máximo # las horas que anotaban permitieron por día, o mes de la semana; # las horas que pueden ser miradas ("acceso") basaron en el funcionamiento de la persona (eg.: cuentas de la escuela)); educ; básico; alerter; acceso.
- Cribador del programa de la hospitalidad: 9G-220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)
- copiado a 9G220 en 8/95

5A750 Warner: separar o ató el dispositivo que observa si tv/monitor tiene peligro para la salud convertido (la radiación excesiva, la imagen pobre que lastima ojos {las disminuciones eye la visión en un cierto plazo}). El mejor como dispositivo separado vendió por alguien que no hace televisiones.
- OTD: "S"; "C"; sensores diversos de la radiación, del etc; alerter.
- Cribador del programa de la hospitalidad: 9G-220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

los esloganes 5A770 marcan la máquina expendedora: oír los segmentos de la demostración (teatro, cine, etc) y o de revisiones en las máquinas del boleto.
- la P.M. o SUBE para la opción la cual desean escuchar
- "Hospitalidad"/cribador del programa (interruptor): 9G-220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

palanca automática del asiento 5A781: baja el asiento y la tapa de tocador sobre limpiar o la salida del cuarto de baño o de la película con un chorro de agua del interruptor. Los aumentos asientan y o tapa en la película del interruptor.
- Relacionado con el dispositivo existente, que tiene luz verde o roja, si el asiento está hacia arriba o hacia abajo.
- D: posición = sensor = analizador = luz/oscilador/nr del asiento

metro del uso del cepillo de dientes eléctrico 5A790: cuenta el número de épocas utilizar-demostradas en "S" y o alerta a usuario cuando es hora de cambiar los accesorios del cepillo

- OTD: básico; tds; alerter; cuenta; trabajos con los cepillos de dientes regulares y eléctricos.

intérprete simultáneo 5A800: palabras del altavoz traducidas a lengua deseada: en la pantalla o puesto en palabras en el teléfono del oído del oyente.

- convertidos en idiomas de oyentes
- puede también escuchar vía altavoces
- OTD: "S"; "C"; pp; P.M.; Reino Unido; fecha; educ (enseña a la lengua, pronunciación, hace los taladros de la lengua, el etc); entretener; "mic"; synth (en efecto sonoro deseado); portable; impresora; "M"; punto de ebullición; oscilador; vc; egh; md; carro (idiomas, sonido sintetizando efectos); trabajos con los teléfonos, tr, MES, fs; RPC; uq; mq; uip (preferencia por ciertas frases, estilos del discurso, el etc); carácter; palmada.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

selector de la música del correo de voz 5A870: El oyente selecciona el tipo música deseada mientras que espera en asimiento.

- el oyente pide el tipo música que desean escuchar (o ningúno)
durante su estar en asimiento
- OTD: "C"; radio; Lector de cd; recepción del satélite y transmisiones de cualquie información basada audio, eg.: servicio de noticias; base de datos de la información enciclopédica accesible por el oyente; fecha; tds; básico; juego en "T" - interactivo; "mic"; el synth%; "M"; carro; punto de ebullición; "T"; SP "T"; tr; MES; fs; cp; uq; mq; acceso; uip.

discurso sordo 5A890 a las persianas: como llaves de la persona sorda en las palabras sobre el teclado del dispositivo, el altavoz emite los sonidos de las palabras. Usos para otras situaciones también.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

5A1000 Info cogen: templar en (los medios diversos) y conseguir el tiempo exacto, el tiempo, las noticias, cualquier otro Info deseado, el etc.
- su reloj, reloj, "C", juego electrónico o calculadora o cuaderno coge códigos vía: El "t", la transmisión vía satélite, la radio -, el fm, el interruptor, el mw, el lw o la otra frecuencia del aire. El dispositivo convierte tales señales en el Info, que se puede retratar, al usuario vía "S", audio o la impresora

5A1010 calculan el cambio en el peso cualquier cosa durante tiempo para demostrar fácilmente la información vía el cualquier gráfico automatizado o el otro tipo software de la base de datos.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

5A1020 mide el peso adicional necesario para cumplir el requisito

calculadora de la densidad 5A1030: la llave en el tipo sustancia y o volumen y escala da densidad
- puede tener sistema para el volumen la medición fácilmente, eg.: la diferencia en el levantamiento del líquido sobre la inserción del material - el dispositivo calcula la diferencia a un decimal del minuto.

registrador de la dieta 5A1040: cada alimento tiene poseer el envase y la escala correspondiente. Tabula todo el alimento entrado y lo recuperó para hacer cualquier carta numérica posible, gráficos. Grande para los científicos que estudian los animales, gente; para la gente que mira sus dietas.
- poner el interruptor en el surco para el "alimento entrado" cuando está entrando el poner en nuevo alimento, o simplemente llave en ese nuevo peso. Incorporar el comando relacionado al sacar el alimento para alimentar. La escala sabe para no registrar disturbios para escalar cuando es agitated mientras que entra en o recupera el alimento - la escala pone el nuevo peso en memoria cuando se termina la tarea.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

patín musical 5A1050: El tipo sonidos de los programas del usuario generó cuando en el movimiento. Sonar como un avión de reacción, un coche de deportes, un etc.
- hace los sonidos, música mientras que las ruedas están dando vuelta. Tiene característica con./desc. para girarse sano y lanzar las cerraduras de rueda (si se quiere la seguridad, combinación del uso o la cerradura de la llave)
- sonidos: motores del rugido, coche de silbido, patín de silbido
- el micrófono amplifica los sonidos reales creados por el usuario mientras que embarque del patín

analizador del cambio de temperatura 5A1070: como los cambios de temperatura él analizan resultar cambian en cualquier material que es estudiado, cómo el cambio siguiente: volumen de productos químicos ampliados o contratantes, líquidos; cambia en el color de los crecimientos de los productos químicos, de la planta o del animal (el sistema pudo identificar cambios del color a través de su ojo que analiza el color y esperanzadamente los pequeños cambios del color también); la actividad de los animales, insectos en sus jaulas (están más o menos active) - pudo detectar para la vibración y u observar frecuencias del movimiento, del etc; la frecuencia en la cual los animales, insectos comen, entra ciertos lugares, ciertas cosas del tacto. El sistema compara temperatura con muchas otras cosas también. Entonces puede trazar la información docta sobre todos los tipos de gráficos y de tablas.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

CONCLUYE el ARCHIVO 5AX

Archivo: Introducción a la palmadita/6A

ARCHIVO 6A

ESTEREOFONIA PORTABLE 6B-530: combinación de alarmas en auriculares si: su beeper/paginador se está apagando (alarmando); sonido de campana de puerta; el sonido externo es alto (el sistema amplifica ruido exterior si su frecuencia o volumen adentro cierta eg.: sonidos de los cuernos de coche estándar, el screeching de los coches que vienen aprisa parar, etc)

- lo que sigue existe ya: cuando el teléfono suena, el volumen de su TV, estereofonia va abajo
- el sistema es un sistema de alarma también, con el ajuste de alarma programable ese usuario de las señales cuando es tiempo
- puede ser parte de walkman, de estereofonia, de etc
- Para Techies: Todos; alejado; "C"; P.M.; encima de (ser interrumpido para los ciertos sonidos o situaciones); interactivo; micrófono; mfh; punto de ebullición; alerter; oscilador; vc.

EXPLORADOR de la VOZ 6B-58-600: El explorador ve (admite) palabras, después las lee audiblemente.

- este solo producto es una combinación de los diseños 1B-58 y 1B-60)

Grande para: los cabritos, las persianas, las que estén demasiado ocupados leer pueden apenas dejan el explorador leer (incluso por el alimentador de hoja de papel) y hacer lo que hacen sin sentarse, eg. conducción, etc.

- Los actos algo tienen gusto de un jugador de registro a partir de las 2.a superficies.

- Para Techies: Exhibición; fd-hdd; pp; P.M.; Reino Unido; educ; juguete; hospitalidad; micrófono; portable; mfh; punto de ebullición; oscilador; vc; cartucho (para el tipo la voz deseó, eg.: seleccionar de diversos personalidades, acentos...)prc; cp.

. Opción del jugador de registro: Otra parte de nuestra compañía está trabajando en la idea de leer claves de barras u otros códigos relacionados para generar sonidos, música, el etc. deseados. Esta faceta se anima para la solicitud de patente, con todo los porcentajes del beneficio para esta faceta son ya reservados para otro partido.

--Incluso un nuevo tipo de jugador de registro de la diversión con el alimentador de la rueda o de hoja pudo ser utilizado. Propósito: controlar la velocidad en la cual se reciben los datos

--El sistema pudo poder leer códigos en muchas velocidades, con todo sondea solamente los datos en el sonido deseado. En este caso, el lector debe ser diseñado para ciertos códigos.

. Explorador luminescente: como explorado uno o más colores ligeros, sonidos, música se emiten en la manera que corresponde al artículo que es explorado. Cambiar el artículo que es explorado y conseguir diversas luces, sonidos. Explorar las palabras del papel, cuadros; hojas; piedras; azulejo; tela; caras; etc.

- mercados: juguete, parte del producto

- exhibiciones: diversos gráficos según el artículo que es explorado. Puede convertir los cuadros que son explorados en algo diferente.

- ENCIMA del dispositivo de la manera realiza sus cambios, eg.: en formas más simples más grandes, más azul y verde, cambiar todos rosados al etc. anaranjado.

¡- Grande para los cabritos! Pueden caminar alrededor de su sitio que se divierte creativo magnífico....¡cuántos otros productos en su sitio podrían ser tan imaginativos!

Para Techies:

El explorador envía la luz y o las ondas acústicas (no no necesario audibles a los oídos humanos) y entonces dependiendo de cómo despide de nuevo al dispositivo, los estímulos apropiados (luz, sonido, la música...) para el usuario, se crea;

. Para Techies: Todos; exhibición; fd-hdd; P.M.; pp (los tipos de efectos desearon de cualquier explorador ve, eg.: las superficies brillantes pueden crear una luz más blanca o más de oro...); Reino Unido; interactivo; juguete; hospitalidad; ejercicio; portable; sst; índice de inteligencia; impresora (imprime gráficos, color, el etc según qué fue explorada - el impreso es la reacción, como la luz que es la reacción como arriba); punto de ebullición; oscilador; vc; egh; cuenta; carro (tipos de reacciones que pueden ser creadas y de cómo); RPC (para la parte principal del producto); cp; uq.

CÓDIGO de COLOR 6B-590: El explorador coge solamente ciertos colores. Permite que el usuario anote las cosas para ciertas aplicaciones con todo no deseadas para la entrada en la computadora.

- cada color (aspecto de la información) se puede separar fácilmente una vez dentro de la computadora, para corregir, el etc.

- similar a la idea sobre las máquinas de la copia (eg.: Xerox) que no copia el azul del color

- El usuario puede seleccionar colores al escribir sobre el papel, y o cuando da instrucciones la computadora o el otro dispositivo para poner ciertos colores en el suelo.
- Muchas aplicaciones, por ejemplo:
--el usuario puede escribir en el azul (no cogido por el explorador) al hacer notas sobre el papel que no quiere cogido
--un ciertos datos son necesarios, otros no están para la ocasión particular (el usuario decide qué colores están o no se quieren para la ocasión).
- Las plumas se pudieron vender con el dispositivo, asegurándose que tal escritura no sea cogida
. Para Techies: Exhibición; todos; fd-hdd; pp; P.M.; Reino Unido; educ; juguete; juego; hospitalidad; portable; sst; t; mfh; punto de ebullición; carro (eg.: para trabajar con ciertos colores); cp; uq; carácter.

COSA de la CAMINATA 6B-630: amplificar y alterar los sonidos creados por su dar une vuelta.
- sonar como usted están caminando: en una playa; a través de bosque; en la pila de latas de lata (para el humor); a través del agua; etc.

- usted puede caminar alrededor del cuarto, con todo suena como usted puede ser que camine encendido: arena, nieve, hojas de otoño, chapoteando en agua poco profunda por la orilla o el lago de mar...
- cada movimiento de la pierna acciona el mecanismo de fabricación sano
- los altavoces pueden estar para el aire, o vía los auriculares estéreos portables
- hace caminar a trabajar, el etc más interesante
- el usuario puede crear diversos efectos sonoros de muchas de las opciones enumeradas adjunto
- aplicaciones la tecnología existente del podómetro como parte del sistema (el podómetro cuenta el número de pasos que una persona hace al caminar), más tecnología adicional
- éste es un de tipo precoz del producto de la "realidad virtual"
- otros títulos para el producto: Caminata de la realidad virtual, caminata del cielo, sonidos que caminan, fabricante de la caminata, compañero del basculador. Aplicaciones adicionales: para activar (lo hace más interesante)
. Para Techies (OTD - otros detalles técnicos):
- diversos cartuchos permiten diversas opciones de fabricación sanas; todos; fd-hdd; pp (tipo de efecto sonoro deseado); P.M.; Reino Unido; interactivo; juguete; juego; hospitalidad; micrófono (determina el tipo sonido hecho por el usuario, después sintetiza el sonido por consiguiente); ejercicio; portable; sst; correa inútil; punto de ebullición; oscilador; vc; cuenta; actúa como podómetro también; carro; RPC; cp.

PROTECTOR del OLOR 6B-660: emite el olor terrible para disuadir a la persona que ataca o que quiere violar. El olor es científico diseño para apagar a gente. No dañoso a los seres humanos.

- Ropa de la mancha de Doesn't. Algunas versiones pudieron permanecer con la persona que se rocía en por una época que es (como cómo una mofeta trabaja) ayudar a policía a identificar al bandido
- la dispersión del olor pudo también estar con la tinta (probablemente rojo), que también ayuda al bandido de la etiqueta (la tinta puede eliminar en lavadero). Esto es diferente del gas lacrimógeno, aunque el olor se pudo mezclar con el gas lacrimógeno (los lugares donde está poder el gas lacrimógeno ilegal apenas tienen los productos químicos del olor)

. Para Techies: La poder de aerosol emite hacia fuera hasta 5 metros o más, trabaja así que no consigue el aerosol sobre el usuario; Todos (excepto esto no está un dispositivo electrónico, sin los elementos #6, #7, #8, #9 en "toda la" sección); portable; cm.

El usuario puede también botón lanzar el olor sobre bandido mientras que están saliendo de estancia. Eg.: el área de puerta de salida tiene sensor de movimiento y lanza el olor o la tinta cuando las caminatas de la persona compran...

6B-690 COMPOSTER: (puede ser convertido?) da vuelta rápidamente a los desechos del alimento en el estiércol vegetal para el jardín o para las plantas nuevamente potted, el etc. buenos para las que 1. no quiera para ir afuera para la pila del estiércol vegetal, 2. querer el estiércol vegetal en efecto rápidamente, 3. quieren guardar hacia fuera las ratas al aire libre, cucarachas

- el dispositivo especial maneja el problema de olores
- pudo funcionar en energía solar
- realizar que preparan a los occidentales para pagar los precios poco económicos valor ecológico (incluso si puede ser que sea tonto desde el punto de vista de un experto). Mirar Alemania que quiere pagar sobre $1.00 reciclar muchos de los packagings del producto de consumo, aunque podría costar cerca de $0.03 para quemarla o para descargar en lugar de otro. Hay muchos otros ejemplos.
- es esencial esto es solar accionado. Queremos un anuncio que diga que "dar vuelta rápidamente a sus desperdicios en el estiércol vegetal con energía solar..."

. Para Techies: PP; P.M.; todos; fecha; hospitalidad; índice de inteligencia; t; alerter (cuando el estiércol vegetal es listo, etc); cartuchos de las bacterias para apresurar proceso.

CONTROL de la TAPA 6B-710: el sello de envase demuestra todas las veces que se ha abierto. Para activar, llaves del usuario en la fecha en la cual el alimento primero fue preparado y o insertado en el envase. Los tiempos subsecuentes ocurren automáticamente.

- propósito: frescura; hurto del alimento; los estudios en la frecuencia del uso y de éste pueden también demostrar....; cuando el artículo está de mayor renombre, eg.: Lunes, y o tardes.
- la alarma si la tapa se abre más allá de la fecha programada original para (gente puede no hacer caso de la nota escrita, o piensa que es todavía aceptable - ésta hace psicologicamente a gente hacer más cuidadosa de usar el alimento más allá de la fecha. Contenido: alimento para la gente, los animales, la botánica, el etc; productos químicos; medicinas; fuentes industriales; etc.

- da la advertencia verbal sobre la abertura, eg.: "esto es una sustancia química peligrosa... dirige con cuidado"
- para abrirse: levantar la lengüeta de la tapa; torcer la lengüeta de la tapa; etc
- la programación de la tapa se pudo hacer de: exterior o interior de la tapa, o del exterior la base del envase.

Otras características: memoria, exhibición

- da la advertencia para poner la tapa, casquillo, tapa, sello detrás encendido si: no perfectamente en el lugar; no puesto detrás encendido después de tiempo requerido (según lo programado por el usuario)
- las comunicaciones, las advertencias y o las alarmas pueden estar vía: aviso verbal, sonido de la alarma, luz roja que destella, mensaje de la exhibición
- la tapa puede dar el saludo cuando está abierto, eg.: la tapa del almacén del caramelo o de alimento dice "hola", "intentar por favor una muestra libre"... cuando está abierto
- el sistema se puede conectar con la escala (que pesa el sistema), que también tabula cambios en pesos con tiempos de la abertura de la tapa

Para Techies: Todos; exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; comportamiento del usuario; educ; juguete; micrófono; portable; índice de inteligencia; t; mfh; alerter; oscilador; carro (tipo programas informáticos); teléfono y o módem (usuario de las alarmas); uq; mq; acceso.

ALIMENTO VIRTUAL 6B-720: el alimento se sirve con el sonido y el olor que emiten efectos. Realza sabor y la experiencia del alimento.

- nota: el gusto es la combinación de experiencias sensoriales recibidas por la lengüeta (limitada a cuatro sabores) y de las mayores variedades de olores por el analizador de la nariz/del olor.
- puede substituir las limitaciones para los productos químicos en alimentos (porque es carcinógeno); conseguir el impacto mucho mayor iguales/de otros productos químicos emitidos en aire por los gramos que se absorben en cuerpo vía nariz contra comido.
- puede también ser vendido a la gente que carece tastebuds; querer experimentar con los nuevos alimentos, experiencias
- olores que realzan o reducen el apetito (emitido con o sin el alimento y o las píldoras)
- TM: alimento de la realidad virtual, realidad virtual del alimento, olor, alimento del olor
- debe poder demostrar al fabricante algunos de los olores potenciales creatable y cómo; no debe utilizar ningu□n agente carcinógeno sabido

Para Techies: Efectos de emisión sanos; todos; efectos deseados pp; P.M.; Reino Unido; hospitalidad; portable; índice de inteligencia; t; punto de ebullición; SP; carro (del olor que crea elementos).

JUEGO del ARMA del LASER 6B-740: el objeto del vuelo del golpe, si se vuelve ninguna reflexión usted la golpeó. El espejo causa la reflexión. El arma debe ser acentuado de la posición correcta ganar capacidad de una reflexión si tirado para ser faltado. Además, uno puede tirar solamente en la distancia durante la caída o volar en el aire mientras que arma medio llevado aire del artículo y espejo pequeño o grande.

- sostener el arma en la posición correcta, o hacerlo de un sostenedor del arma
- el objeto del vuelo puede ser una bola del espejo, requiriendo a persona del arma golpear en ángulo recto en el centro, causando una reflexión
- objeto del vuelo, si es lanzado por el dispositivo (o la mano) de la manera correcta, su sensor en centro, al recibir el laser puede sonar: señal sonora; desplome; explosión sana; etc
- Variante: el objeto del vuelo (probablemente bola) refleja la luz laser al receptor del arma, significando cuando un golpe fue hecho. Para el uso al aire libre también. La bola está de material reflector de la luz no frágil
- programas de usuario la frecuencia, la fuerza y la velocidad en las cuales se expulsan las bolas
- La exhibición demuestra la cuenta de jugadores
- Para Techies: Todos; pp; P.M.; Reino Unido; interactivo; educ (enseña a práctica del shooting); juguete; juego; hospitalidad; portable; índice de inteligencia; t; punto de ebullición; oscilador (eg.: cuando un golpe fue hecho); vc; cuenta; carro.

SECUENCIAS del LASER 6B-750: enviar los lasers en distancia grande (o muy corta) el público y los miembros del grupo pueden disparar el sonido que crea ligero y o la música.
- cada secuencia (de rayo láser) tiene diverso sonido
- algunos botones o secuencias pueden también accionar sonidos del fondo, eg.: orquesta del fondo
- los modelos pueden trabajar en la luz y o la obscuridad
- modelos para uno o más jugadores: la distancia entre el transmisor y el receptor pudo ser ajustable
- cada secuencia pudo estar de diverso color: si la visibilidad de la luz es un problema para algunos usuarios, después una línea se pudo pintar sobre el fondo que demostraba la localización de rayo láser.
- puede ser diseñado como instrumento especial con opciones de 100 de sonidos, o ser diseñado representar a: la arpa, va (arpa japonesa como el instrumento que es tocado desplumando cada secuencia), etc.
. los lasers se pueden programar por el usuario: hacer un solo sonido en la viga del tiempo está quebrado por el dedo, el etc sin importar cuánto tiempo la luz fue interrumpida; o, el sonido continúa durante la duración entera de la interrupción ligera
. Para Techies: Los jugadores adicionales pueden jugar utilizando sus instrumentos accionados por control remoto transmitidos en el receptor del dispositivo, que se pudo colocar lejos de la unidad principal bloqueada por el jugador. Códigos: exhibición; fd-hdd; pp (salidas sanas deseadas, etc); P.M.; Reino Unido; interactivo; juguete; todos; hospitalidad; micrófono; synth; portable; índice de inteligencia; mfh; punto de ebullición; alerter; oscilador; vc; cuenta; carro (tipo sonido que hace opciones); RPC; uq.

LUZ MÓVIL 6B-780: el sensor de movimiento tiene la persona de siguiente ligera mientras que se mueven
- Otro: o el disparar de las aplicaciones del laser
- los transmisores del desgaste de los agentes que identifican su lugar o son identificados por otros medios; reduce la necesidad de un hombre de la cámara y de los controles complicados que necesiten ser aprendidos y puede estar roto

- sin embargo no puede estar para el ballet más sofisticado en Bolshoi de Moscú, hará para los juegos de la High School secundaria, el etc

- el sistema es muy básico y económico: las luces vienen en uno de varios las medias cajas abiertas (que hacen instalaciones fáciles), cada caja pudieron tener uno o más luces por agente, dependiendo utilizan a cuántos agentes

. Para Techies: Activar el movimiento de luces por la persona ligera que utiliza mandos a distancia (ahorra de necesitar los alambres); fd-hdd; pp; P.M.; controlar las luces vía ratón o el palillo de alegría; hospitalidad; juguete; todos (excepto: #6); juego; ejercicio; portable; índice de inteligencia; mfh; punto de ebullición; alerter (en el momento de la instalación, antes de sistema el comenzar [para el juego, el etc]), oscilador; vc; cuenta; enseña a actuación; md; carro (software y o soporte físico para la generación del efecto); cp; acceso.

LOCALIZADOR de la TENSIÓN 6B-820: sitúa qué músculos tienen más tensión y o ser más apretado.

- estar del valor (no requerido sin embargo) si el dispositivo se podría utilizar por no los doctores (sin embargo podrían tener una licencia de practicar masaje después de un año de entrenamiento). Por lo tanto el artículo debe ser totalmente seguro de utilizar.

- la demostración de los estudios tal producto podría ser útil puesto que muchos usuarios no saben articular exactamente donde están los dolores principales; también del uso a los doctores para la diagnosis de dolencias

. Para Techies: Segunda parte de masajes del dispositivo. Códigos: Exhibición: demuestra qué músculos son tensos; fd-hdd; pp para las secciones del cuerpo que quieren ser comprobado; P.M.; Reino Unido; comportamiento del usuario; educ; todos; hospitalidad; ejercicio; portable; Índice de inteligencia; mfh; alerter; oscilador; cuenta; tgh.

ANALIZADOR de la VOZ 6B-830: analiza un comportamiento de la persona o del animal, personalidad vía su voz

- el sistema de reconocimiento vocal del sistema identifica el tipo de pronunciación para las palabras particulares, eg.: "amar", "felicidad", "esmero", "mi esposa"... Esto permite al sistema ayudar a juzgar la psicología del altavoz referente a tales.

- el sistema pudo comparar los tonos totales y otras frecuencias sanas del usuario, usando esto como base, después considerando cómo las palabras importantes comparan con la línea baja.

- trabajos en diversas idiomas

- el reconocimiento vocal que es absolutamente complejo, quizá con bloque diagrama para la tecnología existente satisfaría la oficina de patentes, después esa sección de la tecnología mejora más adelante después nuestro producto podría ser comercial.

- si una mejor información es necesaria, la persona que es estudiada puede contestar a preguntas sobre sí mismos, y toma otras pruebas psicologicas estándar. Estos datos se utilizan con el antedicho para mayores resultados.

- algunos usos adicionales: solucionar las causas penales usando las grabaciones del teléfono, la tensión y el tipo de tensión para las palabras claves pudo ayudar; etc.

- Para Techies: Exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha (cuando ocurrieron las conversaciones); comportamiento del usuario; educ; todos; micrófono; portable; Índice de inteligencia; impresora; au; t; mfh; punto de ebullición; alerter; oscilador; vc; cuenta; carro (para las palabras claves deseadas según el tipo estudio); cp; uq; mq; acceso; pi.

SONIDOS del FONDO 6B-840:

Propósito: Para convertir y o eliminar sonidos indeseados. Convertido y o (o reducir) sonidos cortados de las direcciones indeseadas, frecuencias, distancias,

- el sintetizador marcará con etiqueta especificó sonidos según su dirección, distancia, frecuencia y los altera según ASCENDENTE en cualquier cosa sintetización avanzada directa disponible.

- conversiones de la muestra: los sonidos exteriores de las construcciones se convierten a los sonidos de una fuente de agua; traficar los sonidos convertidos a los sonidos en el bosque, incluyendo los pájaros, agua, viento, sonidos caminando sobre las hojas secadas;

--Los sonidos se pueden también convertir en: ondas de océano con el griterío de las gaviotas de mar poco; tambores jamaicanos apacibles; ¡el etc. allí es un mercado enorme para este producto si es bueno!

- el usuario puede seleccionar a que el tipo de conversión él está buscando

- Usos: hogares; ninguì□n lugar en donde la gente quiere estudiar pero no puede conseguir reservado; restaurantes nuevos en el oeste; transporte público

- Para Techies: Teledirigido (el usuario puede seleccionar que las opciones ellas quieren el funcionamiento); exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; comportamiento del usuario; interactivo; juguete; todos; hospitalidad; micrófono; t; mfh; oscilador; vc; cuenta; carro (posibilidades de la generación de los sonidos); RPC; uq; mq; pi.

MICRÓFONOS - el SONIDO GENERÓ RESPUESTA vía la interpretación de sonidos externamente generados, nuestras invenciones envía la señal para que el dispositivo de respuesta reaccione. El dispositivo de respuesta interpreta código y reacciona por consiguiente.

- la misma invención puede estar atento cualquier número de diversos sonidos y enviar códigos de diversas naturalezas a diversos dispositivos dependiendo del sonido oído

ABRELATAS UNIVERSAL de la PUERTA del GARAGE 6B-860:

Número indispensable del bocinazo de épocas de abrirse: puerta del garage - buena para los embarcaderos públicos en invierno en donde diversos conductores no tienen transmisor especial para abrir garages; [del cambio del semáforo áreas viajadas adentro no pesadamente -]

- el exterior de la muestra dice en letras claras grandes cómo conseguir la puerta del garage abierta. Ahorra en el coste de trabajo muy alto en el oeste también. Aplicable para los aspectos de la seguridad no alta. Un protector pudo ser interior sin embargo (mientras que éste los ahorra el apuro de abrir la puerta)

ANALIZADOR de la PUERTA del ELEVADOR 6B-880: Sobre los pasos de la audiencia que caminan hacia el elevador, el elevador puede esperar antes de puertas cerradas. La lógica confusa decide a ir o a esperar basado encendido: el tiempo transcurrió puesto que la llave del número de la primera planta fue empujada; número de llaves del piso empujadas (pudo demostrar el número de gente aproximado en elevador); peso adicional de gente en elevador; hora; el número de elevadores contra la congestión de tráfico y los mejores patrones de flujo; etc.

- sabe si los pasos son inminentes o que dejan al elevador; pudo saber si los pasos están en la línea que camina más allá de los elevadores o hacia (el sistema pudo trabajar mejor donde está menos probable el caminar más allá de los elevadores, dependiendo de esta capacidad de la tecnología un coste de producir)
- tal invención es especialmente valiosa donde está muy costosa la tierra y donde hay mucha congestión.
- Para Techies: Se aplica a otros tipos de puertas también. Ver los códigos IMI: Alejado; fd-hdd; pp; P.M.; Reino Unido; fecha; todos; micrófono; mfh; alerter; oscilador; cuenta; acceso.

RATÓN TELEDIRIGIDO 6B-920: como un ratón excepto, 1. ningunos alambres necesarios, 2. puede trabajar en el aire. El dispositivo pudo tener funciones limitadas.
- Para Techies: Todos; fd-hdd; pp; m; Reino Unido; ratón; portable; mfh; punto de ebullición; alerter; carro; cp.

ANALIZADOR del OLOR 6B-940:
cambios de la medida en las sensaciones, comportamiento cuando la persona huele ciertas emisiones de olor. Medida tomada vía: Exploración de CAT, alambres enganchados sobre cuerpo, nivel y tipo de sudor (el contenido químico puede cambiar), movimiento de ojos, presión arterial, etc.
Para Techies: Todos; exhibición; fd-hdd; pp; P.M.; comportamiento del usuario

GUANTE de la MÚSICA 6B-970: Laser de los dedos cuando el objeto llamativo (receptores) crea sonidos señalados. El usuario puede sintetizar y o alterar el tipo de sonido creó cuando el laser golpea el receptor. El dispositivo vía el cual conseguir diversos sonidos del mismo dedo y del mismo receptor puede estar: dispositivo separado; dispositivo en la parte superior externa del guante; otro receptor de el cual recibe código del dedo del laser en el cual el código pudo ser luces con./desc. en ciertas combinaciones, eg.: tres flashes de la luz son crear campanas. El dispositivo del laser puede ser una extensión de los dedos

- El laser de cada dedo puede tener diverso efecto en el mismo receptor. Ciertos modos del receptor pueden generar pedazos musicales enteros (eg.: para el respaldo).
- comercialización: "crear un grupo musical entero todo en la aislamiento de su sitio ([quizá] sin el tacto de un botón)".

- capacidades del producto simplificadas: el tipo dispositivo del guante envía los lasers de cada dedo. Cada dedo crea un diverso sonido cuando alcanza el receptor. En modelos más avanzados, cada dedo puede crear más de un sonido transmitiendo en más que una forma.
- en lugar de ser un guante, dispositivo podía ser una caja. Cuando sale la luz, transmite la mayoría/todo el sitio, así que el receptor puede fácilmente recibir señales.
- también utiliza el número 6B-971-500000001 del diseño
- para activar el laser en dedos de la versión del guante: el dedo toca el pulgar, la otra superficie dura, o trasero de la mano o de la palma extensamente abierta.

RETRANSMISOR TELEDIRIGIDO 6B-971: Para tener más libertad movimiento y sentarse alrededor de un cuarto, el teledirigido envía mensajes al receptor y también al retransmisor. El retransmisor está en una diversa posición del cuarto, así que si el usuario bloquea el paso del transmisor teledirigido al receptor, el retransmisor en otra localización del sitio puede recibir y después en golondrina de mar transmite al receptor principal.

AMIGO del ANIMAL DOMÉSTICO 6B-990: juegos con el perro, el gato, el pájaro, los pescados, los bebés, los cabritos, el etc. vía:
- consiguiendo el animal tirar en algo la invención es tenencia y el tirar en mientras que el animal está intentando separarlo
- Más: haciendo sonidos de interés de mecanografiar el animal que es jugado con. Emite olores, eg.: la hierba del catnip (que excita gatos); productos químicos que se asemejan al olor de los animales, carne cruda; etc.
- la información investigada o publicada de la necesidad en la cual suena y las emisiones del olor excitarán gatos y perros - hacer esto quizá hacia el final del proceso de la solicitud de patente cuando aparece que la idea puede ser patentable.

Para Techies: fd-hdd; pp; P.M.; Reino Unido; comportamiento del usuario (qué movimientos u olores aparecían interesar el animal más); interactivo; educativo para los animales (especialmente perritos y gatitos); juguete; todos; hospitalidad para el dueño animal y humano; micrófono (los expedientes y los juegos mueven hacia atrás la voz del animal doméstico); ejercicio para el animal doméstico; portable (quizá versión para el uso del jardín a, el movimiento del sitio al sitio); punto de ebullición; oscilador; vc; tgh para el animal doméstico; carro (olores, sonidos).

LOCALIZADOR del ANIMAL DOMÉSTICO 8B-010: (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.

- Ver los ficheros del sistema del animal doméstico y de colocación.
- La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera.

- el collar del animal doméstico tiene transmisor, que demuestra si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la pantalla especial;
- + el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala si el dueño está consiguiendo más cerca o más lejos de animal.
- útil para localizar a niños. Animales en parques zoológicos grandes; áreas de la naturaleza; etc.
- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral
- Nota al pie de la página: Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; etc.

IMPRESORA de la CUPÓN 8B-040: mientras que ve la TV, solicitar una cupón para ser impreso para usted. ¿Grande para el publicista, y puesto que tienen ya un grupo interesado, por qué no hacerlo fácil para que ellos hagan un paso hacia la compra?

- Info impreso petición de materias similares o posteriores
- tablón de anuncios de la TV o de la computadora que demuestra los anuncios o los avisos rápidamente uno o varios a la vez (velocidad y selección del anuncio controlada por el redactor/el locutor o el usuario). Los anuncios no pudieron demostrar bastante Info a tiempo asignado, también usuario pueden pedir qué tipo de Info en materia anunciada quieren.
- la CRT pudo exhibir Info adicional por requerimiento: la difusión todavía está o vida móvil
- el usuario pudo incluso tocar la pantalla para elegir lo que él quiere impreso (interactivo)

BEEPER 8B-060: dan cada persona que espera para ser llamado un pequeño receptor. Cuando están listos para ser llamado, el transmisor envía la señal para el receptor particular, después el receptor: la señal sonora, luz, vibra, etc para notificar el sostenedor que se están llamando o que qué él está esperando está listo. Ahorra a gente de tuvieron que: leer continuamente una exhibición para ver si se ha llamado su número; permanecer dentro de visible o la gama de audiencia de anunciador o de exhibición que lo demuestra ahora es su tiempo, eg.: la persona puede ir a hacer compras en alameda mientras que están esperando a sastre para hacer

ajustes finales en la ropa, o a esperar para conseguir un boleto hecho, o a esperar para ver el doctor, el etc. El aviso se pudo hacer en términos de número de minutos aproximados antes de que sea tiempo (la exhibición del receptor puede demostrar el número de minutos, o dar un código en cuanto a: el tiempo es mucho a continuación, tiempo medio, o el venir se cierra, o ahora está....)

- la distancia de transmisión pudo también trabajar hasta muchos kilómetros
- pudo utilizar tecnología celular o del beeper, el etc.

- si la persona va más allá de gama admisible, el receptor pudo demostrar esto cerca: el ir ligero con./desc.; emitir un sonido breve y agudo particularmente manera
- Usos adicionales: alimento que ordena en el restaurante (la mayoría de los restaurantes quisieran que los clientes permanezcan y que pagaran bebidas, con todo los restaurantes únicos con este servicio (especialmente ésos sin las licencias de licor) se placerán conseguir a clientes adicionales esta manera. Los clientes pueden dar un paseo en el parque, la tienda, el etc mientras que esperan. El zumbador dice a cliente que el alimento estará listo en alrededor minutos del _. También bueno para los miembros de familia con la gente por todas partes la casa grande, mamá consigue gente preparada a tiempo - dejar el proyecto del final de la gente que ella está despertando encendido, las manos de la colada, el etc

Para Techies:

Alejado; exhibición; fd-hdd; pp; P.M.; fecha; interactivo; juguete; todos; hospitalidad; micrófono; portable; sst para modelos más complejos más grandes; punto de ebullición; alerter; oscilador; vc; cuenta; tr; RPC; acceso; pi.

SISTEMA AUTOMÁTICO 8B-070: Cuando el caminar en sitio, gira automáticamente todos los dispositivos deseados o aplicables, eg.: luces, música, altavoces (si música de otra fuente), intercomunicador o sistema de radiobúsqueda y o recepción del teléfono - el sistema identifica donde alguien (o si se utiliza teledirigido personalizada, donde está ese individuo), purificador del aire, calefacción/aire acondicionado, computadora

- el mismo resultado pudo ocurrir con encender de la luz o del otro interruptor.
- ENCIMA de lo que él quiere girado sobre entrada. Puede diferenciar de sitio al sitio.
. - Transmisor localizado en: joyería, bolso, etc
- La luz laser que dispara, activa los mecanismos deseados
- Artículos adicionales a activar: música; grabaciones educacionales (la persona oye cómo hacer algo, qué a no hacer, eg.: tener cuidado de los productos químicos, etc...); luces; calefacción/aire acondicionado
- Para Techies: Todos; alejado; fd-hdd; pp; P.M.; hospitalidad.

EFECTOS del JUEGO VIDEO 8B-10-8B-19: el olor emite cuando: golpean a la persona o a la criatura; uno entra cierta área: pantano fofo, descarga de basura, sitio hediondo; uno viene cerca de criatura hedionda; cuando está al acecho el peligro; abertura del paquete, del etc; entrar en un restaurante; el cocinar; el conseguir sudoroso de actividad; el conseguir nervioso; etc

- los olores pueden también ser muy sutiles
- la cantidad real de olor pudo ser mínima.
- se aplica a otros paquetes audio-visuales del producto: entrenamiento computarizado; vídeo interactivo (sistema activado por el usuario que toca una pantalla - los tableros dominantes pueden ser utilizados, pero no ser requeridos)
- oler a usuario del nuevo producto pudo desear comprar, eg.: dentro del nuevo coche; cuero del olor para los productos de cuero; olores también para los productos siguientes que son vendidos: alimentos, servicio de entrega de la flor, etc

. Fortaleza Techies: Exhibición; pp; P.M.; Reino Unido; ratón; fecha; interactivo; educ; juguete; todos; juego; hospitalidad; oscilador; vc; cuenta; tgh; enseñar; md; carro del olor que causa elementos; acceso (si el dispositivo del olor se utiliza en las arcadas [lugares públicos con los juegos video]); pi; carácter.

- Pantalla del olor: los olores se emiten para acentuar las sensaciones y para experimentarlas mientras que: televisión de observación; selección de opciones de una pantalla de la CRT (por ejemplo cuando hacen compras vía la computadora, ciertas maneras de la ropa pueden tener un olor elegante del cologne emitido para realzar ventas); aprendizaje algo en la computadora (retención de la memoria del aumento de las ayudas - puesto que el material se experimenta más intenso, placer); anuncios: oler el detergente o la Coca-Cola de modo que usted quiera ir al refrigerador y consigue alguno
- las emisiones del olor pueden también ser en cantidades muy minuciosas para tener el efecto subconsciente eficaz
- algunas emisiones del olor pudieron ser creatable por los productos químicos normales en el aire; bloques de productos químicos naturales de los cuales un poco se utiliza a la vez. El factor de reemplazo más difícil pudo estar con las televisiones caseras, con todo está en el interés de la televisión y de las empresas del cable para que la gente tenga éstos, así que puede ser que sean dadas lejos barato o para libre
- la gente de la demostración de los estudios goza el mirar de programas con la dimensión del olor agregada (a menos que está también sobre accionar)

EQUILIBRIO PERSONALIZADO 8B-110 del ALTAVOZ:

El sistema de sonido compensa automáticamente la localización de la persona en sitio. Cuando están más cercano a un altavoz, el altavoz más lejano consigue más ruidosamente. Para el hogar, el coche, los altavoces del etc.

- con la gente múltiple, sentidos donde está el centro "hecho un promedio" de toda la gente y ajusta el balance del altavoz por consiguiente
- el sistema identifica la localización de la gente vía: sensor de movimiento, y o dispositivo que dispara del laser, etc.
- identificar la localización de la gente también cerca: los transmisores portables que ella está usando o que está llevando; puede ser atado a un dispositivo teledirigido que también tenga muchas otras funciones; sensores en asientos, eg.: en automóviles

- Opción de lujo adicional: Si hay más de una las personas en el cuarto, y una tienen gusto de la alta base mientras que la otra la prefiere punto bajo; sistema pueden hacer una cierta remuneración ajustando según el lugar de cada persona en su sitio. Cada uno usa un diverso dispositivo que transmite; o sitio del programa de modo que permanezca así permanentemente. La opción de este funcionamiento sobre una base del transmisor no se requiere.

Para Techies:

Teledirigido; exhibición; fd-hdd; P.M.; pp; Reino Unido; juguete; todos; micrófono; synth; portable; mfh; punto de ebullición; oscilador; vc; cuenta.

CAMBIADOR de la LUZ de CALLE de la EMERGENCIA 8B-120: las ambulancias y los coches policía pueden cambiar luces próximas para adaptarse a sus propósitos.

El dispositivo se diseña para trabajar bien delante de tiempo. Esta manera, hay una ocasión para el modo necesario de la luz ámbar, que entonces cambia al rojo (que bloquea el tráfico que pararía el tipo el automóvil de la ambulancia)

- Usos adicionales: para los coches importantes del gobierno. En casos raros la ventaja siguiente de la fuerza también: colección de basura; limpieza de la calle.

¿- Existe?

Para Techies:

FD-HDD; pp; P.M.; Reino Unido; fecha; todos; mfh; alerter; oscilador; cuenta; tener acceso (hacer alteraciones en la programación)

TERAPIA INTERACTIVA 8B-140: conseguir la condolencia, librarse de su cólera, del etc. hablando con la computadora en el otro extremo del teléfono. Primera llave en el tipo modo que usted desea obrar recíprocamente adentro. Entonces hablar con o sin un aviso. Entonces el sistema responderá de manera para ayudar a la persona a alcanzar la sensación deseada.

- El sistema incita a usuario para una selección bien escogida amplia. Primero su es el tipo general categorías, eg.: felicidad; amor; tristeza; trastorno; etc. Entonces cuando se selecciona el área, eg.: el trastorno, usuario puede mejorar área de punta que buscan, eg.: los padres, mal□n tráfico, alguien robaron su idea, etc....
- El sistema puede también ser un solo dispositivo usado en el país, por el sicoterapeuta para sus clientes, etc.
- terapia principal: salir de sus frustraciones gritando es muy popular en "el mercado norteamericano de la psicología del estallido"
- también, la gente siente a menudo mejor cuando ella oye a otra persona el expresar de las emociones similares las suyas, sea canciones de amor, canciones tristes, el etc. en vez de conseguir expedientes, este producto puede establecer claramente ciertas sensaciones quizá en menos tiempo y más directo. Aunque el sistema pudo también utilizar música como forma de terapia también.

--mucha gente no sabe concreto porqué una canción satisface una necesidad emocional particular, la máquina será más científica sobre ella. Más pocas personas tener toda la música registrada para cada situación emocional, ni quieren quizá escuchar todas las muchas canciones cada sensación. Con este producto pueden incluso experimentar varias diversas sensaciones todas en cuestión de minutos.

- usos adicionales: la persona muy interesada en psicología, y una quién ha comprado ya otros productos psicologicamente relacionados, eg.: libros, cintas educacionales, máquinas de la onda cerebral (disponibles para unas centenas dólares); puesto en un walkman tener gusto del modelo; grande para la gente de las ventas que hace muchas llamadas de ventas, después de frustrar llamadas, pueden presionar el botón deseado; poner el dispositivo cualquier lugar en donde la gente puede a menudo tener frustraciones, o incluirlo en los productos que son gente cercana durante frustraciones, como los teléfonos.

--modelo del teléfono: solamente el usuario pudo oír los sonidos, no altavoz. El dispositivo sondeará en teléfono del oído o teléfono de altavoz mientras que el altavoz está hablando. Actual los teléfonos y los micrófonos de altavoz no funcionan simultáneamente - así que usted no puede hablar y oír al mismo tiempo como con los teléfonos regulares.

- combinado con las fuentes del usuario de la información sobre sí mismo (pi), más cómo el usuario pudo sentir en cualquier día dado, momento según cómo él sensaciones de la corriente de entradas en el dispositivo - el sistema generará efectos deseados. El dispositivo también incita a usuario para la información necesaria: éste puede ser cuando el usuario primero comienza a usar el dispositivo, y más adelante como las cosas cambian también.

Para Techies:

Exhibición; fd-hdd; pp; P.M.; Reino Unido; interactivo; juguete; todos; hospitalidad; micrófono; opción del ejercicio (usuario de los avisos a ejercitar más difícilmente dando el estímulo vía altavoz); portable; sst; Índice de inteligencia; impresora; mfh; punto de ebullición; alerter; oscilador; vc; egh; cuenta; tgh; cartuchos (sonido, opciones registrados salientes de la declaración); RPC; cp; uq; mq; pi; carácter (cambios según el tipo efecto deseado).

IDENTIFICADOR del TABLERO de INTERRUPTOR 8B-150: el recepcionista que recibe llamada cifra el instrumento del teléfono del respondedor aplicable con código o la información de declaración puesta en palabras de la grabación sobre el llamador, eg.: su naturaleza (cliente o surtidor); nivel de importancia, urgencia; longitud del tiempo han estado en asimiento; si su una llamada local o interurbana; persona y u organización; mecanografiar la personalidad (agradable...). El receptor de la llamada consigue esta información sobre la exhibición del teléfono; o computadora (puede entonces almacenar tal información con o sin ningu□n Info adicional introducir por el receptor (la persona con quien habla y las manijas llaman - ahorra el tiempo que afina en el Info, más receptor no pudo poder afinar todo a tiempo y u olvidar después de la

llamada, especialmente si hay otra llamada que viene pronto después de eso). El receptor puede oír o leer esta información antes o durante de la llamada del teléfono.

- toda esta información se puede retransmitir encendido a la tercera (o cualquie subsecuente persona) tomando llamada (la persona no era quizás anteriormente a la derecha una para manejar la situación.

Para Techies:

Exhibición; fd-hdd; pp; P.M.; fecha; todos; mfh; cuenta; uq; mq; pi; carácter.

identificación del RECEPTOR 8B-170: saber si el teléfono que usted está marcando es un celular/teléfono móvil y o si está siendo llamada remitida y o el número o el tipo línea del teléfono del teléfono a los cuales la llamada está siendo llamada remitida.

- los recipientes pueden optar por tal información que no se dará hacia fuera
- H [las disposiciones gubernamentales pueden no permitir todos los aspectos de la idea, dependen del país]
- también aprender arriba y el número siguiente sobre el número del teléfono que usted marcó, o del teléfono que le marcó: el nombre en el cual el teléfono es mencionado, su dirección, cuando el servicio del teléfono comenzó, cuaesquiera quejas importantes contra la compañía, estado de la compañía - por ejemplo si ha archivado para la bancarrota.
- también aprender: cuántas llamadas hicieron de ese número que día

8B-210 AGRADABLE: emite el siguiente mientras que siendo utilizado: olores, sonidos, música. Hace el cepillado de diente más agradable.

- comercialización: Mercado japonés. Comercialización: el otro asiático pone posible también, los mercados no occidentales

ESCAPE 8B-250: insertar el dinero y seleccionarlo deseó la característica (el usuario elige efecto total, o selecciona las piezas que hacen el excesivo todo el efecto. Piezas seleccionables: los olores, sonidos, música, las representaciones visuales, dando masajes, presiden la vibración que son relacionadas o elogiosas el uno al otro)

- bueno para el uso casero también
- comercialización: un escape agradable de la rutina diaria
- quizás especialmente popular en mercado japonés; ¿la gente será ciertamente bastante curiosa por lo menos intentarlo, por qué no?

ANALIZADOR de la MÁQUINA EXPENDEDORA 8B-280: Estampillas de fecha cada venta. Esta información se incorpora en las computadoras que corresponden esto con el tiempo, sucesos actuales en el tiempo (especialmente como difusión/publicado en medios de comunicación). Entender la compra de comportamiento mejor.

- Para Techies: Algunos modelos pudieron también tomar el cuadro del comprador

™ FUTURISTA 8B-290: Realizar su situación anticipada futura y o la actividad. También aprender las nuevas ideas y estrategias sobre qué hacer. Herramienta excelente del entrenamiento. El sistema pudo o no pudo dar la dirección en cuanto a las mejores estrategias para adoptar vía: sugerencias, advertencias, alarma cuando la persona está alrededor a o ha incurrido en una equivocación....

. Ver nuestras descripciones futuristas y de la predicción relacionadas de los juegos.

. Como dispositivo de entrenamiento, programar la situación para representar cerca de las representaciones de la vida que requieren la habilidad necesaria en el futuro.

8B-410 ESCALA ALERTER: los cambios anticipados del peso se programan en el dispositivo, cualquier cambio en no congruencia se alertan

- Alarma del peso: cuando el peso está bajo o sobre nivel de tolerancia, las alarmas. Aplicable para la cadena de producción, el estudio científico, los avisos para los cambios en peso, el etc

ESCALA 8B-420 PARA el ANÁLISIS de la SUBDIVISIÓN: utilizar las frecuencias eg.: sonido, radiografía, etc para juzgar densidad y el peso sección interna o de la otra secundaria de un artículo. Esta manera una puede conseguir una mejor idea del peso y o de la densidad de una sección algo cuyo una no está deseando cortar.

- la escala se pudo utilizar para cargar el artículo total también. La computadora resta el peso de piezas indeseadas.

MEZCLADOR 8B-430: cuando combinar elementos múltiples de los productos químicos, de etc, usuario primero selecciona la combinación deseada por el que la exhibición enumere los ingredientes y % para alcanzar fórmulas. El usuario entonces pone uno de los ingredientes en la escala con o sin el peso y la escala exactos necesarios entonces indica las cantidades exactas requeridas para todos los productos químicos de siguiente. Este sistema puede ahorrar una buena cantidad de hora para ésos que usan la escala con frecuencia, y es muy aplicable a las situaciones donde no está crucial el peso final exacto de la combinación.

- llaves del usuario en mezcla deseada y peso final, entonces peso exacto de cada elemento en demostrado

CONCLUYE el ARCHIVO 6A

Archivo: Introducción a la palmadita/7A

ARCHIVO 7A

Las VIEJAS ABREVIATURAS utilizaron (en este archivo):

B = dentro de las demostraciones del número de la característica dos grupos generales de la característica fue combinado junto. Si no hay número de archivo después del "B", después ambos eran del mismo archivo. Parte del número de la característica.

La "clase particular" = construido en sistema con software enseña al usuario a utilizar todos/la mayor parte de las características de producto. Va de difícil a más complejo.

"...." = etc.

CARILLONES de PUERTA 7A-010: el sombrero usted tiene gusto de saber alrededor: ¿visitante, partido que es visitado? Visitante de los estados de sistema [oscilador del `]: altura aproximada, peso

- almacenes: descripción del visitante; foto; el tiempo entró; el tiempo se fue; cualquie código que puede ser que hayan entrado para acceder; mensajes (funciones del correo de voz); etc.

RELOJ ÚNICO 7A030:

- solamente una mano, representa los minutos. La hora es demostrada por el cambio en el color del fondo: nuevo color cada 24, 12, 6, 4, o 3 horas. Para facilitar la memoria de qué color representa la hora correspondiente, pudo haber varias cortinas de un color, eg.: el 00:01 del tiempo es rosado; el 01:01 es rojo claro; el 02:01 es rojo oscuro; el 03:01 es azul claro.... Podía haber color de fondo en la orden de rojo, blanca, azul...

. - las invenciones pueden aplicarse a los relojes portables con y sin las alarmas, teniendo el dial o indicadores digitales

TELÉFONO 7A040: Llamar por teléfono al dispositivo, que está también con un teledirigido. Cuando el teléfono suena, o usted desea hacer llamada saliente, presionando a usuario apropiado del botón puede decidir si la llamada debe ser hecha en el teléfono sin cuerda o del teléfono regular (anterior es más conveniente pero la calidad de la conexión es más pobre - y los occidentales no tienen gusto incluso de parásitos atmosféricos suaves en la línea)

GLOBO FLOTANTE 7A050:

- (esto existe probablemente - visto para la venta en el pedido por correo) los postes del norte y sur tienen un imán. Sus imanes cargados opuestos se encuentran en el extremo de un pedazo de metal doblado en la forma de un "U". Por lo tanto el globo permanece en espacio.

- en espacio hay ningu□n hacia arriba o hacia abajo. Los nombres de países, de ciudades, de los ríos, del etc se exhiben electrónicamente, para cuando el globo se pone con el lado sur en tapa, poder leer todo fácilmente otra vez (las posiciones de interruptor de las letras)

- el fondo del dial podía demostrar la hora real vía: indicador digital; dial que demuestra la hora del dígito; la segunda mano que es de centro está en diversa localización

. - "Inclinación": controla las funciones del sistema, eg.: mudanza de cualquie objeto flotante.

. Ver la partición del flotador.

Archivo: Introducción a U-ALL de la palmadita/a

MEJORAS A LAS INVENCIONES "DE UNA CARPETA"

Los archivos del directorio siguiente de "U" son realces subsecuentes de las invenciones del directorio de "A", e.g. archivos: 3AX, 5AX, 6A, 7A.

AMAESTRADOR de PERRO de PROTECTOR 5A-65:

- los altavoces pueden transmitir solamente ciertos tipos de sonidos. Puede tener altavoces en cada sitio.

- El sistema tiene demostración de la exhibición: frecuencias que son bloqueadas por el sonido entrante - sistema del micrófono; direcciones se bloquean y o se realzan que; volumen; frecuencias que se transmiten al perro; si el sistema está en el modo de grabación (voz del dueño de registro, cierto descortezamiento de los perros (incluso el perro que es entrenado).

. con usado con el correo del perro) el dispositivo teledirigido (o alambre envía frecuencias al perro en el comando del dueño. El propósito es entrenar al perro. Las frecuencias pueden ser placer que causa audio o vibratorio, dolor suave, y estimulan simplemente para crear resultados. La razón es perros puede reaccionar mejor a dispositivo que clase. Éstos estimulan acompañarían generalmente palabras humanas de comandos, el perro electrónico de la ayuda de las frecuencias entienden simplemente más rápidamente, también sin la necesidad del dueño de castigar (haciendo el perro tener aversión a la persona como siendo la fuente del dolor). El transmisor del perro usado en él es cuello; o cuerpo principal (sobre o abajo)

. Fortaleza Techies: el portable británico del ejercicio del juego del educ del beh del usuario de la P.M. de los pp cons el acceso (electrónico) del mq ACP v del uq del cp del RPC del ep del md LL del EL del punto de ebullición b vc del mfh del sst del comm

COLECTOR del VÁNDALO de la PINTURA de AEROSOL 5A-59:

- la psicología es asustar a vándalos potenciales, puede ser que no sepan siempre si este sistema de seguridad está instalado, y o pudo haber muestras verdaderas/falsas que daban el cuidado al efecto.

- sobre la detección del uso de la pintura de aerosol, sistema de seguridad poder: enviar la alarma audible al vándalo y o a la gente próxima; enviar la alarma solamente al partido señalado, eg.: la comisaría de policías, guarda de servicio, dueño (el vándalo no oye nada y puede conseguir cogido).

- el sistema tiene en \ de característica en caso de que la gerencia conduzca la pintura real
- los sistemas grandes pueden establecer claramente la localización del vandalismo

. El detector puede detectar las pinturas de aerosol en general y o los gobiernos pueden requerir a fabricantes de la pintura de aerosol incluir ciertos productos químicos que realcen la detección fácil.

. El sistema o los sistemas relacionados puede también detectar:

- orina (eg. de perros, de gente)
- la vibración excesiva que pudo venir de ladrón, aunque puede haber el problema de la vibración de la construcción próxima y o los carros, etc, así que dependiendo del lugar y del tipo situación, el detector de la vibración se puede comprar por separado y o dar vuelta con./desc.
- pegamento de la gente que pone encima de los anuncios ilegales del cartel

. Fortaleza Techies: acceso británico del uq ACP v del cp del RPC del ep del punto de ebullición vc LL del mfh del SP del micrófono de la fecha de la P.M. del teléfono pp (el usuario puede decidir escuchar si el detector detecta algo)

4A-1 TIEMPO INFO: Cambiar el título quizá a ---> información del teléfono

¿- es este producto obvio? Tener la persona bien informada en el correo de voz y el otro cheque de las telecomunicaciones este primer y explicar los productos relacionados en el oeste en uso común. Si esto no es demasiado obvio, demostrar la información de producto a Steven otra vez antes de hacer búsqueda.

- para sistemas más grandes, dispositivo puede conseguir la temperatura exacta para diversas ciudades alrededor del estado (provincia, país, mundo. El usuario utiliza simplemente su teléfono de "touch tone" para pedir la ciudad deseada, eg.: presionar el número 1 para seleccionar la ciudad en esta provincia, después seleccionar el número 2 para Osaka. El sistema más grande puede conseguir la información electrónicamente marcando en otro ordenador principal. Guarda a gente el esperar de un poco curioso y con algo hacer si desean. Tal tipo selección de la información está también disponible al buscar para las noticias, la acción, las cuentas de deportes, la información miscelánea del negocio, y todo lo demás los usuarios pudieron ser interesados adentro, incluso la información de producto de la compañía, los etc .....

DISPARADOR del OLOR 4A-3:

- lanzar los olores en las horas preprogramadas de confundir gente, el animal del estudio y o la conducta humana
- los olores lanzaron cerca: acciones del animal o de seres humanos por ejemplo: presionar un botón; el conseguir o el pedir algo (eg.: alimento, entrada)
- también, puede lanzar el olor siempre que el botón de lanzamiento del olor se reclame, incluso partidos, el etc
- puede comprar los cartuchos de diversos olores

- el sistema se puede también conectar con la calefacción interna del edificio sistema y o de aire acondicionado y o los ventiladores (el normal o el acuerdo formó de modo que uno no pudiera incluso saberlos para ser un ventilador sin una inspección más cercana).

. Ver el papel de la definición del código para el siguiente:

Exhibición: demuestra son qué olores: disponible en la fuente de la acción del sistema o del exterior y o de la cantidad (no entrar el detalle aquí en el uso si demasiado es difícil); tiempo preprogramado y o elemento/situación que accionará un lanzamiento particular del olor.

. Fortaleza Techies: Comportamiento del usuario; AU; T; MFH; BP; MA/FE; TGH; LL; EP; RPC; CP o metal; UQ; MQ; ACP; PÁGINA; Pi

RELOJ ESTACIONAL 4A-11:

- los diseños se pudieron también cambiar vía los medios de la visualización electrónica (LCD, etc) en color o negro/blanco.
- ciertos accesorios se pudieron hacer a la pieza externa del reloj, eg.: agregar las alas así que el exterior (y la circunferencia) están en la forma de la mariposa - tales piezas pueden estar de plástico o de metal.
- el tiempo real se puede exhibir en un dial o digital

. Fortaleza Techies: ep accionado solar portable ACP v pi del ll del md del punto de ebullición vc del contra/comm del educ británico de la fecha de la P.M. de los pp (y o puede ser una versión del reloj en la tabla) (puede hacer los sonidos relacionados con los nuevos diseños en la opción de la alarma, o los sonidos pueden estar de menú separado de la selección) (o del tiro el reloj de la variedad lejos también como comúnmente - visto en el oeste con el "reloj de muestra" etc)

TAPA 4A-24:

- la poder de basura se puede también levantar por el dispositivo y o la tapa abierta cerca: accionando el dispositivo teledirigido que emite una luz y o el tipo sonido (audible o inaudible a los seres humanos). Entonces botón otra vez (si pp esta manera) para volver la poder de basura a la original o al otro lugar (según lo dirigido por el usuario vía: otros botones, usando un palillo de alegría, o dirigiendo el dispositivo real que vuelve la poder vacía, o el sistema dejan simplemente la poder detrás del carro en el mismo lugar cada vez (un sistema más barato a producir)
- latas hechas del plástico, del caucho o del metal fuerte (variedad no corrosiva)

. Fortaleza Techies: ep británico del ll del au de la P.M. de los pp

MÁQUINA EXPENDEDORA del MASAJE 4A-24-1:

Pagar el sistema necesario de la cantidad (vía monedas, los billetes o de la tarjeta de crédito - existe) entonces dará masajes a su: manos, brazos, parte posterior, cuello trasero, cabeza con los instrumentos que tocan el

cuerpo con los extremos de goma. La seguridad se considera en el diseño de producto - hacer a todas las partes del cuerpo que pueden ser hechas con seguridad y agradable.

- el sistema ha medido el tiempo apagado (el usuario puede pagar más dinero en comenzar una sesión más larga)

4A-39 CAMOUFLAGER SANO (continuo):

- el sonido del fondo se puede también acciónar cerca: abertura de la puerta, caminando en el botón (situado en piso, la pared, el etc)
- el solo botón, o los botones separados puede accionar lanzamientos del olor.
- diseñan a los locutores y a los disparadores del olor para soportar humedad alta
- para los cuartos de baño en los edificios, automóviles, aeroplanos
- el sistema puede también permitir el diseño especial de la iluminación, eg.: para la ducha que tomaba, el baño que tomaba (quizá más bajo o una luz más alta con diversas direcciones), luces dirigió hacia las plantas.
- películas del reloj en la cinta (simplemente caja negra del parte movible para las características audios, video: radio, Cd, cinta, expediente....)
- la piscina de agua (masajes rápidos del agua) para ésas en bañera, los otros sistemas puede compensar y todos programados para obrar recíprocamente junta, eg.: cuando el masaje va en él es la música de los fósforos del golpe, y la luz puede incluso emparejar los sonidos/música. Esta característica pudo ser provechosa para la gente que como baños pero conseguir a poco aburrida y tiene demasiado dinero.

. Exhibir (para los cuartos de baño costosos de los ricos, demostraciones que las características son en funcionamiento y de qué manera, de la fuente de olores, del control de volumen, del etc)
Puede venir con o sin un tel.

. Fortaleza Techies: acceso británico del mq ACP v del uq del ep d sd od del ll del md del tgh de la hospitalidad del beh del usuario de la fecha de la P.M. de los pp (tan los cabritos, los etc no juegan truco en características cambiantes cuando la puerta al sitio es cerrada)

pi

ALARMA ALEJADA 4A-39 y 4A-30 (continua) ---> notificador (nombre de nuevo producto):

Nota: la complejidad de los tipos de producto dentro de esta línea de productos general es absolutamente grande. Por consiguiente, quizás daremos solamente ciertas piezas a la vez, y hacemos quizá las búsquedas adicionales de la patente y emparejar con los ingenieros cuando las solicitudes de patente iniciales se han enviado en orden el bueno (por su opinión). Naturalmente, usted puede preferir reservar este número de la invención para el tipo ingeniero que 1. ha acabado una invención y está ya listo para el siguiente, 2. la persona que parece la más confiable, seria e interesada, 3. más calificados. Es más difícil dar esto a los inventores múltiples puesto que pudo haber un cierto conflicto entre las invenciones. Después de la limadura inicial, demostrar que este número de la invención otra vez Steven y a él pudo dar características adicionales en aquel

momento. Dar los nuevos números de la invención para cada tipo de producto si necesitan estar en diversos usos (pedir el agente de patente) - eg.: 4A-30-2 para el dispositivo de abertura de la puerta.

- saber cuándo: la puerta se abre sin un sonido ruidoso que toda debe oír (su receptor puede sonar y o encender absolutamente decir una puerta/la puerta/se abre qué puerta)

. Fortaleza Techies: exhibir la cubierta británica del cp del ll del punto de ebullición vc b ma/fe del mfh del SP del micrófono del juguete de la fecha de la P.M. del teléfono pp del acceso del metal ACP v

ANILLO ALERTER del TELÉFONO de la JOYERÍA 4A-33 --> joyería Alerter o Alerter (nuevo nombre):

- el sistema también transmite: campana de puerta; niño, abuelo que grita en la señal de socorro (sonido en grandes cantidades que dura más de largo que apenas un desplome algo que baja abajo, o que responde a las explosiones cortas del sonido ruidoso también);

. OTD: acceso portable del cr ACP v del cm del cp del ep del ll del punto de ebullición b vc del mfh del SP de los pp de la P.M. del usuario del juguete británico alejado del beh

ANILLO ALERTER del TELÉFONO del COCHE 4A-35:

- nota: cuando se indica el "teléfono no es expedición de llamada" que significa que uno puede ordenar a un teléfono que suene encima a otro número del teléfono.

- el alerter es más barato y más pequeño que teniendo otro teléfono con usted pues usted camina (algo puede preferir sin embargo tener este segundo teléfono móvil). El mercado móvil del coche es enorme y creciendo rápidamente, este dispositivo está para la parte de ese mercado.

- el altavoz en la pieza externa del coche que suena (esta característica se puede activar/desactivar). Este mayo o mayo no ser acompañado por una luz que destella (si usted oye el anillo que usted puede ser que no sepa si es el su o coche siguiente)

. Piezas: acceso británico del cp v del ep del ll del Pb de la fecha de la P.M. de los pp

DISEÑADOR del LASER del ALIMENTO 5A-47:

- diseñó acceder en las grietas de los alimentos, etc, y esos alimentos, que son difíciles de estampar con un elemento caliente.

. Ver los códigos de las abreviaturas para below:

Exhibición: La CRT o el otro dispositivo de visión deja a usuario ver el diseño. El diseñador pudo incluso crear diseño vía ratón o códigos regulares del tablero dominante en la computadora, que puede ser transferida, al laser

- el sistema de automatización puede implicar uno o más productos.

pp; P.M.; Reino Unido; impresora (puede demostrar diseños al jefe, al cliente, al etc puesto que la muestra para el estudio no será demostrada fácilmente en forma del alimento); t; punto de ebullición; oscilador (quizás

cuando el alimento está listo para ser quitado); cp; cm; cr; ACP; v; mem (los diseños del pasado se pueden recordar encima de otra vez); "carro" de diseños (eg. en discos)

ALTERNADOR de la VOZ del WALKIETALKIE 4A-47:

Jugar a los juegos, que requieren el cambio de voces, eg.: ser diversos carácteres (los juegos que requieren el número determinado de jugadores se pueden jugar por menos con cada persona que es varios carácteres; o el usuario utiliza diversos carácteres para facilitar sus punterías en el juego de la vida real).

Exhibición (eg.: demuestra el vol., que estilo de la voz seleccionado); pp; P.M.; interactivo; las versiones futuras pueden considerar las transmisiones visuales de otras también; ¡el dispositivo futuro puede utilizar esta opción en opciones del producto de la realidad virtual!

. Fortaleza Techies: micrófono; portable; sst; contra; comm; índice de inteligencia; punto de ebullición; SP; CRT; oscilador; vc; egh; tgh; md; LL; carro (eg.: opciones de la voz en discos); ep; teléfono; tr; RPC; cp; cm; cr; uq; mq; ACP; v; acceso (no incomodar si demasiado es difícil diseñar); pi.

FUENTE de AGUA del AHORRADOR del AGUA 4A-48:

pp; P.M. (eg.: la boca de la distancia y o la persona debe ser de agua antes de que se encienda el agua); tiene purificador del agua; mem; ll; cm; v

Existe: las fuentes de agua con el pie pedal para girar el agua - con todo ésta no es muy moderna; fregaderos que giran su agua cuando la mano funciona debajo del grifo (sin el tacto cualquier cosa)

ANALIZADOR del COMPORTAMIENTO 4A-9:

Ajustado según diversas idiomas y sus dialectos programando del fabricante o de usuario. La patentabilidad esperanzadamente no nos requerirá afinar en las señales exactas que son necesarias accionar análisis correspondiente - requiere la experimentación científica extensa que se pudo considerar trabajo semi-obvio.

. Fortaleza Techies: pp; P.M.; Reino Unido; fecha; comportamiento del usuario; educ; juego; mem; hospitalidad; micrófono; portable; sst; índice de inteligencia; impresora; au; mfh; punto de ebullición; CRT; oscilador; vc; carro (eg.: discos para el análisis de dialectos, de idiomas, del tipo gente que es estudiada, del etc. diversos); cp; cm; uq; mq; ACP; v

4A-12 RETALIATOR:

Cosechadora con funciones, eg.: indica la hora verbalmente (existe?); tiene un dispositivo de la grabación del microchip, que deja a usuario decir cualquier cosa sobre su memoria del tiempo limitado. Pregunta: puede ser que sea difícil que el reloj reaccionar solamente a los sonidos del otro reloj y no haga caso de los otros muchos sonidos en sociedad. ¿El accionar del usuario de la respuesta saliente no es obvio?

. Fortaleza Techies: exhibición; pp; P.M.; Reino Unido; fecha; juguete; mem; hospitalidad; micrófono; portable; punto de ebullición; SP; vc; cp; cm; v

SIGNALER de la LIMPIEZA 4A-6:

La característica de la limpieza de uno mismo puede activarse después de que número del sistema de aplicaciones y de usuario alerta o limpiar el sistema sí mismo; o el uno mismo limpio cuando la determina necesita ser limpiado. ¿El estudio qué sucede a las máquinas del café cuando él no se limpia, qué un poco depósitos se deja y qué dispositivos reconocerán los restos de rutinas, del agua sucia, del etc?

MONITOR del PRODUCTO de la PÍLDORA 4A-17:

pp; P.M.; Reino Unido; fecha; beh del usuario; portable; t; mfh; punto de ebullición; CRT; oscilador; vc; tgh; md; carro; ep; cp; cm; cr; uq; mq; ACP; v

4A-21 COMPOSTER:

La exhibición demuestra eg.: volumen o peso del material adentro, de la edad y o llano de la descomposición, de la temperatura creada de la descomposición (interesante), del etc.

. Para Techies: SP; ll; carro (eg.: tipos especiales de bacterias para apresurar proceso, o para los tipos particulares de material, de etc); cp; cm; ACP; v

SOMBRERO SOLAR 4A-27:

Puede tener células solares duras planas, o material más flexible (si existe tal); la exhibición demuestra la cantidad de calor generada y o dada al usuario y o # de horas en sol.

- Si esto es una idea factible, desarrollarla. Tener cuidado.

ALARMA de la TENSIÓN 5A-53:

Exhibición; pp; P.M.; educativo (enseña a una persona a reducir su tensión identificando cuando y qué los consigue agotadores); micrófono; portable; sst; collar; punto de ebullición; las señales sonoras si la tensión es demasiado alta (pueden incluso tener diversas luces y o sonidos para los diversos niveles o tipos de tensión); vc de sonidos salientes; cp; cm; ACP; v; pi

COMPETENCIA del KARAOKE 5A-45:

mem; hospitalidad; micrófono; synth; CRT; vc; enseña a una habilidad buena en los juegos que ganan en el sistema del producto; RPC; cp; cm; uq; mq; v

PESEBRE MUSICAL 5A-16: pp; P.M.; interactivo; micrófono; el sistema consigue un poco tan más duro que el bebé crece; señales sonoras para el programador - adulto que instala y supervisa el sistema; vc; unidad central - cp, cm; ACP; hacer que el niño impermeabiliza así que el cabrito no puede conseguir en la programación

AMBIENTE 5A-15:
pp; P.M.; mem; micrófono; vc; egh; EL; v

PALILLO de ALEGRÍA del COLOR 5A-13:
pp o P.M. (eg.: los botones particulares se pueden programar para crear el color deseado de ese botón, o la combinación de colores); Reino Unido; señales sonoras; vc; cp; cm;
v

5A-02 QUE RÍE el PIN: Exhibición (demostraciones todavía o cuadros móviles que responden a presionar de botones, etc); pp; P.M.; . Para Techies: fecha; juguete; mem; micrófono; portable; punto de ebullición; vc; cp; cm; cr

CARACTERÍSTICAS del CONTESTADOR AUTOMÁTICO 5A-03:
Exhibición (eg. características de las demostraciones en modo activo, y o su estado); pp; P.M.; Reino Unido; fecha; mem; micrófono; synth; señales sonoras; carro de sonidos o de la música deseados; teléfono; teléfono del SP; RPC; cp; cm; ACP; v; tener acceso (puede coger mensajes de la posición remota por código el afinar en el tel. de "touch tone".

AMAESTRADOR de PERRO de PROTECTOR 5A-65:
los sonidos creados para hacer el perro raspar los mayo o mayo para no ser perro real suenan, podrían ser otros sonidos que inducen psicologicamente el descortezamiento y o el comportamiento agresivo en perro.
Exhibición; pp; P.M.; beh del usuario; mem; micrófono; sintetiza el sonido del perro del dueño también; señales sonoras; carro (sonidos alternativos); cp; cm; ACP; v

SINTETIZADOR de 5A-73 TV:
La exhibición demuestra el tipo factor del sonido en funcionamiento. ¿Puede este producto ser hecho? Si es así la demostración Steve y a él entrará más detalle en el producto. En la pregunta es cómo, eg.: uno puede convertir una demostración al este del ucraniano a los acentos ucranianos del oeste, o a otros acentos que pudieron ser más sensibles.

5A-27 FUERA de la LUPA de los SONIDOS:
pp; P.M.; mem; micrófono; señales sonoras; vc; v. Instalar en automóvil. Maximizar la capacidad de oír la dirección del sonido de modo que el sistema de altavoz múltiple pudiera dejar el oído rápidamente saber qué sonido de la dirección está viniendo. Más de cuatro altavoces son ideales.

INVENCIONES VIDEO DEL FÓSFORO:

A3-3AA

A3-3AAA

A3-3Z

A3-3A

Debajo de descripciones de producto aplicarse a los números antedichos del producto/de la invención:

- El sensor visual coge en colores del ambiente, eg.: vía los pixeles detectará los globs de ciertos colores y determinará el nivel de ciertos colores en su exhibición para hacer similar y o los fósforos coordinados color.
- El administrativo o el otro dispositivo que controla de la persona puede vía llave teledirigida en cierta información sobre grito de la visión de la persona.
- P.M.; beh del usuario; interactivo; mem; micrófono (sonidos salientes, eg.: la información sobre se está vendiendo qué, los servicios proporcionados o la información de carácter general, se pueden hacer en el tono similar al espectador si incitan al espectador decir algo, eg.: si el espectador hace cualquier sonido, o ningúno, incluso, el producto pudo responder como si dijeran algo y la respuesta está según lo que dijeron.
- synth; mfh (puede guardar expedientes de toda la máquina de épocas hizo algo de cierta manera y corresponden esto a las ventas en los cajeros pronto después (o en el plazo de de uno o dos horas) para el producto relacionado - tales ayudarán a enseñar al almacén o el otro abastecedor del servicio o del producto, los etc qué los métodos utilizaron por la invención video del fósforo tienden a aumentar ventas, o aumentan otros tipos de respuesta deseada.

CONVERTIDOR del DIALECTO 4A-32:

- el micrófono, sintetizador, vc, v, ACP, hospitalidad, exhibición demuestra el tipo de acento, pp, P.M., señales sonoras

¿- cómo este producto sería hecho? Si usted hace que cualquier idea después dé detrás a Steve así que él puede dar las especificaciones adicionales.

DISPENSADOR del CARAMELO 4A-38:

El sonido saliente puede con o sin el caramelo dar instrucciones verbales y o alabanza verbal después de cada uno o el paso más importante en curso de ir al cuarto de baño (el niño oye/se recuerda sobre los pasos para ir al cuarto de baño (eg.: la persona oye algo cuando puerta abierta, tapa abierta del tocador, levantando el asiento dan lugar a diverso aviso; etc). El producto es grande puesto que los adultos son realmente los que está desconcertados sobre ir al insignificante con sus cabritos.

- synth, micrófono (el sistema pudo utilizar la voz para los comandos, alabanza del padre; señales sonoras; vc; egh; tgh; carro (el producto se pudo también utilizar como broma, y la gente puede comprar cintas con avisos salvajes); acceso (especialmente para la versión adulta del producto).

. Para Techies: P.M.; pp (por el padre, el etc);

REGISTRADOR MÉDICO 4A-40:

¿Es este producto obvio??

El usuario puede registrar cuando ellos: dientes cepillados; comió (y comió lo que); tomó medicaciones particulares; tenía movimiento del tipo 1 o de intestino 2; etc

- obvio?: el dispositivo pudo alarmar si cierta función (eg.: la píldora que toma) no se hace
- OTD: exhibición; pp; P.M.; beh del usuario; educ; mem; micrófono (el usuario pudo registrar para poseer la voz para que el sistema dé comandos del usuario; o el sistema pudo tener su propia voz para dar comandos verbales; micrófono; punto de ebullición; portable; señales sonoras; vc; cm; cp; mq; uq; v; acceso; pi; int'l

REGISTRADOR MÉDICO 4A-40: mantenerlo el cuarto de baño, quizá montado en la pared.

. Para Techies: Exhibición; P.M.; fecha; beh del usuario; au; cp; cm; v

ANALIZADOR de la FRECUENCIA de LLAMADA 5A-72:

exhibición; pp para el tipo deseado de análisis; el software del sistema pudo ser compatible con las programas informáticos para bases de datos muy populares; P.M.; u; fecha; beh del usuario; mem; índice de inteligencia (el sistema puede conducir tareas simples o complejas); impresora; mfh; uq; mq; ACP; v; acceso

CONVERTIDOR de la VOZ 5A-90:

Estrategia de marketing: porqué pasar con el apuro y la gran dificultad en gente de entrenamiento hablar el uno al otro en ciertos estilos que creen los resultados deseados, eg.: un funcionamiento de trabajo más alto. El uso del producto para un funcionamiento de trabajo más alto puede traer alrededor de un cambio en la cultura corporativa puesto que el estilo de la audiencia será alterado y por lo tanto, la gente llega a estar acostumbrado incluso al discurso en estilos relacionados cuando con la gente personalmente....los estudios pueden demostrar esto para ser verdades. Cuando la gente oye algo en un tono contra otro, su funcionamiento diferencia con frecuencia. ¡Una gran herramienta para el beneficio de negocio!

. Para Techies: Exhibición (demostraciones el altavoz el sonido saliente sintetizando que ella ha seleccionado - por su efecto deseado sobre el oyente); pp; P.M.; la fecha se demuestra en la exhibición a petición de usuario; educ; mem; micrófono; el sistema utiliza el dispositivo que corrige el mal□n teléfono señala enviado o recibido cuando usa mal calidad alinea según lo encontrado en ciertos países (eg.: Los americanos pueden oírnos mejorar en el teléfono que cuando escuchamos ellos, porque los E.E.U.U. convierten nuestros sonidos, qué ellos enviamos a ciertos países puede mutilarse levemente; mfh; vc; teléfono del SP; tr (transmisor) (eg.: teléfonos móviles; Walkietalkie y otros dispositivos de la radiofrecuencia); carro (para las frecuencias sanas deseadas); el usuario puede también pedir para oír sonidos entrantes en estilo que prefieren más; fs; MES; cp; cm; uq; ACP; v; acceso; international (las versiones de un producto más costoso pueden tener efectos de diferenciación del

sintetizador al trabajar para un tipo de lengua y o de dialecto, no obstante somos todos humanos y las cosas básicas sobre humanidad no cambian necesario mucho entre las culturas

PATÍN MUSICAL 5A-105:

El sistema de sonido puede utilizar la radio, cassettes, CD, el Walkietalkie (que se puede sacar de la pistolera también - grande para ciertos tipos de cabritos); la fuente de energía pudo conseguir energía del movimiento de ruedas y o también de la batería; el sistema puede tener botones cuando está presionado hace a cierta P.M. de los avisos o registrado por el usuario en el micrófono y sobre el microchip; el patín pudo también tener constantemente, el destellar, estroboscópico y otros tipos de luces cuando: la mudanza, o encendido, y o va automáticamente en (puede ser apagado sin embargo) cuando obscuridad (vía uso del sensor especial la detección cómo la obscuridad él es exterior (de este sensor especial existe, eg.: en coches - sus luces se encienden automáticamente en la obscuridad.

. Para Techies: pp; P.M.; juguete; mem; el sistema se diseña para tomar porciones de choque (el patín será sacudido mucho); ejercicio; portable; sst; punto de ebullición; vc; carro para: tipos de sonido/de música/de declaraciones verbales; vía el uso de teledirigido el usuario puede iniciar ciertas funciones sin tener que alcanzar abajo y o parar el patín, eg.: dar vuelta encima de volumen; teléfono móvil; acceso

ANALIZADOR del CAMBIO de TEMPERATURA 5A-107 (nombre de nuevo producto: Analizador del cambio del ambiente)

Observa los cambios previamente mencionados incluso cuando los otros factores cambian - la humedad, precipitación (lluvia, nieve), presión de aire, cambios de la dieta se utiliza en otra solicitud de patente (satisfacer tan no cubren esta área, sonidos (eg.: si hay o no es clásico o música pop - las plantas se conocen para crecer más rápidamente con música clásica), contaminación atmosférica general o el sistema observa cambios según cambios en ciertos productos químicos en el aire.

Exhibición; pp; P.M.; fecha; educ; mem; micrófono; portable; mfh; punto de ebullición; SP (cuando es funcionando en el salvaje; punto de ebullición; vc; carro (sonidos, productos químicos para las emisiones del aire, etc); ACP; v; acceso; el sistema se diseña para no ser destruido o para no ser alterado accidentalmente en la programación por los animales, el etc; fd-hdd

ANALIZADOR del CAMBIO del COMPORTAMIENTO del ALIMENTO 5A-108:

(véase el producto 5A-107 para los detalles en cómo este producto debe ser convertido, excluir simplemente las materias no-aplicables, eg.: recubrimiento de los aspectos, humedad, temperatura, sonido .....)

El sistema pudo ser compatible con programas informáticos para bases de datos populares.

COMPOSITOR DEL AMBIENTE DE A3-4B:

- cada laser puede transmitir en uno o más frecuencias, colores, etc - permitir a un solo receptor generar un diverso sonido de cualquier transmisor particular. Más cada receptor puede recibir señales de más de un dispositivo el transmitir del laser - por lo tanto un arsenal grande de sonidos es posible.

Los receptores se pueden activar para accionar: programas previos de la música - eg: cassette, Cd, expedientes, etc; dispositivo de la grabación del micrófono; televisión; televisión por cable; jugador del vcr; registrador de la cámara de vídeo; todavía cámara de la vida; tipo registrador de película - 35 milímetros, etc del cine; contestación del teléfono (eg.: el usuario sabe hablar con la persona vía el aparato de teléfono del altavoz del teléfono; abre la puerta principal (eg.: cuando los anillos y usted de la campana de puerta no quieren el apuro de ir a la puerta abierta); activar su grito para ver quién está en la puerta vía la cámara de la puerta; todavía exhibir los colores y la mudanza/de las demostraciones del grito los gráficos y o los personajes de dibujos animados que se mueven según el comando del usuario y o de la música que es creada (eg.: se trasladan al golpe de la música) - Telecontrol; exhibición; pp; P.M.; Reino Unido; interactivo; educativo; juguete; juego; mem; hospitalidad; micrófono (el usuario activa el micrófono y puede hacerlo cambiar alrededor y o ser repetido en su comando); este producto se puede utilizar como forma de ejercicio mezclada con la hospitalidad (alguna gente encuentra el ejercicio doloroso, la alegría puede hacerlo más agradable y ayuda a gente a conseguirse para ejercitar); índice de inteligencia; mfh; CRT; oscilador; vc; cartuchos (eg.: tipos de transmisiones; sonidos, representaciones visuales que se pueden crear después de la recepción de la transmisión del laser); cm; uq; v; acceso

DIARIO DIARIO DE A3-6A:

El sistema puede también actuar como un calendario y rolodex electrónicos (organiza el teléfono de la gente numera y las direcciones); si no es demasiado trabajo a convertirse - el grito de la exhibición del sistema demuestra a personas que hablan al usuario de la manera que les ayuda, eg.: los calma, les da más energía, etc; exhibición (esta tecnología es más para el futuro en términos de rentabilidad?); interactivo; beh del usuario; pp; P.M.; educ; juguete; juego; mem; hospitalidad; micrófono (el usuario puede dar comandos de sistema y hacer que tales comandos vuelvan a ellos aural a veces; el sistema no pierde de vista cuando el usuario ejercita también; portable; sst; índice de inteligencia; impresora; au; mfh; punto de ebullición; vc; carro; cp; cm; ACP; v; acceso

VIGILANTE de la EMOCIÓN A3-13:

- el usuario también sabe vía están haciendo emocionalmente: gráficos solos o multicolores; caras (las expresiones demuestran a estado de ánimo que puede ser que estén adentro); un dígito numérico, eg.: un punto de porcentaje o punto de la cuenta (con un posible más bajo o más alto de la cuenta sabido al usuario por el software manual- del producto no puede demostrar las cuentas altas o bajas); el sistema pudo también dar una declaración verbal en cuanto a los niveles de usuario; el sistema pudo decir a usuario su estado de ánimo en sus los propios (accionado para ocurrir periódico o cuando una de las cuentas es demasiado alta o demasiado baja, o cuando las peticiones de usuario la información, o la información es siempre visible al usuario.

- El sistema pudo sugerir lo que puede hacer la persona para aliviar sus problemas, ellas pudo incluso dar más de una sugerencia y o dar variantes a veces diversas (reduce monotonía).
Propia historia y preferencias personales de la persona por actividades, tipos música, manías, escritores famosos, el etc. es importantes para la función antedicha.
- pp; m; fecha; beh del usuario; educ; mem; micrófono; punto de ebullición; oscilador; vc; carro; cp; uq; mq; ACP; v; acceso

BALANCEADOR DE LA VOZ DEL TELÉFONO A3-R14:
- el usuario y no el oyente en el otro final de la conversación pudieron oír solamente cualquier sonido del fondo
- los llamadores del teléfono, recepcionistas, operadores pueden tener un grito de la exhibición de computadora que los dirija de maneras emocionalmente convenientes, eg.: uso de colores apropiados (véase los manuales de la psicología del color), tipos de gente en grito que señala o que habla, etc.
- cuando viene el teléfono entrante, el sistema de la música que era oído en el cuarto pudo ir automáticamente apagado el teléfono se coge en ese entonces y o transferido a la porción que escuchaba del usuario de microteléfono y o del volumen pudo ir abajo al punto señalado donde puede todavía ser oído por la persona en sitio pero no sobre la línea del teléfono (hay tal punto del umbral para los teléfonos occidentales de la tecnología)
- algunas de estas características se dirigen naturalmente más a las que sigan instrucciones específicas y estén en el teléfono todo el dia, eg.: tal gente pudo oír los avisos verbales que analizan sus frecuencias vocales (como siendo bueno o malo), y o pudo apenas dar las negociaciones de pep automáticas que inspiran a gente del teléfono (eg.: para vender más productos).
. Para Techies: pp; P.M.; Reino Unido; fecha; comportamiento del usuario; interactivo; educ; mem; hospitalidad; micrófono; índice de inteligencia; impresora (da la información al usuario); mfh (expedientes de toda la gente del teléfono, su funcionamiento [longitud media de las subsistencias de la llamada - ella habla quizá demasiado de largo; número de ventas; qué días son buenos o malo y porqué; etc]; CRT; oscilador; vc para su discurso entrante y saliente (este 3ultimo es una materia rara en el mercado); índice de inteligencia; au; carro; mq (eg.: cómo es usted que hace, el usuario responde hablando y o afinando una respuesta sobre el su cojín dominante del teléfono o el otro cojín dominante; ACP; v; tener acceso (guardar hacia fuera a los virus, a vándalos de la computadora/teléfono)

PLUMAS A1-3 QUE HABLAN (los nuevos nombres de producto posibles: Película hablada, pluma que habla, alegría de la pluma (este título bueno para el mercado japonés), pluma musical)
- tiene un dispositivo teledirigido simple que permita que el usuario gire una música que genera el dispositivo, eg.: radio y o cinta y o CD y o sistema de generación sano preprogramado que emite sonidos preprogramados (eg.: como la caja musical) con una u opciones sanas múltiples. Este sistema permite baterías reducidas en plumas (la tecnología sigue siendo muy posterior en el área de la energía de batería, las baterías pesadas grandes todavía se requiere)

- tiene un teledirigido más complejo, que permite que el usuario seleccione diversas opciones de la música, los canales de televisión, vcr... mientras que trabaja con la pluma. Hay algunas plumas muy grandes en los mercados occidentales, sin embargo, uno pudo desear de encoger el mecanismo alejado tanto cuanto sea posible. La gente puede controlar lo que ella está escribiendo mientras que simultáneamente teniendo control sobre sus sistemas de la hospitalidad sin tener que levantarse del asiento
- puede hacer pequeños sonidos cada vez que la pluma se mueve, eg.: sonidos del agua como ondas, lluvia, el etc; y cuaesquiera otros tipos de nueva edad y o de música de computadora
. Para Techies: Reino Unido; juguete; juego; mem; hospitalidad; ejercicio; punto de ebullición; señales sonoras; vc; cartuchos de opciones sanas; cp; ACP; v

ALIMENTO A1-13 (NUEVO TÍTULO: REFORZADOR DEL ALIMENTO):
- el dispositivo electrónico pudo indicar la fecha en la cual el artículo primero fue abierto y posiblemente el número de aberturas subsecuentes, la fecha pasada de la abertura
- productos que son costosos en el oeste mientras que los adminículos electrónicos que producían en masa que eran envases relativamente baratos, más costosos del producto alimenticio pudieron emitir sonidos y o luces como elemento interesante. Puede ser que incluso destellen un poco en los estantes de una tienda que agregaban interés de los consumidores que caminaban por los estantes apretados. La opción sana pudo estar para el uso casero (y diseñado así que no puede ser accionada fácilmente accidentalmente antes de que consiga al consumidor)
- el dispositivo electrónico u otro accionará la emisión de olores cuando: se abre el envase; un sensor siente los labios el beber de la boca de la botella; cuando se toca un botón o una lengüeta
- el consumidor puede detectar cuáles es el olor del dispositivo antes de comprar rasguñando un cojín del olor (usado con frecuencia para vender perfumes en anuncios de compartimiento)
- la invención se puede utilizar en recipientes reutilizables. El usuario compra envases con o sin el alimento
- el envase puede incluso indicar la temperatura y o calidad o volumen o peso del alimento o del otro tipo de contenido
- utilizar el producto para contener otros artículos, eg.: juguetes, cosméticos, dinero
- códigos: exhibición; P.M.; juguete; mem; hospitalidad; micrófono (permite que el usuario registre sobre la viruta que los juegos mueven hacia atrás mensajes deseados; portable; sst; índice de inteligencia; punto de ebullición; señales sonoras; oscilador; vc; cartuchos de sonidos y o de olores; acceso

ANALIZADOR del teléfono A1-16:
- el reconocedor de la voz categoriza a gente por su opción de la palabra, eg.: "fresco" puede demostrar a la persona para inclinar hacia culturas alternativas... tales palabras (especialmente si ocurren categorizan más de una vez altavoces
- la gente es tal que ella tiene gusto a la afirmación del estilo del comportamiento de otra persona (especialmente en los E.E.U.U. donde está quizás [en promedio] menos intuitiva la gente porque la cultura es

más superficial y pudo haber menos a ver debajo de la superficie [muchos americanos no entran en esta categoría sin embargo]. Además, tales ajustes del análisis bien en la cultura americana.

- el sistema pudo dejar a usuario afinar en la información adicional sobre el otro partido. Tales se pudieron almacenar con las notas y los análisis de llamadas anteriores del teléfono.

- Esto ayuda a desarrollar un mejor sobre todo el cuadro. El sistema pudo entrar efecto después de marcar cierto número del teléfono. Después de que se marque tal número (antes o después del sonido, el sistema puede preguntar se desea el nombre a qué persona - útil si hay más las personas de una en tal número en la memoria de computadora), o el usuario puede afinar personalmente nombre y después seleccionar cuáles de sus números del teléfono son preferred para marcar.

- actúa como detector de mentira. El sistema pudo ser especialmente útil cuando: el usuario pregunta si está mintiendo la persona en el momento (el sistema pudo también comparar frecuencias vocales con el altavoz más allá de patrones de discurso).

- los paquetes de programas informáticos pueden organizar todos los tipos de ediciones, de preguntas, de historias, del negocio Info, de la personalidad Info, de etc. Tales datos se pueden cuando/en caso necesario combinar, analizado, del etc

- el sistema se puede combinar con el teléfono del fax (transmite imágenes visuales cada pocos segundos), versiones posteriores puede transmitir a la persona en el movimiento perpetuo. Las características faciales se pudieron analizar también, eg.: el fruncir el ceño de cejas, sonriendo, etc.

- la pantalla de visualizaciones puede demostrar cómo está analizando a persona. Además, el usuario hace a sistema preguntas, después sistema particular puede intentar calcular una respuesta. Las preguntas pudieron ser de un número del sistema de posibilidades de la pregunta que el sistema se programa intentar contestar. Las respuestas pudieron incluso tener una probabilidad del porcentaje el señalar de cómo la respuesta exacta pudo ser, eg.: si ocurre la palabra clasificable raramente el análisis de sistema pudo ser menos exacta y o la persona pudo inclinarse menos en la dirección que el sistema sugiere que el altavoz esté adentro o que vaya (del comportamiento, etc.)

- códigos: pp; P.M.; Reino Unido; fecha; beh del usuario; educ; juguete; mem; hospitalidad; micrófono; portable; índice de inteligencia; impresora; au; mfh; punto de ebullición; CRT; oscilador; vc; carro (eg.: programas informáticos); teléfono; teléfono del SP; fs; uq; mq; ACP; v; acceso

INHIBIDOR del ALIMENTO A1-23:

- también poner el artículo en las partes del cuerpo, que reducen el hambre (probada por la preferencia y la experiencia de usuario, o va por las sugerencias del fabricante). El dispositivo puede: enviar las vibraciones, frecuencias de un cierto tipo (ultrasonido, radio, etc.). Alternativo, el dispositivo puede actuar una acupuntura poco semejante.

- un producto puede hacer muchas cosas, permitiendo que el usuario intente incluso muchos diversos modos si un no pozo del trabajo bastantes.

- el dispositivo puede también enviar las frecuencias, los sonidos, el etc sin el tacto del cuerpo.
- el dispositivo puede tener calibradores, que regulan el nivel de frecuencia, de vibraciones, de etc que son óptimos para el usuario
- puede ser el dispositivo uno usa alrededor de cuello, mantiene bolsillo o monedero - dispositivos más pequeños pueden tener pocas características
- códigos: exhibición, pp, P.M., mem, portable, con pilas, señales sonoras, cartuchos (eg.: para los olores), v, ACP

ROBUSTEZA FURTIVA A1-35:

- el sistema informático detecta la manera que una persona está moviendo su cuerpo, eg.: vía transmisores que usan del usuario en los accesorios del cuerpo, o ciertas etiquetas coloreadas que la cámara se diseña para coger, etc. Eg.: el ejercicio de la persona puede considerarse en la TV. Considerándose en iguales o especialmente, la variación alterada, podía ser interesante. Agrega el entusiasmo al proceso del ejercicio (los incentivos de la necesidad de la gente para hacer tales)
- existe y u obvio?: puede seguir instrucciones ordenadas verbales o teledirigidas: levantarse o sonar o encenderse de cierta manera, del etc. Eg.: instrucciones dadas a un perro.
- códigos: exhibición; pp; P.M.; beh del usuario; interactivo; juego; mem; micrófono; portable; índice de inteligencia; punto de ebullición; SP; CRT; oscilador; vc; egh; carro (eg.: los juegos y o la computadora de los trucos pudieron jugar); cp; cm; acceso

REFORZADOR de la VOZ A1-43:

- incluso sintetizar su propia voz al escuchar él en el futuro
- el usuario puede afinar en el comando para: mecanografiar el aviso que desean otros o ellos mismos para oír; manera desean el sonido que se alterará; etc
- control de volumen para otros (quién oyen a locutor [usuario]), o para que usuario oiga el altavoz.
- ver su propio nivel de tensión como usted habla (ésta ayuda a locutores a controlar su tensión). El producto también analizará altavoces otras calidades de discurso, eg.: volumen; etc
- el sistema permite que el usuario escuche la música sin la audiencia del oyente (usada en otro producto los nuestros)
- códigos: exhibición; pp; P.M.; Reino Unido; fecha; comportamiento del usuario; interactivo; educ; mem; hospitalidad; micrófono; Índice de inteligencia; mfh; punto de ebullición; CRT (puede trabajar con el sistema informático también); oscilador; vc; carro (eg.: para las características adicionales); teléfono del SP; fs; RPC; cp; uq; mq (eg.: "está usted ansiedad de la sensación, autorización...."); ACP; v

AMIGO DEL TELÉFONO DE A1-43A:

- el tipo selecto llamada, entonces sistema pudo seleccionar arbitrariamente de cierta colección de declaraciones verbales o escritas posibles que puede hacer salir. Las posibilidades de las entradas dadas al usuario son

numerosas, especialmente de maneras que pueden ser pedidas, y el sistema de manera puede dar hacia fuera ayuda.

- el sistema puede alzar la psicología de la persona incluso sin la función del teléfono, eg.: mientras que están en el escritorio, cuando son tristes, el etc.
- cosechadora con la radio, magnetófono, Cd.... Tener sintetizadores eg.: para que bajo, triple, etc mejoren estar atento a usuario
- sintetizar los sonidos entrantes y salientes
- el sistema puede tener representaciones visuales que ayuden al usuario con los cuadros y o las palabras
- códigos: girar el sistema con teledirigido; exhibición; pp; P.M.; Reino Unido; fecha; beh del usuario; interactivo; educ (enseña a gente sobre su psicología y cómo ser más positivo y o eficaz, el etc); juego; mem; hospitalidad; micrófono; índice de inteligencia; mfh; punto de ebullición (para el respaldo si la parada de la electricidad...); CRT; oscilador; vc; egh; tgh; carro (eg.: de la palabra y o del sonido que crea opciones); RPC; cp; uq; mq; ACP v; acceso

CAMBIADOR del SOMBRERO A1-44:

¿No es este producto considerado obvio? Si es así enviarlo a Steven. Él no lo ha repasado.

A4-R29: DESODORANTE ELECTRÓNICO:

Activar las frecuencias, que matan y o inmovilizan y o restringen el índice del crecimiento/de la multiplicación de hongos, de virus, y de otros gérmenes/bacterias. Tales frecuencias se pueden activar vía:

- piezas cuaesquiera dos o más distantes que transmiten - reciben
- una difusión general (dentro de pequeña gama [normalmente]) a partir de una fuente - esto debe ser inofensivo a la gente, a los animales y a la mayoría de las plantas. Tal locutor puede ser lugar dondequiera en cualquier variedad de fuerzas de la difusión para los zapatos, armarios, cuartos de baño, coches, cabañas del jardín, tocadores al aire libre, cocinas, hospitales, refrigeradores
- la emisión del dispositivo puede incluso ir dentro de ciertos envases de alimento. En tales situaciones, el fabricante pudo cortar o reducir los preservativos químicos todos juntos.
- algo que pudo funcionar como un ionizer del aire, que las partículas aerotransportadas de los agregados a las paredes y el piso, el etc.; o algo tiene gusto de los glóbulos blancos y cómo trabajan
- pintar y o la cubierta externa del plástico y o caucho y o metal se podría diseñar para cambiar color o para notificarlo en otros medios sobre cambios excesivos. Y o pintura pudo ser diseñado reaccionar mejor a las emisiones del sistema de frecuencias. Los productos químicos de tal pintura se pudieron diseñar para tener aplicaciones múltiples, eg.: reacciona en una forma para una frecuencia y otra al responder a otra frecuencia. (la idea de pinturas con los herbicidas existe - pero qué sobre obrar recíprocamente con electrónica?)
- ciertos productos pudieron tener energías de limpieza automáticas de las bacterias
- ver los códigos "imi5": todos; alejado; exhibición; pp; P.M.; Reino Unido; portable; sst; punto de ebullición; SP; alerter; oscilador; cuenta; carro (software para zapping en diversas frecuencias; instrucciones y software

para diversos tipos de usos); teléfono y o tr (transmisor) y o MES y o fax (persona de las alarmas a que el estado ha cambiado cuando la situación es bastante importante).

Stylizer del traductor A4-AAR30:

- tiene aplicaciones alternativas: eg., aprendiendo otras destrezas: las matemáticas y las otras habilidades, etc. básicos.
- ver los códigos "imi5": todos; exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; beh del usuario; interactivo; educ; juguete; juego; hospitalidad; micrófono; synth; portable; índice de inteligencia; impresora; mfh; punto de ebullición; alerter; oscilador; vc; egh; cuenta; enseñar; cart (para diversas idiomas, aplicaciones dentro de una lengua particular, eg.: gente de la reunión; negocio; etc); tr, MES; RPC; cp; cm; uq; mq; carácter

MAPA ESPIRITUAL A4-R32:

- el sistema puede pedir que el usuario dibuje cuadros con el ratón que el tipo dispositivo a la ayuda #1 soluciona un problema psicologico; #2 analizan su psicología actual
- sugiere lo que pudo hacer una persona durante su hora de repuesto de aliviar la tensión, el dolor, el etc.
- hace el horóscopo, biorhythm
- la gente de diversas religiones puede tender a ser dado preguntas en estilos alternativos y o diversas preguntas todas juntas.
- ver los códigos "imi5": todos; exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; beh del usuario; educ; portable; sst; índice de inteligencia; impresora; mfh; punto de ebullición; alerter (dice a usuario y o su consejero de la dirección si la persona ha alcanzado estados críticos, etc.); oscilador; vc; egh; cuenta; tgh; enseñar; carro; cp; cm; uq; mq; pi; carácter

COLECTOR del INSECTO A4-33 ("colector de Mooshi" en japonés):

- los insectos muertos (de cualquie especie) pueden ser dados vuelta en el estiércol vegetal (suelo) después de que degenere. El olor (si es sensible) necesita ser limitado. El producto pudo apelar a los "verdes" (la gente en la ecología y poco en productos locos)
- el producto reduce la basura puesto que mayores partes son reutilizables (está un hábito extremadamente tenido aversión en el oeste, especialmente Alemania donde muchas que empaquetan no se pueden incluso lanzar hacia fuera, pero se debe volver exceso de la basura al almacén donde comprada
- los insectos frescos pudieron conseguir tentados por el olor de las reses muertas, pero por otra parte consiguen atrapados también
- ver los códigos "imi5": todos; hospitalidad; cuenta (volumen de las demostraciones de los insectos recogidos)

VACÍO DEL INSECTO DE A4-33A:

- si los insectos se permiten comer las reses muertas, sirve como sostenimiento para la vida continua de otros parásitos.

- el accesorio puede alcanzar en todos los tipos de lugares difíciles, eg.: localizaciones estrechas, etc detrás del refrigerador, etc.
- el sistema se puede hacer parte de ciertos productos, que atraen cucarachas y otros insectos, eg.: estufa (útil después de periodo de tiempo cuando está apagado cuando los insectos están comiendo la grasa que salpica de los alimentos cocidos al horno); armarios; detrás de refrigeradores; etc. Dentro de vacío el sistema pudo ser un olor que atrae insectos. Tal función del vacío pudo entrar además efecto solamente cuando detecta allí es un insecto, eg.: como la trampa de la mosca de Venus que entra efecto cuando la mosca está en su cojín.
- o producto pudo atraer insectos haciendo ciertos sonidos, eg.: llamadas de acoplamiento
- ver el código en el archivo IMI5 para "todos".

SELECTOR de CANAL A4-37:

- el sistema alerta a usuario a las demostraciones de tal interés vía una impresión hacia fuera o de la exhibición en la pantalla - facilita la dificultad en la lectura a través todo, la consideración de que la televisión por cable puede tener superior a 30 canales ahora para cada media hora/hora o período de dos horas, el etc.
- mientras que la observación de una demostración, sistema se puede programar alertar al vigilante de otras demostraciones que vienen en la línea (quizás estaría de mayor interés, con todo el usuario puede ser demasiado perezoso comprobar alrededor.
- ver el código en el archivo IMI5: todos; alejado; exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; alerter; oscilador; enseñar (los padres pudieron desear programas particulares para ser acentuados si están de valor a su niño, y o del censor tipo indeseado hacia fuera que programa) - también se aplica a otros eg.: los que no quieren violencia, etc.; carro (eg.: mecanografiar la programación; capacidad de coger ciertas estaciones; etc; acceso (cabritos de la subsistencia de la observación a veces, del etc. - este producto sí mismo aparece existir posiblemente ya); carácter

A4-38 CANAL INTERPRETER/TRANSLATOR:

- el locutor necesitará enviar en el código para el receptor (quién es oculto o sordo) para comprender la información.
- la persona sorda pudo ver un carácter y o las manos que hacían lengua de muestra
- tales códigos pudieron también permitir a gente (tal como ésos que miran en los aeroplanos, en hoteles, ciudades muy internacionales como Nueva York o Amsterdam) para mirar en sus idiomas deseadas, con la transcripción abajo y o la voz sobre hecho.
- ver los códigos en el archivo IMI5: todos; alejado; exhibición; pp; P.M.; educ; hospitalidad; mfh; alerter; vc; egh; tgh; enseñar; md; carro; cp; acceso; carácter

SELECTOR DEL ESTILO DEL CANAL DE A4-38A:

¿- este no obvio está considerando cómo es fácil está para que la gente video corrija las cintas en el cuarto que corrige?

- ver los códigos en el archivo IMI5: todos; alejado; pp; P.M.

TRAJES ELECTRÓNICOS DE A4-43A:

- ver los códigos en el archivo IMI5: todos; alejado (como parte de la diversión o del juego, uno puede girar algo en el traje de la otra persona); exhibición; pp; P.M.; juguete; hospitalidad; micrófono; synth; portable; sst para ciertos elementos solamente; índice de inteligencia; punto de ebullición; SP; oscilador; vc; egh; cuenta; enseñar; carro; carácter.

BALANCEADOR DE LA VOZ DEL TELÉFONO A3-R14:

Seleccionar el tipo efecto que usted desea de etiquetas fácilmente reconocibles, eg. para el movimiento propio: "paz y armonía". Para su propio efecto del carácter, eg.: "novia dulce", "colector de cuenta (uno quién recoge las facturas sin pagar para su compañía)", "Sr. atractivo", etc.

Estos efectos pueden estar para su saliente y o los deseos entrantes, eg.: usted puede quisiera que otros le oyeran de cierta manera, o usted puede desear oír otros de cierta manera, por ejemplo, una persona con personalidad terrible que usted debe escuchar con frecuencia pudo ser convertido en una personalidad más atractiva sin la pérdida de información en su discurso.

--si ambas partes tuvieran similar los sistemas del teléfono (tardaría un tiempo largo para que el mercado sea dominado por este sistema) el sistema pueden: #1 reconocen el remitente como uno usando tal synthesization, #2 que las palabras no necesitan ser embarulladas o incomprensibles de todos modos puesto que las transmisiones digitales están razonablemente claras (un efecto sonoro o el otro)

--anuncios de producto una pequeña fantasía, diversión, beneficios y muchas otras cosas a su vida y o a su negocio.

--al vender un producto en el teléfono (una práctica muy común en el oeste), el usuario puede tener synthesization estándar y o llave en el tipo de persona que están intentando vender a y el teléfono del vendedor ajustará rápidamente o lentamente en respuesta. El vendedor pudo incluso saber el tipo de personalidad del comprador potencial antes de la llamada vía: el tipo de productos que han comprado previamente de la misma compañía u otras compañías, tales bases de datos están disponibles para la compra, eg.: al conseguir descuentos en ciertos mercados del alimento en los E.E.U.U., usted necesita una tarjeta (usted se aplica y en la misma hora dar su teléfono #, número de cuenta bancaria, dirección, etc... si el Info no dado le no consigue la tarjeta del descuento - eg.: con la compañía llamada Safeway. Safeway es probablemente el supermercado más grande del país. Las computadoras en la caja registradora leen cada artículo vía la clave de barras del producto y almacenan actual lo que compran con lo que, cuando y en qué volumen, etc. Esta información se correlaciona con campañas publicitarias - los acontecimientos de noticias de mundo etc y tal así que las computadoras pueden analizar alto estilo de compra individual.

. Es los estímulos totales que una persona recibe vía sus cinco sentidos (representación visual, audiencia, sensación (eg. vibraciones), el oler, gusto) ese influencias cómo una persona siente en cualquier momento dado. Esta capacidad de cubrir tal área extensa se relaciona con los productos futuros de la realidad virtual que vienen

sobre el mercado. ¡Por lo tanto, aunque nuestro producto no pudo ser factible ahora, las derechas de patente pudieron permitir a los fabricantes futuros a que poseer las derechas de hacer otros productos consideraba obvios a nuestros modelos actuales!

- la persona en el teléfono pudo conseguir todos los o algunos cinco sentidos mientras que en el tel. el producto pudo también ser bueno para un nuevo tipo de juego de la datación (por el que usted encuentre a nueva o conocida gente) y conjeturar quién son realmente, o donde usted desempeña ciertos papeles en un juego electrónico mezclado con vida real, etc.
- representación visual vista por el locutor (puede estar sin sonido). La fuerza incluso viene con una pequeña vibración, eg.: con música de danza
- gusto: pudo dispensar el caramelo condimentado y o píldoras, eg.: con el ginseng o el cafeína para energizar le, o las hierbas que le relajan.

VIGILANTE de la EMOCIÓN A3-13:

. La tensión adicional de las maneras puede ser identificada: cuando en el teclado y la persona incurre en equivocaciones numerosas, la computadora reconoce cuando los espacios traseros del usuario con frecuencia y las letras de las cancelaciones (tal es diferente cuando uno está escribiendo el texto libre y cambia oraciones, etc puesto que este 3ultimo es más de una función de edición. Uno incurre en equivocaciones cuando su cabeza no es toda junta bien;

- el cojín de la llave de computadora pudo tener un monitor de la temperatura en alguno/todas las llaves en las gotas de la temperatura de la persona del acontecimiento (muestra de la tensión), no obstante la temperatura ambiente total necesita ser considerada de también, más la cuestión de cuánto tiempo la persona ha estado en la computadora, (acaban de venir quizá adentro de una cámara fría....). Dependiendo de la exactitud de esta área, el producto pudo preferir utilizar los dedos fríos como solamente uno de varias muestras antes de que la computadora tome la decisión sobre la tensión del usuario. El modulador de la temperatura pudo estar en las ocho llaves que los dedos se están reclinando generalmente encendido. Las llaves para otras idiomas serían alteradas por consiguiente.
- la cantidad de agitación preside personalmente
- en Oriente (donde la gente saca virtualmente siempre los zapatos dentro de la casa, los cojines del pie pudieron comprobar para saber si hay temperatura y otras materias.
- comparar esto con el producto A3-13A en "O titulado directorio" de Steve y en su archivo titulado "A3&". pedirle este número del producto el 1 de diciembre de 92

DIARIO de la DIETA A3-6: ¿Dónde está la segunda adición a este producto? ¡Este producto fue dado a Steven después de la investigación inicial!

. Del uso a estudiar de los doctores solo y o una gran cantidad de pacientes y las interacciones entre cuaesquiera dos o más del siguiente: hora; alimento particular comido; mecanografiar la prescripción tomada y el tiempo y

la frecuencia tomados; música escuchada; horario el dormir; tipo y época del ejercicio; la sincronización y el tipo de cualquier tipo de actividad tal como ésos enumeraron adjunto; gente hablada con en el teléfono; brotes adentro (empeorando) de la condición de una persona, y o de mejoras; tipos de programas mirados en la TV; efecto de ciertos productos químicos (eg.: preservativos en alimentos preembalados); estado de ánimo emocional, eg. felicidad, depresión, energía, energía baja, capacidad de obrar recíprocamente con otras, temperamento, control de cóleras, suicidio, aumento de peso o pérdida o estabilidad, accidentes (eg.: coche, ocupacional, etc.); longevidad (vida)

- este producto se relaciona con el producto A3-6A
- el producto pudo sugerir uno o más menús para comer para cocinar en el país, para comer en restaurante, o compra como alimento precocinado.
- el sistema puede recomendar el plazo del tipo y del ejercicio necesario trabajar de exceso de calorías en dieta
- peso de cada persona de sistema monitores
- la memoria de sistema puede demostrar todos los efectos sobre la salud físicos posibles (positivo y o negativa) de cada alimento, eg.: tiene tales y tales vitaminas, es bueno para mejorar vista del ojo, y o puede causar el cáncer de estómago en 0.03% de población... (comiendo el artículo en tales y tal daño/ventajas de la salud de los aumentos/de las disminuciones de una manera.
- basado en las preferencias personales por ciertos ingredientes, eg.: los tomates, sistema pueden sugerir los alimentos para comer. Las sugerencias también son el producto de muchas otras maneras de las cuales el sistema esté intentando ayudar al usuario.
- el sistema puede también sugerir ciertos alimentos para los grupos de personas grandes si son necesarios estar listos para los deportes, el pensamiento cerebral, un día muy frío (reducir enfermedad), el etc.
- computa fácilmente cuánto de cada ingrediente es necesaria para el cierto número de gente, facilita las fórmulas matemáticas para más o menos gente que pedido en recetas, más él puede calcular fácilmente para los gustos regionales o personalizados, eg.: más picante.
- ver "los códigos de las especificaciones de producto IMI5" para:

todos; exhibición; fd-hdd; pp; m Reino Unido; fecha; educ; micrófono; ejercicio; portable; sst; índice de inteligencia; impresora; au; mfh: punto de ebullición; alerter (cuando la persona está consiguiendo en el mal□n estado, haciendo error, el etc); oscilador; vc; egh; cuenta; tgh; enseñar; carro de softwares; el sistema los transmitirá vía radiofrecuencia a la supervisión de la persona, para: el comprobar para arriba ellos y o si la persona está consiguiendo en apuro serio....; RPC; cp; cm; uq; mq; acceso; pi; carácter

WALKIETALKIE INTERACTIVO 4A-47 (título inicial del producto: Alternador de la voz del Walkietalkie):

- intento que conjetura el lugar de su socio del juego por las pistas dadas (eg.: pedazos al rompecabezas en imaginarlo)
- puede ser de un número de dos simples o más juegos del jugador con vídeo y posiblemente las transmisiones audios entre sí mismos. Los usuarios pueden jugar simplemente en diversos cuartos, y o sobre el teléfono/el módem, el etc.

- el sistema permite que los usuarios hagan sus propios juegos con y o sin los cartuchos que actúan como idiomas que son autor (la lengua básica del software de la cual el programador crea desarrollado un programa)
- las comunicaciones (o escrito o verbal) se traducen entre diversas idiomas
- el receptor y el transmisor pueden registrar lo que reciben o envían para re-escuchar futuro

ARTISTA PRINCIPAL 5A-11:

- el arte se puede crear en las maneras descritas mientras que también lo hace por una suma de música y o los efectos sonoros o grabación verbal (mientras que se está encendiendo el audio, el efecto visual se está creando en ritmo, el etc con los sonidos). Tal sistema puede también ser aplicado para el desarrollo de vídeos musicales, de la diversión pura, del etc.
- el usuario puede programar los tipos de efectos visuales y la exhibición puede hacer estallar hacia fuera tales posibilidades visuales (dentro de los parámetros seleccionados) mientras que se está creando cualquier sonido, eg.: el escuchar la música; el escuchar el profesor (el usuario tiene dispositivo portable en sala de clase); mientras que camina alrededor de ciudad un niño puede ver todas las representaciones visuales creadas por los sonidos todo alrededor; etc

--los tipos programados de efectos visuales podían incluir las peticiones que demostraban las preferencias por: colores; velocidad en la cual se crean las representaciones visuales; tipos de movimientos del cepillo; tipos de formas, eg.: gráficos que se mueven hacia arriba y hacia abajo o arte abstracto que está en el movimiento o collage, etc.

--diversas barras que querían atraer a su propia clientela vía los números limitados de pistas populares de sonidos pudieron ajustar a su efecto especial vía esta idea del producto

. Crear automáticamente el arte por el que cuando usted pide uno o más colores para la parte del cuadro, el sistema seleccione los colores coordinados color para el resto de áreas (que completan las secciones como un libro de colorante por el que el usuario complete cada bloqueada área de su opción del color). Por ejemplo la cara de una persona se puede representar en centenares de maneras diferentes.

. La pintura del arte [artista del `] puede entonces resultar' reacciona en ciertos sonidos/música. La porción audio pudo estar dentro de los parámetros preferred por el usuario, eg.: trompetas, alto bajo, buen ritmo, etc.

SOSTENEDOR REUTILIZABLE del CUADRO A4-41:

Cosas alternativas que pueden ser soportadas:

- muestras: nombre del co; direcciones; lista de empleados y de sus números de habitación que se fijarán en un pasillo; promoción de ciertos productos en almacenes, el etc - facilita el cambio de exhibiciones
- el artículo que era fijado se pudo hacer para moverse para: atraer la atención; moverse a la localización señalada para el propósito deseado; etc
- habitaciones, apartamentos, oficinas: cambiar el cuadro según el tipo gente que viene por el tiempo/la ocasión
- existe y siendo convertido ahora por Microsoft en los E.E.U.U.: cuadros electrónicos, que pueden ser cambiados programando para que un diverso cuadro aparezca en la pantalla

- poner los avisos, eg. en la puerta de cada persona, o en marco

. Puede tener un tablero en quien se escriban los artículos o a qué letras o gráficos se atan manualmente.

. El dispositivo puede asir cualquier tipo de papel que sea de importancia, eg.: la lista de compras, el pasaporte, el etc así que la persona lo recuerda. Tales se pueden poner en el refrigerador o el interior de la puerta principal, del etc.

- existe: uno pudo poner actual un papel en el refrigerador con un imán

SISTEMA AUDIO DEL GUARDA DEL BEBÉ DE A1-12-A

adición de -1st

- ciertos botones accionarán a bebé para parar el gritar vía: el botón de risa, botón a relajarse, abotona para tonto y o la diversión suena como los cascabeleos, el botón para la música, el etc.

- entretener a bebé mientras que el guarda está ausente

- el sistema envía vía transmisor al receptor del guarda el hecho de que está gritando el bebé. Da a guarda mayor flexibilidad en dejar a bebé temporalmente (eg. cuando en almacén) y también entretiene a bebé cuando ellos están ausente así que el bebé es grito menos propenso.

--los sonidos salientes pudieron automáticamente: cambio y o comienzo cuando está gritando el bebé

--el carro de bebé pudo incluso mover (roca) un poco cuando el bebé comienza a gritar y o se puede activar simplemente por el guarda

LOCALIZADOR DE A1-12-B - COMUNICADOR:

clarificación del producto de -1st (este concepto de producto estuvo partido del número A1-12 de la idea)

- el receptor se ata a la persona, animal

--cuando se pierde el organismo y o es necesario para cualesquiera razones el transmisor que trabaja vía el satélite obra recíprocamente según lo deseado. Ejemplos de interacciones: se lanza el sonido, la música, el comando verbal, la alarma, el etc (vía los comandos del receptor)

--una llamada de acoplamiento se pudo emitir a un oído particular para conducir el animal al punto específico en el planeta - mientras que el animal dirige levemente apagado en la dirección equivocada, su oído recibe el sonido de una dirección levemente diversa en el oído (o en la sección del cerebro que juzga la localización de la fuente sana)

- el sistema dice a persona si están entrando en la dirección correcta o no vía: diversas luces, eg.: el verde es bueno, el rojo está en la mala dirección, y el amarillo es que están entre el rojo y el verde; comandos verbales; sonidos; etc

INSTRUCTOR del DISCURSO A1-11 (viejo título: Comunicador animal):

adición de -1st

- enseñar a los animales a hablar, cantar y o hacer los sonidos, por ejemplo para los pájaros, quizá también para algunos otros animales en circunstancias aisladas, eg.: ayudar al sonido del descortezamiento de un perro más agresivo

- el usuario señala el tipo de animal y o compra un sistema y o el software para el tipo animal eg.: pájaro y o tipo especie, eg.: el pájaro del cockatiel.

- el sistema se diseña para hacer los sonidos que se repliegan fácilmente para el tipo animal apuntado

- el sistema puede hacer en varias ocasiones un sano (la repetición sola puede inducir a animales que mímico el sonido)

- también inducir a los animales que mímico el sonido vía la recompensa de ellos con el alimento y u otros desirables cuando el animal hace el sonido deseado

--el sonido deseado puede repetir cuál era apenas difusión y o la fabricación de un sonido particular que represente el alimento o hacer de los sonidos que el animal tiene y o es aprendizaje.

- el sistema pudo incluso fijar un modo conversacional con los animales que son solos. Esta idea posiblemente alto comercial puede contestar al animal en un diverso sonido. Cada especie de animal pudo tener diversos sonidos según especie. Los dueños del animal doméstico pudieron ser entusiásticos cuando ver sus pájaros el conseguir cargó todo para arriba.

--Recordar las incidencias donde un pájaro en un apartamento canta en el entusiasmo con otros pájaros fuera del conveniente cuando la ventana está abierta, el pájaro continúa en gran interés. Sin embargo, pudo haber un límite en cuanto a la longitud y o frecuencia de la operación de sistema.

--el modo de enseñanza puede trabajar conjuntamente con el modo conversacional interactivo. La psicología de cada especie puede ser tal que el producto hablará con ellos diferentemente según su patrón del comportamiento para conseguir cualquier tipo posible del resultado uno puede conseguir de un animal

--Si el modo conversacional solamente es "obvio", el modo de enseñanza pudo ser "no obvio" por el que nuestro modelo en el mercado pudiera tener las características avanzadas no disponibles para los competidores, aunque este modo de enseñanza particular pudo ser la razón principal del interés en tal categoría de producto. Sobre interés que se convierte, los compradores tienen gusto a menudo de características adicionales también.

- recompensar los animales con el alimento dado hacia fuera cuando han hecho una tarea bien.

--El sistema del alimento se pudo tener memoria de la cantidad total de alimento dada y dar para el resto del día/24 períodos de la hora, y la cantidad total que pudo querer ser dado dentro de un período de un día. Por lo tanto, todo el buen comportamiento no se pudo recompensar con el alimento

---otras recompensas: quizás con los sonidos de la alabanza (según lo interpretado por el animal) mientras no interfiera con el aprendizaje de otros sonidos; ofrecimiento de un baño de agua para los pájaros (lo aman). La bandeja del agua bastante grande para bañarse desaparece después de los extremos de baño de la actividad (saber vía los sensores de movimiento) o después de dos a cinco minutos; cualquiera viene primero.

SINTONIZADOR VISUAL 4A-34-ZC:

adición de -2nd

- acordando a donde el ojo se mueve, el sistema sabe qué números y o las letras y o los símbolos está mirando una persona.

--permite que la persona mecanografíe la letra, hace funciones muy básicas de la computadora, hace tareas básicas de la automatización casera

---eg.: cocina el alimento en el tiempo señalado cuando el cocinero pudo haber dejado el alimento en el horno microondas por la mañana y el inválido puede comenzar a cocinar y solamente se requiere la actividad vigorosa de llegar a la cocina solamente una vez (cuando el alimento es caliente)

---dar vuelta con./desc. a cualquier aplicación o dispositivo; etc.

---girarse solo y o los sistemas de iluminación múltiples, eg.: un cantante puede encender muchas diversas luces y o los colores y o los sonidos que crean un musical importante y o sonar y o la demostración ligera sin la necesidad de mucha gente o el uso de manos. ¡Las manos se utilizan quizá para el algo más!

---dar el Info de una pantalla de crt/tv. Eg.: usted está en la cama con su amante y cansada también para tocar un cojín dominante. ¡Mirar simplemente la pantalla en el techo y llamar adelante sus sueños! Los precios de las acciones, las demostraciones sexuales o non-sexual, y o los segmentos del programa, del etc. Incluso "tiros del marco de helada ciertos" de la demostración. ¿Por qué no gozar de lo que tiene que darnos la electrónica?

ELIMINADOR 4A-5 (viejo título: Filtro de café y compresor de la rutina)

Nota: este número del producto y 4A-6 se deben hacer uno tras otro, ambos no se pueden dar hacia fuera simultáneamente

adición de -1st

- del sistema manijas también: hojas de té usadas; pulpa del zumo de naranja y de otros artículos usados para hacer el jugo, eg.: tomate, zanahoria, manzana. Tales alimentos pudieron ser puestos en el dispositivo en su totalidad y o cortar en pedazos y después ser puestos en el dispositivo.

- la basura que salía se pudo enviar en la disposición de basura del dren de la cocina (la disposición de basura recibe todo el desecho del alimento (no los huesos, el plástico etc después los muelen y los limpian con un chorro de agua abajo del dren). Tal disposición pudo permitir la recepción de pedazos levemente más grandes del alimento de nuestro dispositivo

- Códigos (véase el archivo IMI5): todos; exhibición; cm; cp

SIGNALER de la LIMPIEZA 4A-6:

adición de -1st

- para el café automático y o los fabricantes de té. El agua hervida sale de depósitos químicos dentro de la máquina, que cambia el gusto del café o del té.

- el sistema señala cuando el filtro del purificador del agua necesita cambiar

- Códigos (véase IMI5): todos; alerter; cp

SIGNALER del ESTORBO de la PIPA 4A-6A:

adición de -1st

- ciertos tipos de pipas (dependiendo de su uso) pudieron conseguir estorbados y convertirse en un problema más adelante y ellos pudieron estorbarse sin fácilmente ser notado. Por lo tanto el valor en tal conocimiento que es hecho
- tal obstrucción se pudo disolver automáticamente
- útil para la tubería usada en: las máquinas, agua drenan, el tratamiento del aguas residuales, de aguas, etc.
- Códigos [esto significa otra vez OTD también]: todos; alerter; cp; cm

DETECTOR DE METALES ESPECIALIZADO A4-R29A (viejo título: Detector de metales que identifica el tipo sustancia localizada)

adición de -1st

- el detector identifica el tipo sustancia (diversos metales tienen diversas estructuras moleculares y aparecen diferentemente en detectores). La fuerza incluso identifica artículos con excepción de los metales, eg.: piedras; plásticos; nivel de radiactividad (obvia); edad y o llano del empeoramiento de la sustancia; grueso y o volumen y o densidad
- la densidad pudo entonces aparecer en la exhibición del sistema que el artículo posible de las sustancias podría ser. Modelos más baratos pudieron encontrarla difícil considerar la diferencia entre los materiales semejantemente densos
- (obvio) demuestra profundidad en el suelo o el otro material circundante
- demostraciones la presencia de cualquie movimiento y o de la velocidad del artículo apuntado
- la exhibición puede demostrar la forma, el tamaño, el tipo sustancia, el etc.
- Códigos (véase el archivo IMI5): todos; exhibición; los pp para el tamaño y o el tipo objeto desearon - haciendo el trabajo de la búsqueda más fácil - pueden incluso utilizar el producto en área con muchos otros productos, eg.: buscando cierto artículo del tamaño en una bandeja baja de muchas otras tuercas pequeñas - y - pernos, etc.; P.M.; Reino Unido; juguete; portable; sst; mfh (el sistema puede memorizar donde se localiza cierto tipo sustancias [forma, tamaño, material, etc], eg.: ¡por número de la bandeja - cuando el usuario quiere tales y tal pedazo que pregunta a computadora dónde se localiza! ; punto de ebullición; oscilador; vc; cuenta; enseñar; carro; cp; uq; acceso; carácter

BALANCEADOR DE LA VOZ DEL TELÉFONO A3-R14

adición de -2nd

- selector de los sonidos del fondo: el usuario elige el tipo de música/de sonido que oyen sin otras la audiencia adentro. El artículo anima a usuario a escuchar en su sistema de la audiencia, en vez de decir "oh, yo tiene que escuchar este teléfono terrible"

--El sonido del fondo pudo también cambiar automáticamente según la hora, el tiempo, el tipo empleado, el tipo llamadas que están recibiendo, el etc. Este tipo de cambio en sonido se diseña: mejorar el control de calidad, el funcionamiento de trabajo del empleado, la satisfacción del trabajador, el etc.

--el sonido del fondo pudo caer en volumen cuando el sonido entrante del oyente del altavoz exterior cae un poco en volumen

ALARMA de la TENSIÓN 5A-53:

Primera adición:

- identifica qué tipos de sonidos son bastante importantes autorizar la atención, eg.: un tipo del grito del bebé o del niño; maullido del gato cuando es bastante serio autorizar la atención, eg.: para acceder en puerta automática (o cualquier maullido/perro raspar para acceder). Si el acceso sí mismo es obvio, el sistema de juzgar la validez del acceso de permiso pudo ser unobvious.

- notifican al usuario en el nivel de tensión de su u otra voz vía: exhibir (con los dígitos y o las palabras) y o las luces en el producto. El producto pudo también actuar como teléfono - con el interruptor fácil teniendo sistema identificar la voz del recipiente de la llamada o del llamador.

- el sistema se puede programar para dar alarma siempre que un nivel de tensión de cualesquiera o de partido señalado exceda niveles deseados. Esto después ayuda al usuario a hacer acciones necesarias y o cambia.

- del sistema pares también como detector de mentira - la alarma puede ir en cùando la voz es bastante agotadora

- cuando el sistema se utiliza en-no medios de las telecomunicaciones, el usuario puede ordenar sus micrófonos para concentrar en la generación de los sonidos de partido/de partidos y o de regiones señalados de sitio. Las personas señaladas pueden usar un transmisor que señalan su localización.

. Para Techies: todos; alejado; exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; beh del usuario; micrófono; sintetizador; portable; sst; mfh; punto de ebullición; alerter; oscilador; vc; egh; cuenta; tgh; enseñar; md; carro; teléfono; teléfono del SP; tr; RPC; cp; uq; mq; acceso; pi; carácter

ACTIVADOR de los SONIDOS 5A-50 (título anterior: Cerradura de los sonidos):

Primera adición:

- si esto es patentable, es quizá una patente excepcionalmente valiosa. Este uso ha durado demasiado. Debe ser hecho por la persona competente el 20 de febrero de 1993.

- éste es el mecanismo que cuando es accionado por cierto sonido envía las señales de activar y o de desactivar cualquier tipo de función. La utilización de la señal de esta parte del producto está hasta el producto en el cual se incorpora.

- diversos tipos de sonido pueden activar y o desactivar el producto en cualquier número de maneras, eg.: cambiar las combinaciones; restringir el acceso a ciertos partidos (cada partido tiene poseer el sonido)

- OBV: ¿es este producto similar a decir, el abrelatas automático del garage, activado por un dispositivo teledirigido?

- Activar: Abrirse/las ventanas cercanas en la casa, coche. Tocador rasante (la gente no quiere tocar lo que tocan otras con sus dedos sucios, con todo el pedal del pie para los tocadores se considera clase muy baja en el oeste). Tapas a la basura (también hace que el sello apretado guarde hacia fuera insectos). Aire acondicionado y o sistema de calefacción - usted necesita no más salir de cama, del baño caliente (que arriesga descarga eléctrica), del etc

- el sonido es accionado por el ser humano o sostenido electrónicamente significa

- las radiofrecuencias del los medios de mano son también posibles

- Steven es curioso sobre la evidencia de estas adiciones. Hacer por favor una excepción al organigrama de producto y señalar cuál es y no es obvio y dar los resultados cuanto antes.

. Para Techies: todos; alejado; exhibición (eg.: modo de las demostraciones en funcionamiento y o posibilidades de la selección de menú del software); fd-hdd; pp; P.M.; Reino Unido; fecha; beh del usuario; interactivo; educ; juguete; juego; hospitalidad; micrófono; synth; portable; mfh; punto de ebullición; alerter; oscilador; vc; carro; RPC; cp; cm; acceso; pi; carácter

5A-75 WARNER:

Primera adición:

- también deja a usuario fácilmente alterar el color y o niveles de intensidad.

- quizás el nivel de radiación correspondiente será exhibido (que es usuario puede alterar algo y reducir la radiación [de alguna manera] reduciendo el nivel de visibilidad de clases. Fuerza no ser técnico posible.

- notas si el sonido saliente de cualquier dispositivo está dentro de los pp o del espectro sano de la P.M. deseados, eg.: comprueba la calidad de las estereofonias caseras.

. Para Techies: alejado; exhibición; el sistema puede observar los tiempos cuando una desviación ocurrió e incluso desarrolla gráficos allí de demostrar las tendencias para los científicos, el etc; fd-hdd; micrófono; portable; mfh; impresora; alerter; oscilador; cuenta; carro; cp; acceso; carácter

+ CERRADURA del LASER 5A-48:

- códigos (véase el archivo IMI5 para los significados): todos; alejado; exhibición; pp; P.M.; Reino Unido; fecha (eg.: el acceso o las salidas de las épocas ocurrió); micrófono (los expedientes los tiempos cualquier persona hicieron algo con un rato pre-seleccion antes y o después del acceso); portable; mfh - eg.: hace o no permite los códigos de acceso de cierta gente/las señales si se encienden - los almacenes entrantes y las horas de salida para el salario cada hora de la nómina de pago; alerter; oscilador; acceso; carácter

- comprobar la solicitud de patente que presentamos en Ucrania/Rusia para esto.

ARTISTA del LASER 5A-49:

Primera adición:

- la pantalla sobre cuál escribe la imagen deseada puede permitir posteriormente cambios en la imagen

- imprimir el mismo tipo de imagen y o de imagen en diversos tipos de las superficies (metal, vidrio, madera, plásticos, papel, cartulina, piedra, cemento, tela hecha de cualquie subproducto químico, etc). Esto puede estar mucho mejor que clavando o pegándose para arriba firma adentro muchas circunstancias.
- una diversa opción permite que disminuyea la misma imagen sea aumentada o de tamaño
- códigos (véase el archivo IMI5 para los significados): todos; exhibición; fd-hdd; pp; P.M.; Reino Unido; juguete; hospitalidad; portable; impresora (impresiones sobre todos los tipos de material - la impresora puede recibir los materiales del grueso de diferenciación; au; mfh; punto de ebullición; enseñar; carro (de diseños, del etc posibles); cp; carácter (el sistema incluso permite que el usuario seleccione los carácteres que se pueden sobreponer en imagen impresa)

THERMOS SOLAR 5A-41:

Primera adición:

- la energía se puede también utilizar para refrescar el thermos
- el sistema del thermos puede estar de grande o de tamaño pequeño. Incluso ideal en localizaciones sin electricidad
- dar vuelta al sistema en estufas, y o los refrigeradores, las incubadoras del pollo, etc.

. Para Techies: todos; fecha (eg.: cuando la puerta o la otra tapa fue abierta por último y cuando el artículo puede necesitar ser sacado antes de la fecha de vencimiento [cuando el alimento conseguirá demasiado viejo, frío, etc]); portable; sst; punto de ebullición (para el respaldo en caso de que la Sistema Solar falle y o necesita la energía adicional almacenada); alerter; cp; cm.

teléfono del CARÁCTER 4A-22:

- cartuchos de los tipos de personalidad diversos
- tener diales, que pueden acentuar, o de-acentúan características sanas particulares
- la exhibición demuestra que la historieta del usuario del carácter ha seleccionado con el título escrito del tipo carácter también

MONITOR de la SALUD 4A-29 (viejo título: Tiembla el monitor)

- las características temblantes del usuario se almacenan para desarrollar los gráficos que demuestran cualquier cambio importante en el temblor
- la computadora que analiza el temblor puede correlacionar esto con datos sobre otros síntomas físicos para llegar mejor las conclusiones médicas

--mucha gente es demasiado vaga en la descripción de sus dolencias físicas y condiciones. Este monitor ayuda a aclarar.

- usado por el usuario en la muñeca, alrededor de cuello, alrededor de pecho vía correa, o la otra parte del cuerpo

- también supervisa la respiración, golpes de corazón, presión arterial (el sistema consigue la presión arterial automáticamente a veces)
- el monitor de la presión arterial también captura la presión arterial cuando cualquier otra muestra corporal indica que es bueno tomar la medida en aquel momento
- la cámara se puede colocar en el escritorio, el tablero de la rociada del coche, el etc y las comprobaciones para comportamiento inusual del ojo, eg.: movimiento rápido, ojo rojo, y u otros movimientos extraños
- monitor de la transpiración
- anotar simplemente cada sola función del cuerpo que pueda ser supervisada y desarrollar una solicitud de patente para éstos
- los monitores se pueden juntar con otras medidas, eg.: la persona de la reacción tiene que un tratamiento médico (operación, tiro, píldora, los etc)

AHORRADOR del AGUA 4A-48:

- la altura del agua se determina cerca:
--colocación de la cabeza y o de labios y cómo efectúan disparar del laser
--funcionamiento de dedos a través del cojín dominante del laser (no requiere el tacto, ven nuestro número 5A-71 de la solicitud de patente)
- Mecanografiar el selector deseado agua:
- elegir con si su agua estará o sin el fluorito y o la clorina
- temperatura
- volumen
- incorpora el filtro de agua

5A-22 LADRÓN SPOOKER (viejo título: Reflector de los sonidos)

- los expedientes aislaron los sonidos creados por el ladrón, el vándalo, o cualquier persona por ejemplo una persona indeseada, o como broma a un amigo
- los sonidos aislados se pueden entonces repetir dentro del contexto de otros sonidos, eg.: sirenas de policía, descortezamiento de los perros
- las sirenas de policía se activan dentro del plazo del sistema después del robo o de cualquier otro tipo actividad
--en vez de las sirenas, cualquier otro sonido se puede generar también, eg.: "usted está incorporando las premisas ilegal, han convocado a la policía", "su cuadro se ha llevado y se ha transmitido electrónicamente la comisaría de policías"

. Mordedores de la foto del ladrón:

sobre cualquier acceso ilegal o después de cualquier tipo de función, que genera la señal a la cámara, la cámara toma el cuadro

- la cámara puede ser inmóvil, o se diseñe tirar la foto en la dirección del movimiento
- usos: ladrones, experimentos científicos

- si este producto es unobvious, después convertirse como solicitud de patente separada y tomar la cotización adentro sobre 5A-22 sobre "nosotros han sacado su cuadro"
. En los funcionamientos vivos [hospitalidad del `] el mundo occidental goza de vez en cuando el oír que la audiencia participa en el funcionamiento. Por lo tanto aislar las regiones particulares de la audiencia y sintetizarlas por consiguiente

5A-27 FUERA de la LUPA de los SONIDOS:
Tercera adición:
- se magnifican los sonidos externos cuando la gente está trabajando en cualquier tipo de maquinaria, adminículo (especialmente los que son peligrosos un cierto grado y o los que hagan considerable ruido)
- un o vario micrófonos se pueden adoptar, y colocar en localizaciones más probablemente para significar un sonido importante para el uso del usuario, por el que reduzca en otros sonidos innecesarios, eg.: poniendo el micrófono portable cerca de las campanas (puerta, teléfono, alarma del reloj, sistema de seguridad, etc)
- el sistema funciona siempre que un sonido exterior necesite ser magnificado (aumentado de volumen) y o el usuario necesita ser alertado y o el sistema en el cual el usuario está trabajando necesidades de ser retrasado o de ser apagado. Pensar simplemente en utilizaciones posibles según lo descrito adjunto y después aclarar.

CARACTERÍSTICAS del CONTESTADOR AUTOMÁTICO 5A-3:
Tercera adición:
- los sistemas pueden responder al tipo de la persona de voz (significa el tipo de los sonidos/de las palabras/etc que pueden preferir. Toda la gente no puede ser categorizada naturalmente perfectamente por su tipo de la voz, pero este tratamiento preferred es por lo menos mucho personalizado

SINTETIZADOR de 5A-73 TV:
- seleccionar el tipo voz por el carácter, eg.: al mirar la historieta o la otra animación, seleccionar el agente deseado al escuchar y o la observación
--eg.: tener un menú de el cual seleccionar carácteres, voces de sabido y o a agentes desconocidos
- una herramienta también útil en crear una película principal y corregirla para los mercados diversos con menos costo.

A4-R29A: DETECTOR DE METALES ESPECIALIZADO (viejo título: Detector de metales que identifica el tipo sustancia localizada)
adición de -2nd

BALANCEADOR DE LA VOZ DEL TELÉFONO A3-R14:
adición de -2nd

- El teléfono del programa para cuando la llamada se hace al número particular del teléfono poder activar las características siguientes apenas para las llamadas a ese número particular del teléfono, o todos los números del teléfono que comienzan con dice el mismo código de área y los primeros cuatro o cinco dígitos del teléfono (de tal modo que consiguen el otro teléfono # ' s dentro de la compañía grande)

--si ponen al oyente nunca en asimiento, él conseguirá el tipo seleccionado sonidos/música para escuchar

--el synthesization ['sintetizador] de su voz se altera según su preferencia que escucha, eg.: una echada más alta o más baja y bajo

--ahorra el apuro de tener que recordar y o teléfono del programa según las necesidades

- transferir la información sobre los partidos que hacen y o recibiendo el teléfono llama de otras fuentes (eg.: base de datos de computadora, etc) al teléfono

ARTISTA del LASER 5A-49:

- puede tomar cuadros vía cámara, después las porciones o todo el cuadro se pueden retratar en cualquier número de maneras sobre la mayoría de los tipos de superficies vía el laser

--el laser puede hacer ciertos tipos de esquemas de la foto también

- el laser puede distinguir entre los colores por diversos grados de quema en el material

- el laser puede quemar imagen sobre el producto químico especial en la piel para:

--identificando donde la tinta del tatuaje debe ir. Usar etiquetas engomadas puede ser menos provechoso, puesto que cada uno individual puede querer un tamaño de diferenciación de una imagen, y las etiquetas engomadas pueden funcionar hacia fuera, y el sistema del laser permite más fácilmente el diseño de la imagen (incluso en una computadora, un etc.) y después realizar cualquier cambio y después considerar lo que puede ser que parezca exactamente en piel (incluso el laser puede poner hacia fuera en colores)

- el color se puede retratar vía poner una solución química sobre el material, después diversa frecuencia de la luz laser se diseña para dar vuelta solamente a los productos químicos para ciertos cambios del color cuando la toca. Eg.: un laser hace el producto químico dar vuelta al verde, las otras causas del laser el color del rojo que se producirá - un pedacito similar a la película de color que se convierte también.

THERMOS SOLAR 5A-41:

- lema de la comercialización:

--¡la luz del sol de la ventana de la oficina o aún los trabajos regulares de la luz del día!

--Incluso si usted tiene que resolverse en el frío, apenas ponerlo en el sol (eg.: para los trabajadores de construcción, granjeros, ésos que hacen porciones de paradas en su coche (teniendo que dejarlo en el frío para las partes del día..., de etc)

CONTADOR de la PLUMA A1-1:

Mide la distancia aproximada que el instrumento escribió, eg.: 100 metros o más. Calcula esto vía: la cantidad de tinta utilizó; etc.

- calcula el número de metros que se pudieron dejar para la escritura, dibujo. Calcula la cantidad de metros cuadrados disponibles para el dibujo (la diversión para los artistas)

SOSTENEDOR REUTILIZABLE del CUADRO A4-41:

Adición de la descripción de producto:

El imán se puede encajar detrás de las paredes.

- También bueno para los espacios usados para las convenciones del negocio, donde los cuadros deben ser cambiados con frecuencia.

CUCHARA A1-6:

- tener un nivelador (como unos usados por los carpinteros) que señale si la cuchara está o no está llano vía sonido y o luz
- el tamaño de la cuchara se puede alterar mecánicamente y o electrónicamente
- en el laboratorio animal:

--memoriza el volumen total y o el peso dado a cualquier una jaula o sección de jaulas o las plantas, memoria del etc. se basa en los volúmenes totales dentro de cualquier hora, día, mes, año. Puede también crear gráficos. Puede conectar con la computadora.

- construido en escala; y o cuchara puede caber sobre o en un mecanismo de la escala
- la memoria también trabaja por el tipo sustancia
- el sistema puede decir a usuario cuánto es necesario ser dada
- fabricante de la receta: seleccionar el volumen deseado para la receta particular, y el sistema también indicará la cantidad necesaria por cada producto químico y o la sustancia del alimento

. Al dispensar, el sistema recuerda y o sabe cuánto para dar a cada sección de la caja o de la secundario-caja en una banda transportadora.

CONTROLANDO DESPUÉS DE INVENCIONES POR APLAUDIR, OTROS SONIDOS, EL ETC:

Los productos siguientes responden a aplaudir humano generado, rotura de dedos, silbando, equipo o los objetos sanos de generación, etc. El sonido humano generado inicia la función deseada. Esta palmada que reconoce la parte se inserta en cada descripción de producto abajo.

Nuestro número de la invención precede cada invención.

- Marca registrada posible: Clapman, hombre de la palmada
- Utilizar la pieza básica del micrófono oye ciertas frecuencias sanas (palmada, el silbido...) y la frecuencia específica de cierta duración y o del número de ocurrencias activa o desactiva la operación electrónica.

REGISTRADOR DE CINTA ROTATORIO: ¿oír nunca un sonido y no seguro qué usted oyó? Publicidad apuntada a cierta gente, tal como ancianos, madre levemente paranoica en leyes, etc.

- los sonidos de la subsistencia de los microchipes por cierto tiempo, "sistema de lazo" pueden continuar registrando y borrando más viejos sonidos

- repetirlo en un volumen más alto si está deseado; los que quieren sistemas más elaborados pueden volver más adelante al almacén y comprar los micrófonos adicionales u otras opciones, que pueden registrar de diversas localizaciones para conseguir un mejor sonido.

- puede ayudar a la dirección de la demostración del sonido también con el goniómetro

INVENCIONES ACTIVADAS SONIDO MISCELÁNEO:

. Otros artículos a desactivar y o a activar según conceptos dentro del archivo 2-A:

. Llamadas entrantes/salientes del teléfono del altavoz (; marca (ciertas palmadas señalan dígitos del número del teléfono)

. Puertas: abrirse y cerrarse físicamente; sus cerraduras

. Identificación: cada persona que camina compra hace su código y sistema informático verbales registra que era. Aplicaciones: localiza donde la gente pudo estar...

. Girar la ducha o el baño. El sistema sabe ya en qué temperatura usted quiere su agua.

- pre-seleccion la temperatura del agua deseada no es patentable por sí mismo

. Girar la televisión, VCR, estereofonia de la música

Luces: Abre la puerta del animal doméstico para el perro o el gato que busca in/out to/from jardín. O el sistema pudo responder simplemente a la corteza del animal o meow o rasguñar o empujar. El sistema no pudo también permitir la operación en ciertas horas...

OTRAS SECCIONES DE LAS INVENCIONES - CONTROLADAS NO NO NECESARIO APLAUDIENDO:

Regulador de sexo femenino del animal doméstico:

Cuando su gato o perro femenino, el etc va fuera de este dispositivo: disuadir los perros masculinos ausentes o hacer a hembra interesada menos en los varones de sus especies.

- esto se pudo hacer cerca: dispositivo que emite un olor (eg.: poner el collar del animal); suplemento dietético (no un producto electrónico); el dispositivo que da hacia fuera suena no fácilmente audible a los seres humanos (con todo no hace los animales que oyen este demasiado loco).

- los estudios científicos necesitaron demostrar a esto trabajos

SOLAR ACCIONADO: Dejar el dispositivo que pone en el sol, y carga automáticamente para arriba vía energía solar. O la fuente de energía tiene células solares grandes y almacena la energía que en golondrina de

mar se puede dar a los productos portables cuando ella está conectada por el tiempo requerido (como tapar en electricidad); o el dispositivo portable se debe tapar en este dispositivo solar y después los dispositivos recogerán la energía del sol y la transmitirán al producto portable simultáneamente.

SONIDO DISTANCER:

Instrumentos musicales que juegan junto el cambio sus sonidos según cómo está cercano o lejano se mueven desde uno a. Puede estar para una sola persona utilizar dos o más porciones; o dos o más personas con sus instrumentos.

- se aplica siempre que el volumen de sonidos, frecuencia, o tipo sonido deba ser alterado según hasta dónde o cerca dos o más porciones de uno a.

--ejemplos: juguetes - cuando un coche policía conduce cerca de un cierto objeto o lugar, sirena, o una declaración audio se enciende, eg.: "tirar sobre"

JUGAR EL ACTIVADOR TELEDIRIGIDO DE LOS SONIDOS:

Un juguete puede activar el sonido en otro juguete. Eg.: el botón de un tren del juguete cuando está presionado causará la pista del tren que cruza para sonar a continuación, y cercano la puerta. El receptor de puerta consigue la señal del transmisor del tren.

- el transmisor puede también causar el siguiente en el dispositivo del receptor:

luces que destellan; representación visual que demuestra palabras o gráficos; movimiento físico, eg.: abriéndose/puerta de cierre, bola que cae para solar, etc

- el transmisor puede transmitir presionando del botón, o siempre que se mueva (interior tiene un detector de movimiento)

GATOS DE SALTO:

Distancers entre las piernas o los brazos. Cada vez que la persona ejercita separando sus piernas o brazos más allá de cierta distancia, el distancer sonará.

- el distancer puede también contar el número de épocas que el movimiento fue hecho (si las piernas o los brazos fueron más allá de distancia mínima.)

COJÍN DE TACTO DEL TELÉFONO:

Presionar el cojín suave y la manera de la cual usted la presionó se transmite al receptor. Esto permite algo más cercano a contacto físico mientras que habla con sus amigos. Solamente popular para las culturas razonables, eg.: Japón.

CÁMARA DEL HORNO:

El cocinero puede disfrutar de la compañía de su marido o amigos en o fuera de la cocina sin tener que ir mirar la ventana del horno. La cámara demuestra el estado del artículo adentro. Otros ojos de la cámara pueden también ver la estufa de cocina.

FABRICANTE DE CAFÉ MÓVIL:

Hacer el café en coche mientras que conduce. Los conductores aman el café caliente. Dispositivo de seguridad pudo tener en cuenta solamente el abrirse mientras que:
el usuario ha parado el coche, o si el coche tiene más de un pasajero.

FABRICANTE MÓVIL DE LA CITA:

Los vendedores que viajan siempre en el camino pueden conseguir su calendario de cita llenado más fácilmente vía el método siguiente. Las negociaciones de la secretaria con el cliente y pueden concertar rápidamente las mismas citas del día (gran servicio de atención al cliente) comunicando con el dispositivo del representante de ventas (vía ondas de aire). El dispositivo del vendedor almacena su horario y tiempo aproximado necesarios en la cita y a y desde las localizaciones.

- si el vendedor necesita hacer algo diferente, piden su dispositivo si su horario permite. El dispositivo es razonable en la asignación del tiempo necesario. El dispositivo funciona mejor para ciertos tipos de gente de las ventas, especialmente las cuya hora necesaria para cada cita sea algo fiable. Recordar, allí es menos caos en el oeste, y la gente espera mucho menos en línea, el etc....

CONCLUYE EL ARCHIVO: ARCHIVO de U-ALL de la a
Archivo: Introducción a la palmadita/A1X
ARCHIVO A1X

Podómetro de la pluma A1-010: La pluma del juguete mide el número de metros de tinta escritos, y el número aproximado de metros adicionales de permanecer de la tinta.

- pluma contraria: artículos que miden la cantidad de capacidad de la escritura dejada o que ha ocurrido ya en las plumas, lápices, marcadores mágicos. La cantidad de vida se fue en productos antes de que analicen.
. - verificador del contenido 4E020 y de la fecha. 5E020
- "juego": aspecto del juego en el cual la longitud de la escritura llega a ser importante, eg.: los jugadores deben escribir dentro de longitud mínima máxima y o de la duración (""/"de la cuenta tds") (durante cada movimiento/para el movimiento del juego o para todo el juego).
- 'Palillo del r: anota todos sus movimientos, eg. en términos de: las distancias viajaron (en aire), # de ángulos en el movimiento, el etc.

Condones A1-02 para los hombres y las mujeres, que prueban como varón y o los jugos sexuales femeninos.

- Nombres comerciales: Auténtico, casi el auténtico, como el auténtico.

. - Ver el dir KN, específicamente 7G de G sobre los condones. Agregar los productos químicos compatibles con los condones que crean gusto deseado y u oler.

Taro del software A1-050.. Da la fortuna para usted y o usted puede darle el nivel de instrucción deseado. El tacto electrónico del taro o la señala a la persona y da la lectura. Utilizar el taro de Waite, similar, o la quiromancía japonesa, oriental. Numerology electrónico: el sacador en todo numera asociado con la persona, el negocio, el concepto, la estrategia, la idea, el elemento político, el etc., la máquina anuncio todos los números para arriba y divisoria conseguirá el número mágico o hará un promedio más probablemente hacia fuera de cada número dado consigue su significado y cuenta todos los promedios y cualquier número del estado de lecturas para cada significado o da análisis general.

- "Hospitalidad"/cribador del programa (interruptor): 9G-220: Las pantallas/seleccionan del sistema (sistema adaptante) (tales/las ocurrencias indeseadas/queridas señaladas/el modes%/programs%). "Inclinación": controla las funciones del sistema

Termómetro de la cuchara A1-060: mide temperatura. Dispositivo sanitario del cocinero. Uso como agitador. Una cuchara más pequeña para el bebé.

- cuchara que mide temperatura. Temp demostrado por los cambios del color o del número o subida del mercurio en la manija. Utilizar el material de hoja en mercado como termómetro quizá. También bueno para los bebés. También mantener taza, tazón de fuente, el etc para calibrar a temp.

. Para Techies: "S"; fecha; juguete; portable; punto de ebullición; SP; alerter - si demasiado es caliente, frío...; cp; cm; uip (usuario de las alarmas cuando la temperatura está en nuestro fuera de cierta gama).

Etiqueta engomada de A1-070 A que cambia lemas según la temperatura y o edad o si un coche es con./desc. Lemas que dicen "ahora que el coche es con./desc....." dará vuelta a las cabezas. O han automatizado leído en la ventana posterior, alambres conectados con el motor/la batería para la indicación con./desc. del coche.

Posibilidades de la pinza de pelo A1-090:

Con opciones siguientes de la función: 1] \ \ se convierte en muchas pinzas de pelo cuando está deseado y de nuevo a una sola pinza de pelo semi-compacta. Se aplica a todos los tipos de los clips 2] mantiene insectos

ausentes vía los productos químicos y o las señales electrónicas 4] (éste se convierte en "3") son una radio 5] envían los productos químicos, electrónica que atraen a socios sexuales o hacen a gente como usted, o son hechas simplemente por el diseño especial 6] llevan a cabo números de teléfono en un electrónico o el rolodex manual que pudo marcar su número de un \ de "touch tone" \ es del teléfono 7] un legado de la autodefensa usando la carga química del aerosol, electrónica o eléctrica - más fácil alcanzar que en bolso. Buena hora de lanzar el producto, mujeres más puritanas, eg.: Clarence Thomas... 8] \\ llamadas para la ayuda eg.: el silbido 9] "mic miniatura" en el disfraz 9] envía - recibe las llamadas 10 del teléfono] es un legado del juguete 11] para encontrar cosas que usted coloca mal a menudo: el sacador en el código aplicable que encuentra el punto correspondiente 12] lleva a cabo pares adicionales de las llaves 13] abre puertas vía su transmisión secreta 14] envía automáticamente vibraciones de sonidos agradables o las frecuencias consciente o inconsciente 15] llevan a cabo su maquillaje y o el dinero o el cuadro 16] tiene reflector de la noche así que los coches pueden ver que usted en la obscuridad 17] es un reloj 18] detecta niveles de la radiación con construido en la medidor que usa la variedad que usted acortó previamente sobre su camisa ....20] \\ gente pueden localizar le detectando donde está su pinza de pelo, cualquier joyería programada para que el portador decida a si quieren o no quieren allí paradero ser sabido vía el "picosegundo".

- D: cabeza de la persona y pelo = pinza de pelo = mecanismo de funcionamiento.

Carro de bebé A1-120 con la voz de la madre cuando la mamá está allí o no allí. Utilizar la cinta de cassette o el microchip. Puede dar a bebé deseó efectos pues he escrito sobre un de los otros productos. La voz de la mamá se puede convertir en términos de sus frecuencias para alcanzar efecto deseado. O padre del uso, hermano u otra voz. Mezclarse con 10, 11, 8 (el satélite del bolsillo localiza a niño perdido, dice les volver a casa, a etc.)

- "Inclinación": cuando en la posición señalada, la madre es nr. El R naturalmente mejor (`teledirigido) está para levemente más viejos niños que necesiten tiempo de entrenamiento para utilizar el sistema correctamente.

Reforzador del gusto A1-130: Los fabricantes pueden ahora ofrecer mayores variedades de gustos en alimentos preembalados. El gusto es la combinación de olor y de reacciones químicas en la lengüeta. La nariz es más sensible a los elementos diversos que la lengüeta. Más seguro que poniendo las condimentaciones químicas en el alimento. El envase, o la consumición del utensilio emite los olores que complementan el alimento.

- alimento: reducir la digestión química con olores en los envases de la soda, las bifurcaciones, los cuchillos, las cucharas, los palillos, los toothpicks, desgaste de China, gustos del etc. de la acidez, dulzor, amargura, salinidad, e incluye todos los elementos encontrados malsanos hasta la fecha.
- los diseños son electrónicos y no electrónicos.
- ver el reforzador químico del gusto de KN en parte anterior del directorio de "B".

Reloj de A1-220 Biorhythm: le dice la hora que usted es probable ser: creativo, alarma, necesitando la precaución de lastimarse físicamente o de otros, hambriento, no hambriento todavía debe comer, necesitando la medicación o el café, el trastorno emocional. De acuerdo con su bio carta, y o el horóscopo, quiromancía, taro, terapeuta, su entrada en la máquina.

Inhibidor del hambre A1-230: Reducir el peso reduciendo en sensaciones del hambre.
- Mecanismo de la dieta: Parar el comer: al anhelar el alimento, el adminículo electrónico enviará frecuencias de los estímulos, y o los sonidos, vibraciones, olores, palabras, música para reducir hambre. Puede ir en preprogramado automáticamente. Mezclarse con 22 y sus mezclas.

Máquinas expendedoras A1-250 que toman las tarjetas de crédito para el caramelo, bebidas alcohólicas (cuando sea legal como Japón), o cualquie otro artículo.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251); el anti-tratar de forzar; estudio de mercados.

A1-270 canalización vertical del aire O. La poder abierta y su líquido emite a elementos del aire. Puesto le sobre el calentador. Pone los buenos iones en el aire, da el buen olor. Producto no electrónico.

Pelele A1-300: Emite burbujas de la parte inferior de la bebida para una hora. Las burbujas vienen de la taza o de los cubos hundidos en parte inferior.
- Placer del cubo, cubo de la burbuja: agrega las burbujas, efervescencia, carbonatación a cualquier líquido - bebidas, acuarios, para los propósitos químicos o científicos. Contenido químico (eg.: oxígeno, monóxido de carbono) de la burbuja determinados por necesidad particular.
- versiones electrónicas y no electrónicas; seguro

Amante de la planta A1-330: La máquina da frecuencias de las plantas para alzar la salud, crecimiento, verde, suelo de las subsistencias húmedo dando solamente el agua que el tipo planta necesita. Un producto que es programado por P para hacer el suelo húmedo en hasta o sobre diez ajustes de la humedad, por el tipo planta.

Con el manual viene decir en lo que fijar M. Versión avanzada de jugar a Mozart sabida para ayudar a crecimiento.

Maneras creativas A1-400: arropando cuyas costuras parte fácilmente w (con) E M desmagnetizando. Cambiar en nuevos patrones diversos de la ropa. Elegir los pedazos para S M L o XL. Encajar a presión la manera, cortar y la goma, manera convertible, ninguna cose. Pueden utilizar el Velcro, las cremalleras, los broches de presión y o los botones, el etc. buenos para el pedido por correo, puesto que en almacén la versión parcial de programa complicó. Pudo trabajar con la máquina la "costura" de HH o del TT.

Cambiador del sombrero A1-440: el sombrero llega a ser más oscuro en buena luz, y alumbrador en luz corta. Para efectuar máximo la visibilidad del portador y de otros (conductores, cazadores, mamáes que buscan a cabritos afuera, etc).

- También, el sombrero oscuro en sol crea menos reflejo de luz y es más fácil de mirar hacia fuera.
- Utilizado como parte de estrategia en el juego donde el jugador cambia lados en el centro del juego. Sobre todo no electrónico.
- ver A1-490

A1-490 refrescan dicha de la almohadilla: Las estancias se refrescan el noches de verano, ahorran en el aire acondicionado.

- subsistencias que usted se refresca en noches de verano calientes, excepto en el aire acondicionado. Puede también calentar para arriba. Reduce las cuentas de la electricidad del acondicionador de aire. La manta fresca, refresca sueño.

Esto se puede hacer químicamente, y o electrónicamente.

- temperaturas electrónicamente ajustables

Magia del agua A1-510: el sistema mantiene el agua limpia, y fertiliza las flores de corte.

- crecer las raíces de la planta en agua y guardar las flores de corte. El sistema mantiene el agua limpia y la fertiliza.
- limpiador del agua del corte de la planta. Las tabletas o el envase chemicalized o electrónico guarda los crecimientos nauseabundos, flores de corte en el mínimo. Muchas plantas pueden continuar creciendo en tales por años.

- utilizar simplemente el tipo de emisión de la frecuencia que inhiba o mate algas y otros crecimientos hediondos en agua, sin el daño de las plantas, o aún la ayuda de ellas. Los pruebas de laboratorio simples, y el material impreso ya sobre efecto que tales frecuencias tienen demostrarán se desean qué frecuencias.
- las necesidades del bloque D (dibujo) de cubrir todos los tipos de emisiones de la frecuencia en el agua: eléctrico, sano, ligero, etc.

Cortador del alimento de la diversión A1-520: Alimento rápido formado interesante de los animales en pequeños pedazos.
eg.: pepino del palillo en quijadas de rotura del ser humano, pescado (piraña). Alimento de la rebanada contra el tipo máquina de cortar de la rejilla de tiburón, vieja abuela
- activatable solamente con los sistemas especiales para guardar a niños de usar, eg.: el código especial, llave, o comienza para arriba comandos, el etc.
- La "inclinación" substituye funciones del cuchillo, del etc.

Archivo: Introducción a la palmadita/A2

ARCHIVO A2

Las abreviaturas de la característica usadas aquí requieren el archivo "IMI viejo" para las explicaciones.

SELECTOR de la HIERBA A2-010: programar el tipo alimento, # y el tamaño de porciones o el vol.-volumen/peso, asiduo - bajo - ninguna dieta de la sal, alergias, preferencia por más de cierto tipo hierbas, edad de hierbas, fórmulas del m del etc. da a hierba perfecta salida combinada. Viene abajo de poco lanzamiento de cada hierba se encienda que cuando el envase presiona contra él; o la mezcla entera viene abajo de un lanzamiento principal (mejor anterior). Hierba quizá exceso enviada para todos o las pequeñas porciones para la exactitud. Ciertas hierbas del uso frecuente tienen reservas más grandes (cajas). Substituir la colección entera de la hierba periódico en paso simple (excepto de substituir cada uno manualmente). Artículos de los asimientos 12 - 200. Opción de poner sus propias hierbas para propias fórmulas; dispensador de la mezcla de sopa (producto químico libre). Terapia para tocar el punto derecho según cómo usted siente. Para las pastas, las preparaciones (ensalada, etc.), beben. Puede tener líquidos también. Puede tomar sus propias fórmulas personalizadas también. Bueno para los almacenes que no venden las hierbas. El fabricante puede enviar las hierbas directo también. Concepto polaroid: chisme de la fuente de la compra de la necesidad del cliente - ningu□n relleno del uno mismo; la máquina de la venta en el precio bajo, hace el dinero en el suyo. Cliente mayo o mayo no poder agregar las especias particulares cuando funcionan hacia fuera. El precio para la fuente

de la hierba puede levantarse más rápidamente que precio de la máquina. Imprimir o la exhibición ("S") demuestra cuánto de la otra necesidad de las cosas u (usuarios), eg.: los ingredientes para los aliños de ensaladas, mezclas de las pastas, bebidas, lasagna, guisaron el pollo, etc. M también se sostienen: las habas, los pequeñas vehículos y setas tajadas secadas y la carne junta las piezas, las bases de sopa, leche en polvo, tuercas, pulverizadas (la mantequilla, los pedacitos de las pastas, el etc. artificiales conecta con agua para dispensar, pueden también almacenar el agua embotellada. Produce los brotes.

Selector de la hierba; Hierbas del cocinero; Apenas la derecha; Hierbas principales; Mezcla mágica, terapia de la hierba.

. Para Techies: TT, LL, E, W2

- Analizador químico del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por el material con los reactivo químicos. 7G050 = demuestra qué hierbas/alimentos fueron guardados/almacenados y para la longitud del tiempo; las ayudas determinan si el alimento se lanza hacia fuera (fecha expirada).

SECRETOS DE LA RECETA DE A2-01A: mezcla con el selector de la hierba. Sobre el alimento de dispensación cocina vía microonda o calor. U puede llamar m remotamente y los pp qué comer. M puede sostener el alimento congelado en la sección congelada.

RECETAS DEL MUNDO DE A2-01B: secretos de la hierba del MI 1, secretos de la receta 1A. la categoría británica del país y del alimento y elige de opciones. De Op. Sys.: receta del ds solamente.

SELECTOR DE LA VITAMINA DE A2-01C: da las vitaminas ao-y o las hierbas y o las sugerencias escritas según la dolencia del u, deseo y también las fórmulas generales la base para el normal y el resto de los días

A2-020. CHEQUE DE CUERPO: periódico correo adentro como chequeo físico en curso que busca cuaesquiera anormalidades que puedan necesitar pronóstico adicional. La orina (pequeños envases con los casquillos), sangre (tomar el pequeño sello agudo del instrumento-entonces, la jeringuilla con la aguja), pelo, ojo Dabber (para el líquido en esquina del ojo - al gritar, bostezando, siempre, para el moco especialmente al despertar) - entonces sella; heces - cuchara con el pequeño envase; Amortiguador de la transpiración (de hoyos de brazo después de la ducha antes de desodorizar); Raspador de la piel (especialmente si ver las anormalidades); Palillo de la cera de oído (con el sellador); Raspador de la nariz (para el moco con el sellador); saliva (puesta en la pequeña tapa del envase de la boca entonces lo después de sacar, o puesta en el tipo amortiguador (con resultado-intentar rápido o lento acumular elementos particulares de la mayor importancia). Aunque quizás costoso, el rico puede comprar una cierta paz interior y o medidas preventivas. Incluidas pueden ser las instrucciones para el uno mismo - cheque - suben, eg.: pechos, testículos... Ellos o el doctor elige en los cuales muestreo al correo y a la frecuencia para cada uno. También registra lecturas del cuerpo en memoria:

golpe de corazón, presión arterial... Muestra del cuerpo (r, cheque (del uno mismo) (para arriba), cheque encima de la muestra (r/s)

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

. - Analizador químico del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por el material con los reactivo químicos. NR (notificador adaptado `) demuestra qué productos químicos eran actuales W5. 7G050

CHEQUE ANIMAL DE A2-02A: para el hogar, parque zoológico, animales salvajes. Mezcla con el cheque de cuerpo. Ayuda si u (usuarios) está demasiado ocupado concertar la cita con el veterinario, situación de o (o) no ve bastante serio para autorizar una visita con todo la preocupación de las causas. TM: Diagnóstico animal

FÓSFORO VIDEO A2-030: los vídeos del minorista demuestran la manera, modelos del producto y el fondo arquitectónico con emparejar/que felicita de los colores alguno/todo colorea gastado por los clientes que caminan cerca. El vídeo también puede emparejar al minorista, disco, decoración del lugar público por color/forma/diseño/el período de estilo. (Manera/ropa/estilo/producto) fósforo video. Es influencia sociológica, psicologica inducir ventas. De entrada del minorista, la caminata en clientes, computadora principal (controlada quizá por el fabricante del producto o del servicio especializado co) la música/el sonido, líneas de productos, colores, verborrea puede alterar según el tiempo, tipo almacén, región, línea de productos, día, semana, mes, año; raza (dentro de límites); competición (en general o qué él está haciendo en ese entonces), sucesos actuales/noticias. Puede utilizar automatizado, la historieta, imágenes de la vida real (quizá). Pegar la cara de la persona sobre un cuerpo: juegos, exhibiciones de la lavadora. Cliente que camina de los fósforos de la impresión de la voz.

. - verificador del contenido 4E020 y de la fecha

. - "Hospitalidad"/cribador del programa (interruptor): 9G220: Las pantallas/seleccionan del sistema (sistema adaptante) (tales/los programas indeseados/queridos señalados/los modes%/programs%)

FÓSFORO DE A2-03A NEUROLINGUISTIC: el caminar del cuerpo (y la velocidad y dirección), la colocación, el sentarse, la raza, expresiones faciales, emparejadas y alteraron en moldeado en modo. Mezcla con el fósforo video.

. - verificador del contenido 4E020 y de la fecha.

VIBRADOR del ASIENTO de la MÚSICA de A2-040//: empareja la música jugada. Conectar la silla por el alambre con música/fuente sana, o la silla tiene micrófono. La silla hace la conversión. Puede substituir la silla por (cama, asiento de coche, asiento del transporte público, sala de baile, vidrios, reloj, pulsera, collar,

pendientes, guantes, pluma, taburete, vidrio de consumición (para el disco también), persianas, cortinas. El tipo portable puede ser el asiento puesto de on/below (todo arriba), que reacciona (para la portabilidad, la broma cuando usted grita, el etc.) Vibra sano (tor/tions), vibrador de la acción. HH, TT, W1, BP, E, contra, pequeño grande directo, cabritos, adulto, diversión, humor, LL

TARJETA A2-050 UNO: combina la licencia de conductor, cuadro, las tarjetas de crédito a las cuales para arriba le firman, microchip con (su historia de la salud encajona de emergencia de la salud, copia de las partidas de nacimiento originales, Seguridad Social y otros números, firma, las huellas digitales, los números de cuenta de otras cuentas como el aviador frecuente, los números de cuenta del cliente, los números del teléfono, etc.). También para: el acceso de la seguridad, pasaporte, la política del seguro médico (los hospitales saben cuánto y qué tipo de crédito a dar), almacenes el Info en qué fueron comprados (ayudas soluciona facturaciones cuestionables y las ahorra de necesitar recibos)

La tarjeta puede trabajar con todas las o algunas opciones. Apenas la tarjeta del palillo en lector y otras pueden tener acceso solamente al Info de la tarjeta con la contraseña del sostenedor, y entonces solamente el Info que quieren dar hacia fuera.

. - verificador del contenido 4E020 y de la fecha.

DIARIO de la DIETA A2-060: después de que sea extendido utilizar, diga u (usuarios) cómo el alimento efectúa sensaciones, comportamiento, funcionamiento, pensando, sacador del etc. en humores, y los alimentos comidos. Puede comprar o pedir prestado de doctor, de terapeuta, del almacén a ayudar a evaluar los alimentos en emociones, de la capacidad del pensamiento creativo, del funcionamiento, de la capacidad de los deportes, de problemas del sueño, del etc. Utilizar por varias semanas a un año. M recomienda qué prescription/OTC narcotiza para tomar, y se puede felicitar más a fondo con la máquina de la terapia para mayores alteraciones y entrada de los datos para los cambios deseados necesarios. Para seleccionar el alimento comido, llave en la categoría del alimento, entonces plomo de u (usuarios) vía más subcategorías al alimento (y o marca de fábrica común en país). Para las sensaciones de u (usuarios) selectas de categoría general y o entonces de las subcategorías que describen mejor sensaciones. Virtualmente cada uno quisiera saber, él es más fácil de calcular por el M.

. Para Techies: CRT HH, BP, E, contra, SM, M, W1, adulto, LL de la DD.

Humor/comportamiento/funcionamiento - vigilante/analizador/diario

. - verificador del contenido 4E020 y de la fecha.

DIARIO DIARIO DE A2-06A: mezcla con el diario #6, máquina de la dieta de la terapia. Medidas cómo u (usuarios) influenciado cerca: la música particular, demostraciones de hospitalidad, gente, almacenes hizo compras en, los tiempos del recorrido, llamadas de las maneras o del teléfono hechas gente recibida y cuando su mejor hablar, los sucesos actuales leídos/oídos, trabajando en la computadora, cualquier cosa y cuando su mejor

evitar, viajar, resistir, los sueños o de las estancias o encenderse, del sitio o del lugar u (usuarios) (o) (o) lee o (o) come..., escritura o de la recepción de p las letras en general o particular de o (o), colores, vestir usado u observado.

Aplicaciones de la investigación: bueno para el comportamiento de consumidor, comportamiento psicologico, sociológico, médico, científico, de organización, investigación del diseño de producto

Usuario de las ayudas sugiriendo: qué donde porqué cuando cómo hacer, observar, responder a las cosas (no) de maneras alteradas; la hora cuando su toma de decisión y o la intuición ha sido la mayoría del acertada (asunto británico de la decisión DA automáticamente sabe hora/la fecha para mí - decisiones posteriores de las cuentas de u (usuarios) sin ser recordado la época para anotar de la c; puede la interacción del auxiliarate con el psicólogo/el asistente social (socios). La frecuencia intermedia debe estudiar el comportamiento de la humanidad mucho antes desarrollar el interruptor M puede sugerir terapias en las áreas del arte, música, juego, cultivando un huerto, tipo manías..

TD: requiere u (usuarios) afinar en todos sobre las influencias se están comprobando que, más estilo/historia del comportamiento personales (pudo ser o transferido (o) complementado por la máquina de la terapia.

. - verificador del contenido 4E020 y de la fecha, pista.

SELECTOR de la ESTACIÓN A2-090: tipo hospitalidad de la petición por categorías de #8. Bueno para las compañías, viajeros, conductores. Cambios TV, estaciones del cable por la demostración. Mezcla con el convertidor de la música. Elegir los restaurantes, disco, clubs, teatros, almacenes. Registrando en M usted conecta con L C.

ARTE de la CARTULINA A2-340: La cartulina, que se pliega, y se pliega, en que u (usuarios) pinta. Para la esquina del sitio (3 pedazos de la cartulina: el piso, uno para cada pared), la escultura de Op. Sys. u (usuarios) de la cartulina puede crear, altera y o pinta. Apoyado contra la pared plana (2 pedazos). Los cabritos llevan a la escuela y o de escuela el hogar, actividad para el día lluvioso. Montar la cartulina en formas: cajas, animales

(pájaros, animales domésticos del hogar, casas, gente, árboles (la Navidad), coches, aeroplanos, soldados, etc) TM: Arte de la cartulina, arte del estallido (hacia fuera).

JUGUETES de la BASURA A2-350: Insertar e en cualquier cosa crear: los coches, robustezas, radios, Walkietalkie, plumas, lápices, envase para el rolodex archivan, el teléfono ("T"), los rattlers, altavoces para el sistema de la música o substituyen el discurso vivo

Fuentes de Op. Sys. de la frecuencia intermedia: cortadores de cristal estándar de s, tijeras para el plástico duro de la hoja, cartulina, latas de lata, alambre; los pegamentos, alambre, b, campanas, instrucciones, goma-ons que hace productos miran semi-genuinos, etc.

Crear los productos de: botellas, latas, cartones, productos rotos (la TV, radia, mira, coche, latas, huevos ahuecados, juguete, productos falsos suministrados por la frecuencia intermedia (grapadora hueco para el teléfono ("T"), embalaje de la cartulina del refrigerador o del fax o (o) C (computadora) o s del otro producto para el sistema de la hospitalidad)

Notas: cuando sus difíciles convertir el artículo, insertan solamente la parte del sistema del producto y dejan la comunicación alejada entre la función de las piezas como un sistema, eg.: altavoces alejados; dispositivo teledirigido para cualquie sistema de la hospitalidad (estereofonia, TV, juego de C (computadora), abrelatas de la puerta, interruptor ligero)

CÁPSULA A2-360: cuando está quebrado (con todo poder todavía permanecen en sello) llega a ser muy frío. No totalmente idea de Steven Kays. TM: Cápsula fría, TD: las fórmulas químicas crean frialdad cuando los productos químicos multi entran en el contacto con otros productos químicos.

MÁQUINA DE LOS SONIDOS DE A2-36A: botón para la risa, gritar, gritar, el etc. Ayuda a la sensación de u (usuarios) qué él quiere y o es un compañero y un simpatizante. También sonidos de: risa/griterío/que juega del bebé la sorpresa de around/in, reganando - "no hacer eso" en estilo serio o chistoso, la frustración, el reck nervioso, los "di DA del la...", el etc.

Opción: comprar cualesquiera sobre de los partes movibles una docena para el tipo variedades queridas

SELECTOR de CANAL A2-370: u (usuarios) pp qué él desea oír/para ver, eg.: tiempo, noticias (general o por el tipo, eg.: financiero, regional), cantantes particulares, grupos, agentes, directores, tipo general películas de la hospitalidad (roca, clásico, italiano...), producciones de regiones particulares. Seleccionar de TV, TVAD, cable, radio, hamm de radio (los CB del lw del interruptor del fm de la (software) mw...) El locutor da hacia fuera código en otro fq de la difusión real, selección de los pp de los oyentes, después su m dará real o de Op. Sys. cuál está el más cercano. M indicará # y los tipos de de Op. Sys. que los ajustes o viene cerca del gusto pedido. Entonces, M o u (usuarios) puede cambiar automáticamente a la estación, fq sin sin el tacto del botón. También tener exploración para el tipo hospitalidad/Info que viene con en la gama de selección.

- Incluso los programas de televisión de la serie tienden a tener diferencias de la demostración a la demostración. La serie que buscaba nuevos espectadores pudo alterar más adelante la demostración bastante para atraer a nuevos vigilantes. M indicará # y los tipos de de Op. Sys. que los ajustes o viene cerca del gusto pedido. Entonces, M o u (usuario) puede cambiar automáticamente a la estación, fq sin sin el tacto del botón. También tener exploración para el tipo hospitalidad/Info que viene con en la gama de selección.

A2-380 CANAL INTERPRETER/TRANSLATOR: mezclarse con el selector de canal, y m interpreta verbalmente o visualmente simultáneamente (o con un cierto retardo). Templar en difusiones el mundo (quizá más adelante, cosmos) de par en par. Perfora hacia fuera en Braille (material barato: el plástico, el subproducto de papel), imprime para la gente oculta, sorda.

SELECTOR del ESTILO del CANAL 38A: ¿tener solamente 100 canales a elegir de? ¿Preferir generalmente el romance, misterio, acción, violencia, no-ofendiendo (para los cabritos de u (usuario) o (o))? Los Pp labran, el modo deseado y el selector de canal #37 1] agregarán en los clips no usados en corregir final para las audiencias totales, y o 2] alteran excedentes de la voz, y o] la mezcla 3 con el convertidor de la música #8, la máquina de la terapia y conceptos relacionados, y o 4] censura hacia fuera los aspectos (escenas, algunos sonidos/palabras sin sin afectar a la representación visual. TD: el accesorio del MED w2 del ep del punto de ebullición del tt del hh del interruptor C (computadora) e cons P.M. adulta exc D. TM de los pp del ll del humor de la diversión de los cabritos del autobús (mezcla con el fósforo video): Censor personal (o), su/estilo (ized) personal de /Individual (ized) -/censor (o) /Entertainment (sistema) /Program (el ming)

39 METROS DE FRANQUEO: para las persianas (las aplicaciones Braille, tienen b que explique verbalmente m, los problemas que necesitan ser comprobado y las soluciones posibles). Pedazo del recorrido, convierte en el franqueo para el país local (eg.: bueno en la EC, URSS anterior, los E.E.U.U. pueden Mex, el etc). Facturado o pagado por adelantado en diversas monedas y entonces trabajar a máquina calcula el tipo de cambio (puede guardar la época de la impresión de mandar la cuenta o de alterar debido de las cantidades debido a las fluctuaciones de intercambio). Calcula el peso en sistema local del peso.

ESCRITOR de LETRA A2-400: los agregados al metro de franqueo #39 o (o) son un accesorio opcional incorporado. Las direcciones de los almacenes, impresiones letra la matriz del laser/de punto/la rueda de margarita. Tiene fusión de correo y puede tomar la mayoría de los programas de tratamiento de textos. Puede aumentar memoria, tiene módem, puede hacer llamadas del teléfono ("T") (u marca en el accesorio del teléfono ("T") o los diales de C (computadora)) y cuentas automáticamente a ur-su tarjeta de visita/acct si es más barato que tarifas locales.

SOSTENEDOR REUTILIZABLE del CUADRO A2-410: bueno para los hombres de negocios con los escaparates que viajan, galerías de arte. Fijación a emparedar. El montaje amó su cuadro sobre oficina. Ata quizá e para emparedar un cuadro, no estropeando superficies. O imanes de las aplicaciones para las paredes del metal y o los marcos.

O el cuadro flota entre el tipo magnético legados abajo y arriba.

OBJETOS FLOTANTES A2-420: flotar cualquier cosa arreglando el tipo magnético dispositivos por consiguiente. Ver #41.

EJEMPLO VISUAL del ANALIZADOR A2-430: VIDRIOS SELECTOS DE LA VISIÓN: ve solamente qué u (usuario) quiere ver, o bloquea elementos indeseables. Mezcla w: (hasta la fecha) concepto semi-poco realista de los vidrios de la radiografía.

TRAJES ELECTRÓNICOS DE A2-43A: demostrar a persona que está intentando influenciar cómo usted piensa que u (usuario) considera el mundo su manera, los vidrios del desgaste con su título (mamá, el jefe...) o nombrar en esquinas exteriores superiores de lentes. De Op. Sys.: seleccionar los marcos exagerados para imitar su tipo comportamiento; el registrador del microchip/la parte posterior del juego que da una cierta línea que dicen siempre - u (usuario) puede girarlo siempre que, eg.: "usted nunca hace lo que le digo".

¿Las cosas salvajes del juego del amor japonés, recuerdan cómo es salvaje era la tapa de los romanos del mundo, cómo los americanos eran en los sus años 60? Modificar el traje para requisitos particulares.

Vidrios de la broma: Demostrar a persona que está intentando influenciar cómo usted piensa que u (usuario) considera el mundo su manera, los vidrios del desgaste con su título (mamá, el jefe...) o nombrar en esquinas exteriores superiores de lentes. De Op. Sys.: seleccionar los marcos exagerados para imitar su tipo comportamiento; el registrador del microchip/la parte posterior del juego que da una cierta línea que dicen siempre - u (usuario) puede girarlo siempre que, eg.: "usted nunca hace lo que le digo".

Opciones: el marco de cristal puede tener muchos accesorios opcionales adquiribles por separado que puedan crear 100 de carácteres. El LCD puede exhibir ("S") el nombre del carácter, el título o el tipo persona.

Los usos, usuario pueden ser: Mercado japonés: vaquero (sombrero adicional), pintor francés (sombrero adicional), vendedor de coche americano "americano de la compra", princesa. Mercado japonés del niño: Carácter cómico de Manga, samurai, Elvis Presley, hombre del espacio, vaquero, geisha.

Mercado norteamericano: Agente famoso, presidente Bush, candidato presidencial, ama de casa irritable. La persona puede ser su hermano, vecino, profesor, amigo, amante, conductor de tren, conductor del autobús. Para los payasos profesionales, los actores, cabritos, aburrieron a adultos, dan como broma alguien el cuadrado o ya salvaje.

¡Los vidrios del día de fiesta - uso en Víspera de Todos los Santos, año tras año - incluso cambian los trajes cada hora! En el país de América: uso en los Años Nuevos, tarjetas del día de San Valentín, días de fiesta presidenciales, desfile del día de mayo - ser una cierta extravagancia, 4 de julio - ser algu□n patriota, acción de gracias - ser un pavo - engullen engullen... ¡(por algunos minutos a la vez), la Navidad - ser santa o un duende o lo que! Esto es un dispositivo pre-Virtual del mercado de la realidad. También uso de realzar su creatividad siendo diversa gente - sale del moho. Uso para el comportamiento positivo que modela - quizá.

. Para Techies: ¡El audio puede salir de un walkman como el dispositivo atado a la correa o dondequiera que! Audio también quizá del collar. La salida audio preprogramada por el fabricante y o el usuario - comprar el audio como la gente hace para sus contestadores automáticos - la cinta puede venir con el accesorio de cristal para ciertos carácteres. Poner en cortocircuito preprogramado o el audio de la voz del usuario puede venir en pequeña viruta, por lo tanto necesita solamente el pequeño walkman.

Vidrios del día de fiesta - cierto accesorio que compra opciones puede ser varios carácteres con algunas alteraciones de menor importancia de piezas incluidas. La opción audio simplemente selecta y él continuarán jugando de nuevo ese número en solo presionar de un botón.

. Opción: tiene pequeños dispositivos colgantes, que se pueden exprimir por un amigo, o el usuario para hacer sonidos audibles o palabras... éstos puede estar para la diversión o el choque. Un dispositivo puede sugerir al amigo para encontrar el dispositivo siguiente y así sucesivamente... entonces para encontrar el rojo - quizá su ocultado en... el foreplay sexual.

ETIQUETAS ENGOMADAS A2-440: lemas, pernos, marcas registradas para la manera (camisetas, accesorios...), pegatinas para el parachoques, productos (consumidor, anuncio publicitario: electrónica, juguetes, juegos, trucos, bromas, interruptor, publicidad, empaquetando...). Esto se aplica a todo el tipo futuro lemas de la etiqueta engomada según lo descrito adjunto.

TM: Muchacho del planeta, planeta/mundo/International/cosmos/Marte/luna - sistema de la robusteza/del ser humano/del hombre/del muchacho/de la muchacha/del recorrido/de jet/viajero -- para: bolso, manera, complementos, eg. reloj, manera eyewear, accesorios del recorrido, continente del etc./país/planeta - puente

LUCES de la NAVIDAD A2-450: los flashes al sistema de la hospitalidad del ritmo o (o) conectaron, audio, visual. TD: el MED w2 del ep del interruptor (software) C (computadora) e tt cons la P.M. adulta del ll de la diversión de los cabritos del autobús

CONTROL de LUZ de CALLE A2-460: propósito: reduce el tiempo que espera en el automóvil, tren, plano, a pie. La luz de calle cambia más rápidamente en el favor de los elementos móviles (automóviles, etc) que quieren ir más vía una trayectoria. Para el sistema de rejilla del semáforo de ciudad (ajusta según entradas totales de todos los elementos móviles y ajusta otras luces de calle por consiguiente según incluso flujo a través del área del metro. Atado al vehículo y va encendido sobre la detención o coger de la señal de luz que es señal

cercana; la destinación de los pp y m dirigirán o auto (o) u (usuario) en patrón con menos obstrucción de señales, tráfico (m está en línea con el transporte c del metro, la congestión de los monitores de estes 3ultimo por la cuenta del coche de la c, el helicóptero, la historia de la circulación en este tiempo, el etc); [mezcla con idea electrónica del mapa] [m dice la mejor hora de u (usuario) viajar y el tiempo de recorrido posible, antes de salir], Info en recorrido del metro también.

. Para Techies: el vp w2 del SP del ep del punto de ebullición de la auto-contador-tapa del hh del interruptor C (computadora) e cons P.M. adulta exc D. de los pp del ll del autobús.

TÚNELES DE A2-46A: túneles extensos de la estructura en districtos centrales del autobús. Ahorrado de luces de la parada. EG.: en Manhattan, construir abajo de las avenidas, y de algunas calles (que interconectan los túneles de la avenida). Túneles múltiples, eg.: La Quinta Avenida A, este 3ultimo de la Quinta Avenida B. conecta u (usuario) con los 57.os túneles de la calle C. para el transporte eléctrico. Los túneles con el extractor del gas utilizan los ejes de aire. Entonces bloquear quizá alguno/todas las calles superficiales de los automóviles y el verdor de la planta, ensancha las aceras.

TABLEROS del JUEGO A2-480: su listado atado al tablero (por los clips etc) y a él produce a agregados de papel de los pedazos u (usuario) del tablero del juego a objetos más pesados. Elegir el juego u (usuario) quieren, eg.: monopolio, su propio juego que usted ha programado, o comprado e insertado en el M. Puede alterar reglas. Mezclarse con el juego electrónico #47 del patio. TD: el MED w2 del ep del punto de ebullición del tt del hh del interruptor (software) c (computadora adentro) e cons P.M. adulta exc de los pp del ll del humor de la diversión de los cabritos

TRANSMISOR del RELOJ A2-510: según hora, hace de vez en cuando declaraciones, como: "su hora de levantarse" - en el reloj de tiempo dispuesto para alarmar; "comienzo ahora" - 9 del día del trabajo: 00; "tiempo del almuerzo", "el jefe se está volviendo de almuerzo pronto", "hora para las noticias de la TV". Suena cada hora//or de media hora. Contenido verbal de los PP o de la P.M.

DESCORTEZADOR del ABRELATAS de PODER A2-520: los gatos, perros, animales vienen a la cocina cuando la audiencia puede abrirse (eg.: esperando pescados), así que enviar la corteza hostil durante y o después de abrir. Contra el descortezamiento, puede enviar inaudible sano para servir que rechace moderado animales. TM: Gato lejos

LABORATORIO DE IDEAS MACRO A2-530: una enciclopedia de especializado o a través del espectro Info. Pidiendo el Info en asunto particular, elegir todas las áreas en enciclopedia que se menciona este asunto. Entonces p puede pedir más Info en el subtema. Eg.: Se selecciona el asunto "teléfonos", después título o Thomas Edison explicativo principal, diseño italiano - teléfonos, compañías de la selección del estado - los

teléfonos... TM: Einstein, laboratorio de ideas TD: el MED cd w5 del ep del punto de ebullición del tt del hh del interruptor de c (computadora adentro) (software) cons el mem adulto de la P.M. v de los pp del cp del mfh de la DD del crd del po del ll del ed del cabrito del autobús

MAPA del ZAPATO A2-55: el zapato, calcetín, joyería, manera (accesorio) actúa como marcador con el mem. Saber más adelante donde ha estado p. Hacer solamente esto donde el ambiente (de sitio al país) tiene fq saliente que m admita. El seguidor sabe si son frío (muy lejano), caliente (más cercano), caliente (algo el cierre) - basado en color (sonar quizá también - daría sin embargo el seguidor lejos al seguido)

ASPECTOS A2-560 de los G: MI el resto del G descrito anterior y más adelante según si su nrl del rl o.
1] Mapa G del zapato: mapa del zapato del MI 55. rl. seguir otro olor cogiendo solamente donde han estado con el retardo del tiempo/de la distancia del sistema creado por el producto del seguidor. Incorporar el aspecto en un G. más complejo.
2] Invertir la orden de la cinta/del microchip de extranjero y su lengua y sus dialectos. Conjeturar qué lengua. rl. Puede también ser jugado adelante.
3] El destructor crea las trayectorias de la destrucción. sin sin el enemigo que reconstruye/construye/lucha el destructor. nrl.

MÁQUINA DE CORTAR A2-570: vía el laser de: alimentos grandes de la cocina del hogar o (o); ¿existe? productos =industrial, productos demasiado lejos para alcanzar fácilmente o (o) en espacio. MK: mantiene el cuchillo aseado limpio, agradable y o más fácil y o más rápidamente/un pedazo más pequeño/ningu□n metálico después de gusto (eg.: para los cortes de la lechuga)

DECORADOR A2-580: el laser corta una pequeña trayectoria o hasta el final adentro, alimento del diseño with/on de págs., madera, metal, plástico, piedra, papel... Cortar y goma, artes. Mover el objeto/laser.

ANALIZADOR de la DISTANCIA A2-590: la luz del laser o (o) demuestra distancia entre m y el objeto (eg.: montaña, árbol) por tiempo que toma para que la luz refleje detrás o vía otros medios. También pudo la pista en contenido del objeto distante por manera que la luz/sound/fq refleja de nuevo a producto.

Exhibición A2-600 ("S")
PROYECCIÓN: como en proyector de diapositiva, el cable, TV, vídeo proyectó sobre la pared, lona blanca, vidrio especialmente reflejado (ventanas del transporte público, coches (mientras que en la luz de la parada, parqueada; para automáticamente cuando las ruedas dan vuelta y re-continúa de donde ido cuando las ruedas trabadas). También proyecto: todo el nrl G describió hasta ahora de modo semejante y los interfaces de o (o) g con el rl cuando estaba colocado entre g m y reflector; cualquie CRT Info de cualquier persona producto eg.:

computadoras; mapas; instrucciones; luces/lasers que despiden al derecho (existe pero no como de Op. Sys.); vista posterior del conductor auto o del peatón o (o) del bicyclist.

ESCALADOR del COMPORTAMIENTO A2-610: como m que detecta si la persona está mintiendo por la tensión... en voz, detectar cómo:

a] sexual otra persona siente. Incluso intentarla en se para ver que trabaja. Saber si usted persigue otro por una fecha caliente.

b] confiable y o constante/organizó/confiado/capacidad de seguir el plomo de o (o)

De Op. Sys.: da la lectura de muchas otras características del comportamiento posibles vía el po, DD, CRT del p; cara de la entrada p y po/show en la CRT qué mirarán como la fecha futura de los pp, o el de sus niños... . Para Techies: JK (hasta ciencia ha avanzado bastantes para validar resultados)

- Opción portable: Pequeño y portable - mantener bolso o bolsillo y mirar más adelante para determinar análisis, apenas giran el interruptor para escuchar adentro longitud de tiempo preprogramada. Y o uso guarda la mano en el interruptor en cuanto a cuando quieren a o no recibir la entrada para el análisis, eg.: determinado por la sincronización de declaraciones importantes, mientras que el hablar del menor de edad pudo ser menos importante para el análisis.

INFORMACIÓN del MUNDO A2-620: sucesos actuales de los di del mfh en la parte del globo seleccionada cerca: continente, país, ciudad o metro-área del área específica w/in, asunto (tiempo, finanzas, tipo industria, política, guerras...), o acontecimientos principales mundiales; predicciones de la moneda (en el boletín de noticias que existe ya en algunas formas) que digan las predicciones de u (usuario) para el tipo de cambio futuro de moneda para los hombres de negocios que necesitan tomar decisiones del punto; hora y fecha en cualquier momento conversiones calculadoras del tiempo ligero del día de la zona (existe como producto por sí mismo) (muchos productos no hacen esto); traducciones de lengua (véase traducir la invención de la máquina); radio -, fm, interruptor, mw, lw; televisión;

TD: si el mfh no es práctico para las cosas que no cambian tan rápidamente, u suscribe al Info en el disco se inserta que (en disco de 3.5 pulgadas o en el tamaño más pequeño futuro), y o consigue el Info templando en un interruptor, mw, estación de radio del lw que envía el Info en el código (hacer tan mientras que no usa la máquina) - ningu□n coste y accesibilidad fácil.

MANIFESTANTES del ALIMENTO del SUPERMERCADO A2-630: m prepara los alimentos para los clientes posibles de nuevos productos mientras que miran a través de ventana. los fabricantes de m qué gente comprará y o dan muestras libres.

MK: ahorrar en el trabajo (requiere sin embargo p guardar el ojo por horas), /novelty atrae a gente, toma poco espacio.

ANIMALES DOMÉSTICOS ARTIFICIALES A2-640: caminan con usted, cantan, nadan. Ahorra apuro.

TARJETAS PREFABRICADAS A2-R65: competir con el sello... Comprar con los cuadros del color y o algunas frases. Reino Unido su c (computadora adentro) las palabras. u pudo también conseguir la selección de lemas que quieren personalizar para su special a alguien. La fecha especial m del calendario o del registro de S o (o) recuerda las fechas para enviar.

MK: correo directo vendido, computadora/almacenes grandes

Opción: ¡comprar un microchip en un pequeño caso, que es terminantemente una tarjeta verbal (sonido solamente)! Idea nueva. Puede incluso venir en el empaquetado plástico, los corazones, el etc atractivos, que el usuario puede oír en varias ocasiones, incluso con el imán para el refrigerador.

TRANSMISOR PÚBLICO A2-660: e m que habla para el efecto socio-psicologico deseado, eg.: en el R&D u otros lugares creativos, sonar excesivamente serio reducir el malo helado de la sensación para el alcohol creativo del grupo; juega música/sonidos; etc

Donde: en elevadores, vestíbulos (cuando detecta p está caminando abajo), entradas a los cuartos, pisos, garages de interior/al aire libre de los edificios.

CUADROS del PLANETA A2-67: ver cómo diversas culturas lo hacen, la manija, administrar, stylize las cosas similares, objetos. c (computadora adentro) y o vídeo y o con audio: música de las palabras de los sonidos

Usos: Organizaciones de la investigación y del desarrollo; proyectos de la escuela del estudiante; agencias turísticas - demostrando a viajeros potenciales cómo diversas culturas manejan los intereses del cliente: manías, ocio, cocina, etc.

A2-680 CUADRO ALTERATOR: la cámara y S (pantalla) que altera la foto moviéndose/que agrega pedazos, los colores cambiantes, agregando suena (para las presentaciones de diapositiva)...

ALTERNADOR DE RADIO de A2-690 TV: el producto de la diversión-broma, en una distancia e m cambia la estación que ella quiere, eg.: p confiado selecciona 94FM clásico pero en ese punto del dial él consigue música country en lugar de otro, él mira el dial otra vez y no puede entender. Partes movibles: cinta del canal del playboy o video; canal de noticias extraño - incluso noticias falsas; en almacén de la TV, la persona de las ventas pone cierta demostración sobre el canal - quizá para caber el estilo de compra percibido del cliente. Para controlar a niño, consiguen a mala recepción para cierto de radio negativo y o las cadenas de televisión.

DIVISOR de los SONIDOS A2-700: como el divisor ligero de la prisma, esto divide el sonido en diversas piezas que se oigan normalmente solamente simultáneamente. De Op. Sys.: una característica de Op. Sys. para el sintetizador de los sonidos, g, EL

Laser de la LUPA del SOL A2-710: cosas de las quemaduras en una distancia o un cierre para arriba. La lupa grande es absolutamente de gran alcance. Aplicaciones: hacer el arte; comenzar los fuegos sin fósforos; calentar el agua sin el fuego; decir p "no cruzan", laser quemará p un poco si cruzan la línea

RETORNADOR de la FRECUENCIA del teléfono A2-720 ("T"): el fq registrado, entonces música/sonidos del llamador en fq similar, tensión, felicidad, nivel/tipo de sensación es oído por el llamador mientras que están en asimiento. Propósito: hace que el llamador siente a la una con el otro partido. e m pudo hacer alteraciones para cambiar el comportamiento del llamador.

EXTREMO del ARCHIVO A2
Archivo: Introducción a la palmadita/A3 A4 A5 A8

ARCHIVO A3:

CHEQUE de CUERPO A3-2: periódico correo adentro como chequeo físico en curso que busca cuaesquiera anormalidades que puedan necesitar pronóstico adicional. La orina (pequeños envases con los casquillos), sangre (tomar el pequeño sello agudo del instrumento-entonces, la jeringuilla con la aguja), pelo, embadurnador del ojo (para el líquido en esquina del ojo - al gritar, bostezando, siempre, para el moco especialmente al despertar) - entonces sella; heces - cuchara con el pequeño envase; Amortiguador de la transpiración (de hoyos de brazo después de la ducha antes de desodorizar); Raspador de la piel (especialmente si ver las anormalidades); Palillo de la cera de oído (con el sellador); Raspador de la nariz (para el moco con el sellador); saliva (puesta en la pequeña tapa del envase de la boca entonces lo después de sacar, o puesta en el tipo amortiguador (con resultado-intentar rápido o lento acumular elementos particulares de la mayor importancia). Aunque quizás costoso, el rico puede comprar una cierta paz interior y o medidas preventivas. Incluidas pueden ser las instrucciones para el uno mismo - cheque - suben, eg.: pechos... Ellos o el doctor elige en los cuales muestreo al correo y a la frecuencia para cada uno. También registra lecturas del cuerpo en memoria: golpe de corazón, presión arterial... Muestra del cuerpo (r, cheque (del uno mismo) (para arriba), cheque encima de la muestra (r/s)

. Para Techies: Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por los reactivo químicos del material w (con). NR (notificador adaptado `) demuestra qué productos químicos eran actuales W5. Esta N copiada al agosto de 95 7G050.

VENTANA DE CUADRO DE A3-8A: en la pared tener terminal de la CRT el demostrar de escenas al aire libre cambiantes: árboles, orilla de mar con la paloma, etc. opcional: aroma, plantas verdaderas, sonidos: grillos.

ARCHIVO A4:

DEMOSTRACIÓN VIDEO DEL PRODUCTO DE A4-69A: el administrativo ve a cliente interesar particularmente el producto - ellos en el botón de la golondrina de mar que demuestra qué cliente está interesado adentro.

- FOTÓGRAFO DEL LAPSO DE TIEMPO DE A4-R71A: variedad disponible. Las plantas del reloj crecen, subida de los soles y o sistema, cambio de las estaciones.

A4-R73 TATTOOER: ratón de los gráficos w del diseño (con). Impresión hacia fuera sobre el papel especial, transferencia sobre el cuerpo para el tatuaje temporal. Opción: conectar la computadora con el dispositivo electrónico, que pone diseños sobre cuerpo permanentemente - facilitación de los miedos del tattooist con habilidades artísticas pobres. Comprar diseños, y o cambiar los colores. Los cuadros del amante, máquina toman el cuadro.

Exhibición de MERCANCÍA A4-74 ("S") ER: sobre la eliminación del artículo, de sonidos y o de la música apropiada al producto. Botón de empujes del cliente para el producto Info. Incluir el distancer - el sonido llega a ser cada vez más alarmante mientras que se está tomando demasiado lejano. Características alternativas, colores disponibles en el pedido por correo o en almacén.

COMUNICADOR LIGERO A4-Q75: la luz del color es indicación de cierta área de la comunicación. ¿Usos?

ANALIZADOR DE LA CINTA DE A4-78A: dice la calidad del sonido en la cinta. Eg.: reproducción pobre, grabación original pobre. Las ayudas convencen el mercado comprar los registradores del CD, de DAT, el etc. En el interés del fabricante electrónico. Hacer barato bastante para los que no pudieron producir normalmente una máquina costosa de la música.

ANALIZADOR DEL DISCO DE A4-Q78C'COMPUTER: si la calidad ha caído incluso un poco, la gente consigue nerviosa y quiere substituir. El carro es así que analizado.

AMO LIGERO A4-80: DJ controla los colores ligeros de la música, del sonido y el emparejar que bailan a los ritmos. Para el disco, uso del hogar.

ARCHIVO A5X

JUEGO QUE CONJETURA A5-050: el usuario conjetura qué llave representa, si recuerdan conectando pares iguales, después ganan.

SIMULADOR de la MUCHEDUMBRE A5-100: el cliente oye que los sonidos sutiles del distribuidor al por menor/co del tráfico w/in de un cliente que camina más pesado vía el ms/v del ms/V. pueden también emparejar los movimientos del ms/p para causar un fósforo de clases con efecto subconsciente. M sabe quién es cliente puesto que él viene a través de puertas del cliente, empleados debe utilizar normalmente la entrada del empleado (prevención del hurto). M sigue a cliente.

ARCHIVO A8: ENCANTOS

A8-03 PUESTO ENSAMBLA en número del sistema de crear preprogramado de las posibilidades: nuevos objetos, carácteres; u oraciones. Opción: Los nuevos sonidos se pueden crear consecuentemente también. Puede hacer en el software, pedazos en tablero electrónico especial.

- Cada pedazo es una partición IMI.
- D: A8-03 ~ c (computadora adentro) = oscilador/S ()/r de la pantalla

Los ENCANTOS A8-05 para la mujer cuyo amante o marido olvida poner el asiento de tocador en el suelo - el encanto alarman después de limpiar con un chorro de agua si el asiento no está abajo

FIJACIÓN de los ENCANTOS A8-07 a los cajones, sonidos al abrirse. Especialmente para las chicas jóvenes.

A8-08 ENCANTA las HERRAMIENTAS del CARPINTERO: salen a menudo de las herramientas detrás. Hace un solo sonido que recuerda corto si la herramienta está también lejos del bolso de la correa de la cintura del carpintero. Puede integrar a partes importantes con absolutamente los pedazos.

ENCANTOS A8-09 PARA la CAJA del JUEGO de NIÑO: sonidos siempre que esté abierto: el cajón, pecho, caja del juego, caja vendió por la frecuencia intermedia para sostener los juguetes. Hacer como sensible y activa por algún tiempo período. Especialmente uso en el cajón de objetos de valor: diarios, compartimientos del sexo (cabritos de la subsistencia hacia fuera), etc.

A8-10 ENCANTA BROMA: puesto debajo de la alfombra así que suena como el piso de madera está crujiendo gravemente

A8-11 ENCANTA SONIDOS de la CEREMONIA de BODA: bromear para la datación de la gente, en luna de miel, el día de tarjeta del día de San Valentín, la bola del etc. y la cadena: diseñó ser atado a la pierna. Siempre que la persona coja la bola en la tabla, suena la ceremonia de boda.

ARCHIVO A9

USOS A9-02 de los SOFTWARES QUE REPRESENTAN a GENTE de PENSAMIENTO, MENTES:

MÁQUINA de la DATACIÓN A9-04:
máquina por cuál puede familiarizarse con otros mejores, totalmente nueva gente o los viejos amigos. Hacer las cosas en nuevo/maneras diferentes poner en evidencia los nuevos comportamientos/que piensan/sensaciones.

CONCLUYE LA CARPETA DE LAS INVENCIONES DE "A"

Archivo: Introducción a la palmadita/A5X

ARCHIVO A5X

Nota: El archivo A5-Old fue ampliado más adelante en el archivo A5X. Algunas invenciones no fueron transferidas.

JUEGO QUE CONJETURA A5-050: el usuario conjetura qué llave representa, si recuerdan conectando pares iguales, después ganan.

SIMULADOR de la MUCHEDUMBRE A5-100: el cliente oye que los sonidos sutiles del distribuidor al por menor/co del tráfico w/in de un cliente que camina más pesado vía el ms/v del ms/V. pueden también emparejar los movimientos del ms/p para causar un fósforo de clases con efecto subconsciente. M sabe quién es cliente puesto que él viene a través de puertas del cliente, empleados debe utilizar normalmente la entrada del empleado (prevención del hurto). M sigue a cliente.

+ identificador del reemplazo A5-110: La pieza del producto cambia color cuando el tiempo necesario ha transcurrido para el reemplazo.

- notar esto cuando una pieza cambia color, eg.: consiguió demasiado caliente o recibido demasiada frecuencia o el tipo incorrecto. El color del cambio puede significar la posibilidad de la parte de necesitar el reemplazo; su edad; el nivel de fragilidad, conductividad, elasticidad, del peso eso cambiada, grueso cambió, temperatura, etc.
- dar esto a un ingeniero químico también.
- las versiones electrónicas y no electrónicas de este producto deben ser construidas

. Para Techies: Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por material (de los reactivo químicos de este N) w (con). NR demuestra qué productos químicos presentan W5. Esta N (invención) (invención) copió al agosto de 95 7G050.

Archivo: Introducción a la palmadita/A6X

ARCHIVO A6X

Nota: El archivo A6-Old fue ampliado más adelante en el archivo A6X. Algunas invenciones no fueron transferidas.

Los ELEMENTOS COMUNES a LA MAYORÍA de los ENCANTOS NUMERARON LÍNEAS DE PRODUCTOS EN el ARCHIVO A6:

(Escritor: insertar por favor los elementos aplicables de esta sección del principio en las descripciones de producto reales)

. Pequeño sonido que hace las baratijas. Emite cualquier tipo suenan como gojear del pájaro, silbando, campanas, percusiones diversas.

. Tiene opción de estar en la cadena dominante, pendiente, collar, pulsera.

. Colgar del árbol de interior o al aire libre, pasamano, árbol de navidad, cortina, barra de cortina de ducha, cabeza de ducha, sombrero, collar.

. Cada artículo puede ser un no-descriptivo o la forma específica puede tener poseer el sonido: loro, vaca, coche de bomberos, señora atractiva. Cada forma, sonido, función se apunta a diverso mercado.

. Brilla intensamente en obscuridad.

. Los mecanismos internos pueden ser totalmente sólidos, permitiendo que la piel coriácea externa contenga la arcilla como la sustancia, que puede remolded. Los botones y digitales leídos están con seguridad a ras de la piel, sustancia de la arcilla que rodea el resto de los lados del encanto.

. Viejo para las formas: presionar el objeto en molde en la forma del gato, corazón, flor... La forma llega a ser permanente. Un modelo de sistema más costoso permite el formar de nuevo otra vez.

. Agregados a otros objetos vía: etiqueta engomada fuerte del pegamento sobre la eliminación del sello; Velcro; imán; pequeña correa (eg.: alrededor de propia correa del monedero).

. La salida audio, digital o video del encanto es determinada por el mercado apuntado. EG.: en producto A6-1 enderezan debajo de la "música de cadena", alteran el tipo opciones según categoría de edad, cabritos de la música consiguen consonancias del niño...

ENCANTO del AMOR A6-07: Forma del corazón dada a su amor uno. Los recuerda llamarle. Programable solamente por el donante y o el usuario. No reutilizable solamente (solo tipo grabación). Opción: tiene voz del amor uno que dice que "amo su", el etc.

. Atar los cuadros detrás del protector plástico claro. El producto se pudo vender con el tipo plástico plantilla en forma del corazón de cuál puede cortar fácilmente la parte del cuadro en la forma del corazón para la inserción exacta en encanto

A6-8B QUE CAMBIA PERIÓDICO A ANUNCIADOR

. El horóscopo de la persona para el día o dado hacia fuera durante día como estrellas cambia periódico. Cada muestra consigue su propia versión, fabricante produce doce versiones cada año.

LLAMADOR de ACOPLAMIENTO A6-12

Ha preprogramado sonidos para tentar el interés del animal. Habla en su lengua que usted es amistoso e impaciente encontrarse. Hacer las llamadas de acoplamiento con los pájaros, ranas, grillos, gatos, perros, otros pequeños animales peludos.

Opción: tipo animal y o propósito del programa

Opción: Aparato de lectura del registrador: Cuando el viajar a la máquina exóticos de las tierras y o si usted no sabe el tipo pájaro, al mono, del etc. registra su voz y la amplifica de nuevo a ellos. El "mic direccional" coge sobre todo los sonidos distantes que vienen de fuente acentuada.

. Versión subacuática para los pescados, y los delfines del mamífero.

. Comunicador del animal doméstico: ¡Obrar recíprocamente con sus animales domésticos caseros a las nuevas alturas!

Animales domésticos quizás ciertos hasta la fecha menos populares en el hogar responderán bien realzando su renombre como animales domésticos.

. El producto puede también juntarse como instrumento musical que mezcla diversos sonidos. Los sonidos se pueden incorporar a la máquina con el otro musical que crea sonidos, o sean una opción agregada a una máquina musical.

. Esto se combina con el producto siguiente: Comunicador animal A1-110-121004:

comunica en los sonidos animales, que crean efectos específicamente deseados en animales. Por ejemplo puede hacer un animal de la seguridad parar el raspar o llegar a ser agresivo si la persona que controla la máquina percibe peligro. Enseñar a los pájaros a hablar, cantar. Puede inducir a animales que tengan menos o más

hambre, sensación menos sola, agujereado, cansado, tímido, agresivo, rápido y antipático. Utilizar apenas para la diversión. Diversión animal, transmisor animal, hombre de la charla, película hablada de la película hablada. Inducir o reducir el comportamiento sexual.

AYUDA del VIAJERO A6-13:

¡El traductor de la voz se adaptó a los dialectos regionales y a las ocasiones serias o sociales! Presionando cualquier un botón seleccionar a anunciador automático de la oración en la lengua del país. El botón así que el extranjero oye, eg.: ¿"puede usted ayudarme? ¡esperarme, dejar por favor mirar en mi diccionario", "hace cualquier persona hablan (la lengua del usuario)", "ayuda! ", "llevarme por favor a esta dirección" - con lo cual el usuario demuestra el papel del taxista con la dirección, "cuánto", "gracias", el etc. Un botón deja a usuario selecto de cualesquiera de las idiomas una docena. Cuando en modo de la lengua del sistema, las declaraciones convirtieron a esa lengua. Los comandos de la máquina pueden estar en de las idiomas.

- Los modelos futuros dejarán a usuario hablar en el "mic" que en golondrina de mar habla hacia fuera en la lengua y el dialecto deseados.

. Técnico: al presionar "ayuda!" si el ser con túnica, etc, volumen entra automáticamente máximo.

. Comercialización: la gente que cruza muchas fronteras no consigue a menudo aprender todas las idiomas. Es muy común a la impulsión con medias docenas de los países al viajar a través de Europa en algunos días. También una herramienta de lengua-aprendizaje.

. Relacionado con otros números del producto.

. Opción del reloj: recuerda algunas frases importantes, y la prensa la necesaria de emergencias, del etc

AMPLIADORA de la PANTALLA de la CRT A6-18: Magnifica la pantalla de la CRT. Trabajo más lejos lejos, reduciendo la exposición radiactiva.

. Trabajar más lejos de la pantalla radiactiva de la CRT colocando la lupa clara fácilmente conectable del plástico o del vidrio encima de la pantalla. También, más fácil en ojos. Conectable a las televisiones también.

- Deja fabricantes hacer pantallas más pequeñas también, causando menos radiación.

. FLOTADOR =

Las partes más portables del sistema tienen enfrente de los imanes en cada extremo. Una "c" formó la base también tiene imanes que atraen cada uno de los extremos del pedazo en espacio. los .2cm a los 2cm de aire está entre los imanes de atracción. El artículo portable es ligero. Los imanes y el diseño se diseñan para soportar gravedad y el viento, y usar abajo de las fuerzas del imán para el mínimo cinco años.

. Para Techies: D: 1+ = 2 - = 3 = 4+ = 5.

- Notas de D: 14 imanes positivos; 25 imanes negativos; 3 no magnético conductores (entre 1/2/4/5) que es/parte del producto; 1 y 5 es cada uno en sus extremos individuales del bastidor de "C"; uno de los propósitos del flotador es crear un diseño interesante (entretener); el artículo que flota se puede sacar del marco de "C"

(usado sobre premisa/puesto en la tabla); cc. "Inclinación": colocan/el functions% de los controles del objeto flotante

- Formar de la flotación = del nr/de la otra forma de comunicación al usuario. Pista = tipo flotación.

. Para Techies: PIEZA DEL FAX - FX/FS =

Construido en máquina de facsímil, envío/que recibe en diversas velocidades.

D: datos/imagen = "sensor" = "C" = TR (transmisor) = impresora

- cojín del aire (envía y recibe faxes); carro (cómo se envían y o se reciben los mensajes); "S"; "C"; Reino Unido.

- La máquina de fax C95 defiende hacia fuera mensajes indeseados. Ver el fax en la exhibición ("S"), los faxes deseados impresión. NTT 29 de marzo de 93 NK. D (dibujo): C95=tel~c~remote

. - matriz contenta de la fecha 4E020: Los registros y organizan ocurrencias anteriores.

CARPETAS DEL DIRECTORIO DE LA INVENCIÓN DEL <<CONCLUDES "YO J G E D C B A" >>

INVENCIONES DEL <<<< POR EL >>>> DE CATEGORY

La mayoría de las invenciones enumeradas adentro sobre archivos

Categorías principales: Producto químico, profesor particular del movimiento, Musical, plástico y mecánico, telecomunicaciones.

RELACIONADO QUÍMICO - LAZOS A OTRAS CLASIFICACIONES

. Indicadores

. Piezas

. Para Techies

. 7GN

. 7GQ

. 7GR

. Producto químico en general 7G

Archivo: Categoría/química/introducción

INTRODUCCIÓN del ARCHIVO 7G

Ver los archivos relacionados para los detalles. 7Gi antes titulado.

Las invenciones incluyen los indicadores químicos que demuestran qué sucedió cuando, donde, porqué y cómo. ¡Consumidor interesante y otros usos.!

+7G050 PVC - guantes, condones, etc:

Alerta a usuario cuando ha estado perforado o contacto entrado en con los productos químicos dañosos. Versión química: la capa interna está de diverso color en la golondrina de mar que se expone, o la capa interna emite la sustancia coloreada cuando está pinchada. Versión electrónica: el sensor notifica si cualquier contacto se ha hecho con los productos químicos específicos en superficie interna, externa o superior.

- guantes de las aplicaciones R259 (seguridad), ES 95

+ (no-EL) (en todas partes) el guante colocado los sensores químicos "analiza" /nr cuando el guante entró en el contacto w (con [o fuera a un cierto grado]) peligroso/señaló los productos químicos.

+ esta N (invención) ampliada en 20-30 páginas, combinando: 7G050, 7G051, 7G052.

+ NOTIFICADOR del PVC 7G051:

Alerta a usuario cuando se ha agrietado, o ha doblado más allá de cantidad deseada, en la golondrina de mar que lanza la sustancia coloreada. Ver 7G050.

- la exposición al aire de la sustancia interna causa: descoloración (en área general (incluso dentro de varios mm/cm en superficie normalmente expuesta, visible).

+ esta N (invención) ampliada en 20-30 páginas, combinando: 7G050, 7G051, 7G052.

+ 7G052 dobló el notificador llano:

Hacen el usuario enterado el número de épocas excesivas y el grado de material de doblez emprendió más allá de niveles deseables. Usos: alambre, bisagras (existe?), el cubrir flexible (vinilo). El sensor electrónico analiza la situación: cuando, donde, qué, cómo algo fue doblado. Útil en laboratorios del R&D, eg.: prototipos de prueba del nuevo producto, usos de los específicos no identificados.

- corte y movido a: Archivo REG30 7.95

+ esta N (invención) ampliada en 20-30 páginas, combinando: 7G050, 7G051, 7G052.

DIRECTORIO del archivo 7G del extremo

Archivo: Patentes del indicador categoría/producto químico/7G

PATENTES del INDICADOR del ARCHIVO 7G (los E.E.U.U.)

Los números siguientes son patentes de los E.E.U.U. Los diagramas se extraen de cada número de patente con sus descripciones al título de esa sección. La información encontrada después dos puntos del número de patente de los primeros es probable más allá del alcance del número de patente sí mismo.

El color cambia para 7G y 1G20 y 1G20R

Indicadores del cambio de temperatura: Estrategia de búsqueda de la patente: (Color near9 (cambio o cambios o cambio)) y ((temperatura o termal) near5 (cambio o cambios o cambio))

DIAGRAMA: INDICADORES del CAMBIO de TEMPERATURA del ~ de KN (invenciones) = ~

CAMBIANTE del MÉTODO del COLOR

-5215378

-5202677

-5175944: color del cambio de la ropa

-5165797 5153066 5115825 4804275

-4781597: para el suelo, las paredes, estructuras cerca de elementos calientes, estructuras que sostienen o que rodean elementos calientes, y todo lo demás hechos del concreto.

indicador de tiempo-temperatura -4859360 y 4834017 y 4805188 [para cocinar] y 4824827 indicadores del Tiempo-color: similar a KN; combina los efectos del tiempo y de la temperatura en la determinación de cuando la temperatura señalada se ha alcanzado sobre una duración mínima/máxima/predeterminada; cuanto más alta es la temperatura, menos el tiempo necesario cambiar posiblemente NR.

-4832046 4834500 4835899

-4877633 y 4844933: seguridad del alimento demostrada por (niveles de diferenciación de natural) NR; una cierta descoloración se pudo reducir, pero bastante hacer disponible para demostrar cualesquiera peligros o carencia del valor alimenticio debido a su edad y o a las temperaturas excesivas alcanzada vía cualesquiera circunstancias.

-4854160 4854332 4888219 4818215

-4888219 flor artificial termosensible

Indicadores ligeros del cambio: Estrategia de búsqueda de la patente: ((Luz o laser) near9 (cambios o cambio)) y (color near5 (cambio o cambios o cambio))

DIAGRAMA: INDICADORES del CAMBIO de la LUZ del ~ de KN (invenciones) = ~ CAMBIANTE del MÉTODO del COLOR

-5338631

-5308900: el nivel de resistencia a los cambios del color se reduce según cómo este indicador se desea rápidamente para demostrar la exposición luminosa.

-5308900: el nivel de resistencia a los cambios del color se reduce según cómo este indicador se desea rápidamente para demostrar la exposición luminosa.

-5178091 niveles bajos de detección del líquido en depósito - el color líquido sí mismo cambia: (peligroso) niveles bajos de cualquie líquido = NR; las ventanas en envase pueden demostrar los colores cambiados del líquido; el indicador del color de lubricantes y de otros líquidos necesitó prevenir: averías mecánicas, continuación de efectos deseados.

-4772529 4772561

-4779120: "tener acceso", "pista", "visual-analizador"

-4867552 y 4865440 y 4865439 y 4840477 contactos coloreados: los cambios colorean para encenderse

- Alimentos: 4853235 y 4840806: para otros alimentos

Palabras claves: producto químico, química, colormetric, peligro [bio peligro o peligroso], peligro, dañoso, tóxico, indicat

Estrategia de búsqueda: chem y (peligro o peligro o daño o tóxico o carcinógeno) y (indicat o colormetric)

Colormetric: término usado para cuando dos o más productos químicos obran recíprocamente y cambian color. Causa el cambio del color en espectro [visible] de a.

CONCLUYE EL ARCHIVO: PATENTES del INDICADOR 7G

Archivo: Indicadores categoría/producto químico/7G

7G050 I N D I C A T O R S

Tipos más beneficiosos de indicadores. Mucho N diversa en las páginas siguientes 30+.

Productos del uso general:

Guantes

Juegos, delantales, zapato (cubiertas)

Envases: llenado demasiado arriba cuando tapa colocada encendido; presurizado

+ tubería: descarga ilegal vía limpiar con un chorro de agua en sistema de aguas residuales de la ciudad

+ cableado: corrosión interna

Esteras

Edad del contenido

Suelo: cementos, azulejos, tapas contrarias, fregaderos

+ indicadores del accidente: topes autos contra conductores del atropello y fuga

+ indicadores superficiales para los objetos comunes: plumas, teléfono, teclados, interruptores, manijas, tiradores, rodillo impulsor, herramientas

+ máscaras, anteojos, vidrios.

+ ruedas

+ vendajes

Tipo indicadores:

+ sincronización: contacto, deterioración, empeoramiento de contenido

Etiquetas

Material intermedio: entre la superficie y el indicador

Frecuencia intermedia: simplemente los indicadores de la capa sobre de productos del estante, entonces hacen los moldes para los productos disponibles si las ventas son altas.

(Todos) N (invención) en varias categorías:

- indicadores de la fractura
- mecanografiar los indicadores del contacto
- indicadores de la tensión. Exceso: temperatura, doblez, estirando, edad.

Elementos únicos de N: Algunos fundamentos solamente

- bolsillos en el PVC
- mecanografiar las mezclas usadas PVC w (con [o quizá un poco fuera]) necesitó mejor los productos químicos inducir el tipo reacción del nr (el notificador alerta a usuario)
- cambios del color de los nr
- donde el nr (el notificador alerta a usuario) colocó: zapatos, tierra, ropa, guantes
- ventajas: la seguridad, anti-contaminación, no lanzando genes no comprobados en el ambiente, substituye la carencia de las sensaciones de la mano en guante
- u selecciona el tipo: PVC y sensores y nr del producto químico
- tipo Secundario-UNo inactivo productos químicos

- capas

El usuario descubre si su plástico-tipo producto ha estado perforado, deteriorados o entrados en contacto con los productos químicos peligrosos. Para los guantes, los condones, laboratorio cubren, los envases, problema del etc. evidenciados vía: lanzamiento del tinte del color.

OTRO:

. Deterioración

. La pieza de recambio necesitó

. Notificador químico del contacto

. La presión aumentada notificó: pipas; envases a presión (patentes encontradas en el DB de la patente?)

. Guantes: toxinas de extensión u otros contaminantes a los usos subsecuentes del trabajo.

. corrosión (mirada corrosiva)

fraseología de +-printed (esa aparece dependiendo del tipo ocurrencia). La fraseología pre-se hace en el material: sus cambios del color vía la reacción química (en lo que concierne nr).

<3, 3.5, 3.5, 4, notificadores de 3> 7G050 (plástico)

SE DEMUESTRA QUÉ:

Cualquier tipo de usuario de la ocurrencia quiere "notificado" (abreviatura: Se demuestra NR). el nr (el notificador alerta a usuario) es una advertencia cuál deja al usuario o a otros saber vía diverso significa que sucedió una ocurrencia (indeseada) específica. Ejemplos del tipo ocurrencias:

. Condiciones de la calidad del PVC demostradas:

- Misceláneo: agujero; rasgón;

+ (menor de edad) estirando que podría llevar más adelante al rasgón verdadero debido al área débil creciente; si entró en la sustancia corrosiva del contacto w (con [o quizá un poco fuera]) (que podría debilitar el pvc (enrarecido)), puede haber corroído ya la capa externa de pvc; si el pvc se está estirando más allá (deseado/banda) de capacidad, eg.: dar la superpresión demasiado grande para el guante, o. El grado de deterioración se refleja en más o menos de ciertos colores/tipo nr. funciones del nr (el notificador alerta a usuario) en la anticipación de perforaciones.

--relacionado con: el aeroplano cansa el caucho acodado de diferenciación de w (con [o quizá un poco fuera]) así que el equipo sabe cuándo cambiar los neumáticos.

+-Age (del uso): si el PVC es demasiado viejo, o expuesto al aire/al producto químico (demasiado de largo/más allá del plazo de pr/tds).

+ excedió las temperaturas demostradas: cambio en temperatura para contenido (tubería, envases,)/ambiente de las tapas. Diversos colores representan diversas temperaturas.

--si la temperatura ha excedido una temperatura mínima o máxima.

. - Cambios biológicos demostrados: El minuto cambia en temperatura resultando de comportamiento del microorganismo. Mecanografiar los organismos y o en cuál él es hacer (w5) demostrada - > su efecto mensurable del "nr" de la causa de las actividades (los productos químicos excretados por la actividad del tipo organismo, temperatura, pvc llano del movimiento (cantidad de fricción/de vibración) reciben, etc.) - > reacción (química) (pvc) - > nr.

--resultados llanos de la fricción - > cambia en condiciones químicas del PVC/de cambios químicos resultando de mezcla de sustancia (de mudanza) estudiada con el PVC.

- Tipo químico contacto demostrado: diversos colores representan el tipo contacto w: ventilar (calidad), nivel del pH, producto químico específico querido (ser evitado). Porcentaje del contenido químico particular: cómo está deshidratado, sulfúrico.

+ diversos lados del PVC tienen nr de diferenciación (el notificador alerta a usuario) según lo que entra en ese lado el contacto con lo que (w5). Ver la subdivisión "de múltiples capas". Usos: saber qué lado del plástico había señalado ocurrencia.

+ las superficies duras (instalación de tubos, echando a un lado) demuestran cualquier perforación, tensión excesiva en cualesquiera como maneras al PVC que tiene problemas. Eg.: la instalación de tubos para la agua caliente/los productos químicos está cercana a estallar. NR:

1] color exuda hacia fuera vía el líquido (pegajoso, gooey, alto líquido - el derramarse al piso, aceitoso, se separa fácilmente (casi por todas partes coger la atención). Fácilmente lavable.] el EL 2 (el sistema electrónico busca acoplamientos adaptables a las características asociadas) "sensor" envía el nr (el notificador alerta a usuario) vía los cambios externos del color de la C. 3], debido a: reacción química (dentro de la capa interna o de la capa/entre la capa interna y externa.] el nr 3 (el notificador alerta a usuario) aparece abajo de la tubería, eg.: los cambios instalaron tubos el color del material; el algo más se emite o se cambia en el material que es transportado, eg.: fragmentos de un poco de material (no daña cualquier cosa).

- el pvc incluye los productos químicos (mezclados/incorporados) diseñados para obrar recíprocamente las sustancias apuntadas de w (con [o quizá un poco fuera]). La reacción química puede ser inmediatamente considerado/adelante/cómo la banda - w5.

. - cualquier elasticidad necesaria todavía se encuentra en el PVC.

. - ciertos tipos de contacto cuyo nr (el notificador alerta a usuario) no es fácilmente prestable a la inspección por el ojo humano sin ayuda: sostenido debajo del microscopio (con: ciertos filtros de la "lente"/ven en cierto fq, eg.: luz ultravioleta).

- NR demuestra la sincronización de la ocurrencia: el contacto sulfúrico hizo hace 5 horas por 8 minutos, nivel de contacto/de porcentaje sulfúricos de la sustancia que era sulfúrica en aquel momento (w5) era 40-50%.

O-Hornadas: para comprobar mejor w5 el tipo exposición, diversas hornadas de los productos químicos usados en el pvc se diseñan para un efecto de la cápsula del semi-tiempo (cada hornada se hace eficaz en las horas de diferenciación, por lo tanto más reaccionar accionado las hornadas/para no reaccionar, una lectura más exacta en cuanto a el tipo acontecimientos (cuando, cuánto qué, w5).

. - diversas hornadas pueden el nr (el notificador alerta a usuario) (búsqueda a la demostración): tipo múltiple contacto por el tipo químico/w5.

- diversas hornadas se pueden atar sobre el PVC/tomar o pelar apagado/activatable cerca: tirando de la lengüeta/del color/poniendo el PVC anterior en el tipo solución (el PVC diseñado para llevar a cabo o para trabajar con eficacia el paso tan anterior hecho es útil para cualquier futuro que identifica para el tipo contacto. la sección/la pieza de la reacción química de +-needed en el PVC se cubre cerca: lengüeta, cinta, capa externa del PVC. La reacción ocurre cuando:

---+ se saca la parte externa (por u, momentos antes que el nr (el notificador alerta a usuario) es necesario)

---. gastado o erosionada/o sale apagado de una cierta otra manera.

--la combinación de diversas hornadas y cómo se activan puede pintar un mejor cuadro para: mecanografiar el contacto químico/w5. Eg.: la sustancia con dos productos químicos puede ser identificada cuando cada lengüeta diseñada para cada sustancia se ha efectuado/nr. El "análisis adicional" del tipo producto químico es comprensible determinando cuántos y cuáles de las reacciones químicas múltiples posibles ocurrió - toda la porción como evidencia adicional.

--las lengüetas/las hornadas puestas sobre el PVC son: absorbente para uno o etapas múltiples para determinar el tipo contacto. Puede comprar lengüetas por separado del PVC. El PVC diseñó mejorar el asimiento/el trabajo con la lengüeta/hornadas cerca: el mejor pegarse con la lengüeta (permanece tan en/puede salir); las hornadas no se tocan: (los marcadores colocados en el pvc donde cualesquiera/ciertas lengüetas pueden ser puestos, marcadores para las lengüetas fijan en localizaciones menos probablemente para tocarse basaron en para lo que se diseña el pvc, eg.: guante (que evita los puntos donde los dedos tocan otras partes del guante.

. - Mecanografiar los productos químicos que el plástico puede demostrar que el contacto fue hecho con: microorganismos, tipos específicos de: bacterias, virus (VIH, frío que induce), tuberculosis, molde; agentes carcinógenos; ácidos; toxinas a los seres humanos o a otras formas de vida que el guante pudo tocar posteriormente; etc.

- sección de cada PVC (eg.: el dedo del guante) tiene diversa función. Cada sección puede tener aspecto de diferenciación: tipo color-coded/de diferenciación plástico (aspecto/superficie). Usos: las ayudas identifican qué sección del PVC tenía que mecanografían la ocurrencia (w5) (después de que pvc movido/sacado del chisme/de la mano anteriores).

Cómo funciona el nr (el notificador alerta a usuario):

cómo cierto tipo ocurrencia se hace sabido (a u (investigador/protector de seguridad) /observer/ "sensor" /sys).

- la superficie del rasguño/lleva a cabo la lengüeta para considerar: cambio del color/de la textura. fraseología de +-printed (esa aparece dependiendo del tipo ocurrencia). La fraseología pre-se hace en el material: sus cambios del color vía la reacción química (en lo que concierne nr).

. --si sale la capa externa, el poner letras se puede imprimir sobre una capa más baja, y se expone sobre retiro de la capa externa.

. --La fraseología puede indicar: el peligro, advertencia, contacto químico hecho, agujero, perforación hecha, precaución del _____, considera el manual, el código numérico que se explica en manual de sw/printed. el cambio de +-color es "nr". "Nr" puede también estar vía: cambio (superficie) del PVC físico, eg.: las burbujas, consiguen más difícilmente/más suave más o menos flexible/excreta sustancias (el líquido, polvo, olor, (concentrado) tinte de la tinta frota apagado). Cada tipo de situación se puede representar en tipo de diferenciación de acción del "nr", eg.: azul contra el rojo para la temperatura, el olor del hedor para el peligro, y el perfume para una situación más segura.

. - Cemento/pintura: el nr (el notificador alerta a usuario) altera vía cambio del color; cambio de la textura superficial (corrosivo (mirada), burbujas para arriba)

. - El vidrio/ve a través el PVC: nivel de cambio (coloreado) = de nr de la opacidad. Eg.: la ocurrencia de un poco de producto químico señalado se demuestra vía el enrojecimiento del material. Cualquier presencia de deterioración (grieta, viruta) es acentuada por el color en la grieta, viruta.

. - el material pierde su elasticidad/flexibilidad/llega a ser más frágil/deteriora después de la reacción C del chem (adaptar características asociadas de las búsquedas de la computadora) ocurrió. Esta deterioración puede ser (+only/and o) servir como la función (especificada) del nr (el notificador alerta a usuario). Eg.: Guante de N-Dex, plásticos existentes que llegan a ser frágiles después de que las temperaturas excesivas/productos químicos de los contactos w (con [o quizá un poco fuera]) ciertos.

+-Resin usado en la fabricación del plástico tiene productos químicos que acentúen la mirada/la sensación/el olor corrosivos/deteriorados que actúan como NR. Esto pudo suceder en ciertas circunstancias como el plástico ahora se hace, con todo no siempre. Por lo tanto el plástico usado producto químico de w (con [o quizá un poco fuera]) se diseña para alterar el aspecto del plástico en la ocurrencia señalada, donde no tendría de otra manera.

%-any el otro cambio unordinary que puede ser notado: visualmente, "sensor". Eg.: cualquier otro cambio que pueda/ocurre de plástico en otras situaciones, puede tener reacción reproducible similar cuando el plástico entra en el contacto con otros productos químicos que no causaron tal reacción antes.

- Emisiones de NR: Cambios del color; el líquido exuda hacia fuera; gas oloroso; ("sensor") gas perceptible; nr; la reacción (química) a la ocurrencia hace el sonido no electrónico, eg.: rasgado/sonidos vibratorios/de la fricción; (menor de edad) haciendo estallar o burbujeando suena mientras que las hebillas del pvc/las deformaciones/alteran en la reacción química.

Cómo el sistema (el sistema busca acoplamientos adaptables a las características asociadas) (automáticamente) reacciona (señalado/cualquiera) a NR: Cómo el PVC/el sistema responde favorable a la señal/a la reacción química de NR: Ocurrencia (primera reacción - > produce Chem C) - > nr (el notificador alerta a usuario) - > reacción (descrita en esta subdivisión, chem secundario-c).

- El flujo de las paradas del mecanismo (EL) (adrede) de líquido/de sustancia hasta problema alivió.

- el sistema (entero) cerró (hasta que reparación/la alteración hecha)

. - Seguridad/policía de T, eg.: el vandalismo ocurrió.

- OTD D (dibujo): u (adaptación que busca del usuario) = este ~ del sistema de N (invención) (cómo sistema reacciona a nr (el notificador alerta)/"del usuario estado" de la ocurrencia) C =

ACCESO (); ANALIZADOR (); CARRO (efectos del interruptor cómo responde el sistema);

NOTIFICADOR (si se desarrolla el tipo químico múltiple de diferenciación nr (el notificador alerta a usuario), el compuesto de ellos puede significar una situación/una ocurrencia = un nr más complejos (que significa tales)).

OSCILADOR (las alarmas se apagan a través del departamento/del edificio (unidad)); Banda (); Picosegundo-Zona (); Q (); CUENTA (); SENSOR (para la presencia química); ESTADO (); TDS (); T (); UIP (); ANALIZADOR VISUAL (); WA (capa de goma del laboratorio = EL n).

las puertas de +-automatic shut=seal en la contaminación y o la gente que intenta salir/entran. Cerrando adentro de la contaminación vía el cierre/fijación de puertas, las ventanas, HVAC expresan, etc causado cerca: nr (el notificador alerta a usuario) - > C - > cerrado mecánico/fijación.

modo de +-Combat: cualquie otro sistema en el "estado del arte" a combatir: (indeseado/peligroso) lanzamiento de sustancias, eg.: las caretas antigás dispensaron automáticamente.

+--Extinguidor: el retardador es aplicado/rociado sobre el punto/el área/sitio/unidad. Retardador: ignífugo, el otro producto químico/microorganismo diseñó combatir/w interactivo (con [o quizá un poco fuera]) el tipo químico (indeseado) B.

. - el personal de seguridad especializado entró en contacto con vía: la persona llama/uip-analizador = t = seguridad.

- u/C (adaptar las características asociadas) de las búsquedas de la computadora (uip-DB) entró en contacto con/información dada (vía t) que la ocurrencia podría estar de interés (para los usos de la investigación). "Perseguidor".

- el "analizador visual" "analiza" el material (alterado): monitor inteligente 2E251.

- hay tipos de diferenciación de NR (dentro de un experimento/de un material/de una parte particulares), la manera de la respuesta del sistema depende del tipo de NR.

Multi-Capas:

- La capa interna/externa (del guante) de diverso color en la golondrina de mar que se expone, o la capa interna emite la sustancia coloreada cuando está pinchada.

+-three o más capas, cada w (con [o quizá un poco fuera]) poseer las características (color, qué busca y nr). Eg.: nivel de deterioración ácida demostrado por en qué capa ha comido.

- un material más costoso se puede señalar en posiciones más cruciales, eg.: capa externa.

Funciones electrónicas: [esta sección electrónica no se debe utilizar en la reescritura]

El sensor notifica si cualquier contacto se ha hecho con los productos químicos específicos en superficie interna, externa o superior. Ambas versiones analizan el tipo de ocurrencia en términos de cuando, y cómo un

tipo particular contacto químico fue hecho. La ventaja más grande es la característica de la seguridad para la humanidad.

- PVC = EL (el sistema electrónico busca acoplamientos adaptables a las características asociadas) "sensor" = c (analizador/memoria/estado) conectable a PVC = S (la pantalla y el analizador del 'adaptan el menú para las necesidades actuales de los multi-usuarios')/C (adaptar) asociado/m/carro/guantes/PVC de las características de las búsquedas de la computadora

- Pista: (producto químico) ocurrencias de la "pista" de los "sensores" para: DB del R&D (compilación de la historia referente a experimentos particulares), tds, nr (el notificador alerta a usuario) (w5).

- OTD D (dibujo): u (adaptación que busca del usuario) = este ~ C del sistema de N (invención) Alerter (adaptar características asociadas de las búsquedas de la computadora) =

ACCESO (acceso necesario antes del activatability del nr); ANALIZADOR (reacciones químicas); CARRO (productos químicos, interruptor); EDUC (); MULTIUSOS (); +NOTIFIER (); OSCILADOR (alarma, nr de las señales sonoras); Banda (funciones de: nr, analizador, estado, tipo producto químico (reacciones) buscado); Picosegundo-Zona (u/chemical/pvc debe estar en cierto sitio); Q (qué cada reacción del nr significa; el sistema pide q pertinente para ayudar a determinar "estado" de la ocurrencia, eg.: qué productos químicos u trabajaba w (w5)); Capa del nr de S (w revestido (con [o quizá un poco fuera])); CUENTA (contacto w5/reacciones químicos); SENSOR (los sensores químicos, cada sensor pueden diferenciar por el tipo contacto químico buscado, este sensor son a menudo desmontables/lanzados fácilmente hacia fuera después de la reacción ocurrieron; D (dibujo): producto químico que entra en el sensor del contacto w (con [o quizá un poco fuera]) = el sensor químico (in/on/attached al pvc/al sistema) = reacción química = reacción química al convertidor de señal = a la señal = a c ("analizador") = ~ del nr la otra función deseada; ANALIZADOR de SONIDOS ("analiza" los sonidos emitidos de la reacción química, eg.: el tipo burbujeante o ardiente sistema del aislante de la ayuda de los sonidos del producto químico podía ser, estos datos usados para emparejar con datos en UIP-DB para el tipo productos químicos en el DB del sistema); ESTADO (cualquie contacto químico hecho); TDS (las ayudas entienden w5 para: aislando cuando/donde sucedió la ocurrencia química); T (nr); UIP (uip-DB: características de productos químicos (u puede entrar en el contacto w), uip de u (adaptación que busca del usuario) (la lista de tipo productos químicos u puede ser el funcionamiento w), el w= emparejado UIP-DB UIP de U); ANALIZADOR VISUAL ("analiza" antes de que/durante/después de que de las imágenes las reacciones químicas para ayudar a determinar la naturaleza de la ocurrencia, UIP-DB); WA (el sistema trabaja el wa de w (tipo de R&D) n).

- el sistema del EL reduce costes de la mano de obra, vía su "análisis funcionado c" /diagnosis.

Patrones generalizados del uso:

- Manipulación de materiales peligroso, sondeando en fábricas de productos químicos y refinerías, basuras municipales, guantes del dentista/del investigador. Mercado enorme.

- cuando consigue al nivel del peligro, el "nr" necesita ser muy identificable/sensible/eficaz en la cogida de la atención del u, eg.: muy brillante contra los colores no-sensibles, oscilador ruidoso.

. --Problema: animase a u (adaptación que busca del usuario) se pudo que confíe en n, incluso si se previenen sobre el nivel inevitable de inexactitud en ser prevenido del apuro.

- ropa del laboratorio, también: juegos, pantalones, camisas, chaquetas, delantales, zapatos, sombreros...

equipo de +-lab (capas): cuando la superficie ha deteriorado exponiendo el material peligroso - > NR. El material peligroso incluye: radiactivo..., agentes carcinógenos, gases, peligros quizá no a la vida humana - pero al experimento o a la vida de la planta no humana, animal, insecto, temas del microorganismo en el experimento.

- las demostraciones nivelan de uso/del frotamiento/de la fricción. La capa externa de guante usa hacia fuera demostrar su hora de cambiar el guante. Si usa por tiempo largo/rasgón de menor importancia, estirar.

el plástico de +-if recibió desgaste excesivo y el rasgón.

+--esas partes del pvc que consiguieron mayor uso ya - > nr, pueden dejar uso de u (adaptación que busca del usuario) otras piezas de separar el área del uso/del desgaste. Eg.: La manopla del PVC (guante) se puede mover de un tirón encima en la misma mano.

demostraciones "nr" del material de +-covering. Abrigo del material de cubierta/PVC para: asiento, manteles, delantal, sombreros, cubierta sobre la ropa, manija de la pluma (existe: pluma que mata los gérmenes en contacto). Actos también como la demostración del desgaste de la gente de las divisas con qué productos químicos han entrado en el contacto.

- el PVC mata los gérmenes (algunos): en el contacto superficial/sobre (semi) la penetración (puesto que la capa protectora externa cubre (posiblemente) los productos químicos peligrosos para anestesiar. Los gérmenes de las matanzas sobre superficie del contacto w están de plástico.

Comerciabilidad/valor:

- Guantes: Mucha gente es absolutamente temerosa de la contaminación, el número de tal gente crece probablemente anualmente debido a la sofisticación cada vez mayor de la población. Reduce la ocasión de: separando microorganismos nuevamente dirigidos, enfermedad (VIH, cáncer, quemaduras (del producto químico)). Los sueldos para el producto químico/Biotech aventurado/los trabajadores médicos son más altos, usar tales guantes reduce riesgos y excepto en nóminas de pago. Con la publicidad, los empleados exigirán los guantes. El envío, la dirección y los costes de fabricación pueden ser bajos.

ahorrador de +-Time: ahorrar el tiempo de estudiar la naturaleza de la situación; las reparaciones se pueden eliminar a menudo por el reemplazo (de la vieja/deteriorada parte que ha cambiado color debido a su condición alterada). Se cambia la parte antes de que ocurra el apuro; uso de la investigación del laboratorio; previene el mayor daño que podría ocurrir si el problema (deterioración) no se rectifica; saber qué necesita la limpieza/que substituye algo que haciéndola como costumbre de todos modos (después de un cierto plazo periódico).

daño de +-Minimizes: eso puede resultar si problema (deterioración) no rectificado a tiempo; substituir la parte que podría causar el sistema grande en la falta (que daña más piezas); el producto/sistema pudo ser abajo/inoperable de por algún tiempo si advirtió el sistema no utilizado.

ahorrador de +-Money: substituir las piezas menos a menudo fuera periódico (mantenimiento incluso si el producto no es defectuoso, puesto que no puede ver su estado real wo (con [o fuera a un cierto grado]) de nr); el tiempo ahorró; bajar las primas y los sueldos de seguro porque el trabajo es más seguro.
sensibilidad de +-Hand: un material más fino se puede utilizar dando la mayor sensación a las manos, porque los métodos alternativos se utilizan en la respuesta a la deterioración del guante.
las manos de +-Sweating en guantes son menos convenientes notar los pequeños escapes.
- otras ventajas mencionadas en todas partes

Uso del mercado que predice del guante:
. - los usuarios que intentaban guardar abajo de costes (del guante), pudieron usar el guante claro sobre el guante de esta n. Por lo tanto: hacer los guantes que usan sobre este guante difícil vía: ineficacia del nr (el notificador alerta a usuario) en tales circunstancias (ventilan/etc de las necesidades en la perforación - > nr); fricción (parecida a la goma) que consigue el segundo guante sobre el guante de esta n; la función del nr reduce en eficacia después de cierto plazo usado guante (tener nr el demostrar de la edad del guante); ¿el gobierno permitirá todos estos factores del estímulo de las ventas que comprometan la seguridad para los cortadores del presupuesto?
. --tales guantes dobles se pueden vender por separado por la misma organización, para reducir los costes para el mercado de extensión del interno de los usuarios. Pero guante externo diseñado para funcionar guante interno de w (con [o quizá un poco fuera]).

NR: Cómo (problemas) demostrado
los síntomas de +-Multiple son nr: nr de diferenciación (no-en conflicto) (de los productos químicos) (el notificador alerta a usuario) activatable, eg.: 1] dos diversas rayas coloreadas; 2] C (adaptar características asociadas de las búsquedas de la computadora) = nr; 3] dígitos particulares/los efectos visuales aparecen en el PVC (en lugares de diferenciación).
- Demostraciones de N donde ocurrió la ocurrencia (en el pvc). Hecho vía: venas que funcionan vía reacciones químicas de la deterioración/de la ocurrencia - > punto donde NR aparece para u/el S.
+-U siente algo (picadura, prickle, ácido) sobre/después de la perforación/de la fractura. Las ayudas encajonan u (adaptación que busca del usuario) que no mira el guante. El agente introducido a la superficie = indicador de la reacción química w (con [o quizá un poco fuera]) = sentía por u (ácido, descarga eléctrica, oscilador). Especialmente útil para: los guantes, los condones, las máscaras, o el otro material en (dirigir) contacto con la piel.

++ otras maneras de notificar a usuarios del estado:
- Sobre la visión: Los usuarios no prestan a menudo quizá la atención al indicador. Por lo tanto más que apenas un cambio del color puede conseguir la atención.
- Formas de notificación. Vía:

--sensación física (la picadura, prickle, lanzamiento del olor, oscilador [pieza sana saliente del comunicador] como un sonido de la alarma, %flashing enciende el notificador, cierre del sistema (el sistema busca acoplamientos adaptables a las características asociadas) conectado/relacionado con el plástico/la ocurrencia en la pregunta/causar la preocupación.

--La sensación de Prickling se puede generar del interior y o del exterior del PVC, eg.: la fractura del condón se puede sentir vía prickling (lanzamiento ácido) por ambos al masculino/a la hembra que reciben la penetración del condón en su orificio.

--Diagrama: estado indeseado de la ocurrencia/de la perforación químicas/fractura del material que contiene el indicador - > sensor/reacción química (exposición/contacto del aire entre aislado previamente (capas)) - > químico lanzamiento ()/oscilador del ácido

+-pvc brilla intensamente en obscuridad: útil para los condones puesto que no puede ver el cambio del color como fácilmente en obscuridad.

--o la fractura puede solamente ser discernable bajo iluminación [infrarroja] especial...

+-taste del PVC cambia sobre la deterioración/la ocurrencia: condones. Especialmente útil en sexo oral.

+ ajustes con 1G20. Ver las patentes de los E.E.U.U. aquí también, eg.: indicadores color-cambiantes.

NR: Cómo está demostrado - después del hecho:

PVC de +-place bajo ciertos luz/sonido/tipo frecuencias de la radiografía. La deterioración resultante de la demostración de las reflexiones (tipo específico) (por tipo la reflexión/las imágenes vistas).

--Esto ensancha los tipos posibles de indicadores que puedan ser utilizados. También, puede haber los casos donde u puede no quisiera que cada uno supiera que el indicador fuera accionado, eg.: para no alertar a la otra gente que pudo ser: dado una sacudida eléctrica, o snooping alrededor.

--Los tintes fluorescentes diferencian en términos de sus frecuencias de la emisión basadas en la naturaleza del problema. Los tintes son efectuados vía la reacción química por el tipo ocurrencia. La palmadita 5329127 de los E.E.U.U. - identifica el tipo plásticos basados en el tinte fluorescente usado.

cambios de +-color al tipo tipo de entonado de colores ocurrencia: Palmadita 3743846 de los E.E.U.U. KN (invenciones) permite que los solos indicadores/plásticos busquen ocurrencias potenciales múltiples.

. --Éste puede ser w combinado, eg.: resultados de 1] indicador que son mantenidos semi-confidenciales requiriendo ciertos procedimientos ver si sucedió la ocurrencia; 2] indicadores (del múltiplo) que demuestran la sincronización de ocurrencias.

+-after señaló el tipo ocurrencia sucedió, puso el PVC en las situaciones que causarán reacciones químicas subsecuentes - > ver/"para analizar" el tipo PVC del contacto tenía w5. Eg.: colocar el guante en las soluciones químicas/el tipo específico luz/cierto nivel del calor. Quizá un método más barato para detectar la deterioración (después del hecho).

--Es decir: el pvc especialmente diseñado de a] entra en su potencial de las sustancias del contacto w (con [o quizá un poco fuera]) diseñado para - > el PVC de b] después se altera/se efectúa de cierta manera para crear la reacción química sobre vía la cual el tipo ocurrencia (eventualmente) se considera fácilmente: el ojo sin ayuda/la razón adicional del proceso químico/del microscopio/etc. de pasos adicionales es: el coste o el nivel de sofisticación no permite una lectura inmediata para el tipo contacto w5; mayor exactitud (estado, nivel, w5) para el tipo contacto; las compañías pueden recoger todo el final de los guantes (nombre del u de w) de cada vez que el período y las procesa en hornadas más grandes - > entonces el nr/dice u de cualquier tipo exposición o uso para el estudio de la investigación, eg.: como las tabletas contrarias de semi-Geiger usadas por la gente en reactores nucleares.

Cómo interpretar los resultados de los nr:

- ciertas ocurrencias son más probables ser más serias que otras, eg.: cierto contacto químico más probablemente que otros productos químicos para tener mayor deterioración causada (agujeros en guantes); sustancia tóxica (biológica) de la contaminación (extensión de virus, pérdida de esterilidad, contacto (excesivo) w (con [o quizá un poco fuera])).
- cambiar: pieza (de la máquina); guante
- "estado" de la situación
- otras aplicaciones de laboratorio de investigación: características del PVC en circunstancias de diferenciación.
- Misceláneo: limpieza/edad/tipo de material
- La pureza del PVC del material entró en presencia del contacto W. de cualquier producto químico indeseado/otro notado (nr).

%-Tabs se puede colocar en el material (siendo estudiado). Los productos existentes que los cambios de la medida de cualquier tipo se relacionaron con qué se describe en esta N, son aplicables a este N. general Eg.: lengüetas que miden (los cambios adentro) temperatura, el pH, el etc.

Con el notificador, el usuario puede identificar más adelante mejor la fuente de ocurrencia/de contaminación separadas:

1] ocurrencia identificada, después 2] el tipo ocurrencia identificada, después 3] u pueden intentar localizar la fuente w (con [o quizá un poco fuera]) la información disponible:

+-Indicators que demuestra la sincronización de ocurrencias, puede permitir la interpretación del rastro vía el cual extensión de la ocurrencia/del producto químico, llevando a persona de investigación a la fuente de problema/de contaminación.

+ la ropa (del laboratorio) demuestra NR: deterioración de la capa externa (el ácido comió lejos). Ropa diseñada para los "sensores químicos (desprendibles)" de las lengüetas w (con [o quizá un poco fuera]).

Dejarnos que el usuario sabe que la contaminación se ha separado en un primero tiempo: saber antes de la piel de los tactos, deterioración adicional de las causas a la ropa/pvc.

+-Shoes/la cubierta de tierra (capa, capa, pintura) demuestra NR. El único color de la causa de los productos químicos in/on cambia en la tierra sobre ocurrencias señaladas. Ejemplos: ver las huellas coloreadas en (embaldosado/cubrió difícilmente) el suelo y saber su que es separado. Colorear los cambios en gente de la alarma del piso al problema, después identificar quién/que los zapatos son el problema mirando su planta del pie (después de que la ocurrencia como comenzado/terminó). Los indicadores del piso pueden ser protector revestido de w (con [o quizá un poco fuera]), así que la coloración ocurre cuando la capa externa penetró (por los ácidos....), este especialmente útil cuando los indicadores del piso pueden ser levemente tóxicos/dañosos en otros respectos.

--D (acoplamientos asociados de la búsqueda del dibujo): los indicadores en planta del pie (y el producto químico del piso de w/indicadores mezclados) necesitaron causar el cambio del color al piso/al zapato.

. --los cambios del color del suelo son posibles vía piso que se lava con: regar, señalado las coladas del producto químico/los decolorizers no tóxicos.

Mecanografiar el PVC usado: seleccionado por u

- utilizar el PVC vía el cual puede mejor crear los bolsillos: pocos pasos; simplemente de molde/cómo el PVC sale o se refresca después de verter; uso químico subsecuente que induce el desarrollo de bolsillos.
- que mezcla/reacciona favorable los productos químicos deseados/las aplicaciones/los ambientes de w (con [o quizá algo fuera])

Color: Color/cambios/emisiones = NR del olor.

- color generado de los productos químicos: mezclado en el PVC; cubierto sobre el PVC; bolsillos interiores.

+ BOLSILLOS: El material puede alternativo también llevar a cabo los productos químicos del indicador con sí mismo.

- En otras palabras:

El PVC (el otro material) tiene bolsillos (minúsculos) que se sostengan/tipo interactivo producto químico/condición de w (con [o quizá algo fuera]) buscó = el ojo/EL "analizador" del u = estado en tipos de contactos hechos w5.

- en otras palabras: el PVC puede llevar a cabo los productos químicos necesarios para reaccionar con los nuevos agentes que entran en el contacto con el producto químico en los bolsillos. De bolsillo de molecular hasta varios ajustar los centímetros/los metros.
- embolsar las formas: cualquier tipo cavidad donde hay una abertura y un interior grandes/pequeños él consigue más estrecho/más de par en par mientras que consigue más profundo; cualquier proporción de anchura a la profundidad; el bolsillo se puede crear vía una superficie circundante de la pared incluida, w (con [o quizá algo fuera]) o el wo (con [o fuera a un cierto grado]) cualquier cavidad hecha en la superficie del pvc, paredes puede aletear. Los puntos de la superficie áspera (muescas de w) se pueden llamar bolsillo también.

- los bolsillos están completamente o llenado parcialmente, en estes 3ultimo, los agentes químicos subsecuentes pudieron conseguir en los bolsillos (y crear una mejor reacción química).

- Bolsillos parcialmente llenados:

--Cómo la subsistencia embolsa totalmente de llenarse de los productos químicos atados adrede al PVC: la pieza externa de paredes rechaza (ciertos) productos químicos/pegamento no se pega allí; reducir al mínimo la cantidad de producto químico aplicada/dada al PVC para no llenarse embolsa totalmente.

- la limpieza del PVC puede no disturbar los bolsillos

- Superficie dentro de la capa: sustancia lisa/áspera o revestida de w (con [o quizá algo fuera]) (función adhesiva) a ayudar a atar al producto químico señalado. Esta capa pudo [ayuda/PVC del protector contra] los productos químicos (reacciones).

- Nódulos: los bolsillos pueden ser w substituido: nódulos químicos atados a la superficie (que come con eso en la superficie para un mejor apretón/la adherencia.

- Cubierta: las cubiertas (minúsculas) de bolsillos pueden (casi) sellar en sus productos químicos. Tales cubiertas pueden abrirse (parcialmente) cuando es el PVC: sumergido en líquido; la estructura química del PVC alteró bastantes vía agente introducido; + la cubierta deteriora de: el ácido que la come lejos/producto químico que los ataques/comen el PVC y también/edad de la cubierta del PVC/de la otra ocurrencia mencionada (que efectúan el material del pvc, la cubierta se hace del material (iguales)).

--El valor de la cubierta puede ser no disturbar los productos químicos en bolsillos excepto a veces.

- los productos químicos en bolsillos se pudieron salir vía proceso químico (sumergir en de/capa o aerosol del líquido químico/de la colada en el producto químico que sale los productos químicos de los bolsillos).

- puede reaplicar los nuevos productos químicos en los bolsillos para los usos la diferenciación. Eg.: una capa del laboratorio usada para un tipo de experimentos se puede utilizar en el tipo de diferenciación experimentos después de cambiar los productos químicos en bolsillos. Ahorra de tener que rechazar el PVC, ahorra tiempo de tener que comprar nuevos tipos de PVC si solamente el proceso químico es necesario para los bolsillos de relleno/que alteran el PVC de la otra manera así que actúa como nr.

Pegamentos: si hay o no es bolsillos o ninguÌ□n tipo de aspereza que se pueda crear en la superficie del pvc, las capas de pegamentos ayudarán a los productos químicos señalados para pegarse a pvc = interno reaccionan con los agentes introducidos. Estos pegamentos pueden ser quitados (w cuaesquiera productos químicos) (en uno o pasos múltiples).

- el pegamento sí mismo puede ser o contener los productos químicos necesarios para accionar el nr.

el >User de la idea inventiva selecciona simplemente 1] propósito (tipo ocurrencia), 2] que las reacciones químicas deseadas para servir como el nr (el notificador alerta a usuario) (ocurrencia de las demostraciones), tipo 3] qué tipo de PVC y o los productos químicos ser compatible junto (puede ser mezclado/atado junto) al servicio como parte de la ocurrencia de la reacción química w (con [o fuera a un cierto grado]), 4] de nr/de sistema del nr desearon.

- hecho vía: EL/aplicación de indicadores señalados

LAS REACCIONES QUÍMICAS GENERALIZARON: pasos, etapas, inactividad.

. Reacciones retrasadas tiempo:

- algunos productos químicos/reacciones biológicas tienen resultados más claramente discernable para el nr, si tiempo dado un plazo, eg.: el microorganismo excreta los productos químicos después de días del _ del _ = tales excreciones = nr. El producto químico del PVC = del indicador utilizó funciones bien en un cierto plazo: no puede caer o lavarse fácilmente apagado.
- productos químicos secundarios-UNo inactivos

. Reacciones de varias fases: (para de retraso de tiempo)

- se accionan algunos (posteriormente productos químicos) del indicador eficaz después de que las ocurrencias = la causa anteriores señalaran reacciones químicas. D (dibujo): El producto químico B = producto químico A = producto químico de la reacción = reacciona w (con [o quizá algo fuera]) pvc (inactivo) del producto químico C (era w (con [o quizá algo fuera]) anterior) = produciendo el producto químico de la reacción que acciona = nr.

. Inactividad:

- algunos productos químicos pudieron requerir hora de reaccionar. O, el nr (el notificador alerta a usuario) diferencia según la longitud del tiempo: la reacción ha sido el ocurrir/cuánto tiempo hace la reacción (el producto químico C) fue hecho.
- valores en inactividad: los contactos de menor importancia (medidos por el plazo de la exposición) no pudieron autorizar el nr. O, NR- "cuenta" podía ser más bajo/más arriba.
- qué disparadores químicos fuera de inactividad: plazo de la exposición a % químicos; producto químico de capa del anillo (a) gastado apagado (por cómo B/C lo desaparece); la cubierta del bolsillo usada de/hizo más impenetrable para los productos químicos de B/C.
- Productos químicos Secundarios-UNo inactivos: reacciona el producto químico B/C. del w=.
- Los productos químicos en capas internas de PVC se pueden también considerar inactivos en que las capas externas del PVC son sus barreras. Con todo la inactividad del término para tales situaciones es limitada, eg.: quizás las búsquedas del nr cuando la capa externa ha deteriorado, en este caso (una reacción = un nr más rápidos) puede ser deseado, y por lo tanto inactividad no se aplican.

Mejoras sobre patentes existentes del nr del guante por el que las perforaciones estén demostradas cuando los guantes se colocan dentro de las soluciones líquidas/agua:

- mecanografiar el producto químico B que pudo haber estado presente = nr. Las búsquedas de Chem A (en la solución) para demostrar el chem B de if/where estaban dondequiera en el PVC/si incorporó puntura.
- otras partes de este KN, por el que el chem (producto químico) A esté en la solución química de fórmulas señaladas.

Capas/remiendos del PVC: cada capa/remiendo tiene características de diferenciación, algunas capas/los remiendos está más interesada en:

+ remiendos de indicadores de diferenciación: permite el nr múltiple, que no interferirá w, como fácilmente por físicamente la separación. - Poner cada nr (el notificador alerta a usuario) en la ocurrencia señalada del punto donde más probablemente crear el contacto/donde no interferirá el nr función de w (con [o quizá algo fuera]) del plástico.

- fuerza: da el tipo elasticidad de la fuerza w necesaria; evitar la deterioración
- reacciones químicas: mezclar los productos químicos de w (con [o fuera a un cierto grado]) (a); bolsillos.
- desaparecido fácilmente; fácil deteriorar = exponiendo capa interna.
- aspecto cosmético
- permeabilidad de: aire, agua, productos químicos (a, b+, c)
- demostrar las muestras de la deterioración: puntura = nr; el color-nr puede venir solamente de ciertas capas.
- cómo es el pegamento ellas, o cómo trabajan fácilmente los pegamentos agregados de w (con [o quizá algo fuera]), o como de bien se adhieren a las capas de diferenciación/material (interno) (son capa).
- inactividad de la reacción: productos químicos más profundos A del asimiento de las capas
- los productos químicos en una capa/región (no linear, sino los remiendos) tienen propósitos de diferenciación del nr.
- esterilización/desactivación/retraso de daño de: producto químico/microorganismo B
- u puede considerar visualmente más fácilmente el grado de la deterioración, basado en el número de capas deterioradas.

Los puntos soldados con autógena en el PVC pueden causar efecto del nr (el notificador alerta a usuario) cuando tales puntos han deteriorado (el líquido ha filtrado en sus grietas/grietas desarrolladas). Demuestra una debilidad en la estructura del PVC, aunque ninguna salida fuera del pvc/del envase puede haber ocurrido. Ayuda si el PVC es claro/opaco considerar alguì□n nr (cambio del color donde se considera la deterioración).

- las bolsas de plástico: puede demostrar puntos más débiles de la soldadura
- la parte de material usada en el proceso de la soldadura se puede tratar como una capa separada (según lo descrito en la descripción de esta n). Ejemplo: es (una porción de) este material soldado con autógena que causa el nr (sobre la exposición/la deterioración del material soldado con autógena).
- frecuencia intermedia: antes de la soldadura, los puntos que se soldarán con autógena tienen indicadores aplicados sobre ellos. Estos indicadores pueden soportar la temperatura necesaria para la soldadura.

Valor: cogeř la deterioración/la fabricación pobre de PVC n, antes (más lejos) de uso.

Si solamente un externo/capa interna (material principal) ha deteriorado, después cualquiera que deterioró la capa/o el material/la capa subyacentes pueden inducir el nr (emitir el tinte del color) que señala el lado/la localización de la ocurrencia. Ejemplo: el guante de múltiples capas, capa externa se usa (la capa externa emite

el nr suave (el notificador alerta a usuario) hasta que su de todo gastado/deteriorada); posteriormente, cuando se expone la capa interna siguiente, este 3ultimo emite el tinte rojo, funcionando como la piel de animal.

U se da la advertencia antes de salida/de la deterioración completa. Valores: al usar guantes, reduce la ocasión de los elementos indeseados de contratación que son carcinógenos, si no malsano, evita el líquido caliente del tanque del trabajo que llena en guante, eg.: trabajo con los objetos agudos.
- el nivel de la sensibilidad perdió en los guantes de situaciones peligrosas puede ser ganado algo cuando la medida protectora de ayudas de esta N (invención) compensa la mayores delgadez/sensibilidad del material del guante.

Contaminación NR: U (usuario) para la contaminación antes de que tenga ocasión del suceso.
- Una herramienta puede transferir el material indeseado a su uso en actividad subsecuente. Por lo tanto la importancia en saber la presencia de productos químicos (indeseados) (en la superficie del pvc) (bajo la forma de polvo, espec., embeddedness, etc).
- Los artículos plásticos incluyen: los guantes, pinzas, palillo, envase, tapa pudieron separar otros productos químicos o insectos indeseados (el nr busca los productos químicos emitidos por los insectos); (funcionado automáticamente) piezas del equipo; capa externa del termómetro; neumáticos; correas giratorias de la máquina; ruedas.

ESTRATEGIA DE BÚSQUEDA DE LA PATENTE:
- Material:
(pvc o plástico o polivinilo o poliuretano o caucho) near5
guante, condón, cubierta, vinilo
- Ocurrencia:
(corros (corroer/corrosión),
(deteriorat o disintegrat o
- No: biodegrad, recycl, non-corros, resistentes
- (caída near3 aparte) o contaminat
- Y reparación/problema/Identif (identifica)/cambio near2 color/reaccionan (no)/producto químico near2 del reactor reaccionar o entrar en contacto con/measur/las burbujas (el no otro bubbl...)

- Palabras claves de búsqueda de la patente: el pvc, cloruro de vinilo polivinílico, caucho, guante, caja fuerte, germen, penetrat-, advierte, hospital, investigación, rotura, rasgón, capas múltiples.
- atar con alambre/el otro PVC de on/within de los "sensores" cuando estaba disturbado/alteró/efectuado en cualquier w/in descrito manera esta N, acciona la señal (nr) que demuestra llano/tipo situación/problema.

Curiosidades:

el material de los contaminantes/de los productos químicos de +-any (no lavados apagado) (pvc) causa el nr (después de período señalado del contador de tiempo (vía nr basado tiempo)). u (adaptación que busca del usuario vía acoplamientos de las características') tiene el plazo limitado (%TDS), o PVC más largo hecho, mayor es del contacto w el nivel de nr/deterioration.

+-Helps u (adaptación que busca del usuario vía acoplamientos de las características los') saben la limpieza de la superficie/del área de trabajo. Esta función del nr se aplica a: pinturas, barnices, Formica, papel (tablero), PVC (caucho, vinilo, bolsos, envases (de la tapa)...

- OTD D1: Esta N (sistema (PVC)) ~ del ~ C (adaptar características asociadas de las búsquedas de la computadora) (7G051/7G052) =

TENER ACCESO (u limitado puede saber: estado, nr; o sistema del uso); ANALIZADOR (condición w5/estado de la condición del pvc); CARRO (interruptor; el enchufe pvc = ata con alambre = los elementos = c) del EL (el sistema electrónico busca acoplamientos adaptables a las características asociadas); EDUC (para la investigación educativa; uso del laboratorio); M (analizador, DB); MULTIUSOS (); NOTIFICADOR (); Banda (cómo analizar los datos); Q (u pide con referencia a la condición del pvc); ANOTAR (# el pvc de las épocas era: penetrado, dañado, y w5); El SENSOR demuestra la corriente/el pasado/%anticipated (analizador, uip): (la presión, vibración, puntura, rasgón, estiramiento, calor, frío, nivel de la humedad, edad de las demostraciones del pvc (kn) cambia en la coloración, el otro contacto químico, el nivel de corrosión); ESTADO (); TDS (ocurrencia de cualquie elemento w5);

+ UIP (para qué sistema del EL (el sistema busca acoplamientos adaptables a las características asociadas) debe tener cuidado (tipo problema/situación/actividad). Ejemplos: el archivo para la historia de u señalado comparó contra características de la actividad actual del mismo u, eg.: qué productos químicos/procedimientos que son adoptados. Áreas en las cuales u no está bien entrenado por lo tanto más probablemente necesitar nr/forewarning: para ser ignorante de protocolos o de ser consciente de ocurrencias negativas (si suceden). Productos químicos/microorganismos del guante de VR (VR "Educ"/herramienta de la investigación, "obran recíprocamente" w (con [o quizá algo fuera]) mientras que usa VR (analizador visual)).

- OTD D2: Este ~ del sistema de N (invención) (el sistema busca acoplamientos adaptables a las características asociadas) (guante) C =

+ ACCESO (antes de que (mano) pueden comenzar el trabajo/entran en (el tanque), del "analizador" de los sistemas los sentidos del "sensor" = si el tipo correcto guante de la seguridad se está utilizando vía la lectura del guante: reflejo de luz ultravioleta, lector de clave de barras); La lubricación en vagina humana causa NR si el condón usado es del tipo que es wo: NR si ocurre la deterioración; materiales de la calidad - por lo tanto más probablemente romperse; frescura (fue reutilizado antes).

+-D (acoplamientos asociados de la búsqueda del dibujo): el condón apropiado incorrecto lanza el producto químico en el orificio que obra recíprocamente w en persona/los líquidos humanos (naturales en orificio) y

activan al interno (ninguì□n) NR. Ejemplo: solamente los condones apropiados no emiten los productos químicos que causarían NR, por lo tanto producto químico de los condones existentes necesarios para obrar recíprocamente lubricante especialmente formulado de w. NR = lanzamiento de la picadura/del olor/gusto desagradable (para el sexo oral)/color de los cambios (del lubricante/de secreciones humanas/morir se emite (del lubricante o del condón, y de la extensión vía el lubricante/los fluídos corporales).

ANALIZADOR (); ARTISTA (cada dedo crea diversa tinta del color (sobre: s de papel/interactivo) vía: el dispensador de la tinta en cada dedo/reacción química de los productos químicos de diferenciación tocados de la superficie w (con [o quizá algo fuera]) por el dedo, y las partes de superficie entradas en contacto con/la carga del EL (electrónico/eléctrico) o el producto químico de diferenciación de cada dedo y cómo S interactivo (la pantalla y el analizador del `adaptan el menú para las necesidades actuales de los multi-usuarios') o la otra superficie avanzada obra recíprocamente/lee cada dedo); C (adaptar características asociadas de las búsquedas de la computadora) (); CÁMARA (el monitor inteligente 2E251 sigue solamente el guante particular, porque el guante tiene: tr (transmisor) (picosegundo), cierto color); CARRO (c/el microchip = "analiza el tipo (producto químico) ocurrencia diferentemente. Tinta. Productos químicos para causar reacciones químicas de diferenciación (por el dedo)); COMPOSICIÓN (guante KN de la música); K (como guante de la música, excepto ninguì□n teclado necesario puesto que el sistema analiza cómo el dedo toca diversas superficies - KN); M (analizador, DB); MES (c); RATÓN (c); MQ (ocurrencias w5 buscadas); MULTIUSOS (); nr (el notificador alerta a usuario) (); OSCILADOR (); Banda (); R (el analizador teledirigido del `se adapta al usuario) (k); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); SYNTH (); TDS (); T (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

. - R14 aplican (capa de) este material - a la capa impermeable en las superficies duras, que pueden estar dobladas. [Instituto de investigación para las ciencias aplicadas, NK].

- El sistema electrónico permite que los usuarios doblen y de cualquier otra manera alterar la forma/la posición del (metal).

- OTD:

ACCESO: (tiene en cuenta doblar del material); ARTISTA: (crear el arte de sculpture/3D); CARRO: (); COMPOSICIÓN: (curvas/movimientos del metal según música/el oscilador); ENTRETENER: (); Banda: (cómo doblar cuando y cómo/w5); Q: (); R: (); S: (); CUENTA: (tds); UIP: ().

Estrategia de BÚSQUEDA de la PATENTE y algunos números relacionados de la palmadita de los E.E.U.U.: las perforaciones Alerter, 7G052 del PVC de 7G050 7G051 doblaron el notificador llano.

- str: (polivinilo o P.V.C. o pvc o caucho o plástico) y (perforar o rasgar o romperse o agujerear o cortar o debilidad o guante o enfermedad o investigación o laboratorio o contrato o alerta o notif).

--STR: iguales que sobre pero tienen solamente guante con el tipo perforaciones: Guante del indicador de +5317760 sellos o cubierta de cuerpo quirúrgico;

- STR también: capa multi

--+ 5204632 aparatos y método para detectar los escapes en guantes quirúrgicos y de la examinación: pero esto requiere el uso de la electricidad y relacionado, sobre todo para el uso en guantes de fabricación, o guantes del funcionamiento debajo del agua [con las manos adentro]. Esta patente puede enangostar patentabilidad de la versión electrónica de mi guante.

- Str APS 69 ' al 6.92:1] (polivinilo o P.V.C. o PVC o caucho o plástico) y al guante; 2] substituyen el guante w: la alarma o el noti [el aviso/notifica] o advierte)

- KILOVATIO H: o el agujero o el corte o la debilidad o la enfermedad o el laboratorio o la alarma o el notif perforan o rasgan o se rompen o advierten

--79 ' - 82 ': No. de la palmadita de los E.E.U.U.: Patrón de proceso de la pisada del desgaste del neumático neumático 3653422.

---4344320

- + 4909069 detecta los escapes en los guantes de goma vía uso de la prueba de inmersión del agua de la conductividad eléctrica del portador. Esta patente puede enangostar patentabilidad de la versión electrónica de mi guante.

Extensión de N. incluye no-guantes también:

- tinte (coloreado) sublime emitido sobre la deterioración (visible solamente en ciertas circunstancias, eg.: bajo luz ultravioleta, o después de la inmersión en líquido especial, eg.: agua (ciertos productos químicos de w con los cuales obrar recíprocamente (tinte))).

- el material demuestra muestras de tratar de forzar: ver la clasificación de la palmadita de los E.E.U.U. # 427/7 +

--% utiliza anti-tratar de forzar (la capa, +eg.: las demostraciones que trataban de forzar fueron hechas)

<3, 3.5, 3.5, 4, 3>

(esta N (invención) w combinado 7G050 8/95) el PVC 7G051 alerta a usuario cuando se ha agrietado, o ha doblado más allá de cantidad deseada, en la golondrina de mar que lanza la sustancia coloreada. Ver 7G050. La exposición de la sustancia interna al aire induce la descoloración.

- analogía: cortar adentro la piel, causa la sangría, debido a la exposición del aire - > cambio químico - > cambio del color (en área/líneas próximas a través del pvc/(nr = oscilador)).

- Demostraciones hasta dónde él: ha estirado ya, y o cuánto puede ser que estire más lejos antes: fractura, partiendo, no pudiendo dar más. Cada etapa del estiramiento puede causar cambios aplicables en la coloración.

CHICLE DE A2-23E: los sabores múltiples del ao realzan sensaciones de: hembra o varón del sexo w; deportes; éxito monetario; entusiasmo; felicidad; estando en la nube nueve; estando en uso de las drogas (pero ningunos efectos secundarios verdaderos) en la conjunción w (con [o quizá algo fuera]) cualquiera sobre la máquina descrita o de la terapia del producto de la serie #23, máquina de la música.

. - Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por los reactivo químicos del material w (con [o quizá algo fuera]). el nr (el notificador intenta acoplamientos

adaptables a las características asociadas para notificar a usuario) demuestra qué productos químicos eran actuales W5. Versión del EL muy impráctica. "Embolsa" de productos químicos en goma, utilizado para calcular NR. Propósitos de NR: el tipo de dolencia encontró a hospitalizado, cambios de la saliva del paciente según su salud "estado".

+-Indicator Chem A: mezclado en la goma/el caramelo/la lengüeta puesta en boca.

+--ventajas: algunos pacientes (cabrito) pueden ser poco dispuestos tomarlo a una prueba wo (con [o fuera a un cierto grado]) que está en un gum=nr condimentado o en forma = nr (duros) del caramelo. También menos repugnancia del paciente.

+--la prueba del nr demuestra a tipo la dolencia médica sufrida por el paciente debido a los cambios en química del cuerpo: saliva, eg.: niveles/existencia de (detalle): bacterias, azúcares, elementos de la sangre, y otros exámenes médicos estándar en la base de datos de la patente demostrada a las anormalidades médicas de la medida vía cambios en saliva.

+--caramelo duro: la parte del caramelo puede estar del material duro del no-caramelo (no fácilmente soluble en boca) que es la porción de NR incorporada al caramelo. Este NR está en superficie del caramelo. El Lollipop se puede también atar a NR así que la persona no traga NR.

KN VIEJO (invenciones) que utiliza el nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) funciona

COLECTOR del INSECTO A2-330: entrada posible donde el aceite o la otra superficie deslizadiza (un piel, etc direccionales) inhibe la salida. Eg.: el labio del vidrio w (con [o quizá algo fuera]) curvó hacia adentro. U del prototipo de C. Quizás insecto de la piel de la visión. Tener atracción de tentación del olor.

TD (OTD): adulto wo del MED w1 del tt S (la pantalla y el analizador del `adaptan el menú para las necesidades actuales de los multi-usuarios') (con [o fuera a un cierto grado])

Opción: el borde de la poder de basura tiene pocos dispensadores del control del veneno que el escarcho se fuerza a arrastrarse a través para ganar la entrada a la poder de basura. Los dispensadores del veneno son reemplazables para cierto tipo envases de la basura. TD: adulto wo del MED w1 del tt S (la pantalla y el analizador del `adaptan el menú para las necesidades actuales de los multi-usuarios') (con [o fuera a un cierto grado])

A3-2//. CHEQUE DE CUERPO: periódico correo adentro como chequeo físico en curso que busca cuaesquiera anormalidades que puedan necesitar pronóstico adicional. La orina (pequeños envases con los casquillos), sangre (tomar el pequeño sello agudo del instrumento-entonces, la jeringuilla con la aguja), pelo, embadurnador del ojo (para el líquido en esquina del ojo - al gritar, bostezando, siempre, para el moco especialmente al despertar) - entonces sella; heces - cuchara con el pequeño envase; Amortiguador de la transpiración (de hoyos de brazo después de la ducha antes de desodorizar); Raspador de la piel (especialmente si ver las

anormalidades); Palillo de la cera de oído (con el sellador); Raspador de la nariz (para el moco con el sellador); saliva (puesta en la pequeña tapa del envase de la boca entonces lo después de sacar, o puesta en el tipo amortiguador (con resultado-intentar rápido o lento acumular elementos particulares de la mayor importancia). Aunque quizás costoso, el rico puede comprar una cierta paz interior y o medidas preventivas. Incluidas pueden ser las instrucciones para el uno mismo - cheque - suben, eg.: pechos... Ellos o el doctor elige en los cuales muestreo al correo y a la frecuencia para cada uno. También registra lecturas del cuerpo en memoria: golpe de corazón, presión arterial... Muestra del cuerpo (r, cheque (del uno mismo) (para arriba), cheque encima de la muestra (r/s)

FOTÓGRAFO MAGNIFICADO A4-R71B DEL CRECIMIENTO: periódico pequeños crecimientos de la fotografía de bacterias, del hongo, del etc del período en un cierto plazo. Por sí mismo, el producto inhibirá ventas de cámaras disponibles normales.

Identificador del reemplazo A5-110-022004: La pieza del producto cambia color cuando el tiempo necesario ha transcurrido para el reemplazo.

- notar esto cuando una pieza cambia color, eg.: consiguió demasiado caliente o recibido demasiada frecuencia o el tipo incorrecto. El color del cambio puede significar la posibilidad de la parte de necesitar el reemplazo; su edad; el nivel de fragilidad, conductividad, elasticidad, del peso eso cambiada, grueso cambió, temperatura, etc.
- dar esto a un ingeniero químico también.
- las versiones electrónicas y no electrónicas de este producto deben ser construidas

+ tapa interactiva 6B-710-083001: La tapa advierte cuándo expiró el contenido del alimento o del producto químico, es peligrosa de abrirse, y o si la tapa necesita ser sujetada mejor.

- Control de la tapa: el sello de envase demuestra todas las veces que se ha abierto. Para activar, llaves del usuario en la fecha en la cual el alimento primero fue preparado y o insertado en el envase. Los tiempos subsecuentes ocurren automáticamente.
- propósito: frescura; hurto del alimento; los estudios en la frecuencia del uso y de éste pueden también demostrar....; cuando el artículo está de mayor renombre, eg.: Lunes, y o tardes. Algunas patentes existen en el área de la frescura del contenido vía lengüetas del indicador.
- la alarma si la tapa se abre más allá de la fecha programada original para (gente puede no hacer caso de la nota escrita, o piensa que es todavía aceptable - ésta hace psicologicamente a gente hacer más cuidadosa de usar el alimento más allá de la fecha.
- contenido: alimento para la gente, los animales, la botánica, el etc; productos químicos; medicinas; fuentes industriales; etc.
- da la advertencia verbal sobre la abertura, eg.: "esto es una sustancia química peligrosa... dirige con cuidado"

- para abrirse: levantar la lengüeta de la tapa; torcer la lengüeta de la tapa; el botón y ella moverán de un tirón abierto de la bisagra, o hacer estallar fácilmente apagado; etc
- la programación de la tapa se pudo hacer de: exterior o interior de la tapa, o del exterior la base del envase.
- otras características: memoria, "S"
- da la advertencia para poner la tapa, casquillo, tapa, sello detrás encendido si: no perfectamente en el lugar; no puesto detrás encendido después de tiempo requerido (según lo programado por el usuario)
- las comunicaciones, las advertencias y o las alarmas pueden estar vía: aviso verbal, sonido de la alarma, luz roja que destella, mensaje de "S"

+-lid puede dar el oscilador cuando está abierto, eg.: "advirtiendo - la sustancia peligrosa", la tapa del almacén del caramelo o de alimento dice "hola", "intenta por favor una muestra libre" "que advierte...."... cuando está abierto.

- el sistema se puede conectar con la escala (que pesa el sistema) que también tabula cambios en pesos con tiempos de la abertura de la tapa
- OTD:

Todos; "S"; "C"; pp; P.M.; Reino Unido; fecha; beh del usuario; educ; juguete; "mic"; portable; índice de inteligencia; t; "M"; alerter; oscilador; carro (tipo programas informáticos); "T" y o módem (usuario de las alarmas); uq; mq; acceso.

6B-690-083005 Composter: Los habitantes de apartamento pueden ahora ensamblar la cultura verde abonando sus basuras. Descompone los artículos que no se pueden descomponer en una descarga. El mejor sistema comprable en el invierno en que el abonamiento es más difícil para ésos con los jardines. Solar accionado.
- da vuelta rápidamente a los desechos del alimento en el estiércol vegetal para el jardín o para las plantas nuevamente potted, el etc. buenos para las que 1. no quiera para ir afuera para la pila del estiércol vegetal, 2. querer el estiércol vegetal en efecto rápidamente, 3. quieren guardar hacia fuera las ratas al aire libre, cucarachas
- el dispositivo especial maneja el problema de olores
- pudo funcionar en energía solar
- realizar que preparan a los occidentales para pagar los precios poco económicos valor ecológico (incluso si puede ser que sea tonto desde el punto de vista de un experto). Mirar Alemania que quiere pagar sobre $1.00 reciclar muchos del producto de consumo que empaqueta, aunque podría costar cerca de $0.03 para quemarlo o para descargar en lugar de otro. Hay muchos otros ejemplos.
- es esencial esto es solar accionado. Queremos un anuncio que diga que "dar vuelta rápidamente a sus desperdicios en el estiércol vegetal con energía solar..."
- para los artículos biodegradables: materia vegetal; el resto de la materia non-vegetable indicada por el fabricante como siendo biodegradable, eg.: plásticos, empaquetado non-paper.
- OTD:

PP; P.M.; todos; fecha; hospitalidad; Índice de inteligencia; t; alerter (cuando el estiércol vegetal es listo, etc); cartuchos de las bacterias para apresurar proceso.

% de 8B-010-083004 del localizador del animal doméstico: Saber donde está su animal doméstico. El transmisor del collar demuestra que el receptor localizan del dueño el cuarto o la parte del animal doméstico del jardín.

+ (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.

- (no electrónico): La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera.

- el collar del animal doméstico tiene transmisor, que demuestra si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la pantalla especial;

- + el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala. si el dueño está consiguiendo más cerca o más lejos de animal.

- útil para localizar a niños. Animales en parques zoológicos grandes; áreas de la naturaleza; etc.

83

- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral

- el collar del animal doméstico también tiene un altavoz del analizador del receptor..... Esto hace los sonidos diseñados para llamar el perro, eg.: "silbar", o el animal oye su nombre.

- "inclinación" y vibración "sensor": saber si animal doméstico es durmiente o caminando, etc.

- OTD:

Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; localizador; distancer

- Descifración entre los diversos animales/organismos/especie vía:

- nr aplicado a los collares del animal doméstico. Búsquedas de Nr: pulgas, gérmenes animales, demostración cómo es el animal doméstico sucio (hora para su colada).

8B-410-083008 escala Alerter: se alertan los cambios anticipados del peso se programan en el dispositivo, cualquier cambio en no-congruencia

- Alarma del peso: cuando el peso está bajo o sobre nivel de tolerancia, las alarmas. Aplicable para la cadena de producción, el estudio científico, los avisos para los cambios en peso, el etc

mezclador 8B-430-083007: cuando combinar elementos múltiples de los productos químicos, de etc, usuario primero selecciona la combinación deseada por el que el "S" enumere los ingredientes y el por ciento de qué

productos químicos/elementos para alcanzar fórmulas. El usuario entonces pone uno de los ingredientes en la escala con o sin el peso y la escala exactos necesarios entonces indica las cantidades exactas requeridas para todos los productos químicos de siguiente. Este sistema puede ahorrar una buena cantidad de hora para ésos que usan la escala con frecuencia, y es muy aplicable a las situaciones donde no está crucial el peso final exacto de la combinación.

- llaves del usuario en mezcla deseada y peso final, entonces peso exacto de cada elemento en demostrado
- el sistema determina qué producto químico allí = después está ahora mucho de cuál son necesarios alcanzar deseos como (k) indicado por u/uip-adaptan otros productos químicos.

8B-460 componen la caja: llaves del usuario en el tipo de humor que quieren crear, y o colores queridos, y u ocasión. El dispositivo del sistema o de los programas del usuario para el lugar en el cual utilizó (compone se usa diferentemente en culturas diversas, o regiones de países también)

- la programación inicial del usuario pudo requerirlos afinar en el país y el código postal de su dirección para hacer el sistema funcional. El usuario pudo seleccionar de varios compone opciones después de afinar en sus deseos (tal selección se hace de muchas maneras)

. - portable

- el usuario del fabricante pudo poder seleccionar de tipos de las tipografías, del pelo y de la piel
- negro y blanco (mono cromo) o la exhibición de color ("S") también indica que el tipo compone utilizado con o sin marcas de fábrica
- grande para las chicas jóvenes y ésas en los sus años 20 y años 30, más los que se aburran con sus miradas, y o los que amen creativo componer. Bueno para los sketches caseros (juegos)
- el usuario puede aplicarse compone en sus amigos; bueno para componer a gente de las ventas que va a domicilio (el sistema puede imprimir las cupones para la derecha compone) o que trabaja en un almacén
- música de los juegos mientras que está abierto; ENCIMA del tipo música - consigue uno en el humor creativo para poner componen

-895

- las lengüetas del nr del lugar en la cara para determinar la constitución química antes o después de aplicar los cosméticos/los otros productos químicos = sistema del interno "analizan"/nr de la lengüeta (el notificador intenta acoplamientos adaptables a las características asociadas para notificar al usuario) (ninguì□n EL) qué tipo de balance/de tipo cosméticos del pH trabajará la cara de w.

--Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por los reactivo químicos del material (de este N) w (con [o quizá algo fuera]). el nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) demuestra qué productos químicos presentan W5. Esta N copiada al agosto de 95 7G050.

- el "analizador visual", uip-adapta

Envases [las bolsas de plástico]/envases/botellas: el nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) demuestra la salida/la puntura/la otra deterioración.

Película plástica: puede ser utilizado como lengüetas. La ventaja es una puede mejorar la visión cómo la película cambió cerca: el sostenerse a la luz/mirada vía el microscopio.

Información química:
- Algunas de las familias químicas (peligrosas) (derramamiento) buscadas incluyen:
ÁCIDOS: hydrochloric+; acético; sulfuric+; nitric+.
SOLVENTES: cloruro de metileno; benzene+; chloroform+; hexano; tetrahydrofuran+; Alcoholes: metanol, propanol 2; Éteres: Ethel, butílico; tolueno; carbontetrachloride+; fenol.
BASES: hidróxido de sodio; hidróxido de potasio; aminas.
Hay muchos otros.
- Algunos de los métodos vía los cuales nr (alarma u (adaptación que busca del usuario vía)/sistema de los acoplamientos de las características') eg. los indicadores incluyen: Titulación [medidas cuánto algo está en algo, demostrando el porcentaje de elementos solicitados en material. Visualizar esto (para u) vía el indicador (3ro producto químico). Eg.: el indicador cambia color cuando los estados de oxidación de los cambios. Los estados de oxidación pueden ser accionados cuando: el aire expuso a los productos químicos (vía la penetración, el corte, la deterioración), o sobre otras reacciones químicas.
--para los ácidos y las bases: los productos químicos sensibles al cambio de pH se pueden también utilizar, eg.: fenolftaleina.

D: perforación, deterioración, PVC doblado más allá de deseado:
----------. ----------
---------- ---------- agujero/grieta de este diagrama demostrada en el área del punto del punto. Los productos químicos de diferenciación pueden ser sobre encontrado/en/entre o debajo de las líneas representadas. Las líneas representan dos (de) capas en (guante) el PVC.

<1, 3, (3-mk, palmadita 4), 3.5>
7G052 dobló el notificador llano: Hacen el usuario enterado el número de épocas excesivas y el grado de material de doblez emprendió más allá de niveles deseables. Usos: alambre, bisagras (existe?), el cubrir flexible (vinilo). El sensor electrónico analiza la situación: cuando, donde, qué, cómo algo fue doblado. Útil en laboratorios del R&D, eg.: prototipos de prueba del nuevo producto. Reemplazos costosos o peligrosos de la pieza del equipo: aeroplanos, maquinaria al aire libre, equipo de la fábrica, material de construcción eléctrico. Ahorra el el tiempo necesario para determinar la naturaleza del problema de la reparación.

. - analogía: cortar adentro la piel, causa la sangría, debido a la exposición del aire - > cambio químico - > cambio del color.

- la frecuencia intermedia cuesta para este más alto que 7G050 o 7G051

- utiliza KN (invenciones) para las piezas del PVC que cambian color cuando: necesitando la reparación, más allá de cierta edad, del etc.

objeto de valor de +-system cuando (pvc, caucho) los materiales usados no son tipo para demostrar fácilmente desgaste excesivo y rasgón, u otros sufrimientos, eg.: el daño potencial ocurre bajo superficie visible (capa externa/la guarnición del interior)

- R260 "sensor" que juzga ("analizando"/"cuenta") w5 de la naturaleza flexible del elemento, no ES.

- el objeto de los jueces w5 del sistema (el alambre/el otro material flexible) estuvo doblado. Eg.: # de épocas dobló (más allá de parámetro señalado) - > nr.

- usos: útil en la determinación del futuro posible/de las faltas actuales del sistema (debido a los alambres (rotos) culpables/a los elementos flexibles).

- del sensor búsquedas también para otras características para las cuales puede ser mirado (en tales panoramas potencialmente culpables), eg.: temperatura alta-baja excesiva; (señalado) contacto químico; sobre exposición a tiempo ()/etc. de los elementos # elemento de las épocas fue utilizado o correctamente no usado/incorrectly/at todo. Usos: previene u (adaptación que busca del usuario vía acoplamientos de las características los') del material del daño potencial (antes de aparecer encendido); forma adicional "de"/"del sensor nr".

- EL D (dibujo): el sensor = el analizador = C (adaptar características asociadas de las búsquedas de la computadora) = s/osc/data tr (transmisor) a la base de datos (m)/sw sostiene o analiza datos/la cuenta.

. - Producto químico D (dibujo): (excesivo) doblando = la reacción química (cada vez) = acumulación de w (con [o quizá algo fuera]) del residuo de la reacción química = del color/de la sustancia cambia (aspecto).

Usos: máquinas importantes/valiosas donde está preocupación la seguridad importante; aeroplanos; centrales eléctricas; redes del co del teléfono y del cable; automóviles.

Cómo los problemas identificados y o notificaron posteriormente/reconocible (nr):

- utilizar la luz especial del color (ultravioleta) para ver para los problemas - subsistencias él más difícilmente para que la gente copie/robar la invención.

- poner la parte/material en la solución especial, eg.: agua (ciertos productos químicos de w) - > con eso induciendo la reacción química - > nr: cambios del color.

- nr (EL)

- la "cuenta" "sigue" # las épocas de ocurrencias señaladas = del nr después del umbral alcanzado

- el "estado" mide ("sensor") la situación (desgaste y rasgón) = nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) después del umbral alcanzado

- OTD D1: Esta N (invención) (sistema, pvc, alambre, u) daño Alerter del PVC del ~ 7G050 del ~ C (adaptar características asociadas de las búsquedas de la computadora) =
ACCESO (); ANALIZADOR (); CARRO (); EDUC (); M (); NOTIFICADOR (); CUENTA (); SENSOR ();
+ ANALIZADOR de SONIDOS (el sistema busca los sonidos que pudieron implicar la alteración (de la negativa) del material en la pregunta, eg.: sonidos del rasgado, fricción (carencia del lubricante), quemando, el hacer estallar, rasgando), sonidos del fuego (en vientos del acontecimiento fluir en la dirección lejos del detector de humos).
ESTADO (); SYNTH (analizador de sonidos (monitor inteligente 2e010) = synth - > los sonidos de las respuestas de la manera de la banda así que de u/sys pueden mejorar "analizan" estado/qué sucedió (w5)); TDS (); UIP (); ANALIZADOR VISUAL ().

- OTD D2: Este ~ C del sistema de N (invención) (el sistema busca acoplamientos adaptables a las características asociadas) (OTD D1) (adaptar características asociadas de las búsquedas de la computadora) = ANALIZADOR (el interruptor cruje todos los datos disponibles para llegar el pronóstico); AP (); ARTISTA (); BALANCE (); BVA (); C (adaptar características asociadas de las búsquedas de la computadora) (); CÁMARA (); CARRO (); COMPOSICIÓN (); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MES (); RATÓN (); MQ (); MULTIUSOS (); nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (el analizador teledirigido del `se adapta al usuario) (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); tr (transmisor) (); u (adaptación que busca del usuario vía acoplamientos de las características') (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

+ nivel de la demostración de los vendajes (para los seres humanos, los animales) (nr) de deterioración/de edad del uso/del almacenaje. Valor: deja a doctor saber su mejor utilizar un vendaje alternativo. D (dibujo): el cuerpo = los fluídos corporales/los productos químicos animales/sudan = reacción química con uno o más el vendaje de las capas w/in = el nr (el color del vendaje exterior o interior o ventana cambia el tipo de entonado de colores situación, eg. ; sangre/edad excesivas/infection+.
- infección demostrada vía: vendar los productos químicos de w que obran recíprocamente comúnmente presentes sobre la infección, eg.: glóbulos blancos excesivos y productos químicos/cambios asociados del cuerpo (líquido). Utiliza el bacteria= " sensores ", el otro microorganismo "sensores".
--el vendaje intenta notar tantos casos de la infección pues posible pero no es la prueba completa.

PATENTAR la estrategia de BÚSQUEDA y algunos números relacionados de la palmadita de los E.E.U.U.:

7G052 dobló el notificador llano:

- STR: el #a determinado primero fijado del <replace w - #b] > (desgaste o calor o frío) y 2dos sistemas C del sistema w del <replace (con [o fuera a un cierto grado]) (adaptar características asociadas de las búsquedas de la computadora) - e, entonces cae el primer set> (exceso o extremo o más allá) y (polivinilo o P.V.C. o PVC o caucho o el plástico)
- kilovatio: más allá de (señalado niveles...), grieta

2] fijaron a: (corros (corroer/corrosión),

- b determinado: (deteriorar o doblar o doblado o flexión
- fijar c: disintegrat notic alerta del notif
- e: (caída near3 aparte) o frágil
- Kilovatio: la grieta, (tiempo) substituye, repara, roto, la rotura,

- No. de la patente de los E.E.U.U.: Método 5170654 para el alambre que dobla en tres dimensions%; 5145061; 5258205 de + color 5.411.034 cambios del condón sobre salida: Fecha de limadura: 12 de agosto de 94; Fecha de edición: 2 de mayo de 95. Inventores: Cubas de tintura. Artículo de noticias del Mercury de San Jose sobre la invención: 8 de agosto de 1995, página C1 y C2.

Extensión de N:

- el material [siendo mirado/supervisado] para [los cambios/las grietas/deterioración] puede ser w revestido: (pvc, rubberized, pintura, aleación (basada) metálica) el material de diferenciación, que puede mejor al nr (notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) sobre la deterioración. La sangría o el otro nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) puede venir de la capa/del material principal. Pudo haber una reacción química entre la capa y el material principal.

. Qué demostraciones del nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario), y cómo el sistema (el sistema busca acoplamientos adaptables a las características asociadas) reacciona a NR. Es decir:

Cómo el material demuestra (nr) (señalado/solicitado) tipo deterioración/qué sucede cuando el material deteriora:

- el material se puede sumergir en el material (producto químico/líquido/agua) (mejor) para demostrar cualquier deterioración. Eg.: sobre la inmersión - > nr.
- temperatura del aumento o de un material más bajo (durante plazo señalado)
- utilizar (EL basado) en construido/atado de los "sensores" al material. Eg.: puede demostrar si el alambre se rompió (ningunas señales que pasan a través) o el alambre consiguió débil (en un cierto punto identificable). El material de las demostraciones también puede tener deterioración cuestionable.

- Funciones de NR vía: (nuevo/diferenciando) los colores (de la sangría) (mejor) aparecen.
- el material llega a ser más o menos pegajoso: hediondo (tiene/reduce)/hace del olor o no brilla intensamente en obscuridad ni demuestra ciertos colores cuando está colocado bajo frecuencias ligeras particulares, eg.: ultravioleta/poroso (para los gérmenes, aire, productos químicos, líquidos
- la capa externa/material se convierte (excesivamente): peely (peladura), llega a ser flojo o escamoso o frágil.

Usos. Piezas para: vehículos (automóviles, autobuses, trenes, arte del aire, envío, máquinas/equipo de la fábrica (piso); equipo electromecánico; c; computadoras; equipo automatizado; t; puertas/puertas (acceso).

La definición de términos se amplió. Cualquier término se puede entrelazar normalmente con cualquier otro término del mismo grupo.

1] Deterioración: contusión; golpeado para arriba; impacto excesivo (sobre la porción de material); grieta; rasgón; rotura; doblado (más allá); doblado (más allá); deshacerse; (se convirtió también) frágil; arruga; pliegue; si el material es una cuerda: un nudo que estrangula (las señales tr (transmisor) vía la cuerda) da lugar a nr.

2] Tipo impacto: desgaste (y rasgón); calor excesivo o frío; (deterioración) más allá de parámetros señalados;

3] Más allá de parámetros: Extremo, excesivo, más allá, demasiado, el unusual%, el non-designated%.

] material 4 (de la cañería): cloruro de polivinilo, pvc, caucho, rubberized, plástico, tipo flexible capa/(del PVC, del PVC o del caucho capa externa,

5] NR, alarma: notificar (nr+); demostración; dar a conocer %; (la persona puede) aviso (deterioración); cambiar el color/la textura; cierta fraseología llega a ser visible (sobre la superficie del material principal en la pregunta), eg.: estados "reemplazo de las necesidades". + indicador. "Sensor " %

6] "estado" de cualquie deterioración "analizada", vía: productos químicos de la reacción química (entre (la nueva) presencia o lanzamiento de los productos químicos adicionales w (con o [(algo) fuera]) en el material principal; (EL) "sensores" = "analizador" = "nr"; ojo humano que mira los efectos del nr (cambio en color/textura).

7] Capa: pintura; material amortiguador; capa recubierta de goma; la espuma (dura) tiene gusto de la sustancia; capa externa. Área donde nr (no EL) que demuestra el tipo deterioración muy probablemente (sobre todo) para ser localizado.

+ el material demuestra el número de épocas, o llano del uso anterior (# de las horas/grado de uso intensivo, eg.: utilizado ligeramente o con mucha presión/tensión). Demuestra cualquier total combinada (desgaste sobre) el material (superficial) vía medios diversos. Funciones de Nr vía: medir el tiempo de los elementos señalados basados de los indicadores (la longitud del pvc del tiempo tenía contacto w (con o [(algo) fuera]), eg.: pelar los productos químicos).

La superficie demuestra la evidencia de tratar de forzar: ver las patentes con el kilovatio: plástico o cloruro de polivinilo y pisón

Los "sensores" "analizan" cómo las piezas se doblan con frecuencia (más allá de parámetros señalados).

Tipos del notificador:

- Localizado en la parte del guante usada no generalmente, eg.: cerca de área del nudillo (no mucha abrasión aquí, con todo consigue la exposición) - poner el indicador aquí.
- Localizado en la parte del PVC donde está más probables el contacto/la deterioración: capa interna de PVC en las esquinas, bordes (labio) (de envases: cajas, tapas, bolsos).
- Hay indicadores químicos y físicos.
- Inflamaciones del látex cuando está expuesto a los solventes. El guante da vuelta en jello. El guante lo absorbe. El efecto de la esponja dice u allí es el problema.
- El abrigo plástico da vuelta opaco cuando hay tensión (tirada).
- La deterioración vía los medios mecánicos (algo que causa un agujero, o el rasgón), diferencia de daño químico. Los notificadores por lo tanto de diferenciación (indicadores) son necesarios.

Otros puntos del contacto:

(a qué u puede separar el producto químico/los gérmenes). el nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) demuestra donde, cuando, qué fue separada (más allá del área/de los envases señalados). Facilita en saber los elementos w5 (extrañamente) fueron separados. (Las superficies cubiertas con el material del nr (indicadores), tipo indicadores usados se emparejan al tipo necesidad). On/in usado toda la manera de los artículos (usados por los seres humanos).

+-NR vendió en forma prescindible y se aplicó por U, o el nr (el notificador intenta acoplamientos adaptables a las características asociadas para notificar a usuario) se incorporó a/aplicado a los productos (n) antes de venta. Vendido en: latas de aerosol, aerosoles (de la bomba), forma del polvo (u se mezcla (w otros productos químicos), forma líquida (u sumerge los artículos (herramientas) en él, o aplica los productos químicos del nr sobre los artículos (herramientas).

+ partes inferiores: el nr (el notificador alerta a usuario) colocó en las partes inferiores de cualquier dispositivo que toque: molió ((de cerámica o el linóleo o el otro pvc) azulejo, alfombra, (piso, tabla) esteras/cubiertas, cemento, piedra, grava, arena, vidrio, cera de piso, madera, etc), las tapas contrarias, lavabos, los envases en los cuales se ponen los dispositivos, eg.: los fregaderos, tinas, estante basan (en gabinetes, los refrigeradores, hornos, ambientalmente controlaron (temperatura, calidad del aire) el equipo/los envases. el nr (el notificador alerta a usuario) también puesto en las superficies potenciales estos dispositivos puede tocar.

+-devices que tocan la tierra: silla/piernas/ruedas de los muebles; partes inferiores de cajas y de otra (plástico (cubierto)) cajas/cajones; apretones de goma (piernas) colocados debajo de muchas máquinas (EL).

+ las cosas comúnmente tocadas tienen NR. Demostración de las ayudas de la contaminación/de la extensión. nr (el notificador alerta a usuario) aplicado a =: plumas, lápices, teléfono (microteléfonos); manijas: puertas

(para los edificios, automóviles, sistema del EL (el sistema electrónico busca acoplamientos adaptables a las características asociadas) (puerta a ver dentro del dispositivo), ventanas, cajones, tapas, cajas, envases; Material fino largo: correas (dispositivos tieing (a los estantes)), secuencia, alambre, cuerda, cuerda, instalando tubos. Consumición de los utensilios: bifurcaciones, cuchillos, cucharas, palillos, herramientas de servicio, desgaste de cristal, (tiro lejos) utensilios plásticos (herramientas) del laboratorio, tazas de papel, envases (del almacenaje). Herramientas de la investigación: pinzas, cuentagotas de ojo, bombas, bandejas, escalas (plataforma) en la cual los elementos (peligrosos) pesaron, manijas, material fino largo, material plano. Vidrios del ojo: marcos, lentes. Joyería (KN funciones del EL de la joyería w (de KN (invenciones))

- botones (k) de los dispositivos de el/electrical: T, faxes, teclados de C (adaptar características asociadas de las búsquedas de la computadora), interruptores ligeros
- telas: la ropa, muebles, cubre, las alfombras, mantas, esteras, esteras del piso del vehículo.

Sistema de dos guantes: material adentro, con el indicador del color adentro (una cierta clase de tinta). El producto químico aparecería en el guante. (El color está allí ya). Morir muy se concentra en color. El color frotará apagado (y limpiar fácilmente).

Donde/cómo los indicadores utilizaron:

. Juegos usados como indicadores. Mecanografiar los tipos. Alguna gente utiliza varios diversos juegos por cambio de trabajo.

. Indicadores de la rueda: neumáticos/ruedas de carros (empujados manualmente); (de interior) vehículos (impulsados por motor): carretillas elevadoras (en almacenes de almacenaje químicos), neumáticos de coche. el nr (el notificador alerta a usuario) puede estar en S (la pantalla y el analizador del `adaptan el menú para las necesidades actuales de los multi-usuarios') puesto en móvil/unidad "portable", arriba en la gama visible del ojo: neumático (o neumático del accesorio to/near) = "analizador químico" = NR.

--capas de diferenciación de neumático usadas como notificadores: ver otras partes de la invención.

. Superficie (entera) cualquier cosa (equipo (químico) de la investigación, tapas contrarias, pisos, paredes, ventana (dolores), cortinas, alfombras, puerta (perillas).

Indicadores para los agujeros:

- Tinte: selecto morir por el tipo de material que están trabajando con. Las yemas del dedo pudieron ser solamente tinte coloreado w de la parte.

--rociar el caucho sobre la mano artificial para crear la guarnición interna del guante, después rociar apenas los dedos o todo el tinte de la mano w, después plástico del re-aerosol sobre guantes.

Demandas:

- el sudar en guantes hace más duro saber if/when ha habido una salida.

la naturaleza de +-wrinkled de guantes (más finos) hace notar considerar/aviso de las deterioraciones más difícilmente. Por lo tanto necesitar más que el color que cambia NR.

. --U se da instrucciones cómo poner encendido/desgaste/saca guantes, tan: hay áreas ocultadas no/fewer, usa el guante derecho del tamaño.

- explicado a otra parte

USOS:

- Las fábricas que usan los productos químicos peligrosos son más convenientes encontrar uso en los productos que incorporan indicadores determinados. Es decir los usuarios con los usos repetidos que tratan de las mismas sustancias peligrosas son más convenientes ser requerido para comprar nuestros productos del indicador.
- Los surtidores de productos químicos peligrosos pueden también ser requeridos suministrar sus productos químicos los productos químicos señalados. Esto es bastante fácil para ellos puesto que los compradores los necesitarán probablemente, y la compra del producto químico con los indicadores es un un procesador más fácil del paso para el comprador. Tipos del indicador de la muestra:

--envases [ésos el producto químico se están transportando en así como los envases adicionales vacíos para el uso con los productos químicos peligrosos para el trabajo subsecuente]; guantes para dirigir; pinturas o aerosoles para [tapas contrarias donde los productos químicos pueden ser utilizados]

COLORMETRIC/Colorimetric (deletreo?) las maneras se desarrollan sobre todo en cuanto los indicadores. Las otras maneras que necesitan más concentración son:

- Métodos bioquímicos: ELIZA {análisis amino ligado enzima}. Eg.: ciertas moléculas orgánicas que buscan tales como un anticuerpo; el anticuerpo reacciona al producto químico señalado, llevando a la notificación señalada.
- Métodos electroquímicos: Detección de escape con medios eléctricos.

. --Un circuito de la batería es un dispositivo electroquímico simple.

CONCLUYE FIILE 7G

Archivo: Piezas producto químico/7G

TÉRMINOS del INDICADOR - PIEZAS 7G

Términos y conceptos que son permutables dentro de cada grupo:

PVC: plástico, caucho, cloruro de polivinilo, %material, %glove [su contenido material, contra solamente su uso terminantemente como guante estándar]; esta n se puede aplicar a virtualmente cualquier material, eg.: vidrio, metal, madera, piedra, cement+. El PVC se puede inter-substituir (permutable) por uno o más de otras sustancias. el nr (el notificador alerta a usuario) se demuestra simplemente en tales sustancias. Polyurathane. El otro plástico tiene gusto de las sustancias que comienzan con polivinílico...

Búsquedas: ocurrencias (del tipo) (buscadas - > nr); qué necesidades de u (adaptación que busca del usuario vía acoplamientos de las características') de saber (sucedido/sucede)

NR: la alarma, "notifica", (capaz) aviso/considera (los cambios en material), advierte; (u/sys) puede identificar el tipo problema; cómo problema/ocurrencia demostrada; se demuestra qué

> prueba para los cambios en el PVC: poner el material in/under seguro: productos químicos, líquidos, luces/frecuencias de la radio de sonidos...; % leyeron la lengüeta; % consideran el tipo nr

> deterioración (del pvc): la perforación, rasgón, rotura, agujero, corte, debilidad, grieta, deshaciéndose, corrosión, puntura, se rayó, las capas externas deterioradas, cambios en el color%/textura/contenido/fuerza/flexibilidad

Excederse (parámetros): % alteraron más allá de niveles deseados vía: el estirar, doblando, el torcer, tirando; % entraron en el frío excesivo del contacto w, calor; % entraron en los productos químicos (ásperos) del contacto w (con o [(algo) fuera]), bacterias, moldes; % de los ambientes/aplicaciones ásperos.

Producto químico "A": Producto químico del indicador; % del primer producto químico; indicador - en eso su usado para indicar la presencia algo, y ése que no es necesario el nr (el notificador alerta a usuario) sí mismo, nr (el notificador alerta a usuario) podría ser algo que los resultados después de la reacción química - ver "C"; el producto químico diseñó ser pvc usado de w; producto químico que está en el pvc antes de la reacción química señalada. % del producto químico inactivo "Secundario-UNo": algo acciona su reacción w que acciona el agente más adelante a tiempo. Quím. (abreviatura para el producto químico).

Producto químico "B": Accionar el agente; % segundos del producto químico; agente nuevamente introducido (producto químico); el producto químico que viene en alguna parte adentro del ambiente y reacciona con el producto químico A [que era pvc de w anterior]. % el Reactivo-b - uno o más de los productos químicos en la sustancia buscada que reaccionará el producto químico "A" del w= (Reactivo-UNo que preexiste en el pvc). Analito: producto químico/ocurrencia buscada/para qué "se está analizando".

Producto químico "C": NR; reacción entre el and= "B" de los productos químicos "A" - > "C". Secundario-c: secundario-UNo químico reacciona el nr (Secundario-c) subsecuente del causing= de la reacción del causing= del producto químico C de w (adaptar características asociadas de las búsquedas de la computadora); la razón es el producto químico C (adaptar características asociadas de las búsquedas de la computadora) puede en sí mismo no ser bastante para coger color de notice/nr/change.

Archivo: Categoría/producto químico/7G Techie

ARCHIVO 7G-TECH

TÉCNICO - tipos del indicador:

. Indicadores químicos del uso casero para: limpieza; pintura; reparación del equipo (los productos químicos en dispositivo pueden venir sobre las manos); uncloggers de la pipa (Draino); etc.

. El cultivar un huerto: Detecta los pesticidas, eg.: aldrina (tratada con cloro), (tratada con cloro) dieldrina; fosfatos orgánicos: ataca el sistema nervioso; familia de las clorinas del órgano: aldrina, dieldrina, el DBC%, PWB (no pesticida sino dañoso); carbamatos; herbicidas ácidos fenoxis; otros productos químicos (comúnmente) encontraron para combatir insectos/crecimientos indeseados de la planta o del microorganismo; otros productos químicos.

(a) Benzo pyren: en el humo (cigarrillos, automóvil, filetes); hojas del asfalto. Éstas son hidrocarburos aromáticas polivinílicas. Causa el cáncer de piel.

. Desechos peligrosos: gente en desechos peligrosos. Tales empleados pueden demandar para las granes cantidades si los exponen, por lo tanto pueden cargar mucho para los guantes/los envases especiales. Eg.: metales peligrosos. SW846, y ésos mencionados en la metodología de la prueba de EPA, eg.: productos químicos volátiles y semi-volátiles.

. Farmacéutico: eg.: la droga de corazón consigue en piel mientras que hace el R&d.

. Mezclas orgánicas ácidas del cloruro: el indicador puede prestarse probablemente mejor con el elemento del cloruro en mezclas orgánicas del cloruro. Ácidos concentrados (pH extremo).

- indicadores de pH: el indicador puede indicar solamente cuando el pH se ha excedido o ha entrado dentro de un parámetro señalado. Diversas partes de pvc (guante) tienen indicadores de diferenciación (pH) el demostrar de las ocurrencias w5.

- indicadores de papel: colocado dentro del guante (existe), o del envase.

. Indicador fluorescente: menos práctica, una cierta clase de luz sería emitida sobre contacto.

. Agentes carcinógenos: cloropreno; productos químicos radiactivos; M.I.C. ; benceno.

. Indicadores mecánicos de la violación:

- los productos químicos en los plásticos = y reaccionan el aire de w:
permanganato de potasio (oxidante); nitratos (nitrato de calcio); productos químicos oxidantes orgánicos (chlorobenzine, nitrobencina).
- Ocurrencias comunes: indicadores de la necesidad para apuntar las situaciones comúnmente de ocurrencia que usuario alerta: contacto indeseado, deterioración del PVC. Esta manera pocos tipos de guantes se puede fabricar para cubrir una gama más amplia de ocurrencias posibles. Las mezclas químicas de diferenciación pueden a menudo tener productos químicos comunes/similares para los cuales los notificadores sean necesarios. Los notificadores para el oxígeno, la clorina, los cambios en agua, los cambios en el pH, el etc. cabrían esta cuenta.
- Metales (peligrosos): mercurio, plomo, cadmio.
% (dañosos) de los gases.
material de +Radioactive - materia orgánica radiactiva: los indicadores son específicos a ciertos isótopos: + C14: (esto es más probable trabajar porque emite más energía, etc.); P32; H3; isótopos del yodo, del etc; alfa-emisores; emisores beta.
- productos químicos misceláneos: cianuro; arsénico; fenoles.

Indicadores - misceláneos:
- los materiales de emisión de gran energía (radiactivos, C14) podrían causar el cambio en el estado de oxidación de indicadores químicos orgánicos específicos. Los emisores de una energía más alta son también más peligrosos, es decir: más probablemente penetrar la piel y estropear internada una vez en cuerpo.
- Los oxidantes pudieron ser demasiado de gran alcance como indicador.

palmadita no 5.411.034 de +US: El condón cambia color sobre fractura. Mid-1995 publicado.

Productos químicos buscados:
- excreciones de la sémola
- productos químicos que causan los alergies, asma.

Archivo: Producto químico/7GN

MÁS NUEVAS NOTAS del INDICADOR 7G050:

Necesidades de ser organizado con el archivo principal por categorías sujetas.

Misceláneo:

- el pvc incluirá ideal los indicadores para los productos químicos diversos. Tan si se hace cualquier un tipo químico contacto = nr (el notificador alerta a usuario) = activado.

- las características (deseadas) del plástico pudieron ser perdidas al mezclarse en indicadores. Por lo tanto el plástico-tipo correcto sustancias es necesario trabajar con los notificadores señalados/tipo productos químicos/situaciones que se espera el pvc que puede entrar en contacto con. Eg.: Los guantes utilizaron cerca de los ácidos concentrados utilizan los plásticos diseñados para resistir la corrosión ácida mientras que mantenían flexibilidad y un sentido del tacto, mientras que pudiendo incorporar indicadores de pH.

- edad del guante demostrada por cuánto recogió la suciedad sobre guante.

. - costes de desarrollo mínimos: +/- $1.000.000, si la persona fijó ya. Incluye: garantía de calidad, viajantes de las ventas, servicio de atención al cliente.

. - algunos guantes son $80/pair, usando un par al día.

- Trabajo de la radiación: puede utilizar cinco paga por el día, $50/pair, por trabajador.

- para el nr (el notificador alerta a usuario) cuál es sensible al tiempo (sobre la exposición (al aire/al agua/al otro producto químico)) su tarifa de la eficacia disminuye (rápidamente) a tiempo): u (usuarios que buscan la adaptación) escribe sobre el uso señalado comenzado, u (usuarios del nr del tiempo del lugar (el notificador alerta a usuario) que buscan la adaptación) lleva a cabo (algunos, cubierta del indicador) la lengüeta (cuando comienzo químico del reloj de la fecha).

- guantes/producto químico de la oferta de los condones/etc (tentativas) sensibilidad y destreza y elasticidad asombrosas (vueltas, puntura y de la resistencia y de la oferta (adicionales) de abrasión a la forma original después de la deformación (tracción, doblando)). (Eg.: como el guante existente llamado N-Dex).

- Edad de la sustancia (alimento, producto químico (cambios en un cierto plazo)) mantenido envase = nr: demuestra edad/cuando está expirado. KN. Las patentes para iguales/los indicadores relacionados existen.

+-Sweating: los guantes permiten más respiración, reducen el sudar; la guarnición interna absorbe el sudor, guarnición interna: (tela) material absorbente/polvo (talco-como). Material = nr internos.

--Respiraderos contra sudar: las salidas de aire del EL (el sistema electrónico busca acoplamientos adaptables a las características asociadas) se incorporaron a los guantes que reducían sudar: cubre todos/la mayor parte de el guante [diversos lados del dedo, de las áreas de la palma, de la ventaja]; sensitivo al contacto/las partes importantes del guante puede ser el respiradero del wo (con [o fuera a un cierto grado]) (tubos) para reducir el trabajo de interferencia w.

--el aire se empuja vía la bomba (entre los nudillos/muñeca y codo, quizá en las partes del cuerpo superiores) en los tubos finos (flexibles). Ser sale vía otros tubos/agujeros (en guante superior).

--estos tubos pueden también llevar (algo de) señales del EL to/from los "sensores" en la versión del EL de este N.

- la elasticidad estira más que otros guantes a: manos clasificadas de diferenciación aptas con el discomforture mínimo para tamaños más grandes de la mano; doblez (de dedos).

+-structure del guante es tal que cuando su mano sacada (después de uso/de la deterioración largos): su más duro volver sobre la mano/el nr (el notificador alerta a usuario) (también) aparece en la guarnición interna de guantes (especialmente donde la mayoría del visible - las palmas/ventaja).

tamaños de +-hand: los tamaños de la mano no necesitan apenas conseguir más grandes con las mismas proporciones, puesto que algunas manos (de las razas humanas de diferenciación) se proporciónan diferentemente.

- los guantes pueden ser lavados. el nr (el notificador alerta a usuario) demuestra que principio/deterioración de menor importancia (corrosión) - > guante de las coladas de u (usuarios que buscan la adaptación) apagado - > pudo continuar reutilizando (si caja fuerte).

- el diseñador coloreó guantes: solo o multicolor; patrones. Las diversos partes/colores de los guantes/plástico/superficie pueden representar notificadores de diferenciación (NR).

- los guantes pueden subir a la muñeca, a un brazo más bajo, o a cualquier distancia hasta hombro.

- Arrugas en guantes: los guantes diseñaron reducir el número de arrugas.

ajustador N del tamaño de +-Glove: el chisme mide tamaño y proporciones de guante. Poner la mano sobre diagrama. El diagrama tiene tamaños múltiples del guante el conseguir más pequeños dentro del tamaño más grande siguiente del guante. U sabe su tamaño considerando qué tamaño/tipo ellos completamente/parcialmente cubierta con su mano (ungloved). El valor incluye: teniendo ajuste correcto tan: reducir al mínimo las arrugas, mejores ven cualquier color el cambiar de NR.

- localización de la frecuencia intermedia: en los E.E.U.U. porque países más bajos del coste laboral pusieron hacia fuera las mercancías de baja calidad. El control de calidad es muy importante en la fabricación esta N.

+-gloves vendió en los repartos de paquete w cierto otro n/sys, eg.: donde está la seguridad durante el uso de n/sys en la edición. Los guantes señalados pueden también ser recomendados simplemente. Los fabricantes de sus propias invenciones/productos pueden reducir sus ediciones de la responsabilidad por la fabricación de un producto recomendando el uso de los guantes dichos.

Trabaja conjuntamente con otros pvc's/n/%sys que demuestren los cambios realizados a su superficie. Las fórmulas químicas usadas son compatibles/trabajo mejor juntas. Eg.:

- KN: cambio de los colores por presencia o carencia de: calor, (sol/bulbo) luz.

- color del color del cambio de los plásticos (llegado a ser blanquecino) sobre la tensión excesiva (el estirar, doblando).

- indicadores químicos: balance del pH

% de las gafas de sol de la polaroid

% de la protección ULTRAVIOLETA (capas sobre: vidrio, lentes)

% N ()/sistema de la invención: Nr demuestra qué tipo de producto químico tocó cualesquiera (bastante firma, eg.: el plástico, del nr del metal) N. % (el notificador alerta a usuario) permite que u (usuarios que buscan la adaptación) determine el w5 del contacto químico. Este acceso de la invención da simplemente situaciones del ejemplo.

+ nr (el notificador alerta a usuario) = (véase a través) ventana: los cambios del indicador se pueden ver a través de ventanas en: envases (donde está opaco el resto de la pared/de la cubierta), paredes, los tanques, tinas, tubos de prueba, tazas, tubos de prueba, cubas. Cambios de la claridad de la ventana a la reacción del indicador del fósforo (chemically=/electronically=).

+ demostraciones del nr (el notificador alerta a usuario) cuando el producto químico de %any toca el objeto de %any: Las ayudas de NR determinan lo que tocaron dos (portable) %products el eachother. NR enlaza el material bien en con el cual se coloca/se mezcla. Contactos del ejemplo:

- los topes del vehículo (coche, autobús, barco) actúan ambos como nr y también emiten los productos químicos (etiquetas) que se dejan en el otro producto. Cada vehículo/producto (tipo) tiene poseer etiquetas químicas.

--utilizado cerca: investigadores; policía en la determinación de los accidentes (atropello y fuga (coche al coche o coche a otros desplomes derechos del objeto (postes del teléfono, edificios, cercas, parquímetros)).

- impresiones del dedo (existe en un cierto nivel). Artículos tocados W5 de las demostraciones.

- impresiones del pie: marcas del zapato (el frotamiento de las plantas del pie (hechas de tipo del pvc) - > obra recíprocamente químicamente con el indicador en piso. Inmediatamente/después de las demostraciones de NR de un producto químico posterior (indicador) se aplica al piso. Indicador: reacciona el material típico de la planta del pie del zapato de w.

- el área de la superficie (piso) no tocada (caminado encendido, efectuado, alterado) tiene color de diferenciación de qué no recibió ninguì□n contacto. El revés de los indicadores que buscan para los puntos del contacto. El contacto hizo causas = la reacción química que no aparece en indicadores factibles, por lo tanto el sistema reverso se puede utilizar en tales casos.

- cambios en calidad del aire, eg.: productos químicos en aire: contaminación, sulfers, ácidos, toxinas. El aire = entra en contacto con = superficie cualquier cosa (kn).

- who/if cualquier persona, donde sentado/cuando. Productos químicos de telas de la ropa, o de porciones del contacto de piel de muebles: parte inferior, resto del brazo.

. - el plazo cualquier sustancia se ha mantenido envase. Eg.: alimentos: (las bebidas, el café, el té, las sodas, el vino, el otro alcohol, jugo, agua, leche), los vehículos, carnes, harina basaron los alimentos, frutas; productos químicos o laboratorios/pacientes médicos/laboratorios.

los productos químicos de +-wrong pusieron en el envase (vertido, insertado, inyectado) (para el almacenaje, el "analizador químico"). las demostraciones del nr (el notificador alerta a usuario) = sacan tratar de forzar, eg.: colocando las toxinas en almacén contradecir los productos de los bandidos. Para a gente de reutilizar los envases por razones incorrectas: la seguridad, toxicidad, envase no pertenece para tales usos o no diseñado

contener tales materiales peligrosos. Los envases del material peligroso pudieron tener NR el aparecer cuando el material peligroso que fue diseñado para fue insertado en esto - entonces la gente/security/u sabe: el envase derecho/llenó hasta o debajo de nivel/de bandido señalados no robó el material (peligroso) vía el envase incorrecto (tales envases pudieron ser además duros de conseguir (y también tener ciertas insignias sobre eso).

- Presión de aire/velocidad del viento/barómetro/altitud = nr.

- sudor de: seres humanos, animales, rocío (humedad condensada del aire)

- grasa, aceite (tóxico, comestible, vehículo/petróleo basado). Propósito: el toxity, evita el deslizarse (cuando nr en piso, el cemento).

- presión puesta sobre la superficie: pluma de la escritura (w cualquier papel entre la pluma/equipa y emerge difícilmente w=nr).

+-NR colocado en los cosméticos (maquillaje): colorete, paquetes de la piel, sombra de ojo, lápiz labial, rimel, cremas hidratantes de la piel, protecciones solares, chapstick, otras cubiertas de la piel. el nr (el notificador alerta a usuario) enlaza la piel bien de w. Existe: remiendo patentado para NR cuando u que consigue cerca de etapa de la quemadura.

+--el aerosol de pelo/el acondicionador del pelo/el otro elemento ese pelo = nr de las capas: u (usuarios que buscan la adaptación) descubre si los productos químicos indeseados aterrizaron en la cabeza/los pelos de la piel/del abrigo de pieles. Nr enlaza el pelo bien de w.

- lente de contacto: productos químicos de usar más allá de plazo = de nr señalados: la coloración ocurre, u considera aumento (del menor de edad) en opacidad (coloreada).

- (planta de la casa) suelo (potted) = llano del contenido en agua (agua del por ciento) = nr.

- etiquetas (pegadas sobre superficies de n) = nr

NR para las piezas del producto demuestra cuando/cómo la parte excedió parámetros deseados, eg.: la temperatura, doblando, contenta w/in que el pvc revestido ha deteriorado o efectuado de una cierta manera indeseable. KN (invenciones) - piezas del directorio A5 incluyen:

- mangueras de goma, instalando tubos

- los alambres eléctricos cubrieron la capa de w

- la capa se aplicó a cualquier superficie de: calentar el material conductor (metálico), partición.

Búsquedas de NR del condón: Productos químicos en líquidos de la vagina de la mujer: acidez de la vagina de la mujer, fluídos corporales; Productos químicos de la saliva. ¿Existe en la patente de mayo de 95 concedida a Beckers?

(Señalado niveles de) la suciedad acumuló sobre nr de los disparadores del pvc. las búsquedas del nr (el notificador alerta a usuario) señalaron la suciedad de los productos químicos w/in, eg.: humos (del automóvil),

(hogar, tela) polvo, suelo, (suelo, alimento, hogar, agua) líquidos químicos/excreciones del microorganismo. La superficie acentúa el nivel de suciedad/de productos químicos que entró en el contacto con (incluso si no hay indicadores (fuertes).

NR: detecta los escapes emitidos de los envases. Quizás los escapes se fuerzan hacia fuera vía la presión (excesiva) del envase/del frasco. Grietas.

+ metal cerca () de la prisión/N (invención) (kn) de las barras = es la capa cubierta de w que cuando el corte/abrased - > nr: eye los colores/los olores de cogida/la otra forma del notificador [7G].

+ las trampas de la tubería, de los fregaderos, y de la pipa tienen NR. Propósito: alarmas si alguien intenta limpiar abajo el material con un chorro de agua peligroso. D (dibujo): u = poniendo el material peligroso abajo drena/pipa/tocador/fregadero/calle-canal/corriente/el tanque = nr (el notificador alerta a usuario) ("sensor") = sensor "analizador" = C (adaptar características asociadas de las búsquedas de la computadora) = nr (el notificador alerta a usuario) (el oscilador, t=police/management/security, flujo líquido (del agua) paró/tapado (inmediatamente)). "Cuenta": los niveles limpiaron con un chorro de agua abajo (en un cierto plazo).

U puede aplicar ciertos indicadores sobre el material (plástico). El indicador empareja el agente químico buscado. El plástico se diseña para trabajar w una gama señalada de indicadores. Esta flexibilidad es provechosa para researcher/u. También ahorra el tiempo del u en no tener que imaginar si obra recíprocamente el plástico favorable los indicadores de w. Frecuencia intermedia: cubrir simplemente los indicadores sobre de productos del estante, después hacer los moldes para los productos disponibles si las ventas son altas.

Si los indicadores son un problema en: deteriorando el plástico, no pegándose a las superficies, a las coladas apagado demasiado legible, al etc. señalados. Uso: un producto químico intermediario entre el plástico y el indicador. El producto químico intermediario puede actuar como: pegamento, neutralizador (no efectuará tan negativamente (deteriorar) el plástico/la otra superficie, da el indicador/el plástico otras características deseadas.
- el producto químico intermediario puede ser: tinta/pintura/esmalte del color; o el producto es solamente producto químico intermediario vendido de w, después u (usuarios que buscan la adaptación) aplica el tipo indicador necesario para las funciones señaladas.

Los nódulos que pegaban la superficie exterior pudieron romper después: abrasión, juego duro.... = productos químicos de los lanzamientos que reaccionan indicadores de w en (otras partes de) superficie = nr. Accionando necesidad de los productos químicos de ser insertado en estos nódulos.
- puede simplemente estar un recordatorio al usuario a tener más cuidado en el futuro para ese producto particular, o llega a ser quizá inoperable después de que el indicador aparezca.

Los plásticos permeables al aire (guantes) pueden ser más usables si hay un nr en el lugar. Puesto que u (usuarios que buscan la adaptación) puede quitar guantes antes de que esté señalado los productos químicos entra en el contacto de piel. Los usos limitaron.

+ derramamientos sobre el borde cuando: el envase llenó al colmo/cuando tapa colocada encendido. Una tira/un área de la barra apenas debajo del borde de la tapa (en fuera del envase) tiene el indicator/nr.

+ biodegradando: u (usuarios que buscan la adaptación) aplica los productos químicos al material (plástico) cuando está listo para la basura/biodegradar. el nr (el notificador alerta a usuario) demuestra si se han conducido los productos químicos necesarios/proceso: completamente/a todas las partes de plástico, entonces permitiendo que u disponga del plástico por consiguiente.

+ indicadores de los condones: funciones del nr (el notificador alerta a usuario) en demostrar la probabilidad creciente de la fractura, aunque ninguna deterioración pudo haber ocurrido necesario.
+ - indicador del Pre-uso: demostraciones del nr if/when el condón fue utilizado previamente. El objeto de valor así que la persona sabe que su socio no está suministrando un condón usado, y también que reduce a gente de la probabilidad intentará reutilizar los condones.
- tecnología: presencia de probable contacto químico - > nr (color de los cambios). Los productos químicos probables para accionar el nr incluyen: líquidos vaginales, esperma, líquidos de la pre-eyaculación del hombre, productos químicos de la piel, lubricaciones no humanas usables para el sexo (petróleo y no petróleo basado).
+ - longitud del uso: los condones se substituyen mejor después de cortos períodos de tiempo.
condón de +-Was usado antes: los indicadores del pre-uso pueden entrar en efecto después de que el plazo señalado de tal producto químico apuntado entre en contacto con.
- los condones (especialmente de la variedad estirable, que necesitan estirar antes del uso del hombre) pueden demostrar en un cierto plazo NR porque el condón ha estado en un estado estirado más allá del tiempo señalado.
--el estirar - > causa reacciones químicas - > NR
. Indicador abusado del condón: demuestra si fue abusado de cierta manera, aunque pudo no haber deteriorado necesario, eg.: cabritos usados adentro como un globo del aire o de agua; el estirar o experimentación excesivo (manos de w).
la materia prima de +-Petroleum (lubricantes) ha tocado el condón - > NR. Tales productos químicos deterioran los condones, por lo tanto necesidad de usuarios de ser recordado vía NR. U utiliza a menudo unknowingly los lubricantes incorrectos. O demostraciones de NR si el spermicide deseable o el otro antibacteriano - el agente viral es /are no presente, por ejemplo en la lubricación o el condón - los 3ultimos dos puede tener los indicadores necesarios.

NR colocado sobre las partes del cuerpo humanas:
+ colocó en/debajo de los clavos del dedo/del dedo del pie (del ser humano). Debajo de las uñas mejorar el contacto/la acumulación químicos peligrosos de las demostraciones. el nr (el notificador alerta a usuario) puede incluso brillar intensamente en obscuridad - así que u por lo menos la considera cuando se van a la cama.
- piel

NR también demuestra contenido: mecanografiar los productos químicos (el por ciento cuyo los ingredientes); volumen; peso (escala); nivel de calorías (para la consumición del ser humano o del otro organismo); temperatura (KN en dir de G, eg.: termómetro de la cuchara).

Analizador del índice de alcohol: el nr (el notificador alerta a usuario) determina el por ciento de alcohol poniendo la lengüeta en líquido. Ejemplo: usted está en el partido y no seguro de índice de alcohol, o el restaurante de la sensación le está engañando dando una bebida aguada. 7G050.

Contenido del líquido "analizado" vía: NR-Lengüetas 7G050. Eg.: demuestra niveles de información alimenticia valiosa.
- Tecnología: la información alimenticia incluye: todas las vitaminas y minerales sabidos necesitaron para la consumición humana.

Los productos existentes se diseñan a menudo para resistir cambios del color sobre ciertas ocurrencias, eg. contacto (excesivo) con: luz, calor, serenidad, (común/peligroso/otro) productos químicos. Sin embargo los agentes químicos de inhibición en los materiales dichos se pudieron reducir para demostrar un mayor nivel de cambio. El grado a el cual se reducen tales agentes corresponde a la velocidad a la cual NR demuestra tales ocurrencias sucedió.

Sistemas de la generación de las fórmulas:
Software usado en las fórmulas el convertirse/el analizar/evaluación para el alimento, la química, los indicadores, el etc.
- el uip de la función deseada es el matched= w uip de elementos/de ingredientes/de productos químicos/de elementos de diferenciación del alimento = dando por resultado fórmulas de los ingredientes que pueden (mejor) alcanzan meta deseada.
--las características de la meta son tied= vía uip = a las características de ingredientes disponibles/sabidos o (KN) sistema.
+ partes importantes: UIP-Adaptar, 7G050, banda, Pista-Analizar (analiza para cuál es el mejor de seguir = DB), inspirándose el interruptor, 2E010 20 30 40 50 softwares de la receta.

. Ejemplos:

1] desarrolla un nr (el notificador alerta a usuario) = alertando la presencia de sales/de ácidos/de elementos peligrosos = de in/for: líquidos/polvos/contacto de la superficie.

2] El otro 7G050.

el sistema de 3] interruptores (software adaptado `) puede ayudar simplemente a u (usuarios que buscan la adaptación) ofreciendo posibilidades sugeridas: fórmula/equipo/fuente de información (material de referencia,) en línea/tipo de las fuentes experimenta.

4] UIP-Adaptar = UIP-DB: ajusta a las necesidades del u.

5] La constitución necesitó en resinas plásticas/metales/la cubierta del producto ("cm", el "cp") o piezas, porque = tolerando niveles señalados de: el estirar, doblez, tirando = dentro de ambientes señalados de la variación (extremo): temperaturas, luz, abuso, desgaste excesivo, plazo del uso del elemento (edad de N).

6] Estrategia de búsqueda de la patente: software y (fórmulas o receta o ingrediente)

7] Farmacéutico: ingredientes que se convierten para las drogas; ideas para la investigación.

8] El software diseñó simultáneamente ayudar a investigadores aumenta su (relacionado sociológico, psicologicamente) creatividad: KN

- "Banda": el interruptor (software adaptado `) (con referencia a) se programa = según lo controlado por el UIP; el programador puede ayudar a dirigir/interruptor del control.

. OTD D (dibujo): u (usuarios que buscan la adaptación) = este ~ C del sistema de N (el sistema busca acoplamientos adaptables a las características asociadas) (interruptor que sugiere fórmulas) (adaptar características asociadas de las búsquedas de la computadora) =
ACCESO (); ANALIZADOR (); CUENTA (); CARRO (); EDIT (); EDUC (); MULTIUSOS (); Banda (); Q (); RANURADOR (); +SCORE (dado a cada aspecto = atado a cada elemento de: ingredientes de la meta y del potencial); SENSOR (7G050); ESTADO (); TDS (cuentas de retraso de tiempo en conseguir efecto de NR); PISTA (historia (producto químico/alimento) de los experimentos anteriores conducidos cerca: u, cuerpo de organización, DB, m); U (investigador, estudiante = "educ"); UIP ().

- Nota: las referencias en otras referencias del estado de las invenciones (no dentro del archivo 7G) a menudo apenas a 7G, pero en actualidad deben hacer las referencias a la familia 7G050 de indicadores, eg.: N que cambia color en su superficie de la no-pantalla por cualquier razón.

Movido desde 1G200

<Pat: AUTORIZACIÓN, 4>

cambiador superficial del color +1G200: Ésta es N grande, ampliada especialmente en otros archivos desde 8/95. Ver 7G.

Los colores cambian según luz o la temperatura, ayudando mantiene temperaturas deseables [el blanco es más fresco que negro] para: 1] Azoteas: pinturas, azulejos, alquitrán y grava; 2] Tarps, tiendas; 3] Pinturas para: casas, marcos de las carteleras que consiguen la atención cambiando color; 4] Tela: ropa, cortinas - ayudando mantener las temperaturas deseables.

- el color de los cambios por la estación (oscura para el invierno, la luz para el verano) a ahorrar en la calefacción de interior/el enfriamiento cuesta. El color se cambia químicamente (vía gota en temperatura o de la oscuridad o de la luz). Productos químicos en: pintura, o material de cubierta flexible, o hecho en superficies expuestas de materiales, eg.: material de material para techos.

- esta N copiada a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verlo para las actualizaciones.

. - Azotea de la temperatura especial/del material sensible a la luz, del material duro (plástico, esmalte de la arcilla, capa de metal (esmalte). - Cambiar el ^via del color: capa (fácil)/aerosol (color cambiante como con el camaleón, que puede ser cambiado de nuevo a color anterior).

--cambiar el color (%nr) vía el rf o la otra emisión

--¿ésta es una más vieja N los míos?

- Azotea de la casa de perro: más fácil poner, manteniendo temperatura más cómoda para cualquie tipo animal doméstico.

- Venta N en formas de: unidades separadas del azulejo, lonas, pinturas, esmaltes, mezclas con alquitrán (y grava)

- Usos: azoteas, caminos, calzadas, cubiertas, exteriores del vehículo, maquinaria o equipo usados al aire libre;

¡++ cómo los indicadores ayudan a guardar el calentador y el refrigerador - OBJETO DE VALOR de los usuarios!

las azoteas del color de ++Darker [el color consigue más oscuro en temperaturas más bajas] atraen calor. Inversamente, en tiempo caliente, el color de la azotea llega a ser ligero, dando por resultado una cierta reflexión del calor.

+--Conductos de la HVAC con la exposición luminosa al aire libre: ellos a algu□n en/fuera del calor de la transferencia del grado de edificios. Puede también cubrir tales accesorios con el material de aislamiento (pvc relacionado, o el otro material) la entrada en del contacto con los elementos/las temperaturas exteriores.

+--ropa: capas, sombreros, zapatos - guardando el calentador de los usuarios o más frío según el ambiente (al aire libre/temperatura del cuerpo, luz (al aire libre));

+--carteleras (al aire libre grande): conseguir más atención por su color cambiante hasta de las maneras 20+ según ocurrencia de diferenciación nivela (luz/humedad/contaminación de la temperatura (de productos químicos señalados, eg.: monóxido de carbono, mercurio, plomo) - usado por control de la contaminación o firmas del filtro de aire).

+--Cubiertas de arriba: azoteas, tarps, cubiertas duras (al aire libre) de la tierra superficial

--Misceláneo: subacuático; cuando el dispositivo se quiere ser menos sensible (brillante en el día a mezclar con la arena, después la obscuridad en la noche para evitar reflexiones de luces de destello....); paraguas; bolsos; computadora (cubiertas) usada al aire libre; (público) t; pabellones (en las entradas del edificio); tiendas; tarps; paracaídas; travesaños de la ventana; protección satinada de la ventana (w usado o wo (con [o fuera a un cierto grado]) contra: Traspaso térmico ULTRAVIOLETA, (pérdida de calor en invierno), sonido) - la ventana cambia color en las ocurrencias señaladas, más que se convierte/menos opaco también; paredes (de casas, de divisores);

+-this N es similar a/los elogios/sinergiza (de ventajas al punto de vista del usuario) notificadores del PVC 7G050 de w (con [o fuera a un cierto grado]). Eg.:

--tipo de luz (el nivel de intensidad (como mensurable por el fotómetro)/el nivel del calor determina llano/tipo del cambio del color.

--NR demuestra la combinación de tipo productos químicos y o tipo luz/calor, y longitud de la superficie de las épocas tenía tales/cualquier ocurrencia señalada.

--las lengüetas utilizaron a los niveles de la luz/de temperatura de monitor

--"sensor" = "analizador" = C (adaptar características asociadas de las búsquedas de la computadora) = NR

. - utilizar los productos químicos sabidos que cambian color por consiguiente, y que pueden ser reutilizado por 3 o más años, y mantener la forma bastante constante en condiciones atmosféricas adversas.

Impermeable/flexible (puede ser aplicado a (el pvc que cubre))productos químicos de la pintura de /for.

. --un ejemplo limitado: productos puestos para medir la tensión humana: la temperatura del cuerpo más bajo significa la tensión y crea diverso color (sobre el material de hoja) que normal o temperaturas calientes.

- el material cambiante del color se puede aplicar a: los coches, piscina basan, arropando, las máquinas de los productos (teléfono, el expendedor, las bicis, los etc al aire libre)

- D (acoplamientos asociados de la búsqueda del dibujo): el calor/la luz = reacción química = color cambia

- D (acoplamientos asociados de la búsqueda del dibujo): calor/luz = "sensor" = señal del tr (transmisor) al material que cambia color.

- esto puede (también estar) (sobre todo) solamente una invención química.

- copiado para mejorar el archivo 1.95 de N

- esta capa especial se aplicó a cualquier producto donde está necesaria su temperatura ser refrigerador o calentador guardado mientras que en sol la otra luz.

- técnico: los cambios del color debidos encenderse están en fotoquímica; los cambios en temperatura son área de la química física de termo...

+ ajustes con 7G

. aplicarse a:

+ (edificio, vidrio, pvc) ventanas: pintado/otro el tipo cubrió color del cambio de las superficies.

+ muebles (al aire libre): evitar el daño del sol/exceso del calor (más fáciles sentarse en el metal/los muebles plásticos).

- capas de cuaesquiera otros productos: K; cubierta del producto ("CP", "cm" (según lo mencionado en KN));

- actúa como camuflaje: el elemento cambia color

persianas de +-venetian: permite en luz, con todo la visibilidad de los límites de los forasteros que tienen capacidad de mirar adentro.

--Si u (usuarios que buscan la adaptación) quiere bloquear la luz entrante durante día, pueden volver simplemente las persianas la otra manera.

--Solamente la luz del exterior altera color/la opacidad de persianas. Eg.: la luz de interior (diversa frecuencia ligera de w de la luz del sol) no efectúa el cambio del color.

Luz - > golpea un lado (externo) de cada uno las persianas solamente. El otro lado de persianas bloquea el tipo frecuencia de la luz que efectuaría el otro lado (externo).

- altitud, profundidad debajo de la superficie líquida (del agua), barómetro, flujo de aire (viento, aerodinámica (que es favorable (como banda))). el nr (el notificador alerta a usuario) localiza en la máscara del zambullidor - donde u puede considerar NR (sobre el vidrio).

--también se aplica a cualquier otro material claro: ventanas, envases, parabrisas.

- parabrisas autos, ventanas

- (masticando) color de la goma. Demostraciones de NR: presencia/carencia de cualesquiera/del sabor señalado, eg.: el sabor color de rosa de la cereza de las demostraciones del color existe al grado de su intensidad de color rojo [el color de rosa es una cortina más ligera]. NR demuestra salud del chewer humano [los productos químicos de la saliva que llevaban los productos químicos señalados/pH se asociaron a enfermedad - > NR: cambios del color.

- Neumáticos: NR demuestra el nivel de la suciedad (grasa) o la presencia de eso.

- ciertos elementos (en superficies) cambian color solamente a ciertas frecuencias ligeras, eg.: mecanografiar las bombillas, sol, o asolear más arriba de 45 grados sobre el horizonte (intensidad de luz), el sol no cubierto o no cubierto por las nubes.

caramelo de +-hard (lollipop): El attached= de NR al palillo = su superficie entra en contacto con la saliva = mientras que sus otros lados son rodeados por el caramelo.

--

- impresiones del dedo: convertirse más fácilmente: visible/fijado (frotado no fácilmente apagado) después de =: la temperatura/la luz ha cambiado/o cambio realizado a él.

- (lengüeta) Nr demuestra cuando el empaquetado del producto fue abierto. El empaquetado pudo ser aire firmemente, por lo tanto presencia de las demostraciones de NR de cualquier nuevo aire (excesivo) (extendido demasiado el plazo).

. --soluciona problema del contacto limitado del aire apenas antes del empaquetado del lacre y del contacto del aire con boquetes después de sellar. Las aplicaciones miden el tiempo de NR basado (KN).

- hornos: Demostraciones de NR cuando las temperaturas deseadas durante plazo deseado se han alcanzado, eg.: 1] fijó # los minutos que la temperatura estaba sobre 80 grados de cent3igrado; o se reduce 2] iguales que #1] pero si la temperatura subió a 90 grados, después el plazo antes de que NR aparezca.

. Estrategia de búsqueda de la patente: Chang del color near5. Substituir el cambio w: alterar, sensor, sentidos, detectando; indicador.

. No. de la patente de los E.E.U.U.:

. - Algunas patentes aquí son muy importantes, otras no son, pensamiento las designaciones para las patentes (especialmente para esta N, ser menos probable demostrar su mayor/menos que valor).

-5114218: las gafas de sol cambian colores vía el modo del EL de alterar los pixeles en lentes; indicador del color de 492535 veces; Color del cambio de 4659619 imanes de la tela; + 4659649 sistemas fotosensibles que demuestran la indicación visible de la exposición, eg. a la radiación; 4687728; indicador del derramamiento del gas de escape 4751912; Radiación 4788432...; 4804275; 4804630 4805188 4814269 4818215 4820316? 4820755; + 4822743 método y paño para detectar los escapes en cuerpos cerrados: se aplica a la salida del gas...; 4829187 4863694; + 4750814 vidrios de ventana del automóvil cambian el color para antideslumbrante; + indicador de la vida útil 4382700: fieltro del material, eg.: cambios de las demostraciones de la jalea mineral en el contenido químico del contenido; + 4430299 reacciones químicas de los monitores; 4456723 4467025 4472507 4482635; + mascarilla 4488547: los cambios colorean para señalar su pérdida de capacidad a las bacterias del limador debido a la acumulación de la humedad; 4490440; 4538811; 4615828; 4614715; 4615828 4524264 4629330 4145186 4150570 4166058 4170190 4191125 4196167 4201548 4212153 +4215562 detecta los defectos subsuperficies superficiales de la American National Standard en color de los cambios de la joyería de los productos laminados 4220016 según la temperatura del cuerpo del u 4231370 que 4235108 4244693 4245997 4248597 cambios del azulejo de +4249273-pool colorean (el color de KN cambia para calentar la piscina cuando su demasiado frío - pero está este KN (invenciones) iguales que patente?) 4258000 4263850 4271121 4276190+ 4277368 4277848 4278439 4291122 4292916 4298348 4298569 4300910 4314030 4315890 4324558 4343885 4344909 4347312 4355113 4356149 4362645 3442749 3743846 3826499-for "juego" - KN

Códigos adicionales de la categoría de producto de USPTO a leer: ¿150a? , 138.97, 138.99, 225, 427.7+ =

- existe: anillos de humor; cristales de ventana - si se construyen en las capas dobles (polarización cruzada controlada electrónicamente - girar, después los cambios del color).

El archivo de las piezas titulado "Parte-MED" también es aplicable para entender los códigos de las partes usados dentro de invenciones del archivo 7G, para los usos médicos, y biológicos (de la investigación).

Archivo: Producto químico/7GQ

INDICADORES - ARCHIVO 7GQ

Preguntas: Algunas de las áreas que necesitan la investigación

Misceláneo:

- Cómo pequeños bolsillos hechos en los plásticos: abriendo .25m m o menos con la anchura quizá .5m m y la profundidad quizá .5m m.
- Cómo PVC construido, eg.: capas, tintes del color, sistema del "sensor" del EL (cómo el analizador del EL sabe cuál está en el sensor).
- donde usted buscaría este Info, los títulos conocidos...
- sincronización de la ocurrencia
- que mecanografían los plásticos para los guantes pudieron permitir permeabilidad del aire

. - qué equipo común necesita el nr adicional (el notificador alerta a usuario) alrededor. ¿Puede explicar con todo mantener n secreta?

%-indicators para los productos químicos apuntados

%-Secret: productos químicos apuntados adicionales.

. tipos del nr (el notificador alerta a usuario): o estado apenas que acciona el producto químico

- capas
- mixings
- el indicador aparece bajo luces especiales
- indicadores que pueden soportar temperaturas altas
- infecciones del cuerpo

. - alta/baja temperatura

. - doblando

. - perforación del uso de la GEN notada vía: oxidación, clorina

. Productos químicos buscados:

- productos químicos peligrosos

. Con cómo los indicadores trabajan = las superficies duras [tales como vinculación, como de bien actúan como indicadores]:

- plásticos
- cemento
- esmaltes, esmaltes, pintura
- metales
- vidrios

. localización del nr (el notificador alerta a usuario): Cómo los productos químicos peligrosos se derramaron/los seres humanos entonces entrados en del contacto w en laboratorio/casero separados (concentrado en contaminaciones de interior).

- nombrar otros lugares que se colocan NR

. Str:

- q difícil más adelante para el crup de la persona (aumento de la creatividad)
- mencionar ambo cualquier producto químico sabido, otras ideas, donde usted miraría

Archivo: Producto químico/7GR

LA INVESTIGACIÓN DEL INDICADOR NECESITÓ: CAMBIOS del COLOR PARA 7G y 1G20R

. Material: cambios dentro y al aire libre

- vinilo, eg.: delantales, tarps.
- plástico duro, eg.: envases de plástico, Formica, azulejos de piso del vinilo
- pinturas, esmaltes: las superficies que cubren incluyen: plásticos, metales, maderas, cemento
- plásticos de goma y recubiertos de goma, eg.: tubería y guantes gruesos y finos.
- tela (algodón, poliester, otro)
- superficies de metal: todos los metales de uso general encontraron en laboratorios, eg.: superficies anodizadas
- vidrio
- alambre revestido: tipo eléctrico alambres de todos los tipos
- asfalto, cemento, esmalte de cerámica

. Porqué el indicador cambia:

- hacer los cambios de la demostración de los indicadores en temperatura [y si tan cómo rapid un cambio], y o la temperatura actual:

. --temperatura en ese momento (eg.: de cent3igrado o de 20 cero Celsius, a 30 cent3igrados o a 40 Celsius).

- la temperatura excesiva alcanzó en un cierto plazo - efecto acumulado. Especialmente sobre 40 Celsius para dos o más minuta un balance del tiempo quizás a partir una hora a 100 horas o más.
- contacto químico peligroso: enumerar los productos químicos comunes y semi-common con sus indicadores (que pueda enlazar con el tipo superficies). Eg.: ácidos, materiales radioactivos.
- edad: qué indicadores se pueden utilizar al speedup el proceso de la descoloración al plástico.
- Efectos perjudiciales de la luz del sol, eg.: su ULTRAVIOLETA [luz ultravioleta]

. Notas:

- el agua, el aire y la limpieza (con el jabón y agua) esperanzadamente no destruirán los indicadores o los plásticos.
- Qué sobre el agua forzada de las máquinas automáticas de la limpieza.
- una cierta fragilidad u otros problemas causados por los indicadores será tolerada en esta etapa en la investigación
- el tipo materiales mencionados es mismo general e incluye otros materiales de la naturaleza similar que usted pueda encontrar puede ser que trabaje con los indicadores necesarios.
- el material puede ser subacuático

Archivo: Producto químico/Chem 7G general

GENERAL QUÍMICO

1J081 CALIDAD LÍQUIDA "NOTIFICADOR": caer el elemento en el líquido [agua] = las pruebas del elemento la calidad del líquido "señalado". Comprobar el nivel de la seguridad de la salud del agua para: bacterias, virus, (adentro) compuestos orgánicos.

- Forma del "notificador": lengüeta; paja [probador en la parte inferior de la extremidad]; píldora que disuelve en líquido y [puede cambiar color al nivel designado de la seguridad deseada/de los contaminantes/etc.
- Ver 1J080; archivar 7G.
- Qué color cambia puede anotar: cualquier contenido químico señalado tiene gusto: sal, glucosa (para los diabéticos), (conocidos) alergénicos (para el usuario), %calories (por el milímetro cúbico), balance del pH (acidez).

VIDRIO de ALTERNANCIA 7J-08: Vidrio que alterna entre opaco y translúcido:

El vidrio puede estar claro, o actuar como cortina dependiendo de la película de un interruptor. Windows y otras formas de vidrio pueden ser útiles para cualquier luz y opiniónes, o la aislamiento deseada.

. Las imágenes aparecen sobre el vidrio

Técnico:

--Por el funcionamiento la frecuencia [eléctrica] señalada a través del vidrio, los pixeles u otros [elementos del producto químico del tamaño del polvo] se accionan para crear opacidad [al nivel señalado].

--En vez del vidrio puede también utilizar: plásticos; LCD [doblado]; % cualquie material usado en tecnología actual/futura de la pantalla de ordenador.

- Alteraciones técnicas - más baratas o más factibles:

--Diversas luces coloreadas se echan sobre [vidrio] en patrón señalado.

¿- Un KN más viejo?

-' Ventana del programa para crear cualquie color señalado.

- % de las funciones de cristal como una pantalla electrónica, demostrando la información o la imagen deseada. Eg.: fraseología indicada con letras; %television; etc.
- Las rayas cambiables u otras imágenes se pueden programar adentro para servir como seguridad contra la gente que camina en el vidrio. Esto es más aplicable para las puertas de cristal cuando las huéspedes han terminado. Mucha gente se ha lastimado caminando en puertas de cristal limpias.
- El vidrio se programa para comunicar cualquier forma de notificación [visualmente relacionada]. La notificación en el nivel de la imagen puede acompañar cualquier otra función como la notificación audio.

. Vidrio con imágenes creatable:

- Alternando/líneas móviles
- Cualquie derroche móvil de colores, eg.: como trabajos del fuego; formas móviles; etc.

. Misceláneo:

- La superficie de cristal puede ser lisa o levemente áspera (creando una superficie opaca con pérdida mínima de transferencia ligera).
- El vidrio sí mismo no necesita ser constante. Diversas secciones pueden crear colores ligeros de diferenciación. Eg.:

--Las líneas o la fraseología pueden haber señalado las partículas para crear imágenes señaladas.

--Las áreas ahuecadas del vidrio pueden corresponder con las partículas de diferenciación así que ambos diversos colores y las recesiones transportan una palabra. El vidrio circundante está quizá sin color, o un color de diferenciación.

- D (acoplamientos asociados de la búsqueda del dibujo): fuente de luz (eléctrica) - > vidrio claro (sin la obstrucción de partículas) - > partículas - > se refleja la luz (lejos de la trayectoria ligera original).

. Productos del ejemplo:

- El vidrio de corte de diversas formas tiene gusto de las prismas, del etc: la luz se refleja de maneras interesantes según: 1] cómo se corta/se forma el vidrio; 2] las partículas y cómo está presentado; 3] la dirección y el tipo fuente de luz.
- [Diversos pedazos de] el vidrio puede moverse/gira en una 'forma programada pre-. Crear una demostración de la luz [coloreada].

--la demostración de %Light corresponde automáticamente al tipo música/sonido

- Globo de la tierra del planeta (o globo de colores abstractos): cada país/continente tiene luces de diferenciación.

--En vez del globo que hace girar, los países se mueven en el globo.

- La batería de la novedad pulverizó el globo o la otra forma. Puede ser llevado alrededor, o ser utilizado en juego, o ser dado a los amigos.
- Suelo de cristal
- El vidrio puede también servir como forma de luz, transmitiendo la luz del vidrio. Eg.: la fuente de luz viene del borde de cristal, y las partículas en el vidrio reflejan la luz hacia fuera [en 90 grados de la fuente].

--Tal vidrio puede ser plano [y colocado a lo largo de una pared]; o en interesante [curvado] forma [por ejemplo los globos]. Las porciones del vidrio pudieron tener agujeros [demostrar fuente de luz no es de una bombilla central].

--Las capas múltiples de vidrio pueden estar sobre uno a. Mientras que cada pedazo se puede cortar diferentemente, las áreas no del traslapo pueden representar diversos colores. Eg.: el color interno de la capa demuestra a través del agujero en el área externa; o el área donde el traslapo de los vidrios amarillos y verdes crea un azul como luz.

Ver: Extracto 1J080, etc. de la bola de hielo.

Archivo: Producto químico/7G

ASPECTOS MENOS IMPORTANTES 7G

¿Existe?

- Semejanzas en productos existentes: hay muchas cosas de la dos-capa en mundo, eg.: al doblar una capa, puede exponer otras capas; las tarjetas de crédito cambian color después de clavar nombre mecanografiado.
- Semejanza: similar a uno-utilizar los calibradores para determinar la tensión que un paquete se ha sujetado a al enviar.
- el PVC deteriorado puede cambiar naturalmente su color, estructura (visible), y flexibilidad. Deterioración: envejecido, abuso. Con todo tales ocasiones pueden no significar claramente el tipo ocurrencias buscadas, o suceder solamente después de que los niveles de abuso hayan excedido el nivel de abuso que necesita ser determinado.
. - La forma líquida o dura de PVC tiene colores/características de diferenciación. Las características también diferencian entre las temperaturas de diferenciación mientras que el PVC está en su forma dura.
- que los productos químicos reaccionan a qué productos químicos a servir como función del nr; qué productos químicos mezclan bien bastante PVC de w al formar el producto del PVC. Situaciones corrosivas al PVC.

Legal:

La etiqueta en PVC (guante, condón) explica:
el "nr" no debe ser confiado sobre; el "nr" puede dar difícilmente para identificar el aviso a u; ninguna advertencia pudo ser dada. En otros productos, U dijo proceso del nr no está siempre seguro, ni él el nr u sobre otros tipos de problemas potenciales no enumerados. A pesar de advertencias, algunos países pueden todavía inhibir el uso para todos los aspectos de este producto.
- la idea es el efecto del nr es mejor que no teniendo ninguì□n tal nr.

PVC que se cae: Cuando el elemento (capa del exterior/parte desmontable) se daña/lo deterioró (automáticamente/más fácilmente) de/aparte de las caídas. Vía: su (capa/capa externa) pegar el mecanismo pierde su apretón a n/element principal.
- esto sucede porque: él mejor nr u de la condición del PVC; mejor ver la naturaleza del problema del subordinado (que no pudo ser wo visible algo que salía).

Situaciones/ambientes corrosivos: - > accionando NR
- uso en ambientes corrosivos de la atmósfera: Palmadita 5316035, 5112664 de los E.E.U.U.

- cuando el material del PVC no se hace de la corrosión o del otro material fácilmente deteriorado, para lo que otras razones, eg.: tales materiales del PVC pierden las características necesarias para lo que deseó usos que un u puede tener.
- uso de los materiales de deterioro del caucho, eg.: palmadita 5275054 de los E.E.U.U. de los líquidos
- bacterias, moldes - palmadita 5247984 de los E.E.U.U.
- contacto con: (seriamente) temperaturas calientes o frías; ácidos
- (negativa) (química/eléctrica) reacciones entre el PVC y con qué PVC entra en el contacto.
- el moho o la otra corrosión al PVC de la superficie/el material% se ata a. El causar del interno: El PVC a deteriorar (más que lo necesario), PVC (parcialmente) separa/caer (más que pudo ser necesario).
- Otros tipos de deterioración en el pvc. No. de la patente de los E.E.U.U.: 5334335 5318805 5298254 5295541 5280670 5277726 5262237 5254192 4919986 4743468 4492781 4409270 4260439 4181547 4074412 4123309 3975558 3926895 3920497 3887413.

NOTIFICADORES EXCESIVOS DEL CASTIGO: KN viejo del directorio A5.

. El indicador para demostrar temperaturas ha excedido parámetros deseados:
- Una cierta clase de metal en la capa. Entonces consigue oxidado fácilmente en una temperatura más alta.
- Aplicar la capa vía: pintura/aerosol, hecho por la frecuencia intermedia/el U.
, --incluir este tipo en el plástico sí mismo del indicador. Las oxidaciones aparecen en la superficie del plástico.
. El problema del necesario de alta temperatura para conseguir el plástico en forma líquida antes del moldeado necesita ser manejado de alguna manera, eg.: algu□n indicador que indica las temperaturas excesivas se ha alcanzado la segunda vez [la primera vez sería cuando el plástico estaba en forma líquida].
. el indicador demuestra cuando la temperatura incorporó en una cierta zona w/in los 30 grados a la gama de Celsius del grado 100+.

Elementos legales:
- las advertencias se ponen en el guante, la caja, la envoltura, y o encendido las instrucciones del interior.
- el material del guante no hace la erupción pelar. Quizá la preocupación principal de la responsabilidad legal si otras precauciones tomadas. La gente de diferenciación tiene alergias de diferenciación.
- hay muchos juegos de la ley del palillo de la aguja, pero ningunos sabidos para los guantes.
- lengua de la etiqueta amonestadora en la lengua principal del país de la blanco. No necesitar quizá poner instrucciones secundarias de la lengua.
- estos productos pueden establecer nuevos estándares del cuidado en industrias diversas.
- los juegos de la ley de la responsabilidad por la fabricación de un producto pertenecen más a los productos que son peligrosos en sí mismos. Esta n no tiene normalmente ninguna pieza móvil. El agujero o la otra deterioración o contaminación no causa lesión sí mismo, y es un paso quitado de lesión.
- puede conseguir seguro de responsabilidad por la fabricación de un producto.

Existe:

. Guante de N-Dex: una vez que se deshace su violado (consigue el agujero), él (los fragmentos, agujero consiguen más grandes rápidamente). Guante hecho de Nitril. Esto no cambia color. Problema: la mano puede estar en la solución peligrosa sobre la violación dando por resultado peligro a la salud creciente. Este guante es el superventas para el fabricante más grande del guante de América.

- Ventas al por menor para $11 por la caja del dispensador: 50 pares por la caja.
- Del mejor fabricante más grande del guante de la fabricación (los E.E.U.U.). Hacen solamente guantes. Teléfono 800 884-6413.
--Distribuidor - 2000:800 554-5683 del guante
- aplicaciones del comandante para N-Dex: trabajando con sangre, los combatientes de fuego, el etc.
- ajustes y estiramientos como látex; resiste los aceites, la gasolina, el keroseno, la grasa, y otros solventes. El látex se deshace pero éste no hace generalmente. Ésta es tres veces más fuerte que látex.
- el wasn't diseñó deshacerse sobre conseguir un agujero, vendedor tan dicho, quizá porque no alerta siempre a usuario a la presencia de un agujero.
- Patente No. 5014362 de los E.E.U.U.

Existe probablemente: papel de indicador usado por el usuario debajo del guante para notificar si se ha hecho el agujero. Fue hecho publicidad probablemente en un poco de compartimiento de la seguridad y sanidad entre 8/93 y 8/94. No era quizá acertado no ahora desde su un artículo común, ni hecho publicidad al parecer. Esto se combina con nuestra idea del producto de la notificación del PVC.

piezas plásticas 4G120 que cambian color con edad. Muchos usos. Eg.: cuando la parte necesita ser substituida, por ejemplo para la reparación, o condiciones atmosféricas indebidas. ¿Obvio puesto que el plástico demuestra a menudo el cambio del color, incluso si es inintencional? La reparación necesaria ocurre cuando la parte entera, o la parte de la parte, o el color del cambio de la etiqueta de la parte, o una inscripción escrita llega a ser visibles. Demostración de los usos: fragilidad; exposición a los elementos, eg.: temperatura o humedad excesiva.

- Ver KN, probablemente directorio de A o de B.
- Los cambios en color pueden significar uno o más del following^ para la parte dicha/objeto con las piezas múltiples: temperatura/ambiente/condiciones atmosféricas en las cuales estaba ((también) frío/caliente/húmedo); uso multi ("multiusos"); cantidad de uso que recibió (estirando (del caucho)); nivel de luz (del sol) que recibió.
- Usos:
--shows^ del pote de la planta: nivel de humedad en suelo, nivel nutriente. Las patentes existen para los indicadores que demuestran el nivel de la humedad del suelo.

--trabajar a máquina las mangueras/((pvc) cubrió) ata con alambre el show^: fragilidad, niveles de la edad, capacidad de conducir (fq/electricity) y "cuenta llana" de los factores de la impedancia

--si el artículo (parte) recibió el excessive^: temperatura (alta-baja); humedad/humedad; tensión (doblez/que estira)

--niveles de energía de batería (véase vía ventana). Mismo o patente relacionada encontró en base de datos.

- patentabilidad: aunque la aplicación los plásticos que cambiaban color con edad no podría ser nueva, la idea que su sincronizado para las ocurrencias específicas pudiera ser.

- copiado para mejorar los plásticos N 1.95For Techies:

- cuando se miden los elementos múltiples (simultáneamente), diversas secciones del producto pueden demostrar los colores señalados para las situaciones señaladas, o, los colores múltiples se pueden notar en la misma hora, eg.: el color normal es blanco, el azul señala frío, candente, y el producto púrpura de las demostraciones ha estado en ambos extremos, pero más en el frío puesto que la púrpura es azul-púrpura.

- D: piezas: [] (cubierta o caja)/(x) (cubierta o caja)/O/o/<>/═══ (de la pipa)/____ (del alambre)/ ||| /\ VX/C

- esto es probablemente un KN anterior en directorio de A.

Datos repetidores: el color también cambia cuando/debido a los cambios en: Productos químicos aerotransportados: olor (índice de la calidad del aire, polen, contaminación, nivel de otros productos químicos: oxígeno, óxidos del carbón di/mono, polvo del hidrógeno...). % (ciertas gamas del fq de) de los sonidos. % de la vibración: movimiento, fricción, sacudiendo (dentro de ciertos parámetros).

CONCLUYE ESTA CARPETA QUÍMICA

INVENCIONES RELACIONADAS DEL EJERCICIO:

Archivo: Categoría/ejercicio

generador de la recompensa del podómetro de $$ 1G22:

RECOMPENSA GENERADA POR USAGE LEVEL:

Podómetro de McDonald's: Patente relacionada.

Ejercicio y grasa floja. El podómetro anota cuántas calorías fueron quemadas, y en golondrina de mar conseguir una cupón (certificado permitiendo descuento del cliente en su compra siguiente en el restaurante). El podómetro pudo escupir hacia fuera una cupón. Alquiler o podómetro del préstamo de McDonald.

- D (acoplamientos asociados de la búsqueda del dibujo): u (usuarios que buscan la adaptación) (caminando) = "sensor" = podómetro ("analizador", K, S, impresora (de las cupones, de la "cuenta", "interruptor")).

--"Interruptor": uip; almacenar selecciona cómo el sistema (el sistema busca acoplamientos adaptables a las características asociadas) "anotará" - > usuario de la recompensa; UIP - ajusta las calorías requeridas que se quemarán/llanas de ejercicio con la edad del u (gama).

- Estrategia de búsqueda de la patente: Podómetro

- No. de la patente de los E.E.U.U.: 5164967 5117444 5065414 5117444 4649552 4651446 4741001 4771394

- + 4855942 podómetro y/o aparato de medición y método de la caloría: absolutamente similar a KN, con todo al extracto no menciona que las cupones están dadas hacia fuera, ni que el dispositivo es rentable de almacén.

- las cupones se pueden dar hacia fuera simplemente para el nivel cuantificado de ejercicio, eg.: cada kilómetro (caminado) iguala un punto.

- Tipos de la recompensa: bebida del cafeína [que guarda a clientes en el ir]; alimento; música y gente de entretenimiento de otros cartuchos. Ciertos artículos compraron resultado en mayores puntos correlacionados ganados por los clientes, eg.: bebidas caffeinated.

--un uso más libre [EL] del dispositivo/sistema/acceso

--kilometraje del aire; uso interurbano de t; regalos o parte posterior del efectivo [según lo ganado cerca descubrir la tarjeta o American Express].

+ cualquier N (invención) ese scored= del is= puede reaccionar recompensas del w=.

- Cuenta: Cualquier tipo patrón que anota puede ser aplicable, eg.: nivel del uso de $; nivel del uso de la cantidad del tiempo; cuenta solamente para el tipo particular [ofrecido nuevamente] de servicios. Cuenta = Acceso-VAGOS.

- D (acoplamientos asociados de la búsqueda del dibujo): u (usuarios que buscan la adaptación) = actividad/función = sensor/cuenta = C (adaptar características asociadas de las búsquedas de la computadora) = servicios/funciones/recompensas outputted.

- Tipos del algoritmo: mayor es el nivel de recompensa el nivel de aumentos/de disminuciones de la acumulación del punto según lo señalado [basado en la actividad w/in 24 períodos de la hora]; la hora/el year= corresponde al nivel de puntos también.

-

+ otros dispositivos que miden usage= de la actividad/u entonces que da recompensan:

- Picosegundo-Zona: recompensas según las acciones/los movimientos del picosegundo del u.

- Uso de la gasolina: si los clientes compran todos/la mayoría del gas del mismo grupo de la venta, eg.: Aceite estándar, consiguen más baratos/libres [las reparaciones autos]. El automóvil tiene sensor= que detecte los productos químicos marcados con etiqueta usados solamente por el aceite estándar. Publicidad de estados: nuestro gas mantiene su funcionamiento del coche más largo y mejor.

- Cybernet: la mayor frecuencia del detalle de acceso del u [grupos de] avista los más puntos. Acceso = cuenta = recompensas.

- 'Equipo = cuenta del ejercicio: la velocidad/los metros que anotaban del treadmills= atravesó; cargar el systems= que anota el número total del peso w de repeticiones [que dan cuentas más altas a mayores pesos que

el número de repeticiones según algoritmo señalado] = las recompensas en kilometraje del aire o el uso de la gimnasia.

- VAGOS = cuenta: el buen behavior= resulta las recompensas del in=. Eg.: buen comportamiento del niño en conseguir buenas cuentas en pruebas automatizadas; su televisión excesiva de observación o juegos del EL de w que obran recíprocamente (con [o fuera a un cierto grado]) (el sistema electrónico busca acoplamientos adaptables a las características asociadas).

. OTD (otros detalles técnicos) D (acoplamientos asociados de la búsqueda del dibujo):

Archivo: Batería ejercicio/2

BATERÍAS ACCIONADAS MOVIMIENTO 4E010

Patentabilidad en la pregunta grande. Ver la sección de la patente abajo. Nada como esto para la venta en tela encontró.

EXTRACTO

Atar el cargador de batería al accesorio del cuerpo o al objeto móvil. Por ejemplo colocarlo en su pierna antes del ejercicio, o atarlo a una rueda de bicicleta. La energía del movimiento se transfiere en energía de batería almacenada. Ejercitando energía las cargas suben sus baterías. ¡Usted puede cargar sus baterías mientras que también consigue las subsidios por enfermedad del ejercicio! Ahorrar el dinero de las baterías de compra del reemplazo que terminan para arriba en los terraplenes que dañan el ambiente. Hay muchas otras características innovadoras relacionadas con esta invención confidencial también.

USOS DE LAS DEMANDAS DE LA INVENCIÓN Y DE LA PATENTE

Fijación: ¡bajar la pierna, las plantas del pie de zapatos, los molinos de la pisada, el músculo del cuerpo que entona el equipo, la bicicleta, incluso el casquillo de eje del coche, el etc! También enjaeza energía de: ondas de océano, roturas del automóvil. El cargador consigue su energía del movimiento cinético. Buena excusa para el ejercicio mientras que ahorra el ambiente y la cuenta eléctrica. Basculadores inducidos a guardar paso constante por accionar de su radio del walkman.

Comercialización: los zapatos/otros dispositivos que son vendidos se pueden poner como generación de ciertas unidades de energía por kilómetro caminaron o funcionamiento, por la persona de cierto peso. O, por las millas biked, o, por kilogramos levantó/tirado. Eg.: energía generada por milla, contra los galones consumidos por milla por los coches. Caminata/ejercicio/bici en vez de la conducción.

- el ejercicio pagará el producto en términos de electricidad y o no-daño generado al ambiente.

. - los gobiernos pudieron dar deducciones fiscales/las rebajas para estos productos: para la fabricación, la compra, o el uso. "Cuenta" para el nivel de uso.

"CUENTA":

El usuario mide cuánto ejercicio lograron. Más o el artículo empujaron más difícilmente, movido, golpe, más alta es la "cuenta". Dejamos sensación de los usuarios: mejorar, más masculino, más fuerte, y productivo. También demuestra llano del ejercicio (fuerza), calorías quemadas, cantidad del número de energía generada/+ almacenado en la batería.

- La' pantalla demuestra se está generando cuánto energía por la cual tipo acción (mientras que está ocurriendo la acción), eg.: mientras que en molino de la pisada. El software compara los resultados (calorías quemadas, energía generada) para las actividades de diferenciación.

- el oscilador suena (los zumbidos agradable, "estereofonia") (más ruidosa) según tipo/llano/intensidad del ejercicio.

CÓMO TRABAJOS:

- el tipo recharger (modo) usado depende del tipo movimiento (dirección/velocidad/duración (no repitiendo) de movimientos) anticipado. En golondrina de mar, el sistema puede mejorar energía del movimiento del arnés cerca: (uno mismo) ajustando (uip-adaptar) sus piezas móviles.

- baterías y rechargers de las aplicaciones que son la mayoría de la energía, coste eficiente, y caja fuerte para el usuario y esperanzadamente el ambiente, eg.: baterías de níquel-cadmio.

- cualquier alternador se pudo juntar con otras fuentes generadoras de energía: energía solar, baterías (del estándar), corriente eléctrica (de la planta eléctrica), molinoes de viento.

. - Necesitar un campo creativo del imán [pieza móvil]. El campo creativo mueve el interior = el estator, como el péndulo. Sobre la mudanza - rueda alrededor. El sistema (el sistema busca acoplamientos adaptables a las características asociadas) no necesita ser atado (al hubcap de la rueda). El estator recoge = energía y amplifica = [la base del metal absorbe la energía entonces = consigue inducida en el cableado inmóvil = (que se hiere de una manera especial)]. = ahora hay corriente del aire/acondicionado vía el rectificador. = el más [+] y [-] la pieza menos del rectificador conectan con la batería + o - los extremos/las secciones = batería de carga del interno.

- las subpartes del péndulo y del estator de esta N (invención) pudieron ser piezas disponibles.

- Se adapta a cada tipo movimiento/ejercicio. Diversos dispositivos o el dispositivo ajusta su manera de enjaezar el tipo movimiento como su suceso.

MISCELÁNEO:

¿- barato fabricar? ; puede ver a muchos compradores.

- Movimientos del cuerpo: el activar, el caminar, yendo de excursión, aeróbicos, nadando (impermeable), tajando (alimento, madera), trabajando (construcción de la casa, cultivando), bailando.

- Problemas: Requeriría mucho ejercicio accionar la batería. ¿Puede desarrollar un buen movimiento al cociente de conversión atrapado de energía? ¿Probable alguien lo concibió ya?

--Pero incluso algunos que cargaban pudieron ser útiles como la motivación necesaria para que la gente ejercite. Las subsidios por enfermedad no pudieron siempre ser bastantes. También, el ejercicio de esta manera se puede anotar, demostrando almacenaje de energía creciente thee de la batería. Bueno para el ambiente. Etc.

. - amplía vida de batería. Acompaña el otro sistema del suplemento de la vida de batería, eg.: energía solar.

- Psicología: da excusa adicional al ejercicio; mejoran quizá a los mecánicos levemente sobre tal sistema de batería similar usado previamente para los relojes en los años 70, años 80.

+ D1: el giro (rueda) = da vuelta mientras que movido = causa la fricción = la superficie del punto de contacto = del convertidor (fricción a la electricidad) = tr (transmisor) = los battery~c~s (cuenta: nivel de la vida de batería)

EXISTE:

. - Seiko tiene reloj del cuarzo: reloj para no enrollar el resorte principal (no enrollar el movimiento principal). Las corrientes eléctricas van a través (cuarzo). Los convertidos indican a la energía eléctrica. Diferencia de Rolex. Esto pudo hacerla menos probablemente para patentar esta invención.

. --Los relojes de Rolex, consiguen el movimiento cinético - > aprieta físicamente el resorte del reloj mecánico.

- el resorte rewindable basó los relojes. Alternador (coche).

Si cuestionable es patentable, discutir la necesidad del producto.

- las zapatos tenis que se encienden para arriba como camina u \ él, indican quizá accionado. - El podómetro R83 sugiere el pulso de la blanco para los exercizers. Los usuarios entraron edad y pulso de reclinación antes del comienzo. [un KN copiado?]

. --[Omron Corp: Nanajo-Sagaru, Karasuma-dori, Shimogyo-ku, Kyoto 600 Japón. Teléfono 075-344-7000 NK 23 de mayo de 94]

- "Ciclo vital": ¿existe? la bici de ejercicio w llevó la pantalla accionada poniendo pedales.

- Existe: alternador que enjaeza energía de onda de océano: 4447740

- aparece la batería del alternador del reloj es el único producto sabido que convierte el movimiento y lo almacena en forma de la batería. Otros alternadores utilizan la energía como su que es transformado.

CÓMO FIJACIÓN: lugar en objeto donde hay el potencial más grande del movimiento, eg.: el más lejano hacia fuera (con el oscilación más ancho); señalar adonde la energía más grande puede ser creado, a veces cambiando para la manera más fácil en la cual puede ser utilizada todo, eg.: más seguro, menos presión requerida por el usuario, producto funciona más cercano a cómo funcionaría normalmente sin el convertidor de la energía por ejemplo con menos obstrucción, y menos bulto o materia (alambres, enchufes, convertidor, batería) pegándose hacia fuera.

+ estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U.: baterías recargables accionadas movimiento 4E010: ()

- OTD: ruedas volantes (del automóvil).

- kilovatio: pierna cinética del brazo del movimiento del talud del alternador

- Str batería de la búsqueda de la palmadita de los E.E.U.U.: talud del alternador. Disco 9.94 del babero. circuito de 5285146 reguladores para el voltaje para la batería de carga por...; 5132605; 5119010; el 5305798%

--str: alternador del ejercicio: 5238462 aparatos del ejercicio de la escalera que suben que utilizan las correas de impulsión: batería no mencionada; 5135447 aparatos del ejercicio para simular subir de la escalera: batería no mencionada.

--STR: ("movimiento accionado" o "movimiento accionado ") y batter$ y (charge$ o carga)

¿- las baterías accionadas movimiento de diferenciación existen, pero para ejercitar?

- S: compañías del alternador de la llamada, pidiendo con referencia a viabilidad

- Str: una palabra - alternador

1] <replace w 2> (el ejercicio o sacude o sacudiendo o se mueve o moviéndose) near10 (alternador o batería) y (charg o recharg o energía o energiz)

2] que siguen substituye #1] 'sección de s primer: (bicicleta o caminata o radio o rueda de ardilla)

- RM: la invención del alternador abstrae difícilmente para entender, por lo tanto las búsquedas no fiables.

-79 ' - 82 ': 4227092 operó fuente de la corriente manualmente eléctrica.

- No. de la patente de los E.E.U.U.: + exercizer con la rueda volante 4470597 1984; Accesorio 4613129 de la bicicleta del ejercicio; Convertidor eléctrico 4996637 que utiliza fuentes de energía unidireccionales y bidireccionales cambiadas. 4480966 convertidos emergen movimiento del líquido.

. Patentes de los E.E.U.U.: 6629574 6281660 6037728

+ 6316906 - Sistema de carga cinético de la batería para los teléfonos celulares

+ 5949215 - Cargador de batería

+ 3792307 - Energía cinética para accionar luces de la bicicleta con energía del pedal. ¿Pieza reemplazable de la batería recargable no de esto?

sistema del generador de ++ 4837494 y de batería recargable para el esquí.

MOVIMIENTOS QUE CREAN LA ENERGÍA (CINÉTICA)

Mecanografiar los movimientos enjaezados. D (dibujo): los movimientos = alternador de activación = resultando funcionan (batería que carga). También alternador del anuncio:

1] Puertas: movimiento más grande externo del oscilación de la parte w, o en o con la bisagra.

2] Equipo del ejercicio: Ruedas de ardilla (en sistema de la golondrina de mar requiere electricidad de less/no funcionar); Equipo del edificio del músculo: el nivel o la resistencia es alterable, y la mayor resistencia empujada contra, cuanto mayor es la energía desarrollada, eg.: campanas de la barra, tipo equipo del nautilus - substituye levantamiento de pesas (para)/cuerpo del edificio del músculo que entona el equipo que implica empujar o la tracción o estirar del dispositivo: la resistencia u abarca - > batería de las energías. Las prensas de la pierna son uno de los generadores más grandes de la energía por empuje.

--eg.: la tracción o empujar (rellenada) de la parte = tira de la cuerda atada - > como la cuerda se mueve, su resistencia - > alternador - > acciona la batería

- los chismes ataron a los empalmes del cuerpo humano/animal = su movimiento (especialmente si mucha resistencia está implicada) - > alternador - > batería de las energías. Sin embargo puede causar lesión de tensión repetidor.

3] Raquetas de tenis: o cualquier objeto que recibe la presión de golpeo.

4] Bolas: tenis, baloncestos, golf, béisbol, zapatos del etc. 5], palillo de Pogo, bastón: también enjaeza la energía de la presión a la baja. El adolescente puede accionar para arriba sus baterías del walkman con las zapatos tenis del diseñador. Bolas p100, 101: el movimiento de bolas genera energía, eg.: la bola dentro de la bola es mecanismo dominante

6] Convertidor de la vibración atado a: los automóviles, trenes, terremoto dividen la iluminación en zonas encima de ciudades enteras sin la energía (broma).

7] Mobiliario de oficinas: teclados, grapadoras, cajones, plumas.

8] Juguetes: automóviles (existir?); muñecas (energía de sus movimientos del accesorio); pistas de la raza y del tren; Yoyo (KN)

9] Rodillos, ruedas: bicis, automóviles, carros (compras).

10] Pasos de la escalera, calzadas: mientras que uno reduce, la energía creada da a algunos alza ascendente al caminante humano, dando por resultado menos esfuerzo humano total de la energía.

- Usos más seguros: Ejercitar los paso-molinos (tipo rueda de ardilla) con las barras del asimiento. Enciende para arriba la escalera. La presión necesaria es grande empujar hacia abajo algunos milímetros, por lo tanto superficie de tierra más estable como el acolchado de la alfombra.

11] Perros de animal doméstico. "Rover" nombra para la marca. Batería usada para accionar el sistema (el sistema busca acoplamientos adaptables a las características asociadas) que acompaña el animal. Eg.: acciona (supervisión) el sistema atado a los animales (en salvaje, bajo estudio). Reduce necesidad de substituir las baterías.

12] Acariciar (gerbil, ratón, perro) el funcionamiento encendido dentro de la rueda de ardilla de giro circular.

13] Giro y broche de presión del yoyo al alcanzar el extremo de la secuencia. Los cabritos pueden accionar para arriba su juguete, baterías del juego video. ¿Consiguieron a padres tradicionales comprar un juguete no-CRT, puesto que el cabrito necesitará el yoyo antes de que él pueda jugar al juego?

14] ondas (del océano) mueven el alternador = las cargas la batería dentro de la cápsula (flotante) impermeable. Energías para arriba: las luces (nr) que demuestran la tierra están cerca;

(investigación/monitoring/tr/oceanographic/nautical/navigational) equipo electrónico/eléctrico, eg.: faros encendidos, equipo de cogida de los pescados (que trabaja como parte de un sistema más grande, eg.: la atracción/que asusta pescados en trampa), envía señales el SOS (cuando es necesitado por la persona apenada): el sistema lleva a cabo (EL/vía el papel en cápsula) los datos sobre donde la persona apenada pudo ser encontrada - según lo explicado por la persona que lanzó el adminículo).

15] Movimiento del vehículo, eg.: las roturas cargan una batería algo que solamente accionando para arriba el sistema del EL (el sistema electrónico busca acoplamientos adaptables a las características asociadas). Aunque esto parece obvio fue dicha éste no existe. ¿Por qué? Aplicarse a: coches, autobuses, trenes, bicicletas...

- mecanografiando en el tablero dominante
- arte del aire: roturas; cojines de aterrizaje que cogen el choque de la lancha de desembarque
- bolso de perforación del boxeador: impactos de los convertidos en energía
- perro/animal doméstico que tira en el correo/la cuerda

. - nota: cualquier número después de la categoría de producto es la página para los fabricantes para las categorías de producto tales como encontrado en el "registro americano" 1994 de la exportación, de Thomas que publica el teléfono 212 629-1130.

- Chismes especialmente diseñados para enjaezar energía (cinética) del movimiento - > batería:
- instrumentos musicales: percusiones (presión - > convertidor de la energía); instrumentos de la secuencia (movimientos del arco).

- todos los vehículos del terreno
- aleteo: alas, aletas o aletas del pájaro en el agua atada a los pescados o a la gente, aleteando en viento, aleteo/que se mueve desde ondas de océano.
- ondas; fricción o fuerza del agua que se enfrenta: paredes (del barco, del cemento en la tierra) o mecanismos de cogida de la onda de la orilla.
- máquinas de la diversión: de fichas, juguetes. p55
. - motores: p547 - 550: actúan como generadores.
- generadores p 741-746
- reductores de velocidad p.1427: roturas que convierten energía a la batería.
- dispositivos de giro
- probadores p1427 de la vuelta
- los dispositivos absorbentes del choque traducen impacto a la batería que carga, eg.: resortes - p 1437 - 1440.
- Hidroelectricidad: agua que fluye abajo de las colinas, eg.: vía las pipas, abajo maldice.
- viento: molinoes de viento
- coctelera: piezas/flujo del interior de las bolas de lado a lado que genera energía. Eg.: la pipa sellada de 1 metro llenó de las bolas. Aros de Hoola.
- cuerdas de salto: el torcer de la cuerda - > batería de las energías
- gatos de salto - > batería de las energías
- roturas: cualquie tipo de situación donde las roturas se aplican (donde tal energía no se traduce ya a otro propósito, eg.: elevadores).
- La batería de la sacudida y su sistema alrededor en 1,000's de maneras y energiza la batería, eg.: correa al tobillo y al trabajo (mientras que pierde el peso); fijación a la rueda de la bici/del coche.
- Fijación a cualquie objeto móvil, sistema: las cosas que giran/giran (los neumáticos), las cosas que vibran (excesivamente, eg.: máquinas de la fábrica).

+-Shoes: la presión del pie (mientras que camina) = presiona encima del dispositivo (que va respaldo otra vez después de que presión del cuerpo transferida al otro pie) = alternador = función deseada (cargador de batería).
--algunos zapatos pueden tener un mayor nivel de la depresión (fieltro por u) como caminan = creando más energía. Esto puede también requerir más energía del ejercicio, usando encima de más calorías del cuerpo.
--el alternador le consigue energía de cualquier pieza del zapato, eg.: + el talón, frente de la planta del pie del zapato, el lado de la planta del pie del zapato, el nivel en el cual calza curvas en el tercero alrededor de delantero del zapato mientras que camina u (usuarios que buscan la adaptación) = la resistencia es contradicho por el pie = el alternador que acciona del interno.
tipos de %-general de movimientos enjaezados: salto (movimiento ascendente y hacia abajo); salto escocés; natación; el caminar; el activar; el ir de excursión; el sprinting; subiendo (escaleras, montañas); colisiones: del dispositivo o apenas del alternador entero de las piezas w/in, golpeando, accidentes; roturas a la detención/que retrasa; tracción (cualquier cosa); el empujar (cualquier cosa); elevación; caída; el torcer; doblez; plegamiento;

% de la tenencia (el llevar); torneado (alrededor 360 grados a la vez); onda de océano arriba y abajo del movimiento.

--la parte del producto que se mueve más (a lo más punto giratorio importante en el movimiento +) es la pieza que suministra la energía del alternador.

LA ENERGÍA GENERADA TAMBIÉN PUEDE ACCIONAR PARA ARRIBA:

- ventilador, eg.: mientras que en la rueda de ardilla o el otro equipo (mencionado) del ejercicio. Refrescarse apagado mientras que ejercita, una buena manera de motivar un ejercicio más duro.

- La energía enjaezada puede también: - > encenderse desarrollado en lámpara, hacen los sonidos (oscilador) que duran para cierta duración después del movimiento, reducen el consumo de energía para gestionar un sistema (simultáneamente).

dispositivo portable de +-Any. n. "portable". Especialmente si u (usuarios que buscan la adaptación) está lejos de los enchufes eléctricos.

- "t móvil".

. - El sistema puede puentear la batería que recarga (como pr/k por u)

ACCESO (); ANALIZADOR (cómo la batería (mejor) está consiguiendo su suministro de energía; cómo su que es utilizado); CARRO (la batería sí mismo es el carro que las ranuras/los agregados al sistema que golpea ligeramente el movimiento y convierte a la energía para el almacenaje en la batèría); EDUC (S (la pantalla y el analizador del `adaptan el menú para las necesidades actuales de los multi-usuarios') demuestra se está generando cuánto energía por la cual tipo acción (w5 aparece simultáneamente/más adelante (vía memory=c))); M (analizador); MIC (energía sana del convertido - > energía de batería); MULTIUSOS (las demostraciones/memorizan del sistema (c) que y la energía w5 fue obtenido y vía qué medios (actividad, índice de generación de la energía)); NOTIFICADOR (u dijo cuándo la vida de batería es almacenaje del final cercano/de la batería en la capacidad máxima); La generación de exceso de la energía (más allá de almacenaje máximo) (poder) activa: oscilador (música), calor, refrigerador, el otro sistema de la banda/función); Banda (batería w5 que recarga para ocurrir; u puede sacar el convertidor del sistema cuando (w5) eligen); Q (el sistema pide u w5 con referencia al sistema; u pide w5 q); S (cuenta); CUENTA (batería w5 que recarga: cuando, el where%, cómo (tipo, índice, duración de la actividad), qué (fue cargado, porque qué uso/era batería usada (revelador uip); SENSOR (es mechanical/el; sistema (automáticamente, (vía u que hace el ajuste mecánico) se ajusta manualmente para mejorar el golpecito en el tipo movimiento); ESTADO (batería llana); TDS (la cantidad de energía recogió cuando (w5)); UIP (); WA (agregados del sistema de la batería al wa).

OTD D2: (Cuerpo/producido por máquina) movimiento = este ~ C del sistema de N (invención) (el sistema busca acoplamientos adaptables a las características asociadas) (alternador) (adaptar características asociadas de las búsquedas de la computadora) =

ANALIZADOR (banda para cómo el sistema mejorará la energía del convertido (movimiento) controlada cerca: "cerebro" /k/ (movimiento) "sensor").); AP (la energía no se almacena ideal sino se utiliza inmediatamente para reducir pérdida de energía - > los usos: energías para arriba: luces/oscilador/el sistema sí mismo del EL); CÁMARA (); CARRO (); DISTANCER (); EDUC (); GPS (); K (); MQ (tipo de movimiento); MULTIUSOS movimientos (de cada u (usuarios que buscan la adaptación) diferentemente; diverso u determinado vía: k/access); NR (cuando la energía (usable) máxima no se está generando, o cuando u está haciendo demasiado poco/mucha energía. La "cuenta" sabe el nivel de energía necesario para el ejercicio); Q; R (el analizador teledirigido del `se adapta al usuario) (); CUENTA (); ESTADO (nivel de energía (necesario) que es generado); TDS (energía w5 hecha = cuenta); T (las energías suben t); TR (EL, t); U (seres humanos, animales); UIP (analizador para maximizar energía); UQ (); WA ((las ayudas) accionar cualquier EL portable (el sistema electrónico busca acoplamientos adaptables a las características asociadas) N).

OTRO:

. % de la fijación a otros objetos móviles de la manera creativa, eg.: pies del perro de animal doméstico y movimientos de la cola [el nombre comercial para el mercado del animal doméstico es Rover].

. Habló con en los mediados de-tarde años 90 - hacer la investigación sobre la invención. Él preguntó si oyeron hablar nunca de tal producto, a el cual su contestación era negativa:

- Powersonic, Redwood City 364-5001 Catalina, Carl.
- Batería co en el consumidor Yellow Pages, SF
- GN 909 598-1919 Juan Huang, vía Regina del árbol de hoja perenne.

. El sistema anota los movimientos del usuario para demostrar el nivel de energía que es creada para el almacenaje de la batería. El movimiento del cuerpo analizado por invenciones se relacionó con la invención 3E061 - profesor particular del movimiento del cuerpo humano.

. Atar el cargador de batería a la rueda de ardilla del exercizer: la salida más lejana (en la rueda), mayor es el impacto de la energía sobre cargador.

CONCLUYE "EL ARCHIVO DE LA BATERÍA 2"

Archivo: /la batería + Nike recompensan

GENERADOR de la RECOMPENSA del CARGADOR de BATERÍA 1G22:

ARCHIVO: RECOMPENSA DE BATTERY+NIKE. Recompensa generada por Usage Level.

La invención archivó más adelante por Nike. Palmadita no 6.585.622 de los E.E.U.U. el 3 de diciembre de 1999.

DESCRIPCIÓN:

Podómetro de McDonald's: Patente relacionada.

Ejercicio y grasa floja. El podómetro anota cuántas calorías fueron quemadas, y en golondrina de mar conseguir una cupón (certificado permitiendo descuento del cliente en su compra siguiente en el restaurante). El podómetro pudo escupir hacia fuera una cupón. Alquiler o podómetro del préstamo de McDonald.

- D: U (el caminar) = "sensor" = podómetro ("analizador", K, S, impresora (de las cupones, de la "cuenta", "interruptor")).

--"Interruptor": uip; almacenar selecciona cómo el sistema "anotará" - > usuario de la recompensa; UIP - ajusta las calorías requeridas que se quemarán/llanas de ejercicio con la edad del u (gama).

- Estrategia de búsqueda de la patente: Podómetro

- No. de la patente de los E.E.U.U.: 5164967 5117444 5065414 5117444 4649552 4651446 4741001 4771394

- + 4855942 podómetro y/o aparato de medición y método de la caloría: absolutamente similar a KN, con todo al extracto no menciona que las cupones están dadas hacia fuera, ni que el dispositivo es rentable de almacén.

- las cupones se pueden dar hacia fuera simplemente para el nivel cuantificado de ejercicio, eg.: cada kilómetro (caminado) iguala un punto.

- Tipos de la recompensa: bebida del cafeína [que guarda a clientes en el ir]; alimento; música y gente de entretenimiento de otros cartuchos. Ciertos artículos compraron resultado en mayores puntos correlacionados ganados por los clientes, eg.: bebidas caffeinated.

--un uso más libre [EL] del dispositivo/sistema/acceso

--kilometraje del aire; uso interurbano de t; regalos o parte posterior del efectivo [según lo ganado cerca descubrir la tarjeta o American Express].

+ cualquie N que el scored= del is= puede reaccionar recompensas del w=.

- Cuenta: Cualquier tipo patrón que anota puede ser aplicable, eg.: nivel del uso de $; nivel del uso de la cantidad del tiempo; cuenta solamente para el tipo particular [ofrecido nuevamente] de servicios. Cuenta = Acceso-VAGOS.

- D: u = actividad/función = sensor/cuenta = c = servicios/funciones/recompensas outputted.

- Tipos del algoritmo: mayor es el nivel de recompensa el nivel de aumentos/de disminuciones de la acumulación del punto según lo señalado [basado en la actividad w/in 24 períodos de la hora]; la hora/el year= corresponde al nivel de puntos también.

-

+ otros dispositivos que miden usage= de la actividad/u entonces que da recompensan:

- Picosegundo-Zona: recompensas según las acciones/los movimientos del picosegundo del u.

- Uso de la gasolina: si los clientes compran todos/la mayoría del gas del mismo grupo de la venta, eg.: Aceite estándar, consiguen más baratos/libres [las reparaciones autos]. El automóvil tiene sensor= que detecte los productos químicos marcados con etiqueta usados solamente por el aceite estándar. Publicidad de estados: nuestro gas mantiene su funcionamiento del coche más largo y mejor.

- Cybernet: la mayor frecuencia del detalle de acceso del u [grupos de] avista los más puntos. Acceso = cuenta = recompensas.

- 'Equipo = cuenta del ejercicio: velocidad/metros que anotan del treadmills= atravesados; systems= del peso que anota el número total del peso w de repeticiones [que dan cuentas más altas a mayores pesos que el número de repeticiones según algoritmo señalado] = recompensas en kilometraje del aire o el uso de la gimnasia.

- VAGOS = cuenta: el buen behavior= resulta las recompensas del in=. Eg.: buen comportamiento del niño en conseguir buenas cuentas en pruebas automatizadas; su televisión excesiva de observación o juegos del EL de w que obran recíprocamente.

. OTD D:

U = este ~ del sistema de N [generador de la recompensa] C = actividad/recompensa del u = TENER ACCESO [] AL CARRO de // de los VAGOS de // del ANALIZADOR de // del ARTISTA de // [] [] [] [] // EDIT [los medios u obran recíprocamente w alteran según la cuenta del u] // EDUC [u va a de alto nivel] // que [] la CUENTA MULTIUSOS de // del RANURADOR de // Q [] // R [] // de la Picosegundo-Zona de la banda de // NR [cuando/cómo las recompensas dispensadas/acumuladas] // [] // [] [] [] // BUSCA y REACCIONA [] el ANALIZADOR VISUAL de // UIP [] // de la PISTA de // TDS [] // T [] // del ANALIZADOR de SONIDOS de // del SENSOR de // [] [] [] [] // VR [] // WA [].

Archivo: La categoría/la ayuda deterioró

TAMBIÉN NOS ESPECIALIZAMOS EN INVENCIONES DE LA AYUDA DE IMPAIREMENT

SE DISEÑA NUESTRA SOLICITUD DE PATENTE ENTERA DE ADAPTAR INVENCIONES A LA GENTE QUE EL WHO TIENE DIVERSO FÍSICO Y O LIMITACIONES MENTALES. ¡HAGAMOS ESTO UN MEJOR MUNDO QUE CUIDA QUE COMIENZA HOY!

Introducción a algunos ejemplos: Las invenciones se diseñan para todos los tipos de individuos perjudicados. Éstos incluyen: físicamente lisiado; y ésos deteriorados por la vista, la audiencia, y o el tacto.

Ver el amaestrador de la lengua 7J02 y el analizador de la voz: Enseña los principiantes de lengua a cómo pronunciar nuevas palabras.

notificación del Pre-Acceso 7J03: Como un individuo perjudicado puede requerir más hora de llegar al cuarto de resto, pueden enviar una señal al cuarto de resto que notifican a cualquier inquilino de la llegada que viene de un partido perjudicado.

- Diagrama: el usuario perjudicado = teledirigido = computadora = notificador [que dice a inquilinos preexistentes de la llegada prevista]/las puertas es bloqueado si el sitio de resto es vacante así que el partido perjudicado puede tener espacio reservado para ellos.
- El partido perjudicado las localizaciones puede tener acceso:
cuartos de resto; elevadores; vestíbulos (que carecen tamaño ideal); teléfonos públicos; copiadora de oficina; cocina [el usuario puede requerir más espacio y puede ser que sea la mejor cocina se va para ellos solamente].

analizador del Pre-Acceso del vestíbulo 7J04 - "barbas del gato": La invención analizará la disponibilidad del espacio para las sillas de rueda o el otro equipo lisiado de la ayuda. Ejemplos:
- dimensiones aceptables del vestíbulo en los pasillos y para las esquinas que circundan.

cuenta de la accesibilidad del ADA de la localización 7J05: El usuario sabe que el nivel de localizaciones de la conformidad del ADA tiene antes de viajar o de incorporar esa región del sitio. Ejemplos:
- los sitios de la tela son requeridos por la ley para exhibir el grado
- la oficina de correos de los E.E.U.U. requiere el grado ser incluida dentro de la dirección si quieren el correo recibido. El grado pudo estar después del código (postal) Info de la calle, de la habitación o del cierre relámpago.
- tipo grados: los dígitos múltiples, cada dígito que representa la cuenta para corresponder publican. Eg.: Habitación 200-BCD6
--B = cuenta accesible de la silla de rueda (A es la mejor y completamente obediente, F es acceso cero en el edificio)
--C = cuenta deteriorada vista. Nivel medio, solamente presente de Braille.
--D = audiencia - cuenta deteriorada. Nada a menos que la estructura de la característica sea tal que la salida en emergencias es muy fácil.
--6 = cuenta total para todos los aspectos de la conformidad del ADA con 1 que es el mejor, y 10 el peor.

instrumentos de la fijación 8G030 (escritura) a su accesorio, molde corporales etc. Para físicamente lisiado. Instrumentos de la escritura que atan/correa-sobre/encajar a presión-sobre finger+, o... Atar cualquier invención al accesorio; el sastre de la invención' ajusta a las necesidades de usuario.
--/wrist/arm (superior o bajar) /leg /foot /toe /torso /casts utilizó por los que rompieron los huesos. Especialmente para la gente deteriorada.

+ el agujero del lugar como el chisme en el molde que (firmemente) sostiene insertó el instrumento de la escritura ((pluma del punto de bola), lápiz (mecánico), (pintura/pelo) cepillo, peine.
--los agujeros de diferenciación en N (invención) se pueden utilizar para los instrumentos de diferenciación.
--recoger a derechos de los hospitales que utilizan la novedad.
--la colocación de agujeros diseñó para el tipo desventaja sufrida por los huesos rotos w de u.

Ver nuestro archivo para que una gran manera adapte el texto para la gente con debilitaciones de la lectura como ésos con la lectura lenta, o la dislexia.

Archivo: Categoría/Hm Automation

AUTOMATIZACIÓN CASERA:

colección y sistema de distribución grises del agua de $ 1G17:
Es un dispositivo de los ahorros del agua para el riego del jardín:
Regar que los flujos de una unidad (casa, conveniente, oficina, etc) están ahorrados y después utilizados para regar un jardín, césped, granja... Regar ahorrado en el tanque, después golpeado ligeramente en por los grifos/los interruptores señalados del agua. Para las partes del mundo con poca agua, eg.: Los E.E.U.U., España, Italia, Grecia, el etc. occidentales por lo menos la idea básica existe. ¿El reciclaje del agua es vox populi, pero su hecho solamente más manualmente?
- El `se adapta cerca: eliminación (a las aguas residuales de la ciudad) de un a base de agua más sucio en como base necesaria [un agua más limpia de la subsistencia].

DETALLES:
- re-se acanala toda la agua (excepto de tocador), o el usuario determina qué agua (en la época de usarla) se acanala para la reutilización
--Controlar que le riegan quieren: uso de agua del botón o de la palanca at/during/after para determinar si se utiliza la re-canalización. El agua se pudo sostener en unidad temporal en incluso los cambios del usuario su mente sobre cómo el agua debe ser utilizada. Válvula de desbordamiento [entra sistema de aguas residuales].
. - el sistema puede tener: filtro de agua; alarma si el contenido en agua contiene características de las sustancias nocivas (pH alto-bajo, de los venenos).
- los usuarios pueden utilizar solamente ciertos tipos de jabones que sean benignos para las plantas
- un fregadero separado se podría utilizar cuando uno necesita limpiar cosas que no quieren rechanneled, eg.: los cepillos de pintura, máquina usada parte, etc. Aunque naturalmente la mayor parte de qué uno limpia w (con - el nivel de controles del adaptatro de interacción) el agua no es dañosa.

- el agua del jardín puede entrar el tanque de sujeción de el cual la bomba riega el jardín (si los desbordamientos, pueden entrar: el sistema de alcantarilla/el tanque séptico convertido y da la alimentación profunda de la tierra del suelo)

- D: agua corriente = dren = mecanismo de control (frescos) (que señala la dirección de la salida; C (la automatización del `adapta las características seleccionadas por el usuario) = sensor/analizador para el agua dañosa) = corrientes = flujos temporalmente al tanque de sujeción (tiene la "cuenta" (por completo/historia del volumen de las demostraciones)/flujos a los golpecitos del sistema = del control de alcantarilla en esto agua ahorrada primero para las aplicaciones señaladas: jardín, limpieza miscelánea (el regar inicial abajo del coche sucio, arrastrando la acera/el camino).

+ evitar que la mala agua sea reutilizada, u (multi-usuarios) se puede requerir para seleccionar a el cual la corriente de la dirección fluya hacia fuera: la reutilización, o el departamento del saneamiento soluciona: u (multi-usuarios) que olvida accidentalmente seleccionar donde el agua irá después de uso.

- filtros (puede ser) usados antes de que se reutilice el agua reutilizada.

Archivo: Categoría nueva/casa/alimento Kitchen.doc

ALIMENTO Y COCINA RELACIONADOS

% de 2J-05 de la estufa de la tapa del reflector del calor: Reducir el burning en estufa (del gas) teniendo utensilio de cocinar rechazan calor por uno de varios medios, mientras que reduce al mínimo traspaso térmico al utensilio (pote).

- Medios del rechazo:

--el aire está soplado (hacia abajo) hacia la fuente de calor (bastante) para guardarla (las llamas) del utensilio conmovedor.

--la composición química de la capa externa del utensilio (parte inferior de la cacerola) diseñó: rechazar el calor (dando por resultado algo como los imanes de la misma orientación que se rechaza, aunque sin relación de proceso científico)/las extensiones el calor sobre un área más amplia (como la capa de cobre)/transferencias hasta una cantidad máxima de calor (total/por unidad de tiempo) eg.: sustancia cuyo efecto es similar al asbesto.

taza de café 5J06 con los elementos de mantenimiento del calor:

El material incorporado a [parte inferior] de la taza de café, líquido del longer= del calor de las subsistencias por lo tanto permanece más largo caliente.

- el material se pudo utilizar a través del envase. Quizá sus más activatable sabio del calor en un horno microondas.

+-see: - CALEFACCIÓN - BOLAS de ENFRIAMIENTO del INDICADOR PARA los LÍQUIDOS, ETC 1J080

correlador de la dieta del grupo 2E030: Afinar en software que el alimento tenido gusto mecanografía, y o ingredientes, después el sistema suministrará recetas. Para las recetas de deseo de la gente múltiple del interés mutuo, el sistema encontrará recetas el emparejar la mayor parte de de sus gustos individuales. <2, 2, 2>

fabricante personalizado 2E040 de la receta: El sistema recibe grados de usuarios en las recetas recomendadas, en la golondrina de mar que mejora más lejos sus sugerencias futuras (eg.: mayor o poco uso de ciertos ingredientes). Recetas sugeridas también influenciadas vía: requisitos de salud del usuario; país o región donde se vende el software.

calculadora de la caloría 2E050: Llave en calorías deseadas máximo. Incluir la información sobre cómo una quema sus calorías (tipo ejercicio). Recibir recomendó las recetas para el alimento pedido del volumen. - <2, 2>

Archivo: Bola de hielo/indicador de la introducción de la bola de hielo

HIELO y BOLAS CALIENTES 1J080 ABSTRACTO

Contenido para el hielo y los archivos calientes de la bola:
. Introducción
. Thermos
. Leído más adelante
. Nueva tecnología

Después de congelar es la manera más rápida enfriar el jugo, la cerveza y el vino, sin la dilución derritiendo el hielo. Las bolas de hielo substituyen la necesidad de las bandejas de hielo sucias que derraman a menudo el agua cuando están llevadas al congelador.
- Más bolas de hielo se congelan y se almacenan en el mismo espacio que las bandejas del cubo de hielo.
- Las pequeñas cajas portables de la bola de hielo substituyen los pechos de hielo abultados, más un viaje posible al almacén para un bolso sucio del hielo.
- La invención ahorra a usuario del riesgo y de la preocupación temporalmente de colocar sus bebidas en el congelador para evitar derretir el hielo en sus bebidas.

La bola caliente: La bola caliente innovadora después de microwaved, de las subsistencias café y del té caliente. Ahorra a usuario de agregar el café caliente a una taza semillena, que puede calentar solamente para arriba un poco. La bola caliente también ahorra de tener que reajustar los niveles diluidos del azúcar y de la crema.
- Una de las maneras más fáciles de tener una bebida caliente al aire libre.

El caso del recorrido permite una de las maneras más fáciles de disfrutar de bebidas frías o calientes al aire libre. ¡Muchas más características únicas abundan! Hay un mercado enorme si solamente una fracción personas del mundo de las cinco mil millones compró un sistema de bolas de hielo y de bolas calientes. La mayoría de la gente bebe frío y o las bebidas calientes diariamente. El beneficio proyectado conservador está bien sobre $64.000.000.

Hay muchas otras características innovadoras relacionadas con esta invención confidencial.

INDICADORES CONTENTOS QUÍMICOS DE LA BOLA CALIENTE DEL HIELO

El cambio del color notifica la naturaleza de la no-temperatura del contenido.
- Por ejemplo:
Demuestra la calidad del té o del café, por ejemplo: tipo de carne asada, cuánto azúcar necesario para esta mezcla del café/del té (debido a la bebida inherente (acidez)).
- Calidad líquida "notificador" de la invención 1J081. Esta invención es parte de la invención principal 1J080, y ser archivado para la oficina de patentes más adelante como invención separada pero relacionada.

La edad/la calidad del líquido (eg.: el zumo de naranja) puede alterar en un cierto plazo, y tiene un estándar/un cambio sabido, eg.: un contenido ácido más alto. El notificador puede intentar tan cambios señalados en la calidad de un líquido para determinar: edad, dulzor, valor alimenticio...

% alerta a gente en dietas restrictas a la presencia de ciertos ingredientes en su bebida:
- Debido al error humano en restaurantes, uno puede nunca estar seguro si su bebida contiene el alergénico o el otro ingrediente indeseado.
- Diabéticos:
--Yendo a los restaurantes pueden pedir soda del azúcar libremente, pero reciben accidentalmente bebidas con el azúcar; o el camarero funcionó de soda libre del azúcar... Bebedores (traer sus propios instrumentos del indicador puede comprobar para saber si hay sí mismos.

+--El problema es ellos necesita mantener el frío de las bolas de hielo, quizá una cubierta fría especial que también fue precongelada antes de salir de su hogar.

--El otro contenido del producto químico que los usuarios son alérgicos se puede también demostrar también por los indicadores del color. - Etc...

Ciertos gérmenes pueden causar un cambio en el color del indicador. Los indicadores del color para diversos países pueden ser específico de la región; en ésa la presencia más alta de ciertos gérmenes diferencia por la región. Las bolas de hielo utilizan diversos indicadores del color de la seguridad basados en el país y o el tipo de uso.

- El indicador puede no saber la presencia del germen sí mismo, pero puede buscar los productos químicos asociados a la presencia de los gérmenes, tal como cualquier cosa tales gérmenes emiten y que no se encuentra normalmente en bebidas, ni es emitida por los gérmenes no peligrosos.

El otro contenido del producto químico para las cuales los indicadores pueden ser utilizados:

. - tipo de té

- cualquie deterioración de la bebida debido al envejecimiento (del material original para elaborar cerveza, o desde elaborado cerveza).

- algo sucio: grasa, bacterias, (presencia o carencia de la clorina), materias del suelo

CARACTERÍSTICAS GENERALES DE LOS INDICADORES DE LA TEMPERATURA

La temperatura ideal (por ejemplo para un bebé) se puede señalar 'notificado (por el tipo color).

El comprador selecciona la temperatura deseada que quieren comprando/que altera el dispositivo para cambiar color o para hacer lo que se señala en tal temperatura/situación.

- o comprador fabrica el cubo vía su fabricante casero "fácil de utilizar"...

Utilizar los indicadores del color para demostrar cómo el líquido caliente está consiguiendo mientras que el su ser heated. Permite al usuario parar el proceso de la calefacción quitando la bola caliente cuando se alcanza la temperatura deseada.

Bola caliente de la calefacción de la bebida:

. - formas del cubo: la esfera, el cubo, la forma de animales, las formas del etc. guardadas alisan bastantes para la higiene.

cambios de %-other según temperatura: los encogimientos/se amplían; las imágenes aparecen/desaparecen en la superficie del cubo; oscilador (zumbido leve); olor.

%--las bolas pueden ser caídas de (debajo del frasco del café)

las bolas de %-the comienzan solamente a emitir calor cuando el líquido cae debajo de cierta temperatura. Esto puede ser porque: conserva temperatura caliente mejor que la taza...

Los cubos de hielo ordinarios desaparecen cuando son inútiles, pero revestidos los plásticos no dejan a usuario saber cuándo llegan a ser disfuncionales.

Técnico:

- la temperatura del interior de la calefacción/del instrumento de enfriamiento necesita ser distinguida de temperatura exterior vía:

--(producto químico/temperatura/termómetro) el "sensor" colocó la calefacción interior/el instrumento = la ventana de enfriamiento a emerger = NR.

--en peor de los casos: la temperatura de la bebida entera efectúa grandemente el color de la calefacción/del instrumento de enfriamiento

Mientras que la temperatura del instrumento del enfriamiento/de la calefacción cambia uno de siguiente puede ocurrir:

flotadores o fregaderos de %-implement (en líquido), actuando como NR. Cargar el cambio causado encogiéndose/que se amplía/alteración química del material de revestimiento (de PVC)/de la cubierta del contenido w/in.

%-bubbles vienen adelante (el efecto de carbonatación)

. - olor lanzado

% de la calefacción del dispensador de la bola:

- Camareros del cuadro que caminan alrededor con los dispensadores de la bola en un café de alta tecnología. Su otra mano puede sostener el frasco para más café.

- El envase cambia color según su temperatura:

ahorra de tener que tocarlo o beber para comprobar la temperatura.

- Calmando algo tener gusto de los líquidos, del material granoso, del etc sin la alteración de su constitución. Útil para los usos del laboratorio, desde demostraciones cuando los instrumentos de enfriamiento o de calefacción están no más de valor cambiante de la suficiente temperatura.

--El dispositivo de tenencia sí mismo puede sevir de ayuda en la alteración de la temperatura (especialmente si su constitución se diseña para almacenar la temperatura deseada).

Ejemplos de las bebidas líquidas que son frescas deseado, pero no adaptado a la dilusión: vino, cerveza, jugo, soda, otras bebidas frescas exóticas que utilizan la leche de coco en vez del agua, etc.

- Bebidas calientes: Café, té, leche caliente con los Cocos.

--Difícil rehacer más del líquido caliente para calentar para arriba si no se hizo ningu□n líquido adicional. Cualquier líquido adicional hecho se refrescará abajo, o correrá el riesgo de secarse mientras que está mantenido caliente.

Las bolas de hielo son útiles cuando solamente las bebidas de la temperatura ambiente están disponibles:

- de sus gabinetes

- si apenas está comprado de un almacén.

- si estuvo comprado de un refrigerador del almacén, consiguió caliente en el hogar del viaje, o no era bastante fresco cuando estaba comprado.

ARCHIVO CALIENTE DE LA INTRODUCCIÓN DE LOS INDICADORES DE LA BOLA DEL HIELO DEL EXTREMO

Archivo: Bola de hielo/Thermos de la bola de hielo

BOLA CALIENTE DEL HIELO - THERMOS RELACIONADO CON CALOR DE DISIPACIÓN ALMACENADO

SUPERFICIE REFLEXIVA INTERNA:

- Tener un área inferior reflexiva, o la superficie interna entera refleja. El valor consiste en la fabricación del color actual de la bola que mucho más sensible; dando una vida a la bebida basada en la temperatura solamente. --más conveniente al claro o a los líquidos semi claros; y los líquidos que son algo color emparejaron a las bolas.
- Diversas bolas del color y sus anuncios de las reflexiones una nueva dimensión al placer de consumición, a la novedad, y charla de la mesa de centro a la pequeña...

El envase almacena bolas hasta que sea necesario:

- Las bolas se pueden verter y almacenar [lado] de la taza, mientras que su temperatura es [sobre todo] mantenido debido al buffering y al contacto de no/little con el líquido.
- El usuario en como base deseada lanza bolas.
- Diagrama automatizado de la versión de lanzamiento: el líquido = el termómetro = el analizador = el regulador del lanzamiento del mecanismo = el lanzamiento = la bola del mecanismo fluye [suavemente] en líquido sin salpicar [desde flujos no de por encima de la superficie].

Ventana termal del envase:

- Una pequeña área del envase vía la cual el usuario puede tocar la superficie de transferencia del calor para calibrar el contenido líquido. Esto es mejor que usar de cerámica/los envases de cristal que lanzan temperatura por todas partes.
- Los indicadores pueden demostrar estado de la temperatura '.
- % de la pantalla/notificador funciona como ventana también.
- Ventajas de la seguridad/de la higiene. Eg.: evitar el burning.
- Protector opcional sobre ventana.

INSTRUMENTO CALIENTE/FRÍO ALMACENADO

- [Parte inferior de] el envase termal puede conservar un instrumento de cualquier forma [con excepción de bola], como discos gruesos planos. Los discos tienen un almacenador intermediario/una tapa/una

pared del líquido real, que es (con referencia a) mueble cuando la temperatura líquida baja afuera de gama deseada.

- Instrumento de la calefacción: puede ser que sea calentado en: calentador separado; o guardado dentro (termal) del envase líquido - desde calor (de la microonda) puede acercarse a él a través del envase.

Opciones de la localización del instrumento de enfriamiento de calefacción:

- superficie interna entera [de la taza externa].
- parte inferior [mitad] de la superficie interna de la taza externa.

PROTECTOR DEL INSTRUMENTO DE HEATING/COOLING - GENERAL:

- pudo estar algo eso: hace estallar apagado; desliza; expulsa apagado.
- el instrumento pudo incluso ser pieza [permanente] de a de la taza. Los finales lisos son tales que la taza/instrumento es fácil de limpiar [sin sacar el instrumento]. En este caso es el protector que puede ser limpiado: especialmente/por separado/con la especial atención.

Protector interno de la taza: - taza [disponible] dentro de una taza

- la taza externa contiene el instrumento
- cuando baja la temperatura líquida parámetro deseado exterior. Las opciones son:

--verter el contenido interno de la taza en el contenido externo de la taza, interno que da a líquido la exposición directa al instrumento. La taza interna sirve como barrera hasta cambios de temperatura.

---si la taza interna no es tolerante a la temperatura excesiva del instrumento, un protector adicional puede ser utilizado.

- solamente la parte de la necesidad [disponible] de la taza se protege contra excesivo [calor], por ejemplo la parte inferior de la taza interna.

Protector interno de desplazamiento doble de la taza: - Dos tazas que caben en uno a de los mismos tamaños. Ambas tazas tienen [alrededor] mitad de su parte inferior cortaron. El usuario decide cuánto [si cualquiera] dará el contacto ellas a líquido a la calefacción/al instrumento de enfriamiento, como la temperatura líquida puede desviarse de parámetro señalado.

- Más el contacto líquido con el instrumento, el mayor líquido del efecto es recibir.
- Para la limpieza, las tazas internas se pueden sacar completamente.
- Las tazas traslapadas múltiples pueden ser:

--abisagrado tan resbalan sobre uno a cuidadosamente [sin mucho boquete entre cada uno], así que regar menos probablemente para tocar el instrumento [en la localización indeseada].

--marcado en tapa [cerca del labio - de donde el usuario bebe] así que usuario sabe donde están los boquetes abajo. Permite al usuario alinear las tazas en la posición deseada.

'Velocidad del instrumento del lanzamiento de la temperatura: - Su construcción pudo estar de una sustancia que lanza temperatura lentamente, para no requerir [mucho] el blindar [alterable].

- Absorbe calor deseado/el enfriamiento lo más rápidamente posible. Pero las características para la lentitud/la velocidad deseadas del lanzamiento pueden ser más importantes.

- La temperatura a la cual el instrumento se altera en calentador/refrigerador puede [determinado automáticamente por el analizador] ser relacionada con la temperatura ambiente/del ambiente en ese entonces. Es decir el café caliente necesitará más alza del calor en una cámara fría.

- Con todo las oficinas/los hogares en las temperaturas normales puede requerir simplemente un producto "de interior" estándar que no necesite ser referido sobre el cálculo en la temperatura del ambiente.

- El lanzamiento de la temperatura se efectúa cerca:

--características del contenido químico del instrumento

--mecanografiar los protectores, y los almacenadores intermediarios

Misceláneo: - las tazas múltiples que caben en uno a son posibles, continuar mantenimiento de la temperatura.

- el 'instrumento necesita sostener más de la temperatura excesiva que el líquido. ¿Qué materiales en mejor del instrumento permiten esto?

- calentar quizá/antes fresco/por separado de los instrumentos del envase w (con - el nivel de controles de la adaptación de interacción) de líquido, porque el instrumento necesita una mayor variación de la temperatura.

--producto químico para el lanzamiento de la temperatura: una barrera immobiliaria [mientras que bebe] se puede utilizar, por ejemplo contra los productos químicos del peligro, eg.: hielo seco colocado en el chisme

Ediciones: disponer de la taza interna; messiness en la colada a partir de una taza a después

Estrategia de búsqueda de la patente en los envases del thermos:

- (envase o taza) y (therm o insulat) y (calor o caliente o frío o fresco) y (líquido o café o té o bebida)

--la búsqueda refinada puede enangostar sobre búsqueda agregando el siguiente a la estrategia principal: (excepto o el almacenar o almacén o energía o talud o portable o vehículo o bebida o indicat // o latente y transferencia o conductas o el conducir o dissipat o regenerat)

Patentes de los E.E.U.U.: ++5572872 dispositivo de refrigeración por líquido, que almacena y de dispensación; +5720555 envase y tapa para indicar la temperatura; ... bebidas de la calefacción +5842353 y de enfriamiento; 5871042; 5699841; ¿? 4696338; ++4823554; +4320626; 5271244; 4320656; Réfrigerador de 5067922 bebidas y juguete que lanza; 5301508

CONCLUYE LA BOLA CALIENTE DEL HIELO - ARCHIVO RELACIONADO DEL THERMOS

Archivo: Bola de hielo/bola de hielo

BOLA CALIENTE DEL HIELO

- CALEFACCIÓN - BOLAS de ENFRIAMIENTO del INDICADOR PARA los LÍQUIDOS, ETC 1J080

Ver KN (invención) en directorio de A; % (7G050 NR); %1J081. Ver + las invenciones 7G.

. - La superficie puede demostrar el estado del contenido en las cuales los dispositivos entran en el contacto.

La superficie cambia color según la naturaleza del material en el cual su superficie entra en el contacto.

No. de la patente de los E.E.U.U.: 4016762; 4388332; ¿3935432? ; 4893477; 5180598 4028118 - también ven patente/N ()/KN (invención) de la invención en el notificador 7G050 del PVC que implica cambios del color a la temperatura. No. de la palmadita: 4919983

La temperatura de la bebida, juntada con (analizador del usuario ') saber la cantidad de la sustancia -> permite que el usuario/el analizador sepa cuántas bolas a colocar en el líquido.

Las bolas pueden felicitar las tazas existentes de la espuma de poliestireno [consumición].

Seguridad: - considerar diversas formas asistir a seguridad. Eg.: ningunas grietas en la forma que puede llevar a cabo la suciedad.

- El hielo es más deslizadizo cuando está caído en el piso.

Formas de la bola: formas más planas pueden disipar el templado más rápidamente; los instrumentos en forma de disco, pudieron tener el canto u otra forma a lo largo de los lados así que ambos lados pueden estar en un contacto más completo con el líquido, sin un lado que se basa plano sobre la parte inferior del envase líquido.

El tipo de bebida que era bebida pudo aparecer en la fraseología como el indicador del color, tal como "Coca-Cola", "café", o "jugo". Esto es hecha por el indicador que busca un ejemplar químico apenas para tal bebida.

Diversas descripciones de la invención, son aspectos limitados a la invención.

- Ninguna uno o más descripciones de la invención no necesitan necesario anularse, ni arriesgan el valor de las bolas de enfriamiento, ni las funciones cambiantes del color.

- Las características deseables y prácticas tienen que ser planchadas hacia fuera para algo que interesa por lo menos una porción del mercado que no busca la invención perfecta, solamente algo que soluciona su dilema actual para la calefacción y las bebidas del recalentamiento.

El líquido puede también ser material no humano de la consumición por ejemplo para: [acción viva o animal doméstico] animales; líquidos en laboratorios científicos; utilización del laboratorio médico; maquinaria [donde los indicadores demuestran el estado]; ver el archivo 7G. ¡Esta área amplia es aún más confidencial que otros aspectos de la invención! Esperanzadamente el socio continuará su trabajo en esta área más adelante.

La ventaja del almacenador intermediario también es reducir la ocasión de la explosión de menor importancia si el líquido de temperatura grandemente diversa que sí mismo del tacto del instrumento.

Como una novedad otros factores puede cambiar los colores del notificador:

- tipo de instrumento de golpe ligero. Eg.: resultados del sol y de la luz fluorescente e incandescente en colores de diferenciación; y su intensidad también se refleja en intensidad o el tipo de color.

Los términos simples en la comercialización de la invención como el "hielo y las bolas calientes son más convenientes" pueden ser utilizados.

Más fácil en los ojos del usuario: Más fácil leer, tales en una distancia, o para los niños o los illiterates en los países del tercer mundo. Usos médicos posibles para los pacientes menos educados que pueden ser requeridos calentar o enfriar un líquido a una temperatura señalada para el valor médico máximo.

Los anfitriones son mejor conscientes en cuanto a cuando es hora de servir más bolas sin la necesidad molestar al bebedor, que ellos mismos no puede ser plenamente consciente de la temperatura líquida actual.

Bolas del sabor: Las bolas calientes o frías pudieron también dispensar sabores también cerca:

--disolviéndose totalmente

. --guardando el material de dispensación dentro de la bola, por el que se reutilice la bola.

El estado de bolas puede también [visualmente] ser considerado bajo circunstancias especiales, eg.: luz infrarroja. Las ventajas incluyen:

- comprobando para saber si hay cualquier salida, ver: fractura del condón +7G050 o del guante.

La paja también tiene los indicadores. También cualquie tubería usada para mover líquidos alrededor, por ejemplo desde la máquina a la máquina o al envase.

Poner las bolas del indicador en los acuarios [de los pescados].

Presión aumentada notificada, si consigue demasiado caliente.

Si las temperaturas excedieron mismo frío, o muy calientes; esperanzadamente los indicadores demostrarán color [relacionado] de a [a el apenas de ser frío o caliente]. Sin embargo, cerciorarse de que por lo menos el "frío" o los colores "calientes" esté demostrado, y no desaparecer si la temperatura consigue incluso más lejos al extremo. Puede haber ediciones de seguridad implicadas si la temperatura es tan caliente que se descolora el color caliente, haciendo a usuarios piensa que el líquido es seguro.

Los indicadores también demuestran: calidad del aire pobre en burbujas de: carbonatación.

Resplandor en la obscuridad: - pueden brillar intensamente en la obscuridad [pero solamente en ciertas temperaturas]. Diversión para los partidos del patio trasero, ventas de Víspera de Todos los Santos.

- Herramienta de la datación:

las noches apasionadas con las luces apagaron - pero tener su socio acabar su whisky en las rocas antes de que salga la luz [una manera de conseguirlas listas para la diversión...].

--¡Límite de dos bebidas a la noche!

Característica de la seguridad de la fábrica o del laboratorio:

- Si de cualquier sustancia nociva de uso general en la tierra del lugar de trabajo de una persona en su bebida accidentalmente, las bolas o el indicador del envase de bebidas pueden demostrar tal ocurrencia. Esto es un pequeño precio a pagar seguridad del trabajador, y puede reducir tarifas del seguro.
- Puede trabajar con o sin características de calefacción. De otra perspectiva, algo tiene gusto de un contador de Geiger contra la radiación.
- Especialmente útil con los indicadores que se diseñan fácilmente para adquirir las características del indicador el usuario quisiera que tuvieran, sin tener que hacer un funcionamiento especial de la fabricación.

Otras maneras de notificar a usuarios del estado:

- Sobre la visión: Los usuarios no prestan a menudo quizá la atención al indicador. Por lo tanto más que apenas un cambio del color puede conseguir la atención.
- Formas de notificación. Vía:

--sensación física (la picadura, prickle, lanzamiento del olor, oscilador [pieza sana saliente del comunicador] como un sonido de la alarma, %flashing enciende el notificador, cierre del sistema (sistema ligado a las características adaptadas) conectado/relacionado con el plástico/la ocurrencia en la pregunta/causar la preocupación.

--Diagrama: indeseado estado dentro líquido/perforando/fractura de material conteniendo indicador - > sensor/reacción química - > químico lanzamiento ()/el oscilador/la otra forma del ácido de la notificación.

Las bolas que diferencian de uno a por ejemplo por su tamaño disipan temperatura rápidamente o lentamente según el tamaño. Bolas más grandes tienen un almacenador intermediario más grueso. Ésta es tanto más razón del cliente para comprar tipos múltiples de bolas.

El hielo guardó fuera de los derretimientos del congelador, aumentando la velocidad en la cual todos los cubos de hielo derriten de exceso del agua. Menos necesidad de viajes múltiples al congelador, cuenta eléctrica cada vez mayor.

ARCHIVO CALIENTE DE LA BOLA DEL HIELO DEL EXTREMO. TERMINAR ESTA CARPETA DE LA BOLA DE HIELO

Archivo: Bola de hielo/bola de hielo Techie

ARCHIVO CALIENTE DE LOS ASPECTOS TÉCNICOS DE LA BOLA DEL HIELO

Nota: Los detalles técnicos cubren una amplia gama de usos más allá apenas de las bebidas. Utilizar este material para accionar nuevas ideas, y dar menos foco a los aspectos restantes.

- Por ejemplo: esto cubre las ediciones diversas tales las perforaciones (de S (la pantalla y el analizador del 'adaptan el menú para las necesidades actuales de los multi-usuarios') en la bola, y más que pudo ser esperado,

porque mucha investigación fue hecha ya en esta área para otra invención. No se alarman por favor excesivamente debido a los detalles extensos en este tema. Esto era en gran parte un "cortar y pegar" de otro archivo, con una cierta modificación.

CÓMO LAS CALIDADES DEL INDICADOR SE PONEN SOBRE BOLAS:

Opción 1 - Bolsillos:

- alisar o el área de la superficie semi áspera guarda los productos químicos seguros en la superficie, cuando la bola se coloca en tales productos químicos en las formas de: energía, goma, líquido, gas, y o mientras que recibe las frecuencias eléctricas [que hacen las bolas ese mucho más receptivo a recibir las características del indicador].
- la superficie puede tener calidades absorbentes.

--asimismo la superficie pudo rechazar [viejas] calidades del indicador cerca: siendo sumergido en una sustancia química [del baño]; entonces estando listo para una re-administración de los mismos productos químicos del indicador, o un diverso indicador.

--el proceso se pudo simplificar para el cliente que puede no necesitar conocer a todos los mecánicos del proceso. Eg.: puede ser que apenas plop la bola en un dispositivo que "hace el resto".

Opción 2:

- la bola clara tiene los colores del indicador insertados adentro.
- la bola pudo encajarse a presión, o tornillo cerrado, o tiene una diapositiva o una bisagra de la puerta cerrada.

--entonces un sellante no tóxico se pudo poner quizá alrededor de la bola; solamente si el contenido no es el más seguro para la consumición humana.

Opción 3:

- las bolas son simplemente disponibles.

Opción 4:

- trabajo de los indicadores por un plazo largo/indefinido.

Opción 5:

- la bola es como una cebolla en que las capas externas pueden salir.

BOLSILLOS: El material puede alternativo también llevar a cabo los productos químicos del indicador con sí mismo.

- En otras palabras:

El PVC (el otro material) tiene bolsillos (minúsculos) que se sostengan/tipo interactivo producto químico/condición de w (con - el nivel de controles adaptador de interacción) buscada = el ojo/EL (adaptado electrónicamente) "analizador" del u = estado en tipos de contactos hechos w5.

- en otras palabras: el PVC puede llevar a cabo los productos químicos necesarios para reaccionar con los nuevos agentes que entran en el contacto con el producto químico en los bolsillos. De bolsillo de molecular hasta varios ajustar los centímetros/los metros.

- embolsar las formas: cualquier tipo cavidad donde hay una abertura y un interior grandes/pequeños él consigue más estrecho/más de par en par mientras que consigue más profundo; cualquier proporción de anchura a la profundidad; el bolsillo se puede crear vía una superficie circundante de la pared incluida, w (con - el nivel de controles del adaptatro de interacción) o el wo (sin a excepción de la investigación y otros propósitos) cualquier cavidad hecha en la superficie del pvc, paredes puede aletear. Los puntos de la superficie áspera (muescas de w) se pueden llamar bolsillo también.

- los bolsillos están completamente o llenado parcialmente, en estes 3ultimo, los agentes químicos subsecuentes pudieron conseguir en los bolsillos (y crear una mejor reacción química).

- Bolsillos parcialmente llenados:

--Cómo la subsistencia embolsa totalmente de llenarse de los productos químicos atados adrede al PVC: la pieza externa de paredes rechaza (ciertos) productos químicos/pegamento no se pega allí; reducir al mínimo la cantidad de producto químico aplicada/dada al PVC para no llenarse embolsa totalmente.

- la limpieza del PVC puede no disturbar los bolsillos

- Superficie dentro de la capa: sustancia lisa/áspera o revestida de w (con - el nivel de controles del adaptador de interacción) (función adhesiva) a ayudar a atar al producto químico señalado. Esta capa pudo [ayuda/PVC del protector contra] los productos químicos (reacciones).

- Nódulos: los bolsillos pueden ser w substituido: nódulos químicos atados a la superficie (que come con eso en la superficie para un mejor apretón/la adherencia.

- Cubierta: las cubiertas (minúsculas) de bolsillos pueden (casi) sellar en sus productos químicos. Tales cubiertas pueden abrirse (parcialmente) cuando es el PVC: sumergido en líquido; la estructura química del PVC alteró bastantes vía agente introducido; + la cubierta deteriora de: el ácido que la come lejos/producto químico que los ataques/comen el PVC y también/edad de la cubierta del PVC/de la otra ocurrencia mencionada (que efectúan el material del pvc, la cubierta se hace del material (iguales)).

--El valor de la cubierta puede ser no disturbar los productos químicos en bolsillos excepto a veces.

- los productos químicos en bolsillos se pudieron salir vía proceso químico (sumergir en de/capa o aerosol del líquido químico/de la colada en el producto químico que sale los productos químicos de los bolsillos).

- puede reaplicar los nuevos productos químicos en los bolsillos para los usos la diferenciación. Eg.: una capa del laboratorio usada para un tipo de experimentos se puede utilizar en el tipo de diferenciación experimentos después de cambiar los productos químicos en bolsillos. Ahorra de tener que rechazar el PVC, ahorra tiempo de tener que comprar nuevos tipos de PVC si solamente el proceso químico es necesario para los bolsillos de relleno/que alteran el PVC de la otra manera así que actúa como nr.

Pegamentos: si hay o no es bolsillos o ninguì□n tipo de aspereza que se pueda crear en la superficie del pvc, las capas de pegamentos ayudarán a los productos químicos señalados para pegarse a pvc = interno

reaccionan con los agentes introducidos. Estos pegamentos pueden ser quitados (w cuaesquiera productos químicos) (en uno o pasos múltiples).

- el pegamento sí mismo puede ser o contener los productos químicos necesarios para accionar el nr.

El usuario de la idea inventiva selecciona simplemente 1] propósito (tipo ocurrencia), 2] que las reacciones químicas deseadas para servir como el nr (nuestros notificadores no garantizados) (ocurrencia de las demostraciones), tipo 3] qué tipo de PVC y o los productos químicos ser compatible junto (puede ser mezclado/atado junto) al servicio como parte de la ocurrencia de la reacción química w, 4] de nr/de sistema del nr (nuestros notificadores no garantizados) (sistema ligado a las características adaptadas) desearon.

- hecho vía: EL (electrónicamente adaptado)/que aplica indicadores señalados

REACCIONES QUÍMICAS GENERALIZADAS: pasos, etapas, inactividad.

. Reacciones retrasadas tiempo:

- algunos productos químicos/reacciones biológicas tienen resultados más claramente discernable para el nr, si tiempo dado un plazo, eg.: el microorganismo excreta los productos químicos después de días del _ del _ = tales excreciones = nr. El producto químico del PVC = del indicador utilizó funciones bien en un cierto plazo: no puede caer o lavarse fácilmente apagado.

- productos químicos secundarios-UNo inactivos

. Reacciones de varias fases: (para de retraso de tiempo)

- se accionan algunos (posteriormente productos químicos) del indicador eficaz después de que las ocurrencias = la causa anteriores señalaran reacciones químicas. D: El producto químico B = producto químico A = producto químico de la reacción = reacciona el producto químico (inactivo) C de w (la automatización del `adapta las características seleccionadas por el usuario) (estaba el pvc de w anterior) = produciendo el producto químico de la reacción que los disparadores = nr.

. Inactividad:

- algunos productos químicos pudieron requerir hora de reaccionar. O, el nr (nuestros notificadores no garantizados) diferencia según la longitud del tiempo: la reacción ha sido el ocurrir/cuánto tiempo hace la reacción (el producto químico C) fue hecho.

- valores en inactividad: los contactos de menor importancia (medidos por el plazo de la exposición) no pudieron autorizar el nr. O, NR- "cuenta" podía ser más bajo/más arriba.

- qué disparadores químicos fuera de inactividad: plazo de la exposición a % químicos; producto químico de capa del anillo (a) gastado apagado (por cómo B/C lo desaparece); la cubierta del bolsillo usada de/hizo más inaccesible para los productos químicos de B/C.

- Productos químicos Secundarios-UNo inactivos: reacciona el producto químico B/C. del w=.

- Los productos químicos en capas internas de PVC se pueden también considerar inactivos en que las capas externas del PVC son sus barreras. Con todo la inactividad del término para tales situaciones es limitada, eg.: quizás las búsquedas del nr cuando la capa externa tiene deterioran, en este caso (una reacción = un nr más rápidos) puede ser deseado, y por lo tanto inactividad no se aplican.

CAPAS/REMIENDOS DEL PVC: cada capa/remiendo tiene características de diferenciación, algunas capas/los remiendos está más interesada en:

+ remiendos de indicadores de diferenciación: permite el nr múltiple, que no interferirá w, como fácilmente por
5 fisicamente la separación. - Poner cada nr (nuestros notificadores no garantizados) en la ocurrencia señalada del punto donde más probablemente crear el contacto/donde no interferirá el nr función de w del plástico.

- fuerza: da el tipo elasticidad de la fuerza w necesaria; evitar la deterioración
- reacciones químicas: productos químicos de la mezcla w (a); bolsillos.
- desaparecido fácilmente; fácil descomponerse = exponiendo capa interna.
10 - aspecto cosmético
- permeabilidad de: aire, agua, productos químicos (a, b+, c)
- demostrar las muestras de la deterioración: puntura = nr; el color-nr puede venir solamente de ciertas capas.
- cómo es el pegamento ellas, o cómo trabajan fácilmente w agregaron los pegamentos, o como de bien se adhieren a las capas de diferenciación/material (interno) (son capa).
15 - inactividad de la reacción: productos químicos más profundos A del asimiento de las capas
- los productos químicos en una capa/región (no linear, sino los remiendos) tienen propósitos de diferenciación del nr.
- esterilización/desactivación/retraso de daño de: producto químico/microorganismo B
- u puede considerar visualmente más fácilmente el grado de la deterioración, basado en el número de capas
20 deterioradas.

Los puntos soldados con autógena en el PVC pueden causar efecto del nr (nuestros notificadores no garantizados) cuando tales puntos han deteriorado (el líquido ha filtrado en sus grietas/grietas desarrolladas). Demuestra una debilidad en la estructura del PVC, aunque ninguna salida fuera del pvc/del envase puede haber
25 ocurrido. Ayuda si el PVC es claro/opaco considerar algu□n nr (nuestros notificadores no garantizados) (el cambio del color donde se considera la deterioración).

- las bolsas de plástico: puede demostrar puntos más débiles de la soldadura
- la parte de material usada en el proceso de la soldadura se puede tratar como una capa separada (según lo descrito en la descripción de esta n). Ejemplo: es (una porción de) este material soldado con autógena que
30 causa el nr (sobre la exposición/la deterioración del material soldado con autógena).
- frecuencia intermedia: antes de la soldadura, los puntos que se soldarán con autógena tienen indicadores aplicados sobre ellos. Estos indicadores pueden soportar la temperatura necesaria para la soldadura.

Multi-Capas: - La capa interna/externa (del guante) de diverso color en la golondrina de mar que se expone, o
35 la capa interna emite la sustancia coloreada cuando está pinchada.

+-three o más capas, cada w poseen las características (color, qué busca y nr). Eg.: nivel de deterioración ácida demostrado por en cuyo su de la capa comido.

- un material más costoso se puede señalar en posiciones más cruciales, eg.: capa externa.

+ notificador - cómo está demostrado: Los síntomas múltiples son nr: nr de diferenciación (no-en conflicto) (de los productos químicos) activatable, eg.: 1] dos diversas rayas coloreadas; 2] C (la computadora del `adapta las características seleccionadas por el usuario) = nr; 3] dígitos particulares/los efectos visuales aparecen en el PVC (en lugares de diferenciación).

ESTRATEGIA de BÚSQUEDA de la PATENTE - mucho se relaciona con los asuntos más allá de indicadores de la bebida. Material: (pvc o plástico o polivinilo o poliuretano o caucho) near5
guante, condón, cubierta, vinilo
- Ocurrencia: (corros (corroer/corrosión), (deteriorat o disintegrat o
- No: biodegrad, recycl, non-corros, resistentes
- (caída near3 aparte) o contaminat
- Y reparación/problema/Identif (identifica)/cambio near2 color/reaccionan (no)/producto químico near2 del reactor reaccionar o entrar en contacto con/measur/las burbujas (el no otro bubbl...)
- Palabras claves de búsqueda de la patente: el pvc, cloruro de vinilo polivinílico, caucho, guante, caja fuerte, germen, penetrat-, advierte, hospital, investigación, rotura, rasgón, capas múltiples.
- atar con alambre/el otro PVC de on/within de los "sensores" cuando estaba disturbado/alteró/efectuado en cualquier w/in descrito manera esta N, acciona la señal (nr) que demuestra llano/tipo situación/problema.

Las MANERAS de COLORMETRIC se desarrollan sobre todo en cuanto los indicadores. Las otras maneras que necesitan más concentración son:
- Métodos bioquímicos: ELIZA {análisis amino ligado enzima}. Eg.: ciertas moléculas orgánicas que buscan tales como un anticuerpo; el anticuerpo reacciona al producto químico señalado, llevando a la notificación señalada.
- Métodos electroquímicos: Detección de escape con medios eléctricos.
. --Un circuito de la batería es un dispositivo electroquímico simple.

OTRO:
. Preguntas: Algunas de las áreas que necesitan la investigación
. Bolsillos: - Cómo pequeños bolsillos hechos en los plásticos: abriendo .25m m o menos con la anchura quizá .5m m y la profundidad quizá .5m m.
. Tipos del indicador: o estado apenas que acciona el producto químico
- capas
- mezclándose
- el indicador aparece bajo luces especiales

- indicadores que pueden soportar temperaturas altas

. Cómo los indicadores trabajan con las superficies duras del [las porciones que pueden ser] instrumentos sumergidos [tales como vinculación, como de bien ellas actúan como indicadores]. Tipos superficiales:

- plásticos
- cemento
- esmaltes, esmaltes, pinturas
- metales
- vidrios

. La investigación necesitó en los cambios del color del indicador

. Porqué el indicador cambia:

- hacer los indicadores demuestran cambios en temperatura [y si tan cómo rapid un cambio], y o la temperatura actual:
- la temperatura excesiva alcanzó en un cierto plazo - efecto acumulado. Especialmente sobre 40 Celsius para dos o más minuta un balance del tiempo quizás a partir una hora a 100 horas o más.

Cuaesquiera efectos perjudiciales de la luz del sol, eg.: su ULTRAVIOLETA [luz ultravioleta] a los indicadores.

. El agua, el aire y la limpieza (con el jabón y agua) esperanzadamente no destruirán los indicadores o los plásticos. Qué sobre el agua forzada de las máquinas automáticas de la limpieza.

TIPOS DE INDICADORES: Esta sección es una copia del archivo 7G-Tech.

. Indicadores químicos del uso casero para: limpieza; pintura; reparación del equipo (los productos químicos en dispositivo pueden venir sobre las manos); uncloggers de la pipa (Draino); etc.

. El cultivar un huerto: Detecta los pesticidas, eg.: aldrina (tratada con cloro), (tratada con cloro) dieldrina; fosfatos orgánicos: ataca el sistema nervioso; familia de las clorinas del órgano: aldrina, dieldrina, el DBC%, PWB (no pesticida sino dañoso); carbamatos; herbicidas ácidos fenoxis; otros productos químicos (comúnmente) encontraron para combatir insectos/crecimientos indeseados de la planta o del microorganismo; otros productos químicos.

(a) Benzo pyren: en el humo (cigarrillos, automóvil, filetes); hojas del asfalto. Éstas son hidrocarburos aromáticas polivinílicas. Causa el cáncer de piel.

. Desechos peligrosos: gente en desechos peligrosos. Tales empleados pueden demandar para las granes cantidades si los exponen, por lo tanto pueden cargar mucho para los guantes/los envases especiales. Eg.: metales peligrosos. SW846, y ésos mencionados en la metodología de la prueba de EPA, eg.: productos químicos volátiles y semi-volátiles.

. Farmacéutico: eg.: la droga de corazón consigue en piel mientras que hace el R&d.

. Mezclas orgánicas ácidas del cloruro: el indicador puede prestarse probablemente mejor con el elemento del cloruro en mezclas orgánicas del cloruro. Ácidos concentrados (pH extremo).

- indicadores de pH: el indicador puede indicar solamente cuando el pH se ha excedido o ha entrado dentro de un parámetro señalado. Diversas partes de pvc (guante) tienen indicadores de diferenciación (pH) el demostrar de las ocurrencias w5.

- indicadores de papel: colocado dentro del guante (existe), o del envase.

. Indicador fluorescente: menos práctica, una cierta clase de luz sería emitida sobre contacto.

. Agentes carcinógenos: cloropreno; productos químicos radiactivos; M.I.C. ; benceno.

. Indicadores mecánicos de la violación:

- los productos químicos en los plásticos = y reaccionan el aire de w:

permanganato de potasio (oxidante); nitratos (nitrato de calcio); productos químicos oxidantes orgánicos (chlorobenzine, nitrobencina).

- Ocurrencias comunes: indicadores de la necesidad para apuntar las situaciones comúnmente de ocurrencia que usuario alerta: contacto indeseado, deterioración del PVC. Esta manera pocos tipos de guantes se puede fabricar para cubrir una gama más amplia de ocurrencias posibles. Las mezclas químicas de diferenciación pueden a menudo tener productos químicos comunes/similares para los cuales los notificadores sean necesarios. Los notificadores para el oxígeno, la clorina, los cambios en agua, los cambios en el pH, el etc. cabrían esta cuenta.

- Metales (peligrosos): mercurio, plomo, cadmio.

% (dañosos) de los gases.

material de +Radioactive - materia orgánica radiactiva: los indicadores son específicos a ciertos isótopos: + C14: (esto es más probable trabajar porque emite más energía, etc.); P32; H3; isótopos del yodo, del etc; alfa-emisores; emisores beta.

- productos químicos miscellanous: cianuro; arsénico; fenoles.

Indicadores - misceláneos:

- los materiales de emisión de gran energía (radiactivos, C14) podrían causar el cambio en el estado de oxidación de indicadores químicos orgánicos específicos. Los emisores de una energía más alta son también más peligrosos, es decir: más probablemente penetrar la piel y estropear internada una vez en cuerpo.

- Los oxidantes pudieron ser demasiado de gran alcance como indicador.

. palmadita no 5.411.034 de +US: El condón cambia color sobre fractura. Mid-1995 publicado.

. Productos químicos buscados:

- excreciones de la sémola

- productos químicos que causan las alergias, asma.

. Cómo el hielo o la bola caliente puede alterar mejor deseó la temperatura - sustancias ideales para hacer bolas con:

¿- qué material por volumen conserva más de la temperatura deseada?

- materiales que pueden ir a temperaturas más altas o más bajas, mientras que mantiene su (líquido o sólido) estado ideal.

- glicol de etileno: es el helada anti, pero probablemente el tóxico. Una forma o un material no tóxica de las características relacionadas deseadas.

. Entalpia (capacidad de la retención de la temperatura). Comprobar en dinámica terma.

. Indicadores termosensibles:

- Anillos de humor; termómetros planos cuyo color cambia según la temperatura [sin el uso del mercurio].

EXTREMO: ARCHIVO CALIENTE DE LA TECNOLOGÍA DE LA BOLA DEL HIELO

Archivo: Categoría/laboratorio

LABORATORIO Y R&D RELACIONADOS

TAZAS, ENVASES LÍQUIDOS: Para todo el envase N (invención) (especialmente en el archivo G1): Tener tapas (sacadas fácilmente). Los envases humanos de la variedad de la consumición tienen tapas diseñadas para la consumición fácil mientras que conducen, caminando (semi-derramar la prueba).

1J020 temperatura NR: el nr (nuestros notificadores no garantizados) demuestra la temperatura del agua. D: temperatura líquida - > NR: el color de los cambios de la lengüeta = el color representa temperatura.

-7G050. Ver la cuchara KN (invención) en el directorio de G, que cambia color por temperatura - para los bebés de alimentación.

ventana 1J030: ver la altura del líquido. Reduce riesgos de derramamiento permitiendo que u (multi-usuarios) ajuste sus niveles de precaución con cómo es el envase lleno.

- las luces se emiten hasta nivel de la marca líquida (tapa del agua).

calentador de $ 1J040: Guarda caliente líquido/frío a la temperatura señalada (mientras que en coche). Termómetro usado al control temperatura-que controla el sistema. Eg.: para el café o té o soda.

$$ 1J050 Carbonator: Carbonata el líquido (después de la abertura (de la soda)). Eg.: burbujas emitidas de una parte más inferior del envase. KN.

- D: insertar el carbonator en la parte inferior del envase del líquido.

O-Cubo Fizzler: después de que el cubo se altere de cierta manera, fizzles burbujas en bebida cuando está colocado en esto.

- cómo el cubo pudo emitir burbujas:

1] helada - > entonces burbujea cuando está colocado en un líquido más caliente; colocar el cubo en un cierto compartimiento (no tóxico) químico de la solución/del gas/de presión.

] el cubo 2 que golpea alrededor en el envase (fricción/presión) - > burbujea del cubo.

- Términos: el cubo puede ser w substituido: esfera o cualquie otro (dispositivo de la tenencia de la temperatura) puesto en el envase de líquido.

- Estrategia de búsqueda de la patente: +carbonat y taza. Kilovatio: envase, vidrio [taza]

- No. de la patente de los E.E.U.U.: 4745853 4735974 4886525 4423670 4596341 4211342 +3615673 bebidas carbónicas de fabricación dentro de una taza.

+ 1J060 saben la profundidad del líquido en envase "analizando" la cantidad de presión puesta en la parte inferior de la taza. D: presión "sensor" = OSCILADOR de NR/S/. El "analizador" sabe el volumen exacto de saber líquida del by=: tamaño + forma del envase + de la profundidad del líquido.

- este sistema (sistema ligado a las características adaptadas) puede ser un respaldo a otras profundidades de medición del sistema (sistema ligado a las características adaptadas) del líquido.

- Usos: saber para cambiar la manera que cualquier líquido existente en envase se trata. La cantidad de líquido determina cómo se trata, eg.: más calor se da para guardar cantidades más grandes de líquido se calienta. Cuando u (multi-usuarios) no puede considerar en envases (eg.: con los desechos peligrosos (guardados bajo tierra o lejos de U)), (cuando es peligroso a cualquiera tiene una ventana/un envase abierto). La otra investigación del laboratorio. Medida de reserva para el por ciento de medición del envase que es lleno. Líquidos gaseosos.

- El "sensor" "analiza" para los cambios en porcentaje de cada ingrediente.

- considerar los productos existentes con los calibradores que demuestran el nivel contento líquido, eg.: metros autos del depósito de gasolina.

sostén de la temperatura del envase 1J070: Custodia de frío/caliente líquidos: Envase colocado en congelador/calentador (estupendos) ((microonda (horno)). Envase hecho del material especial que: puede llevar a cabo las temperaturas frías/la gota en rápidamente/esperanzadamente de la temperatura también permanecen más largo frío que él toma para que consiga el frío (posible?)%.

- substituye la necesidad de cubos de hielo.

- existe: envases de la espuma, que rodean la mayor parte de las latas de la soda/de cerveza - actuando como barrera de la temperatura; Tazas de la espuma de poliestireno; tazas con las tapas - custodia hacia fuera del aire externo; productos que consiguen más calientes (más frío?) cuando son agitated.

organismo de la vida 5J05 que levanta software:

"Educa" a usuarios en el crecimiento o el aumento de las plantas, de los animales y de otros organismos. User= vía sw= hace en format= representativo qué él haría normalmente en vida real para tomar a cuidado de la forma de vida.

- Enseña/advierte: "dirigen" al usuario, o el usuario hace lo que piensan el mejor y el sistema simplemente "nr" cuando/después de usuario hace errores.

. Plantas:

- Luces: el usuario coloca las plantas en lugar con (qué piensan son) del mejor nivel ligero. Cada "zona" tiene diverso color el representar del nivel ligero/de horas (dirigir) de luz.

- Agua: el suelo cambia color por el nivel de la humedad. El usuario ve cualquier exceso de agua recoger en el colector inferior, a que el usuario puede quitar así que no se descomponen las raíces de la planta. "NR" activa cuando el agua sobre el 1cm se deja en ella.

- Otro: el "estado" también demuestra los niveles nutrientes del suelo; viento; cantidad/tipo insectos y otros parásitos.

. Animales: Alimento W5, preparando, "ejercicio" dado.

. Microorganismos: "estado" para los factores ambientales: temperatura, humedad, luz.

. Usos: Universidades para los estudiantes de enseñanza. Ahorra el dinero de tener que matar formas de vida, y o las situaciones de la vida real de la disposición. el interruptor (el software se adapta ligando a las características asociadas) es compatible con el usuario material pudo haber leído anterior. Este interruptor (el software se adapta ligando a las características asociadas) puede ser forma de prueba semi de la vida real ("cuestionario").

Extracto

La invención dirige a gente para mejorar sus movimientos físicos.

Las ventajas de la invención incluyen:

- Enseñanza del usuario levantar correctamente artículos pesados con menos ocasión de la lesión dorsal.
- Alivio de síndrome de túnel de carpal. La invención substituye apoyos existentes más restrictivos de la muñeca.
- Una mejor postura total del cuerpo. Colocándose y sentándose encima de derecho, mejora salud, amor propio y bienestar total.
- Mejores efectos de la yoga y de la meditación que vienen de postura correcta.
- Las ayudas desearon los movimientos llegan a ser habituales, sin la preocupación de la falta de memoria.

Los pequeños accesorios al cuerpo transmiten la información sobre los movimientos del cuerpo a la unidad central vía el alambre o la radio. Las versiones mecánicas baratas de la invención son también beneficiosas.

La invención es terapeuta físico automatizado adaptado a las necesidades únicas del usuario. La invención se adapta cuidadosamente a los centenares de necesidades de la terapia donde está parte la restricción del movimiento del cuerpo del proceso curativo normal. Esto es hecha atando las piezas de la invención a las partes huesudas necesarias del cuerpo, cuyo la colocación requiere la supervisión. Los pacientes reducidos de las horas necesitan con los terapeutas físicos costosos más que las cubiertas el coste de comprar o de alquilar la invención mientras que mejoran cuidado de calidad. Las ventajas de la invención sobre terapeutas físicos humanos son substanciales. La invención reduce responsabilidad del patrón, y ahorra a aseguradores reduciendo el tiempo necesario con los terapeutas físicos. La invención es los 24 terapeutas físicos más conocido de la hora. Es la más rápida, el más eficiente, y los pacientes conocidos más baratos de la manera pueden mejorarse.

Sobre ediciones del movimiento de cientos cuerpos de la terapia física a mejorar oscilaciones del golf ahora tener medios más sofisticados por los cuales la gente pueda visualizar las deficiencias de su propio movimiento. Los gráficos de computadora comparan su movimiento representado, con cómo su silueta debe haberse movido. La memoria de computadora sigue su mejora en un cierto plazo, y demuestra exactamente sigue habiendo qué refinamientos de menor importancia ser mejorado.

La gente con sobre cientos tipos de uso limitado del miembro publica de paraplegia a las víctimas serias de la artritis, puede creativo utilizar la invención para controlar los dispositivos electrónicos. La lengua de muestra del usuario se interpreta como código electrónico. Por ejemplo, la lengua de muestra del cuerpo permite a usuario sin el tacto cualquier cosa, activar una luz, enviar el email, o utilizar un teléfono del altavoz. La invención interpreta los movimientos del cuerpo como formas particulares de lengua de muestra, que se traduce al código de comando correspondiente. Las compañías de seguros, y las casas de retiro pueden ahorrar mil millones de dólares en costes laborales permitiendo que los inabilitados se ayuden. Más importante el lisiados y los ancianos quieren la independencia de la libertad traen.

Hay muchas otras características innovadoras relacionadas con esta invención confidencial también.

Archivo: Guía del cuerpo movimiento/3E061

Guía del cuerpo del ARCHIVO 3E061

guía de la posición de cuerpo 3E-061: Da instrucciones a usuarios para estar en la posición de cuerpo ideal para el tipo humor o función que pueden estar adentro.

+ nuestras invenciones muy relacionadas: varita de la magia 5E020; movimiento NR del cuerpo 1J010; instructor del movimiento del cuerpo 3E061; 3E150 "Picosegundo-Zona " %

- El 'measures= de la cuenta después recompensa o castiga a usuario según su buen cuerpo que coloca ['seguido en un cierto plazo] = vía nr/el vibrador silencioso cuyo movimiento se siente bien o el malo al usuario [según uip-vagos = uip-adaptar]

- Ejemplos de funciones con posiciones de cuerpo asociadas: el estudiar; el meditating [que alcanza estados más arriba superados vía eg.: Posición sentada del loto del zen]; trabajando en la oficina, o escritorio o fábrica [que evita la tensión repetidor del movimiento, tal como mecanografiar o asamblea]; sexo; el escuchar: gente, música; pensamiento, inspirándose [para las ideas creativas en grupos, ver el documento de KN (invención) sobre creatividad cada vez mayor]; el caminar; el activar; aeróbicos o gimnasia [entrenamiento preventivo del mantenimiento, eg.: evitando los huesos rotos]; [colocándose mientras que] el cocinar; hacer tareas de hogar; rehabilitación física [el sistema ajusta al tipo de usuario [permanente perjudicado] condición]; lectura u observación [TV].

. - ver el tipo siguiente texto en posiciones de cuerpo posiblemente ideales: yoga; terapia y rehabilitación del cuerpo.

- Más adelante, u (multi-usuarios) no necesita quizá el sistema de alarma de KN (invención) más si se han mejorado sus habilidades de levantamiento intuitivas. KN (invención) permite que u (multi-usuarios) esté

temporalmente en la posición de cuerpo incorrecta (para el máximo 5 minutos, banda). OTD: banda; tds; cuenta; estado; uip; oscilador.

-

. Uso de la posición de cuerpo el dormir: (KN enseña al usuario en (cambio en) (durmiendo adentro) ciertas posiciones de cuerpo antes del levantamiento, la teoría son que la persona aprende intuitivo alterar su posición de cuerpo y el interno los prepara mejor para despertar con la tensión menos asociada y para un mejor marco de la mente para el día.

. - Éste es algo como la filosofía detrás de N existente (invención) esa enciende gradualmente la luz como el tiempo se acerca a la hora untada, KN (invención) también utiliza este KN cambiante ligero.

- Se activa NR cuando u (multi-usuarios) está en la posición incorrecta dentro del tiempo señalado (una hora) antes de tiempo de la alarma.

+ KN (invención) es mejora en No. existente de la patente de los E.E.U.U.: Monitor de la postura del sueño 4617525 y sistema de alarma.

- U puede ver más adelante en la pantalla sus posiciones de cuerpo seguidas.

-

. OTD D: u (multi-usuarios) = este sistema de N (sistema ligado a las características adaptadas) (los profesores particulares/analizan: el dormir, caminando, danza, nadando - para el estilo/las calorías quemados/tolerancia (teatro)) ~ C (la computadora del `adapta las características seleccionadas por el usuario) = CUENTA (u/el animal que es entrenado, paga/sufre la pena (nr, descarga eléctrica) siempre que no sean modo/patrón adentro deseados de la posición/del movimiento); CARRO (); EDUC (); MULTIUSOS (); NR (da sonidos del positivo o de las negativas/estímulos según cómo el uip "anota" u); OSCILADOR (); Banda (); Picosegundo-Zona (); Q (); R (la computadora teledirigida del `se adapta ligando a las características asociadas) (); CUENTA (); SENSOR (); INCLINACIÓN (); PISTA (); U; UIP (); VR+ (); WA+ ().

Archivo: Cuerpo movimiento/3E061

PROFESOR PARTICULAR 3E061& del MOVIMIENTO: DOCUMENTOS DE BASE

Extracto - repetido: Enseña a gente a mejorar su postura del cuerpo. El dispositivo da instrucciones a usuarios para estar en la posición de cuerpo ideal para el tipo humor o función que pueden estar adentro. Las invenciones similares existen.

- Para lesión de tensión repetidor del cuerpo humano. Los sistemas "sensor" determinan cuando la parte del cuerpo ha doblado más allá de parámetros señalados, eg.: vía hábitos que mecanografían pobres.

- Cómo funciona la invención:

Correas del usuario en los accesorios a diversas partes del cuerpo. Cada accesorio transmite su localización [sin los alambres] al sensor. El sistema entonces analiza el patrón total del movimiento del cuerpo. En golondrina de mar el sistema anota el patrón del movimiento del cuerpo para el tipo de movimiento ideal buscado.

Los usos de diferenciación hacen el notificador del sistema funcionar diferentemente. el sistema (sistema ligado a las características adaptadas) responde diferentemente a diversas circunstancias según lo dictado cerca: movimiento "sensor"; uip; "cuenta"; mecanografiar la actividad u (multi-usuarios) está implicado adentro (el sistema sabe vía ""/uip del analizador); y o qué programas del usuario/sistema de las peticiones hacer la 'guía.

% relacionaron la invención [palmadita # no sabido]:

Éste es algo como la filosofía detrás de N existente; que enciende gradualmente la luz mientras que el tiempo se acerca a la hora untada, KN (invención) también utiliza este KN cambiante ligero. El uso actual de esta invención es una alarma de la mañana, consiguiendo la persona acostumbrada gradualmente a despertar dando la luz.

- Si el usuario está en una posición pobre el dormir, la luz se enciende lentamente despertarlos.

(No) usos del cuerpo humano. Invención puesta sobre:

- Animales:

--'seguir su movements= para el análisis/los vagos

- Objetos - ver cómo se mueven (en sus los propios). Ejemplos:

. --árboles [en el viento o el huracán] para la investigación

. --proyectos de nueva construcción que necesitan considerar su fuerza en el viento

--combinar esta invención con: vibración \ sensores \ otros sensores de movimiento

--productos mecánicos con las piezas móviles. Medidas para los movimientos defectuosos

"Inclinación": atado a las regiones de diferenciación de cuerpo donde están más los movimientos señalados/lo más fácilmente posible "analizable".

Archivos de la parte a imprimir:

- El ingeniero de diseño importante de los archivos necesita leer para entender mejor que es el alcance de esta invención los archivos de la pieza titulados: +Tilt; Alejado; Guía; Picosegundo-Zona.

¡- Pedir una copia de estos archivos después de que usted entienda la mayor parte de la descripción de la invención, y han conducido una buena búsqueda de la patente, y pueden verdad conseguir los resultados necesarios terminados en o antes del plazo!

Trabajando con las herramientas específicas, tales como una las muchas peligrosas tener gusto de las motosierras:

- La inclinación - el notificador puede alarmar siempre que un dispositivo esté en o en y en un modo peligroso específico, mientras que estando en una posición insegura.

- Éste es un ejemplo de otra pieza relacionada de la invención no exactamente de 3E061. La parte de la invención, por el que el usuario ponga la guía sobre su cuerpo es parte de esta misma invención, y uno que puede ser considerado.

Para el síndrome de túnel de carpal y otro lesiones de tensión repetidor consideran:

- Posiciones de cuerpo deseadas determinadas por los libros respecto a temas relacionados, a práctica médica estándar, y al doctor del paciente.

. - Se aplica a las enfermedades diversas conforme lesión de tensión repetidor popular del libro a "- una guía de usuario de la computadora", por Emilio Pascarelli, MD, publicado por J. Wiley y hijos, New York City.

- tela, etc.

Estudiar la investigación y las solicitudes de patente del movimiento de la robusteza, especialmente en las áreas de:

- cómo mueven sus accesorios

- la trayectoria de sus movimientos (menos de la trayectoria tan los cambios en su localización física).

- '[cuando, cómo, qué, donde, cuando] los movimientos del accesorio de la robusteza w5 son: restricto, restringir capaz, determinado no exceder los apremios señalados [debido a la fractura o desgaste y rasgón posibles].

- cómo los movimientos de la robusteza y los movimientos humanos son similares; qué investigadores de la robusteza han aprendido sobre patrones humanos del movimiento.

Motores de la búsqueda del Web: Palabras claves del intento: "túnel del carpal" y productos, inclinación, "movimiento al ángulo"

% incorporan el dispositivo del masaje del túnel del carpal de Panasonic con el dispositivo de la guía. O su producto se utiliza quizá como parte del proceso curativo, pero se guarda como producto separado.

% - lociones curativas incorporadas de la piel.

- Detalles en el producto existente en www.carpalproducts.com

Más talento puede ser necesario: Palabras claves para buscar en la tela para la gente con habilidades deseadas y o intereses. Si más gente es necesaria considerar mirar fuera de su área geográfica, donde la gente tiene incluso menos oportunidades de trabajar en una buena invención. Si está interesado puede ser que salgan a usted o usted puede comenzar a trabajar sin la reunión y continuar de allí - puede ser que sea una avenida por lo menos digna de la exploración. La separación del secreto necesitó antes de lanzar a ciertas porciones de cualquier detalle de la invención al público.

- yoga
- meditación
- médico
- terapia física
- paraplegic
- hardware electrónico
- mecánico, mecánico
- ingeniero, dirigiendo

¿- qué otro?

- El manual educacional da claramente ['] direcciones interactivas [vía su guía].
- Las piezas plásticas y suaves son lavables, quizá incluso en el lavaplatos o la arandela especial de la máquina.
- El analizador necesita estar seguro que las piezas están colocadas correctamente en lo referente a los empalmes del cuerpo de la persona.
- Comprobando los accesorios están prendido correctamente - comprobando con minuciosidad:

El usuario puede ser pedido moverse sobre sus accesorios del cuerpo de ciertas maneras, eg.: los oscilaciones de 360 grados en ciertas direcciones [mientras que mueve otro accesorio], sistema entonces analizan para considerar que están colocados correctamente en relación a uno a.

- Para la mayor certeza que el cuerpo se está moviendo correctamente, uno puede también intentar:

. --usuario que es completamente plano en piso duro mientras que hace los movimientos señalados

. --usuario que pone su cuerpo [entero] en el dispositivo de a/el apoyo de cuerpo/la estructura [sólidos];

formular a un lado la pregunta si el cuerpo está en la posición correcta. Entonces el sistema analiza cómo cada

uno de estas piezas se coloca mientras que los accesorios son o inmóviles, o moviéndose dentro de los apremios de la estructura.

- % de los sensores en el dispositivo saben cuándo están conectados correctamente con el cuerpo y notifican a usuario en cuanto a el estado de su que es puesto correctamente o del not= vía señales sonoras de diferenciación del oscilador.

- Por ejemplo: el uno mismo que comprueba el mecanismo requiere ciertas cosas estar en el lugar, aunque puede no ser el 100% seguro una pieza está prendido correctamente puesto que puede haber demasiadas cosas a comprobar.

corrector de la postura del cuerpo 5J03 - esta descripción es básicamente repetidor:

- La fijación de los "sensores" a las partes del cuerpo, "notifica" siempre que el cuerpo tenga alineación pobre (según lo "programado").

- Dispositivo para mantener postura correcta - al caminar.

- "Sensores" atados a las partes del cuerpo: cabeza (trasera, frente, lados, tapa); cuello (trasero, lados); hombros; parte posterior (área espinal); cadera (trasera, lados); piernas; pies; brazos; manos.

--atar especialmente sobre las áreas huesudas debido a mayor estabilidad....

- Cómo funciona la idea central: El "sensor" debe estar en cierta posición = o "notificará" a usuario. El "sensor" deseó el ángulo de la posición (concerniente a la gravedad de la tierra, eg.: se fija el nivel del carpintero) que cuando el usuario o su instructor presiona el botón "alejado" ("k") que los "sensores" se alinean en ese entonces correctamente (según lo visto visualmente/vía el "analizador" que utiliza la otra tecnología existente).

- U desactiva el sistema siempre que desearan. Eg.: para caminar, trabajo físico.

- "Notificador" activado siempre que el non-alignment continúe más allá ("banda") de la duración señalada.

. Otros usos:

- inducción de gente que duerma en posiciones deseadas, eg.: en la parte posterior, o si tienen otra dolencia física, eg.: lesión del hueso que necesita la posición señalada el dormir.

- terapia del movimiento, eg.: Técnica de Alexander. Para: ejercitando (natación, activando); seguridad del trabajo (elevación). Propósito: reduce la ocasión de lesión del cuerpo/mejora el movimiento para mejores deportes/funcionamiento del ejercicio. Sentada de la gente mientras que caballos de la conducción o de montar a caballo, o bailarines.

- utiliza las invenciones preconcebidas de Steven Kays: nivel multidireccional 9G050

% de 9G050 del aparato de medición del ángulo superficial:

Esto es un diverso proyecto relacionado de la invención incluido adjunto para el interés.

Determina la llanura de una superficie como el del aparato de medición del balance del carpintero con una pequeña burbuja en un tubo; cuando la burbuja está en el medio del tubo, el dispositivo se considera plano.

Otros tubos se colocan para demostrar si el dispositivo está perfectamente a un ángulo de 45 grados. Esta invención es mejor en que se aplica a las superficies no-planas también usando los dientes para saber la posición media del dispositivo que es medido.

- Cada pierna alcanza a un diverso punto que analiza para:

#1: Cómo es la superficie llana. Diseñado especialmente para las superficies no-planas (tener curvas, topetones múltiples). #2: También comprobaciones para el grado a el cual la superficie es horizontal/vertical (en relación a perspectiva deseada, eg.: columna diagonal, tirón de la gravedad). #3: Mide la exactitud para el grado a el cual deseó ángulo es lo que debe ser.

. - nivel de la consistencia en los puntos señalados.

- D1: piernas = punto central (c, sensor).

- D2: niveladores existentes múltiples que se encuentran junto (como la letra X o forma de la estrella -)

- Estrategia de búsqueda de la patente: level+ y (medida o medidas o medición) y (alfombra u hous o de madera).

- No de la patente de los E.E.U.U. [a partir antes de 1990]: 4850491 4182046

- Técnico - cómo KN (invención) mira: posiblemente una burbuja circular (con (es) la tapa plana) = bolsillo de aire dentro de la burbuja plástica que sostiene el líquido = movimientos de señalar enfrente de donde hay la mayoría de la inmersión/del ángulo.

- Utilizado para la medición llana estándar, eg.: de izquierda a derecha y o frente a la parte posterior o a otra.

+ grado de las medidas a el cual el ángulo está en el grado deseado, eg.: u (multi-usuarios) quiere ángulo de 45 grados: colocar llano en (plano) el rotate= superficial del then= después chascar en lugar la burbuja plástica en el point= de 45 grados dando por resultado la burbuja plástica que es perfectamente horizonal si el chisme principal está en 45 grados (en términos de gravedad de la tierra). Fijar llano para medir la exactitud del ángulo de cualesquiera (incremento de cinco grados).

- demandas: los viejos niveles utilizaron los frascos en vez de burbujas plásticas más redondas que miden el frente al norte al sur o al oeste al este o al nanovatio al SE...., mientras que KN (invención) también puede manejar ángulos señalados en relación a hasta abajo mientras que también comprueba para saber si hay otros ángulos (incongruence), eg.: (superficie plana) siendo torcido de cualquie otra manera de la manera deseada.

- Relacionado con la guía del movimiento del cuerpo humano de la invención 3E061. Esa invención mide los ángulos a los cuales los miembros del cuerpo se están moviendo. Sugiere los ángulos alternativos por ejemplo a los cuales los miembros se pueden sostener para evitar síndrome de túnel de carpal.

--Una adaptación puede estar en que el aparato de medición del ángulo superficial 9G050, podrá calibrar el ángulo en el cual se coloca un miembro humano, puesto que no hay posiciones planas respecto al cuerpo humano.

Detección de la inclinación/del balance: el laser u otras frecuencias puede determinar la posición relativa que cada pedazo está a la otra.

- las 'frecuencias pueden incluir: distancer; % ' del picosegundo: sistema de colocación. Esta parte se centra más en el GPS importa sin embargo; una versión micro de tales es tan necesaria. Demasiado costoso quizá.

- Posibilidades de la marca: Balance del cuerpo o del movimiento, eg.: balance del cuerpo o profesor particular del balance del movimiento; guía del cuerpo; instructor del cuerpo, profesor particular del cuerpo; Profesor particular del movimiento; Doctor de la postura

- Las invenciones muy similares están bajo dos diversos números del producto:
3E061 y 1J-010.

- Trabajando en el escritorio inmóvil, la tabla de trabajo, la banda transportadora, o la otra área de trabajo:

- El sistema necesita haber calculado en él el tipo silla y escritorio, junto con sus alturas; y guías por consiguiente. Es decir las posiciones señaladas de cuerpo son resueltas una vez que una entra en el sistema la altura de las sillas, tabla, y la distancia del usuario de la silla pudo necesitar alcanzar. También sugiere cómo las alturas de la silla y de la tabla pueden ser alteradas.

. --La invención de la guía se pudo vender junto con las sillas y los escritorios, cuyas alturas son ajustables. Todo el usuario necesita hacer es dominante en el sistema cuál es sus parámetros el estado de los marcadores del escritorio y de la silla importantes de la altura.

- Distancias señaladas que mantienen de la pantalla de ordenador (s) o del libro, para no lastimar ojos humanos.

. --Diagrama: "distancer" (distancia de las medidas del usuario a la pantalla) = analizador = notificador.

- El otro trabajo manual repetidor, u otros patrones pobres comúnmente practicados del movimiento del cuerpo: alerta a usuario a sus movimientos del cuerpo, que son dañosos al cuerpo.

Antecedentes teledirigidos de las características:

Producto existente de Canon:

La cámara detecta los movimientos de ojo del usuario, marco del buscador de visión es donde el globo del ojo está mirando. [Canon, 17 de enero de 93 periódico de "Yomiuri" de Tokio, artículo. - No tener artículo sin embargo]

los movimientos de +-eye controlan productos. Las posiciones del ojo representan diversas señales.

Steven Kays está desarrollando el teclado controlado ojo de R123-1 Touchless:

La cámara detecta los movimientos mientras que el ojo mira cada letra a bordo. Sobre el ojo que para en cada cuadrado (representa dominante), se crea la señal como si la tecla fuera pulsada manualmente. Poner la cabeza en anteojos o apoyarla dentro de la vista del sensor del movimiento de ojo. Usos: deteriorado físicamente; higiene (control de Touchless); carencia del espacio; realidad virtual. Controla todas las llaves de teclados estándar.

- las llaves adicionales se pueden agregar para, eg.: el señalar que las dos llaves siguientes paradas en deben ser consideradas presionado simultáneamente (mirada en la llave simultánea #1 - > la llave de alt #2 - > F3 la llave #3).

- dependiendo de requisitos técnicos/del control (constante) del ojo del usuario, el plazo para que el ojo pare en cada llave se fija (vía la frecuencia intermedia o la banda del usuario).
- las ayudas si la posición del zócalo de ojo es estable de cierta manera, así que el movimiento de ojo tiene punto de la referencia así que el sensor sabe se mueve el ojo.

--una versión más sofisticada del "analizador visual": el sistema (sistema ligado a las características adaptadas) busca la cara de u (multi-usuarios) (vía el reconocimiento de la imagen de cualquie u humano o particular, eg.: vía características faciales - > sabe donde están los ojos. En golondrina de mar, cuando la cabeza se mueve, el sistema (sistema ligado a las características adaptadas) acomoda. El sistema sabe el cambio en el ángulo de los efectos principales cómo el ojo necesita moverse para ver los cuadrados (cualquier punto de la visión).

- D: qué ojo ve (el tr da su localización a c) = el sensor de los ojos = del movimiento = analizador = C. visuales.

movimiento del cuerpo 5E050 = "R":

La manera de la cual el usuario toca/se mueve en asiento/sofá/muebles/el chisme = "synthesization del sonido = de la memoria/del altavoz/del juego detrás.

- grado a el cual el elemento/la parte se exprime el grado a el cual el volumen/base/triple... va hacia arriba o hacia abajo.

'Características teledirigidas - cómo la lengua de muestra del usuario se interpreta como código electrónico:

- ver la partición alejada.

Activar, desactivar cualquier dispositivo electrónico y o controlar sus operaciones sin el tacto de la unidad principal (botones de la unidad).

D: 1uk~2display~ convertidor 3osc = 4c = 5signal = 6tr/6rc (vía la radio/el alambre) = convertidor 7signal = 8c = 9 (el producto sigue comando deseado).

- OTD 1: Las distancias de transmisión para las transmisiones de la radiofrecuencia redujeron según las regulaciones locales del uso (retransmisores del uso). Puede estar en cualquier forma/función dual/atado como ^ de la combinación: collar, reloj, reloj, pulsera, correa (hebilla de correa), anillo dominante, paginador del bolsillo, "cojín del aire", vidrios de %eye, anillos de %ear, %hat, venda de %head, %shoes, accesorio del bolso de la carpeta/del monedero (o insertado en esto), %umbrella (manija; barra para el "tr"), coche, bicicleta, %ring, computadora (cuaderno, organizador), instrumento del teléfono, atado a (puerta, pared, muebles (silla, sofá, tabla, cama). Es impermeable y puede incluso ser sumergido en el agua sin descarga eléctrica posible.

D: ~c (británico) alejado = tr/rc = función

- OTD 2: Algo del below se puede diseñar solamente para los controles limitados (activación/desactivación) si hay una gama limitada de accionar posible de las señales de control deseadas en el diseño final. En este caso controls/pp simples/complejos se dirigen vía otros medios (botones/teclado/+ el regulador alejado del sistema del sistema de pesos americano del Co del vencedor que trabaja w (con - el nivel de controles del adaptador de interacción) 13 tipos de unidad audiovisual).

Chapaleta: aplaudiendo o silbando, el usuario activa el sistema. Para operaciones más complejas, las palmadas y o los silbidos o cualquier otra combinación del sonido acciona la función correspondiente. Sistema de la activación de la voz también. Ver el ^: Piezas, archivo de la "chapaleta" para los detalles.

% de la pluma mágica del aire: Los movimientos de la pluma alejada se transmiten a la computadora. Hacer los movimientos en el aire o en cualquier superficie plana. Cada diverso movimiento crea una diversa señal. (Paladio) 3A-790-042004

% del cuerpo del regulador del movimiento: ¡Incorpora el "Miburi" lanzado por Yamaha después de mi limadura de esta idea! Juguete del bailarín: Crear las señales como usted baila. Los movimientos del bailarín pueden ser convertidos en un arsenal infinito de diversas señales (como pp/mp). Ejemplo: La mudanza de la pierna izquierda puede generar sonidos de campanas o de tambores. Cada zona del cuarto en el cual el usuario mueve la pierna izquierda, crea una diversa señal, según el área (picosegundo). La historia considera: B7-120-022001

- Otros productos de la realidad virtual que crean señales según los movimientos del cuerpo (guantes).
- "Picosegundo": Según cerca qué dispositivos se están moviendo (baile). Eg.: si están cerca de un bloque (que transmite o que recibe señales) entonces los zapatos o el bloque hará un diverso sonido. Eso se pone los bloques donde usted quiere, estos bloques crea "zonas sanas".

OTD: Todos; alejado; exhibición; pp; P.M.; Reino Unido (sonidos deseados); interactivo; juguete; juego; hospitalidad; micrófono; ejercicio; portable; sst; punto de ebullición; SP; oscilador; vc; egh; cuenta; md; carro (sonidos); cp. Para dentro o al aire libre utilizar

CONCLUYE el archivo: Cuerpo movimiento/3E061 del cuerpo

Archivo: Demandas movimiento/3E061
DEMANDAS del PROFESOR PARTICULAR del MOVIMIENTO 3E061

Centenares de enseñanza de diversas habilidades adicionales para refinar los movimientos físicos de la gente en:

- Deportes: Lanzando o haciendo pivotar en las bolas en tenis, béisbol, baloncesto y el balompié.
- Conductores de camión de enseñanza que trabajan horas excesivas para evitar dosificar apagado. Esto es una mejora sobre un producto existente.
- Trabajando correctamente con las herramientas y la maquinaria diversas con objeto de seguridad, un mejor funcionamiento de trabajo, y la reducción del daño potencial a la maquinaria costosa. Ahorra el tiempo de la formación del profesorado.
- Corrección de las posiciones de cuerpo para: síndrome de túnel de carpal, sentándose en un escritorio, el caminar, una yoga, y una meditación, un etc.

Objetos pesados de elevación:

- La invención puede ahorrar a millones de gente de la agonía de la lesión dorsal larga de la vida, más posiblemente sobre mil millones dólares en la remuneración del trabajador mundial y las horas perdidas del trabajo pagaderas por las compañías, los negocios y los gobiernos de seguros.
- El patrón que la usa como parte de su programa de entrenamiento, puede reducir sus responsabilidades incluso si todavía ocurren las lesiones dorsales; puesto que la compañía puede demostrar que están haciendo todo posible prevenir el problema. Esto pone más de cualquier culpa en el empleado que pudo no haber utilizado la invención, o practicado a lo que le enseñaron.
- La invención puede anotar como de bien al empleado escogido encima de objetos. Los usuarios pueden incluso ser pedidos pasar la prueba simple antes de ser empleado dando otra protección legal valiosa para el patrón.

Opiniones de usuario sus últimos movimientos:
- Más adelante, el usuario puede ver en la pantalla sus posiciones de cuerpo seguidas.
- Los gráficos de computadora demuestran una ventana para cómo alguien de su tamaño exacto y estructura debe haberse movido. Esta ventana se puede demostrar de lado a lado, o yuxtaponer sobre los movimientos reales del usuario.
- Sus movimientos pueden ser puestos sobre el del movimiento ideal, eg.: silueta del usuario sobre otra silueta de los mismos tamaños. Esto se puede hacer simultáneamente o en serie.
- El sistema analiza los movimientos del cuerpo humano determinando dónde cada partes del cuerpo deben estar en relación a las piezas de la invención [que transmiten sus localizaciones].
- El progreso del usuario se puede demostrar en un cierto plazo cerca: corriente traslapada con los últimos movimientos; cuentas de diferenciación de sus movimientos [como vía una carta en un cierto plazo]

Amaestrador del animal doméstico: La invención enseña a perros a comportarse mejor por ejemplo no saltando sobre gente.

¡Muchas más características creativas abundan con el mismo y las versiones relacionadas!

Archivo: Demandas movimiento/3E061

DEMANDAS PARA el PROFESOR PARTICULAR del MOVIMIENTO 3E061

Monitores flexibles en la parte inferior de las muñecas (7G052). "Inclinación". Partes del cuerpo conectables a: dedos (los dedos no estiran tan demasiado/que golpea a menudo las llaves de la k de la salida. Otras piezas (humanas) del cuerpo: cuello, cintura, tobillos.

Rehabilitación física [el sistema ajusta al tipo de usuario [permanente perjudicado] de condición]; lectura u observación [TV].

Otro utiliza posibilidades: Supervisar los movimientos de la gente o de objetos. Estudiar los patrones del movimiento. ¿Qué más?

Los accesorios de piezas se hacen a las partes del cuerpo individuales:
- dedos, muñecas, codos, hombros, cuello, ojo (tapa), pecho (área) de la médula espinal, cintura, cadera, área del zócalo de cadera de la reunión conjunta de la pierna, rodilla, tobillo, dedos del pie.

--¿qué más puede tal guía hacer?

- Sensores múltiples colocados en cada parte mencionada - cada sensor presente maximizar "análisis" para cada movimiento, eg.: el cuello tiene más sensores que codo puesto que anterior tiene más tipos de movimientos angulosos posibles.
- Los 'sensores pueden (parcialmente) ser ocultados/ser disfrazados vía: ropa, sensores del cuello - cuellos altos o collares estándar, %jewelry: pulseras, zapatos - tobillo; abrigos o aparato médicos.

--¿qué formas creativas de joyería pueden ser sugeridas?

Danza y movimientos estilizados del cuerpo:
- Ji del Tai: La ji del Tai para del arte es una danza meditativa de China que esté llegando a ser más popular en los E.E.U.U.

Cuando la colocación correcta se alcanza en la orden correcta y medir el tiempo [tal como la pausa correcta entre los movimientos], el sistema recompensa a usuario jugando nueva música de la edad. O el usuario continúa practicando hasta que el sistema analice a usuario haya alcanzado el patrón correcto; es decir cuanto mejor es el movimiento del estudiante, más rápidamente la clase se termina.

- Enseña a cualquier otro tipo de los movimientos deseados del cuerpo, las razones de tal forma de cuerpo que los movimientos no necesitan necesario ser preprogramados en la máquina. Los programas del usuario la máquina a adaptarse. Ejemplos:

--Aprendiendo cómo a: caminata en la tierra frágil; de equilibrio mientras que el caminar de la cuerda; aprendizaje de los movimientos para cualquie tipo de trabajo del truco de la película [el director de cine quiere quizá cierto efecto de los movimientos - en que los movimientos deseados pueden ir contra cómo una persona se movería normalmente en una circunstancia señalada]; cómo colocarse [mientras que habla y u obra recíprocamente con alguien o algo (como una invención de KN (invención))].

- Amaestrador de la danza: "educación", "inclinación", ballet, danza moderna, teatro (caminando, presentación, saltando).

¿- Qué otros tipos de movimientos del cuerpo pueden beneficiar de la dirección?

Ejercicio:

- Activando: para reducir daño a las piernas causadas por hábitos pobres, eg.: rodillas.
- Comportamiento del usuario de los estudios para determinar qué zapatos mejorarían el fósforo sus necesidades.
- Aeróbicos o gimnasia [entrenamiento preventivo del mantenimiento, eg.: evitando los huesos rotos]
- Educación de los deportes. Eg.:
--Aprendiendo montar una bici, una tabla hawaiana, un etc.
--Aprendiendo utilizar cualquie nuevo equipo de deporte, eg.: raquetas, bola de bowling rodante.
- Gimnasia: actividades olímpicas unas de los de la competición.
- Ejercicio: el activar, nadando.

Guías cómo sostener y tocar los instrumentos musicales correctamente.

Ventajas misceláneas:

. - [colocándose mientras que] el cocinar

. - hacer tareas de hogar.

. - ver el tipo siguiente texto en posiciones de cuerpo posiblemente ideales: yoga

%. - Terapia de discurso: Enseña a gente a mejorar el discurso colocando su cabeza de cierta manera.

. - sexo

. - pensamiento/reunión de reflexión/el estudiar: ciertas posiciones pueden sacar mayor creatividad. El fabricante pudo sugerir las posiciones, o el usuario puede determinar qué trabajos mejor para ellas - apenas necesitan ser recordadas en la ocasión.

¿Qué otras formas de ventajas pueden usted sugerir?

- Especialistas que pueden hacer las recomendaciones adicionales para el cuerpo ideal que coloca para incluir: chiropractors; instructores de la yoga; agentes; psicólogos; médicos (para los pacientes que necesitan (temporalmente) cambiar su colocación (debido a sus cambios médicos).

Alojamiento

+ alojamiento de la proximidad: Para los movimientos de la gente cuando no son donde se suponen ser. Puede ser una seguridad y o la precaución de la seguridad.

- Los 'códigos de acceso necesitaron parar los mecanismos restrictivos.

--Usuarios requeridos usar la invención: Si el dispositivo ser sacado [el unsnapping acciona el notificador] = acceso o castigo o notificación [a la seguridad puede ocurrir].

- Diagrama: Cuando el usuario está en una zona señalada = la invención = restringirá = los movimientos del usuario.

+ alojamiento del encarcelamiento: La guía puede trabajar como forma de contener los movimientos totales de una persona, eg.: para los criminales durante transporte (puede estar que libera más que los puntos de la pierna o de la mano).

El usuario puede ser castigado o ser recompensado a su comportamiento seguido en un cierto plazo:
- La 'cuenta analiza el grado a el cual el usuario excedido señaló parámetros del movimiento, y por a qué margen. [Malo/bueno/moderate] los movimientos de diferenciación [cada uno] se anotan positivamente o negativamente vía las variables diversas [atadas a los grados de calidad].
- El peor/el mejor los movimientos del usuario, más/menos restrictivo el sistema puede conseguir [automáticamente].

Posturas permanentes y que caminan:
- Un alto porcentaje de la población se beneficiará de una mejor postura. La postura correcta ayuda en mantener buena salud y amor propio. Debido a la evolución histórica de la humanidad de caminar en todos los fours, nuestras partes posteriores y la postura continuar siendo un problema. Ésta es la única invención sabida que recuerda y da instrucciones con eficacia a usuarios mover sus cuerpos correctamente.

El Meditating: La invención ayuda al usuario a alcanzar estados más arriba superados induciéndolos en la posición sentada arqueada correcta. La demostración de los estudios que alcanza la postura deseada del cuerpo es importante para inducir a estado de ánimo meditativo.

Yoga:
- La invención dirige a usuario en la colocación ideal del cuerpo. Menos pupilas practicadas de la yoga pueden ser menos convenientes en saber la posición ideal, y no pueden quizá verse objetivo sin un instructor. La invención anota el progreso de los usuarios.
- El coste de la invención puede a tiempo pagar detrás de los ahorros en las clases incómodas, costes del transporte, el tiempo perdido uno pudo trabajar de otra manera. El usuario puede pronto comenzar a tomar roturas más de alta calidad de la yoga en su voluntad sin los profesores particulares.
- 'Orden y sincronización de la guía:
El dispositivo se puede juntar con un dispositivo de guía sincronizado para la secuencia recomendada de movimientos del cuerpo. Sigue habiendo su señal verbal ['oscilador] da instrucciones a usuario en cuanto a el plazo ideal para en cada posición. El usuario puede ser dado una pausa del sistema entre las posiciones.

--Antes de comenzar, el usuario puede poner uno a una docena o tan los sensores. El analizador estudia solamente la colocación de los sensores aplicables para los ejercicios pertinentes del cuerpo.

- Como el usuario sigue los avisos; el sistema sabe o asume a qué ángulos debe ser el usuario adentro para cada postura general del cuerpo.

- Si los ángulos del usuario son totalmente diferentes [por sobre 30 grados en el promedio para todos los sensores], el sistema apaga su sistema de dirección; para no interferir.

- Las ayudas substituyen la necesidad de un instructor diario de la yoga. Sin embargo un instructor o el representante o la escuela del fabricante es necesario programar el dispositivo para qué ángulos del cuerpo son ideales para el usuario.

- La invención puede tener construido en la expectativa que la flexibilidad del usuario mejorará. El profesor o el sistema calibrará la edad del usuario, experiencia reciente de la yoga y así sucesivamente en la determinación de una curva prevista de la mejora en un cierto plazo. El estudiante puede visitar además a su instructor de vez en cuando para una reprogramación de la máquina si su mejora es más rápida o más lentamente que predicha. TGH (la terapia consigue más difícilmente).

Uso de la posición de cuerpo el dormir:

La invención enseña al usuario a dormir en ciertas posiciones de cuerpo antes del levantamiento.

- La teoría es que la persona aprende intuitivo alterar su posición de cuerpo y el interno las prepara mejor para despertar con la tensión menos asociada, y para un mejor marco de la mente para el día. Es decir después de usar el sistema por algún tiempo, el sistema puede alterar el subconsciousness del usuario así que necesitan no más el dispositivo.

- Ésos en camas de hospital pueden necesitan la dirección del sueño. Eg.: ésos con los huesos quebrados y debajo de los tranquilizantes pesados pueden no realizar el dolor contraído por ciertos movimientos (mientras que está dormido). ¡Tal gente pudo ser dada menos tranquilizantes para mantenerlos bastante alertas, así que este dispositivo puede ayudar realmente a inducir un mejor sueño! La gente podría pagar querido apenas esta una característica.

- Los estudios demuestran que la colocación del sueño está correlacionada a los tipos del comportamiento. Por ejemplo, la gente que duerme en sus partes posteriores es a menudo social más saliente que las que duerman en sus estómagos. La invención se puede utilizar para ayudar a inducir la modificación de comportamiento; posiblemente junto con otras formas de terapia mental.

- La invención también se aplica (el sentarse cómodamente inclinado) a la dirección de posición de cuerpo de reclinación que se sienta (en silla de salón) u otra.

INVENCIÓN DEL EJEMPLO EN DETALLE DE MENOR IMPORTANCIA

- Máquinas de la terapia del síndrome de túnel de Carpal

- El síndrome de túnel de Carpal es una de las formas de lesión de tensión repetidor sufrida por millones. Este papel entra un cierto detalle en las ventajas de la invención para ésos con síndrome de túnel de carpal. La versión de la invención para el síndrome de túnel de carpal sirve como ejemplo áspero para cómo otros usos de la invención pueden ser desarrollados.

- El síndrome de túnel de Carpal tiene una carencia crónica de buenas soluciones. La comercialización de las máquinas especiales del masaje de la muñeca del túnel del carpal (de Panasonic), las lociones de la piel del túnel del carpal y los tés especiales son todas las muestras que las buenas invenciones están careciendo, y el mercado está dispuesto a comprar casi cualquier cosa en las esperanzas de solucionar sus problemas.

- La invención produce mayores formas de flexibilidad que disponibles de otros productos del síndrome de túnel de carpal, que son generalmente una cierta forma de un punço usado sobre la muñeca con flexibilidad mínima. La invención sin embargo se diseña para proporcionar el movimiento restricto provechoso de la muñeca, mientras que también permite que el usuario desuna temporalmente el modo restricto en como base necesaria.

- El usuario puede necesitar ganar temporalmente más flexibilidad para sus muñecas para cualquier número de razones. Las muñecas después de que todos sean flexibles porque los necesitamos esta manera de hacer las cosas nosotros hacen sobre una base diaria. Mucha gente evita los productos pasados de moda debido a su embarazo, y el interno no gana la ventaja que los productos existentes tienen que ofrecer.

- La flexibilidad de la invención puede también inducir al usuario que use la invención más a menudo, interno que gana de las ventajas de la invención.

- La flexibilidad ofreció las muñecas se diseña en diversas variaciones.

- Dado cualquier medida de urgencia requerida del usuario, esta invención si está construida correctamente puede ser más segura de utilizar que remedios existentes, puesto que las manos tienen más de la movilidad necesaria a responder apropiadamente. Cuando en el medio de un cierto pánico, el usuario pudo olvidar que tienen en el dispositivo. Diseñar la invención de modo que sea desprendible en el tiempo más rápido con el poco número de movimientos necesarios.

Versión mecánica una:

- Cuando es necesario, el usuario encaja a presión simplemente el lanzamiento de la invención. Este lanzamiento mecánico guarda la invención en las muñecas pero produce mayor flexibilidad.

Versión mecánica dos:

Ejemplo #2 - versión puramente mecánica de la construcción de la invención:

- Las piezas similares se pueden atar a la parte posterior de los antebrazos y de las manos como en el otro ejemplo de la construcción, pero el elemento clave es el ángulo a el cual el empalme (de la bola) que conecta las dos piezas está.

- El empalme se puede trabar quizá por el usuario al ángulo deseado y en los tiempos señalados. En golondrina de mar solamente que pesca con caña, con o sin una gama flexible limitada se produce el usuario [que mecanografía en el tablero dominante].

Versión electrónica para el síndrome de túnel de Carpal:

, o el usuario puede no hacer caso simplemente de la sensación de la alarma de menor importancia que reciben cuando se mueven las muñecas naturalmente, puesto que la invención no tiene que físicamente restringir todos sus movimientos.

- cuando el usuario dobla demasiado lejos, doblarán su mano en el dispositivo acentuado embotado inmóvil. No obstante (quizá) si el usuario continúa doblando en este elemento acentuado, el elemento acentuado llevará, no prohibiendo a usuario mayor flexibilidad sin el factor del "castigo".

- Las alarmas al usuario que los notifica de movimientos pobres pueden estar en las formas de: las vibraciones suaves, sonidos, descarga eléctrica muy suave, elemento mecánico que empujan en su piel, y o diferenciando encienden cada señalización una diversa cuenta.

Ejemplo #1 - versión electrónica de la construcción de la invención:

- Los sensores de la inclinación se colocan en el antebrazo, y también la parte posterior de la mano. El antebrazo debe estar a un ángulo señalado. Quizás la parte posterior de la mano tiene que estar a un ángulo señalado en lo referente al antebrazo o a la independiente del antebrazo.

las manos y los antebrazos de diversa gente de +-As diferencian de uno a, después el usuario necesita programar a qué ángulo se deben fijar sus piezas de inclinación a la búsqueda, así que determina el cuerpo ideal que se ha alcanzado la colocación. Las manos se pueden medir en maneras diferentes, eg.: 1] de lado a lado cuando la mano es plana en una tabla; 2] el grueso de la mano.

- Supervisión del uno mismo:

Una versión más simple permite que el usuario vea simplemente el ángulo a que la pieza se sitúa, con o sin los medios electrónicos de la notificación, o análisis en cuanto a cuál es el ángulo correcto. Por ejemplo, el usuario puede ver fácilmente la tapa de su antebrazo mientras que mecanografía.

. - Esto se aplica a cualquier otro uso de la invención con excepción de síndrome de túnel de carpal.

. - Diagrama: Movimientos del cuerpo - > el "sensor" del sistema determina cuando la parte del cuerpo ha doblado más allá de parámetros señalados, eg.: vía hábitos que mecanografían pobres - > notifica al usuario/a usuario de las guías.

La gente habitual olvida sus movimientos pobres, debido al hábito, o de otra manera. El túnel del Carpal y otros síndromes relacionados se arrastran generalmente para arriba en gente. Puesto que la lesión física empeora con las que no practiquen los movimientos apropiados, no han una necesidad clara de este dispositivo en una forma o la otra; incluso si solamente un barato de la invención se utiliza para el gran público.

El uso diario de computadoras por todo el mundo está estallando, e interna la necesidad creciente de la invención con el uso de la terapia del síndrome de túnel de carpal.

La terapia física continuó de otros papeles:

. - Enseña a gente [fuera de necesidad física] a utilizar sus accesorios alternativos. Por ejemplo gente que han sufrido lesión a un miembro, o que tenía una dirección de la necesidad del movimiento al usar medios alternativos: Enseña a gente a utilizar otros accesorios disponibles más, eg.: mano para la escritura/trabajar; pierna. Los cambios del uso implican: menos presión, esfuerzo, movimiento.

- El movimiento "sensor" puede también ser utilizado.

- Trabajo w (con - el nivel de controles del adaptador de)/substituye de la interacción metodologías de la terapia física (comúnmente en la práctica)

- Las dolencias incluyen:

artritis

- lesión accidental: ligamentos rasgados, huesos rotos (puede sacar moldes anterior o evitar todos junto, especialmente cuando los moldes están de menos ayuda en tales ocurrencias)

- enfermedades del músculo o del hueso

- defectos de nacimiento

- La invención puede ser autodidacta y ajustó; con todo un terapeuta puede ser utilizado si hay cobertura del seguro médico.

- Etc

Deportes:

- Lanzando o haciendo pivotar en las bolas en tenis, béisbol, baloncesto y el balompié.

- Bolas que lanzan en béisbol, el balompié, el baloncesto, el etc.

- Al coger o haciendo pivotar en la bola, la dirección, cualesquiera hace girar, y la velocidad de la bola debe ser reflejada en la respuesta/el oscilación correctos del movimiento.

--El sistema sabe la naturaleza de la bola vía:

---controlando cómo viene al usuario

---'visualmente analizando sus movimientos

- Natación de la velocidad.

Multa - adaptación de sus movimientos de la técnica de la gimnasia y de la danza.

EXTREMO DE LA SECCIÓN DE LAS DEMANDAS: Buscar más demandas en el uso

Archivo: Movimiento/3E061 H2

PROFESOR PARTICULAR del MOVIMIENTO 3E061 - OTRO

Cómo la invención sabe la colocación de todas sus piezas:

Cómo los diversos sensores saben donde en el cuerpo están, y se yuxtaponen a las otras piezas:

- Cada parte se asigna [normalmente] solamente a una porción del cuerpo. La programación rodeando esta parte pertenece apenas a esas partes del cuerpo, eg.: antebrazo.

- Invención que sabe donde está en el cuerpo y saber en qué posición debe estar (en relación a campo gravitacional):

--El 'analizador del software sabe deben estar en lo referente a uno a basaron encendido: mecanografiar el modelo usado y para qué persona del tamaño debe utilizar el sistema; el tipo de sistema de los movimientos del cuerpo es dirigir; si una de las piezas cae bien del patrón normal del movimiento [según lo determinado siguiendo], el sistema notificará a usuario.

. --Esto presta la invención total para preferir diseños más simples cuando es factible.

. --las piezas/los sensores esperanzadamente se colocan correctamente sobre el cuerpo.

. --diversas piezas del tamaño se pudieron utilizar para las partes del cuerpo de diferenciación: tales pudieron crear ajustes mejor perfectos. Las invenciones hicieron/adaptable para la gente de tamaños de diferenciación.

% ' de Distancer sabe la distancia de otras piezas.

%+-Distancer colocado en cada extremo de cada partición movible. En golondrina de mar la posición del calibrador del analizador de cada parte en relación a cada uno de las otras piezas, o en relación a un solo sensor localizó con./desc. el cuerpo.

--El sistema asume que 'analiza [dentro de una margen de error señalada permitida], eso que las piezas se caben sobre la persona correctamente. Por consiguiente analiza entonces cuentas cómo es bueno son los movimientos.

Comprobando si el sistema se está utilizando correctamente

El sistema de maneras puede juzgarlo no se está utilizando posiblemente ideal:

¿- Las piezas están quizá separadas demasiado lejano? Alguien que ponía la parte incorrecta en un miembro pudo causar esto.

- Por ejemplo, la distancia entre los diversos accesorios del cuerpo es [en promedio] no la cantidad correcta.

--Esto pudo ser resuelto vía: el distancer que mide por las ondas de radio entre cada pedazo.

- La persona incorrecta está utilizando quizá el sistema, y están de un diverso tamaño.

- El usuario asume quizá el sistema está programado dirigirlas para un patrón del movimiento con excepción de lo que piensa el sistema que debe dirigir.

. --En las versiones demasiado costosas, el sistema puede determinar cuál es la dirección del movimiento necesaria, y después golpear con el pie adentro de allí. Hecho siguiendo los últimos patrones [del minuto], y emparejándolos contra la base de datos de sistema de los patrones del movimiento.

- El patrón en el cual los pedazos se coordinan con uno a en los movimientos totales del cuerpo.

- Sin saberlo si el sistema fue puesto incorrectamente, o el usuario está haciendo algo mal, ser difícil para que el sistema analice para el movimiento inadecuado; puede asignar características pobres del movimiento o al usuario y o cómo las piezas pueden ser atadas incorrectamente.

- Una notificación señalada se puede hacer en tales situaciones.

Las maneras de ayudar a cerciorarse de el sistema se utilizan correctamente:

- El usuario se cerciora de que las piezas estén prendido correctamente, y en la distancia correcta de las otras piezas.

--Por ejemplo: El usuario debe medir la distancia entre las piezas atadas. Pueden poner en el piso. El usuario o el sistema entonces puede analizar si todo es ACEPTABLE.

- Requerir a persona entrenada en el dispositivo para atarlo para arriba correctamente con las piezas.

- Escalar detrás la invención:

Tener pocas piezas. Más simple es el más fácil utilizar. Esta invención total es naturalmente compleja para los modelos costosos.

- % de los alambres entre las piezas: la manera de la cual los sentidos del sensor que están siendo doblados pueden ayudar en: determinación del patrón total correcto del movimiento [puesto que las piezas incorrectamente puestas efectuarán el movimiento de cualquier alambre de conexión por consiguiente - para el individuo con medidas dadas del cuerpo].

- Diversas piezas del tamaño se hacen para caber a la derecha sobre el individuo como los zapatos. Uno necesita el tamaño correcto. Eg.:

--el antebrazo entero se agarra de una forma de modo que pueda caber solamente encendido con la ocasión mínima del error.

---los mecanismos de lanzamiento se pueden incorporar.

--El comprador puede orden especial cada parte, o se mantienen los productos ajustables comunes en el almacén. La invención no es generalmente ajustes de un "un tamaño todo el" producto, pero las excepciones abundan.

- Los accesorios pueden ser [sobre todo] sólido [plástico] - asegurando mayor exactitud de los transmisores/de los receptores/de los sensores de cada pedazo que están en la posición correcta.

- Tener cuidado [humano] general.

Errores y movimientos menos deseables del cuerpo:

'Programando en la gama permitida de tolerancia para el error:

- El nivel de sistema de la tolerancia tiene para el movimiento pobre puede ser programado y ser alterado.

- si las medidas del cuerpo humano no son perfectas, o si los dispositivos no se ponen perfectamente; el sistema pudo dar más sitio para el error.

--quizá el dispositivo, el usuario, o el tipo movimiento requiere tal mayor flexibilidad. Las razones incluyen: la persona tiene coordinación pobre; los movimientos deseados son difíciles de lograr o de repetir; el usuario puede necesitar hacer alteraciones [espontáneas] de la trayectoria dirigida.

- El sistema que aumenta su margen de error es más fácil o más lógico o aplicable si el sistema analiza que no se está utilizando correctamente.

- el usuario/sistema puede (con referencia a) fijar la margen de error. Las razones pueden incluir:

. --la invención aparece no caber sobre el cuerpo perfectamente debido a: carencia del usuario de la experiencia [la 'base de datos sabe cuantas veces el sistema usado usuario hasta la fecha]; piezas que no mueven en un tan ideal una manera como esperado; difícil hacer frente físicamente al movimiento.

- El 'sistema de la guía se puede programar para dar vuelta al modo del "castigo" del sistema con./desc. si el usuario carece postura correcta:

--el usuario no necesita quizá el sistema del notificador más si se han mejorado sus [dirigido consciente o intuitivo] habilidades del movimiento. La invención permite que el usuario esté temporalmente en la posición de cuerpo incorrecta (para el máximo 5 minutos).

--OTD: cuenta; estado; UIP; oscilador; analizador del comportamiento; pista; programa.

PARTE 3E061

Introducción: Estos términos son reemplazables completamente o parcialmente inter. Es decir cada grupo de términos se puede substituir generalmente por uno a, interno que ensancha la patente. Los términos describen las piezas y o las funciones.

. - La definición completa de términos encontró cerca: Usar el tesoro [de alta tecnología] para cada aspecto de la definición; haciendo búsquedas de la palabra clave en bases de datos de alta tecnología tener gusto de www.uspto.gov para ver cómo tales son utilizables.

"Analizador: Es el cerebro de la invención. Estudios posiciones de las diversas piezas". Controles/monitores: guía, supervisión, inclinación, siguiendo, uip, usuario.

'Educación: El usuario es educado en las mejores técnicas en: baile, gimnasia, aeróbicos, el activar, caminando, yoga.

- El sistema reprende los malos movimientos, y consigue más resistente ('TGH) en un cierto plazo como el estudiante debe haber aumentado sus habilidades). Guía.

'Guía: Da instrucciones a usuario cómo moverse; educativo; La invención supervisa normalmente a usuario, y el interno los dirige en mejores posiciones cerca: señales sonoras, luces, u otras formas de notificación.

- 'TGH [la terapia consigue más difícilmente] como la persona mejora [su yoga], es decir la guía da una cuenta para los movimientos seguidos del usuario, y el interno dirige a usuario a tareas más duras.

--Para los usos médicos, el tgh puede asumir simplemente automáticamente que se está mejorando la condición física del usuario a menos que se programe pensar de otra manera.

'Supervisión: el anotar; evaluación si se está alcanzando la posición de cuerpo señalada. La guía utiliza la supervisión para determinar qué dirección si cualquiera es necesario.

'Inclinación: Posición de sensores uces de los; Parte [usada como sensor]. Balance.

- (postura del cuerpo (que se levanta correcta/en de ángulo recto (véase KN "analizador llano" N (invención) en dir de E o de G))

- El ángulo a el cual se coloca el sensor se determina cerca

una versión electrónica o mecánica del aparato de medición llano del carpintero.

- Cada parte puede dar sus propias lecturas en cuanto a sus ángulos. Cada pieza se puede conectar con diversas porciones de la persona, por lo tanto un diverso ángulo deseado se puede buscar para cada pedazo.

- 'Analizador: estudios la trayectoria cambiante de la trayectoria de cada parte, y o cómo las diversas piezas se colocan en lo referente a las otras piezas.

--El análisis de las trayectorias de la trayectoria es más valioso cuando las posiciones múltiples son ideales, contra tareas donde hay solamente un ángulo ideal. Las posiciones múltiples pueden ser la manera una son retaught cómo caminar, las solas posiciones pueden meditating.

'Siguiendo: gráficos de la trayectoria del usuario de siguiente del movimiento del cuerpo; supervisa la historia del movimiento del usuario [mejorado].

'UIP [información de usuario que programa]: El usuario más allá de los patrones del movimiento, qué dolencias tienen/tenía/necesidad que corregía y del cómo. Analizador del comportamiento. El sistema se adapta a las necesidades de usuario [según cómo el mejor de la guía determina él debe ser hecho].

'Usuario: Paciente; persona que experimenta terapia física; ventajas normales de la invención que busca de la persona. Cualquie objeto (3D) o animal cuyos movimientos necesiten ser supervisados, seguido, dirigido, y o controlado.

- - - - -

Limitación del número de sensores:

- Para reducir al mínimo el número de sensores, el usuario puede tener solamente algunos de los sensores necesarios. La idea es que si ciertas partes del cuerpo están en la posición correcta, después es algo probable las otras piezas está haciendo MUY BIEN también.

- Los 'sensores se pudieron colocar en las partes del cuerpo más difíciles o más problemáticas.

- Las versiones avanzadas las cuales preparan a los usuarios para pagar el suplemento pueden tener más piezas.

Las recompensas se dan para los buenos movimientos. Diversas formas de notificación se pueden dar al usuario, basado en cómo es bueno es la pupila. Cuanto peor es la posición cuanto peor es la sensación de la notificación, eg.: señales sonoras más ruidosas.

sonido 5E040 y registrador visual activados por ocurrencias señaladas:

La grabación incitó sobre la presencia de sonidos o de imágenes señalados: El micrófono y o la cámara se activa solamente cuando está deseado. El ™ programado de la información de usuario sabe qué escuchar o buscar. Entonces registra lo que está buscando el UIP. Esto ahorra porciones de tiempo. La gente no necesitará repetir las últimas grabaciones que carecen se está buscando qué. Ella las búsquedas del sistema y reacciona a las ocurrencias señaladas. La base de este producto existe en gran parte. Ver nuestros aspectos únicos.

Ideas de la extensión:

. Pensar de una manera positiva, fuera del área de sistemas de seguridad.

. ¿Cuándo un incidente sucede, qué reacción pudo sistema iniciar?

. Cuando cualquier tipo de sensor nota un acontecimiento señalado, el sistema puede responder por consiguiente. Considerar los sensores siguientes para: olor, vibración, movimiento (que puede o muchos no causan la vibración sensible).

. Imaginarse el tener de un amigo por su lado que haga algo para usted cuando sucede algo mientras que usted está ocupado. ¿Cómo usted tienen gusto de ellos para ayudarle?

Aplicaciones del ejemplo:

. Recompensa animales domésticos con las pelotillas del alimento cuando hacen los tipos deseados de movimientos.

. Cierre de Windows cuando: llueve; o la temperatura/el viento excede cierta gama.

. Cuando cualquier número de uso en línea de los servicios de noticias señaló las palabras claves o las imágenes generales, esas página de los Web site la' se envía usted. Ejemplos:

- Le entran en contacto con cuando cualquier invención relacionada con su proyecto se discute.

--Un sistema más elaborado para General Electric, o Panasonic pudo determinar qué términos de sus analistas de mercado necesitarían haber buscado.

Usos:

- Supervisión de seguridad, e.g.: sobre la fractura del vidrio, las voces fuera de horas normales, persiguen el descortezamiento.

- Cuando grita el bebé desatendido, la función de registro golpea adentro, y transmite sonidos con el pie al guarda que puede entonces determinar qué acción a tomar.

- Solamente voces agudas de los expedientes (de mujeres). Menos exacto de un sistema sin embargo.

¡- Etc!

Misceláneo: la grabación puede estar en curso, aunque las porciones señaladas se marcan con etiqueta según el tipo ocurrencia, para la parte posterior fácil del juego. Existe en algunos formatos, eg.: sistema (sistema adaptante) que funciona sobre el desciframiento de la voz de la persona particular.

Es decir: el sistema (sistema adaptante) responde solamente a ciertos sonidos: Programar el sistema para buscar ciertos sonidos, then= cuando son oídos por el system=, will= del sistema:

1] expediente/sintetiza como programado (buscar aspectos deseables de la sopa de la diferenciación suena = vía "analizador de sonidos"; esto se puede hacer durante o (por u) bien después de la grabación completa)

2] "notifican" (las emergencias)

3] responden vía el modo w/in % " del acceso ".

- D1: (Paso 1: monedas de la sacudida en bolsillos; Paso 2: memorizado; 3: usuario "pp" cómo #1 debe "ser sintetizado"; 4: el usuario sacude monedas de casi cualquier manera dentro de la gama del mic; 5: expedientes del "mic"; 6: aparato de lectura.

- D2: sonido externamente generado - > analizador del mic = de sonidos = C (computadora) (cart/m) = notificador/mic (sistema de grabación/synth).

. - el "analizador de sonidos" es "pp" para buscar solamente los sonidos similares a la entrada original del sonido deseado que se seleccionará. El sistema debe no hacer caso de otros sonidos.

Sonido = "mic" = analizador = memoria = función de los sonidos

. - incorpora funciones del sistema de "Hanauta" de Rolando (el ritmo del tarareo crea el tempo para la guitarra u otros sonidos)

- OTD: acceso; usos de la seguridad (que rompen el descortezamiento/desplome del vidrio/el perro suena - > mic - > 5E-04 ("") del analizador del "sonido "=c=notifier/r (el usuario puede ^: escuchar adentro en la acción/el control (EL) en la posición remota (escena del crimen percibido)/la seguridad del contacto (protectores). Los sonidos solicitados pueden también ser de ^: el carro/m, de esta manera la anchura de espectros sanos pudo ser más amplio/seleccionado más cuidadosamente para evitar la interpretación con otros sonidos.

+ sinergiza el monitor inteligente 2E251 de w (con).

- mic = grabación activada por = cualquie ocurrencia/acción triggerable dentro del "acceso".

- existe: micrófonos que paran el registrar de cuando el silencio comienza

Patentes:

- Estrategia de búsqueda de la patente: micrófono y expediente.

- No. de la patente de los E.E.U.U.: discurso que reconoce sistemas, eg.: 5251283 y 5182765; mejora sobre el dispositivo de registración 5239587 para los cazadores - que recoge muestras de los sonidos; 5197490; (el sistema puede también engañar organismos (vía sounds=osc) después de que esté señalado (los sonidos animales oídos por el mic) y trae el animal (más cercano al mic o atrapar o cazador o alimento o la otra destinación (para los propósitos de la investigación) así que el mic puede mejorar captura = "sonido analiza"),

eg.: 4896305 - Patente de atracción animal; 4898179; (investiga = "naturaleza del analizador de sonidos" de situaciones eg.: patente 5012820; 5014039+; 4644330 - el dispositivo anti-que ronca, ejemplo de cómo KN (invenciones) puede responder a los sonidos (se aplica a 2e251 también), vende bien en mercado; 4160386 +4340915 (expedientes de KN con mayor sensibilidad (vía el mic más cercano al as= de la fuente sana determinado vía "analizador de sonidos") cuando: los sonidos señalados ocurren/como banda).

- Arrancador voice-operated remotamente controlable +4342106 para el registrador de cinta hecho por Olympus - N (invenciones) es activada por voz.

¿- +? Los expedientes suenan sobre niveles predeterminados especificados durante los intervalos de tiempo dados 4003264 (este KN). Título de esta patente: Dispositivo para medir y colocarse del sonido.

--COPIAR ÉSTOS PALMADITA AL ANALIZADOR DE SONIDOS

- Ocurrencias que inician la grabación: "CID" - las llamadas entrantes de números de teléfono señalados, o señalaron número del teléfono/extensiones; sonidos animales particulares (para los laboratorios de biología); sirenas de policía; fractura o el cortar del vidrio o el metal o la madera o el otro (edificio o protector) material. Ver 2E251. "Discurso": sonidos de la gente particular, identificados cerca: (acento regional/extranjero), echada (hombre o mujer), palabras particulares (más probablemente ser hablado por la persona particular (del tipo) (eg.: bandidos contra personales del mantenimiento).

- La investigación necesitó: identificación de las frecuencias sanas para las ocurrencias señaladas que accionan la grabación, y entonces cómo esas frecuencias no se pueden confundir desde otras frecuencias por el "analizador de sonidos".

Archivo: Categoría nueva/Sports.doc

Invenciones del ejercicio

Atado especialmente a las piezas (funciones): Ejercicio, el Entertainment%

sorbo rápido de $$ 1J090: Para los basculadores, motoristas. Tubo largo (paja): va cerca del envase del from= de la boca llevado por u (usuario) (en cadera, en bolso, en la correa...). El ejercicio bombea el agua hasta boca. Más el ejercicio, más líquido disponible. ejercicio del wo (fuera), aspirando el líquido encima de la paja larga difícil. diseño de la edad del Semi-espacio.

Energía de bombeo de: 1] cargador de batería del movimiento KN

2] el cada presionar del pie sobre las bombas de tierra (aire/líquido/otro (de la bebida)) (en forma acumulada).] botella flexible del apretón 3 para generar la presión en la paja del contenido.

- No ser sin embargo popular en algunas regiones, eg.: Europa Oriental, basculadores californianos de moda, eg.: los equipos y las zapatos tenis que activan especiales que usan tienen gusto de esta invención.
- Estrategia de búsqueda de la patente: (dispensador líquido del ajuste) + y portable.
- No. de la palmadita de los E.E.U.U.: 5154317 5037389 4703871 4420097 4491244 4629098
- N existente similar: la paja, amamanta utilizado cuidando a bebés.

rueda de ardilla flotante 5J01: Rueda de ardilla utilizada en las piscinas, los lagos, y los ríos tranquilos. Ejercitar mientras que viaja en el agua.

- Impracticalities incluye: consiguiendo el barco con./desc. con seguridad. El subir del agua pudo ser demasiado peligroso.
- Cómo mantener la libertad perpetua de golpear poolsides:

--Se diseña el propulsor [tan hablar] de modo que requiera el esfuerzo de la energía humana moverse a través del agua, solamente él no mueve el dispositivo flotante en cualquier dirección. Quizás diseño de los propulsores el 'anula las fuerzas que empujan el dispositivo para ir dice adelante contra ir al revés.

- Maneras de dirigir la rueda de ardilla alrededor: otra rueda de ardilla [más pequeña] usada, o el diseño de la rueda de ardilla principal alteró para permitir control direccional.
- Consiguiendo con./desc. la rueda de ardilla sin caer en piscina:

--Los muelles o las cerraduras del flotador en un muelle.

--La acción del pedal aspira el agua fuera de un tanque que la hace más ligera. Esto permite al usuario conseguir en la rueda de ardilla mientras que semi es anclada por energía de la fricción sobre pasos de la piscina u otra debajo del dispositivo [movible] del muelle del agua. Cuando el usuario desea atracar, colocan el barco en lugar deseado y [manualmente] permitir el agua en esta altura de caída aire-atrapada de los barcos del compartimiento en agua.

. - Otras maneras de guardar la rueda de ardilla del borde de la piscina:

--[El 10%] de la energía real no se está en conflicto solamente en que los movimientos de la rueda de ardilla pero hacen tan lentamente bastante para hacer el torneado más fácil puesto que no está viajando el flotador tan rápidamente.

--El dispositivo dirige automáticamente el dispositivo flotante lejos del borde dos o más metros antes de llegar el borde.

--El dispositivo de torneado puede mantener el flotador el ir un patrón circular u oval. Sin embargo el nivel de energía ejercido de las piernas [desemejante de los brazos] hará el dispositivo algo rápido y hará a persona mareada [peligroso].

--El dispositivo se fija quizá al borde de la piscina, y no se mueve. Empujes de la rueda de ardilla solamente contra el agua.

--Versión electrónica: envía el laser al borde de la piscina para determinar distancia, y cuando la tolerancia inminente de la distancia mínima, él fuerza la rueda de ardilla para dar vuelta lejos antes de que el su moler demasiado último de la pisada pueda continuar tan.

--Con un tirón [automático] del interruptor el mismo movimiento del tráfico pone simplemente el dispositivo en revés. Es decir guardar el vender puerta a puerta adelante pero la rueda de ardilla toma energía y la aparta.

--El volante permite que el usuario dirija lejos del borde, permaneciendo posiblemente en trayectoria del círculo. Este solo puede no ser patentable.

- Comercialización: vendido a través de la frecuencia intermedia y de distribuidores de: bicis, equipo del ejercicio (ruedas de ardilla), fuentes de la piscina.

--Blanco en la próxima primavera y estación vendedora del verano en hemisferio norte.

--La gente prefiere el ejercitar al aire libre en el agua a ser pegado dentro. También el ideal para los que tengan piscinas pero no las utilizan - otro uso para una característica casera existente que se descuide a menudo a falta de uso.

- Invenciones similares: Vender puerta a puerta los barcos para uno o más gente.

- Tiene lugar [ajustes] para: bebidas, ventilador, dispositivos de la hospitalidad [pantalla de la TV, de la PC], etc.

- Mejoras para vender puerta a puerta los barcos:

- el dispositivo de la "cuenta" mide las calorías del número quemadas/distancia viajó.

- u = "s" (pantalla) = "cámara" = ve cuál está debajo de superficie del agua

- colocar las ruedas de ardilla en tándem o de lado a lado.

--Protección de la cubierta de Sun. Quizá puede tener energía sòlar en caso de que el usuario consiga cansado. Guarda la lluvia apagado. Puede hacer estallar hacia fuera la cubierta cuando está deseado.

sistema variable del movimiento del tráfico 5J02: para vender puerta a puerta los barcos, las bicis, y las ruedas de ardilla.

- Los pies se mueven en los movimientos alternativos dependiendo de los cuales el ángulo [de los 360 grados] de los pies circulares del movimiento está. Las piernas pueden moverse en arqueado, arriba y abajo del movimiento.

--Propósito: dar a piernas la libertad para moverse de maneras/de ángulos de diferenciación. Posibilidades terapéuticas.

--Puede mover pies al lado de uno a en un empuje y el movimiento de la contracción contra la mudanza en el movimiento circular, eg.: como las prensas del peso de la pierna.

- Precaución: diseño para no lastimar a las piernas o a otras partes del cuerpo. Los estudios sabidos uso de los terapeutas físicos a determinar desearon los movimientos de la pierna/del cuerpo para alcanzar puntería deseada.

- Utilizar el sistema para las partes del cuerpo con excepción de las piernas. Eg.: brazos (para la persona encuadernada de la silla de rueda) a moverse alrededor en tierra/agua.
- El sistema de la "cuenta", que compensa movimientos más difíciles del ángulo al determinar las calorías utilizó. Es decir diversos movimientos pueden requerir más energía sino crear menos fuerza física.

corrector de la postura del cuerpo 5J03: movido a 3E061

+ 4855942 podómetro y/o aparato de medición y método de la caloría: absolutamente similar a KN, con todo al extracto no menciona que las cupones están dadas hacia fuera, ni que el dispositivo es rentable de almacén.
- las cupones se pueden dar hacia fuera simplemente para el nivel cuantificado de ejercicio, eg.: cada kilómetro (caminado) iguala un punto.

Ver en "mf" archivan invenciones siguientes:
Generador de la recompensa del cargador de batería -1G22
BATERÍAS ACCIONADAS MOVIMIENTO -4E010

+ 7G010 Gyrator: ejercicio por el objeto pesado de giro en el extremo de la secuencia. El sistema mide giros del número y el nivel de fuerza centrífuga. Controlar la longitud de la cuerda. ¿Responsabilidad por la fabricación de un producto?
- ejercicio teniendo objeto en el extremo del oscilación de la secuencia alrededor. La fuerza ejercida sobre secuencia y o la velocidad se mide (cuenta) = vía los "sensores".
- después de efecto la velocidad/la fuerza en de la cual el objeto desmontable vuela: velocidad del giro, longitud de la cuerda/de la extensión, y si está hecho girar (manualmente) la más larga hace girar quizá más rápido es el giro. Tiempo del balance con la velocidad de la descarga. Pocas descargas con otros alcances.
- controlar la longitud de la cuerda = vía el retractor (como con la cuerda del aspirador) = manualmente/automático control
. - puede substituir objetos en el extremo de la cuerda para el ^ la diferenciación: pesos, tamaños (fricción en el aire), uso de interior/al aire libre de la seguridad (más suave).
- el objeto del vuelo puede tener = las luces/oscilador. Éstos funcionan según el tipo movimiento/vía control por el U.
- genera electricidad/energía de batería
- la manija de lanzamiento (mecánica) deja el objeto de giro volar hacia fuera (en el control del usuario).

- usos: dispositivo controlado de la humanidad que consigue otro for^ de la atención: emergencias (accidentes de carretera); señalización del tráfico; acontecimientos de ventas; juguete; ejercicio; juego con el animal doméstico (perro).

. - El giro alimenta la batería atada a la manija: charger=battery del disk=gyration.

- las versiones actuales del laboratorio pudieron existir

- pudo ser patentable si hay una nueva manera de hacerla. Patentabilidad de 2 sin esta mejora.

- cuentas del sistema y o medidas la tensión en secuencia. Versiones (electrónicas) mecánicas/del EL.

- grado de las medidas de esfuerzo del ejercicio.

- frecuencia intermedia barata

+-injury a la otra gente - debe ser diseñado hacia fuera antes de utilizado.

- KN: g \ 4g N (invenciones) en el extremo del archivo que cuenta/anota el número de oscilaciones de la cuerda de salto.

SECCIÓN DE LAS INVENCIONES DEL TELÉFONO

Contenido para los archivos de la invención del teléfono:

. El teléfono celular notifica antes de entrar en área con la recepción pobre

. Guardar el teléfono el sonar hasta que usted pueda coger llamada

Archivo: Categoría/notificador del teléfono/de la célula

NOTIFICADOR MÓVIL 3E010 de la LOCALIZACIÓN del TELÉFONO

Señales cuando el dispositivo de comunicación móvil se está acercando a una zona pobre de la recepción.

Búsqueda de la patente necesaria - también complejo para Steve. Algunos se traslapan de patentes.

EXTRACTO

Dice a usuario cuando su teléfono celular o sin cuerda está a punto de acercarse a un bolsillo con posibilidades limitadas de la transmisión. Los sistemas actuales demuestran el nivel de receptividad que sale del usuario que tiene que conjeturar en qué dirección puede ser que muevan para mejorar receptividad. La invención dirige a usuario a la dirección en la cual una mejor receptividad puede ser obtenida mejor. Puede estar la parte o a parte del teléfono.

DESCRIPCIÓN

La localización del usuario con objeto de la identificación de cuando se están acercando a un bolsillo de capacidad pobre de la comunicación es determinada por el GPS. Como un respaldo los medios siguientes se puede también utilizar para determinar el acercamiento de un bolsillo con capacidad pobre de la comunicación: debilitamiento de señales; otros modos existentes.

Versión simple de la invención:

- La luz anaranjada se adelanta demostrar niveles bajos de la batería. Las demostraciones una de la luz ámbar están entrando en un área de la transmisión pobre que colinda un bolsillo sin posibilidades de la transmisión. Si se oyen los parásitos atmosféricos pero sigue habiendo la luz verde, ésta demuestra que los parásitos atmosféricos son probablemente temporales. La luz roja demuestra que el apuro con no tener ninguna comunicación es la no el teléfono o batería, sino el estar en un bolsillo de la comunicación de no.

DESCRIPCIÓN Y NOTAS DE LA INVENCIÓN

Identificación de los bolsillos de la transmisión pobre delante del tiempo. El sistema demuestra los bolsillos de áreas con la cuenta que demuestra la calidad de la recepción en tales áreas.

llaves de +-User en su [del '] dispositivo teléfono un código para las áreas señaladas que se están acercando. Tales códigos pueden ser:

+--número de millas y de dirección de donde localizan al usuario. [solamente este aspecto aparece no obvio desde el punto de vista de la patentabilidad].

. --códigos postales postales [patentabilidad obvia sabia?]

. --el código de área del teléfono más los primeros tres dígitos del usuario del número de teléfono sabe está en el área de la pregunta [la patentabilidad obvia sabia?]

- La función trabaja ambos cuando el microteléfono es por intervalos, pues el valor de la receptividad es importante en ambos panoramas.

+ el sistema ajusta cómo anota a recepción [anticipada] adaptándose a las circunstancias diversas. Ejemplos:

- tipo de microteléfono
- mecanografiar los servicios que son proporcionados por el portador del teléfono en áreas señaladas
- tiempo

- si el usuario está dentro/al aire libre/debajo de azotea del coche

+ el usuario da instrucciones el sistema cómo es malo una conexión del teléfono ellos tolerará. El nivel de conexión de la calidad que el usuario lo ha pedido necesita, eg.: la calidad mínima que tolerarán para la llamada del negocio de a], llamada del negocio de b] no.

--el sistema se adapta a las preferencias de usuario.

- tipo de red de teléfono [y calidad correlacionada de conexiones].

- nivel de calidad en la conexión según lo efectuado por las líneas cones base en tierra. Si hay una conexión pobre al alambre/a las líneas ópticas, el sistema tolerará menos apuro en las ondas.

+ demuestra a usuario cómo conseguir a una mejor recepción:

- el sistema da a usuario una cuenta de diferenciación, si el usuario altera cualquier uno o más de los elementos que están efectuando a su recepción, positivamente o negativamente. Eg.: la recepción sería el 10% mejor si caminó el usuario 4 metros (al norte) del edificio.

--el mapa digital en el dispositivo puede dirigir a usuario.

+ el GPS puede proyectar una ruta del recorrido para el usuario por cuál puede mantener la mejor receptividad.

Cómo el sistema puede comunicar fácilmente con el usuario.

manera del notificador de informar al usuario el estado (en cuanto a la calidad del actual/anticipó la calidad de conexiones:

- la distancia se puede también indicar por los sonidos del fondo oídos solamente por el usuario sin cuerda del teléfono. Tales sonidos pueden ^humming, las señales sonoras que aumentan de intensidad en lo referente a la distancia del transmisor y o las dificultades en la recepción.

- vibración del instrumento. Diversos tipos de vibración son códigos, eg.: la porción de teléfono que envía la vibración indica la dirección en la cual la recepción (mejoraría) si fue el usuario allí, y las pausas entre la vibración indica la distancia que necesita ser viajado.

+ mapa de la base de datos del terreno general:

- el sistema utiliza los mapas basados en los satélites que demuestran la localización de edificios, de caminos y de obstrucciones en la región. Esto juntada con el GPS (o relacionada) que demuestra la localización del usuario; permite al sistema dirigir a usuario en cuanto a cómo pueden ayudar/daño la calidad de la recepción.

- el software puede analizar la altura de edificios y otros obstáculos de mejorar el sistema de la guía para corresponder con localización de los usuarios la' y adaptación correspondiente necesaria.

. - el mapa existente de Sandbourne demuestra los esquemas de edificios.

El sistema de maneras puede adaptarse a la situación del usuario: Cómo mejorar a la recepción:

- una diversa forma de transmisor/de receptor del portador del teléfono se utiliza para comunicar con el teléfono del usuario para compensar la localización del usuario. Es decir diversos portadores pueden servir a cada uno la localización con los niveles de calidad de diferenciación, y el sistema puede cambiar automáticamente a mejores portadores.

--el coste adicional para tal interruptor se puede calcular con el aumento previsto en calidad.

- Asume que diversas formas de transmisión pueden por ejemplo transmitir mejor a través de edificios, de las montañas, del etc dependiendo del portador y de sus formas de transmisión.

Técnico:

Todos los tipos de cuentas/de gráficos/de cartas están disponibles para el usuario para que determinen posibilidades diversas de la recepción:

- Teléfono sin cuerda y celular: la distancia aproximada de las demostraciones del transmisor así que del usuario es menos probable conseguir cortada. Y o da la advertencia vía luz y o audio cuando está acercando a límites externos. - Calidad de transmisión es "anotado" = visto en S ()/Nr de la pantalla.

Diagrama:

base t = distancer/pd= (portable/sin cuerda/celular) t

- usos: Walkietalkie; dispositivos de la radiofrecuencia (recepción) (radios, estereofonias) (en vehículos);

Notificador de la batería:

- advierte (nr) cuando: la batería está funcionando bajo (por lo tanto la preservación de la energía da a N (invenciones) menos gama/capacidad de manejar obstáculos físicos a la receptividad).

- existe por sí mismo, pero quizá no con este sistema.

Misceláneo:

. - el oscilador [comunicador sano saliente] dice la "interrupción en (quizá) 12 segundos/50 metros. Si por el sistema del tiempo (el sistema adaptante) calibra la velocidad del automóvil....

- el' nr funciona cuando recepción pobre de cualquier tipo (puede efectuar funcionamiento del sistema (sistema adaptante)). Eg.: cualquie comunicador móvil; satélite de la conexión w (con) (debido al plano, al pájaro, a las nubes, al metro inminentes...); baja de energía de batería.

- existe: el sistema sabe cuándo cambiar las células celulares. Las señales del sistema se están debilitando.

- problema: u (usuarios con o sin acceso completo) sabe cuándo están alcanzando la montaña o el túnel. ¿Qué sobre los acantilados en el lado de la carretera? Necesita quizá el interruptor complejo determinar la

localización de u en relación a la localización del túnel. Las obstrucciones cerca de ciudades grandes tendrían estaciones de relais.

- el GPS pudo ya estar en el coche, ahorrando costes de fabricación.

- qué bloquearía de la comunicación: acantilados por el lado del camino. ¿Está esto tan?

- Limitaciones: el ocuparse de monopolios del teléfono; apenas autorizando esta invención difícil. Pero un cliente puede pagar una fortuna las derechas.

- El "analizador" demuestra la mejor posición (picosegundo-zona) para el rc/tr (transmisor) para estar adentro para las transmisiones de una mejor calidad. Eg.: platos basados en los satélites, t, otras comunicaciones sin hilos.

- las condiciones atmosféricas negativas [que efectúan la comunicación] notificaron el via= m sin hilos tr.

- el nivel de energía necesitó compensar el transmission= pobre aumentando la intensidad de la transmisión: el sistema analiza la calidad/la zona del tr (transmisor) para determinar si se requiere tal alza; NR (notificador adaptado `) demuestra la cuenta de la intensidad de este tr/del nivel del uso de la batería.

--ciertas zonas pueden restringir el tr más allá de la intensidad señalada: u (usuarios con o sin acceso completo) se notifica antes de entrar en tal zona - demostraciones de la exhibición esto; la comunicación se efectúa automáticamente.

- Esta invención es un subconjunto de la parte común llamada: "Picosegundo-Zona". Estudiar todas las piezas, especialmente la pieza de la "zona" muy bien, y adaptarlas a esta invención.

Los E.E.U.U. Patentar la estrategia de búsqueda 2.99:

- celular y teléfono y (el notifie o la alarma o advierte). Nada bastante importante encontrado.

Búsqueda 4.04 de la patente de los E.E.U.U.:

- str: (célula de la TTL y (telephone$ o phone$) y (approach$ o el "venir cerca" o el "subir" o notifie$ o alter$ o warn$ o predict$) y ("recepción pobre" o "ninguna recepción" o "transmisión pobre" o "calabozo ")

Palabras claves:

- celular, móvil

- teléfono

- el notifie, alarma, advierte, % predice

Notificador de la distancia de las antenas - para las aplicaciones con excepción de los dispositivos de comunicación portables también:

- cuanto más lejos el distancer dice que el dispositivo [portable] del usuario es del transmisor/del receptor, mayor es la cuenta señalada. - usos: cualquie dispositivo que requiere el intercambio de comunicación/de frecuencias, y que pudiera también ser portable.

. - se aplica a las antenas/a los transmisores móviles.

- str: TTL (cell$ y (teléfono o teléfono o teléfono) y (approach$ o el "venir cerca a" o el "subir" o notifie$ o alert$ o advierten o advierten o predict$) y ("calabozo" o "área pobre de la transmisión" o "transmisión pobre" o "ninguna recepción" o "recepción pobre ")

. Los E.E.U.U. patentan %: 6418319 6240292 6195555 6035197

Los tipos de comunicación deseada incluyen:

- telecomunicaciones
- dispositivos portables que guardan el contacto para cualesquiera propósitos, eg.: pequeños sistemas aislados usados por los rancheros del ganado...

Qué uno puede hacer sobre entrar en un bolsillo pobre:

- Parar y continuar el conversar.
- Decir a partido que usted llamará detrás.
- Caminata o impulsión alrededor del bolsillo

PIEZAS

Nota: Más partes importantes tienen descripciones detalladas extensas más fácilmente disponibles.

El ACCESO = accede a los controles de producto electrónicos con afinado correctamente en la combinación. El acceso a la comunicación se puede limitar por la región - un restricter de la llamada.

El ANALIZADOR = los programas informáticos analiza cómo manejar la situación.

CUENTA = facturación: Usuarios de las cargas por cantidad y el tipo de uso.

CARRO = cartuchos que se insertarán en sistema. Contiene con frecuencia software/bases de datos útiles.

BASE DE DATOS = de las zonas de la mal calidad.

GUÍA = un instructor. Sugiere cómo el usuario pudo proceder. El sistema dirige a usuario así que evitan la comunicación de la mal calidad.

INTERACTIVO = el sistema obra recíprocamente con el usuario.

Notifican el NOTIFICADOR = al usuario en el estado de cualquier situación.

Paladio = dispositivo de colocación. Unidad portable que difunde su localización al sistema de colocación. Formar del sistema de navegación mundial [GPS].

El PROGRAMA = las facetas programables incluye: cómo el usuario quisiera que funcionara el teléfono.

PREDECIR que = el sistema predice qué ocurrirán, o qué usuario quiere, eg.: dirección de la localización móvil del usuario.

La PREGUNTA = el usuario y o el sistema se hacen preguntas. Ayuda a cada uno mejor a entenderse.

REACCIONAR = sistema reacciona a la ocurrencia según lo programado, eg.: mal calidad de la comunicación.

RANURADOR = llamada de las rutas del sistema (sistema adaptante) al portador o a la solución alternativo señalado.

CUENTA = el estado de localización y de la calidad correspondiente del usuario actual y previsto de llamadas.

SENSOR = sentidos vía muchos medios la calidad de la comunicación.

BUSCAR y REACCIONAR = las búsquedas del sistema señaladas las ocurrencias, que internan causas una reacción que responda por consiguiente, a saber mal calidad de las materias de la comunicación.

El ANALIZADOR de SONIDOS = analiza el tipo sonido, para la calidad de la transmisión.

El ESTADO = el sistema demuestra el estado de la llamada, eg.: la calidad de la llamada, calidad del receptability para un área dada, etc.

SINTETIZADOR = sintetizador de los sonidos, señales pobres de la transmisión de las máscaras.

El SASTRE = el sistema se adapta a las necesidades únicas del usuario, a una mejor función de propósitos señalados.

PISTA = acciones de las pistas o de los monitores del sistema (sistema adaptante) del usuario, o sistema, eg.: para determinar los patrones del comportamiento del llamador. Por ejemplo el sistema puede determinar automáticamente donde está el hogar del usuario y el usuario general de la ruta viaja para ir allí. Este Info usado para dirigir a usuario.

ZONA = área de A cierta con límites definidos. El área también se ocupa según de su distancia del punto de la perspectiva. El mapa da estado a diversas zonas para su calidad del receptability del teléfono.

APÉNDICE Al NOTIFICADOR MÓVIL 3E010 de la LOCALIZACIÓN del TELÉFONO

Archivo: Retardo del anillo de la categoría/teléfono

ANILLO LISTO DELAYER 3G010 del TELÉFONO

anillo Delayer del teléfono 3G010:

EXTRACTO:

. Los llamadores de los retardos de sistema hasta el partido de recepción están listos para recibir la llamada. Jueces del sistema cuando están retrasando al recipiente de la llamada. Dan la opción de dejar un mensaje o puede esperar el llamador a una persona viva.

. La disponibilidad y el retardo del recipiente se pueden verificar por cualquiera: 1] dispositivo de sistema sigue a recipiente como siendo próximo; o 2] las señales del recipiente vía el suyo embolsan teledirigido que lo retrasarán en la respuesta a la llamada.

- El recipiente tiene la opción de afinar en el tiempo previsto por el cual pueden tomar la llamada.

. El sistema utiliza funciones como la información de usuario que programa, y la identificación de llamador opcional

Cuando retrasan pero quiere al recipiente contestar, la llamada no irá al correo de voz. El llamador oye que una grabación que puede tenerlos a esperar temporalmente hasta el partido ellos está llamando puede conseguir al teléfono.

Usos importantes:

- Contestadores automáticos: el teléfono del programa para tener espera de los llamadores hasta persona puede conseguir llamar por teléfono. El contestador automático del teléfono sabe cuándo el dueño es casero o no: tiene automáticamente dos modos de contestación.
- Intercomunicadores: da a dueño más hora de contestar.
- Si el llamador consigue un ocupado, la compañía del teléfono puede todavía ponerlo en asimiento. El llamador sabe su posición de la señal sin partido de recepción que disturba.

Funciones misceláneas:

- Los llamadores mientras que están guardados en asimiento pueden oír/leída: música; número de gente o de llamadas a continuación; el horario futuro así que el llamador de la persona de la blanco pudieron revisar intentar la comunicación.
- Todas las funciones existentes del correo de voz se aplican, eg.: Los llamadores pueden optar dejar un mensaje algo que esperan.
- Los tiempos de conexiones pobres pueden informar a partidos en otros extremos: espera; naturaleza del problema, eg.: calidad de transmisión pobre. El usuario o el sistema puede seleccionar o uno mismo-determinar la naturaleza del problema, en golondrina de mar da (nr, oscilador) "estado aplicable".
- Llamadas entrantes encaminadas cerca: la identificación de llamador, número de extensión pidió.

Usuario que controla el sistema del teléfono para retrasar a llamador. Opciones:

- El dispositivo teledirigido del usuario puede dar instrucciones el sistema del teléfono para retrasar al llamador de cierta manera. Este dispositivo teledirigido puede ser parte del abrelatas del garage del usuario/del otro dispositivo teledirigido común - haciéndolo práctico.
- El teléfono del usuario (célula) tiene botón para transmitir control a la línea teléfono relacionado de la tierra.
- El' analizador de sonidos oye los comandos de la voz del usuario.

El sistema [automáticamente] conoce la localización del dueño/del usuario vía:

1] compensador basado en los satélites de la obstrucción de 3E210 GPS; 2] determinadores localizados de la localización (KN) en: calzada del garage, jardín, cuarto de baño (ducha), banco de trabajo ruidoso; 3] "sensores" "que analizan" para la actividad en la vivienda, eg.: vibraciones humanas, hablando; abertura de la puerta principal - analizada con la combinación de otros sensores;] el dueño 4 selecciona a partir de diez mensajes de salida más, eg.: "Estoy en patio trasero, dejo el mensaje o llamo detrás en una hora", "yo estoy conduciendo to/from trabajo/casero"; 5] llamadas entrantes (ya que están) se remiten. 6] El usuario acciona el pequeño dispositivo portable (pares como: paginador, abrelatas de la puerta, teledirigido, reloj, organizador) cuál activa el tipo aviso saliente.

Retardo en la opción de sonido del teléfono:

Los llamadores esperarán más de largo el teléfono que se escogerá encima de puesto que puede ser que permitan un número común de cuatro o más anillos.

Problemas: Necesidad de autorizar probablemente para telefonar monopolio. ¿Pero barato apenas conseguir patente entonces autorizar? Necesidad de hacer relaciones públicas para conseguir a compañía telefónica adoptar el sistema. Probable alguien pensó en esto en la industria apretada de la telefonía con los jugadores de gran alcance.

Delayers también para:

- Campanas de puerta: el partido que es visitado envía el mensaje [por la radio] a la persona en la puerta.
- Luces de calle (para las ambulancias, vehículos de transporte total que consiguen prioridad, eg.: Autobuses holandeses para los cuales las luces pueden dar preferencia y cambiar para ponerse verde puesto que hay generalmente más gente en un autobús que en otros vehículos).
- La temperatura del horno reduce temperatura cuando el "cerebro" sabe que los "sentidos" el usuario van a ser atrasados/salida de la casa. Internar, el alimento puede cocinar para más de largo y ser caliente listo más adelante sin la quema.

- OTD D2: Este ~ C (computadora) del sistema de N (invenciones) (sistema adaptante) (delayer del anillo de t) =

Fax (el sistema coge el fax más adelante); ACCESO (); ANALIZADOR (); AP (); ARTISTA (); BALANCE (); CEREBRO (); BVA (); C (); CÁMARA (); CARRO (); COMPOSICIÓN (); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MES (); RATÓN (); MQ (); MULTIUSOS (); NR (notificador adaptado `) (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (`teledirigido) (u controla el sistema: retardo del anillo cuando u está lejos de t); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); TR (); u (usuarios con o sin acceso completo) (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

- decir en la American National Standard "que soy viejo y retardarse, así que esperar. O llevar el teléfono."

- todo el software ejecutado sin importar encima de donde la señal de t que es escogido se genera de).
- dar más tiempo entre los anillos.

% del llamador no oye quizá los anillos durante los primeros uno o dos anillos. Esto da a llamador razones adicionales para dejarlo sonar más de largo. Esto dirigida a través del portador del teléfono.

. - señales generadas de matriz del microteléfono o de conmutación.

- si puede hacer del microteléfono: no necesitar preocuparse del monopolio del teléfono. Fácil descubrir.

--difícil descubrir si: La matriz de conmutación del teléfono Co descargaría la llamada si no consiguió un anillo detrás señala w/in cierto tiempo. Pedir el teléfono co.

- el llamador puede conseguir el sonido/el oscilador que dice la espera (iniciada después de seguro # los anillos).

DIAGRAMAS:

- D1: llamador = t ~ C ()/intercomunicador de la computadora = compañía C (computadora) del teléfono que procesa la red (analizador) = ~ de la American National Standard del teléfono del ~ de t c = [pobres/tipo analizador de la conexión]/analizador de la localización del dueño

- D2: diales del llamador ascendentes = c (la banda por t) del receptor = llamador oye que el sonido retrasado/receptor oye el sonido inmediatamente

- trabajos con el fax/los contestadores automáticos también

- el término "llamador" se puede substituir por "uno quién está haciendo el contacto inicial"; "dueño" con "uno quién recibe la comunicación"; "llamar" o "llamada entrante" con la "acción del remitente".

- el GPS dice a sistema del teléfono donde está u, por lo tanto el sistema de t reacciona por consiguiente.

- problema: ¿señal generada por la red de conmutación? ¿El teléfono co la alterará para usted? La estación de conmutación recibe la señal con./desc. del gancho del teléfono (la C.C. señala?). ¿Llevar a cabo la patente hasta que el teléfono co abra su mente?

- OTD D: T/este sistema/C de N (invenciones) =

ACCESO (estado del dueño de la llamada limitado a ciertos partidos); ANALIZADOR (naturaleza del problema/del estado: donde está el dueño, que el llamador es (vía el uip o el acceso de este 3ultimo)); CARRO (localización del dueño, tipo oscilador u opciones de la VM); M (uip, paradero del dueño, gps); MIC (t, intercomunicador, sistemas de radiobúsqueda); MULTIUSOS (cada número de la telefonía puede: encaminar/distinguir entre diversas llamadas entrantes (vía la identificación de llamador, tener acceso; distinguir para quién está la llamada entrante, vía: número de extensión, reconocedor de la voz); NOTIFICADOR (anillos del teléfono; las cuentas miden el tiempo o los anillos de número hechos por el llamador - simultáneamente o después de que paren (hung-up)); OSCILADOR (anillo del teléfono, estado para el llamador, dueño); Banda (); Picosegundo (); Q (cómo el llamador/el dueño puede mejorar uso altera el sistema); S (); CUENTA (número de mensajes); SENSOR (); ANALIZADOR de SONIDOS (las ayudas determinan el nivel de transmisión de la calidad); ESTADO (); TDS (VM); T (); UIP (); WA (t).

OTD (otros detalles) de Techie D: Este N)/C [línea (de las invenciones) (de T del anillo Delayer dibujada a cada uno debajo de N#] =

Cámara accionada por control remoto -2E251: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

Notificador móvil de la localización del teléfono -3E010: Entra efecto cuando el "analizador" de este N# determina para: banda, uip. Eg.: cuando u es alrededor entrar en área de recepción pobre, el sistema permite el sonido extralargo (receptor, los mayo o mayo no saber esto).

El teléfono -3E040 con ruido seleccionado canceló cuando más allá de distancia señalada: El teléfono -3E041 con ruido seleccionado canceló cuando los sonidos ambientales están de frecuencias indeseadas:

Correlador y regulador de la circunstancia de -3E151 GPS: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

Compensador basado en los satélites de la obstrucción de -3E210 GPS: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

Palillo teledirigido -5E020 con el interruptor: Entra efecto cuando el "analizador" de este N# determina para: banda, uip.

la grabación +-5E040 incitó sobre la presencia de ciertos sonidos: Entra efecto cuando el "analizador" de este N# determina para: banda, uip. Eg.: el usuario está lavando los platos, tomando la ducha, ya en el teléfono, roncando, durmiendo.

El explorador del canal -9G220 salta las estaciones que tienen anuncios publicitarios: el sistema deja la comunicación entrante (t) venir en más tan durante los anuncios publicitarios.

PATENTAR la estrategia de BÚSQUEDA y algunos números de patente relacionados de los E.E.U.U.:
anillo Delayer de 3G010 T: ()
- str babero 8.94: retardo del anillo del teléfono
- Str APS 69 ' - 78 ': retardo del anillo del teléfono
--No. de la palmadita de los E.E.U.U.: 3965304; 4103114.

La "alarma" 'anillo de la mañana de s activa solamente después de tiempo señalado if/when: u (usuarios con o sin acceso completo) está (temporalmente) fuera de cama (quizá cuarto de baño); u está en "t" (para no molestar a persona en el otro extremo de la línea); otros sonidos se están generando en aquel momento, eg.: otro (puerta/horno/t) anillos.

Picosegundo: El sistema (sistema adaptante) sabe donde está u, y retrasa el anillo por consiguiente. Sin embargo, U puede desactivar esto/cualquier otra característica.
- el sistema dice a llamador donde está el recipiente de la llamada (en términos de recipiente de la distancia/de la velocidad/del tiempo previsto pudo coger el teléfono (basado en su velocidad en relación a distancia para viajar y para mecanografiar el terreno (las escaleras o tierra plana) que se atravesará).

El OSCILADOR consigue más ruidosamente en cada anillo = KN sucesivos (invenciones) en directorio de "A".

El recepcionista coge llamada si/cuando:
- el tiempo previsto u cogería llamada excede tiempo programado (el llamador del tiempo previsto puede esperar el wo (fuera) que suelta la paciencia, colgando para arriba).
- después de seguro # de anillos: existe

El "analizador" decide cómo a dirigir/ruta ("ruta" = la pieza del futuro IMI?) llamadas entrantes/salientes/datos.

--pesa los aspectos/los datos de diferenciación/uip de la situación (tipo del llamador, recipiente, hora, donde está el recipiente - qué están haciendo (w5)).
--ranurador de la llamada 3G050

Uso futuro distante: Las llamadas entrantes del fax se manejan diferentemente. Distinción entre el fax/las llamadas verbales/del email de la "hospitalidad" de /etc determinados vía: CID = colocado para el tipo actividad; se cifra la llamada entrante (por el transmisor/el receptor "analiza" contenido (mientras que el llamador está en semi-se sostiene)); las llamadas entrantes son destinadas para diferenciar teléfono # dependiendo de la naturaleza de la llamada, por lo tanto el sistema (sistema adaptante) sabe cuáles es cada llamada para basado en esto o cualquier otro factor.

El receptor (cualquier t KN) está (temporalmente) ocupado, pero puede manejar posteriormente llamada entrante era él dado más tiempo. En este caso, el llamador consigue el sonido retrasado contra: el busy signal/redujo los anillos - > correo de voz, etc.

El receptor puede juzgar la naturaleza de la llamada entrante (CID, CID = UIP) y el interno elige cómo pueden acometer rápidamente para coger llamada, o cómo recibir la llamada.

El llamador y el recipiente pueden saber si hay un sistema relacionado del retardo de llamada disponible/funcionando/desactivado. El llamador o el recipiente puede activar/desactiva características del retardo del llamador de sus localizaciones.

Retardo en la opción de sonido del teléfono:
Los llamadores pueden esperar más de largo el teléfono que se escogerá encima de puesto que puede ser que permitan un número común de cuatro o más anillos. No obstante el retardo en el sonido de la audiencia no debe exceder un número de segundos, si no el llamador pensará que la llamada no ha pasado a través de la compañía telefónica correctamente y un redial pudo ser intentado.

Técnico:
- Cuando el teléfono recibe la llamada/el fax, se termina el lazo, después el sonido para.
- El retardo necesita ser hecho por la red del N-usuario o del portador.
- Una persona oirá a veces un anillo aunque el receptor no consiguió un anillo.

. OTD D: u (usuarios con o sin acceso completo) = este sistema de N (invenciones) (sistema adaptante) ~ C (computadora) (de T (anillo Delayer 3G010) =

Sistema del acceso de la entrada de la imagen -4E030: (u puede crear retardo antes ("acceso") del sistema requiere U responder (para la contraseña necesaria))

-5E040 Mic controlado vía sonido: ("jueces del analizador de sonidos" donde está u en referencia a la t)

Interruptor de la dislexia -5G061: (U ha mejorado S (pantalla) en el sistema de T=C)

Elementos técnicos - no seguros:

- Probablemente cuando el teléfono recibe la llamada/el fax, se termina el lazo, después el sonido para.
- El retardo necesita ser hecho por la red del N-usuario o del portador.
- Una persona oirá a veces un anillo aunque el receptor no consiguió un anillo.

Preguntas - el intento que llama AT&T recoge: Pasar a través del operador de AT&T.

- CTR técnico 800-257-4636 de la investigación del enlace del consultor: 2
- Relaciones Mgr de los medios: Donna Cunningham 802-482-3748.
- Sistemas de red: cajas de conmutación, relaciones de los medios del etc.: Carl Blesch 708-224-4196.

+ también ver el archivo: Las Parte-Telecomunicaciones para códigos más futuros de las piezas de las explicaciones utilizaron.

Identificación de llamador:

- Basado en CID del llamador', el sistema puede notificar al recipiente de la identidad del llamador. Si se bloquea la identificación de llamador, el sistema puede pedir que el llamador se identifique y o tener la llamada del llamador detrás y desbloquear su número así que el recipiente (y su sistema') pueden saber la identificación de llamador - > entonces procesar la llamada según el UIP.

Echan a un lado las características:

- El recipiente puede tener la llamada encaminada al partido señalado [dentro del co] si el recipiente opta no tomar la llamada [basada en la identificación de llamador/la información de usuario que programan].

El repetir:

La disponibilidad y el retardo del recipiente se pueden verificar por cualquiera: 1] dispositivo de sistema sigue a recipiente como siendo próximo; o 2] las señales del recipiente vía el suyo embolsan teledirigido que lo retrasarán en la respuesta a la llamada.

- El recipiente tiene la opción de afinar en el tiempo previsto por el cual pueden tomar la llamada.

Características diversas

VAGOS: los sastres sí mismo a los vagos de los comportamientos predicen que el usuario ejemplificará

BASE DE DATOS: identificación de llamador

DISTANCER: el recipiente de la distancia es del punto de la necesidad del contacto que los se espera que se acerquen.

EDIT: ciertos contactores se encaminan en "no disturban" modo. Un mensaje se pudo tomar para tales partidos.

INTERACTIVO: el sistema intenta entretener o asistir a llamadores durante su tiempo de espera

LOCALIZADOR: identifica la localización del recipiente

MULTI-MEDIA: la invención se aplica a cualquier dispositivo electrónico por el que un partido (un ser humano o una máquina vivo) intente hacer [vivir] el contacto con el recipiente [usuario de esta invención].
Otros ejemplos incluyen:
- teléfonos vía la tela
- la mensajería inmediata del Internet, por el que los contactores cuenten con una contestación pronto [si conocen al recipiente está en línea].
- cualquier cosa que desea una respuesta de una persona viva y donde electrónica se utiliza para comunicar [dos] maneras

MULTIUSOS: retrasando las características dependen se está entrando en contacto con de quién

PREDECIR: al grado que el recipiente está demasiado ocupado ofrecer una contestación, sistema intenta calibrar el tiempo de retardo. Ejemplos:
- el recipiente es el 50% con escuchar un mensaje minucioso del correo de voz 2 mientras que siendo entrado en contacto con por un llamador exterior. Piden el llamador esperar 65 segundos [que agregan en tiempo adicional de 5 segundos para el recipiente a las tareas del interruptor].
- hora que camina para que recipiente alcance la destinación: de acuerdo con velocidad de recorrido percibida [durante los primeros 3 segundos]
- ver el analizador del comportamiento

RANURADOR:

CUENTA: urgencia/importancia del llamador, ideada de llamador o de recipiente o vía analizador contento.

PISTA/PERSEGUIDOR: sigue a recipiente para predecir mejor cuando/cómo responderán al llamador

El UIP (INFORMACIÓN de USUARIO QUE PROGRAMA) adapta la invención a las necesidades únicas del usuario:

Aspectos portables de WA (CAMINATA ALREDEDOR):

Términos permutables - invención de extensión:
- El llamador puede también estar: contactor, remitente, approacher, uno quién camina para arriba
- El recipiente puede también estar: receptor de la llamada, mensaje, investigación, email, mensaje inmediato.
- Los anillos del teléfono pueden también estar: formar de notificar a recipiente, señales alertas, comunicación del oscilador.
- El dispositivo del teléfono puede también estar: cualquie dispositivo electrónico que reciba la comunicación; computadora; campana de puerta; intercomunicador; paginador [el llamador puede ser respondido con al tiempo de retardo previsto [w u hospitalidad del wo (fuera) mientras tanto para el contactor].

Para las situaciones donde puede tardar el tiempo para que uno conteste al teléfono, el llamador puede no oír el sonido durante algún tiempo (durante cuál comenzará el teléfono del receptor a alertar el receptor de la llamada entrante).

CONCLUYE EL ARCHIVO DEL RETARDO DEL ANILLO DEL TELÉFONO

Archivo: Categoría/herramienta Inv

La herramienta del usuario se relacionó:

tabla autoajustable de la pierna de $$ 1J100: Tapa de tabla que se reclina sobre las piernas del usuario mientras que la persona se está sentando: tapa de la tabla mantenida horizontal (plano) ajustándose a los ángulos en los

cuales las piernas de la tabla se ponen. - Para las piernas en la posición sentada estándar - con ambos pies en piso; o, porque piernas cruzadas - en estilo que se sienta indio en la tierra.

- Ventajas: bebidas de las subsistencias y otros elementos en contador del deslizamiento.

. Cómo ajusta:

- mientras que u (usuarios con o sin acceso completo) en (semi) la posición inmóvil: las manivelas de u (usuarios con o sin acceso completo)/las diapositivas/los broches de presión/ajustan piezas/las piernas así que la tapa contraria es nivel.

- Para los juegos de bola de observación, también, mientras que u (usuarios con o sin acceso completo) se está moviendo (en vehículo: coche, tren, autobús, plano, barco): el eslabón giratorio ajusta altura de la manera similar a las tazas de café que mantienen la parte inferior algo plana como topetones del coche alrededor.

- Estrategia de búsqueda de la patente: +table y ajustan y pescan con caña y pierna.

- No. de la patente de los E.E.U.U.: 5299510 5131106 5129702 4943040 4991518 4143601 4196675 4259909 4095843

+4703701 (KN es portable y para reclinarse sobre regazo; las piernas son resueltas en la parte inferior por la barra que puede conectar por lo menos dos piernas; las piernas pueden doblar hacia fuera - teniendo en cuenta llevar más fácil. 4372631

alarma autoajustable de la tabla de la pierna de $$ 1J110: La alarma se apaga si el usuario altera accidentalmente la tabla que coloca sin primero la desactivación del "sensor llano electrónico". Esta manera u es menos probable derramar contenido de la tapa de tabla.

- Usos: para el bebé (tabla de alimentación).

- NR D: ~ C (computadora) (k) = OSCILADOR del "analizador" del nivel "sensor" ("inclinación") =

- Otros usos: cama de la tabla (para el desayuno de la última mañana) siempre que el nivel cualquier cosa se haya excedido más allá de parámetro deseado en: camas de carro; partes de edificio que es construido (donde está la preocupación sobre algo que suelta lentamente el balance que lleva a un desplome); cuando u ha inclinado su más allá de/en del dispositivo de la "inclinación" parámetros/funciones indeseables.

- conecta con: Tabla autoajustable 1J100.

5J08 tornillos irreversibles - versiones mecánicas:

Existe probablemente. Los tornillos irreversibles, o unos que no se pueden sacar se utilizan con frecuencia para instalar el material así que él no se pueden sacar por los vándalos, tales como accesorios en áreas públicas tales como cuartos de resto. El problema es que ninguì□n equipo sabido, incluso si está especializado y menos probable ser tenido por los vándalos existe que pueden quitar los tornillos irreversibles comunes. Por lo tanto, diseñados son los tornillos con las cabezas especiales, más complejas que el tornillo Phillips común, que se

puede llevar solamente hacia fuera por uno con la cabeza correcta su destornillador, emparejando el patrón conmovedor inusual encima de los tornillos innovadores.

. Los patrones para las cabezas de tornillo pueden variar enormemente. [Nota: las cabezas son: la parte más ancha que sigue habiendo visible después de que el tornillo se atornille sobre todo]

- Diseños ahuecados en el head del tornillo:

- agujeros o cavidades "femeninos" de cualquie forma simple o compleja. Eg.: es la circular, semiesférica; , o el bloque forma (tal como escaleras miniatura, o cualquie hendidura formada cubo de Rubics), L forma [el interno la mayoría de la región no (fácilmente) visible al ojo desnudo - como torcer excava.

--cruz gamada [o porción allí pero más complejo que del diseño estándar Phillips].

- las proyecciones "masculinas" del head del tornillo pueden ser el contrario del female heads', eg.: los bloques minúsculos múltiples llenaron hacia arriba de modo que el interface de un destornillador del female pueda [casi] cubrir totalmente la arquitectura del proyectil y agarrarla bastante bien para dar vuelta al tornillo head'.

- Atornillar la forma del conductor esa los interfaces con la cabeza de tornillo correspondiente: de la forma los ajustes y los fósforos naturalmente, con un cierto permiso para el error teniendo la porción masculina del interface del destornillador más pequeña que la hembra [hendiduras] de la cabeza de tornillo. Asimismo, el interfaz femenino del conductor es más grande que los proyectiles masculinos de las cabezas de tornillo. Razones: fabricación incorrecta [de las cabezas de tornillo, desgaste y rasgón, y cualquie otra razón (sabida con el tornillo común y el destornillador que forman)].

- posiblemente todas las alteraciones o surcos de la forma dan preferencia en conseguir los tornillos adentro, algo que hacia fuera.

tornillos soldados 5J09:

Los tornillos tienen una capa delgada de la soldadura que derrite en una temperatura mucho más baja que el metal ordinario. Después de atornillar en el tornillo, un calentador se coloca en la cabeza Phillips y calienta el tornillo a una temperatura para derretir la soldadura pero no el tornillo o el metal en los cuales se encaja el tornillo.

- llamar a experto del tornillo para determinar si existe tal - más fácil que búsqueda de la tela. Entonces hacer la búsqueda de la tela.

Las ventajas de esto incluyen:

- Se hace una conexión más apretada y más fuerte.

- Evitar volver a apretar: Los tornillos consiguen de otra manera a menudo flojamente, y el rescrewing puede ser un esfuerzo alto costoso dependiendo de su localización. También la gente olvida o no sabe sobre el ajuste de los tornillos, causando averías indeseables.

- Reduce el tratar de forzar por los vándalos.

- Dependiendo del uso esto puede ser más beneficioso que francamente soldando o soldando con autógena. Por ejemplo:

- Conexiones más exactas pudieron ser hechas primero atornillando en el tornillo.

- Puede ser menos sucio y requerir menos habilidad especializada:

--El soldar general requiere las habilidades para determinar la cantidad correcta de soldadura no sólo para proporcionar el nivel de fuerza correcto. --Las ayudas previenen desbordar de exceso de soldadura. --Evitar el molestia de usar los pedazos precortados de soldadura que las necesidades de ser emparejado al punto correcto de soldar. Esto agrega la confusión excesiva. Puede ser más fácil simplemente haber clasificado diferentemente los tornillos para determinar el nivel de soldadura y o de fuerza requerida.

- el nivel de la transferencia de la temperatura de tornillos es mucho más alto que el material en en el cual el tornillo se encaja. El calentador, o el interface del destornillador es [eléctricamente] alto heated para calentar el tornillo entero [como el arma que suelda común]. Ejemplos:

+ la sustancia encajada en [pared] derrite [del tornillo heated]. Los surcos del tornillo pueden ser ásperos [desigual], creando mayor apretón, después de que la sustancia encajada re-solidifique después de refrescar. Tirando del tornillo retirarse puede ser hecho mejor primero derritiendo el tornillo circundante material - si se va a ser sacado cuidadosamente. Si no el acercamiento pasado de moda de perforar un agujero donde está el tornillo puede ser hecho en este caso el tornillo rompe algo.

. --la aspereza de los surcos del tornillo se puede hacer cerca: [rociando encendido] la cera en la manera manchada al screw= entonces que sumerge en puntos tan no encerados del ácido se erosiona levemente; o vía otros procesos de fabricación.

Ideal, la aspereza diseñó así que su más fácil conseguir los tornillos en que hacia fuera en material no derretido.

- elementos de las aplicaciones de 5J08

- el uso incluye clavos, w usado las tuercas (con) emperna [los derretimientos del perno con la tuerca y o el material encajado]: crea mayor apretón.

INVENCIÓN % DE MARTE ROVER DEL EXTREMO

Archivo: Juguetes/pluma

™ mágico de la pluma 5A490

Artista del laser: este dispositivo del arte (laser) registrará los movimientos de la pluma (cuando en modo activo) en "C", que es entonces tranferible sobre el papel, la lona, los plásticos, el etc vía la impresora o el segundo laser que transfiere las imágenes creó ya sobre centenares de tipos superficiales.

- Hay descriptores adicionales en esto a otra parte - concebido por Steve.

™ de la pluma de la realidad virtual 3C-250:

La pluma transmite cómo se está moviendo. Los altavoces del receptor separado transmiten sonidos según cómo la pluma fue movida.

- Controles del usuario cómo el receptor sintetiza las señales de la pluma. - Eg: un movimiento puede sonar como muchas campanas, o sonar como la pluma se está moviendo en arena, el etc.

. - Grande para los cabritos

- aplicable a cualquie dispositivo (con o sin la pluma), eg.: palillo, bola, cubo, muñeca, coche del juguete, aeroplano del juguete...

- relacionado con 3A-790/3C-790.

Techie:

- método #1: la pluma que emitía los golpes del laser que recibían la pantalla, que registra los lasers recibió. Estas grabaciones se pudieron demostrar sobre otra pantalla, impresión constantemente activa hacia fuera (las demostraciones cada movimiento como se están haciendo, eg.: con el trazador).

- método #2: según el movimiento de los expedientes de mano del dispositivo "C" (vía: tipo dispositivo del ratón con el rodillo en piso, el alambre, los detectores de movimiento) donde va el dispositivo de mano cuando active.

- diversos modos activos pueden generar diversas intensidades, colores, las anchuras del movimiento, el etc

Diagrama: Mano del usuario = barril de la pluma [sensores (sensores del movimiento/de la vibración) = analizador del movimiento/de la vibración/K) = salida de la escritura.

ALCANCE DE EXTENSIÓN DE LA INVENCIÓN DEL INSTRUMENTO DE LA ESCRITURA

[Sección #1 de las piezas]: u (usuarios) (usuario de esta invención) = funciones aplicables del ~ C (CPU) de la invención [escritura/dibujo] =

[Sección #2 de las piezas]: TENER ACCESO (al control de seguridad) [basado en el movimiento] la CUENTA MULTIUSOS EDUCATIVA // SA (analizador/reconocedor sano) // del RANURADOR de la banda de // del OSCILADOR de // EDIT [] // [conseguir el Info basado en cómo los movimientos de la pluma] // [] // del CARRO de // de los VAGOS de // del ANALIZADOR de // del ARTISTA de // [drenaje] [] (analizador del comportamiento) [] [] [] (programación) [] // PS-ZONE [trabajos en ciertas zonas] // R (teledirigido) [] // [] de sonidos [] // BUSCA y REACCIONA [] la PISTA de // TDS [] // T (telefonía) [] // del SENSOR de // [] [] // UIP (Usuario Info que programa) [] // WA (caminata alrededor) [].

Archivo: Categoría/recorrido

Invenciones relacionadas del recorrido

calentadores/refrigeradores portables de la taza 6J090: Calentadores/refrigeradores con pilas de la taza:
- [parte inferior/lado] de envases contener una batería junto con
una calefacción/un device= de enfriamiento que entra en el contacto con
líquido del envase.
- (recargable) o batería reemplazable

Calentadores/refrigeradores químicamente funcionados de la taza:
- poniendo los productos químicos en ranuras de la taza, transfieren su
calor a través de la membrana [fina] entre los productos químicos y el líquido
- los productos químicos incluyen: hielo seco; otros productos químicos que calientan/se refrescan sobre siendo mezclado junto o siendo agitated...

Los envases se diseñan con el material del buffering, y la tapa opcional
[con la bebida a través de los canales que son semi prueba del derramamiento].

Las búsquedas de la patente necesitaron. Relacionado con el kn: Bolas calientes 1J080 del hielo.

Ver el ajustador del retraso de jet 5J07

Archivo: Categoría/monitor visual del analizador/índice de inteligencia
Monitor inteligente del ARCHIVO 2E251 - analizador visual

monitor inteligente 2E251: Las funciones de la cámara se controlan según lo dictado por el sistema de vigilancia de la computadora. Expedientes de computadora según lo que está buscando su analizador: qué, cuando, cómo, porqué, donde. Intentos del sistema para substituir todas las características de un protector/de un monitor humanos. Ahorra costes. <3, $, 4, 3>

Ejemplos de cuando ocurre la grabación: células en la divisoria del plato de Petri que crece hasta mitad del espacio, o color del cambio; la gente particular entra o sale (el sistema determina a persona vía su transmisor u otros medios); hay cualquier tipo de amenaza o de desastre (según lo determinado vía un poco de computadora "analizador"); el sistema considera/oye sonidos particulares: perros que raspan, rompiendo el vidrio, patrones que caminan inusuales.

Sistema de detección - la cámara busca actividad vía:
- detector de movimiento: (vieja N, KN), sensores del calor, cambios en pixeles visuales, el disparar de las luces laser, sensores de la vibración, "analizadores de sonidos" quizá para la fractura de cristal, cambios en la luz (conmutación en el interruptor ligero (el sistema no hace caso (vía c) el movimiento cambiante del sol)), etc.
- UIP - Programación de la información de usuario: la base de datos demuestra el sistema qué actividades humanas están de menos interés, tal como los que: usar los juegos, trabajar las horas normales, caminar en patrones normales (no parar en zonas aventuradas), tener visto bueno de seguridad más alta, cualquier otra seguridad de los criterios/uso de los investigadores de identificar patrones aventurados/inusuales/otros del comportamiento.
- No hace caso de señales según el software del analizador: sonidos de frecuencias particulares - vía "analizador de sonidos"; movimiento por otras cámaras (dentro de su opinión); sombras móviles vía fuente de luz de la ventana, vía: sol, luna, coche o calle u otras luces exteriores. Obra recíprocamente con otros (seguridad o supervisión) sistemas; gente no suspicaz debido a su uip.
- Adaptación. El sistema se adapta a las necesidades cambiantes cerca: el minuto, día, ciclo de negocio, estado de la emergencia, alertas de protector o de otro sistema de seguridad.
- Sentidos adicionales: El sistema recoge entonces analiza sistemas de datos múltiples. Olor "analizadores", eg.: detectores para el fuego, lanzamientos químicos (peligrosos), olor de cuerpo, humedad. Intuición: ¿UIP? Vibración: distingue entre el tipo vibraciones por ejemplo del carro que levanta en la noche del acondicionador de aire. Analizador del diafragma de la huella digital o del ojo: para acceder, saber quién está entrando o se está yendo.

El reaccionar al bandido: cuando el sistema primero identifica deseó actividad o la determina allí es (probable) un bandido, él puede: policía (de la llamada); seguridad interna; alarmas de los sonidos (oscilador); automáticamente puertas o acceso de la cerradura en sistemas informáticos o terreno físico; destraillar los perros de protector; activar otros sistemas de la seguridad (supervisión); rociar coloreado mueren (por todas partes o

sobre objetos móviles); rociar el gas o (insecto, rata, o hierba) los venenos del tranquilizante, eg.: parar la extensión de gérmenes nuevamente dirigidos; cualquie otro sistema de respuesta automática sabido en situaciones de la seguridad/el monitoring%.

- Necesidad de considerar ediciones de la responsabilidad legal en reaccionar a los bandidos.
- Procesos legales. verificador de la comunicación 4E020: las ayudas prueban que las ocurrencias fueron registradas en los datos del tiempo fueron transmitidas y la fecha del tiempo estampada en la fuente secundaria, eg.: computadora alejada.

Base de datos:

- Base de datos enorme de las circunstancias diversas, imágenes, datos usados por el sistema para decidir vía su computadora "analizador" si un objeto debe ser: seguido, etiquetado, capturado.
- El edificio para arriba de la base de datos lleva al desarrollo del uip para tal tipo (futuro) de circunstancias (semejantemente de la repetición posible).
- Seguimiento de objetos durante periodo de tiempo. Base de datos usada para ayudar a identificar la repetición de vuelta/de acciones iguales/de objetos similares. Las aplicaciones/desarrollan el uip.
- Perfil de los estudios/de los fósforos de sistema del objeto mirado. Aplicaciones UIP.

Acceso. Personales autorizados que acceden en el edificio/el sistema (de la computadora): las aplicaciones pasan el código que acciona la manera de la cual el sistema la supervisará; el sistema puede hacer preguntas autorizadas de los personales (automatizados) en cuanto a porqué están haciendo lo que están haciendo (w5); el sistema sabe distinguir entre diversa gente y por lo que están haciendo.

Fabricación: analiza para porqué y cuando los productos (w5) fallan. Búsquedas del análisis de la falta: en qué defectos visibles de la etapa son más probables ocurrir vía sistema de seguimiento; identifica que la unidad de producción está poniendo hacia fuera las piezas defectuosas o el trabajo; mira los cambios en el aspecto de objetos después de que se hayan alterado de cierta manera por ejemplo color o texture el cambio después de soldar con autógena, haciendo estallar fuera del molde, estampando; cambios en vida o materia del alimento en un cierto plazo para el color, textura, olor (analizador del olor); piezas que caen de planta de fabricación.

Usos adicionales: Uso de los analistas de comercialización de estudiar patrones del comprador de ésos que cumplen sus criterios automatizados de búsqueda, eg.: qué clientes de la tarjeta de crédito del oro hacen después de/antes de comprar artículos particulares, o qué señoras rubias altas buy/do en Macy/almacén del expediente tres días en la campaña publicitaria de Madonna; seguridad en: aeropuertos, alamedas de compras, edificios de oficinas, bancos, siguiendo a la misma persona que salta entre los diversos edificios o aeropuertos conectados con el mismo sistema de vigilancia; supervisión de chimpancés agresivos en cautiverio; límites cómo un

sistema de la realidad (VR) virtual puede ser utilizado, eg.: bloqueando los de caminar más allá de cierta distancia, o cambios el software de VR según qué o donde (w5) de la situación del usuario.

Existe: cámara de los controles de computadora, eg. cuando: cada 30 segundos, o cuando la palanca de mando se mueve. Cuando no hay piezas que vienen abajo planta de fabricación, el sistema se para. C mueve la cámara bajo manera preprogramada, eg.: filtrado de vez en cuando - probablemente no adaptándose a los cambios ambientales. Cámaras accionadas por control remoto vía: palanca de mando.

- Las piedras de afilar del sistema sobre el paso de los números de matrícula del automóvil (si están apresurando) entonces procesan los números según lo necesitado, eg.: números de licencia particulares que buscan, dando citaciones que apresuran.

- Existe quizá:

Los pixeles probablemente de menor importancia cambian en marco al marco debido a los parásitos atmosféricos eléctricos. Pero este sistema pudo no hacer caso de tales. Busca para los cambios grandes. Entonces el sistema sigue el movimiento del cambio grande. Pero no pudo haber mejorado arriba.

Quizá patentable: el sistema identifica a persona (del detalle) vía uip (información de usuario que programa), eg.: el color, altura, entonces cámara sigue. Entonces el sistema va automáticamente a rematar a la 3ro parte de la persona. El sistema sabe para ir a la tapa de la imagen.

- nr cuando la parte inferior del plato de petri se llena.
- la cámara del punto en la central nuclear, punto en el área inusual (caliente), cámara (infrarroja) entonces mueve su cabeza a otras partes importantes (después de eso, que pudieron internar efectuarse).

Problemas: Los analizadores visuales requieren quizá la programación costosa, aunque tenemos programadores extranjeros baratos disponibles. Cada usuario querrá adaptar el sistema a sus necesidades, aumentando costes programados. Los analizadores no visuales pueden malinterpretar señales, eg.: analizador de sonidos. Necesidades de este número del producto que enangostan abajo a una o poca solicitudes de patente.

- mucho los sistemas del detector y del viaje existen, en la golondrina de mar que lastima las ocasiones para la patentabilidad y la comerciabilidad.

Misceláneo:

- Interactivo. Lanzamientos de la cámara en ciertos casos cuando: el "analizador visual" se acciona de cualquier manera como un movimiento que es detectado; el tipo de imagen hecho se encamina/se corrige automáticamente según cómo el "analizador visual" analizaba imagen.

Investigador de la imagen -2E210: la cámara busca las imágenes particulares, interno tira, sigue, las cacerolas, etc por consiguiente según lo programado.

- si hay circunstancias inusuales/solicitadas múltiples, el sistema puede (rápidamente) filtrar entre los dos, dando tiempo igual a cada uno, o proporcional más a el que está por cómo es inusual es (con un 65% máximo de tiempo a cualquier un punto).

--si uno de los puntos llega a ser menos inusual (el bandido dejó su bolso en piso y caminó más lejos), el sistema presta menos atención (desde su mudanza (mucho) más)

--el sistema funciona con uno o más cámaras que (parcialmente) traslapar la misma área de la visión.

- la cámara enfoca en la actividad deseada, persona, objeto, (como cambios ocurrir).

OTD D: Este sistema de N (invenciones) (sistema adaptante) = ACCESO (hace/no mira objects/u la mudanza según el tipo transmisión de su código u (usuarios) k del tr (transmisor)/de acceso sobre entrada); ANALIZADOR (desarrolla el perfil del objeto que es estudiado = uip = sistema reacciona por consiguiente); CARRO (el acceso (tarjeta) de incorporar u (usuarios) tiene/acciona: el interruptor, tipo banda, uip w (con) asoció funciones); EDUC (aprender el w5 de la gente/de bandidos potenciales; aprender coger actividad ilegal repetida iguales/de gente similar en iguales/diversas localizaciones/situaciones vía el uip); M (DB, uip); MIC (analizador de sonidos); MULTIUSOS (uip, siguiendo); NOTIFICADOR (policía, seguridad); OSCILADOR (alarmas); Banda (); Picosegundo (tr usado por u); Q (la gente en la seguridad/ésas que son observadas (si ella tiene problema) puede ayudar a solucionarlo (eg.: tener acceso fue negado (por razón tonta)); S (la seguridad/la gente que es observada puede considerarse); CUENTA (chance tal u (usuarios) puede confiar crimen = vía el uip, el DB); SENSOR (movimiento: el calor, vibración, analizador visual = hace el sistema prestar una atención más cercana); ANALIZADOR DE SONIDOS (); ESTADO (monitor qué se está encendiendo, interno de la seguridad de las ayudas que presta la mayor atención donde está debido); SYNTH (el oscilador se altera a más bandidos del susto, el tipo sonido "se analiza" para y en analizador "del comportamiento" de la voz de la golondrina de mar seleccionada por el "analizador" basado en el uip del objeto observado, y del objeto, y comportamiento "analizador", y software del crimen); TDS (w5 de ocurrencias, para el uip, el DB); UIP (); ANALIZADOR VISUAL (); WA (usado por el objeto o la seguridad observado; picosegundo; tr (transmisor) su código de acceso).

- D1: objetos móviles o inmóviles: tiran/"tr a la gente/los animales/los organismos/los meteoritos/los productos o las piezas = las imágenes de los controles w5 registrado" = vía el analizador visual/uip/satélite/m/R (`teledirigido) de (c)/el detector de movimiento/tds/analizador del olor/analizador de la vibración.

- D2 - UIP: [datos usados para desarrollar el uip: visto objeto = camera=visual analizador/DB ()/m/k (qué protector de la base de datos entra)] = analizador de la c (interruptor: archivos de los fósforos)

- D3 - Reaccionando a la situación solicitada aislada, o al bandido: el sistema de vigilancia piensa que hay alta ocasión de este ser el caso = entonces los estudios de sistema que otros datos recibieron de la situación actual, eg.: emparejándolo con su DB (base de datos) = si las ocasiones de la situación buscada (cada vez más) probablemente = sistema reaccionan: cogida/seguimiento de la detención/bloqueo/privación de capacidad objeto o bandido/de ellas (más de cerca).

Misceláneo:

- relacionado con el 1G040 anterior.

- El sistema identifica el usuario/el potencial villains/u vía: (su acceso), w5.

- Esta invención "obra recíprocamente" con:

Cualquie KN (invenciones) %; Cualquie sistema de la supervisión de seguridad del existing%, eg.: gana el Info adicional (vía la supervisión, el uip (colección de datos = para los datos que emparejan)/la policía de las ayudas/las ayudas determinan la naturaleza de la actividad inusual.

- El sistema sabe a lo que su no hacer caso/no paga mucha atención, (debido a los sistemas c=memory (uip de tal tipo ocurrencias)).

- Organizando y procesando los datos D:

OTD D: Este sistema de N (invenciones) (sistema adaptante) (C=SW para organizar y procesar datos. /4E020 monitor inteligente C/2E251 del verificador del contenido y de la fecha/=

TENER ACCESO (mejor determinar quién puede acceder, trabajando w: analizadores del uip, de la representación visual, sanos y del comportamiento); ANALIZADOR (cómo archivar w5); CARRO (datos que se colocarán); EDUC (); M (almacenaje para: registro, DB); MIC (); MULTIUSOS (procesos diferentemente); NOTIFICADOR (cuando uno o más elementos w5 de la ocurrencia de a (almacenada previamente) como banda se resuelven por requerimiento por u); OSCILADOR (); Banda (cómo procesar, organizar, colocarse, los datos de NR (notificador adaptado `); controlando qué incluso para registrar y cómo (w5)); Q (); S (); CUENTA (las cuentas de diferenciación determinan cómo los datos/los archivos organizaron/procesado, eg.: por el uip, requisitos del DB (base de datos) o de la banda); ANALIZADOR de SONIDOS (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); ESTADO (); TDS (); T (datos del tr vía el módem, el fax, el email, paginadores, el etc); UIP (); ANALIZADOR VISUAL (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); WA (sistema de los controles).

- OTD D: Este N)/C (computadora) [línea (de las invenciones) (monitor dibujada a cada uno debajo de N#] = Notificador móvil de la localización del teléfono -3E010: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Encargado de registro de -3E020 GPS: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Correlador y regulador de la circunstancia de -3E151 GPS: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Sistemas de facturación de -3E190 GPS: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Compensador basado en los satélites de la obstrucción de -3E210 GPS: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Anillo Delayer de -3G010 T: cuando el objeto (t) entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

-3G050 llamada Rerouter: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

-4E020 colocó la comunicación de los medios electrónicos: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Palillo teledirigido -5E020 con el interruptor: cuando objeto (esto o cualquier (estándar) r) entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

La grabación -5E040 incitó sobre la presencia de ciertos sonidos: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

- OTD D2: Este ~ C (computadora) del sistema de N (invenciones) (sistema adaptante) (2E251) = BALANCE (mic controlado para conseguir la grabación exacta en pistas audios múltiples); BVA (cierto comportamiento is/is no supervisado); EDUC (para los usos de la investigación); GPS (monitor controlado por cualquiera/la carencia del paladio); RATÓN (controles de u/guard (la toma panorámica, el otro movimiento): cámara, mic); MQ ("cerebro"); MULTIUSOS (diferencia en medio: paladio, u (usuarios) (sus características: bva, "cerebro")); Q ("cerebro"); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (interpreta ocurrencias en los códigos/texto); DISCURSO (u (en zona cerca del sistema del control de los sensores del monitor (pudo tener "acceso" /R/ "cerebro" a) 2E251, soluciona el problema del sistema que diagnostica a protectores de seguridad como bandidos potenciales); ESTEREOFONIA (los sensores cogen la información y la juegan de nuevo en estereofonia/Synth; TDS (); UQ (); + VR (permite u (usuarios) (portador del sistema del vr) a la caminata sobre el sistema de w (con) VR que interpreta el ambiente para u (como banda). Ejemplo: la caminata alrededor de Palo Alto y de u (usuarios) experimenta la caminata como caminata en París, u (usuarios) no cae abajo, información necesaria de las búsquedas del sistema para asistir a u (usuarios) mientras que las peticiones de u (usuarios) (vía su interruptor de VR). Sistema en las robustezas similares de las guías de la manera para hacer cualesquiera tareas se quieren para hacer. "Cerebro" para la robusteza o VR); WA (VR; Security/U controla el sistema vía R).

<3>: Monitor inteligente. ¿Pero puede ser hecho?

- más difícilmente explicar en la comercialización: necesidad de demostrar a p los lo necesitan.
- mucha hora: para hacer búsqueda del mercado, y la solicitud de patente.

- Reducir los costes de la frecuencia intermedia: la función limitada "sensores" [para el monitor rector] cortó costes, eg.: sensor = analizador de sonidos (que busca cualquie sonido). Las compañías grandes del int'l que intentan reducir costos de la nómina de pago pueden utilizar este sistema, y pagan monitores más crudos contra estar fuera.
- protector mirando múltiple cámara tener difícil tiempo oyendo múltiple sonido (simultáneamente)/que identifica qué sonido viene de qué localización.

- esta N (invenciones) data del "analizador visual" también
- para las ideas ver el archivo: E \ 3E.

- Asher: cámara nunca vista controlada. ¿Tipo geográfico cuadros de Nat'l de crecimiento de flores, algo accionó la cámara en sus etapas?

Conrado: la visión por ordenador es un área grande: eg. detecta las grietas en botellas. El transductor es lo que este concepto.

- vibración "analizador": ciertos tipos de las búsquedas de modos de la vibración (similares "al analizador sano o visual" en modo). Los carros tienen una característica particular de la vibración (carros del monitor con excepción los nuestros).

- características de la gente para coger/aviso del sistema: altura - fácil hacer; características faciales - difícilmente hacer - mismo complejo para no humano.

Búsqueda de la patente: sistemas de reconocimiento visual.
- patentabilidad: Existe quizá, un poco de sensor entonces disparado activa la cámara, mic. Existe: mic activado por el sonido sobre cierto umbral. El centrarse en "el sistema que activa del analizador de sonidos" - lo hace que esto sería más probablemente patentable.
--Obvio?: el disparar ligero activar el monitor pudo.
--No obvio?: calentar el sensor, sensor de la vibración, analizador del olor, porque menos campo común, menos disponible. Analizador visual.
--Existe: señalar la cámara en el compartimiento de piezas, dirigiendo la mano de la robusteza para el tipo parte, eg.: tuerca o perno. Quizá un sistema más complejo.

Archivo: Categoría/Web/secretario 4E020

secretario 4E020: Verificador del contenido y de la fecha +

<2.5-pat, 4 mk), 3.5, 3, 3, mf-cheap>

secretario 4E020: Verificador del contenido y de la fecha.

Las pistas y las ayudas del sistema prueban qué contenido fue enviado contra apenas la evidencia de la transmisión. Mejora sobre los servicios de mensajeros de noche, del correo registrado y de públicos de notario combinando todas sus ventajas en una. El sistema trabaja vía el cliente que envía por correo electrónico o que envía el material por fax al prestatario de servicios vía el cual los almacenes en bastante sistema clasificador resistente de la computadora del pisón, después transmiten documentos al destinatario: fax, email, y o correo registrado de la oficina de correos.

El sistema mejora sobre: El servicio de noche de Federal Express y los públicos de notario puesto que su servicio de la verificación no prueba el contenido enviado eran realmente ésos demandados para haber sido enviado.

Básicamente cualquier acontecimiento en el universo, que puede entonces ser registrado numeró, se almacena. El sistema entonces mide el tiempo de estampillas de fecha los datos mientras que hace el contenido de la ocurrencia inalterable. Registros: los documentos electrónicamente enviados, la telecomunicación verbal, los acontecimientos capturados vía a/v "cámara", de los "analizadores" del etc. búsqueda de los "sensores" y entonces colocan ciertas ocurrencias, que emparejan los criterios del software vía el monitor inteligente 2E251, un software más simple.

Usos:

Verificación de los documentos:

Enviar electrónicamente y tener tales transmisiones y su contenido colocados. El sistema de correo certificado de la oficina de correos no permite fácilmente a remitentes probar el contenido del envío. El ordenador central central almacena tiempo de transmisión, contenido, y tiempo recibido o archivo abierto. Enviar vía email, fax, el etc.

. - Verificación impresa de la comunicación: De la actividad bancaria al comprando las casas a la ley de contrato general relacionaron materias. En negocio, los términos de contrato especifican cómo los avisos deben ser enviados o ser recibidos, por lo tanto podrían especificar este servicio del registro (como uno de los medios (del respaldo)). Si la oficina de correos es el mercado, la obtención de un contrato de fuente podría ser difícil, pero no necesita la oficina de correos. Uno puede tener este sistema de la verificación incluso para la mayor parte de una comunicación de la semi-rutina de los negocios.

- Transferencias de alambre del dinero (existe?), boletos de línea aérea, visas del pasaporte.

- Reporteros de las noticias que envían la información: los receptores quieren estar seguros que las bromas no están enviando los datos incorrectos para la publicación del mundo.

- Verificación de firma: las ayudas identifican la firma como genuina vía: el emparejar contenta la prueba del w~ del remitente del w~ (acceso, contraseña, cid) del recibo por el w~ "analizador visual" de los recipientes (la base de datos de firmas)

--KN: apresura en que cuál fue escrita la firma vía el EL (electrónico) significa que [(ratón, pluma sin hilos) = c] las ayudas prueban la originalidad de la firma. ---la velocidad de la escritura naturalmente cambia algo en las letras y las secciones de diferenciación de letras (algo más difícilmente para un falsificador, el pirata informático a la falsificación). TDS cada señal como firma que es escrita.

---"filigrana digital" con cada firma/material que son colocados.

Verificación audio/visual de la ocurrencia:

Todos los acontecimientos que se pueden convertir a la forma digital se registran, después se almacenan para el registro inalterable.

Tipo funciones:

1] Lanzamiento todavía/película móvil que se transmite (vía el módem) para el registro.

. - el "sensor" = el "analizador" = el "analizador visual" determina los ángulos de los temas/la visión en relación a la "lente", en golondrina de mar = más difícilmente falsificar (abajo de la línea en el envío - > almacenando proceso)

2] A/V y el resultado técnico (de las reacciones químicas) de experimentos científicos se colocaron. Eg.: para el FDA.

3] Todos los acontecimientos que están ocurriendo, eg.: en el ensayo de corte, acciones de la investigación relacionadas con "primero para inventar", depositando, procedimientos de laboratorio, supervisión de la calle. También utiliza el monitor inteligente 2E251.

- "pistas": donde fue la gente, u, clientes, caminado, qué él lo hizo.

4] Comunicación verbal (con o sin el modo visual): teléfonos (t); discurso vivo registrado sobre el micrófono.

- "palabras habladas convertido del analizador de sonidos" (poder también) en el texto [al igual que técnico factible]. Usos: permite las búsquedas de la palabra clave para el texto; el texto de la lectura es más rápido/más fácil que conversaciones ampliadas audiencia.

. --esas palabras/imágenes no traducibles/"analizables" (analizador visual) en el texto se pueden cifrar en tal manera que el código se puede "analizar" por el ser humano/sistema más adelante para determinar la ocasión probable ("cuenta") tal semi-señal/mutila la palabra/la imagen (del tipo), él de is/was podría/debe haber sido.

Verificación de la señal electrónica:

- señales enviadas entre las piezas o los sistemas de diferenciación. Estas señales (probablemente) tienen poco significado solo sin el contexto de otras señales/interruptor (software) (software)/sistema entero.

--diversos pasos en (EL) w/in de proceso de varias fases escogen o multi-conectar-sistema (interruptor tds cada señal del EL/transferencia de datos) incluso abajo al diferencial más cercano del tiempo del milisegundo entre tales acontecimientos.

---ventajas adicionales: las ayudas "analizador" analizan datos/ocurrencias/pasos para llegar mejor la conclusión (de la lógica confusa), eg.: coge si algo está fuera de lugar/no-ordinario (vía el uip de las ocurrencias señaladas (para qué sistema está teniendo cuidado (el monitor inteligente 2e251)).

--eg.: w5 (cuya contraseña) del "acceso" c fue girado.

- "acceso" de cualquie clase: quién entró, se fue
- Ranurador 3g050: "sigue" qué archivos (electrónicos) del EL fueron enviados donde, cuando, cómo y por quién (w5).
- funciones de este sistema como una "filigrana digital" según lo discutido en la sección del negocio y de la tecnología de New York Times el lunes el 7 de agosto de 1995.

El material de la verificación fue visto/abierto/experimentado (por el destinatario/el recipiente).

- sobre el material de la abertura, se activa/se altera un código = tds de tales ocurrencias de la abertura.
- las alteraciones al material dicho registraron = "seguido"
- "cuentas" /tds/registers: w5 para la ocurrencia (del tipo) (abierto, experimentado, recibido).

KN misceláneo:

- El "picosegundo" identifica localizaciones (en puntos del tiempo = "sigue") de los elementos/de los objetos señalados/U.

~ de organización que procesa datos:

- Reduce el factor de error humano para las ocurrencias mislabeling para: tiempo, tipo actividad (w5), uip. Las computadoras pueden más fácilmente: localizar, utilizar, entender, alterar, "analizan", "cuenta", los datos del "estado". Eg.: archivo correcto determinado vía: tds, kilobytes del archivo, tipo contenido (analizador del uip-contenido)
- Las ayudas se convierten: bases de datos; uip; estado.
- formar de la organización/del proceso utiliza los métodos anti-que tratan de forzar (acceso).
- computadoras de reserva múltiples: puede ser utilizado/ser dado vuelta solamente encendido (manualmente) vía el acceso
- el acceso almacena físicamente el material en las localizaciones de diferenciación (c, archivos) como parte de su estrategia
- Organizado según: el más fácil "seguir"; uip (tema); qué material se predice para ser necesitado/utilizó de ciertas maneras.

--eg.: si los datos del tds se utilizan como DB (base de datos) para el futuro uip, después el material más fácilmente hizo disponible para los propósitos dichos (los usos dichos pueden tener requisitos más fáciles del

acceso); el material (escapado, cortado) más (financieramente) deteriorable = guardó (acceso) más cuidadosamente.

Comercialización: Los clientes envían simplemente datos a nuestra compañía vía fax, email, correo aéreo, entrega, el etc. Entonces almacenamos datos electrónicamente y en la forma de papel.

- Retransmitiendo al destinatario final: 1] El correo aéreo se colocó: nuestro vendedor lleva la oficina de correos, consigue una cierta certificación del envío. 2] Email: Utilizar los modos de verificación existentes. 3] Fax: Utilizar los modos de verificación existentes, a saber tienen estado de los testigos que miraron la transmisión verificada según lo transmitido por fax para trabajar a máquina.

Probando quién creó el material y W5: Verificar datos fue enviada de, y o creada realmente por el sistema particular de u/clients/(cliente) (c, la cámara, mic, monitor inteligente 2E251) /w5.

- El sistema (en la organización de servicio del registro (c)) verifica que los documentos particulares fueran recibidos de remitente vía: 1] identificación de llamador (CID, MES); 2] "acceso" (contraseña: identifica el remitente/no prohibe a remitente el tipo particular (uip) "acceso" en la computadora del prestatario de servicios (c). Todas las acciones por el remitente (c) son = seguido = C (computadora) = memoria. Marcar (la etiqueta, el código, el acceso con etiqueta) (automáticamente) enviado con la comunicación del remitente (todos) (al prestatario de servicios).

- verificando la firma "acceso" (contraseña, identificando el código del remitente): estaba con el documento (a partir de la época de la transmisión - > rc del prestatario de servicios y tds del donante). El contenido es difícil de tratar de forzar. El seguimiento de datos de las demostraciones w5 era: enviado (por quién, cuando (tds), cómo (módem, fax, email), qué (contenido de datos: texto, a/v), donde (de enviar el punto, CID, acceso (solamente trabajos cuando está enviado de detalle: localización (gps)/C ()/interruptor (software) (que de la computadora no se puede duplicar/copiado (sin el permiso especial, acceso), y si están copiadas se siguen tales copias)).

O - (si) la firma creó/firmado (EL): u (usuarios) = C. La velocidad/las pausas de la firma "se analiza" (w emparejado (con) uip de u, acceso) para cómo las maneras de escribir el fósforo w de la firma (con) cómo u (usuarios) firmó documentos antes: al firmar para arriba servicio de w (con), cómo sus estilos/velocidades de la firma han cambiado en un cierto plazo mientras que u utilizó el esto/el otro (c) sistema.

UIP: Determinación de la autenticidad de la identidad del remitente:

- UIP de U: El sistema (sistema adaptante) "analiza"/empareja tantos datos sobre u (usuarios) (su comportamiento - uip) por todas las fases durante las cuales se crean = se almacenan = se envían los datos = al prestatario de servicios. "Cuenta" para como de bien el uip de DB del prestatario de servicios de los fósforos de u (usuarios) (base de datos) del uip del usuario se genera.

El tratar de forzar anti: Hacer difícil alterar en memoria electrónica, y o papeles archivados qué fue enviada (w5). Propia computadora de cada usuario pudo registrar los mensajes enviados/recibidos también. Cualquier demostración hecha que trataba de forzar que trataba de forzar fue hecha (w5).

- Esto envió/Info recibido almacenado en sight/c del remitente/del receptor útil: u (usuarios) suscribe al sistema, en este caso no pueden tratar de forzar el texto entrante de w (con), pero puede copiar de él. Estancias en memoria, ayudar a servir como evidencia (recibieron o enviaron).
- hace más barato registrar los granes números de mensajes.
- el cliente envía el mensaje vía usuario de esta patente.
- un sistema de grabación del Internet.

¿- Patentable? Conrado: las computadoras locales (redes) w5 de registro, entonces apenas agregan un sistema de seguridad a esto para evitar tratar de forzar de: fechas enviadas, recibido, contenido.
nodo de +-develop en el Internet vía el cual los mensajes más allá a través a nosotros, entonces nosotros envían vía el correo aéreo (MCI Mail) y o Internet o fax, o combinaciones allí de. Las letras de correo aéreo se colocaron en la oficina de correos (vía empleado auxiliar humano) mientras que el contenido se almacena en empresa de servicios.

- Cortar y pegar las firmas vía la computadora: substituye necesidad de hacer de nuevo firmas. La misma firma usada siempre para enviar particularmente medios, o las circunstancias, ayudando reduce fraude, y cualquier estudio subsecuente o el retroceso.
- cualquier señal (tds, materiales (aspectos de eso), datos w5, datos adicionales para verificar la autenticidad) puede (contraseña) ser cifrada ("acceso").

Prevención del registro: Más allá de la legislación.

- Como el bloqueo de la identificación de llamador (CID), ciertos usuarios pueden pedir (electrónicamente) que sus acciones (enviadas los mensajes, comunicación verbal) no puedęn ser colocadas (como siendo recibido).

Problemas:

- Secreto: Perder el secreto porque el Info consigue almacenado en alguna parte. Los datos pudieron ser patentables si estuvieron almacenados y mantenidos confidencial en la misma hora.

--Lo que sigue ocurre (casi) simultáneamente: los datos enviaron = registro de los datos enviados/los datos almacenados = los datos recibidos = registro de los datos recibidos/los datos almacenados.

- Misceláneo: ¿Cuál es "cómo"? Es la gran necesidad que haría este patentable, contra la evidencia de la solución.

¿- Los servicios onlines y los militares tienen sistemas de las verificaciones del mensaje, con todo verifican el contenido sin el riesgo de tratar de forzar? ¿Demostración en línea si la persona adecuada consiguió el mensaje, o mensaje entero?

Previniendo el registro - continuo de antedicho:

- Bloqueo hecho cerca: afinando en el código (el access%), quizá en cualquier momento antes, durante o después de la acción o de la transmisión.

- Los elementos limitados se pudieron registrar según lo programado por el remitente o el receptor, o el tipo situación (uip).

- El remitente o el receptor sabe si la comunicación is/was que es colocada. Puede remontar quién (w5) colocó datos. Un código se genera para instigar a modo del registro, por lo tanto cogiendo este código, después permite que el trazalíneas siga cómo los datos con su código (que se diseña para dejar un rastro rastreable de la computadora) se movieron alrededor; o fue alterado y en qué forma (w5, uip).

Software para los documentos totales de la comercialización vía medios electrónicos: Resultado: es la capacidad de enviar una gran cantidad de documentos vía fax o email con las firmas en un modo más rápido que haciendo individualmente, eg.: vía fax estándar. Ningu□n solo software sabido consigue fácilmente firmas sobre los documentos y hace la función de la fusión de correo del software, dando por resultado el tiempo excesivo perdido por el mundo, impresión para enviar una letra por fax firmada.

- Detalles en cómo esto pudo ser hecha: 1] que consigue la firma en la computadora fácilmente, vía: explorador, ratón, recibiendo una firma enviada por fax. 2] Insertar la firma en el documento primario. 3] Tener el número de fax en un campo particular de los archivos del destinatario. 4] Fusión de correo, creando letras de forma múltiples con la información de diferenciación del destinatario. 5] El software busca el campo particular para el número de fax, y envía documentos automáticamente en las horas señaladas.

- Nos han dicho que esto se puede hacer alterando software existente, pero que no ha visto esta tarea relativamente fácil resuelta.

- Organizando y procesando los datos D:

OTD D1: Este sistema de N (invenciones) (sistema adaptante) (C=SW para organizar y procesar datos. /Monitor inteligente C/2E251) del verificador de la acción/=

TENER ACCESO (mejor determinar quién puede acceder, trabajando w: analizadores del uip, de la representación visual, sanos y del comportamiento); ANALIZADOR (cómo archivar w5); CARRO (datos que se colocarán); EDUC (); M (almacenaje para: registro, DB); MIC (); MULTIUSOS (procesos diferentemente); NOTIFICADOR (cuando uno o más elementos w5 de la ocurrencia de a (almacenada previamente) como banda se resuelven por requerimiento por u); OSCILADOR (); Banda (cómo procesar, organizar, colocarse, los datos de NR (notificador adaptado `); controlando qué incluso para registrar y cómo (w5)); Q (); S (pantalla) (); CUENTA (las cuentas de diferenciación determinan cómo los datos/los archivos organizaron/procesado, eg.: por el uip, requisitos del DB (base de datos) o de la banda); ANALIZADOR de SONIDOS (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); ESTADO (); TDS (); T (datos

del tr vía el módem, el fax, el email, paginadores, el etc); UIP (); ANALIZADOR VISUAL (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); WA (sistema de los controles).

- Utiliza a "perseguidor" (la nueva parte IMl).

- OTD D2: U (enviar/recuperar el Info; acceso) = este N (invenciones) sistema)/C (computadora) (del sistema adaptante) (del registro verificador =
TENER ACCESO (expedientes w5, eg.: datos de a/v sobre quién caminó cerca); El ANALIZADOR (1] determina qué archivos son más importantes para la memoria. 2] El sistema aísla las actividades particulares para el "análisis". Aislamiento vía: uip/analizador visual/analizador de sonidos/comentarios de los observadores vivos (k)/de las palabras claves. 3] esta piscina limitada de datos después del aislamiento da menos datos para estudiar); AP (vagos); CEREBRO (decide (automáticamente/como banda) qué registro/"análisis" de las necesidades basó encendido: palabra clave/acceso ()/uip (u/material) de u/material; reduce costes de la mano de obra; compila los datos para el uip/el analizador según lo necesitado para los propósitos con excepción del registro (eg.: la patente busca, "juego estratégico".); C (); CÁMARA (2E251); CARRO (véase la sección del sistema de seguimiento); DISTANCER (que sigue (carro en esta sección de OTD)); EDUC (estudio de la gestión de la información/de la seguridad); GPS (); K (acceso - quién puede utilizar el sistema); M (carro de este OTD); MIC (); MES (no central c = m/source c); RATÓN (); MQ (); MULTIUSOS (anti-cortando el interruptor); NR (notificador adaptado `) (cuando el cerebro determina probablemente (cuenta) que el pirata informático está en el sistema del co); OSCILADOR (); Banda (); Picosegundo (); Q (); R (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); TR (); U (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

- sinergiza con el monitor inteligente 2E-251.
- este sistema tds cada tipo de actividad supervisada: email, monitor inteligente.

El UIP continuó para 4E020

Nota: este del UIP de la sección complejo también.
- UIP también usado a: guardar hacia fuera people/u ("teniendo acceso") del sistema ilícito que introduce, eg.: piratas informáticos de computadora que controla; pistas que está desarrollando los datos (w5) del concepto de la idea al registro pasado (prestatario de servicios de w).
-1] "acceso"; la congruencia del 2%] del tipo datos/A/V u (usuarios) está generando w (con) sus últimas actividades (enviadas al prestatario de servicios); 3] interruptores (software) usados por u/el sistema del usuario; matriz de la fecha del contenido 4] 4E020: Los registros y organizan ocurrencias anteriores que ése

llevó a los datos actuales archivados. Vía: búsqueda de la palabra clave/imágenes que emparejan antes de w (con) después de (analiza para las semejanzas en iguales/otros sistemas de las imágenes w/in de datos (visuales) del texto.).

- D: entrada = analizador = memoria de datos (el mfh, carro, reconoce multiusos) = analizador = salida = función de datos

- OTD #1:

consejero 5A-810-042003: compila y analiza la información de usuario.

- OTD #2: c; pp y programa de la P.M. cómo quisieran que el sistema recogiera, recuperar y analizar los datos en base de datos; Reino Unido; tds (cuando y cómo ocurrieron los elementos); m (DB); cuenta (la información de la cuenta se puede procesar para la base de datos del pi; y el pi puede ayudar a generar cuentas deseadas); carro (para los datos adicionales para la base de datos; y o software para procesar la base de datos); uq (la base de datos del pi se utiliza para ayudar a generar respuestas alrededor, eg.: sobre el usuario más allá de preferencias y o de actividades); P.M. (la base de datos y o el software puede ayudar a preguntas pronto, eg.: para ampliar la base de datos, dirigir a usuario en la pregunta correcta si el sistema primero consigue la información correcta); tener acceso (los límites tienen acceso a la información delicada dentro del todo o una parte de la base de datos (con referencia a: uip) a la gente con la contraseña correcta).

- Artículo en "americano científico", p.64, abril de 1995. Título del artículo: "Máquinas que aprenden de indirectas" ("analizador"). Su alrededor: El aprendizaje de máquina mejora perceptiblemente aprovechándose de la información disponible de indirectas inteligentes; discute el proceso del algoritmo de modo general; da ejemplos de diferenciación, eg.: juicio de las computadoras cuánto crédito dar a los usos de la tarjeta de crédito basó en las últimas historias de la otra gente similar.

- Pieza #1 de OTD: El dispositivo electrónico obtiene la información sobre el usuario por uno o más del siguiente: recordar el funcionamiento anterior del usuario, eg.: sus capacidades en esto, o dispositivos relacionados (que transmiten datos del uip a otras unidades vía el alambre, o %wireless); pidiendo preguntas del usuario, o "M"; El dispositivo reconoce a más de un usuario por multiusos, eg.: sus códigos usados para acceder en el dispositivo. La información personal se almacena en memoria y es utilizada por el dispositivo más inteligente al sastre sí mismo a las necesidades particulares del usuario.

- Pieza #2 de OTD: el usuario puede llevar su carro (su uip personalizado para todos los productos idénticos o relacionados) de la máquina la máquina - el sistema del interno sabe quién es el remitente, o limita el "acceso" de otra manera; uip de diverso del carro usuario de los efectos diferentemente con los cambios correlacionados en funciones; tipo cambios del carácter según el uip (si se utiliza una exhibición ("S")); fecha; los datos del uip (material que es colocado) pueden ser vistos en la exhibición ("S") y o ser impresos; el uip se utiliza para aumentar el cociente de la satisfacción del usuario, eg.: entretener, (^possibly cerca: la manera de la cual la función funciona, sonidos, luces, palabras se utiliza para crear mejor el tipo del efecto electrónico uip indica es más probable aumentar la reacción positiva del usuario a usar el producto [los estudios de la prueba se conducen para considerar las reacciones de la gente en estudios del caso de prueba de 50 - 1000 personas]); "C"; % del uip pueden apoyar interactivo (dando los datos adicionales necesarios para mejorar la invención del sastre al

usuario; % de los datos obtenidos para la memoria del uip del micrófono ("mic") (reconocedor de la voz); ratón; P.M. (cómo material registrado); multiusos (quién envió/material recibido/registrado); la base de datos del uip dirige las funciones de sistema (determina el tipo (cómo material registrado), manera (registro), midiendo el tiempo (registro), independientemente de si notificar, del mq, oscilador, synth; pp (registro); del uip de la base de datos de las influencias de la impresora del impreso los parámetros, cuenta, discurso, vc, incita - acepta - el uq de los procesos; tds (registro); Reino Unido. Los datos (material registrado) son via^ también obtenido: "Reino Unido", "carro", "teléfono", "MES", explorador; UIP (de: material/u (usuarios) (los que se convirtieron, usado, sierra Info) puede ser programado/ser entendido con la ayuda de: psicólogos (analizador del comportamiento), sociólogos, expertos de comercialización; Ciudad del u (código de área del teléfono/código postal)/identificación de llamador (pistas w5 de cualquie ocurrencia).

- D: entrada de datos (registro) /output = para el "analizador": tr/rc=c
- utiliza lógica confusa

. - El sistema analiza las acciones de usuario - > base de datos (comportamiento). Eg., computación ubicua: u lleva (minúsculo) "c" en que comunicar con la otra "c" encajada: aplicaciones, t, coches, paredes, KN. Eg.: Lengüeta de Parc de Xerox, y otros productos mencionados en "ciencia popular" el febrero de 95 de p.47.

el sistema 2D021 reacciona (el monitor inteligente 2E251, decide cuál debe ser colocado automáticamente) a los productos externos según w5 ocurrió/sistema es w que obra recíprocamente:

Eg.:

- Entrante-Llamar el identificador - cribador/identificador externo del elemento: "tener acceso".
- Las llamadas de números deseados del teléfono tienen un diverso anillo. El llamador sabe por este medio si coger la llamada o no.
- (Señalando diverso tipo conexiones/llamadas (entrantes) relacionadas con otras de nuestras ideas?): el sistema responde diferentemente dependiendo de cuál quiere el otro producto de N/sys/existing "obra recíprocamente" con él.

--el sistema sabe identidad de la otra parte/sistema vía su: ""/código/teléfono del acceso #/uip (características del comportamiento de N, o U: cómo se mueve/las funciones/responde (estimular de "C central" o de "M")/analizador visual/analizador de sonidos.

- D: Producto central/sistema (sistema adaptante) = C (computadora) = sensor/pieza del sistema de la identificación del analizador/de llamador del analizador/uip (sistema adaptante) = tr/rc = producto externo/sistema.
- OTD: ACCESO (); CID (); CÁMARA (LENTE) (monitor inteligente 2E251); CARRO (tipo uip o sentidos o datos (registro) buscados); DE RECUPERACIÓN DE LA INFORMACIÓN (registro); K (); MFH (registro); MIC (); RATÓN (registro); P.M. (); MULTIUSOS (); NOTIFICADOR (cuando el contacto deseado se ha hecho con (registro)); Banda (registro); Picosegundo (la localización del producto externo (material registrado) es un factor de determinación en decidir a si se va cualquiera/el tipo conexión/contacto/registro "acceso" a ser hecha); R (`teledirigido) (); RANURADOR (producto externo de las

rutas por su tipo naturaleza); S (pantalla) (estado de las demostraciones); CUENTA (tipo registro); ANALIZADOR de SONIDOS (análisis material registrado: material de a/v); TDS (registro); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (registro de la comunicación de t); UIP (); Reino Unido (); ANALIZADOR VISUAL (registro); CORREO de VOZ (registro)

. - Un sensor que conecta con u (usuarios) (cuerpo humano, eg.: abrigo del dedo; animal) para leer las señales electromágneticas generadas por la piel. El software propietario interpreta esas señales y las traduce a acciones. Siendo investigado por la compañía: Other 90% Technologies Inc., Sausalito - ver Wall St. Journal 1995 (quizá artículos de 6.95) titulados: Juegos de mente: Pronto usted zapping a chicos malos sin la elevación de un dedo. La versión del abrigo del dedo venderá para $100-$200.

- Final de UIP - subdivisión. verificador del contenido 4E020 y de la fecha

"TENER ACCESO" para 4E020

- "Tener acceso" tiene muchos usos: restringiendo quién tiene acceso a la visión/a la revisión/al cheque.

ACCESO (4E020) = OTD: 1 accede vía afinar en la combinación alfanumérica; 1 o, inserción dominante; o, 1 con el telecontrol ("R"); el acceso 2 se puede cambiar vía pp, P.M., carro; carácter 25; 1 palmada; 24 tds (cuentas w5: cuando, cómo, qué, %why, que ganó "acceso" en sistema - [puede también ser utilizado para uip [base de datos]]; 25 "S"; el distancer del 23% activa/desactiva la cerradura; la cerradura del acceso 123 puede ser una comprobación y o barrera del software; 245 "C"; el 245% interactivo (activa/desactiva el acceso).

13 señales para la activación/la desactivación del acceso se pueden recibir y o activar vía: micrófono ("mic") (las señales de sonido activan/desactivan el acceso); teléfono ("T"); MES; tr; %fs (imagen correcta eg.: firma); alejado ("R"); inclinación 2; distancer 2 (eg.: chapaleta); P.M. 245; 24 mq (antes de la activación/de la desactivación; para la mejora de la base de datos del uip); 24 multiusos (el individuo requiere para poseer la contraseña o el otro activador/deactivator para acceder); notificador 245 (quién, qué, cuando, está accedido %where, porqué, y o está utilizando el sistema); oscilador 25 (si la contraseña o el otro activador/deactivator efectuaron la función deseada, eg.: accedido); 24 uip (el acceso dibuja en la base de datos del pi al mq antes de permitir el acceso de usuario al usuario; 24 preguntas para el cambio del acceso según uip del usuario (mq un usuario de la acción hecho en sistema en una de actividades anteriores [importantes]); 24 pp; 24%score.

2 la necesidad para la característica del acceso es normalmente triviales, pero ayudas en la comercialización, y las ayudas organizan diferencias entre multiusos; uip.

1 que el tipo código usado en la contraseña (una serie de sonidos, las luces, las combinaciones de la letra o del número, etc) activa y o que desactiva la función correspondiente reservada para los individuos equipados de la contraseña.

24tds del usuario más allá del acceso se utiliza desarrolla su uip. El uso excesivo o escaso puede excluirlo las aplicaciones de alguno/de todas las funciones, accionar el "notificador", e informar al supervisor del usuario vía el teléfono ("T"), MES, email.

24 el tipo de uq puede por lo tanto (según uip del sistema, P.M., pp) afectar/control el tipo de contraseña/de manera necesarias para activar/desactiva; altavoz 5.

. - 1R-45 "verificación de firma dinámica": Escribir en su contraseña. El sistema también identifica el estilo del cursivo del usuario. [Convertido cerca: Communication Intelligence Corp, secoya apuntala, California/Riley que el diseño se asocia, San Mateo, CA 4.94 picosegundos]

Cerradura de la transmisión -4C-020, con otros modos diversos del "acceso".

==

Preocupaciones:

-4E020: verificador contento. Lo vio quizá en NYT, pero no sabe si manejó el contenido. Tan porqué estaba esto una 1 cuenta, quizá comerciabilidad: mercados estrechos, necesidad de enseñar a compradores con referencia algo que nunca querían antes.

- está haciendo qué computadoras saben ya hacer; pudo existir dentro de las compañías en alguna parte; podría ser puesto sobre Internet como servicio (técnico posible, o algo interesante hacerlo patentable).

--quizá haciendo más patentable: el poner sobre Internet; haciendo contenido - alguien en Internet pudo aprender cómo romperse en código - imposible por lo tanto inalterable imposible inalterable probablemente - > entonces la copia dura se certifica ante notario (por lo tanto mejora seguridad);

--búsqueda de la patente: mirar más en literatura de la computadora que la base de datos.

--mejorar cómo hacer el material inalterable. Sucede automáticamente. Eg.: la copia dura es tds, después limita (así que no puede substituir las páginas). Poner el material sobre el CD-ROM, la cinta, o el disco duro - sostener en cada vez, o una vez diariamente; no perder de vista quién accede en el sistema (sistema adaptante) - piratas informáticos de cogida).

--método de acceso: prevención del acceso a los piratas informáticos. "Tener acceso" para los usuarios legítimos.

- Patentabilidad: ésta es automatización de la tarea manual/mecánica sabida. Torcedura aseada de la necesidad que trabaja el email de w (con). De América los almacenes en línea más allá de los mensajes que fueron enviados, solamente las cuestiones de la aislamiento están allí.

Los sistemas del acceso de la tarjeta dominante existen que guardan expedientes de quién entró a través de puertas. Las cámaras pusieron la fecha sobre el cuadro (no hecho probablemente por el revelador de la película).

- Cómo podemos enangostar abajo este y 2E251.

- el mundo es email que va.
- en el mundo físico difícilmente para verificar cualquier cosa. En mundo de la comunicación electrónica, verificación más fácil.
- al recibir los datos, estados de la letra también fue enviada al servicio de la verificación.

- La cuestión legal podía ser pesadilla para el servicio co.
- Patentabilidad: ¿Nadie otro haciéndola? La retransmisión de datos ayuda a patentabilidad. Discutir la necesidad verdadera de ella. Puesto que nadie pensó en ella y hay tal necesidad de esto, las demostraciones no es obvio.
- servicios que friegan el mensaje, identidad del remitente. Él está en Suiza, haciéndola para libre. Pero él no la archiva. Opuesto algo de este N.

- Seguimiento del recibo del mensaje: El sistema (sistema adaptante) determina cuando el mensaje/la letra era encima de escogido/abierto/recibido. Esto ayuda cerca al proceso determinando el recibo. --seguimiento de comenzar al contenido final del recibo/de la abertura hecho vía: "acceso" (código del hombre k del correo en la caja que los fósforos entregaron el artículo w (con) = tds (época del depósito, época de la abertura).

. Existe: Alarmas R43 si hay correo señalando si la puerta de la caja fue abierta. [Inventor Colleen Murphy, Easton, CT 4.94 picosegundos]
- Para el hogar o POB.
- OTD:

ACCESO: (para conseguir el correo; otros artículos/acceso); MAÑANA: (dice a usuario si hay de papel alistan para ellos (por la puerta principal); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); S: (); CUENTA: (tds w5 sobre el correo (que espera para ser escogido encima de); el depositante del correo puede "k" w5 en cuanto a el correo depositado, eg.: quién y cuando está depositado, de peso, del etc).

. Probar el tr fue hecha: u (usuarios) (cliente) puede afirmar su material fue enviado/recibido (según lo deseado, en términos de transmisión/modo de envío; y o exactitud del contenido real (con referencia a) que es transmitido, vía:
- u selecciona/se da el acceso (contraseña) (en la época de tr inicial (transmisor) al prestatario de servicios o sobre cliente de a que se convierte (firmada encima de)). Entonces U puede (paga) ver/consigue los materiales y o el tipo de tr. Puede estar hasta U para verificar que ningunos errores ocurrieron de parte de: U, prestatario de servicios, recipiente (sistema).
- las ayudas evitan juegos de la ley al prestatario de servicios

- servicios prestatario claramente estado en (todos/algunos) etapa de usuario tr (transmisor) ese servicios prestatario es no obligado (más allá de seguro dólar límite/coste de ese tr ()/del transmisor no obligado en absoluto).
- cada investigación por cualquie partido en verificar cualesquiera resultados del tr del pasado (transmisor) en cuenta al cliente. Eg.: copia de la petición de las cortes del material - > el cliente/quienquiera pide la información paga a empresa de servicios.
- si el cliente/u suelta la contraseña/el acceso de usuario (contraseña) no permite a u acceder (ver) (previamente enviado material): Uno o más de ayudas de siguiente prueban: a] que (w5) - material enviado/material fue enviado, b] u (puede ser requerido) envían el tr solamente del teléfono señalado # ' s: si el remitente bloquea su CID, c del prestatario de servicios para servicio (para ese tr); c] uip de u (su formulario de inscripción/material anterior envió al prestatario de servicios (fósforos: palabras claves, recipientes apuntados, tema)); d] u puede indicar hora y o día y o los recipientes para el tr dicho en la pregunta.

--u puede pedir tipos de oferta del prestatario de servicios de las medidas de seguridad (poder) en acontecimiento: intentos del pirata informático de c que acceden; cliente incapaz de tener el "acceso" (perdido su c sys/sw (tipo interruptor de la contraseña/del usuario del acceso) llega a ser O.N.U-operacional)

El tratar de forzar anti: Uno o más de siguiente pudieron ser decretados.

- Hardware/sw especialmente cifrado (acceso (contraseña, uip, cid)) colocado en cada punto de la transmisión (tr): c del remitente (computadora) = tr (transmisor) (canal usado) = prestatario de servicios c = (c) del recipiente
- Uso de uno del sistema anti-que trata de forzar existente numeroso.
- Solamente tr (del)/(del cliente al recipiente) hecho en cierta época del mes ser (más) válido [las aplicaciones la validez se dibujan menos dentro de la pregunta].
- (quizá) solamente el interruptor del sistema (sistema adaptante) (software) sabe los tiempos reales, que pueden ocurrir cada hora pero permite solamente las transmisiones que comienzan dentro de cualquier parámetro del tiempo del uno-minuto. Tales parámetros del tiempo pueden continuar alterando/se desarrollan, quizás su por casualidad y determinable por todo el sistema (cada punto de c en la cadena de la transmisión).

--las contraseñas necesarias cambian adentro algo - maneras relacionadas: en un cierto plazo; cada contraseña subsecuente diferencia de anterior (con todo de la parte de la contraseña sigue siendo similar identificar partidos).

--procedimientos cambiantes del "acceso" (contraseñas) necesarios en cadena subsecuente del acontecimiento (cualesquiera). El sistema pudo ayudar a u para conseguir/imagina lo que pudieron ser tales elementos del "acceso".

- recibiendo y o enviando señala cada necesidad "acceso" de continuar tr/rc del material. Eg.: el envío del cliente pudo enviar unknowingly el material a la computadora incorrecta/sistema (del competidor).
- el sistema cerró cuando lo que sigue detectó vía ("analizador", "acceso", "sensor " %): fastidio, escuchando detras de las puertas; uno o más protocolos necesarios no en efecto (acceso, cid); momento inadecuado de tr; las

conjeturas del sistema allí son ocasión (del 1%) que un pirata informático está jugando con el sistema del general/del cliente.

- el tr y el uso del interruptor del rc (software) relacionaron programas de la encripción. El material puede permanecer en forma cifrada siempre, a menos que: cualquier un partido apropiado tiene "acceso". Expedientes (seguimiento, acceso) para cualquie descifrar del material.
- número de kilobytes por archivo/la transacción (que permanece similar) y otros programas (del virus anti del interruptor (software)).
- el recipiente (en cualquie etapa) envía tr (tipo código del acceso de w) al remitente (en cualquier momento (remitente/prestatario de servicios originales al destinatario) en cualquie hora futura señalada (según lo acordado por el acceso). Si el remitente no puede responder apropiadamente (según lo acordado por el acceso, eg.: tienen nuevo/viejo contraseña, que es transmitido en señalado tiempo adelante) "pirata informático "estado"" es dado a apropiado partido - > NR adaptado (`)/acceso (en cualquier momento en el sistema sube sus medidas de seguridad)/policía del notificador "notificada".
- la firma personal (nombre de la persona como vía la escritura de la mano y la pluma (standard/el)) necesaria para cualquier acción = "analizador visual" = "acceso" = transaction/tr permitió.
- el tds es w emparejado (con) cada kilobyte/carácter/palabra/párrafo/página del material registrado. Eg.: vía sistemas de repuesto. Si algo (en material) cambiarse (por el pirata informático), el nuevo material no emparejará el material sostenido. Solamente las cortes del gobierno se pudieron no prohibir (físicamente/remotamente) giran tal respaldo +c/sistema/interruptor. Puede hacer respaldos múltiples (extender por tiempo) del material registrado/registerable.

Extensión de N: Uno o más de siguiente en cada grupo se pueden substituir normalmente por uno a.

1] Gente que paga servicio: usuario; cliente; el sender%; sistema de seguimiento automatizado.

2] El material que era colocado/aseguró (contra piratas informáticos): material del texto; código convertido a digital de cualquie tipo; datos; el information%; contenido; sonidos [comunicados] [cogidos por el mic del sitio/teléfono]; imágenes [cogidas en cámara]; uip-DB; DB [alterado].

3] Relacionado con la seguridad: acceso; el tds%; contraseña; el code%; seguridad; el protocols%

4] Estudiar el contenido del material: uip; palabras claves; tema.

5] La identificación de partidos implicó (en cadena de acontecimientos): cid (identificación de llamador); u (usuarios) con el acceso apropiado.

6] Piratas informáticos/que cortan: El tratar de forzar; acceso (frustrado) ilegal; villain%; El sistema (sistema adaptante) cerró en respuesta a tales partidos/actividades %; carencia de el protocol%.

7] Transmisión/tr (transmisor) (vía): línea de t; sin hilos; MES; fax; carta (certificada/certificada) de la oficina de correos; c "carro" (acceso de w necesario para leer el material) (enviado cerca: el poste/el otro tr); % de la transmisión inicial es el primer paso: de la fuente de material a: prestatario de servicios/destinatario; otras formas de comunicación.

8] Recipiente: el target%; rc; el receiver%; prestatario de servicios (en lado receptor del remitente original); Recepción del c/sys%; usuario del sistema de seguimiento.

9] Remitente: transmisor; prestatario de servicios (en el envío del extremo, el servicio del interno: envían (material/[códigos de acceso] a (respaldo) C ()/destinatario de la computadora); El U%; C/sys de envío/que transmite %.

10] Empresa de servicios: órgano/sistema eso: tds/material/asimientos de los registros materiales (contra tratar de forzar); el sistema/el órgano entre el remitente y el respaldo originales c/dirección, sin embargo, el respaldo c es generalmente parte de la empresa de servicios también; prestatario de servicios; empresa de servicios; centro el party%; sistema del reparto del correo certificada/registrado de la oficina de correos (vía de papel/electrónico) %.

11] Acceso: contraseñas; código (que identifica el something%); encripción (acceso) %; el decoding%; guarda hacia fuera a piratas informáticos; espectrograma de la voz de u designado (los que tienen ya acceso) = analizador = acceso de los sonidos (tenido). Hay una ranura de tiempo/del espacio (para la memoria de la impresión de los sonidos) dentro de la transmisión.

12] Registro: registros; verifica; certifica; respaldo (c); el expediente de las subsistencias/el registro de transmitido/colocó el material; la oficina de correos que entrega y que guarda el expediente del envío/recepción de % materiales; %encrypts también; hace a pisón resistente.

13] Interruptor: interruptor de la encripción (software) (software) incluido como parte de general (proceso de la palabra/interruptor el transmitir/de la contraseña (acceso); interruptor (software) para manipular/que envía % materiales; acceso el sw%

14] Cortes, comprobando si el material fue enviado: Gobierno federal; juez; determinación de validez de la demanda de un cliente que el material particular fue enviado a partir y en a tiempo señalado y vía modo particular (consiguieron colocado por el prestatario de servicios (w5)); el cliente que comprobaba para ver si el material los fue enviados w5 pidió (al destinatario/ellos mismos (como la verificación inventó el material dicho en tales y tal fecha, substituyendo el departamento del acceso del documento de USPTO)) %

Adiciones: Términos reemplazables.

Cualquie término/concepto w/in cada grupo, normalmente inter-reemplazable:

- Prestatario de servicios: compañía que recibe/el material de los almacenes/registers+; software y o m que hacen la vista con./desc. del registro automáticamente/en C del usuario (computadora) (interruptor).
- Datos: material; texto (escrito) (en el carro, vía email); palabras habladas (vía t, el mic); imágenes (vía: "cámara", relacionada con el "analizador de imagen"); ocurrencias: señales (electrónicas) del EL; contenido; "sensor" = "analizador" = este sistema del registro (sistema adaptante) N; %sw; DB; vídeo (cintas, discos, datos/via= recorded=registered imágenes "cámara").
- Verificación: registro; certificado ante notario; prueba; prueba; probado; almacenado (con tds = contenido que empareja); enviado vía la letra certificada de la oficina de correos a las direcciones

- Anti-tratando de forzar: "acceso"; contraseña; código; acceso-uip%.
- Usuario: cliente; %sender de datos originales; u.
- Transmisión: email o tr en línea; el enviar por fax; t (llamada del teléfono); línea % de t; transmitir; enviar; enviado.
- Recibiendo: rc vía el tr; % que reciben por alguien abajo de la cadena de acontecimientos; el remitente original no recibe normalmente cualquier cosa en relación al aspecto principal de la invención, a menos que quizá la confirmación del envío/información para el material de la evidencia fuera enviada/acceso; (el material era) (por el destinatario) % abiertos; el addressee%
- El material se abrió. Material is/was: utilizado; abierto; experimentado; copiado/se movió/alterado (después del registro (de la cañería)) (w cualquier cambio seguido cuidadosamente al w5 de cualesquiera cambios se documenta = se coloca cuidadosamente).
- Computadora: c; %m; %sw; % imprimieron la versión de la copia del material registrada y archivada (en el cabinete de archivo de papel); % de R ("cojín del aire")
- "Sensor " %: % del monitor inteligente de 2e251; %motion "sensor"; % " de la cámara"; "sensor" para las ocurrencias cambiantes (en laboratorio de investigación); % del analizador de la representación visual.
- "Analizador visual " %: analiza el contenido de la imagen (2.a, tridimensional, 4+-Dimensional); "anota" la diferenciación (los aspectos) de imágenes.
- "Analizador " %: cómo el material organizó/% procesados; el access%; qué material es ser % registrado, y el w5%.

Probar el material no consiguió alterada después de la transmisión inicial:
- El recipiente envía código que recibieron el material (probar la transmisión ocurrió). Este código del recipiente incluye (los códigos para): 1] # kilobytes.] retransmisión 2 del contenido idéntico a (remitente/prestatario de servicios (respaldo c)/3ro prestatario de servicios. el material recibido 3] w5 fue almacenado/colocado (por el recipiente/el prestatario de servicios (en el recipiente de diferenciación de la localización). 4] Otras características del material enviadas por el recipiente a cualquier 3ro/4tas/5tas parties. Características: cada (quinta palabra); # palabras por la oración; primero o 8va, o pasada letra de cada línea; cómo el material se ocupa su haber cifrado o haber alterado vía (estándar) método del interruptor. se verifica 5] "acceso" necesitaron determinar el material w5 (como siendo recibido en cada punto por los partidos señalados/registrados/que son alterados por el pirata informático).
6] El método de #5 antedicho puede ocurrir vía método cambiante, por lo tanto hace más difícilmente para que el pirata informático determine los sistemas w5 dirigir/material del proceso/del registro.

Piratas informáticos de cogida:
- Los intentos del sistema para comprar tiempo, así que el sistema (sistema adaptante) pueden determinar la identidad del pirata informático vía: CID del pirata informático; características del pirata informático (cuya

información ellos quiere y de porqué, el uip%); qué métodos de acceso los tienen conseguidos y cuáles del fósforo de esos métodos que los métodos que fueron dados a que parties (y vía cuál significa).

- Entran en contacto con a la policía cuando la identidad del pirata informático determinó.
- Otros modos de cogida del pirata informático estándar utilizaron.

+ el sistema compara lo que se ha colocado el pirata informático de los elementos en su sistema con los sistemas que él puede tener hacked= en la ayuda coger y procesar a piratas informáticos.

. --el sistema de registro en la computadora del pirata informático puede necesario no ser muy sofisticado. El TDS del pirata informático del material es útil.

El almacenar y registro (casi todo):

- Todos los archivos, textos, papeles, diagramas, hablados con antes de ser hacia fuera lanzado/desechados (por la organización) se exploran/se envían a M (sistema del registro).
- Filtro: defiende hacia fuera ciertos archivos basados encendido: w5 fueron creados y por quién para qué propósitos; palabras claves; temas; nombres del directorio o del archivo de archivos; si el archivo lo hace/hizo/no tiene una contraseña (acceso).

Los archivos se organizan/se ponen en un índice/se registran según:

- w5 con referencia al desarrollo/al envío del archivo
- cliente
- localización, o CID del cliente

El sistema "sigue" /suggests cómo se encaminan los archivos: 3G050

Extensión de N:

- el sistema "analiza" ocurrencias/señales apuntadas (pues el sistema (sistema adaptante) es banda por u). Eg.: el "análisis" condujo con el monitor inteligente 2E251.
- el sistema "analiza"/compara ""/"de las cuentas estado" para determinar si ocurrió el tratar de forzar, o si los datos en ninguna una etapa no emparejan con otras etapas del proceso de registro.

+ el sistema determina qué será colocada según características de la situación:

- El 'analizador determina qué acciones serán `seguido `del ~ registrado.
- Sensores del ~ del UIP: controlado por la pista del analizador/del `.
- el modo de búsqueda del interruptor puede las ocurrencias señaladas `de la búsqueda del `que fueron colocadas.

- se activan los 'sensores señalados cuando están señalados. Eg.: ciertos sensores que la demostración el tipo actividad deseada es sensores [adicionales] del `del occurring= entonces [y su `adicional que detecta capacidades] es activated= para recoger el information= adicional se coloca/se analiza que, según lo señalado.

- el UIP determina que podría ser (legalmente) sabio colocar el material.

--Los criterios a colocarse incluyen: "VAGOS" (el "analizador del comportamiento", bva, las demostraciones visuales customer/u del analizador (facial el characteristics%) aparece ser deshonesto/difícil; palabras claves particulares; imágenes = analizador visual; acceso (multiusos); monitor inteligente 2e251

- "Analiza" = "sigue" reparaciones/historia de la reparación: 5023817+

fax de tiempo 6B-40 y de la estampilla de fecha: tiempo de expedientes del fax adentro y de la salida

- la persona de quien recibió (pudo saber vía el número del teléfono de remitente - en algunas regiones de mundo, de demostraciones del receptor su teléfono #); remitente que envió el fax.

83

- aplicaciones la tecnología actual existente de la identificación de llamador (el receptor de la llamada del teléfono ("T") puede identificar el número del teléfono del llamador): si un mensaje de fax fue recibido pero no transmitido bien bastante, el sistema puede decir al usuario dé donde vino el fax (el fax está faltando quizá el número del teléfono y o fax y o dirección del remitente debido a la falta mecánica o al mindedness ausente del remitente)

NUESTRA LIMADURA ANTERIOR DE LA PATENTE

Wordings exacto en nuestro 11/94 uso abandonado - recortes solamente: Debemos haber puesto en el dinero para conseguir la patente.

Introducción: Toda la información está en cotizaciones exactas. Solamente los pedazos son incluidos....mucho *más profundidad está disponible a través de la solicitud de patente. La información adentro [los corchetes] fue* insertada para ayudar a entender la información previamente archivada.

Texto

Descripción central de la limadura:
"comunicación registrada 4E-020 de los medios electrónicos: Más fácil utilizar que el envío/recepción/la limadura registrada y la otra comunicación. El sistema memorizará a quién/de quién los mensajes fueron enviados/recibidos y almacenar el texto del mensaje también. Usando la identificación de llamador, el receptor sabe de donde el mensaje fue enviado. Provechoso en casos del pleito. "

"Estampilla de fecha del TDS = del tiempo. El programa memoriza, las etiquetas, e identifica la sincronización de ocurrencias deseadas.
- D: contador de tiempo = tr (transmisor) = c
- OTD: la exhibición ("S") demuestra el TDS asignado al elemento aplicable.
- Etc ..... "

p.21 línea 39:
"M/MFH = opción de la transmisión en circuito del ordenador principal ("C") para tareas más complejas....En-Línea-Transacción-Proceso.

p.22 línea 16: "%TDS"
- línea 22: "calcula/tabula #1 "cuenta" y o salida deseada por #1 - > los datos enviados a #1 - > los procesos #1 por consiguiente...

p.15 línea 9:

La "CÁMARA/la LENTE = captura imágenes visuales y las traduce a....digital.

D: cámara = tr/rc=c=tr/rc=viewer/r "

p.16 línea 1:

"+ C ()/COMPUTADORA = computadora de la computadora. La parte central más importante de cada número del producto...."

p.19 línea 21:

El "FS = construyó en la máquina de facsímil, envío/que recibía...

D: datos/imagen = "sensor" = "C" = "tr"...

línea 41 del P. 19:

"GPS = sistema de navegación mundial....

... el análisis determina: W5 - cómo, cuando, donde, porqué, qué se movió. Ejemplo: modelo de PYX15 de los ^Sony.

p.23 línea 41:

Los "sonidos del MICRÓFONO ..... de tipos particulares se reciben y o se registran y o se procesan."

p.23 línea 52:

"La transacción del módem de la demostración del módem ..... estaba o no fue terminada con éxito; la información o los resultados alcanzados de la transacción del módem; ..... tds (de la transacción del módem)

p.24 línea 25:

"Programas del fabricante....

....el usuario puede seleccionar de uno o más sistemas de menú/formatos...

p.31 línea 13:

"CUENTA = el estado de: producto/funcionamiento/situación del usuario.

- D: la entrada de datos/el sensor = "C" = hizo salir

^includes del estado: determinando si es el sistema: en, que la función es en funcionamiento, hasta dónde en la operación está apagado, cualquier problema, y o los resultados (éxito, falta; mecanografiar, eg.: cantidad, calidad, manera); el número de épocas un detalle incluso ocurrió (algo dentro del sistema y o algo afuera en el ambiente (tal como sonidos, o algo o alguien que da un comando al dispositivo).

... "fecha"

... confía en "C" y su memoria, y %mfh; % del micrófono

... los datos son via^ también obtenido: "teléfono" de "Reino Unido"..., "módem", explorador.

p.32 línea 23

SENSOR = sentidos para las señales: ... distancer del "visual" del sensor de movimiento analizador del analizador de sonidos del micrófono..... "[una forma de GPS]

...."tener acceso" [contraseña y sistema de seguridad] (cuando los patrones particulares de señales con referencia a recibido, las funciones de sistema según cualquie "UIP" [cómo el usuario quisiera que funcionara el sistema].

...mp/pp [programa]: cómo el sistema con el "sensor" reaccionará

... cada ocurrencia de señales (entrantes) es "tds".

p.38 línea 28

Analizador visual: .... almacenaje de todos los efectos visuales que está comparando contra "

- D: cámara = convertidor de datos = C (computadora) = tr (transmisor) = función

p.48 línea 49:

COMPUTADORA: ....Si un tamaño deseado de la unidad restringe/no permite una computadora dentro de él, capacidades de la computadora (memoria, transmisión en circuito separada del ordenador principal del "mfh"], "pi") está conectado con la "C" en via^ de D (dibujo): radio...; alambre, transferencia de discos.

p.49 línea 31:

Computadora: ... permite alterar usuario/sistema/control/monitor/memoria de /keep del "estado" de la demostración.

... uno o más puertos en "C" pudieron interconectar con todos los periférico/otros productos.

p60 línea 21

Tagger del GPS (TM): El sistema sigue los movimientos W5 de los MD [dispositivo móvil] [qué, cuando, donde, cómo, porqué].

- El anotar del GPS...

p60 línea 38

Analizador del movimiento del GPS: Compila y analiza los movimientos, eg.: las distancias/los locatons viajaron, las velocidades, sincronizaciones (longitud del recorrido, inmóviles pasada tiempo)...

p62 línea 12

Notifican el notificador = al usuario (alertado) en cuanto a el "estado" de cualquier situación. ..... Todas las notificaciones se pueden también mantener memoria con la época de la ocurrencia que es hora y fecha estampadas. Notifica (W5 - qué/cómo/porqué/donde/cuando) la acción: (se ha terminado...

- Notifica cuando: "tener acceso" permitido...; el mfh decide a cuando/cómo/donde/porqué una notificación puede/será hecho; módem; ... notifica la acción W5 se ha terminado; tipo de mp/pp [programa] de notificación

p.73 línea 11

UIP = programación de la información de usuario.

D: entrada = analizador = memoria de datos (el mfh, carro, reconoce multiusos) = analizador = salida = función de datos

-... pp y programa de la P.M. cómo quisieran que el sistema recogiera, recuperar y analizar los datos en base de datos; tds (cuando y cómo ocurrieron los elementos)

Secretario del extremo 4E020: Verificador del contenido y de la fecha

CONCLUYE ESTA CARPETA PARA ALGUNAS DE NUESTRAS CATEGORÍAS POPULARES DE LA INVENCIÓN.

El mercado global de estallido para las computadoras está aumentando la llamada para una solución a lesiones de tensión repetidor.

Las ventajas de la invención sobre terapeutas físicos humanos son substanciales. Por ejemplo:

- Pacientes que no necesitan ser recordado [desperdiciador de tiempo para la ayuda empleada]. Menos tiempo de la observación requirió.
- La invención es en gran medida cómo tener un terapeuta físico de 24 horas.

la capacidad de +-The para que los terapeutas humanos calibren exactamente los ángulos deseados de movimientos es menos exacta que la capacidad de la invención. El médico prescribe simplemente a la invención los qué ángulos y el otro tipo movimientos se desean, y cómo son cambiar en un cierto plazo. Esto se junta con la supervisión del doctor y la reprogramación correspondiente de la máquina.

El sistema está en un cierto plazo, más barato y a menudo más eficaz que instructores vivos. Los ejemplos incluyen:

- Historia y base de datos del usuario: movimientos, comportamiento, problemas, qué guía que los modos trabajaron mejor, qué modos del tgh trabajó mejor, preferencias de usuario, etc. Todos estos datos son generalmente demasiado para un profesor con los estudiantes múltiples a recordar, y demasiado desperdiciadores de tiempo recordar. Adaptación mejorada.
- 24 horas disponibles. Ningu□n recorrido necesario conectar a estudiante con el profesor.

¡- etc!

Diagrama: ~ C de la invención del movimiento del usuario = del cuerpo (la computadora del `adapta las características seleccionadas por el usuario) =

. ACCESO: los movimientos señalados permiten el acceso.
. ANALIZADOR: cómo los movimientos interpretaron; guía
. ARTISTA:
. VAGOS: aprender sobre el comportamiento del portador
. CUENTA: cargar más para ciertos tipos de movimientos
. CARRO: cada cartucho del interruptor (el software se adapta ligando a las características asociadas) permite diversas funciones, eg.: cómo se enseñan o se interpretan los movimientos
. COMPOSICIÓN:
. COORDINADOR: balancea las capacidades, la curva de aprendizaje, el tgh y la guía del usuario.
. EDIT: la guía intenta cortar comportamientos señalados del movimiento del usuario [comportamiento].
. EDUC
. MULTIUSOS
. NR
. OSCILADOR

. Banda

. Picosegundo-Zona:

--'señaló deseó los movimientos diferencian por la región en la cual el usuario está situado

--el movimiento de cada accesorio cae en una localización dimensional diversos 3 [otra manera de interpretar los movimientos realmente hechos]

. Q: El sistema pregunta a usuario qué habilidades o ventajas desean ganar de la característica de la guía.

. TELECONTROL: Objetos teledirigidos vía movimientos del cuerpo de usuario.

. CUENTA

. LAS BÚSQUEDAS Y REACCIONAN: El sistema castiga los malos movimientos señalados

. SENSOR

. INCLINACIÓN:

. PISTA:

. UIP:

. UIP-Adaptar:

. ANALIZADOR VISUAL: La cámara puede estudiar los movimientos hechos. Ayudaría si el usuario usó luces u otras señales transmisibles en los puntos dominantes del cuerpo.

+. REALIDAD VIRTUAL: Ésta es una forma de realidad virtual.

. WA: una forma más fácil de teledirigido.

. ZONA

'Pieza del artista:

- los movimientos correlacionaron en arte (dos o tridimensional) más quizá sonido y cualquier otro efecto, eg.: vibraciones, cambios en temperatura u olores.
- dibujar/crear (mudanza 'interactiva) las imágenes mientras que (en realidad virtual).
- substituye la brocha y o el ratón de la computadora.
- el usuario puede mejor crear imágenes tridimensionales: cada localización en la cual el transmisor 'teledirigido está situado se puede interpretar como la pintura o cualquier otra forma de crear [convertido a digital] características.
- dibujo sobre medio de dos dimensiones con su eje de X y de Y: los movimientos [perpendiculares] en el Z o el otro llano pueden aumentar o disminuir el tamaño o tener tales movimientos interpretados en cualquier otro ['] modo editable. Ejemplos: cambios en el color [cortinas], volumen de sonido o tamaño u olor, etc.
- Ver la inclinación

'Hospitalidad: Formas de aprendizaje del movimiento del usuario las nuevas pueden ser entretenidas. Eg.: danza, yoga, gimnasia, habilidades temporarias [cómo una camina conjuntamente con otros movimientos y declaraciones que necesiten ser puestos en palabras (según lo determinado por la pantalla de ordenador del sistema).

'Ejercicio: El dispositivo anota el nivel de actividad del ejercicio. Anota el número de calorías quemadas, y analiza de otra manera los niveles en los cuales el comportamiento del usuario alcanzó los movimientos/las velocidades ideales/etc. de las características.

'Predecir: La terapia consigue más difícilmente según como de bien predice que los movimientos del usuario cambiará.

W5: los elementos w5 determinan los movimientos deseados del cuerpo. Eg.:
- cuando: hora; o en qué secuencia de función de la orden y de temporización
- donde: zona; a donde el accesorio del cuerpo se mueve exactamente [qué ángulo, hasta dónde outstretched (si en absoluto)]
- porqué: para la terapia, o la hospitalidad
- qué: qué movimientos del cuerpo son necesarios, cuando y cómo
- cómo: cómo moverse

Misceláneo:
Invención de conexión al cuerpo:
- Atando sensores de las partes de la invención 'al usuario vía:
correas; implantes del cuerpo de %human; abrazadera sobre cuerpo [sobre piel o ropa o [juego terapéutico de la cubierta/del cuerpo], eg.: broche de presión de las piezas alrededor del accesorio del cuerpo...
- Usuarios de los niños o cuando la invención es utilizada por los múltiple-usuarios: Los pedazos de la parte se pueden ajustar para caber diversos tamaños de cuerpo. - Mientras que se hace el ajuste, el usuario o el sistema programa automáticamente el analizador por consiguiente, así que el sistema ajusta su dirección según perfil del comportamiento de tipo el cuerpo 'del usuario.

El trabajo necesitó:
- Centrarse en esos usos, que pueden aparecer más, rentables y para cuáles allí son mercados más grandes.
- Los específicos para la elaboración de la necesidad de los mecánicos de la invención de ser resuelto.
Balancear las ventajas ganadas con los costes de fabricación, sin necesario contar con la maquinaria perfecta.
Estudiar y aplicar la tecnología existente a este uso innovador. Por ejemplo cheque hacia fuera:
--www.uspto.gov para su base de datos en piezas mecánicas. Aplicar el conocimiento existente a los usos de la terapia física.
--preguntar a bibliotecarios de la universidad en material explicando cómo crear tales mecanismos.
--buscar la tela, el etc.
--También, comunicar con los terapeutas físicos en cuanto a qué movimientos necesitan supervisar.

Movimientos de respiración y otros insignificantes de User:
- El analizador aprende cómo no hacer caso de los movimientos menos importantes como la sacudida, mover de un tirón de menor importancia, el etc. Mira cosas como la posición media durante un corto período de tiempo. No hace caso de saltos en las curvas de movimientos.

El usuario puede chascar cuando comienzan y o termina su tarea del movimiento. Este mejor permite que el usuario/sistema sepa qué movimientos deben ser analizados. En modelos costosos, el sistema determina comenzar y la terminación, basada en el patrón seguido del movimiento, y cómo tales fósforos contra la base de datos de sistema de los patrones [deseados] del movimiento.

El 'analizador determina/las conjeturas hasta dónde cada partes del cuerpo extienden más allá de cada uno de sus piezas. Es decir una pieza puede por ejemplo estar apenas sobre el tobillo, y puesto que el sistema sabe para para qué tipo de cuerpo se está utilizando la pieza, él puede aproximar hasta dónde la pieza es de la parte inferior del talón. El usuario puede también afinar en la información sobre sus dimensiones del cuerpo, eg.: tamaños del tamaño y del pecho del zapato.

Amaestrador del animal doméstico: La invención enseña a perros a comportarse mejor no saltando sobre gente. La guía puede trabajar como forma de contener los movimientos de un animal por ejemplo:
- mientras que necesita ser refrenado para un veterinario [la invención se puede poner sobre el animal por el dueño del animal doméstico].
- mientras que las huéspedes están visitando, y el dueño no quiere trabar totalmente el animal hacia fuera.
- animales domésticos de enseñanza buenas maneras, tales como salto sobre gente.
- enseña a perros a no funcionar demasiado: enseña /aprende habilidades nuevas los movimientos de la pierna más allá del parámetro señalado, y o de límites el número de pasos grandes dentro de un marco de tiempo [ver la parte ordenar y el timing'].

EXTREMO DE ESTE ARCHIVO 3E061 H2

Archivo: Movimiento/3E061 IMI&

MÁS PIEZAS - PROFESOR PARTICULAR DEL MOVIMIENTO. Archivo IMI&

Nota: Los nombres de parte seguidos por a más "+" los detalles extensos de la demostración del símbolo se imprimen en estas especialmente partes importantes.

El ACCESO = accede a los controles de producto electrónicos con afinado correctamente en la combinación. Las idiomas de muestra específicas del movimiento del cuerpo se leen como formas de contraseñas necesarias.

El ANALIZADOR = los programas informáticos analiza cómo manejar la situación.

ARTIST+ = permite que el usuario haga y que corrija imágenes según los movimientos del cuerpo.

BA+ = analizador del comportamiento. Analiza el comportamiento vivo de la gente. El tipo movimiento es comportamiento interpretable. El comportamiento del usuario [según lo almacenado en base de datos] permite al sistema mejorar a usuario de la guía para sus necesidades adaptadas.

CUENTA = facturación: Usuarios de las cargas por cantidad y el tipo de uso.

CARRO = cartuchos que se insertarán en sistema. Contiene con frecuencia software/bases de datos útiles.

PALMADA = chapaleta. Cada combinación de palmadas controla una diversa función. Permite que el usuario controle la invención sin el tacto.

COMPOSICIÓN + = composición de música electrónica: Otra variación del producto se puede también utilizar para crear música interesante según el tipo movimientos. Ver la invención de Miburi de Yamaha.

El CA/el ANALIZADOR CONTENTO = analiza el contenido de la base de datos del comportamiento del usuario; el sistema puede mejorar tan a sastre sí mismo a las necesidades de usuario.

COORDINADOR = piezas de los coordenadas diversas del sistema.

La DANZA = el movimiento del cuerpo genera sonidos.

DB = base de datos. Almacenes: últimos movimientos del usuario; las formas de usuario de los patrones del movimiento necesitan ser enseñadas; etc.

DISTANCER + = señala siempre que cualquier dos piezas se separen o vengan juntas. Señales vía las ondas de radio si la separación es distancia más o menos que programable. Ver el otro archivo registrado en el distancer para los detalles. La distancia entre cualquier dos piezas es otro método por el cual calibrar el movimiento.

EDIT = interruptor (el software se adapta ligando a las características asociadas) corrige/defiende hacia fuera dato antes de que él alcance u ()/sistema de los multi-usuarios. La guía puede centrarse en ciertas formas de instrucción, no haciendo caso de otros aspectos [de la base de datos].

EDUC + = educativo: enseña a habilidades interesantes. Substituye a terapeuta humano.

EGH = la educación consigue más difícilmente. Ajusta a la habilidad del usuario en movimientos del cuerpo.

ENTRETENER + = también utilizado como forma de hospitalidad.

EJERCICIO = también utilizado como forma de ejercicio. Anota el ejercicio del usuario para: calorías quemadas; millas del número funcionadas con y más importantemente bajo qué condiciones [eg.: el ir para arriba una colina].

JUEGO + = también utilizado como forma abstracta de un juego. Atando esta máquina de la realidad semi virtual, los usuarios saben jugar a juegos con uno a sobre las líneas telefónicas mientras que en diversas localizaciones.

GUÍA + = un instructor. Sugiere cómo el usuario pudo proceder. El sistema dirige a usuario así que pueden moverse mejor.

INTERACTIVO/INTERACTIVO = el sistema obra recíprocamente con el usuario según sus necesidades.

M/MFH = opción de la transmisión en circuito del ordenador central para tareas más complejas. El usuario puede tirar hacia abajo las bases de datos de otros patrones deseados del movimiento, reglas para la realidad virtual ['juegos].

Milímetro = medios multi. Los movimientos interpretaron en formas diversas de multi-media ['hospitalidad].

HUMOR = humor del usuario. El analizador del comportamiento es dicho por el usuario, o analiza en el comportamiento de su propio usuario. En golondrina de mar dirige a usuario a los movimientos del cuerpo señalados por el usuario o el sistema como solucionando o creando un humor emocional deseado.

MAÑANA = alarma de la mañana. Para desactivar la alarma, el usuario debe hacer ciertos movimientos del cuerpo, interno llega a estar más alerta.

MQ = la máquina hace preguntas del usuario para obtener la información así que el sistema puede mejorar a usuario de la guía para sus necesidades del movimiento.

MULTIUSOS + = el sistema se diseña especialmente para los usuarios múltiples que tienen diversos tipos de cuerpo, buscando diversas terapias físicas.

Notifican el NOTIFICADOR = al usuario en el estado de cualquier situación. Eg.: cuando exterior de la caída de los movimientos del usuario el parámetro señalado.

La ORDEN y la SINCRONIZACIÓN = el sistema reacciona a la pedido y a la sincronización de los movimientos del usuario. La orden y la sincronización es un método más sofisticado por el cual el sistema puede analizar qué usuario está haciendo W5.

OSCILADOR = comunicador sano saliente. Comunica con el usuario por los altavoces, eg.: instrucciones.

Paladio = dispositivo de colocación. Unidad portable, que difunde su localización al sistema de colocación, o localización de una pieza, atada a un accesorio del cuerpo.

Banda + = programa (software)

PREDECIR que + = el sistema predice qué áreas del usuario de la educación necesitan la especial atención. Predice qué malos/buenos movimientos son más probables ocurrir, o qué movimientos quiere el usuario [después de que sus capacidades han conseguido mejor]. El analizador del comportamiento se utiliza para llegar las predicciones.

Picosegundo = sistema de colocación. Identifica la posición de la parte movible (dispositivo de colocación) vía su difusión de las ondas.

PS-ZONE = el sistema reacciona según la localización de la parte en la pregunta.

Q = usuario/sistema se hace preguntas. Ayuda a cada uno mejor a entenderse.

R+ = teledirigido

REACCIONAR = sistema reacciona a los buenos/malos movimientos.

La RUTA/el RANURADOR = el sistema (sistema ligado a las características adaptadas) encamina a usuario a la parte señalada de un programa [según las necesidades de usuario].

CUENTA = el estado de la situación y o del funcionamiento del usuario.

SENSOR = sensor. Detecta el movimiento vía muchos medios.

BUSCAR y REACCIONAR = las búsquedas del sistema señaladas los movimientos del cuerpo, que internan causas una reacción, que responde por consiguiente.

El ESTADO = el sistema demuestra el estado de los movimientos de la corriente y del pasado, por ejemplo a cómo es bueno eran.

Se marca con etiqueta, y se sigue la ETIQUETA = cada pieza atada movible.

El SASTRE = el sistema se adapta a una mejor función para los propósitos señalados.

Estampilla de fecha del TDS = del tiempo hecha en cada aspecto de un movimiento, como cada marco de una cámara del cine. Útil en el seguimiento y analizar de los movimientos.

T/teléfono = teléfono. Los datos sobre los movimientos comunicaron sobre líneas de teléfono.

TGH = la terapia consigue más difícilmente. Mientras que la capacidad del usuario aumenta, el sistema empareja más nuevas habilidades del usuario.

La INCLINACIÓN + = las piezas atadas al cuerpo se analiza para su movimiento o cómo se inclinan.

TR = transmisión/recepción de movimientos vía ondas y o alambre.

PISTA/PERSEGUIDOR = acciones de las pistas o de los monitores del sistema del usuario.

U = usuario, persona.

UIP + = programación de la información de usuario. El sistema utiliza la información recogida sobre los movimientos del usuario y el comportamiento a mejorar los sirve.

UQ = el usuario pueden hacer preguntas de la invención tales como lo que y cómo el usuario puede cambiar sobre sus movimientos.

VIBRACIÓN = vibración generada por el dispositivo para señalar la cuenta del tipo movimiento.

VR/REALIDAD VIRTUAL + = uso futuro con la tecnología de la realidad virtual posible. Menos importante ahora.

WA + = caminata alrededor. Invención portable.

W5 = formas de movimientos por ejemplo: Cuando/donde/cómo/porqué/qué

¡También ver el archivo detallado de las piezas y sus apéndices!
Archivo: Movimiento/3E061 Techie

PROFESOR PARTICULAR del MOVIMIENTO 3E061 - PATENTES EXISTENTES ANTES del AÑO-2000

+ relacionado con Miburi de Yamaha: Este sistema hace música según los movimientos del usuario.
. - Las relaciones públicas de Yamaha en este pedazo fueron hechas en cerca de 1993 o 1994.
- ésta es probablemente patente 5.648.626 y 5.373.096 y 4.905, 560, y 5.170.002, y posiblemente otros.
. - Ésta es probablemente la misma familia de invenciones Steven Kays concebida antes de la fecha de limadura de Yamaha; Steven Kays archivó esta invención con el departamento de los E.E.U.U. de patentes y de marcas registradas en los años 90 tempranos (en diversas limaduras), pero desafortunadamente no persiguió la invención. No está claro si Yamaha o Steven Kays primero concibió el Miburi.

+ esta invención es una mejora en No. existente de la patente de los E.E.U.U.: Monitor de la postura del sueño 4617525 y sistema de alarma.

Estrategias de búsqueda de la patente de los E.E.U.U.: indicar y detectar y no (cuadro o vídeo o cámara o imagen o óptico o ligeros)
- Patentes de los E.E.U.U.: 4024734 5585566 5146206 5008654

Estrategia de búsqueda: indicar y detectar y (la ayuda o el guid o corrige o ayuda) y no (cuadro o vídeo o cámara o imagen o óptico o ligeros)

Estrategia de búsqueda de la patente de los E.E.U.U.: ("injur repetidor de la tensión ") o ("síndrome de túnel de carpal ").
. --[Observar esto fue hecho cuando la adyacencia de la palabra era posible en base de datos de la patente de los E.E.U.U.].
- No. de la patente de los E.E.U.U.: 5301683 5256136 5244296 5214799 5183230 4941460 4966137 5107853 5113849 4770774 4774966 4834882 4850341 4883073
+ 'notifica cuando el usuario no está utilizando el teclado correctamente: 5230345+ 5215100 5163443 5275174 4807642
--Todavía necesitar buscar: (postura del ajuste del cuerpo) y (eléctrico o alambres o cableado o analyz)

Invención similar: Patente no 4536755 de los E.E.U.U.: la alarma activa siempre que el accesorio al muslo de la persona exceda un ángulo pre-seleccion del umbral.
--Pero esto no enseña ni sigue al movimiento de la persona. Ni recompensa el buen movimiento.
+-Nor aparece tomar en el nivel del balance para los sensores uces de los. ¿Este aspecto de equilibrio parece ser particularmente un área, que se aprieta menos con invenciones?
--puesto que hay el "ángulo pre-seleccion del umbral" éste traslapa mucha de esta invención.
--Necesidades de ser comprobado hacia fuera para las invenciones similares, y de la tecnología existente para ayudar simultáneamente a hacer esta invención factible.

Estrategia de la patente de los E.E.U.U. - centrándose en el área de equilibrio de la detección:
balanc y (cuerpo o brazo o brazos o pierna o piernas) y (detectar o los sentidos o sensor o detección o determin o sentarse o se sienta o el sentarse)

+ las invenciones del analizador del oscilación del golf existen. Supervisan y dirigen a usuario. Comprobar hacia fuera a amaestrador del oscilación de béisbol de www.uspto.gov: Palmadita 5.375.836 de los E.E.U.U.

ANALIZADOR del UNO MISMO de la ACÚSTICA 5E080A

Extracto

La invención sintetiza la música de la estereofonia según las calidades acústicas del cuarto. Esto trabaja conjuntamente con otras tecnologías de sintetización existentes. Los compradores de sistemas estéreos favorecerán naturalmente marcas de fábrica que autorizan nuestra invención.

Uno del sonido que analiza métodos para alcanzar la calidad de sonido ideal es estudiar cómo los sonidos que emite se repiten de nuevo a su micrófono. El sistema emite los sonidos de la prueba que pueden mejor demostrar las características acústicas del cuarto.

Hay muchas otras características innovadoras relacionadas con esta invención confidencial también.

Detalles

Comercialización:

- Substituye la necesidad de contratar a ingenieros accoustical. Aunque pueden ser mejor que las versiones moderado tasadas de la invención, los usuarios finales desean raramente encontrar y pagar tales servicios (cambiar solamente los muebles más adelante y o movimiento); más estamos vendiendo un "concepto" incluso si el sonido perfecto no se alcanza. Los compradores están también en lo que piensan los sonidos buenos.
- Diversas versiones de la calidad de la invención están disponibles en los precios desiguales.
- Esto ayuda a competir con otros sistemas de la música que suenen los mejores del cuarto de la demostración. La invención también hace el sistema de la música vendido en el sonido del salón de muestras mejor también.
- Los sistemas competentes de la música tienen un rato más duro el venderse debido a la naturaleza desconocida de sus calidades de sonido.
- Esto es una invención para la cual hay en gran parte con todo una necesidad desconocida.
- Los anuncios pueden importunar simplemente algo como: "El sonido se ajusta a su hogar", o el "sintetizador se ajusta automáticamente a las calidades acústicas de su hogar", del etc....

El "analizador" ajusta el sistema según: "multiusos"/tipo música/uip/tipo uso, eg.: sonidos para alzar ventas, o para hacer que la gente siente en el país.

¿- cómo técnico posible? El método extraordinariamente importante para determinar patentabilidad. - El sistema se modifica vía cualquier regeneración consigue de sitio. Control de frecuencia auto. Como una característica Dolby estándar incorporada a productos.

- frecuencia intermedia quizá barata una vez que la viruta se convirtió
- El usuario puede también alteración sana del oscilador (del complemento) vía el K. del sistema.

Analizador del uno mismo de la acústica: Los productos relacionados existen a un cierto grado - solamente su grado de traslapo en esta invención en confuso. Estudiar la base de datos de la patente.

Funciones adicionales:

- "Analizador": para reducir el sistema del ruido (para los vecinos) (sistema ligado a las características adaptadas) alterará automáticamente los sonidos más penetrativos, eg.: un bajo más fuerte, sacando los elementos más ásperos (que reducen el bajo).

- Hacer una búsqueda de la palabra clave para KN (invención) con el "synth". Eg.: para los usos.

Cómo trabajos:

- D1 (diagrama uno): diversos micrófonos - > analizador de sonidos = oscilador (c)
- D2: oscilador - > el sonido refleja de nuevo al "mic" = c (sonido analyzer1) = oscilador (ajustado por c; synth).

--Notas: 1: el analizador de sonidos intenta difundir en diversas frecuencias - > el analizar del interno qué resultados cumplen mejor requisitos según lo controlado cerca: (fabricante) banda, uip.

posicionador del altavoz 5E010:

Los principiantes u otros de las ayudas de la invención determinan la mejor colocación de sus altavoces sanos. Esto es una invención similar pero diversa. Utiliza ""/"del distancer GPS" para cuando el sistema analiza donde los altavoces deben ser colocados.

Provechoso para:

- determinación de las vendas con frecuencia nueva en las nuevas localizaciones

- distancia de altavoces de uno a en lo referente a tamaño/a dimensiones del tipo del sitio de construcción de la superficie del sitio (acústica (el despedir de sonidos)) es el via^ resuelto: medidas manuales/que afinan adentro del Info; electrónicamente determinado via^: "distancer", herramientas de medición de la distancia electrónica. (comúnmente disponibles en almacenes de hardware al por menor).

. - gente como quien para hacer a menudo ajustes a la acústica de su sitio (siente como usted tiene un nuevo sistema estéreo, y o nuevo sitio, para la mayor variedad).

D: 1tr = 2frequency despide de la pared = de 3receiver = de 4computer = de 5display/6printer/7speaker y o de balance/8 otro.

- copiado para mejorar el archivo 1.95 de N

=

OTD para D:

3access; cojín 2air; %artist 4/5/6/8; basic4567; cart4; clap4; composition4; date4; 1distancer (las unidades separadas del "tr" del lugar en ubicaciones claves del sitio/de la localización (esquinas) del sitio - ésta demuestran perímetros deseados/importantes, después el otro 1 " tr" medios = 4 " computadora", junto determina la distancia real); %interactive; locator1; 4mfh; %4mic; 4multi-user; 4notifier; 4osc; 4pi; portable; 4pp; 4remote; sonido analyzer%4; 4stereo; 4synth=analyzer (efectos de los synth alterables según la acústica del sitio (causada por el tamaño, la estructura, el tipo música); 4uk; 4uq; 4vc; el 4vr%; %4wa.

Estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U.:
Ninguna N relacionada encontró, con todo bajo impresión puede ser que exista.
analizador del uno mismo de la acústica 5E080: ()
- str babero 8.94: (analyz del ajuste del uno mismo) y audi.
--analyz del ajuste del uno mismo = 1 respuesta
- str APS 69 ' a 8.92: ((automático o uno mismo) adj3 (ajustar o analyz)) y (audi o música)
- kilovatio: sonido

El uno mismo del sistema analiza la mejor síntesis para la acústica del sitio/del pasillo. Cómo trabajos: Los micrófonos analizan los sonidos emitidos que consideran cómo los sonidos reflejan de las paredes del sitio, tamaño del sitio, tipo música.

- OTD D: Este N (invención) sistema () de sonidos de sitio/C del analizador (la automatización del `adapta las características seleccionadas por el usuario) =

ANALIZADOR (); CARRO (); M (); MIC (); MULTIUSOS (); OSCILADOR (); Banda (); ANALIZADOR DE SONIDOS (); SYNTH (); UIP ().

- trabajos con la venda sin hilos de la música 5E090.

- OTD D2: Este ~ C del sistema de N (invención) (sistema ligado a las características adaptadas) () (la automatización del `adapta las características seleccionadas por el usuario) =

ACCESO (); ANALIZADOR (donde colocar altavoces, cómo fijar los ajustes del EL del oscilador (adaptado electrónicamente) (según lo determinado por el analizador)); AP (estéreo); BALANCE (); CÁMARA (); CARRO (); COMPOSICIÓN (manera de: 1] grabó de antemano el fabricante registrado música (CD, cinta,)/2] u de la memoria usando su sistema que compone, = determina cómo el sistema sano del ajuste del oscilador se debe analizar); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (los altavoces del oscilador = el analizador del mic = de sonidos = el sistema ajusta cómo el oscilador puede hacer mejor ir saliente); MQ (para los gustos del usuario (más o menos bajo, uip)); MULTIUSOS (cada u tiene poseer ajustes preferred); NR (cuando el sonido se puede mejorar más lejos); OSCILADOR (); Banda (); Q (); R (la computadora teledirigida del `se adapta ligando a las características asociadas) (); CUENTA (estudios del analizador de sonidos cómo el buen sonido está vía circunstancias differenting; w5); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (analizador); DISCURSO (); ESTADO (analizador); ESTÉREO (); SYNTH (); UIP (); UQ (); VR (); WA ().

. OTD D: u (multi-usuarios) = este ~ del sistema de N (invención) (sistema ligado a las características adaptadas) () C =

=

. ACCESO: la manera de la cual se repiten los sonidos da lugar a la contraseña deseada.

. CARRO: calidades de sonido deseadas

. COMPOSICIÓN: dirige a usuario para componer los sonidos que se jugarán en los ambientes señalados (la idea que es que los sonidos originales de los cuales la síntesis puede ocurrir intrínsecamente sonarán mejores para ciertas localizaciones y los ajustes sociales que otros). El usuario puede vía de ensayo y error ver cómo el sistema sintetiza sonidos durante el proceso que compone.

. ANALIZADOR CONTENTO: analizando el contenido de los sonidos que son repetidos detrás

. COORDINADOR:

coordina muchos factores: mecanografiar la música, con el tipo ambiente, con el tipo humor deseado, con cómo diversas porciones de la música (instrumentos) son manejadas diferentemente por el sintetizador por ejemplo dando mayor énfasis a algunas piezas y en maneras diferentes.

. BASE DE DATOS: parte del analizador; algo tiene gusto de un DB de la historia sobre el cual el sistema pueda determinar cómo sintetizar. Coordina diversos pedazos de Info incluyendo elementos del DB. Los elementos de la base de datos incluyen:

- experiencia anterior del sistema
- diversos tamaño y tipo ambientes, eg.: hay 100 el tipo cuartos del tamaño
- humores deseados

. DISTANCER: El usuario de la distancia es de los resultados del sistema en sonidos de diferenciación. El balanceador puede también balancear los altavoces según la localización del oyente principal, o si hay oyentes múltiples, el sistema hace un promedio hacia fuera de la localización central para todos los oyentes cada uno que tiene un dispositivo transmisible el señalar de su localización.

- el distancer y el balanceador no son parte de este contrato. Los competidores probablemente están trabajando secretamente en este aspecto. Info incluido adjunto para su revisión. Estas piezas se pudieron describir en la solicitud de patente sin embargo con una cierta ocasión de conseguir la protección de la patente para ellos en una escala limitada.

. EDUC: educación musical %

. EGH (la educación consigue más dificilmente): se aplica a la clase particular

. ENTRETENER:

. % del JUEGO: [persianas dobladas] conjetura de los jugadores qué sitio en [casa] adentro se basan en las calidades de sonido.

. GUÍA: demuestra cómo diversas calidades acústicas se pueden obtener dentro de parámetros señalados.

. INTERACTIVO: el sistema obra recíprocamente con los sonidos que vienen de otras fuentes (dispositivos musicales, % del ruido del ambiente como tráfico).

. MEDIOS MULTI:

. MULTIUSOS: sonidos adaptados a los gustos de usuarios individuales.

. NOTIFICADOR: este sistema es una manera de la cual los notificadores salientes de los sonidos (alarmas) se adaptan a la situación.

. ORDEN Y SINCRONIZACIÓN: la orden y la sincronización de las influencias de los sonidos cómo se sintetizan

. OSCILADOR (altavoces):

. PREDECIR:

. Banda (programa): cómo los sonidos sintetizaron [a los gustos del usuario]

. Picosegundo-Zona:
- la proximidad de fuentes sanas múltiples se considera
- la localización de la fuente sana en lo referente a la localización de: paredes, distancia de los oyentes, la localización de ventanas de quienes los sonidos puede entrar.

. PREGUNTA: pide que el usuario afine en la información del tamaño, eg.: tamaño del sitio, localización de altavoces en lo referente a las paredes

. TELEDIRIGIDO:

. REACCIONAR: el sistema reacciona a cómo su analizador de sonidos interpreta sonidos es oído por sí mismo.

. CUENTA: anota todos los elementos que influencian fuente sana y aparato de lectura sano

. LAS BÚSQUEDAS Y REACCIONAN: busca qué sonidos de la prueba deben ser enviados, y reacciona a cómo el analizador de sonidos piensa.

. SENSOR: sensor % de los sonidos

. ANALIZADOR DE SONIDOS:

. ESTADO: analiza estados cambiantes como: mecanografiar la música que es jugada y cómo cada pedazo necesita ser sintetizado diferentemente

. SINTETIZADOR:

. UIP-Adaptar:

. ANALIZADOR VISUAL: el dispositivo puede considerar las dimensiones del tamaño. Pudo tener laser como los sensores la determinación de tamaño del sitio.

. VR (realidad virtual):

. WA (caminata alrededor): para el sonido portable la generación de los dispositivos jugó en el aire abierto.

Los sonidos de la prueba usados para determinar las calidades acústicas del área pueden estar adentro y o gama de audiencia humana del exterior.

Archivo: Musical/5E080B

ANALIZADOR del UNO MISMO de la ACÚSTICA 5E080B

Sobre la visión: El sistema audio se ajusta a cada situación. La estereofonia emite sonidos diferentemente según las calidades acústicas del cuarto, tales como su tamaño, y tipos de materiales reflexivos sanos. <3, (Bob 4-Pat verde, 3 mk),

Una mejora sobre la patente 4.306.113 de los E.E.U.U. de Rogelio Morton en Penfield, NY. Patente fijada en www.uspto.gov que la patente tiene o es probablemente alrededor expirar. Su invención se centra generalmente apenas en la coloración sana de cada componente de los sonidos y del cuarto.

Cómo trabaja: El analizador de sonidos dibuja/ve un cuadro del cuarto a través de ondas acústicas, como cómo un palo ve sin los ojos. Los micrófonos analizan sonidos emitidos en el cuarto. Estudia cómo los sonidos reflejan de las paredes del sitio. Los ajustes se hacen según la fuente sana, y el cuarto de la difusión.

-

Adaptado a cada usuario - demanda:

. Se consideran las preferencias de cada oyente. Las calidades de sonido se adaptan a los gustos de cada persona. Cuando es múltiple la gente cuyas preferencias se almacenan en el sistema, sucede estar en el cuarto junta; el sistema comprometerá haciendo un promedio hacia fuera de las preferencias de cada oyente, para llegar las ondas acústicas que hacen un promedio hacia fuera qué cada persona quiere.

-

Efecto psicologico - demanda:

. El efecto psicologico deseado se puede también calcular por el sistema, así que la salida audio también considera cómo el efecto deseado, se puede emitir para el tipo sonido en el cuarto señalado.

. Los efectos incluyen: armonía, vivacidad, tristeza, energía conmovedora (mayor base), vigilancia y precaución (agudas), alegría.

-

Fuente sana considerada - demanda?:

La emisión de sonidos se ajusta según las calidades de sonido que son emitidas. El sistema puede pre-analizar sonidos antes de la difusión; o ajustar los sonidos como se emiten.

-

Detalles:

. La coloración sana es el término para la degradación de la calidad de sonido oída.

. Trabajos con cualquie sistema de emisión sano, y cualquie tipo de música o de sonido.

. Las ayudas substituyen la necesidad de ingenieros sanos profesionales, y su equipo para determinar cómo alterar la coloración sana.

Es decir: Uno mismo analiza la mejor síntesis para la acústica del cuarto.

. Ciertas frecuencias sanas se aumentan/se disminuyen, según las características de la fuente sana/del ambiente.

-

% del mago sugiere dónde colocar los altavoces estéreos:

. (simultáneamente) cada analizador de sonidos se coloca en superior cada altavoz.

. un método simplificado es necesario para los usuarios.

-

- El "analizador" ajusta el sistema según: "multiusos"/tipo música/uip/tipo uso, eg.: sonidos para alzar ventas, o para hacer que la gente siente en el país.

¿- cómo técnico posible? El método extraordinariamente importante para determinar patentabilidad. - El sistema se modifica vía cualquier regeneración consigue de sitio. Control de frecuencia auto. Como una característica Dolby estándar incorporada a productos.

- frecuencia intermedia quizá barata una vez que la viruta se convirtió

- El usuario puede también alteración sana del oscilador (del complemento) vía el K. del sistema.

-

Funciones adicionales:

- "Analizador": para reducir el sistema del ruido (para los vecinos) alterará automáticamente los sonidos más penetrativos, eg.: un bajo más fuerte, sacando los elementos más ásperos (que reducen el bajo).

- Hacer una búsqueda de la palabra clave para KN (invención) con el "synth". Eg.: para los usos.

-

Cómo trabajos: D1 (diagrama uno): diversos micrófonos - > analizador de sonidos = oscilador (c)

- D2: oscilador - > el sonido refleja de nuevo al "mic" = c (sonido analyzer1) = oscilador (ajustado por c; synth).

--Notas: 1: el analizador de sonidos intenta difundir en diversas frecuencias - > el analizar del interno qué resultados cumplen mejor requisitos según lo controlado cerca: (fabricante) banda, uip.

posicionador del altavoz 5E010:

Los principiantes u otros de las ayudas de la invención determinan la mejor colocación de sus altavoces sanos. Esto es una demanda similar pero diversa de la invención. Utiliza ""/"del distancer GPS" para cuando el sistema analiza donde los altavoces deben ser colocados.

Archivo: La categoría/MU/9J compone

El Musical bloquea 9J010

™ mágico de los bloques huecos 9J01

Manera fácil para que usuarios tengan acceso a la composición musical.

Versiones del soporte físico y del programa:

Cada combinación genera diversos sonidos. Los sonidos pueden diferenciar grandemente o lentamente (según lo programado o controlado por el usuario), con cada conexión del bloque.

- Versión del programa: poner los bloques al lado de, o (en parte) el traslapo.

- Educativo': oír y ver (representación visual (el color)) los cambios como pedazos se atan/separado (uno a la vez)

Cada pedazo [bloque conectable del `] puede representar:

- instrumentos musicales
- cantantes
- pistas de cualquier sonido, música, voz, o función (electrónica) (para el uso non-musical, funcionando como "Peter" 1D).
- volumen, echada, base, triple, balance', colores/luces (que cambian a la música (golpe del al).

`Que se adapta:

- función adaptable del `que se adapta al usuario. Hay un efecto sinérgico cuando los otros bloques obran recíprocamente con uno a y el bloque que modifica para requisitos particulares = cada bloque algorítmico efectúa los otros bloques [y los promedios/los genios/realza la otra influencia].
- otras circunstancias influencian el arreglo para requisitos particulares, eg.: el analizador del comportamiento determina a usuario podría oír sonidos en una orden y una sincronización señaladas [crear el efecto deseado/la dirección puesta en palabras oferta/dar [las recompensas del oscilador del `] basadas en las cuentas para cómo los bloques están conectados].

Las rúbricas cubican como funciones:

- algunas piezas pudieron solamente caber/fósforo con las piezas señaladas, o los puntos de conexión (de unidades principales).
- cada cambio de las piezas (iguales) genera diverso OSCILADOR.

+ <3, 3, 4, 4 $ (versión del hw) >

3C292 (número anterior) cada combinación ha señalado "reacciones":] sonidos interesantes 1; 2] permite el "acceso"; 3] colores de los cambios

. Qué "señaló" las combinaciones hacen:

+-sounds

+-Access: crea el "acceso necesario" (para el "juego"):

--Versión del hardware: combinación "señalada" (emite frecuencia correcta).

--Versión del programa: acceder en la computadora o para imágenes" del "artista" del "juego" el when= "en la "pantalla " = se alinean según lo "señalado".

- Memoria "juego". Cómo y donde las "imágenes" caben el together= "cuentas" señala.

. - otras "reacciones": las palabras, las luces, las vibraciones, combinaciones del etc. ciertas de ciertos modelos pueden moverse: como una robusteza del juguete (caminando, rodando, arrastrándose en piso, saltando, vibrando, baile, meneando). De cualquie otra función del "notificador" o de la "hospitalidad" o del "juego " %.

- ranura de los pedazos en uno a que crea efectos según qué está conectada, eg.: si los pedazos se ponen juntos que crean una muñeca, puede decir que "hola" o "mi nombre es Juan" y camina, juntado un perro que "raspa" y mueve su cola. Otras combinaciones pudieron hacer solamente un sonido (o la visión sobre su o unidad de "S" de "R").

Cubo musical de las rúbricas -4C140:

Conseguir en la combinación correcta y los sonidos y o las luces

- mientras que usted consigue (más cercano a la terminación deseada) un sistema más caliente puede dar señales si usted se está enfriando más caliente o sonando/iluminación

. - relacionado con 3C200, 3C290

. - cada parte puede tener muchas diversas acciones posibles dependiendo de la combinación con otras piezas

. - las versiones simples del producto pueden vender a los niños

- cada bloque identifica los otros vía: TR sin hilos (transmite); código del TR (transmite) de cada pedazo (código de la identidad del pedazo #1 - > rc de la parte #2 - > analizador (c) - > oscilador/función).

- Una versión más barata del interruptor (el software se adapta ligando a las características asociadas) (para los cabritos). Todas las actividades descritas en esta N se pueden replegar en el interruptor/%VR. Gráficos de color. Multi-media. CD-ROM. M.

- los pedazos se pueden ligar vía: encajándose a presión hacia uno a (como)/imán de los bloques de Lego. Mientras que junto, sus puntos de contacto del EL (adaptado electrónicamente) pueden al tr=rc (tocando).

. - los puntos de conexión pueden ser (alterado por u) tan solamente ciertos pedazos puede caber en (ciertas maneras (múltiples)).

. - Los pedazos de todas las formas pueden ser separados y reatados en formas interesantes; dando por resultado las imágenes interesantes (no restringidas para atar con alambre formas), eg.: bloques, esferas, prismas...

+ se relaciona con 1D010, en que la mayoría las partes IMI puede ser un bloque conectable con otros bloques IMI. Esta idea conecta potencialmente todo el KN.

. - los pedazos puestos juntos pueden ser cualquier KN (invención) y o IMI parte (código), con la función resultante.

- puede haber un sonido (oscilador) siempre que (cualesquiera/seguro) se aten los pedazos/tocando (durante el proceso de la asamblea. Ventaja: los dice a u ((in-) correctamente) los pedazos colindados.

- OTD: "R"; "S"; "C"; pp (programas del usuario todos los tipos de efectos deseados); P.M.; Reino Unido; interactivo; educ; juguete; todos; juego; portable; bop; oscilador; vc; egh; cuenta; tgh; carro; cp.

KN donde está aspecto el audio importante de la característica

Archivo: DJ audio KN

No comprobó carpetas de A o de B todavía

< (3.5-pat, 2.5 mk), los terminales sin hilos de 3.5> 5E090 conectan con el sistema central.
Venda sin hilos de la música: El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades portables múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. La mayor portabilidad, libertad, suena de fabricación de la experimentación, una grabación más barata.
- Mercado limitado: apunta a jóvenes - el mercado grande, "quiere ser ejecutantes", los profesionales no necesitan ni utilizan a personal sano profesional.
- el sistema puede también ser un acompañamiento (necesitar a pocos jugadores); no limitado a la fijación/a alterar su música pobre.
- el señal-proceso de la parte es qué haría esto patentable
- puede reducir al volumen de jugadores particulares.
- "cojín del aire"

Otros usos: cualquie portable N ()/parte de la invención del sistema de N.
- "juego": cada jugador conectó vía (radio) el TR (transmite) con la C. central.
- "c portable": cuadernos
- t = sistema principal de t recepcionista (automático) (de w, KN relacionado)

Terminología:
- unidades/nódulos externos: las unidades móviles/portables que están conectadas con el sistema central (c=brain) vía (radio) el tr.

OTD D2: (Múltiplo) u (multi-usuarios) = unidad externa/este ~ C del sistema de N (sistema ligado a las características adaptadas) (5E090) (la automatización del `adapta las características seleccionadas por el usuario) =
ACCESO (); ANALIZADOR (cómo obra recíprocamente cada unidad externa w (con - el nivel de controles del adaptador de interacción) y o la central c); ARTISTA (fabricación del arte del grupo - cada u tiene poseer la unidad que agrega al arte del grupo, eg.: 1] cada jugador dado solamente ciertos colores/formas/modos de

escritura/los plazos - en cuál para hacer lo que (arte, el compose%) él desea.); BALANCE (los promedios/consideran del sistema cada localización de u/player.); CEREBRO (determina son qué piezas externas: comparativamente más importante para las funciones señaladas que consideran (w5); para comunicar w que partes del sistema, eg.: unidades externas #2 y #99 y c central; volumen audio que se oirá por cada u; volumen audio que debe ser generado (a la otra u) por cada unidad externa); C (cada unidad externa puede asumir el control (muchos de) las funciones de c central vía: tener acceso, consenso de la otra unidad externa (su u), tds (franja horaria) de esa unidad, uip/cuenta = "juego": quién está ganando el juego); CÁMARA (); COMPOSICIÓN (palillo 5E020, Yamaha Miburi); DISTANCER (); EDUC (que aprende el terminal); K (); M (); MQ (); MULTIUSOS (c central distingue entre diversas unidades externas vía: acceso/uip/analizador); CUENTA (juego, uip que se convierte); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); TR (transmite) (sin hilos, celular, infrarrojo); U (jugadores, receptores de servicios/de transmisiones (la unidad externa puede ser (bastante) voz pasiva)); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

OTD D3: [(Cada uno) la unidad externa tiene tales funciones) (que efectúan el sistema entero) según lo enumerado en piezas siguientes]: C (5E090) =
ACCESO (); %ANALYZER (); ARTISTA (); BVA (); BALANCE (); CÁMARA (); CARRO (); COMPOSICIÓN (); EDUC (); GPS (); K (); M (); MIC (); MES (); RATÓN (); MQ (); MULTIUSOS (); nr (nuestros notificadores no garantizados) (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (la computadora teledirigida del 'se adapta ligando a las características asociadas) (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); WA ().

Pieza musical del UIP: la determinación del usuario de los sonidos que el likes= se da el trato preferente (uip-adaptaron proceso de selección) está dirigiendo a usuario.

Archivo: Misceláneo musical/audio
MISCELÁNEO AUDIO

Introducción: Atado especialmente a las piezas: Analizador de sonidos, OSCILADOR, notificador. Las secciones con números de la invención tenían mejoras llevadas a cabo en este archivo - el mismo número puede tener descripciones centrales a otra parte.

el SONIDO SALIENTE de ++ 6J070 AJUSTA Al TIPO OCURRENCIA: Facilita la manera de la cual los oyentes pueden oír. Los sonidos generados en nivel los' sonidos ambientales previstos existentes los no enmascaran fácilmente. El proceso sano saliente se altera para maximizar la comprensión.

General:

- Diferencias de interpretación del oyente en tipos de los sonidos: Diferencias [incluso matices] en sounds= [subconsciente] indicar al listeners= el estado/la cuenta de la situación.
- El tipo sonido se corrige para ser oído/para ser comprendido mejor en ambiente:
--el 'analizador de sonidos determina los sonidos existentes [que vienen de otro las fuentes] y sintetizan [corrige] sus sonidos por consiguiente.
---eg.: los ajustes hicieron al volumen, base, triple, palabra % bien escogido, echada; [carencia de] sonido del fondo; humor de sonidos; etc.
- Información entera leída de la pieza del sintetizador y del oscilador. Porciones de esta invención duplicó y se amplió en estas piezas.
--Porciones de este KN (invención) también de la partición vieja del OSCILADOR.
- Hay [automático] pausa [5 segundos] entre cada mensaje entrega. Si se entregan los mensajes múltiples [para la entrega simultánea], sistema los sostendrá según lo señalado.
- La 'cuenta da preferencia a la colocación de mensajes de mayor importancia [uip, estado].
--Las preferencias incluyen:
qué mensaje se pone primero; cómo se sintetiza el mensaje; los mensajes [previos] jugaron solamente cuando estaban necesitados [por requerimiento cerca analizador].

Archivo: CategoryNew/

- Los sonidos pueden estar bajo la forma de tonos de la voz/que es discurso/fondo o sonidos asociados. Todo el estò no puede efectuar necesario el texto real de las palabras habladas.
- El can= del UIP ayuda con eficacia a sonidos del fósforo del usuario a los gustos/ [cultural o experimentalmente limitado] levels= de la comprensibilidad dando por resultado un humor más positivo en oyente/más eficaz manera de comunicación, tal como el sistema que es más usuario del ` friendly'.
. --en esta edad de información, ahorra tiempo y alboroto a importar, transportando la información sobre un menos linear [blanco y el negro, o sí o no, o forma articulada]

Tipos de interferencia del ruido:

- maquinaria:
impresoras, construcción, hospitalidad electrónica [radio, música, TV], elevadores, escaleras móviles, aspiradores
- tráfico
- conversaciones de la otra gente
- otros avisos [hechos vía el intercomunicador o el otro oscilador]
- teléfonos del altavoz
- misceláneo:
clanging y golpeando, o el otro [humano generado] ruido normal; animales [pájaros, raspando].

USOS:

ESTACIONES DE CARRIL Y AEROPUERTOS Y OTRAS ÁREAS RUIDOSAS:
--aumentos del volumen cuando hay mayor interferencia de ruido.
--el oscilador lleva a cabo la información hasta que el ruido pase [después de sentidos del analizador de sonidos cuando se ha alcanzado el pico [el volumen], entonces acciona el oscilador cuando el volumen ha caído más adelante [el 80%].
--el comenzar y la terminación de vehículos o del equipo ruidosos pueden estar adentro el database= pero los cambios del programa informático ocurre y los tiempos reales del ruido pueden diferenciar. Por lo tanto, este sistema puede cualquiera sobre paseo tal programa, o esté inversamente sobre montado por eso sistema.
- Los aumentos del volumen solamente en área con mayor ruido [interferencia].
LENGUA HABLADA:
- los vehículos con mucha gente de los grupos de lengua señalados pueden dar más preferencia a las comunicaciones en el apropiado lengua.
. - eg: los planos que llegan de Copenhague en Barcelona pueden ser saludados [automáticamente] primero en español, entonces danés, entonces inglés. El español es seguido normalmente por inglés, entonces franceses, entonces Italiano, entonces alemán...
. - lengua hablada determinada vía: donde abultar de boletos preferencia comprada, o de la lengua del sostenedor del boleto [entrado en programa]; ciudades del origen del vehículo; también la gente de la probabilidad

de tales países hablar la lengua materna, eg.: más aviadores
de Tokio a Madrid hablar inglés que español, y si mitad
los aviadores son japoneses y la otra mitad es Británicos, ingleses
darse la mayor prioridad.

SILENCIADOR DE LOS SONIDOS: - Los sonidos de interferencia pueden ser enmascarados vía [las técnicas existentes - dispositivos de cancelación sanos] [enfrente de los cuales emitir las frecuencias sanas al sonido que debe ser enmascarado.
- El sonido del oscilador sin embargo sin embargo se sintetiza para estar en a frecuencia con excepción del sonido indeseado, o el contrario sonido de la frecuencia. Es decir la comunicación deseada consigue como poca interferencia del sonido indeseado y del sonido el bloqueo de proceso, o cualquier otra cosa puede hacer el sonido deseado a [claramente] se oye/se comprende/se recuerda.

MAXIMIZACIÓN DE LA RETENCIÓN DEL USUARIO:
- Los estudios son necesarios demostrar qué sonidos dan lugar a arriba/ mejor:
--retención de la memoria en usuario.
--utilización de la información proporcionada. Algunos sonidos hacen a usuarios más alarma [como el café hace al wakefulness].
--los resultados de estos estudios se utilizan para maximizar deseado resultados en oyentes/usuarios.

UIP - MAXIMIZACIÓN DE SÚPLICA SANA:
- La gente de diversas regiones prefiere sonidos en sonido señalado patrones, eg.: Los franceses tienen gusto de la comunicación con más énfasis encendido el nasal; Los ciudadanos de los E.E.U.U. del sureste tienen gusto de más "sonido vibrante", mientras que los Británicos como torcedura una "más encantadora". [ha ha]
--Lo que la lengua, tal como inglés que apunta a natural francés el speakers= los sonidos se sintetiza por consiguiente. En otro las palabras, las palabras se hacen para sonar algo como el de a extranjero que habla una segunda lengua [sin necesario el sonar como un extranjero] - se encuentra una tierra de en medio.
- Los anunciadores en aeropuertos hacen probablemente esto inconsciente, por ejemplo al anunciar vuelos en la lengua local, a Londres o a París o Nueva York.

EL SINTETIZADOR COMUNICA EN MODOS CON EXCEPCIÓN DE PALABRAS:
- las formas de diferenciación [sutiles] de oscilador del estado pueden comunicar:
'multiusos [se está tratando quién]; dirección a la cual oyente
se impulsa para prestar la atención o para ser notificado alrededor; nivel de urgencia
- se diseñan las alteraciones sanas [vía corregir]:
--fósforo uip
--psicologicamente súplica al oyente/al fósforo el tipo situación
[psicologicamente]/resultado en el psicologico señalada
reacción [alarma del coche de bomberos que despierta a una persona para arriba de la manera hace,
mientras que se distingue de la policía etc].
- Valor: en el mundo del alboroto de la información, el tono solamente puede
transportar: nivelar de la importancia [estado, cuenta]. Mejor permite
oyentes a enfocarse en cuáles son necesarios, contra la adaptación hacia fuera todo de audio
comunicación.

+ 6J080: NOTIFICACIÓN DE LA SIRENA DEL VEHÍCULO DE LA EMERGENCIA: En cada coche: Para reducir al mínimo disturbio a la población en general, las sirenas de cualquier tipo de vehículo municipal se transmiten vía ondas (terminantemente) a los coches delante de él en el camino. ¿Nivel de viabilidad técnica? Los sonidos agudos son más direccionales.
- El GPS permitió la sirena: cuando las intersecciones inminentes/que entran él pueden aumentar el volumen; punto a las calles secundarias cuando allí. El conductor no necesita centrarse en el aumento/que cambia el sonido.
--El mapa del GPS demuestra qué edificios/otras obstrucciones sanas existir, y la sirena reacciona por consiguiente. El analizador de sonidos de la sirena determina cómo está sonando.
- Las sirenas pueden también ser cualquier oscilador:
- Won't molesta a non-drivers en área.
--los sensores/los receptores del `en la selección up/amplify [de los coches] suenan/señalan [otros no pudieron conseguir/oyen] [para no disturbar].
--Puesto que muchos vehículos requieren esta invención para que trabaje,
los gobiernos pudieron: comenzar a requerir tal instalación pronto, y
entonces comenzar a caer el volumen del sonido de la difusión a
el ambiente general como más coches se equipa correctamente para recibir
las transmisiones.
- Los receptores del coche pueden también ser para utilizado/en la conjunción
con:
--hospitalidad de la música: tal consigue parado mientras que la notificación

se hace el sonido. Ver las invenciones relacionadas nivel de A o de B en apenas esto aspecto.

Alteraciones de la señal de tráfico:

- Altera automáticamente las señales de tráfico a (la emergencia/señalado) ventaja del vehículo. UIP.

General:

Los conductores del vehículo de la emergencia [poder] [automáticamente] señalan su transmisores en la dirección que desean viajar. Esto ayuda reducir la confusión: alertando conductores no en su trayectoria; alteración semáforos no en su trayectoria.

--Si hay una pregunta en cuanto a la trayectoria del conductor, sistema puede notificar solamente conductores, o notificar las señales de tráfico con una cuenta sobre [conductor de la ocasión del 40%] cruzará su trayectoria.

--El transmisor tiene una distancia máxima [distancer] antes de él luces o conductores de las alarmas.

- La difusión del vehículo [de la emergencia] puede también permitir el recibir [hospital] saber el tiempo de acercamiento previsto, reduciendo las tareas requerido por el paciente de ayuda acompañante de la ambulancia.

- Otros usos del vehículo:

--el soplar diario del cuerno de coche. Tales pudieron tener una difusión más corta gama.

. --como radio de los CB, permitir que los coches próximos hablen con uno a. Pero esperanzadamente no gritar en uno a... Ha ha.

Los carros de entrega que se acercan al edificio para decir a recipiente deben venir abajo para recoger el paquete [tiempo del conductor del ahorro necesario zumbar a dueño y esperar cualquier respuesta]. Da la hora para el recipiente para conseguirse listos.

- entrega de paquetes, correo, cargo...

- el ahorro en costes aquí solamente puede hacerlo de mérito pagar recipientes ciertos/todos los posibles para tener tal receptor.

- [La entrega/coge] el transmisor/el receptor del usuario [del vehículo] puede saber/conjetura/aprende/recibe:

--si el sistema del recipiente es activo

--cuaesquiera [mensajes de la instrucción de la entrega] del recipiente.

selector de la calidad de la radiofrecuencia 7J11: El usuario selecciona un nivel de la preferencia para la calidad de la receptividad que tolerarán personalmente, por ejemplo las estaciones anotadas entre "1" (la mejor recepción) abajo a "10". La tolerancia mayor es del usuario mayor es el número de estaciones de las cuales elegir.

- La invención es la más útil cuando el usuario carece bastante selección o está dispuesta a comprometer en la calidad del sonido para una estación más deseable [encontrada por el modo de búsqueda de la radio que selecciona estaciones [todos] con la cuenta señalada de la tolerancia].
- Se aplica a todos los tipos de otras formas de: recepción/comunicación/transmisión. Ejemplos:
--teléfono móvil
--línea comunicación puesta a tierra [en países con la recepción pobre]
- Relacionado en concepto con:
--los motores de la búsqueda de la tela tienen gusto de yahoo.com
--invención del kn del teléfono celular que advierte cuándo la frecuencia de la comunicación es alrededor conseguir peor o mejor, basado en la localización
- Piezas: UIP; oscilador; analizador de sonidos

GRABACIONES MINIATURIZADAS 3E-090 de SONIDOS:
Cuadro alguien que pone en sus dispositivos del bolsillo el tamaño de las monedas del dinero, que son música previa. Llevar fácilmente éstos alrededor. No rasguñan y el título del pedazo está en el exterior. Para los detalles en contenido, eg.: en los títulos y los tiempos el jugar para cada pedazo, pegar el pedazo en el jugador y ver la "exhibición".
. - puede estar en todos los tipos de formas: los discos planos, anillos de espuma, cubos, bolas %-such pueden también llevar a cabo la memoria para el software, las bases de datos, los números del teléfono, las instrucciones, los mapas y los datos para el GPS.

conjetura de ++ 2D-220 el sonido: Los sonidos comunes se sintetizan, haciéndolos más duros y más duros conjeturar cuáles son.

Uso como juego de las curiosidades. También en la educación de usuarios, eg.: aprendizaje de sonidos del equipo mecánico disfuncional.

El usuario compra cartuchos de sonidos. Una "búsqueda trivial" de sonidos. También mime del juego: los socios intentan decirse qué objeto están intentando transportar vía sonidos que componen en el sistema. Mercado a ésos con la intuición y la memoria pobre de hechos triviales.

- el usuario puede también registrar para poseer sonidos y dejó otros conjeturar

- D: carro (tipos de los sonidos) = oscilador/synth (mic, k) = c = k (jugadores k en el tipo sonido que piensan que es, y cada jugador consigue "anotado" en el "juego").

- D1: [c - > (S (la pantalla y el analizador del `adaptan el menú para las necesidades actuales) de los multi-usuarios' (tipo objeto de las demostraciones a retratar en juego del mime)] = componer/oscilador.

-2D-221

- versión simple: jugar la cinta en estereofonia, el manual dice cuáles es cada número sano verbalmente anunciado.

- OTD:

CARRO: (sonidos); COMPOSICIÓN: (u puede componer los sonidos, dejando otros conjeturar cuáles es - algo como jugar mime; crear adrede los sonidos para ""/"" del juego/"de la hospitalidad educación"); ENTRETENER: (); K: (r); MFH: (base de datos de los sonidos); MULTIUSOS: (el sistema ajusta al nivel de la habilidad de cada jugador en el juego; uip-adaptar); NOTIFICADOR: (cuando la respuesta correcta, incorrecta, o %nearly correcto); OSCILADOR: (); Banda: (synth, oscilador, avisos, reglas, sistema de la cuenta, tipo hardware (oscilador) usado); Q: (hacer las preguntas del sistema para conseguir indirectas en cuáles es el sonido, limitado quizá por el número de preguntas que se pueden hacer); S: (); CUENTA: (quién está ganando); SYNTH: (); Teléfono: (diversos jugadores pueden jugar sobre línea de t; d: sistema = t = sistema); UIP: (el sistema compensa el tipo de respuestas que el usuario aparece conseguir correctamente - > los sonidos futuros del interno son más fáciles o más duros para el jugador (según la banda)); WA: (este sistema (sistema ligado a las características adaptadas) es portable).

. 9/96:

- conjeturando el árbol de familia correcto del organismo: se permite al jugador conjeturar las subespecies/otros sonidos de la especie que siguen.

- "Sonido/"imagen"" de w que obra recíprocamente (con - el nivel de controles del adaptador de interacción) del organismo: el jugador debe saber el sonido del sexo opuesto después de que oiga un sound= para conseguir la buena "cuenta". El jugador utiliza a "compositor" para generar sonidos deseados.

. Ver:

Selector de los sonidos -2D-281: El sistema selecciona hacia fuera frecuencias sanas particulares así que el usuario puede magnificar los sonidos deseados para el análisis.

. - Conjeturar el juego del artículo: en carpeta de la pieza del juego. 2D221, 2D240.

Archivo: Musical/juguete del disparador

juguete del activador de los sonidos 3C481:

El accionar del sonido en un objeto acciona sonidos en otros objetos. Puede crear reacciones en cadena multi. El sonido musical de un dispositivo puede accionar otros pedazos para seguir; dependiendo de cómo se activa el pedazo inicial.

Existe en forma básica.

- Los objetos secundarios cogen en los sonidos/las transmisiones (RF/pulsos eléctricos también) del objeto de la fuente. Ejemplo: La muñeca grita, después la muñeca de la mama dice que "no gritar". Componer la' música.

-

. Sonar que acciona el otro juguete de los sonidos:

+ comercialización: los armas del juguete son menos populares en los años 90, por lo tanto foco en usos del no-arma. ¡Ser creativo!

- El objeto secundario puede continuar la reacción en cadena a los objetos del tercer nivel, entonces cuarto nivel, y así sucesivamente.

- El transmisor de la onda de aire del juguete activa los sonidos de otros juguetes. Ejemplos: La leña del arma del juguete causa el fuego enemigo; la granada que lanza activa sonidos estereofónicos.

. - Jugar el arma cuando está presionado hace su propio sonido, pero por otra parte da lugar a: sonido de otros armas en las localizaciones de la distancia (de altavoz de "R"); el sonido de las personas que son golpeadas por el fuego del arma; sonidos del vidrio, del etc siendo destruido.

- sensor" de la granada del juguete el "transmite la señal cuando golpea la tierra (sensor de la vibración o de movimiento), o el niño puede presionar el contador de tiempo antes de lanzar que entonces active el sonido de la estereofonia alejada.

. - Utiliza 1C-250, y 1C-251.

. - La colocación de objetos puede ser importante, en que pueden necesitar estar en cierta localización ("localizador", "balanceador") antes de poder a los sonidos de la transmisión/recepción.

- OTD: "R"; "S"; "C"; pp; P.M.; Reino Unido; fecha; interactivo; educ; juguete; todos; "mic"; portable; "M"; punto de ebullición; SP; oscilador; vc; egh; cuenta; tgh; md; carro; cp; uip; carácter; distancer; receptor acústico del movimiento; flotador; cc; inclinación; composición.

- cualquier cosa descrita en la partición de la "reacción".

- EXISTE en forma básica. Juguete del pesebre de la activación del múltiplo de la patente 4973286 de los E.E.U.U. de Mattel.

Movido desde pieza de S&R el 1.06.

El material del apretón se puede hacer suavidad otra vez si el usuario desea alterar el tipo apretón, tales cambios realizados vía: calentando o colocando la arcilla endurecida tener gusto del material en (líquido) solución (química) (del agua). El material pudo permanecer siempre semi-soft para mejorar la capacidad del usuario de sostenerse sobre la herramienta vía maneras de diferenciación. También para la gente con capacidades deterioradas del apretón, ésos con artritis.

- El usuario puede formar el apretón como la arcilla de cualquier manera, o basado terminantemente en las impresiones hechas de la manija de la tenencia.

- crea un mejor apretón; nueva herramienta de comercialización; provechoso para las manos deformidas; crea una diversa sensación mientras que escribe

- este material flexible (en la pieza de la salida del barril) se puede hacer para endurecer el by^: yéndose en aire abierto por algún tiempo después de que el paquete sellado de apertura/el irse en sol/la hornada/la aplicación de un producto químico por el cepillo, sumergiendo, rocíe/colocando en agua hirvienda.

--puede permanecer (perpetuo) suave, así que iguales/los usuarios múltiples pueden utilizar la pluma y tener/hacer diversos apretones.

. --el instrumento sí mismo de la escritura se diseña para nó destruct if/when entra en el contacto con estos elementos

- permite que los usuarios sostengan sus instrumentos de maneras únicas: sostener la pluma entre los dedos externos cuando la mano está en un puño/un asimiento entre el pulgar y el índice/etc. grandes para la sensación creativa mientras que pinta/dibujo.

- los usos alterables del apretón de la mano para el normal y la gente deteriorada mano incluyen: cambio de palillo del automóvil, otro manijas (cajón, perilla de puerta, puertas del armario, grifos de agua, tazas de café, tijeras, ventana (abrirse/cercano); silla de rueda, elementos que controlan de la cama automática; manija del teléfono; etc.

. - la sección del apretón puede venir en ciertas formas (pre-moldeadas) para los ajustes (interesantes), eg.: hace a usuario haber importado más creativo/más práctico, via^: . superficie espinosa de /bumpy; muchos topetones grandes/pequeños; curvaturas extrañas; posibilidades ilimitadas de la forma.

- el barril puede tomar la pluma/lápiz/los partes movibles del instrumento del cuchillo, permitiendo al usuario cambiar entre dos o más herramientas/adminículos usando el mismo barril.

- el punto de contacto donde el elemento del asidero resuelve el barril (eg.: el b=c) de las piezas puede tener superficie/material especiales así que u puede substituir c (when/if c consigue vieja/usuario quiere c (material del apretón) de diversas características.). Eg.: algo de un cojín de brillo/rought como sustancia se pega firmemente para dirigir, y se enreda con la arcilla como el material.

- o Info básicamente repetido: Las marcas de los dedos/de las huellas digitales son (temporalmente) se fueron en (sección del barril) donde la mano sostiene el cepillo de la pluma/del lápiz /marker/ (mecánico)/la aguja de la computadora.

- crea un mejor apretón; nueva herramienta de comercialización; provechoso para las manos deformidas; crea una diversa sensación mientras que escribe

- este material flexible (en la pieza de la salida del barril) se puede hacer para endurecer el by^: yéndose en aire abierto por algún tiempo después de que el paquete sellado de apertura/el irse en sol/la hornada/la aplicación de un producto químico por el cepillo, sumergiendo, rocíe/colocando en agua hirvienda.

--el instrumento sí mismo de la escritura se diseña para no destruct if/when entra en el contacto con estos elementos.

Archivo del extremo (6G-PL)
Archivo: Plástico y mecánico/6GE

Archivo 6GE

<Pat de $$: Cuestionable, 4>
+ bola 6G020 dentro del movimiento de la bola que retarda el dispositivo: Retarda el movimiento de la bola. Los usos limitados por la creatividad incluyen: productos químicos de dispensación, tinta (para el arte espontáneo del estilo), grasa; situaciones donde el efecto del balanceo se desea con una fuerza más gravitacional. Usos adicionales no todavía observados.
- esfera interna: una bola pesada dentro de la cáscara de la bola puede hacer la bola entera moverse más lentamente a través de (superficie pintada). Los grados de diferenciación de control de la bola se pueden hacer según las sustancias/los pesos dentro de la cáscara de la bola (insertada por u (multi-usuarios) o la frecuencia intermedia).
--la bola interna puede también dispensar la tinta
- una o más bolas dentro de la bola. La central la mayoría de la bola pudo ser sólida/hueco (llenado del material de dispensación). La bola media también se puede llenar iguales/de diverso material de dispensación, en golondrina de mar que el índice de emisión de elementos deseados efectuó por el índice del movimiento de la bola. Tener usos creativos seguramente.
- el punto de la dispensación está vía: agujeros/poros (a través de esfera (cada uno)). El punto de la dispersión puede utilizar otros métodos para el nivel que controla de flujo hacia fuera.
- La esfera íntima pudo ser sólido (que actúa más como inhibidor del movimiento.
- Esferas (huecos) de la fabricación: como en métodos actuales, eg.: soldadura de dos mitades. Utiliza 6G021 Otto.

6G021: Otto: Tipo juguetes: El objeto emite la tinta sobre el papel vía medios numerosos, eg.: esponja, rodillo interno. Objeto en forma de: coche, cuyas ruedas emiten la tinta; hombre de pan de jengibre (tinta de estampillas como estampilla); la serpiente emite por cómo menea; elefante vía el hocico; bola por cómo rueda; bola y tazón de fuente (la bola rueda sobre el papel en cono).
- 6G02-0 antes numerado
- Las pinturas del objeto a través del (papel) como él viajan (y cuando en tinta/dibujar a lápiz la expulsión de modo):
- Objeto físico en formas de: coche/autobús/persona/robusteza/(gato/perro/burro/elefante/serpiente/rana/pájaro) prisma animal/pirámide de /ball/cube/rectangular
--parte/toda en el material flexible (esponja/caucho) que puede doblar (más que otras partes del mismo objeto) en la golondrina de mar que efectúa la imagen (tinta) creada.

- La tinta expulsa de: ruedas/pies/cuerpo (serpiente)/alas/boca (lengüeta/extremo del tronco del elefante)

O-Bola:

La sopa del o-Líquido (agua) está en tazón de fuente: efecto cómo Otto movimiento sobre (Otto puede hacer que el imán el ayudar de él se atraiga a)/líquido del tazón de fuente hace colores de diferenciación (del alumbrador) según el Otto en tazón de fuente en ese entonces. Puede tener Otto múltiple con el líquido (iguales) en el mismo tazón de fuente. Ottó lanza los productos químicos que cambian el líquido. Otro elemento (Otto) puede negar/aclara el líquido (coloreado) previamente efectuado.

- Misceláneo

- sobre caer a la tierra (debido al choque/a la caída libre (no tocando cualquier cosa) que puede el mecanismo de dispensación de la tinta EL (adaptado electrónicamente) córtese/se reduce para reducir la localización de la tinta sobre superficies indeseadas.

- Tazón de fuente: el papel se puede cortar/comprar para caber en un tazón de fuente. En golondrina de mar permitir que Otto pinte como ella desea dentro del tazón de fuente. El papel puede ser sacado más adelante (en su forma no rectangular única/la forma rectangular (solamente la parte de ella se puede pintar sin embargo sobre a la vez) y enmarcado. Grande para la bola Otto.

--el tazón de fuente puede estar en una forma de cono (las ayudas en permitir el papel rectangular)

--las plataformas (discos) se pueden poner en el tazón de fuente para permitir que Otto mueva alrededor solamente sobre/debajo de disco. El tamaño del disco puede (mecánicamente) se amplía/contrato. Los tazones de fuente extrañamente formados pueden también permitir tales diversos discos formados.

- diverso Otto puede estar de uno o de tintas múltiples.

- (parte movible capaz) la tinta puede estar de uno o más colores (mezclados, eg.: azul y verde de fabricación amarillo) /have (interruptores permitiendo que dos o más colores vengan hacia fuera simultáneamente/consecutivamente)

- las bolas (del solo sólido) se pueden sumergir simplemente en la tinta (el material duro, esponjoso de la bola) versión del o-El de Otto: el punto del contacto (según lo especificado para la tinta/el lápiz/etc) es el contacto electrónico point->creating images->c=s/k/cart/artist/composer (el convertidor visual de los sonidos)

- en el interruptor crear las formas para los tazones de fuente/los envases

- el líquido hace imágenes electrónicas

o-tiene las piernas que caminan: mientras que toman/se arrastran/se fuerzan Otto a lo largo de la superficie, sus piernas (automáticamente) entran el movimiento que hace sus impresiones (del pie) sobre (las superficies).

la o-secuencia atada a "Otto" (mientras que en papel (plano) de bowl/on) limita /controls sus distancias; longitud de la secuencia ajustable; secuencia (no) del material de elástico

el o "Otto" diseñó no derramarse (tinta) como no wanted^: el salpicar sobre u; tinta escurr el papel (debido a la tinta excesiva); etc. Tinta hecha salir limitada (solamente (papel) sobre el cual hace el contacto.

o-sello el "Otto" en chamber^ completo: dos mitades del mismo tazón de fuente formado se ponen juntas, con el interior/EL (adaptado electrónicamente) (adaptado electrónicamente) "sensores" del papel en las paredes "Otto".

O-Otto puede ser tomado aparte/vuelto a montar/recibe las piezas adicionales que alteran su forma/funciones: siendo un sello de goma; rueda alrededor; frotado a través.

cuerda de salto cambiante del color de $$ 6G030:

- parte movible (líneas/secuencias/polvo líquido) en (claro (ish)) tubo flexible (caucho)

--la manija puede cambiar color por consiguiente

--puede brillar intensamente en obscuridad

+--la luz laser pasa a través de la cuerda (cambio de los colores vía el interruptor (k)): reflector (ligero) de la manija del =medium del c=laser=tr (cuerda) =rc~2nd. Puede utilizar en la obscuridad.

- handle=osc (=c~pr->osc del vibration->sensor). oscilador (campanas mecánicas)

- substituir las secuencias a la cuerda de salto (las longitudes de diferenciación de w) (sin la necesidad de inserciones en la sección de la cuerda)

- cómo el color puede cambiar: los productos químicos del plástico de la cuerda/ahuecaron completado color de los cambios del área (de la secuencia/de las manijas) según ^: tipo EL charge/fq enviado a partir del uno/tr de amba manija; (sol/eléctrico fluorescente/otro) luz; sonidos el waves%; temperatura (del sitio/del aire/de la cuerda; el estirar/el torcer/balanceo encima de resultados de la cuerda en colores alterados.

--cambios del color vía accionar el agente (nr, 7G050)

--líquidos de la cuerda de salto (ambos) (secuencia/manijas) particularmente.

o-D: dirige = vibración "sensores" = el oscilador [tr/rc: altera color]

- la longitud de la cuerda se puede alterar por su arrollar para arriba la manija interior (si demasiado de largo)

- almacenar las cosas dentro del handle^: llaves (caseras); lápiz; lápiz labial, dinero (monedas/rodadas encima de cuentas); etc... tapa a dirigir (en la pieza externa del cilindro (lejos de cuerda) tiene tornillo en/las tapas rápidas.

. - handles=stereo (fuente sana en los handle=speakers uno en uno/ambas manijas). Activar por k (que se gira), vía la vibración "sensor" que los juegos cuando mudanza de las manijas (bastante).

cuerda de salto o-compacta: ¡toda la secuencia rueda para arriba dentro de cada manija (mitad en cada uno) = broche de presión de las manijas/together-> para llevar, usuario del tornillo tiene solamente un solo cilindro sin la demostración de la secuencia!

™ del o-Jumpedomiter: un tipo podómetro, que cuenta el número de saltos. u (multi-usuarios) puede programar altura del salto medio, en golondrina de mar que el sistema puede calcular las cantidades saltadas - >

"analizador" - > cuenta - > las calorías de la cantidad de s/osc/nr/states perdidas y o ser perdido. Este metro, se cubre en un archivo más bajo 4G.

- Estrategia de búsqueda de la patente: + (cuerda del ajuste del salto) y color

. Otros usos para las cuerdas que cambian colores:

- encadenado a lo largo de área quiso ser utilizado como la advertencia u otro tipo de comunicación o de notificador (nr) - cada color representa diversa comunicación.
- juguetes, partido para los niños

Final de 6G

Plásticos generales

¿$$? hiedra creciente de la pared 1G18: <Pat: AUTORIZACIÓN, 3>

La patente similar existe. Los plantadores se incorporan a las paredes, interno permitiendo una nueva pared más rápidamente a la cubierta sí mismo con la hiedra. La hiedra crece de las cavidades en los lados y mismo la tapa de la pared. Hecho de ladrillos del cemento o de la arcilla. El suelo llena porciones de pared entera permitiendo que las raíces alcancen la base de pared de cerco del suelo. La pared también tiene cuerdas, que absorben más fácilmente la humedad a las cavidades de las paredes de la parte superior, estas cuerdas es plástica cubierta solamente en regiones más bajas de la pared. La poder de riego también se haga vía las pipas superficiales below con los pequeños agujeros. Para la fuerza, la pared puede también estar en diseños totales de diferenciación, eg.: más de par en par en la parte inferior, o tener diseños creativos del contrafuerte.

- también hace que alguna hiedra de ayuda de la construcción de terrazas se establezca. Otras plantas pueden crecer ascendente de tapa (si las restricciones de la división del gobierno en alturas de paredes no lo hacen incluyendo crecimiento de la pared).
- esta N copió a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verla para las actualizaciones.
- riego ayudado insertando el material absorbente, que toma la humedad de la tierra abajo debajo hasta de la pared. El suelo puede estar en toda la/parte pared interna. Funcionar con la manguera encima de la pared con muchos pequeños agujeros para regar en esto también. La pequeña barranca especial para sostener esta manguera (en disfraz), esta manguera es reemplazable.
- los agujeros en pared permiten que la hiedra crezca a través al otro lado, mientras que los agujeros son tan cuando uno mira adentro fuera del agujero se inclina hacia la tierra (no pueden parecer horizontalmente internos)

- depósito usado automáticamente a las plantas de agua

. --(cuando el suelo es seco - con alimentadores existentes del agua del tubo con los enchufes de la absorción colocados en suelo - cuando el suelo seco, el enchufe de la absorción extrae el agua de depósito para manchar su en contacto con.)

. - tecnología: material hecho de: cemento/arcilla/plástico - materia prima (prueba del tiempo, prueba del sol (no se descolorará, grieta)). Los bloques ligaron el cemento de w (con - el nivel de controles del adaptador de interacción) (como la pared de ladrillo del edificio), o los pegamentos plásticos.

- la otra pared de vida en/el by% de las formas de vida: flores, arbustos, árboles, cactos; vida acuática (pescado, plantas, caracoles) con las ventanas incorporadas a las paredes.

- otras aplicaciones para la pared: divisores para: cuartos de interior, carreteras; porciones vacías, trituradores de viento.

- misceláneo: las ventanas en pared pueden permitir el viento, una visibilidad más fácil - viendo cuál está en el otro lado de la pared.

- los aparatos crecientes pueden (portable) ser hechos tienen: cemento, ladrillo, plásticos, piedra, (tratada) madera).

- versiones portables: la humedad se lanza/se absorbe de la tierra en la cual N puede mentir. N puede también guardar exceso de agua/para tener sistema de uno mismo-riego, que almacena el agua.

- Estrategia de búsqueda de la patente: (wall+ o walls+) y (planta o plantas o hiedra) y (cavit o agujero o pote o envase)

- No. de la patente de los E.E.U.U.: Material de la pared 5213857+ para las plantas crecientes - pero no las cavidades; Fieltro 4932159 de 5099009 de D323133 D258255 potes de la planta 5042197 5044120 D323133 - + 4658541 plantadores que se enclavijan, porque uso en la erección de las paredes decorativas (las piezas de KN pueden enclavijarse/reemplazable; el agua escurre para bajar regiones; KN (invención) de hecho de un material más robusto; KN también utilizó donde está necesario el material robusto: guardar hacia fuera los intrusos/las estructuras de edificio de ayuda)

- Utiliza el envase KN de la planta en directorio de G.

- existe: los enrejados pusieron contra la pared; potes de la planta con los agujeros en el lado usado para producir las fresas.

- MK N a la frecuencia intermedia (comercialización a los fabricantes): comunicados de prensa; organizaciones arquitectónicas

DIBUJOS FIGURADOS (DIAGRAMAS) PARA las INVENCIONES de la CARPETA 1BD

CONTESTADOR AUTOMÁTICO PERSONALIZADO 1B-010-300000001: según el número de identificación del teléfono del llamador, receptor puede programar su máquina para dar mensajes hacia fuera diversos.

1 identificación de llamador… almacenaje de 2 mensajes… registrador de 3 mensajes
….
. llamador 4 # reloj 5 de la memoria….
… 6 tablero dominante "Reino Unido"
….
..... 7 .....

2: almacenan mensajes de salida
3: registran mensajes de salida
5: tiempo de expedientes de la llamada entrante; diversos mensajes según hora; desactiva ciertos mensajes especializados si no escogidos encima dentro de cierto plazo (eg.: usted habría encontrado a su amante

dentro de 3 horas de todos modos, y de usted no querer que ella consiguiera el mensaje si
sus demasiado atrasados)
7: registran mensajes entrantes

alarma feliz 1B-050-600000001: Los mensajes subconscientes se transportan en alarmar el tiempo a energizan y ponen a persona en un positivo
marco de la mente.

… tablero dominante del almacenaje del mensaje/del cuadro del calendario del reloj……
….
… altavoz/pantalla/proyector/impresora del sensor .....
….
llave .....
tablero

alarma de 1B-080-200000001 Dangly: Despertar en la hora untada a sonidos de una criatura haciendo estallar hacia fuera sobre su cama.

altavoces de 1 función
.
registrar el tablero dominante del generador de sonidos del calendario……
.
..... sensor

1: el artículo puede caer abajo; y o líquido puede salir

alarma de la mañana de la combinación 1B-110-100000001: En la hora untada la exhibición del reloj demuestra las combinaciones necesarias para ser afinado adentro a
desactivar el reloj. Las ayudas de proceso hacen la cabeza soñolienta alarma.

.....
.
exhibición de 2 funciones.
….
registrar el calendario… 1 tablero dominante del analizador del generador
……..

1: hace códigos; dejarnos los juegos del juego del usuario
2: generador de sonidos, altavoz

alarma de la mañana de la demostración del concurso 1B-111-200000001: Desactivar la alarma cerca
contestando a las preguntas correctamente. Los humores de las preguntas son adaptado para inculcar vigilancia.

.....
.

exhibición de 2 funciones.

….

registrar el calendario… 1 tablero dominante del analizador del generador

……..

sensor de movimiento 3

1: genera preguntas; dejarnos los juegos del juego del usuario
2: generador de sonidos, altavoz.

EXTREMO De los DIAGRAMAS PARA las INVENCIONES de la CARPETA 1BD

DIAGRAMAS PARA C - INVENCIONES DE LA CARPETA

imágenes de la sombra 1C-020-083003

"pared del cojín del aire"…

cucaracha 1C-030-08300B pulida:

…

…… firmemente tapa

… labio (fácil entrar, salir difícilmente)
. envase
. …
… emisor de los sonidos
……

Notas: opción: generar los sonidos los insectos de ese repell; o sonidos a atraer los insectos en el dispositivo y a su trampa de la muerte.

1C-120-08300A callan la vecindad: Silencia animales ruidosos adentro vecindad vía las ondas acústicas inaudibles al oído humano.

divulgar… el micrófono… 1 reconocedor sano… amplificador de 2 analizadores…

panel de control

1: reconoce los sonidos animales de sonidos del tráfico, del etc.
2: a: determina si los sonidos animales por dentro de la vivienda o del exterior
debe ser silenciado según la programación de usuario.
b: tiene memoria y sintetizador de las emisiones posibles de sonidos
c: "Reino Unido"
d: tiene la "exhibición" y "notificador" que demuestra "estado"
Micrófono: juzga la distancia de la cual el sonido aparece ser el venir; por lo tanto el usuario puede programar las distancias de las cuales necesidad del ruido

venido activar la invención del silenciador. Trabajos con #2 también.

dispositivo amonestador de laser de la unidad móvil 1C-160-083005: El tren es alertado cuando se bloquea la pista próxima. Se refleja la emisión del laser de nuevo al tren significar la manera está claro. Funciona durante día y noche.

analizador… "notificador" del sensor del reflector de la emisión de la luz laser……

panel de control

selector interactivo de la estación 1C-180-083005: El sistema selecciona la radio
y difusiones de la película según sus gustos. Sus preferencias son determinó ambos por cómo usted contesta al cuestionario del software, y los programas reales que usted seleccionó.

transmisor

receptor del analizador de la memoria…… 1 función
….
panel de control del "pi" .....

1: TV (difusión del aire o del cable); radio (interruptor, mw, lw); previo hospitalidad (cada uno tiene propios códigos que transmitan el "pi" elementos de la generación para cada escena); quizá interactivo hospitalidad.

generador de la voz 1C-230-083006:
Convertidos afinados en palabras a la voz.

controlar los altavoces del generador de sonidos del puter de panel...com……

alarma audio-visual alejada del sensor 1C-250-083004: Si el usuario oyó a el sonido extraño en otra parte de la vivienda, sistema se repetirá ocurrencia. Micrófono y o foco de la cámara en la dirección del sonido fuente. Un trabajo más simple de los modelos sobre modo audio solamente.

analizador ..... "notificador" de la cámara/del micrófono…

1 parte posterior del juego de la memoria:
audio/representación visual

1: memoriza todos los sonidos normales y o las visiones que no deben ser causa para la alarma.

identificador de los sonidos 1C-251-083005:
Reconoce e identifica el tipo sonido hecho en el ambiente. Para seguridad, etc.

analizador ..... "notificador" de la cámara/del micrófono…

1 parte posterior del juego de la memoria:
audio/representación visual

1: memoriza millón de o más tipos del sonido
Nota: el sistema también funciona con visiones más o menos de la misma manera; él ve e intenta para identificar visiones relacionadas. En cualquier sistema, usuario pudo ser dado un menú de las interpretaciones posibles para el sonido y o visión.

seguridad teledirigida 1C-260-08300B del interruptor
Desactiva la maquinaria peligrosa si algo es incorrecto.

panel de control "notificador"

analizador del deactivator 2…… 1 sensor

memoria

2: vueltas de la máquina de si hay un peligro
1: el sensor transmite al analizador las señales que recibe de: contador de tiempo; termómetro (el sistema o el ambiente ha conseguido demasiado caliente o frío); identificador de los sonidos (véase nuestro producto 1C-251): si detalle se oye el sonido que aparece señalar peligro/problema; uno mismo analizador de la función: cheques de sistema si todas sus piezas están en bueno puesta en marcha, especialmente las que podrían plantear peligros más altos - eg.: la lámina está cortando anormalmente; analizador visual (véase nuestro producto 1C-251): jueces si cualquier cosa está fuera de lo común, eg.: obrero tiene su cabeza o mano en el lugar incorrecto - eg.: debajo del sellado presionar, en la línea donde la luz laser está tirando, el etc.; "inclinación"; alejado control: otra persona puede desactivar o usuario del "notificador" de equipo.

localizador de la llamada 1C-291-083001:
Para la gente que pasa mucha hora en diversas partes de la oficina. Anillos del teléfono en ciertos patrones, señalando para quién es y cómo

urgente. Las llamadas para el anillo de la persona solamente en el teléfono están los más cercanos a.

memoria

1 transmisor… analizador 2 del "localizador"…… 3 recepcionistas/controles el panel.

generador de código 4… 5 teléfonos (opcional)

1: el usuario transmite su localización al "localizador"
2: determina la localización de la persona y transfiere llamada entrante
4: la señal dada en el teléfono del tiempo suena, demuestra el tipo de llamada

analizador de la voz 1C-300-083005:

analizador/computadora del micrófono…… 1 función

panel de control de la memoria

1: se imprimen las conclusiones de la característica del comportamiento; demostrado encendido
exhibición; enviado a otro sistema que maneja la información tal como deseado, eg.: 1C-291 - las llamadas entrantes se emparejan al del comportamiento
características del mejor de la persona de las ventas emparejado al llamador.

instructor de la voz 1C-301-083001:
Aprender cantar, o como un natural hablar las nuevas idiomas. Identifica qué elementos de la voz necesitan la corrección dando ejemplos audios. El dispositivo se adapta listo al usuario produciendo sonidos dentro del usuario
características físicas únicas de la voz. Es más baratos y más eficaz que instructores humanos.

analizador del micrófono…/altavoz del sintetizador de la computadora……

panel de control de la memoria de la parte posterior del juego…

""/"" del pi/"" del egh/bases de datos de la "del tgh cuenta"

pluma multicolora de la aventura 1C-310-083002:
El dispositivo decide a cuando cambiar color en otro emparejar color. En formato de la pluma o del software.

exhibición

impresora opcional o
la computadora 3 de la memoria..... 1 creador... 2 de la imagen entinta el instrumento de la escritura

sensor de movimiento del contador de tiempo "3A-790"

1: hacen gráficos
EXTREMO DE LOS DIAGRAMAS PARA C - INVENCIONES DE LA CARPETA
DIAGRAMAS PARA las INVENCIONES de la CARPETA 2B

arte sano 2B-090-200000001: Convertir los sonidos en formas interesantes ¡y colores! Programa cómo un sonido se convierte en un infinito arsenal de gráficos posibles.

explorador... 1 analizador....redactor 2....generador de sonidos.

teclado "Reino Unido"
. .amplifier....altavoz

El sistema antedicho puede ser invertido: sonidos convertidos en la representación visual
imágenes.

"micrófono"....analizador....redactor 2....3 formas/líneas generador.

. .4 teclado "Reino Unido" de la "exhibición"

1: convierte señales visuales en las señales legibles por 2
2: el usuario puede en su y o con uso con softwares adicionales hacer otros cambios, eg.: el movimiento, hace, suprime, agranda, se convierte, cambia
gráficos y palabras; y elige/cambia colores, vía eg.: efecto de colores de las señales y después de la mezcla que emparejan
3: también genera el color para las formas y las líneas; palabras; letras; fijar los cuadros en su memoria
4: puede también ser móvil o inmóvil: luces; luces laser; creativo selecciones audios de sonidos y o de palabras

caleidoscopio de los sonidos 2B-091-200000001: Los cambios de la visión según sonidos en el ambiente. Ejemplo: Visión interesante

imagen visual....1 fusión....redactor 2....central 3
cerebro....exhibición....impreso

1: alimentaciones del micrófono en la fusión que en golondrina de mar analiza y combina
la representación visual con las audioseñales según el redactor 2
3: central: memoria; toma los discos de la computadora de softwares diversos

.....

cámara... 1 analizador....redactor 2....generador de sonidos.

teclado "Reino Unido"

. .amplifier….altavoz

El sistema antedicho puede ser invertido: sonidos convertidos en la representación visual
imágenes.

"micrófono"….analizador….redactor 2….3 formas/líneas generador.
.
. .4 teclado "Reino Unido" de la "exhibición"

1: convierte señales visuales en las señales legibles por 2
2: el usuario puede en su y o con uso con softwares adicionales hacer otros cambios, eg.: el movimiento, hace, suprime, agranda, se convierte, cambia
gráficos y palabras; y elige/cambia colores, vía eg.: efecto de colores de las señales y después de la mezcla que emparejan
3: también genera el color para las formas y las líneas; palabras; letras; fijar los cuadros en su memoria
4: puede también ser móvil o inmóvil: luces; luces laser; creativo selecciones audios de sonidos y o de palabras

recordatorio de la píldora 2B-140-200000001: Dice a usuario cuándo tomar cuál píldoras.

despertador… "notificador"
.
analizador….memoria: sabe qué píldoras son necesarias cuando
.
1 contador de tiempo del panel de control…

1: botones; determina automáticamente cuando la tapa fue abierta, y desactiva la necesidad de la notificar que es hora de tomar la píldora o el otro contenido

2B-120-600000001 Alerter: Notifica a más vieja gente de emergencias vía señales sonoras. Parte del sistema de la prótesis de oído, o usado alrededor de cuello.

micrófono…
… 1 altavoz del generador de sonidos del analizador……
receptor ..... .
. panel de control del contador de tiempo
.
2 sensores del transmisor…
L sensores

1: define si una señal de emergencia fue recibida; comandos de las formas para generador de sonidos
2: define el tipo de emergencia, y códigos correspondientes de las formas

DIAGRAMAS del EXTREMO PARA las INVENCIONES de la CARPETA 2B

DIAGRAMAS PARA las INVENCIONES 3C

contador de tiempo de cocinar automático 3C-141-083004: El sistema analiza cuando alimento
los artículos se cocinan completamente al nivel deseado. El calor se reduce a calentarse cuando el alimento está listo. Paginan el cocinero cuando el alimento está listo.
Especialmente para las aves de corral y los platos grandes.

1 exhibición "notificador" del analizador del transmisor del sensor.....

cojín del control de la memoria

1: el sensor puede incluir: termómetro, contador de tiempo, analizador de sonidos, etc.

fabricante móvil de la cita 3C-160-083003:

transmisor de la computadora del recepcionista.../receptor... "cojín del aire"

guía del cubo de 3C-200-083002 Rubics: Exhibición en una de las demostraciones de los cubos
el número de pasos adicionales necesarios para terminar rompecabezas. Actúa como
una guía en usuario de ayuda sabe qué movimiento es mejor.

exhibición del analizador del sensor.....

memoria

micrófono .....

cámara 2... 1 exhibición de la computadora...

altavoz del sintetizador de la memoria...

realidad virtual mágica 3C-230-083001: Mirar alrededor del cuarto y experimentar todas las visiones y suena diferentemente. La cámara cambia las imágenes como un caleidoscopio. Sus auriculares alteran sonidos del sitio según el programa usted selecto o la visión usted están experimentando.

cámara 2... 1 exhibición de la computadora...

altavoz del sintetizador de la memoria...

1: el software altera imágenes; controlado por el usuario y o sucede en su poseer
2: aún o cámara del movimiento

cosa de la danza 3C-270-083003: Hacer los sonidos que imitan o que sintetizan sus movimientos. Pequeños transmisores de las aplicaciones colocados en las piernas y los brazos.

exhibición/luces

localizador" 'sintetizador de los transmisores… "del puter de s receivers...com…

altavoces del micrófono

Nota: el movimiento puede generar imágenes y o luces. Eg.: a la caricatura de la historieta de Michael Jackson se moverá según cómo ¡usted se mueve! Su voz se puede incluso sintetizar para sonar un poco como Karaoke que usa de Jackson.

arte del alambre 3C-291-083003: Dar vuelta y torcer a los alambres que crean imágenes encendido
dispositivo de la computadora.

1 wires...transmitters...sensor...computer...display/speaker

1: pueden ser los alambres ópticos o metálicos; los extremos de alambres pueden tener
luces según cómo está movido

bloques huecos mágicos 3C-292-083002: El niño crea nuevo sonidos interesantes como cambian cada bloque. Cada combinación de bloques crea un sonido único.

altavoz ligero/de la exhibición

1 exhibición del puter de sensors...com…… 3 función de los bloques… 2

modificador 4

2: cuando todas las piezas se unen correctamente, la acción correspondiente de el dispositivo ocurre, eg.: el perro de juguete raspa; saltos del dispositivo o sonidos o cambios
colorear o las vueltas a la estación de radio correlacionada, al etc. También, emite
luz, sonido, etc.
3: las piezas que realizan la función pueden ser uno o más de

bloques, eg.: las ruedas o los altavoces pueden estar en el bloque principal con
la computadora, y cuando las señales se reciben de las piezas atadas genera un código para el cual después se interprete y se transmita la función correspondiente. Cuando usted pone el collar en perro, el perro cola del meneo o corteza o funcionamiento.
4: imágenes y sonidos del modificador

juguete de la cuenta de juego 3C-294-083005:
La bola usada en juego, también guarda la cuenta de juego. Pozo aislado de choque.

controlar el altavoz del generador de sonidos de la exhibición del puter de pad...com.....

aparato de lectura/registrador. calculadora

radio

regulador del semáforo 3C-390-083006:
De acuerdo con el volumen de tráfico que va cada manera, el control de tráfico el mecanismo decide a cuánto hora de la luz verde darán para cada uno dirección del tráfico.

luces del transmisor del puter de sensor...com.....

fantasías del agua 3C-400-083003:
Cuando las corrientes o los movimientos, hacen sonidos interesantes. Vida viva
con fantasía angelical.

exhibición

altavoz del sintetizador del puter de microphone...com.....

sensor del movimiento del agua

exhibición: los cambios en agua crean imágenes diversas según software

exhibición especial del reloj 3C-410-083006:

memoria

exhibición del generador de imagen del puter de clock...com.....

altavoz del generador de sonidos del micrófono.....

joyería solar 3C-420-083002: Calienta para arriba en el invierno vía solar energía.

sensor del calor del panel solar… (opcional)
.
convertidos a calentar

actor de la cámara 3C-440-083005: Hace sorpresas así que usted puede conseguir mejores cuadros. Ejemplo: algo hace estallar hacia fuera un segundo antes de flash de la cámara.

"analizador de sonidos"
.
computadora… 1 función
.
contador de tiempo 2 "telecontrol"

1: altavoz; exhibición; artículo mecánico que hace estallar hacia fuera
2: eg.: chapaleta, generador de código del reconocedor de la voz… para aplicable
función

3C-460-083005 que raspa a Warner: Sonidos de los perros del descortezamiento iniciados cerca
el presionar del timbre, y o de la alarma de ladrón. Más fácil que guardando perros vivos.

micrófono… "analizador de sonidos"
.
altavoz del generador de sonidos del puter de doorbell...com……
.
sensor del ladrón

encantos musicales de la muñeca 3C-480-083001:
Dispositivos plásticos que representan los instrumentos musicales.
Transmisores
sobre de la activación transmiten al receptor que realiza sonidos.

micrófono… altavoz del generador de 2 de recorder...com sonidos del puter……
.
1 exhibición del analizador…/luces que destellan

1: sonidos de los fósforos hechos con los gráficos y las luces móviles correspondencia al golpe de la música
2: la computadora es detacheable y puede coger los nuevos sonidos creados; permite que los nuevos sonidos sean hechos para el altavoz; el registrador también incluye a
sintetizador de los sonidos.

cámara tridimensional 3C-490-083005: La cámara especial memoriza

distancia de cada sección del lense. Los cuadros se toman de ángulos múltiples. El sistema combina todos los datos para componer dimensiones de objeto. Los datos están para el análisis y o transmitido a la reproducción dispositivo. Usos del ejemplo: Escultura de copiado, piezas de la máquina; fácilmente objetos del reajuste con exactitud.

(cuadro memoria de #1)

cámara 2… lensel de 2...com puter3 de la cámara de la lente 1……

pantalla 6. de la lente 5 de la película 4……. obturador de .camera

2: eg.: Cámara del CCD
3: analiza distancia; aunque cada imagen puede utilizar las lentes múltiples, la tapa, la parte inferior, los etc cada uno tienen su propia imagen tomada y después están combinado para crear una imagen tridimensional del objeto vista de cualquie ángulo.

(cuadro #2)….filtro de la polarización del proyector ligero… .....

el proyector ligero de los convertidores de imagen de la computadora…… polariza. filtro…

pantalla de los vidrios de filtro de la polarización…….

(cuadro #3)

objeto del puter 2 de 1...com de la computadora… produciendo el dispositivo 3

1: desarrolla el bosquejo de las imágenes tomadas para el objeto
2: el crear de los controles de computadora del dispositivo
3: hace el dispositivo en el plástico, yeso, metal, madera, hielo, caucho, subproducto de papel, vidrio, piedra

amplificador de la transmisión del teléfono 3C-510-083003:
Se amplifica la voz del altavoz, así que no necesitan hablar ruidosamente, disturbar otros.

teléfono automático de la unidad de control llano del micrófono… 1…

pantalla interactiva del coche 3C-580-083003: Cualquie superficie semi plana en el coche puede tener las funciones de una pantalla interactiva de la CRT. Por el lugar apropiado conmovedor, usuario puede hacer los comandos deseados.

pantalla 2

computadora sensible de la superficie 1… ADC (convertidor análogo-digital)…

1: la superficie sensible puede/no se puede combinar con la computadora pantalla #2

DIAGRAMAS PARA las INVENCIONES de la CARPETA 2B

arte sano 2B-090-200000001: Convertir los sonidos en formas interesantes ¡y colores! Programa cómo un sonido se convierte en un infinito arsenal de gráficos posibles.

explorador… 1 analizador….redactor 2….generador de sonidos.

teclado "Reino Unido"

. .amplifier….altavoz

El sistema antedicho puede ser invertido: sonidos convertidos en la representación visual
imágenes.

"micrófono"….analizador….redactor 2….3 formas/líneas generador.

. .4 teclado "Reino Unido" de la "exhibición"

1: convierte señales visuales en las señales legibles por 2
2: el usuario puede en su y o con uso con softwares adicionales hacer otros cambios, eg.: el movimiento, hace, suprime, agranda, se convierte, cambia
gráficos y palabras; y elige/cambia colores, vía eg.: efecto de
colores de las señales y después de la mezcla que emparejan
3: también genera el color para las formas y las líneas; palabras; letras; fijar los cuadros en su memoria
4: puede también ser móvil o inmóvil: luces; luces laser; creativo selecciones audios de sonidos y o de palabras

caleidoscopio de los sonidos 2B-091-200000001: Los cambios de la visión según sonidos en el ambiente. Ejemplo: Visión interesante

imagen visual….1 fusión….redactor 2….central 3
cerebro….exhibición….impreso

1: alimentaciones del micrófono en la fusión que en golondrina de mar analiza y combina
la representación visual con las audioseñales según el redactor 2
3: central: memoria; toma los discos de la computadora de softwares diversos

.....

cámara… 1 analizador….redactor 2….generador de sonidos.

teclado "Reino Unido"

. .amplifier….altavoz

El sistema antedicho puede ser invertido: sonidos convertidos en la representación visual
imágenes.

"micrófono"….analizador….redactor 2….3 formas/líneas generador.

. .4 teclado "Reino Unido" de la "exhibición"

1: convierte señales visuales en las señales legibles por 2
2: el usuario puede en su y o con uso con softwares adicionales hacer otros cambios, eg.: el movimiento, hace, suprime, agranda, se convierte, cambia
gráficos y palabras; y elige/cambia colores, vía eg.: efecto de colores de las señales y después de la mezcla que emparejan
3: también genera el color para las formas y las líneas; palabras; letras; fijar los cuadros en su memoria
4: puede también ser móvil o inmóvil: luces; luces laser; creativo selecciones audios de sonidos y o de palabras

recordatorio de la píldora 2B-140-200000001: Dice a usuario cuándo tomar cuál píldoras.

despertador… "notificador"

analizador….memoria: sabe qué píldoras son necesarias cuando

1 contador de tiempo del panel de control…

1: botones; determina automáticamente cuando la tapa fue abierta, y desactiva la necesidad de la notificar que es hora de tomar la píldora o el otro contenido

2B-120-600000001 Alerter: Notifica a más vieja gente de emergencias vía señales sonoras. Parte del sistema de la prótesis de oído, o usado alrededor de cuello.

micrófono…

… 1 altavoz del generador de sonidos del analizador……

receptor ..... .

. panel de control del contador de tiempo

2 sensores del transmisor…
L sensores

1: define si una señal de emergencia fue recibida; comandos de las formas para generador de sonidos
2: define el tipo de emergencia, y códigos correspondientes de las formas

DIAGRAMAS PARA las INVENCIONES 3C
DIAGRAMAS PARA los PRODUCTOS EN el ARCHIVO 6B:

cribador de la llamada 6B-020-200000002: Las llamadas indeseadas se acanalan a el modo del contestador automático del teléfono.

el banco de datos de la identificación de llamador del llamador..... 1 usuario del anillo del analizador..... habla

..... contestador automático del teléfono

1: decide si la llamada del teléfono va al modo del contestador automático, o los anillos
para alertar a usuario. El usuario puede solicitar cierto número para sonar y o para ir
al modo del contestador automático del teléfono.

guia del espacio de estacionamiento 6B-210-200000002: Parquea automáticamente el coche.

1 determinador 2 de la medidor del sensor visual..... sistema de 3 directores... las ruedas de qué automóvil de las guías, velocidad, roturas de las roturas... trabaron:
si en la colina, las ruedas dan vuelta en la dirección correcta

1: ojo que ve el espacio
2: decide cómo utilizar la información sobre el tamaño del espacio conjuntamente con la localización y el tamaño del coche, y las fuerzas necesarias
para mover y parquear el coche correctamente.

magia de la ventana 6B-27-200000002: Las cortinas se abren y se cierran en deseado
épocas. Activado por el reloj; o salida del sol y puesta del sol.

activador ligero del analizador del sensor de la alarma o del sol..... mecánico operación

analizador: el usuario puede preferir cortinas que se abrirán parcialmente en la parte anterior de la mañana, y se puede programar tan. El activador puede también iniciado: sonidos a los altavoces del amplificador...; accionando sonidos o radio previos.
Sobre la abertura de cortinas, los locutores dicen, "buena mañana"

calculadora del tiempo del mundo 6B-310-200000002: El sistema más exacto para saber la época para cada región del mundo. Soluciona el constante preocupar a hombres de negocios internacionales con cada país que comienza y terminando su día encender los programas de tiempo del ahorro diversas fechas.

registrar... la base de datos

..... analizador... llaves de 1 usuario en los datos "Reino Unido"

salida: exhibir o imprimir o el otro "notificador"

1: puede seleccionar tiempo exacto exacto mecanografiando en el código de área del teléfono
y o teléfono lleno No.

fax del color 6B-430-600000002

fax de la memoria del separador del color del explorador del documento original.....
imágenes múltiples del color de la memoria de la recepción del fax de la transmisión.....
impresora de color de la fusión...

explorador de la voz 6B-580-3000000002:
El explorador ve (admite) palabras, después las lee audiblemente.

señal a
altavoces del amplificador del convertidor de la voz del analizador del explorador.....

memoria de la base de datos

viajero de la realidad virtual 6B-630-400000002: El usuario oye y ve el suyo ambiente de nuevas maneras. La manera el suyo que camina y qué él ve se convierte en un país de las maravillas audio-visual de efectos.

señales transmitidas al otro dispositivo audio

1 redactor 2 del analizador del sensor de la señal..... "amplificador".
.speakers

programas del usuario cómo el sonido es memoria del redactor

1: escoge para arriba suena; la opción de la cámara considera. transmite señales a
analizador
2: convierte el audio y o señales visuales. "sintetizador"

6B-690-B00000002 Composter: Los habitantes de apartamento pueden ahora ensamblar
cultura verde abonando sus basuras. Descompone artículos eso
no puede ser descompuesto en una descarga.

2

1... envase... 3
....
4 5 6 7

1: luz a ayudar a descomponerse. 2: teclado de el cual el usuario controla dispositivo; también tiene analizador. 3: generador de calor; termómetro; regulador de temperatura. 4: gira el envase 5: desodorante:
purifica el aire, y o emite los olores que enmascaran el olor. 6: exhibición. 7: reloj, alarma; notifica el sistema para cerrar cuando está necesitado;
"notifica" a usuario del estado.
Notas: el sistema tiene cubierta impermeable y de la temperatura de la prueba trabajar

exterior en balcón o jardín. Hace el gran suelo para el jardín de el suyo o vecinos. El sistema más eficaz y más comprable para el uso en el invierno durante el cual el abonamiento es difícil. Solar accionado.

tapa interactiva 6B-710-100000002: La tapa advierte cuando alimento o producto químico
el contenido expiró, es peligroso de abrirse, y o si la tapa necesita ser sujetado más con seguridad.

alarma del reloj

1 receptor 2 de la entrada de datos..... 3 el analizador de la memoria... 4... 5 hizo salir

L... analizador de 6 special

1: "Reino Unido"; "telecontrol"
2: opcional
3: también almacena la información que decide automáticamente cuando y o cómo los mensajes necesitan outputted, eg.: sabe el nombre del producto químico
y naturaleza, apenas por el usuario que afina en el producto químico, y o el special 6
analizador que puede identificar el tipo químico por su sensor,
y o detectando la temperatura o el otro cambio indeseado de contenido o ambiente
5: "notificador"

juego del arma del laser 6B-740-400000002: Objetos del vuelo del golpe con el laser
arma. Guarda la cuenta de golpes.

el arma del laser - > objeto móvil - > 1 refleja - > sensor - > 3 ligeros analizador - exhibición
1 4 tirador de la bola - - - > compartimiento de la bola
memoria: guarda la cuenta, el etc

1: a: la luz se refleja de bola o de objeto móvil (eg.: marioneta encendido el palillo), significando un golpe fue hecho. b: la luz se refleja de espejo detrás del objeto móvil no pensativo, significando el objeto fue faltado
3: juzga el número de golpes o de faltas
4: tira la bola en línea exacta, o cambia. Diseñó ir derecho en compartimiento si golpe o faltado

Notas: la bola puede incluso ser un ping-pong; sistema vendido como parte de silbido de bala
bola del pong fijada con la tabla plegable....

regulador sano 6B-840-400000002: Desarrolla el fondo especial
sonidos en sitio de enmascarar ruido indeseado. El dispositivo desarrolla sonidos
eso se diseña especialmente para cubrir la calle, la máquina y otra ruidos que ocurren en el momento.

memoria de efectos sonoros posibles

amplificador externo del sintetizador del analizador del micrófono del ruido.....

registrador: el usuario entra sonidos que enmascaran deseados

ratón teledirigido 6B-920-500000002: Ratón sin hilos de la computadora.

puter "alejado" de device...transmitter...receiver...analyzer...com

guante del laser 6B-970-500000002: Cada dedo emite la luz laser. Cada uno música del disparador de las señales de luz al tocar el sensor.

sensores ligeros del emisor del laser del panel de control del guante..... transmisor de 4 analizadores..... 1 función

2 aparato de lectura de registración de la memoria del control del usuario... 3...
el panel

1: crea la música (el amplificador....altavoz); o cualquie otra función deseado cuál puede ser activar señala simplemente
2: analizador de los programas del usuario en cuanto a cómo debe convertir señales
3: opcional: los expedientes suenan generados
4: también actúa como sintetizador

retransmisor teledirigido 6B-971-600000002:

transmisor "alejado" preferido del control..... re-
función del analizador del transmisor.....

Diagramas del EXTREMO para los productos en el archivo 6B:

Diagramas para el archivo 8B:

localizador del animal doméstico 8B-010-400000002: Saber donde está su animal doméstico, y a
encontrarlo.

exhibición del analizador del sensor del transmisor del animal doméstico.....

amplificador del analizador del receptor del animal doméstico del transmisor de la persona.....

registrador del aparato de lectura...

sistema de equilibrio del altavoz automático 8B-110-400000002: Los volúmenes desde cada altavoz ajustar según donde usted está. Ajusta como
usted se mueve.

1 analizador 3 del sensor..... receptor de 2 transmisores.....
altavoces del amplificador del analizador.....

1: opcional: sentidos vía donde están las personas: sensores de movimiento; asiento

sensores del cushon; sensores del calor del cuerpo; cada persona presiona el botón
lo más cerca posible ellos
2: transmite la localización de las personas al receptor. Opción: el usuario lleva
un transmisor del "distancer" que identifica su localización
3: si más de una persona, determina el mejor punto central para toda la gente

terapia interactiva 8B-140-100000002: Su terapeuta personal.
El usuario selecciona del menú que la sensación él está experimentando. Usuario
también deja hacia fuera sus sensaciones en el micrófono, sistema en golondrina de mar
analiza la voz para determinar mejor la mejor terapia. Sistema
generan sonidos científico probados cuáles crean
respuesta terapéutica deseada, eg.: condolencia, librándose de cólera, confianza del edificio. Su terapeuta es siempre allí cuando usted necesita él.

menue… 1 entrada del usuario 2… 3 señal saliente del analizador de la computadora… 4

1: "Reino Unido", y o micrófono
2: opcional: menú del software
4: salida terapéutica: exhibición, impreso, sonidos/palabras salientes

identificación avanzada del teléfono 8B-170-100000002: Saber más sobre quién usted es
discurso con. Ejemplo: su dirección y quién el número del teléfono es mencionados, el etc.

panel de control de 5 usuarios

el otro partido.
teléfono ninguÌ□n ..... 1 transmisor 2 de la base de datos…… 3 exhibición de la computadora… 4
1: convertido por el teléfono co o usuario, etc. almacenado con la compañía del teléfono, y
tenido acceso vía: mismo o 2da línea o radio del teléfono; almacenado en el usuario
computadora

placer del cepillo de dientes 8B-210-500000002: Hace música agradable y fragancia.

1 amplificador del dispositivo de la generación de los sonidos del transmisor del cepillo de dientes……

L… dispensador de la fragancia

1: puede ser el cepillo de dientes eléctrico o estándar

analizador de la máquina expendedora 8B-280-300000002
fecha del tiempo del analizador del transmisor del sensor de la transacción de venta……
estampilla.

entrada de datos de usuario

escala de la radiografía 8B-420-500000002: Descubrir el peso, densidad y otras características para las secciones internas del artículo.

1 objeto de la transmisión de la radiografía… ..... 2 el analizador del sensor… 3… 4 hizo salir

siendo comprobado L… escala

1: cualquie dispositivo que envíe ondas para considerar el objeto interior
2: crea la imagen del contenido del objeto a partir de 1 transmisiones
3: hace la imagen de la sección del usuario del dispositivo quiere estudiar; deduce
hacia fuera las porciones de dispositivo que no se quieren para el estudio
4: exhibición, impreso; almacenado en memoria; tranferible a la computadora discos, vía el módem…

Concluye este archivo del diagrama para el archivo 8B

DIAGRAMA de la INVENCIÓN B7

Silbido electrónico del perro B7-010-600000001: solamente su perro lo oye

altavoces del dispositivo de la generación de los sonidos del panel de control……

"/"del distancer de la exhibición "localizador"

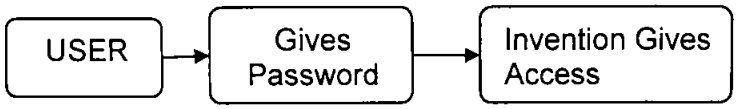
Notas: diversas señales refieren a diversas acciones queridas de animal doméstico. El usuario puede entrenar al perro qué cada sonido significa con el telecontrol
controlar el transmisor en patio trasero, eg.: sonar el descortezamiento de la parada de los medios #8
- Los sonidos generados se señalan para ser asociados más fácilmente por el animal, [no] a una acción deseada correspondiente.
- generadores mecánicos/electrónicos de sonidos: oscilador adaptado

Archivo: Dibujos/características Pix

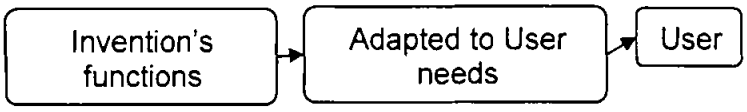
Los dibujos figurados de las características fijaron B1

Identificar los dibujos de siguiente como "características que dibujan B1" seguido por el nombre de la característica, e.g. ofrece el acceso del dibujo B1.

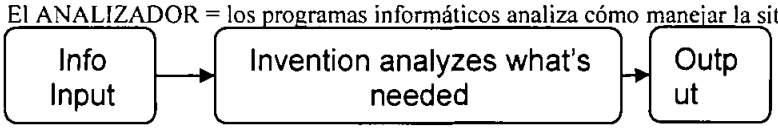
El ACCESO = accede a las funciones electrónicas con afinado correctamente en la combinación, el etc.



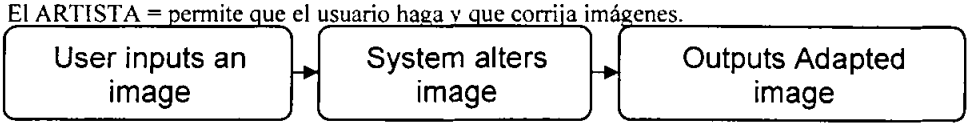
ADAPTAR el ™ = otro término para el ™ programado de la información de usuario. Adaptation también llamada, sastre.



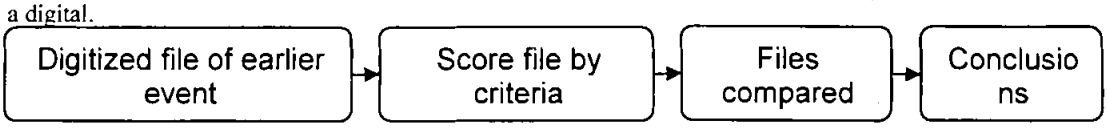
El ANALIZADOR = los programas informáticos analiza cómo manejar la situación.



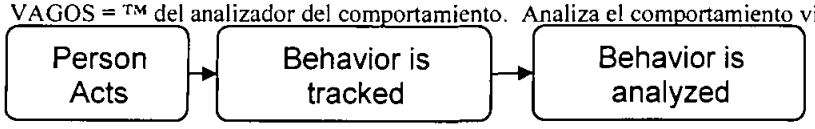
El ARTISTA = permite que el usuario haga y que corrija imágenes.



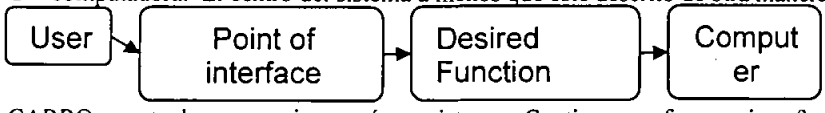
ASOCIAR el ™ = asociando niveles de la semejanza entre los acontecimientos múltiples o los archivos convertidos a digital.



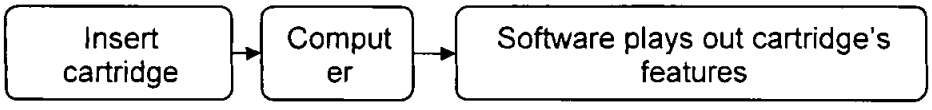
VAGOS = ™ del analizador del comportamiento. Analiza el comportamiento vivo de la gente.



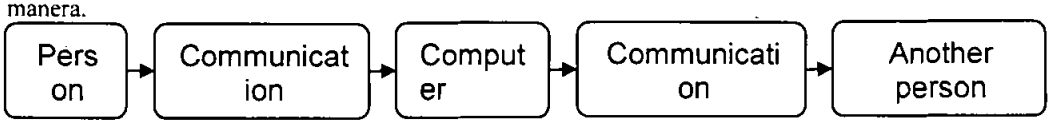
C = computadora. El centro del sistema a menos que esté descrito de otra manera.



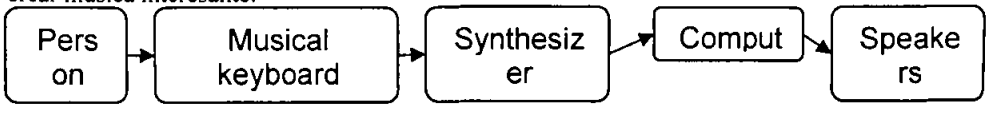
CARRO = cartuchos que se insertarán en sistema. Contiene con frecuencia software/bases de datos útiles.



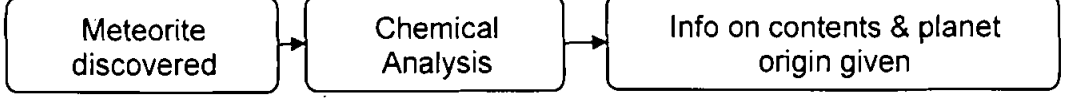
COMUNICAR = cuando cuaesquiera dos o más personas, animales o dispositivos comunican con uno a de cualquier manera.



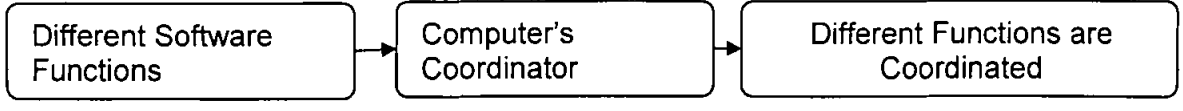
COMPOSICIÓN = composición de música electrónica: Otra variación del producto se puede también utilizar para crear música interesante.



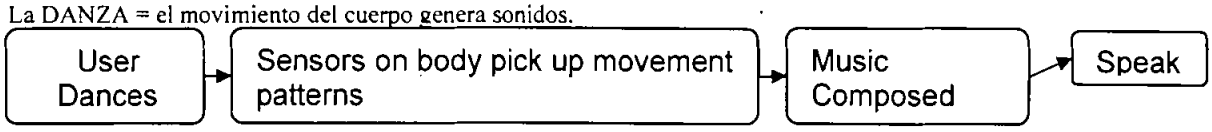
El CA/el ™ CONTENTO del ANALIZADOR = analiza la comprobación, o el contenido de la base de datos.



El ™ del COORDINADOR = coordina diversas partes del sistema.

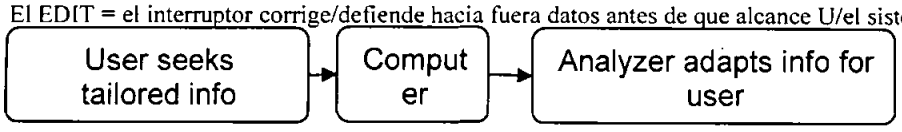


La DANZA = el movimiento del cuerpo genera sonidos.

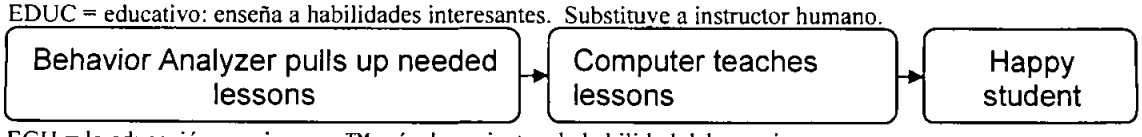


El ™ de DISTANCER = señala siempre que cualquier dos piezas se separen o vengan juntas. Señales vía las ondas de radio si la separación es distancia más o menos que programable. Ver el otro archivo registrado en el distancer para los detalles. ™ de Distancer

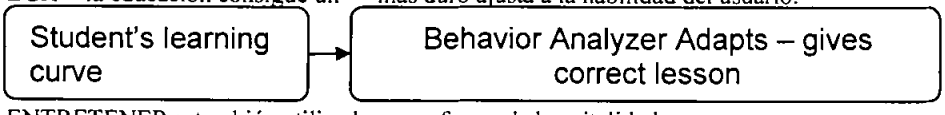
El EDIT = el interruptor corrige/defiende hacia fuera datos antes de que alcance U/el sistema



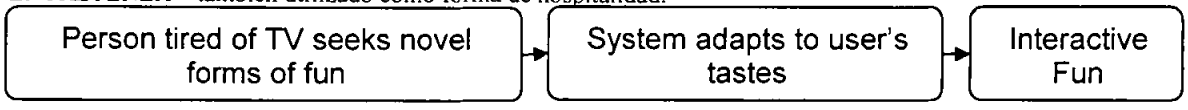
EDUC = educativo: enseña a habilidades interesantes. Substituye a instructor humano.



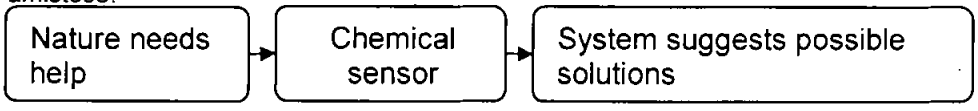
EGH = la educación consigue un ™ más duro ajusta a la habilidad del usuario.



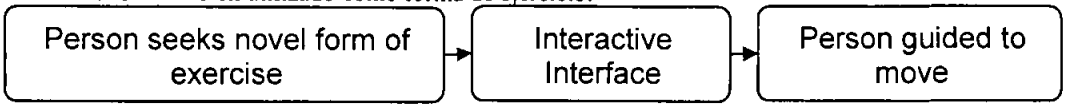
ENTRETENER = también utilizado como forma de hospitalidad.



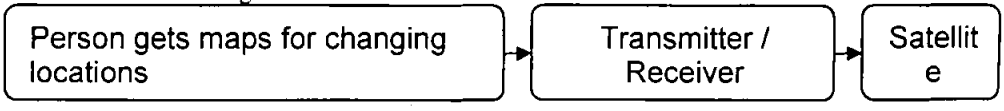
¡La PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = ajusta automáticamente el sistema para ser EP amistoso!



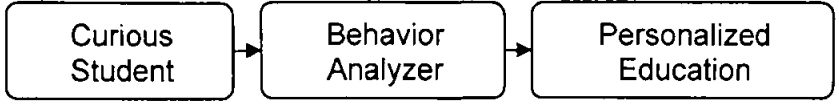
EJERCICIO = también utilizado como forma de ejercicio.



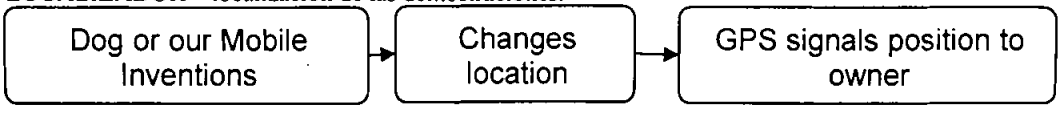
GPS = sistema de navegación mundial.



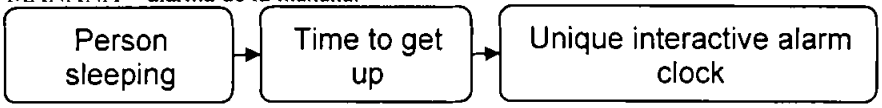
™ de la GUÍA = un instructor. Sugiere cómo el usuario pudo proceder. El sistema dirige a usuario así que pueden mejorar el sistema del uso. ™ de la guía



LOCALIZADOR = localización de las demostraciones.

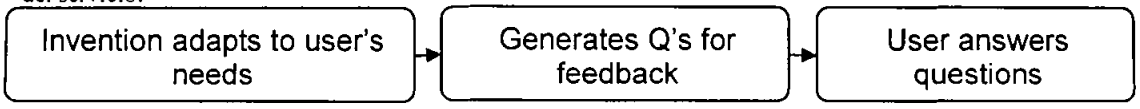


MAÑANA = alarma de la mañana.

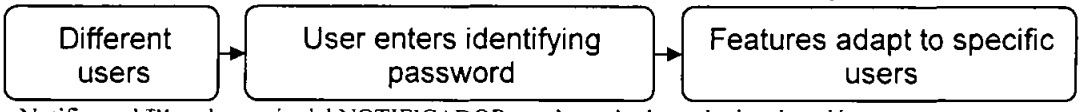


RATÓN = ratón de la computadora.

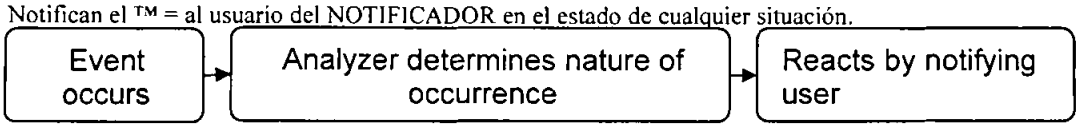
MQ = la máquina hace preguntas del usuario para obtener la información así que el sistema puede mejorar a usuario del servicio.



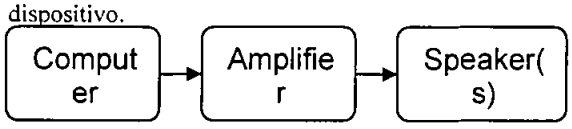
El ™ = el sistema MULTIUSOS se diseña especialmente para los usuarios múltiples.



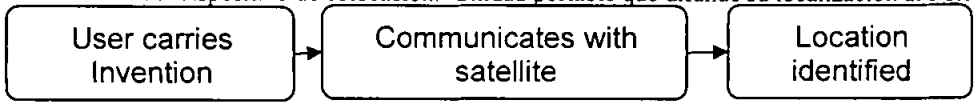
Notifican el ™ = al usuario del NOTIFICADOR en el estado de cualquier situación.



OSCILADOR = ™ sano saliente del comunicador. Señala a usuario cuando ocurrió una función dentro del dispositivo.

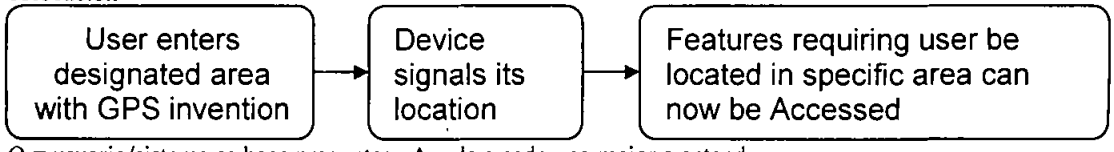


Paladio = ™ del dispositivo de colocación. Unidad portable que difunde su localización al sistema de colocación.

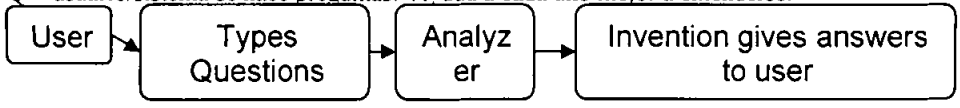


PREDECIR que el ™ = el sistema predice qué ocurrirán, o qué usuario quiere.

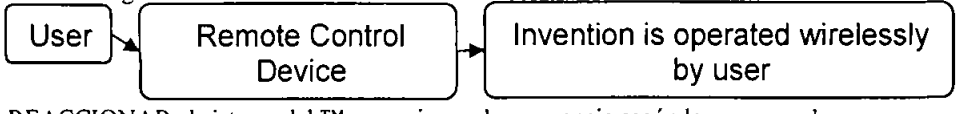
PS-ZONE = el sistema reacciona según la localización del elemento en la pregunta. ™ de la zona del sistema de colocación



Q = usuario/sistema se hace preguntas. Ayuda a cada uno mejor a entenderse.



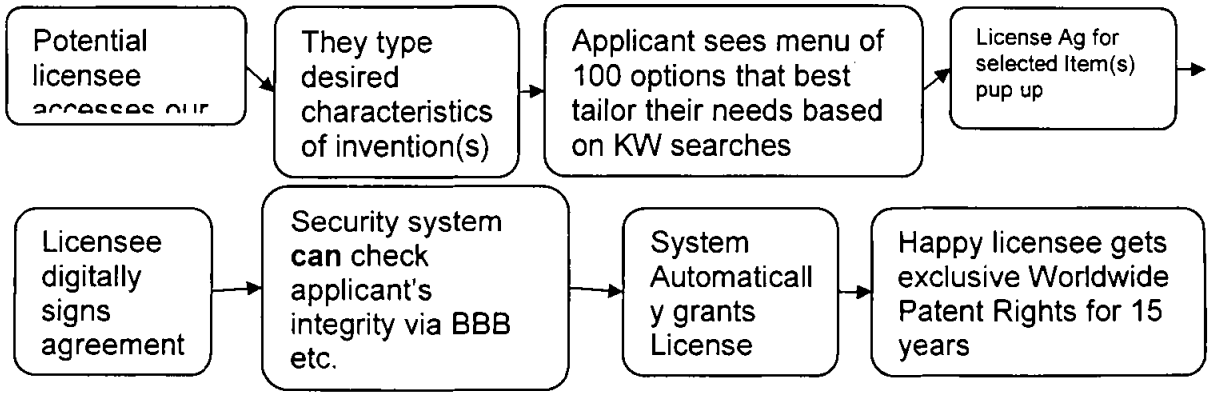
R = teledirigido



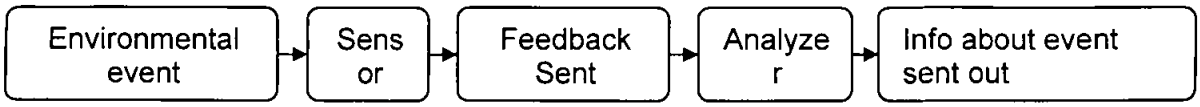
REACCIONAR el sistema del ™= reacciona a la ocurrencia según lo programado.

La RUTA/el RANURADOR = el sistema encamina a concesionarios potenciales a las invenciones señaladas.

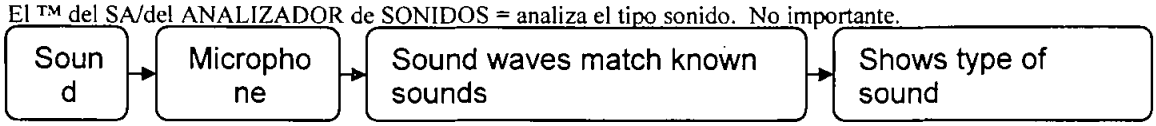
Friendly Invention Licensing System



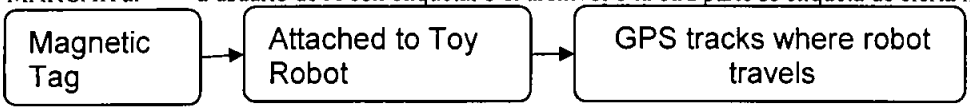
SENSOR = sensor. Sentidos vía muchos medios.



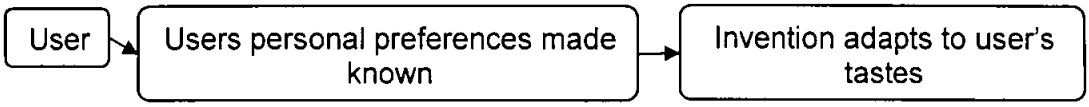
El ™ del SA/del ANALIZADOR de SONIDOS = analiza el tipo sonido. No importante.



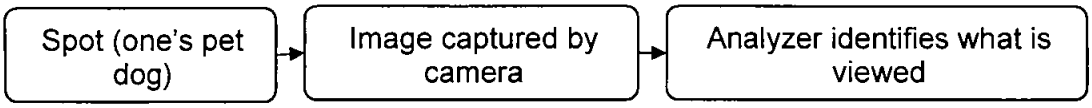
MARCAR al ™ = a usuario de A con etiqueta, o el archivo, o la otra parte se etiqueta de cierta manera.



El ™ = el sistema del SASTRE se adapta a una mejor función para los propósitos señalados. Esto también se llama se adapta, adaptación, y ™ programado de la información de usuario.



™ del VA/™ = alarmas VISUALES del ANALIZADOR cuando la cámara ve un cambio en su opinión. No importante.



VER POR FAVOR LA INTRODUCCIÓN A LOS DIBUJOS CERCA DEL PRINCIPIO DEL USO SOBRE NUESTROS MUCHOS OTROS DIBUJOS FIGURADOS. GRACIAS.

EXTRACTO PARA LA SOLICITUD DE PATENTE REVOLUCIONARIA

Explorar las invenciones interesantes adentro, concebido por nuestro generador de la idea del genio. Descubrir el método más eficaz de la historia en la concepción de las aplicaciones nuevas para la tecnología electrónica existente. Dominios enormes de la licencia de la característica intelectual del directorio de la invención nuestro sistema ayudado para convertirse.

El investigador puede encontrar una de nuestras invenciones interesantes en esta solicitud de patente vía nuestro LicenseItToday.com, llamada del etc. nuestras jefaturas de California 1-707-428-5000.

Ver las ideas de la invención, más las variaciones 100+ adaptadas para los mercados de blanco del usuario final. LicenseItToday.com completa los contratos de licencia internacionales exclusivos válidos hasta el diciembre de 2026.

Ahorra tiempo y el dinero I.P. creativo sobre cualquier otro documentó proceso del pensamiento creativo. Los concesionarios buscan patentes outputted usando a nuestros o sus abogados de la palmadita. Los derechos pueden comenzar cuando los beneficios comienzan. O usted puede comprar las derechas comprables de I.P. La prueba está en tryingit hacia fuera. Descubrir las invenciones asombrosas adentro hoy.

BÚSQUEDA DE LA PALABRA CLAVE PARA LA NUEVA TECNOLOGÍA HOY

LAS PORCIONES DE NUESTRAS DEMANDAS SIGUEN

Contenido para los archivos de la demanda:
. Demanda independiente
. Demandas del dependiente: Maneras interesantes de buscar nuestro directorio de la invención en este uso de la palmadita e Info actualizado en LicenseItToday.com. El genio que piensa diseño

adaptante. Unidad de esta solicitud de patente y de su directorio fijado de la invención. Tener acceso a los sistemas.

Archivo: Demandas/unidad toda

DEMANDA INDEPENDIENTE SIMPLIFICADA

ADAPTA DISEÑOS DE LA INVENCIÓN A LAS NECESIDADES DE USUARIO:
El sistema se adapta a las necesidades únicas del usuario recogiendo la información sobre ellas. Descubrir que los diseños investigables 100.000+ que se adaptan probablemente al tipo de invención un usuario pudo buscar.

DEMANDAS DEL DEPENDIENTE SIMPLIFICADAS:

FÁCILMENTE BÚSQUEDA QUÉ USTED QUIERE EN ESTA INVENCIÓN EN LÍNEA:
Este sistema fantástico genera las características revindicables adaptadas al usuario. Una licencia rápida está disponible. Por ejemplo incorporar las palabras claves o las descripciones como en nuestro descubren/LicenseItToday.Com. Las características permisibles para los nuevos géneros de invenciones aparecen. Esto ofrece los resultados diferentes de bases de datos pendientes comunes del uso de la patente. Ver Unidad-Buscan.

¿INTENTAR UNA INVENCIÓN PARA SOLUCIONAR SU CIRCUNSTANCIA?
La solicitud de patente se adapta proporcionando soluciones necesarias. Sugiere las soluciones únicas que satisfacen su necesidad indicada puesta en palabras claves, el etc. Ver las Unidad-Soluciones.

PROCESO DE LA SIMPLIFICACIÓN:
El sistema simplificado facilita la navegación para lo que usted quiere. Ver Unidad-Simple.

¿QUERER SU INVENCIÓN ADAPTADA A LOS REQUISITOS CAMBIANTES?
El usuario debe manejar los requisitos A entonces B de acceder. Los requisitos del acceso cambian a tiempo, y se adaptan a la situación. Ver Unidad-Acceso-Cambian.

DESCUBRIR LAS VARIACIONES INTERESANTES:
. Sobre 100.000 variaciones se adaptan al tema de su invención. Puede batir Google.com. El usuario necesita intentar esto antes de juzgar cómo puede ayudarles. ¡Usted debe cavar más profundamente que apenas la visión de las soluciones de la muestra proporcionadas!
. ¿Concibió una invención? Presentar su solicitud de patente, mejor aseguró todas sus páginas llegó. El sistema prueba quién envió o hizo algo cavando adentro. Firmar un paquete entregado; saber algo como un anillo de diamante está realmente adentro. Ver a secretario 4E020.
. Mecanografiar adentro qué usted quiere. ¿Por ejemplo puede ser que usted quiera que su gato o perro limpiara sus patas antes de entrar en la puerta del animal doméstico? ¡Problema solucionado abajo abajo!

1r PASO - USTED DEBE INCORPORAR PALABRAS CLAVES.

2do PASO: AUTORIZAR UNA INVENCIÓN ADAPTADA - RÁPIDAMENTE Y FÁCILMENTE:
¿Querer ser el concesionario o el licenciador? Los contratos de licencia exclusivos del mundo se adaptan para el concesionario amistoso. Es más fácil autorizar que este uso amplio que las ayudas usted. Ver la Unidad-Licencia.

ENCONTRAR EL INTERIOR DEMANDADO DE MUCHOS MÁS TESOROS:
Entender amablemente, los abogados de patente aclaró esta solicitud de patente, presentada su manera nueva, debe resolver los documentos de la limadura de la patente para las invenciones en esta etapa. Necesita la ayuda que interconecta con los investigadores listos que él. Puede ser que garantice valor superior, antes del pago.

INTRODUCCIÓN APENAS A LOS ASPECTOS DE LA UNIDAD DE ESTE USO

Cavar profundamente en los accesos revolucionarios. Las variaciones de la invención comienzan a menudo con un número de identificación corto. Descubrir hoy cómo puede satisfacer sus necesidades únicas.

AUTORIZAR NUESTRA INVENCIÓN ADAPTADA - RÁPIDAMENTE Y FÁCILMENTE:

Los contratos de licencia exclusivos del mundo se adaptan para el concesionario. Por ejemplo las opiniones de usuario nuestro contrato de licencia en el acuerdo/LicenseItToday.Com. El pago cero es necesario mientras que el concesionario estudia las ideas inventivas, mientras que tienen la opción para extender la licencia exclusiva por diez a veinte años.

. Los concesionarios potenciales apenas llaman California en (+1) 707.428.5000 a hablar con una persona viva que interconectará amablemente con el llamador y base de datos de los diseños adaptantes la' de características. Este interfaz se diseña para ambos concesionarios potenciales, y la gente autorizada con privilegios de acceso más altos. Todos los acuerdos deben estar en la escritura de persona autorizada, otras interacciones se están inspirando.

. Los concesionarios que buscan los pagos de derechos cero durante un período de prueba que excede un mes, pueden ser seguidos para cerciorarse de que se están moviendo adelante en traer productos desde la licencia, sobre el mercado mundial.

. El antedicho también describe (semi) las funciones automatizadas.

La BÚSQUEDA ADJUNTO PARA LO QUE USTED QUIERE - Unidad-Buscar:

Los acoplamientos dentro de esta solicitud de patente demuestran nuevas maneras de búsqueda para las invenciones necesarias. Pedir el sistema lo que usted necesita, y puede ser hecha disponible. Si usted no encuentra un acoplamiento (conexión esquemática) a una característica aplicable, las ocasiones son buenas que usted la encontrará vía otra estructura del acoplamiento. Como cerebro (humano) de a, hay muchos caminos a otras partes de la mente de pensamiento.

. Utilizar los modos de búsqueda múltiples para tener acceso a todas las características que usted busca en este y solicitudes de patente subsecuentes si usted no lo lee de de arriba a abajo. Demandamos cómo se insertan y se diseñan nuestras características, así que están alcanzadas a menudo (encontrado a través de nuestros interfaces) vía: acoplamientos múltiples, palabras claves, categorías sujetas, detalles del etc. en la introducción de la solicitud de patente.

. Localizar las características buscando de la palabra clave: Papeles de las piezas' [función] en diseño adaptante [puede ser encontrado/ser utilizado/ser obrado recíprocamente con [para este uso de la palmadita] la búsqueda de eso y de los términos relacionados basados en métodos/resultados comunes deseados. Mayor es la adyacencia entre [los términos para] los nodos [mejor/más rápidamente/más simple] el proceso pudo ser.

. Búsqueda del tesoro: Buscar para los términos relacionados (en esta base de datos de la invención) basados en una importancia de la palabra clave del tesoro'. Esto aumenta grandemente el número de acoplamientos potenciales. Ayuda a simplificar las materias (que reducen alboroto de la palabra clave).

--La base de datos del tesoro tiene cada (palabra/concepto/característica/invención centrales) fila que todos los' términos asociados relacionados anotaron para la importancia. Este y las bases de datos relacionadas puede ser almacenado en la computadora del sistema.

. El Search Engine tiene gusto de buscar: Millones de criterios usados para determinar importancia por las funciones relacionadas con los motores de la búsqueda de la tela pueden ser utilizados.

--eg.: Google.com, Yahoo.com, AOL.com, MySpace.com, MSN.com. Resaca hoy y en el futuro, sus motores de la búsqueda para encontrar otros criterios de búsqueda para los modelos reales y teóricos.

SISTEMA DE SIMPLIFICAIÓN Y DE CONDENSACIÓN [TAMAÑO]: Otros demandan

EL LAZO SIMPLIFICA:

Demandamos la manera que las características de la solicitud de patente ligan dentro de sí mismo y a las fuentes exteriores. Sus ventajas incluyen:

- Una navegación y un interfaz más fáciles: encontrar la característica/la invención necesarias. Pantallas más pequeñas permiten nódulos móviles.

. Más fácil controlar y supervisar: el sistema nervioso central [cerebro automatizado].
. Menos memoria requerida para funcionar con el sistema.
. Menos energía requerida: memoria; energía [eléctrica]; requisitos de los recursos [soporte físico y software].
. Mayor arreglo para requisitos particulares creativo: el arreglo para requisitos particulares necesita menos buscar/exploración [palabra clave que busca para las características]. El modificar para requisitos particulares es más fácil como más características/recursos están disponibles con la invención unificada, que si la invención fue separada.
. A pesar de la simplificación, su complejidad y carencia de enormes finanzas nos guardaron de desarrollar un modelo de funcionamiento para la unidad de la invención.
- Simplicidad: aumenta seguridad; reduce los riesgos del virus del software. Pocos portales para que acceso proteja. [Se hacen los controles del analizador del `] cómo [`w5] se encamina el arreglo para requisitos particulares/los acoplamientos/y los servicios [reaccionando].

LA FABRICACIÓN DE CARACTERÍSTICAS OPCIONALES REDUCE ALBOROTO:
Todas las características son opcionales, excepto componentes centrales en características electrónicas como: 1. la fuente de energía, la capacidad 2. un poco de CPU (unidad central de proceso), y 3. de controlar (interruptor) y de ofrecer adaptaron funciones.
- Estorbar cerca sobre la repetición de que las características son opcionales (puede ser) omitidas. Esto un-clutters el interfaz utilizador, y el texto en esta solicitud de patente. Sin embargo damos más ejemplos para cuál es opcional y no necesario.
- La presencia mera de un indirecto o de un enlace directo a otras características, fuera de la descripción central para la característica actual (generalmente qué se encuentra en la misma sección de este uso como un número de la invención o cuál está en las listas de la característica) es (generalmente) opcional.
- Ejemplo de la demanda del limpiador de la pata de la puerta del animal doméstico: Los collares con el acceso del límite de RFID (transmisor sin hilos) a ésos con el RFID señalado son opcionales. Las otras variaciones 100.000+ para la entrada sin hilos en los archivos ligados relacionados con el acceso son también opcionales, e.g.: la descripción central para el acceso liga a los analizadores visuales. Mientras que V.A. se puede incorporar en la puerta del animal doméstico si está deseado. No era necesario agregar las descripciones incómodas para esta opción en la central de la puerta del animal doméstico la descripción central; el hacer tan no invalida las características opcionales completas de las solicitudes de patente cuando la información enlazada no se copia otra vez (copiado y pegado) en la descripción central de una característica.
- Adaptación del `: Las características opcionales se ofrecen para el acceso y o la licencia.
. La consumo innecesaria detallando los lados tecnológicos de cosas, sabidos a la persona calificada, puede o estorbará (hacer más duro ver las cuestiones principales) en este sistema (solicitud de patente/interfaz).

TEXTO DE CONDENSACIÓN:
Referencias entre los números de la invención/las características específicos. Un acoplamiento debe ser suficiente. Sin embargo las referencias se hacen a veces. La carencia de una referencia específicamente redactada como "considera que el número AC-9110 de la invención" no implica la carencia de la conexidad. Una de nuestras metas está demostrando cómo la reducción de tamaño del texto de esta solicitud de patente puede reflejar en la invención construida. Detalles en las secciones de la introducción. Las versiones ampliadas de este documento pueden estar disponibles en nuestro sitio: ProfitableInventionAbstracts/LicenseItToday.Com. Esto ahorra en los costes para traducir el uso en sobre 50 idiomas tal y como previsto, y esperanzadamente hará más de uso fácil para el examinador de la patente que las otras versiones.

DESCRIPCIONES CADA VEZ MÁS PEQUEÑAS/DE EXTENSIONES Y TÉRMINOS ABREVIADOS:
. Las descripciones correctamente redactadas de la característica pueden encoger tamaño del texto cerca sobre el 95%, pero en una cierta pérdida potencial (velocidad adentro) de comprender se escribe qué. Sin embargo, la lectura de tiempo también se acorta. El lector puede pedir una versión ampliada se dé adaptado a sus necesidades. Por ejemplo la característica de la guía aprendió lo que sabe el lector, y puede mejorar lo dirige por consiguiente.
. Encogimiento: Cómo esta invención puede/tiene tenido interfaces de sus descripciones los' acortados:
La omisión de palabras innecesarias como "" ayuda. Ver nuestras abreviaturas y ofrece archivos (de las piezas).
. Buscar y substituir: Utilizar las búsquedas de la palabra clave para de largo o los términos abreviados, después substituirlos. Reducir al mínimo los errores que hacen esto ese resultado en los reemplazos incorrectos [`que corrige] que [grandemente] cambiar el significado. Por ejemplo: substituir el término "U", para el "usuario" o el "concesionario" mecanografiando un espacio antes y después de "U". Si no todas las palabras con la letra

serán substituidas. Nuestros diagramas pueden tener las líneas entre las piezas al lado del término, eg.: Teclado de U=' interconecta With='. Considerar tan también substituir los términos que se colindan con el acoplamiento =") del símbolo (signo de igualdad ".

. Usar términos de la característica como texto: responde al propósito de facilitar la comprensibilidad (lectura) y la lengua condensada (para una gama más amplia de lectores y de usuarios). Por ejemplo la palabra "se adapta" se puede ver como uno o más del siguiente: 1. Una palabra; 2. Una característica como en la función; 3. Un componente electrónico, no obstante está redactado de una forma para hacerlo más de uso fácil para (la gente técnico desafiada que se ha dicho en varias ocasiones algo es más de uso fácil que él está en realidad) los usuarios tecnofóbicos; 4. Un acoplamiento a los millares de ejemplos técnicos, más acoplamientos directos e indirectos a las patentes; 5. Más. Un tecleo puede destacar todos los términos que sean uces de los arriba, por ejemplo poniendo un apóstrofe antes de cada palabra como con muchos de nuestros términos adjunto. Este uso de patente reformula sus funciones para demostrar cómo puede caber en una oración, por ejemplo "demuestra que Tom cómo crear invenciones" es igual que "**dirige a** Tom para crear invenciones". La alteración de la etiqueta puede también: 1. Mejor transportar el significado donde y cuando está necesitado; 2. Hacer el material más interesante - la variedad se demuestra ayudar a menudo al usuario a estimular (guía del ') la creatividad del usuario.

- Etiquetas: Para encoger este uso de la palmadita relabeled a menudo nuestras características, y/o omitimos el apóstrofe - si tales son necesarios ser vistos simplemente funcionar con una característica de la búsqueda del software (y substituir) conectada con un tesoro que levante términos relacionados y frases (como en los motores de la búsqueda de la tela).

. Cuando son generalmente se encuentran las palabras o los términos fuera de contexto: predecir que puede ser que sea reacción de un resultado' al reemplazo culpable [de la palabra clave]. Encontrar las características en la redacción inusual que sugieren un reemplazo incorrecto. Las oraciones con errores gramaticales gruesos, y/o pensamiento modelan la diferenciación grandemente de cómo los seres humanos [puede pensar], son postes indicadores para tales errores, que necesidad ser despedido.

. Otros del "waas generador de número al azar de Psuedo" de la patente publicaron demandado el 29 de noviembre de 2001 ser la patente más larga en ese entonces. Su número de patente de los E.E.U.U. es: 3.314.440. Somos más largos y hemos mejorado la aleatoriedad de su naturaleza.

ANÁLISIS Y SIMPLIFICACIÓN DE COSTE/DE VENTAJA:

. Preocupación importante: ¿Cuánto más simple el examinador de la patente y o el usuario prefiere este uso en el gran coste de perder las demandas del uso?

. Esto no puede un legal y/o una edición netas. Por lo tanto las variaciones múltiples permiten las adaptaciones necesarias. Cavar más profundo en este uso para entender.

. - Todas sus características pueden ser alternativas y/o opcionales en fomentar nuestra demanda.

. La simplificaión puede reducir demandas de las invenciones las', si una omite las piezas necesarias. Cuanto mayor es la suma de las piezas adjunto, cuanto mayor puede ser su entero (valor, novedad de nuestro uso revolucionario).

- Los requisitos tradicionales de la limadura de la patente harán duro continuar con tecnología de desarrollo en los nuevos géneros que estamos demandando. Intentemos adaptarse a las necesidades de tanta gente con poco o nada de pérdida a cualquier persona.

. Cada uno tiene un diverso valor o preferencia (emocional) (puede ser anotado [para adaptar este interfaz]) por cómo está simplificado y o complicado quieren (este sistema) ser. Por lo tanto el sistema se adapta por consiguiente. No obstante poner muchos pero no todas las variaciones en esta solicitud de patente puede exceder diez millones de euros, apenas adentro por honorarios de la página solamente (basado en requisitos del honorario de la página actual en ciertas oficinas de patentes), mayores costes más en traducir y la corrección de los documentos en muchas idiomas (sin la alteración: el tema/la accesibilidad, el diseño de interfaz, y/o causar otros problemas tienen gusto los técnicos, tales como cambios en memoria o la programación).

Términos usados para explicar - unidad de nuestras invenciones:

ALGUNOS CÓDIGOS (FUNCIONES/PIEZAS) EN SISTEMA DEL "DISEÑO ADAPTANTE"

Ejemplos para cómo los códigos se ponen en práctica dentro del "diseño adaptante":

DISEÑO ADAPTANTE = cómo la unidad de invenciones se adapta [por cómo los aspectos del uso de la palmadita integran].

El CARRO + = los números/las funciones electrónicos uces de los de la invención es [también] [la O.N.U] enchufable. Conectar/no relacionado/activar una invención según lo necesitado. Los cartuchos son nodo de a [tipo de] en la unidad sistema de las invenciones'.

CRC = sistema adaptante de la computadora central [unidad de invenciones]. Donde los nodos y la función se encuentran

DISTANCER = acontecimientos accionados cuando los nódulos múltiples están en las distancias señaladas [de uno a].

EDUC = enseña a cómo utilizar el diseño adaptante: cómo los diversos aspectos integran para adaptarse. [Poder] aprender en la información de los CRC (estación de trabajo) /N/printed (libro).

EGH = la determinación de cambios en dificultad (vía la cuenta, uip) y la invención correlacionada para el propósito adaptado puede estar en el número de la computadora central/del producto.

ENTRETENER = ver abajo
EJERCICIO = ""
JUEGO = ""
MICRÓFONO = ""
MAÑANA = ""
RATÓN = ""

-

El diseño adaptante se aplica a la necesidad adaptante, usando sus recursos. La mejor [por la cuenta para la necesidad designativa] forma [`adaptado/demandado] de función ofrecida [al usuario] se basa en las opciones de la invención [demanda] disponibles/para conectado/pagado/que puede ser creado. E.G.: Usuario = [`adaptado] función = VAGOS = CRC. Las funciones señaladas pueden cambiar [egh, tgh del `] mientras que la necesidad/la situación cambia, o adaptan modo de los interruptores en diversa función [invención] [a una mejor situación del fósforo]. Ejemplificado en funciones/recursos incluir:

-

Invenciones específicas; el acceso, artista, vagos, balance, cámara, comunica, composición, coordinador, la base de datos [cuál es necesaria/cómo es aplicado], corrige, egh, entretener, ejercitar, los gps, [cómo obra recíprocamente (con el usuario], el micrófono, la mañana, el ratón, la P.M., el mq, multiusos, notificador, orden y sincronización, oscilador, pp, predicen, la picosegundo-zona, Q, R, reaccionan, sa, cuenta, synth, el sensor [qué busca], interruptor, teléfono, tgh, pista, va, uq.

. Predecir [funciones basadas en lo que ató el analizador a la función que predecía has/is que daba la cuenta más alta del `de la predicción]. Cada predicción [de cualquie combinación de recursos (de piezas) según lo contorneado] crea sus los propios cuenta [potencial]. Todas las cuentas del `de la predicción se comparan con la carta de la cuenta de a [especialmente creativa para la situación] - y la cuenta más alta de la predicción [con menos incertidumbre/valor (probable) más grande incluso si hay un mayor factor de la incertidumbre] = dando por resultado el diseño adaptante que elige la mejor predicción. Las funciones adaptantes de los diseños reaccionan por consiguiente.

CARACTERÍSTICA = función, parte o invención.

Salida de la FUNCIÓN = de la parte o de la invención. Cualquie [software] función conducida, e.g. salidas deseadas.

ACOPLAMIENTO:
- qué ata este e invenciones y piezas de los usos anteriores' juntas.

NODO:
- invención que se puede separar de la computadora central [con la pérdida de funciones periféricas vía el árbol que ramifica].

PARTE = característica. Las introducciones están en los archivos de las piezas. Piezas del ejemplo: tener acceso, analizador de sonidos.

Funciones periféricas:
- funciones que no son parte de las funciones principales según lo descrito en la invención [número]. No enumerado probablemente en el extracto de la invención. No relacionado con el nivel de la importancia de la función [especialmente de la perspectiva de otros nodos conectados].

MISCELÁNEO - UNIDAD de los INDICADORES de la INVENCIÓN (demandas):

ADAPTACIÓN PARA LA TECNOLOGÍA FUTURA. ™ de Fadap:
Adaptar esta invención unificada utilizando la tecnología futura en como base necesaria:
Encontrar/emular/acceso de los criterios de la búsqueda del uso (motor) las funciones/las características/las invenciones a los aspectos relacionados [en esta invención unificada].

CADA ASPECTO ES NORMALMENTE OPCIONAL:
Tener cuidado, la unidad de invenciones une todos los aspectos de esta solicitud de patente, mientras que guarda procesar/función de la capacidad/ofrece uno o más aspectos/funciones [demandas/las demandas independientes] sin el compromiso de la unidad entera [demanda] del sistema. No hace utilizar/cotización a la parte de este uso, en el detrimento de otras descripciones del uso cuando hay un traslapo en conflicto. No crear una restricción innecesaria sacando el texto fuera de contexto, a menos que tales servicios en aquel momento particular/lugar/situación de la necesidad.

MUCHOS EJEMPLOS EN ESTE DOCUMENTO:
Más ejemplos de la invención en el uso de la palmadita, dan la clarificación adicional para la unidad de la invención: En virtud de explicar los detalles de las invenciones [demandas], con los muchos acoplamientos [árbol que ramifica], cada nueva invención [demanda] aclara más lejos la unidad de invenciones en esto, últimas y futuras solicitudes de patente de limadores. Cada función en la invención unida, conecta con cada otra función enumerada o deducida: otd: cada parte/invención/tema revindicable hace muchas referencias/acoplamientos a cada otra parte/invención/materia revindicable vía un número casi infinito de métodos.

CONTENIDO y SECRETARIO del VERIFICADOR 4E020 de la FECHA:
Pista que las invenciones fueron utilizadas. El sistema prueba quién hizo junto con lo que electrónicamente acontecimiento rastreable, cuando, donde y cómo transpiró. Mejorar que cuando el contenido fue enviado/enviado por correo aéreo contra apenas la evidencia de la transmisión. Mejora sobre los servicios de mensajeros de noche, del correo registrado y de públicos de notario combinando todas sus ventajas en una. El sistema trabaja vía el cliente que envía por correo electrónico o que envía el material por fax al prestatario de servicios vía el cual los almacenes en bastante sistema clasificador resistente de la computadora del pisón, después transmiten documentos al destinatario: fax, email, y o correo registrado de la oficina de correos. Ver su archivo central enorme de la descripción.

MÁS INFORMACIÓN
El SISTEMA del "DISEÑO ADAPTANTE" (1D-010) - LEYÓ AMABLEMENTE ESTA SECCIÓN MÁS ADELANTE

Cubre todo el/cualquier aspecto uso de la palmadita

Semi introducción al sistema de diseño adaptante, también conocido como "Peter"

El diseño adaptante se adapta a las necesidades utilizando los recursos aplicables para cada situación:
Esta solicitud de patente adaptante del diseño utiliza aspectos necesarios de la invención unida, para alcanzar la función deseada. La necesidad es resuelta a través de un analizador. El diseño adaptante se adapta a las necesidades basadas en recursos disponibles.

Resumen del diseño orientado meta y de la demanda independiente:
El usuario (computadora central) puede señalar los caminos [acoplamientos] a las funciones señaladas

vía sobre cuál puede venir el, [solamente] utilizando las partes necesarias de las variaciones ilimitadas del diseño adaptante total de posibilidades dentro de las gamas dadas. A cualquier momento, (mayoría) de los equipo y programas de computación (es) no hizo caso para el uso particular.
El "diseño adaptante" es un sistema complejo grande capaz de continuar millares de funciones diversas, incluso simultáneamente cuando es factible.
El diseño adaptante, y la adaptación (UIP) se sinergizan - sus definiciones/funciones se traslapan grandemente.

Resumen reescrito usando muchos términos de las piezas (función):
Usuario (tiene sus necesidades = determinado solo o UIP) = ocurrencias opcionales:

1. El usuario es educado y dirigido a [mejor] determinar lo que [invención o función] él quiere; y cómo utilizar y de ventaja de ella.
2. Usuario y o cuenta del analizador [poder] que las funciones/las invenciones mejor cubrirán la necesidad [basada en el analizador del comportamiento]. La función anotada más alta [poder] ser presentado al usuario/al beneficiario.

La computadora central del "creador" es el centro, que controla los nódulos (portables) separados. Los números del producto (n) son el grupo o las funciones relacionadas.

Según la realización de la fabricación de descripciones adjunto: Un nódulo puede realizar las funciones para una o toda la n; solamente el software (vía cartucho/la transmisión) necesita ser alterado para
nódulo para realizar la función deseada. Los nódulos simplificados pueden recibir las piezas adicionales para realizar funciones deseadas (atado/encajado a presión encendido por el usuario) según (computadora central,
profesor, sentido común, instrucciones del libro). El nódulo es portable y puede convertirse un sistema solo del soporte después del desarrollo, y tiene
funciones más complejas realizadas con la ayuda de la central computadora, y o la transmisión en circuito del marco principal de la computadora central (mfh).

Also^ del sistema del "diseño adaptante": los usuarios de las ayudas desarrollan nuevo
invenciones con el hardware de sistema/las piezas; actúa como punto de venta para

comerciantes (los usuarios pueden intentar prototipos, y si orden feliz del lugar para
soporte N) solo; permite que el usuario programe su N en manera deseada vía la computadora central (que crea el cartucho del software para N).

Este sistema vía sus funciones del software del cad permite a usuario a
cortar y pegar las piezas y las funciones deseadas que crean impresiones (eg.:
audio/representación visual) de los números y de las piezas mencionados (producto del producto
los códigos de la especificación, números del producto pueden convertirse en piezas también),
derivaciones de eso, y nuevas invenciones que utilizan el mencionado
números del producto y o piezas y o funciones. La unidad central
puede ser hecho en un de computadora personal (nivel simple solamente), en la cañería
enmarcar la computadora, y hasta realidad virtual.

El "diseño adaptante" dirige a usuarios a las piezas del enchufe en uno a
crear los productos deseados. El software (sistema de cad, etc.)
demuestra los pasos para la asamblea y crea el cartucho para
software necesario para funcionar los productos nuevamente montados.

+ la programación de la información de usuario adapta la salida/el diseño de la invención y o funciona.

Descripción

Notas:
- El usuario puede elegir para participar en el uno mismo introductorio del "creador"
clases particulares.
- La mayor parte de el software necesario (la mayoría de las funciones en la mayoría del producto
los números) pueden ya estar en los números del producto. Es simplemente a ordenar que activa la aplicación informática deseada en la central
número del terminal o del producto (producto mencionado en este uso,
derivado, nueva invención) (R [alejado]) (via^: r; alambre/radio;
acceso; Reino Unido) de la manera señalada para generar los usos deseado.

Notas:
- el CRC señala los caminos vía los cuales deseó
se realizan los usos/las funciones. Esta designación es
realizado en práctica electrónica estándar, eg.: selecciona
partes/caminos según su disponibilidad (en la buena reparación, no
ocupado por otro uso que es realizado); el modo más simple
(pocos pasos para el sistema, el usuario); uso de los elementos (nódulos, piezas)
eso es más barato fabricar, y o menos probable ser necesitado cerca
otros usos.

El usuario puede elegir de variaciones múltiples de cada producto

el diseño, y o crea la variación deseada que entonces estará fabricado (productos idénticos en una cantidad de uno o más) cerca el fabricante señalado por la base de datos del fabricante del "creador".

Desarrollar las invenciones consiguiendo ideas de la base de datos de sistema de ideas del producto. El dispositivo entonces seleccionará a compañías aplicables que puede fabricar y o vender su idea del producto.

Utilizar la base de datos la mayor parte de de nuestras invenciones de las cuales conseguir ideas sobre nuevos productos. Eg.: las llaves del usuario en "teledirigido" y consiguen ideas del producto en esa categoría de la cual de conseguir el estímulo para a idea del nuevo producto. Las ideas en la base de datos se diseñan a aumentar la creatividad de los que lean las ideas.
- Entonces el usuario mecanografía adentro su invención.
- Es después opcional: el sistema conecta con la base de datos de patentes, y el usuario puede buscar para ver si se archiva una invención relacionada
. --(también puede comprobar otras bases de datos electrónicas la descripción de tales invenciones).
- El usuario selecciona el tipo de letra que desean de enviar hacia fuera la solicitación su idea. Letras de la muestra:
--al fabricante, deseamos producir esta invención con usted, qué ¿ser el coste? En el mínimo esto consigue el interés del fabricante.
--pide los distribuidores al por menor grandes, comerciantes, representantes de ventas de base de datos si quisieran poner una orden clasificada mínima.
--las letras salen a los medios de comunicación que está interesado en tales categorías de producto
. --aunque una venta rápida pueda no ocurrir, se alcanza la atención ¡y ésta es la llave!
- el traductor automatizado del sistema hace traducciones ásperas de descripción y diagramas de producto. La descripción del inventor adentro su lengua materna también se ata para enviar.
. - La letra está disponible en 18 idiomas, y se puede seleccionar por el usuario
- El usuario selecciona a todos los fabricantes de nuestra base de datos que se especializan en las categorías de producto dichas. Escogiendo cualquier usuario del producto es confiado hay 20 - 200 fabricantes por todo el mundo en ese producto categoría.
. - el sistema ambos crea invenciones, e incluye productos y ideas del producto que crean, por lo tanto un título aplicable para esto el dispositivo es diseño adaptante.

ALGUNOS PUNTOS CENTRALES IMPORTANTES SOBRE 1D-010:

Falta de información que procesa la porción de idea:
+ breve, éste es en cómo consolidamos las ideas separadas
uno. La solicitud de patente titulada "diseño adaptante" utiliza software
y o realidad virtual, usuario puede experimentar y trabajar con
cada invención. Ejemplo siguiente: dispositivo alejado (con el transmisor,
receptor, exhibición ("S"), altavoz, contador de tiempo, pequeña
computadora ("C"),
micrófono, sintetizador de los sonidos, aparato de lectura sano, tablero
dominante, volumen
el control, la memoria) obra recíprocamente con la unidad principal del
sistema (con más de
las mismas características que el dispositivo alejado, especialmente su
complejo
base de datos y software) en realizar las muchas de las funciones para
casi todas las invenciones en la limadura. Los específicos para cómo
cada invención sería procesada por el software es muy simple,
con todo viable.

Otros hilos de rosca del campo común para cada idea: ellos todos
usuario del aumento
creatividad en virtud de las ideas del producto (futuro separado
patentes), efectos especiales del "diseño adaptante", funciones para cada
uno
la invención se puede programar por el usuario. 98.5% de las invenciones
pueden
ser electrónico, todos podría más adelante ser hecho electrónico en alguno
casual
medios.

La puntería está para nuestras descripciones y los diagramas para
cada uno se separan
invención para constituir una fecha de la prioridad en esto o un
actualizado
limadura.
- [cojín del aire, básico, carro, carácter, mfh, notificador, Reino Unido,
oscilador, pi,
portable, pp, discurso, teléfono sin cuerda del altavoz, tds.

---

el sistema de +-this combina todos los productos en los directorios A, B, C
y
D. Sin embargo, recordar que cada uno de los productos está obviamente,
también capaz
para ser convertido por separado de uno a también.
- el software y la base de datos se venden dentro de la computadora
portable ("C")
dispositivo que tiene muchas otras características
- El término SHELL CREATIVO según lo explicado abajo en las notas para 1D-
010 es
uno de los métodos importantes de desarrollar ideas con 1D-010
- La ramificación de la base de datos se explica en el "principio
Introducción " - automatizar simplemente todos mencionados en este archivo.
- La estructura de la base de datos se explica en gran parte en el papel
"base de datos titulada". Los detalles adicionales están disponibles de
otro
partes de la explicación 1D-010's.
- Algunos de los propósitos de 1D-010 son: para hacer invenciones, subir
con ideas creativas, hacer el dinero para el vendedor de 1D-010 y su
usuarios, hospitalidad, educación.

- Las partes "Imi" son interconexión capaz. E.g.: como en 3C292 mágico Bloques huecos.

BASTANTE ASPECTOS IMPORTANTES SOBRE 1D-010:
- el usuario puede ordenar a través de los fabricantes 1D-010's/algo de productos enumerados en el u otras limaduras de este inventor: compra, y o arriendo y o ver los cuadros de y o conseguir la mayor información sobre.
--el usuario puede elegir de variaciones múltiples de cada diseño de producto,
y o crear la variación deseada que entonces será fabricante
por el fabricante señalado (eg.: uno con las derechas al básico
idea que generó la cáscara creativa)
- el usuario puede seleccionar y o desarrollar muchas características de producto, eg.:
tamaño, diseño que encajona, color, "pp" del producto o "P.M." o "carro"

Software y o realidad virtual:
. - con software y o realidad virtual, el usuario puede a
experiencia, trabajo - obrar recíprocamente - jugar con la idea básica y o cáscara creativa (incluye la idea básica de 1D-010 y
la información adicional sobre producto proporcionó por el usuario combinándose
con otras partes y funciones de la base de datos 1D-010 y o
la adición viene puramente de la mente del usuario).
. --Esto está para crear ideas del producto, y o experimentar ésos productos para los cuales pudo ya haber estado producido y disponible orden. Esto sirve también como un tipo de punto automatizado interactivo de la venta, aceptando tarjetas de crédito, el etc.
- el software es probable ofrecer sugerencias posibles y o direcciones en la rama correcta ver la "introducción del principio"] para las ideas seleccionado por el usuario
- cuando el usuario quiere más opciones sobre una existencia y o nueva idea propuesto por el usuario del inventor (su invención, o algún otro) poder petición hasta dónde él quiere el sistema que ramifica para buscar tales elementos, eg.: la petición se puede hacer para encontrar todos los elementos el pertenecer
para "interactivo" dentro de uno o más números del producto hasta la rama 2 o 20
--los números del producto se pueden seleccionar vía: palabras claves, categoría,
afinando en números del producto, o por cualquie otro elemento que se separe
un número del producto de otro.
- cualquier producto se puede almacenar en la memoria 1D-010's, eg.: patentes de
otra base de datos de sistema; literatura en medios electrónicos alrededor producto; etc.
- Mayo utiliza la tecnología de Echelon Corp que trabaja en traer una inteligencia común a todas las clases de dispositivos electrónicos.
Wall Street.
Diario, el 19 de junio de 1995, p.R28.

OTROS PUNTOS SOBRE DISEÑO de HARDWARE 1D-010:
- impermeabilizar y los flotadores, e.g. para el uso en piscina, baño, ducha, playa,

lago, comidas campestres, viajes
- hace los sonidos a ese por favor usuario cuando este 3ultimo está en nivel creativo bajo
acordando la "cuenta" (que mecanografía poco en el cojín dominante, pocos productos con
sus archivos creados); o el usuario puede pedir tales sonidos
- conecta con estereofonia de la música; sintetizador de la música permitiendo a usuario a
"componer" los sonidos que alzan su creatividad (mientras que compone y o escuchando)
- vía usuario de la "chapaleta" está fácilmente capaz/creativo los datos de entrada (apenas
habla el sistema que convierte sonidos a las señales de la computadora ("C"))

Una versión del diagrama para 1D-010:

"artista"
.
1 memoria ..... "carro"
.
. convertidor de 3a-950 3D ..... transmisión en circuito de 5 auxiliares
.
. micrófono… exhibición "notificador" de 3 COMPUTADORAS…
.
"ventilar"/"" del cojín/impresora de "del telecontrol Reino Unido"
.....
.
..... 8 "distancer"
….
revendedor/vendedor "MFH" ..... sonido de 6 sintetizadores…
red/fabricante. generador.
….
(4)/"" de la "impresora"/"" del teléfono/amplificador del software 2 del "del MES fa" .....
.
7 altavoces

1: Memoria: Bases de datos; lleva a cabo la memoria para la generación de los sonidos; archivos
creado por el usuario
2: Ramificación: ver el papel el describir de cómo este archivo de separado se organizan y se describen y se cifran las ideas del producto. Virtual Realidad y software: software del almacén de la invención 5a-610; 5a-620 Laboratorio de la invención de la realidad virtual; puede conseguir software y otro
datos a partir de la 1 y o del "carro"
3: La computadora ("C") es el punto central; analiza, los convertidos y procesa todos los datos; con los movimientos mínimos de la llave el sistema enviará
el usar de las letras de la solicitación o de las señales electrónicas (fax, email)
letras del formato
4: el sistema puede también doblar y rellenar sobres; más también imprimir la letra

la firma del remitente en letra, entonces estampa las letras
5: Lector del CD-ROM; música previa que genera el sistema; etc
6:
6a. - El analizador determina efectos sonoros: los sonidos se generan a estimular la creatividad del usuario. El sistema selecciona apropiado sonidos/música según, eg.: combinación del "pi" del usuario, producto la idea (tal como "pi" de la idea), qué usuario ha indicado prefieren, el tipo de producto que están trabajando encendido puede generar el sonido aplicable
variaciones (la invención del coche oirá el coche y o sonidos de la rueda según la característica y o la dirección en las cuales el usuario quiere o necesita
o puede entrar en su pensamiento y o la ramificación alrededor en software.
6a1: el usuario oye los consumidores el usar, hablando alrededor, haciendo preguntas
sobre en almacén, y otros que venden las ideas básicas o creativo ideas de la cáscara.
6b. - "Synth"
7. "balanceador"; (los sonidos aparecen venir solamente de ciertas partes de
sitio y palancas hacia adelante y hacia atrás de crear todos los tipos de interesante
y o efectos sonoros inusuales, e.g.: palanca de los sonidos de izquierda a derecha
cada 3 segundos por 30 segundos; esta desorientación leve adentro el oyente puede abrir su creatividad); diversos compradores/usuarios/etc se puede cada uno oír en el que está de más de cuatro altavoces.
8. "distancer": las ayudas repliegan experiencias de la vida real al usar producto
8a. cada característica del distancer puede tener "exhibición", "carro", "Reino Unido", "fd-hdd", "telecontrol", "cojín del aire", "micrófono", "synth", "altavoz". Usuario
con la ayuda de la computadora 3 ("C") programa las funciones de los distancer tan
que ayuda a la réplica muchas funciones de las ideas deseadas del producto. Eg.: el distancer "portable" se puede programar para ser los siguientes productos, más otros productos de las limaduras de la patente de este inventor
también: despertador del código de la mañana 3a-281a; control del telecontrol 3a-580 ("R");
analizador de sonidos 3a-630; reloj del mundo 5a-310; collar del musical a6-010;
pluma mágica del aire 3a-790.
8b: (computadora 3 ("C") y sus piezas) vía transmisiones proporcionará otras señales de ayudar al "distancer" para funcionar algo como producto deseado.
8c: pp y P.M. del sistema permitir tal programación

Diagramas adicionales

#1: notificador/cojín del aire del ~ del acceso = cart~date~c (computadora) ~display =
c (computadora central - la mayoría de la característica importante para el "creador").

Secundario-diagramas (piezas adicionales que conectan con el #1 antedicho diagrama, eg.: el below conectan con #1 vía la computadora de #1):

#2: R del ~ C (computadora del `) del mfh del ~
#3: Reino Unido/vc/analizador/oscilador/ratón/mañana/localizador visuales /distancer/micrófono/analizador de sonidos/discurso/cualquier otro sensor = R/C ()/MFH = impresora/exhibición/cuenta de la computadora del `
#4: uip/pp/P.M./mq/carro = R/C/MFH
#5: módem/teléfono del fs/del SP/teléfono = R/C/MFH
#6: c = vr.

Utiliza las funciones del software encontradas en el otro realce de la creatividad
y software de la reunión de reflexión.

MODOS OPCIONALES DE IDEAS DE TRANSFORMACIÓN DEL PRODUCTO EN LA MENTE DEL USUARIO:
Un número de las ideas del producto dentro de esto y de otras limaduras de la patente
puede transformar las ideas dentro de la base de datos, e.g.:
Cuadro -3a-950 al convertidor tridimensional (el usuario puede también entrar vía "Reino Unido" adentro
conjunción con la base de datos y el software para el diseño de producto, las dimensiones del producto y los tienen
- "artista"
Juego -4a-430 que crea la máquina
Palillos del color -5a-130
control del telecontrol 3a-580 ("R")
software del almacén de la invención 5a-610
laboratorio de la invención de la realidad virtual 5a-620
OTD:
pp; P.M.; juguete; juego; entretener; impresora; mfh; carro (ideas del producto para
base de datos; formatos de la letra; la computadora ("C") basó lengua del software
sistemas de la traducción); redactar la opción de la búsqueda del software, permitiendo a usuario
para levantar todas las ideas del producto con las palabras claves deseadas de 1D-010
o el "mfh" 'base de datos de s - para conseguir ideas del producto, o patenta
búsquedas; carácter; arte de la antena 3a-110; Pluma mágica del aire; 5a-460
Interruptor de Touchless; % del telecontrol; % del notificador

CONFIGURACIONES OPCIONALES POSIBLES Del SOPORTE FÍSICO 1D-010'S Y del SOFTWARE:
control del telecontrol 3a-580 ("R")
software del almacén de la invención 5a-610
laboratorio de la invención de la realidad virtual 5a-620
OTD: pp; P.M.; impresora; mfh; cuenta (niveles de interés de otro partidos en las ideas del usuario; número y o calidad de ideas él se convierte; % de los cambios en el "pi"); % del tgh; carro; arte de la antena 3a-110;
Pluma mágica del aire; notificador ligero silencioso 3a-820; 5a-460 Touchless

Interruptor; teléfono del espacio a1-040; mensaje de salida personalizado a1-500
(adaptación para la gente que responde a las solicitaciones hechas por el usuario 1d-010's, e.g.: vía el correo del usuario o teléfono o fax…; personalmente
¿email de las respuestas incluso, fax? letras, transmisiones del módem, etc); collar del musical a6-010; alejado; notificador

- base de datos de las piezas aplicables para la mayor parte de las invenciones previstas
para salir de la invención ser seleccionable y con precios. Esto la información se puede adjuntar al inventor de la letra envía a fabricante.
- ésta es más diversión que jugando a ajedrez o mirando la televisión. También
permite esperanza que puede el inventor un día llega a ser rico.
- el libro en cómo aumentar creatividad según lo archivado con los E.E.U.U. La oficina de los derechos reservados está disponible en el sistema para la lectura.
. - marcas registradas adicionales a este producto: hombre de la invención; inventor;
inventemos; software de la invención [y base de datos]; convertirse [er]; cáscara creativa; revelador creativo; inventar; crear; Adaptante Diseño; desafío de la invención

Software para asistir a la reunión de reflexión.
- Uno de ellos es producido por Mindling Corporation para cerca de $200. Su teléfono 1 de los E.E.U.U. 800 253-1844. También cubierto en el Mercury de San Jose
Las noticias, de sept. el 18, 1995 publican, titulado "software problem-solving…"
- El tipo preguntas es el acordar seleccionado: al UIP para la naturaleza de
producto o problema que necesita la reunión de reflexión; UIP de U; DB disponible (databse) encendido
sistema, eg.: si puede reconocer y hacer las sugerencias para las palabras claves
proveído por u (usuario) (el DB tiene archivos para la información relacionada sobre tal llave
palabras).
- OTD: "hospitalidad" y "humor" creativo un optimista psicologico /sociológico efecto en U de sistema ()/interruptor del sistema.

OTD: exhibición ("S"); fd-hdd; pp; P.M.; Reino Unido; ratón; fecha; tds; %interactive; básico; %game; entretener; portable; impresora; au; mfh; punto de ebullición; oscilador; discurso; vc; egh; cuenta; carro; para comunicar con otro
compañías - teléfono, teléfono del SP, tr, MES, fs, identificación de llamador, memoria del número del teléfono;
cp; uq; mq; acceso; pi; carácter; multiusos; cc; alejado; notificador; ("R") control alejado; % de la mañana; portable.

Notas adicionales

Códigos: "N" señala número del producto. El "CRC" señala computadora central del "diseño adaptante" - aunque las funciones pueden ser

igual que la computadora de la n, cc es más grande (y menos portable).

El usuario puede crear invenciones encontrando piezas pertinentes y o funciones en la base de datos del producto de esta solicitud de patente números y piezas. Búsquedas de usuario vía la palabra clave y o el producto
la categoría, o el "diseño adaptante" puede hacer su propio tipo de búsquedas
de acuerdo con las características de los productos y o de los deseos (funciones, usos, preferencias) el usuario está trabajando con y o llaves adentro.

Nuevo corta y pegar vía software permiten que el usuario desarrolle el suyo nuevo
ideas. Él puede también desarrollar el nuevo software para las nuevas invenciones vía
(Creador) diverso software modelo que requieren (fácil)
pasos de programación.

Los ejemplos de los números y de las piezas del producto están en patente
uso. E.g., teledirigido, exhibición, altavoz, tablero dominante,
el localizador, la memoria) obra recíprocamente con la unidad principal del sistema (el "creador"),
y o una característica central separada (computadora). El producto montado las funciones son controladas por el software. Los usos pueden ser cualesquiera
invención en el uso, e.g.: el producto del "balanceador". Balanceador hace altavoces ajustar el equilibrio audio según donde telecontrol controlar transmite su localización.

Aspectos comunes de cada número y pieza electrónicos del producto:

- Ellos todos creatividad del usuario del aumento en virtud de su fantástico
naturalezas. Referir a los materiales de Steven Kays en cómo aumentar creatividad (confidencial archivada en oficina de los derechos reservados, el etc.)

- Una o más funciones para cada número del producto se pueden programar cerca
usuario.

- Las funciones pueden primero ser visualizadas/ser experimentadas por el usuario/ser apuntadas
partidos en la "exhibición" de la computadora central, "impresora", "vr", "oscilador",
"carácter". Y alterado (adaptarse a preferencias) vía: uip, pp, P.M.

- Papel de la computadora central en cada número del producto.

- Electrónico: Sobre 98.5% de las invenciones ser electrónico [o tener versiones electrónicas potenciales]. 1.5% restantes pueden ser desechados de las aplicaciones del "creador". Esos productos que no caben con "adaptante

El diseño " tiene sus ventajas individuales. Todos los productos pueden ser
jugado con en la computadora central del "creador".

- Operación simultánea: El "diseño adaptante" puede controlar 100 o más diversos números del producto simultáneamente vía ^: sus puertos separados (alambre/radio) (uno o más puertos para cada invención). Central
la computadora tiene estaciones de trabajo múltiples opcionales (para visualizar/
entonces conseguir el producto numera operacional).

- Software: Cada número del producto es controlado vía y tiene ventajas del software vía: programas informáticos centrales (cad, autor lengua), P.M., pp, carro.
--Los cartuchos (de creador/de fabricante) crean totalmente diversos usos del mismo hardware. Apenas insertar el cartucho (en la computadora central del número del producto) y seguir (fácil) los pasos/sistema son operacionales pronto después de eso automáticamente (carro
puede girar número/el sistema del producto según mp/pp/uip).
- Los números del producto se pueden hacer impermeables/flotador, e.g. para el uso en piscina,
baño, ducha, playa, lago, comidas campestres, viajes. E.g.: ajustes del producto en
una caja impermeable con: visión para ver la exhibición; aberturas selladas para
teclado, altavoz, etc.
- "OSCILADOR": Hace sonidos según la programación, por ejemplo: por favor el usuario, lo alerta que a los malfuncionamientos en producto montado, dar
estado de una operación - tal como dos medios de las señales sonoras señalados
la función fue terminada satisfactoriamente. E.g., ver las piezas: "notificador",
"cuenta", "oscilador".
- Ver la "hospitalidad": Los números del producto están su grado entreteniendo (para el usuario, los partidos efectuados por el dispositivo)
- "Educativo". E.g.: aprender la electrónica; software; proceso de la invención
(Cad, instrucciones de asamblea); creatividad de los aumentos (da las ideas para
productos relacionados/nuevos); pone lo que aprende uno (vía la computadora central
software. asamblea) en práctica; la computadora central permite clases particulares;
- Seguridad: "acceso" (restringe uso a todos o a usos limitados (en un usuario por la base del usuario (uip, código del "acceso"))).
- El usuario puede seleccionar y o desarrollar muchas características de producto, e.g.,
uno o más del siguiente: tamaño, diseño que encajona, color.
- Costes de fabricación: Debido a las semejanzas de piezas, totales el hardware, y el tipo usos, allí son ahorros en coste de producir iguales/relacionó piezas y o los productos para cada invención. Los costes del software para todos los productos se reducen también.
- Alza ventas
- Prueba de mercado
- Interconectando: Posibilidades únicas del usuario
- Movilidad: Portabilidad de los números del producto ("R" [teledirigido])

/Necesidad de usuario ser atado al número del producto ("discurso")
- Iguales/relacionaron el hardware para las aplicaciones múltiples. Muchas de las mismas piezas
se utilizan (aunque diferencian sus usos).
--Para la simplificación, el "diseño adaptante" y o los números del producto puede
señalarse en diversos sistemas de hardware, cada uno señalado para números particulares del producto. Cada área de usos puede tener uno o más sistemas del "diseño adaptante".
--Separando "diseño adaptante" en sistemas (sub-) separados. E.g.: diversos "creador" para los usos en: audio (entrada-salida); uso del escritorio; movilidad del usuario; uso de interior/al aire libre; no-movilidad;
seguridad (que detecta vía audio/la representación visual/la vibración "acceso" /alterations
en el uip); etc. Cada número del producto puede tener todo el o algo su usos/funciones manejadas vía uno o más sistemas (sub-).
--Cada número/característica del producto puede también estar totalmente a parte de
las otras invenciones.
- Sastres sí mismo del número del producto al ^ del usuario: necesidades/comportamiento/deseos/situación, via^: uip, pp, P.M.

Notas sobre aspectos comunes:

Debido a la ramificación (véase la "introducción a las descripciones de producto"
el papel) cada parte tiene la opción de la conexión con cada producto número de maneras múltiples. Los diagramas para el cableado potencial complejo
entre las piezas estar en el uso. Usos para cada parte
se describen en la descripción central del número del producto o en una de sus ramas; y o determinado cerca: los partidos del usuario/de la blanco (via^: computadora central del "creador"; y o mp/pp/cart que están adentro el hardware separado del número del producto y o en el "creador" computadora central.

CONCLUYE LA INTRODUCCIÓN DE HOY A LA SECCIÓN DE LA UNIDAD

Archivo: Demandas/UIP todo

SECCIÓN EN LA INVENCIÓN QUE SE ADAPTA A LAS NECESIDADES CAMBIANTES

Programación de la información de usuario. Demandas de la independiente y del dependiente.

Secciones de este archivo: 1. Introducción. 2. El sistema puede conseguir más difícilmente como el usuario aprende. 3. Acoplamientos. 4. Patentes y nuestras mejoras. 5. El sistema piensa como un inventor que consigue soluciones.

¿Cuál es ™ del UIP? Recoge y o recibe datos/entrado sobre la situación y la necesidad de a (potencialmente correspondencia). Su "analizador amplio llamado" (analizador = cuenta del comportamiento del ') determina qué cubrirá mejor esa necesidad. Esto lleva a una salida que incluya: una función adaptada, o producto (diagrama esquemático). ¡Ver el UIP, 1D [unidad de la invención] y otros archivos!

Demanda independiente: Programación de la información de usuario. Crea un catálogo de invenciones, adaptado a las necesidades del analista de comercialización del fabricante, de los usuarios, del etc.

Demandas del dependiente:
1] Invención que crea la máquina.
2] Remuneración: Cuando una porción no trabaja correctamente, después otras piezas manejan cosas con el UIP. Ver el UIP-Acoplamiento.
3] Acoplamientos entre las piezas.
4 - Otras demandas del dependiente] las funciones, y subproductos numerados.
Las notas sobre demandas dependientes] tienen características únicas, que también pueden traslaparse sobre las otras demandas dependientes debido al alto interrelatedness de cada página en este uso. Base de datos de funciones posibles/de subproductos. Por ejemplo la puerta del animal doméstico que se adapta a la situación.

Invención del UIP que crea demostraciones de la demanda de la máquina:
. Cómo una lista de necesidades es resuelta, y entonces se correlaciona con una lista de las funciones potenciales (invenciones en el uso). Cada necesidad y función potencial tiene sus propios tipos de cuentas usadas para emparejar una necesidad con una función o una idea disponible de una invención.
- Sastres sí mismo a una necesidad según lo definido por el UIP en spec.
- Sugiere que las invenciones (esperanzadamente) por lo menos el grado de detalles por los cuales ser desarrollable gente (algunos) experta en el arte basado de una lista de opciones deletreadas hacia fuera en digan millón de páginas de ideas inventivas. Las ideas hechas girar hacia fuera se pudieron también diseñar para accionar más ideas (relacionadas) de: los lectores (gente), o el software basaron analizar el systems%.

Exclusiones (qué no es cubierta por la demanda programada de la información de usuario):
. Cuando hay solamente un tipo de respuesta del producto basado en qué le sucede. Una diferencia en usuario o la mayoría de los ambientes/de las situaciones no efectúa un cambio en la respuesta. Ejemplos:
- Los artículos que abarcan un solo material uniforme tienen gusto del metal o el caucho que responden a la presión, calor, tirando, etc.
- Versiones existentes o partes de a: goma; bisagra; grapadora; termómetro (dispositivos controlados); bola; alambre; fósforo; vela; horno; vehículos rodados; el software de la edición de textos como el software del ® de la palabra de Microsoft incluyendo búsqueda y substituye funciones; adaptadores/generadores de la corriente eléctrica.
- Cuando una persona/organismo empuja algo como un botón, después hay una respuesta preprogramada como un interruptor ligero, que tiene una sola respuesta.
- Muchos otros ejemplos
- Se cubren los subproductos no electrónicos y cómo se adaptan, pero no el subproducto duplicar-capaz no-adaptable sí mismo.
- Ver los números de patente mencionados en todas partes, el uso, y los números de patente que esos usos se refieren.

UIP-Acoplamiento: ACOPLAMIENTO del UIP = maneras opcionales de ocuparse de la situación cuando una función no está trabajando correctamente. Ver el archivo del UIP-Acoplamiento.

UIP-GETS-HARDER

(Buenos ejemplos: Acariciar el limpiador de la pata de la puerta, educación consigue más difícilmente, terapia consigue más difícilmente)

Demanda amplia: El usuario debe manejar los requisitos A entonces B de acceder. Los requisitos del acceso cambian a tiempo, y se adaptan a la situación, dando por resultado iguales/los resultados relacionados.
- El usuario debe cumplir criterios señalados múltiples en orden y la sincronización señaladas para alcanzar resultado deseado del sistema.
- Ésta es una característica de nuestro limpiador de la pata de la puerta del animal doméstico. Enseña a animales domésticos a moverse las patas en la estera antes del acceso.

Estacionamiento de recompensas:

Ejemplos:
- El sistema educa a accessor recíprocamente = las recompensas' reacciona cerca: permitir el acceso, educando, dirigiendo.
- La educación de las guías del `consigue más difícilmente = como el usuario aprende. Hay un boquete en cada lección que consigue más difícilmente vía: orden y sincronización.
- El acceso del aumento a las nuevas características/funciones como usuario aprende: el menú de opciones abre; el animal doméstico gana recompensas.

Los criterios para recibir la recompensa consiguen más difícilmente:
- Animal doméstico: accede, preparando, el alimento.
- Usuario (seres humanos): tener acceso a
. Nivelar de aumentos de la recompensa como la educación aprendida del usuario aumenta.
. - Existe: el mejor usuario aprende cómo utilizar los productos existentes, a menudo cuanto mayor es la ventaja, e.g.: empujar hacia abajo una grapadora común con la velocidad y la presión correctas = da lugar a mejores documentos sujetados con grapa; Apple, Oracle y Microsoft basaron software. Serían realzados vía esta solicitud de patente que adapta.

bloques huecos mágicos 3C292: Cada combinación ha señalado resultados. Dirige a usuario para aprender destrezas adaptadas: [con referencia a] aprender utilizar [los pobres [no] que funcionan] a partes del cerebro del ser humano/del organismo. Adaptar a usuario de las pruebas para determinar rasgos de funcionamiento del cerebro = después diseña programa educativo = entonces las guías y recompensa a usuario.
- Ver el archivo 3CE.

sistema de la identidad del conductor 6B240: puede activar solamente el vehículo después de que se hayan accionado los sensores correctos del `de las acciones. Patrones del recorrido W5 restringidos por tal comportamiento del acceso.
- Ver la parte Acceso-VAGO-Auto.

perseguidor de 6G241 GPS: como 6b240, recompensa/permite el acceso señalado a las características basadas encendido: el usuario performance/W5 siguió localizaciones del cambio del objeto [no hizo].

profesor particular del movimiento 3E061: Requiere 'los movimientos de los usuarios de las guías [mejorar su], eg.: el nivel correcto de movimiento accede. El sistema asume que los movimientos del usuario cambiará o que mejorará en un cierto plazo.

En los primeros requisitos puede estar A entonces B. Más adelante puede ser cualquiera: Un B de entonces entonces C; o B entonces C [entonces...]; o C entonces D; o C entonces B.

USUARIO = SASTRE =

ANALIZADOR =
El ARTISTA = incorpora datos artísticos
CARRO = criterios/resultados del acceso del acceso
Movimientos del ™= de DISTANCER correlacionados con requisitos del acceso.
EGH = las lecciones [una vez que cuenta mínima alcanzada usuario] lleva a la lección siguiente y a la prueba que requieren una puntuación del test más resistente antes de progresar a la lección siguiente.
El EJERCICIO = el ejercicio consigue más difícilmente = como tgh del `de egh/
Los requisitos del JUEGO = del juego consiguen más difícilmente
™ = egh de la GUÍA
™ DE LA ORDEN Y DE LA SINCRONIZACIÓN =

UIP-Acoplamiento

Maneras opcionales de ocuparse de la situación cuando una función no está disponible.

Tipos de nuevo lazo necesarios cuando (señalado función NO ACEPTABLE):
Encontrar piezas e invenciones alternativas cuando ninguna uno o más de ellas no están para cualquier razón accesible o sabida.

1] Parte inasequible - separación:
- no está en la conexión [completa] [debido a interferencia sin hilos].
- virus de computadora detectado vía: programas informáticos antivirus.
- la función es completamente o parcialmente inasequible, e.g.: es archivo fue borrado o corrompido.
- la función es (también) porción ocupada otras necesidades [para otros usuarios].
- la computadora [de la central] tiene otro apuro/limitaciones = acceso/que conecta: una función fuera de una descripción más central de una función no es ACEPTABLE.
- conflicto entre las funciones: una función ha dominado/ha interferido con otra función. Necesidad del software [poder] de ser fijado.

2] Mejorar el modo encontrado:
Encontrando las nuevas funciones que [mejores] cubrir las necesidades [incluso si todas las funciones/aspectos siguen siendo [sobre todo] disponibles: Otro modo/función se determina para cubrir mejor necesidades = entonces sistema va vía nuevos acoplamientos/funciones [adaptarse mejor].
Si la porción de invención llegaban a ser inasequible: [Como el cerebro para el ser humano o el otro organismo] el diseño adaptante puede todavía funcionar si casi algunas porciones de esta solicitud de patente fueron quitadas, debido a los muchos acoplamientos entre sus numerosos funciones. También, la adaptación establece nuevas relaciones entre las funciones disponibles si pieza de los equipo y programas de computación/de los periférico de la invención dañados, funcionando incorrectamente, o no [completamente] inasequible. Cada función tiene muchas funciones comunes incorporadas a ella - y tales funciones pueden duplicar/transferencia/copia ellos mismos a otras características [como modo autorreparador/otro adaptante].
- El encontrar/establecer las relaciones de ramificación del árbol alternativo/nuevo cuando un acoplamiento aplicable o una función asociada es inasequible: 1. las cuentas se pueden dar a las funciones posibles de cada acoplamiento [combinación de] que pueden [ayuda] satisfacen una necesidad señalada. 2. la ruta con la cuenta más alta [basada en cualesquiera criterios] se convierte en el modo = y la necesidad de reserva/de defecto consigue encontrada [con solamente la interrupción/la aberración temporales] hasta que el nuevo modo sea resuelto/probado/adaptado mejor (después de que [con referencia a] aprende necesidades).
- Un usuario sistema [de la persona (otra)] puede pedir/sugiere/consigue dirigido en modos alternativos/mejores de la determinación.

Imaginar algo no está trabajando a la derecha así que otras funciones compensan:

Asunto repetido - la determinación algo no es ninguna AUTORIZACIÓN. Si cualquier número de funciones/de piezas es inasequible, cómo las piezas restantes/las funciones pueden adaptar y todavía proporcionar [todos/algunos de] las mismas funciones. Cómo a [automáticamente] determinar la función [actual]/el modo de a es [no] - ideal/inoperable. E.G.: Cuando usuario: desaparecido/cambió su necesidad o hay totalmente un nuevo usuario.
- La regeneración/entró de usuario/de analizador, e.g.:
--Un problema pudo ser sugerido cuando un usuario (elige) desactiva una función vía teledirigido y o cambios de una función. La causa de esto podía ser la función no se aplicó bien bastante, no se aplicó en absoluto, ni no trabajaba. [Cada uno] tal evitación de una función [también] se utiliza para crear la cuenta.
- Señales enviadas to/from [central] y función - a [ayuda] determinar su estado del funcionamiento basado en cualesquiera criterios, e.g.: cómo es útil él is/was basado en el renombre del uso = que afecta a su cuenta.
--La computadora central envía = pieza/función [periférico] de las señales = buscando [y pidiendo] = cuenta [como de bien función es el funcionamiento = entonces analizador reacciona por [guardando modo/la función y o alterando el modo, y o buscando una nueva función estableciendo nuevas relaciones] = entonces verificando si el nuevos acoplamiento/función alcanza una mejor] cuenta de a [.
--La función [continuamente] hace auto-comprobaciones: como cómo los programas informáticos existentes comprueban/arreglo su software publica; tener llano de kilobytes por carpeta y sus archivos permanecían [constante/ajustado como previsto debido a las últimas ocurrencias - orden y sincronización]; la función se compara con iguales/las funciones similares a otra parte en iguales/la diversa invención unificada.
- La invención elegida envía señales al analizador que da estado de sus funciones/capacidad de adaptarse.
- Los hechos de que caminaran otras funciones adentro, o algo que sugiere tales, pueden indicar que algo no esté

bien.
- Si una función no está trabajando correctamente, otra función pudo coger el problema - porque puede ser que no hagan normalmente algo si la función cuestionable actuaba ACEPTABLE.
--el 'que seguía pudo implicar/estado que el acceso no está trabajando cuando: el acceso permite la entrada a la entidad, pero el comportamiento seguido de esa entidad no empareja el comportamiento previsto para ese usuario - tal como un acceso que busca de la caja de banco a las tenencias de la moneda extranjera de un banco disponibles para el retiro de los clientes no conectados con la contraseña de esa caja.
- Edición similar múltiple de la dirección de funciones - pero una función no está emparejando hasta las otras funciones. El Info de otras funciones [con metas similares] [sugiere] que una función no es ACEPTABLE, porque lo hace [venido cerca de] no emparejando el Info de las otras funciones. E.G.: un analizador visual demuestra un carro que apresura a través de una luz roja, pero el analizador de sonidos oye un carro el parar al mismo tiempo vía su estampilla de fecha del tiempo.

LA DETERMINACIÓN DE UNA CARACTERÍSTICA NO ES IDEAL:
[las piezas seccionan #1]: U = funciones aplicables de la invención [1. consigue la regeneración pobre. 2. Uno o más de las invenciones siguientes/de las partes de las señales al analizador = que el estado del modo señalado en cuenta [mínima] de la reunión [seleccionada previamente] ha cambiado (para el peor)] ~ C ()/analizador de la CPU =
[Sección #2 de las piezas] - cómo el analizador determina algo no es ideal: TENER ACCESO (control de seguridad) [no concedido (a pesar de tentativas repetidas de ganar la entrada del mismo usuario) (quién [de otras cuentas] parece de otra manera legítimo)] NOTIFICADOR MULTIUSOS EDUCATIVO de // EDIT de los VAGOS de // (analizador del comportamiento) [el usuario no es (como) feliz] [el modo de corregir causa una reacción pobre] // [cuenta del usuario [grado de la escuela] que no consigue mejor [bastante rápido]] // [el sistema trabaja para un usuario pero no también para otro] // [se activa cuando no fue necesitado (porque la' cuenta usuario/sistema para la otra función no da una alta cuenta de la notificación necesaria, eg.: el usuario entró la notificación era un OSCILADOR de // de la alarma falsa] [conseguido la mala cuenta] // PS-ZONE [el 'predijo que el comportamiento/la función en una zona no empareja cuentas de las' reacciones' de las acciones del ideal/del pasado] // QUE PREGUNTABA [los tipos de preguntas recibieron la cuenta que hay el problema técnico [pero probablemente no el acceso o el otro asunto (cuantificable) basado en el tema [orden del 'y sincronización del] de las preguntas] // R (teledirigido) [utilizado de localizaciones no-típicas porque las viejas localizaciones tenían peor RANURADOR de // del connectibility (debido a interferencia o a la función en esa zona no pudo funcionar correctamente] [se da el encaminamiento alternativo/] las BÚSQUEDAS sugeridas de // de la CUENTA // SA (analizador/reconocedor sano) [los sonidos no emparejan predijeron perfiles] // de sonidos [gotas] y REACCIONAN [el buscar del 'no da lugar a señalado/histórico' predijo reacciones] el SENSOR de // [los sensores múltiples (en la misma zona) dan el Info/el estado que están en conflicto] // TDS [no empareja se predice qué] // T (telefonía) [las conexiones no son realizables o ir a los puntos no previstos/a las invenciones] PISTA de // [el seguimiento (completo) perdido del usuario/de la función, y o del comportamiento del elemento seguido cambiado (fuera de gama)] // VA (analizador visual/reconocedor visual) /SA [gama escogido encima de cuenta con malfuncionamiento (probable) así que SA/VA necesita conseguir regeneración de otro función [] del '/(del calculador) el usuario (haciéndole una pregunta como: 1. ¿Es el funcionamiento de sistema correctamente? 2. Qué cuentas usted (usuario) da las funciones señaladas. 3. Hacer las preguntas/dar la dirección que no pide directo que el usuario anote la función, pero por inferencia (poder) determinar un malfuncionamiento está ocurriendo - eg.: el usuario no podría proporcionar respuesta/la regeneración (apropiadas) sobre algo que deben/que habrían podido saber tenían sistema funcionaron correctamente] // WA (caminata alrededor) [].
Secciones 1 y 2 interactivos.

Subpartes del UIP-Acoplamiento:

Compensar =
Otra función asume el control para los failings de una función no ACEPTABLE. La parte o toda la función no-ACEPTABLE se puede compensar = alcanzar una cuenta más alta para la adaptación.

Función NO ACEPTABLE =
La función no está conectada; completamente o parcialmente funcionando incorrectamente = y la función NO ACEPTABLE pudo necesitar ser desactivado/ser seguido para el comportamiento aberrante [vagos].

Autorización =

Cuando no es una característica o no puede ser autorizada, después el sistema puede funcionar como si fuera de alguna manera inactivo. Descubrir lo que llevan otros acoplamientos a las características adaptables alternativas.

. Concesionario (potencial): encuentra maneras de reducir pagos de derechos restringiéndose a los recursos señalados, incluso cuando existen las características relacionadas en la unidad de esta invención.

. (Posible) licenciador: descubrir cómo los concesionarios [potenciales] pueden encontrar maneras de pagar a pocos derechos, e infringirlo sobre el derechos de propiedad intelectual de otra persona. Entonces bloquear posiblemente el acceso a tales rutas alternativas [por cuál se podría construir y/o ofrecer la misma característica y esencialmente invención similar].

. Método que corta anti.

. Herramienta de la búsqueda de patentes para la patentabilidad: Explorar [todos] las variaciones que abarcan una unidad de la invención.

. Se autorizan las invenciones basaron encendido [se adapta el `W5 algo].

. Un contrato de licencia rápido se adapta (`corregido) para el concesionario, usando el acuerdo de la forma.

Remanente =

- La función/la invención (cada uno) puede tener remanente de sí mismo en las otras funciones (limitadas a cómo hacemos acoplamientos demostrar). Cuando un aspecto de una función no está trabajando MUY BIEN, después sus remanente a otra parte en el sistema pueden [ayuda] cubrir para cuál es que falta/NO ACEPTABLE.
- Cada pieza [de la cañería] se correlaciona con cada otra parte = dando por resultado la correlación/la creación de una subparte [archivo] en cada tal partición. Apenas porque una característica no está trabajando correctamente, no significa que todas sus subpartes [situadas en otras piezas] no ser ACEPTABLE = especialmente si [antivirus/el cortar/corrupción] los programas informáticos se ejecutan correctamente.
- Los remanente de remanente menos relacionados pueden compensar. Los remanente en [menos] funciones directo-conectadas/explicadas pueden compensar: Si la función "A" no es ACEPTABLE, entonces:

--Opción 1: remanente de las funciones "B" encontradas en las funciones "C a Z": puede compensar la función "A". Etc.

--Opción 2: Capacidades más amplias: los remanente"/"de A de las funciones "C" encontrada en las funciones "D a Z" pueden ayudar/compensar "B" (en parte no AUTORIZACIÓN) = así que "B" puede compensar mejor la función "A". Opciones más amplias basadas en la opción demostrada patrón 1 a 2.

--Opción 3: paso 1: la función "D" remanente dentro de incluso, los remanente de "E" = están que en "F" = puede compensar la función G o [A a Z]". Diagrama: f [e (d)] = compensa = el paso 2 del G.: Los remanente de G/de H en G = compensan el paso 3 del A.: A [ayudas] compensa A adentro sobre el etc. de las opciones 1 y 2.

--Las opciones 1, 2, 3 y así sucesivamente ofrecen incluso opciones más amplias, vía posibilidades ilimitadas dentro de los parámetros de las partes y de la presencia de acoplamientos. APENAS SEGUIR LOS ACOPLAMIENTOS - para ver las formas disponibles de remuneraciones [de reserva].

Sinergia =

Hay una sinergia del tener funciones/invenciones múltiples, en aquélas alternativas puede completar cuando otro no es ACEPTABLE. Más funciones conectaron el mayor la sinergia en: fuerza de reserva, adaptación. Apenas otra razón por la que toda las funciones ejemplificadas (los números y las piezas de la invención) enumeró es importante en este uso.

EJEMPLOS EN PIEZAS ESPECÍFICAS:

Demuestra cómo ha determinado una pieza no es ACEPTABLE, después cómo compensar.

U/otra función = este sistema de N [1. AUTORIZACIONES de la función de determinación no. 2. remuneraciones - solucionando problema de Rerouting To el otro ~ de las funciones] C =

-

ACCESO [que determina cuál no es ACEPTABLE] =

[Sección #1 de las piezas]: U = acceso =

[Sección #2 de las piezas - el acceso no se debe haber concedido quizá anterior según lo evidenciado por ocurrencias aberrantes: las acciones de usuarios (ilegítimos) últimos (correcto) y actuales no emparejan (por VAGOS) como en acciones en piezas siguientes. El acceso tiene subpartes/remanente para todo el/porción sí mismo en cada (cañería) partición. Esto determina cuál no está MUY BIEN sobre la pieza del acceso; entonces puede compensar analizando' siguiendo a usuario vía las otras funciones (y o los remanente del acceso dentro de las otras piezas). Entonces remuneración del acceso la' puede hacer lo

que haría el acceso normalmente: convertir a usuario a una alarma más alta, limitar o negar todo el acceso, etc.]: NOTIFICADOR MULTIUSOS EDUCATIVO de // EDIT [] // [el usuario aparece saber demasiado o demasiado poco o algo de cada uno en diversos temas] // [intercambio entre los multi-usuarios] // del CARRO de // del ARTISTA [el estilo del usuario no empareja el comportamiento [vagos] del accessor correcto] [carro is/is-connected a otra función/usuario] [el accessor actual acciona el notificador demasiado; o el notificador alterado usuario W5 podría funcionar] // PS-ZONE [el usuario va raramente a una zona] // QUE PREGUNTABA [] las BÚSQUEDAS de // de la CUENTA // SA (analizador/reconocedor sano) // del RANURADOR de // R (teledirigido) [] // [] de sonidos [] y REACCIONA [] la PISTA de // TDS [] // T (telefonía) [] // del SENSOR de // [] [] // UIP (usuario Info que programa) [] // VA (analizador visual/reconocedor visual) [] // WA (caminata alrededor) [W5 se utiliza (según lo seguido)].

Las secciones 1 y 2 pueden obrar recíprocamente.

ANALIZADOR =
OTD: [Sección #1 de las piezas]: ~ C (CPU) de U = de la parte [] =
[Sección #2 de las piezas]: ACCESO (control de seguridad) [excluye el acceso (al usuario); localiza a bandido que hizo el CARRO de // del analizador (y las aplicaciones este Info de fijar/compensa el acceso [de la cañería]] [insertar un analizador nuevo/similar file/sw] // EDUCATIVO [las lecciones se dan en la orden cronológica, de donde ido apagado sin la opción del egh. Educ enseña el sistema a cómo fijar/reprograma la banda MULTIUSOS de // del NOTIFICADOR de // [el analizador del `que trabaja para un usuario [1], puede compensar [copiado encima] el analizador aberrante para el usuario [2] = [entonces [2] adaptar adapta el analizador de 2 para el usuario #2] // del analizador] [el acceso del `asume el control] (programación) [] // PS-ZONE [] // QUE PREGUNTA [] las BÚSQUEDAS de // de la CUENTA de // del RANURADOR de // R (teledirigido) [] // [se anota el elemento = entonces seguido = búsqueda reaccionará encaminando el elemento basado encendido reaccionó parámetros] [acceso del `dado a los elementos con las cuentas apropiadas] y REACCIONA [automatizó respuestas con menos análisis (como en animales no humanos)] SENSOR de // [la situación detectada ocurre [en el tds seguido] = crea una cuenta = entonces correlador conecta el Info con la función aplicable = que es controlada automáticamente por búsquedas y reacciona] // T (telefonía) [el sistema conecta con otras funciones/sistemas para determinar si algo no es ACEPTABLE/compensa] // UIP (usuario Info que programa) [la adaptación del `ocurre automáticamente sin análisis].

U (usuario) = el ~ C (CPU) de la parte [analizador del comportamiento del `] confía en remanente de la base de datos en =
. UIP-Conseguir-Más duro = egh/tgh.

BALANCEADOR = picosegundo = oscilador

CUENTA/FACTURACIÓN = siguiendo la base de datos de la' cuenta'

CÁMARA = analizador visual = [seguimiento del `]

El CARTUCHO = cualesquiera de nuestros aspectos electrónicos de las funciones/de las invenciones' se puede conectar con el sistema unido como un cartucho. Las diversas funciones e invenciones [con las características correspondientes] se pueden enchufar como reemplazo [sin embargo no puede estar una remuneración completa - mejorar que no teniendo esta opción].
- conexión del teléfono del `= con otro sistema/interruptor/función que compensa el cartucho.

El CARÁCTER = el sastre/los vagos componen un carácter

PALMADA = analizador de sonidos = teledirigido = dispositivo que es controlado

La COMPOSICIÓN (de sonidos) = micrófono/teclado = sintetizador/corrige = música de los almacenes de la computadora = del oscilador/de la base de datos - y ofrece a plantilla los pedazos audios que pueden ser sintetizados.

COORDINADOR = analizador.
U ()/sistema del usuario = función del UIP/de controles/transferencia de la salida de las señales basada en se predice qué [como necesidad] [compensa totalmente] =
. UIP-DB = basó en cómo se anotan los elementos de la base de datos
. La UIP-Guía = dibuja sobre: los vagos/el preguntar/búsqueda y reaccionan

La BASE DE DATOS = [los datos el remanente del `] almacenados con otras funciones puede substituir/los datos de la ayuda en otra base de datos.

DISTANCER = sistema de colocación, perseguidor [orden del `y el medir el tiempo]

EDIT = sastre el texto; artista-corregir.

EDUCACIÓN = sastre = guía. Tener acceso a los archivos apropiados. El analizador/el analizador del comportamiento determina qué necesidades de ser enseñado. EGH. Respuestas a las preguntas = a la guía/al analizador/al sastre.

HOSPITALIDAD = sastre

El EJERCICIO = la guía adapta el programa educativo al usuario. Coordina el Info de otras piezas.

JUEGO % = ofertas adaptadas de la dirección: egh, tgh, hospitalidad artística.

GUÍA = adaptando el proceso educativo.

INTERACTIVO = el sistema se adapta a la situación necesaria vía: multi-media, hospitalidad, orden y sincronización para cómo funciona; el predecir; analizador que determina cuál es w5 necesario y en qué orden y sincronización.

K (control vía llaves) = teledirigido; inclinación. el sastre determina las necesidades de usuario sin la necesidad de usuario afinar en sus intereses. Creando imágenes relacionadas artista como forma de comunicación - cada usuario de la imagen crea o chasca encendido = representa una diversa cadena [hyperlinked/active] de términos/de botones.

LOCALIZADOR = maneras de localizar un artículo:
1] Aplaudir su mano y el oscilador del dispositivo [de la radio] sonará.
2] GPS; Paladio'; distancer

3] El analizador de sonidos determina de adónde el sonido está viniendo/vino, su cambio en la localización y velocidad.
4] Alarmas del notificador [cuando el dispositivo necesita ser notificado sobre algo].
5] El dispositivo [móvil] W5 está adentro fuera de zonas.
6] que siguen
] fuente 7 de vibración

MIC = partición visual del convertidor del sonido del analizador.

MODEM = teléfono

La MAÑANA = los vagos se adapta a la necesidad de usuario analizando al usuario w5 necesita ser despertada = entonces las señales de la estampilla de fecha del tiempo = notificador.

RECEPTOR ACÚSTICO del MOVIMIENTO = analizador = oscilador de la vibración

Usuario MULTIUSOS = diverso determinado vía = acceso [contraseña]/vagos/cómo se pide algo ser adaptado por el usuario o el sistema.

El milímetro/las MULTIMEDIAS = el analizador coordina cómo la función = el artista siguientes [alteración de la imagen del `]/corrigen/compositor/sintetizador/oscilador.

El NOTIFICADOR = el acceso/la cuenta/los vagos/sensor = se analizan para el cambio en el funcionamiento deseado de los parámetros [basados en qué se almacena en base de datos] = las búsquedas del sistema tales cambios = y reacciona por = un oscilador.

La ORDEN y la SINCRONIZACIÓN = el sistema correlaciona qué has/is/will sea necesitado por su = estampilla de fecha del tiempo/cuenta = reacciona.

El OSCILADOR (comunicador sano saliente) = las audioseñales a los altavoces reemplazables vía = búsqueda y reacciona.
. Cuando la porción de la señal audio de OSCILADOR necesita la remuneración: **OTD: [las piezas seccionan #1]**: ~ C (CPU) de U = de la parte [OSCILADOR del `] [los límites/alteran lo que se admiten las audioseñales] =
[Sección #2 de las piezas]: TENER ACCESO A LOS VAGOS de // del ANALIZADOR de // [] (analizador) del comportamiento [] EDIT o la EDUCACIÓN de // del COMPOSITOR CONSIGUE EL NOTIFICADOR MULTIUSOS DIFÍCILMENTE/TGH [] // [] // [solamente los altos artículos anotados activan altavoces] // PS-ZONE [solamente ciertas localizaciones pueden enviar/reciben el audio (las señales)] // QUE PREGUNTA [] las BÚSQUEDAS de // de la CUENTA // SA [el `analiza el sonido en la señal audio antes de permitir que compense] // [el `anota las audioseñales] y REACCIONA [a las audioseñales señaladas] // T (telefonía) [censores qué señales pueden ser transmitidas] SASTRE de // de la PISTA de // [solamente (la O.N.U) las señales de sonido seguidas son transmisibles] [el analizador del `controla qué audioseñales son la difusión W5].
. Cuando los altavoces del OSCILADOR no son ACEPTABLES: El sistema envía [compensado] la señal audio: modo vibratorio que pudo ser audible [a los seres humanos/a los animales domésticos]; vibración usada para comunicar vía las señales que son fieltro; altavoces de otras partes iguales/del diverso sistema; el texto Info = conectado con la señal audio puede ser difusión/enviado a las pantallas; flash de las luces [`que notifica a usuario de la blanco: leer su email/pantalla. Comunicado vía enviar olores.

El paladio (dispositivo de colocación, GPS) = compensó por [no] las características GPS de: Distancers/localizadores/que siguen. Siguen/identifican localizaciones.

PERSEGUIDOR =
cuando cierto seguimiento [submarino] - piezas/funciones es inasequible [eg.: el sensor" persona visual' de la educación] del' Ba del analizador mala] a [se puede todavía identificar/seguir vía uno o más del siguiente:

1. El sistema observa que el usuario ha hecho el acceso incorrecto/cuestionable [pasado demasiada hora en zonas de los asuntos alto protegidos las'] = que es determinado anotando = la ocurrencia entonces se analiza y el sistema determina continuar siguiendo/niega el acceso [completo]. 2. El patrón el cual encamina a la persona [que consigue] = da lugar a las reacciones [las funciones para las cuales son probables accionar el notificador/tds determinan allí son una carencia del pago oportuno] = entonces sistema reacciona por la persona más lejos del seguimiento/de la encaminamiento zona de otro asunto la' [que tiene menos/pseudo información confidencial] [así que persona no sabrá que se están siguiendo] entonces el Info se alimenta a las cortes de la policía/del gobierno [para el procesamiento].
- La pérdida de funciones esenciales [software basado] de las funciones de la adaptación sería uno de los detrimentos más grandes pero no pararía todo el funcionar.

La remuneración confía encendido [el remanente del `archiva] en otras funciones basadas encendido: su base de datos/se predice qué [como necesidad actual o futura cerca (usuario)] /[automatizado - la orden y la sincronización/la búsqueda y reaccionan]/corrige [los censores] qué las señales [del audio] no se prohiben.

Concluye la sección del UIP-Acoplamiento

ETAPAS EN EL DONANTE DE RECOMPENSAS:

Ejemplos:
- El sistema educa a accessor recíprocamente = las recompensas' reacciona cerca: permitir el acceso, educando, dirigiendo.
- La educación de la guía del `consigue más difícilmente = como el usuario aprende. Hay un boquete en cada lección que consigue más difícilmente vía: orden y sincronización.
- El acceso del aumento a las nuevas características/funciones como usuario aprende: el menú de opciones abre; el animal doméstico gana recompensas.

Los criterios para conseguir la recompensa consiguen más difícilmente:
- Animal doméstico: accede, preparando, el alimento.
- Usuario (seres humanos): tener acceso a
. Nivelar de aumentos de la recompensa como la educación aprendida del usuario aumenta.
. - Existe: el mejor usuario aprende cómo utilizar los productos existentes, a menudo cuanto mayor es la ventaja, e.g.: empujar hacia abajo una grapadora común con la velocidad y la presión correctas = da lugar a mejores documentos sujetados con grapa; Apple, Oracle y Microsoft basaron software. Serían realzados vía esta solicitud de patente que adapta.

bloques huecos mágicos 3C292: Cada combinación ha señalado resultados. Dirige a usuario para aprender destrezas adaptadas: [con referencia a] aprender utilizar [los pobres/[no] que funcionan] a partes del cerebro del ser humano/del organismo. Adaptar a usuario de las pruebas para determinar rasgos de funcionamiento del cerebro = después diseña programa educativo = entonces las guías y recompensa a usuario.
- Ver el archivo 3CE.

sistema de la identidad del conductor 6B240: puede activar solamente el vehículo después de que se hayan accionado las acciones correctas/los sensores. Patrones del recorrido W5 restringidos por tal comportamiento del acceso.
- Ver la parte Acceso-VAGO-Auto.

perseguidor de 6G241 GPS: como 6b240, recompensa/permite el acceso señalado a las características basadas encendido: el funcionamiento/W5 del usuario siguió localizaciones del cambio del objeto [no hizo].

profesor particular del movimiento 3E061: Requiere/dirige los movimientos de los usuarios [mejorar su], eg.: el nivel correcto de movimiento accede. El sistema asume que los movimientos del usuario cambiará o que mejorará en un cierto plazo.

Para Techies: En los primeros requisitos puede estar A entonces B. Más adelante puede ser cualquiera: Un B de entonces entonces C; o B entonces C [entonces...]; o C entonces D; o C entonces B.

USUARIO = SASTRE =

ANALIZADOR =
El ARTISTA = incorpora datos artísticos
CARRO = criterios/resultados del acceso del acceso
Movimientos del ™= de DISTANCER correlacionados con requisitos del acceso.
EGH = las lecciones [una vez que cuenta mínima alcanzada usuario] lleva a la lección siguiente y a la prueba que requieren una puntuación del test más resistente antes de progresar a la lección siguiente.
El EJERCICIO = el ejercicio consigue más difícilmente = como egh/tgh
Los requisitos del JUEGO = del juego consiguen más difícilmente
™ = egh de la GUÍA

MENÚ ADAPTADO a obrar recíprocamente con el sistema de uso de la palmadita:
. 06-12-19A de dibujo cubre pasos en la estructura de acoplamientos entre las características y las invenciones: 1 usuario = menú del software 2 (Home Page) = 3 enlaces hipertexto se adaptó al usuario = 4 qué búsquedas del usuario/experiencias/consigue/licencias (para su uso)/usos tecnológicos.
. Explicaciones encendido sobre el dibujo:
-1: El usuario puede ser (el concesionario potencial, el examinador de la patente, el consumidor, el otro accessor).
-2: (Limitado) tener acceso dado vía el ordenador central del usuario/el punto del Web site/de la invención del acceso.
-3: El usuario y o el sistema adapta (el `corrige) la información que está disponible en la sección 4.
-4: Las alternativas disponibles incluyen:
--Características adaptadas o genéricas - > más características adaptadas para = usuario
--Cuaesquiera otras características (secundarias) en nuestros accesos de la invención (para el uso específico buscado), e.g. cualesquiera de las palabras claves de una su o característica relacionada
---Más cercana está la asociación que el más alto en un menú puede él aparecer/esté disponible para el uso.
--Tipo de tecnología, categoría de producto, código de clasificación de patente (del international)
--Dibujos. Imágenes (de la vida real) (de él que es utilizado).
--Licencias (disponibles)
--Opciones del estado: cuál está disponible para la licencia; tipo de ingenieros/ingeniería necesaria para hacer un modelo de la vida real (probada completamente); predicciones (tamaño de mercado, perfil típico del comportamiento del usuario (para el mercado de San Francisco o de Tokio); productos existentes relacionados (sus precios); cuenta ética para las compañías que autorizan nuestro o invenciones relacionadas.
--Estado de la característica intelectual: número de directo y de menos enlaces directos to/from la característica (secundaria) o la invención de a pedida por el usuario; ediciones de la infracción y o habitaciones de la ley para (en) las invenciones directo relacionadas y (cuenta ética del infractor potencial más (sugerencia de la guía del `para la venganza merecida para su mal□n comportamiento - con o sin aumento económico al partido infringido)); asesorías legales.
--Mucho más.

Más adelante leer la carpeta adaptante detallada, e.g. Su archivo en cómo el sistema sube con las ideas de la invención en este uso. Para una lista actualizada de invenciones visitar www.LicenseItToday.com

Archivo: Demandas/demandas del acceso de la puerta/del acceso de la puerta

Archivo: Demandas/acceso de la puerta/acceso de la puerta

Limpiador del acceso de la puerta

La invención consigue animales domésticos limpiar sus propias patas. El dispositivo único reduce la suciedad seguida adentro por los animales domésticos. Los animales domésticos se dirigen' para limpiar sus patas. Los animales domésticos caminan en la estera matosa del piso mientras que esperan para ganar la entrada a través de nuestra puerta electrónica del animal doméstico.

La suciedad se quita de sus patas mientras que espera la puerta para abrirse eventual automáticamente.
¡Los animales domésticos y la gente necesitarán siempre puertas del animal doméstico con la opción más

conocida de la limpieza disponible, y esto es él! Para la medida adicional, el sistema tiene la opción de emitir un sonido breve y agudo al dueño momentos antes que el animal doméstico entra, así que sus patas pueden ser comprobadas.

ENTRENAMIENTO [ANIMAL DOMÉSTICO]:
- Instalado inicialmente sin restricciones [importantes] del acceso. [Poder] educar cómo se hace el acceso. Los animales aprenden y recuerdan rápidamente puntos del acceso.
- Mientras que el animal doméstico llega a estar acostumbrado a su nueva puerta del animal doméstico, los embarazos aumentan vía [orden y sincronización del ']. Requerido [tiempo de espera] [aumentos]. Cuanto más de largo el animal doméstico espera frenéticamente, caminan más alrededor y quitan la suciedad de sus patas.
- Alinear up/install más embarazos [de la limpieza] en un cierto plazo.

VENTAJAS: [Animales domésticos] aprender mejorar limpio ellos mismos como seres humanos.
- La invención más que paga sí mismo.
- Excepto costes en la limpieza y el reemplazo de la alfombra.
- Disminuciones la probabilidad de la orina y de las heces que son encontradas en la alfombra durante la niñez del animal doméstico y en edad avanzada [pues los animales domésticos no pueden esperar como de largo durante tales veces de relevarse].
- Ahorra productividad [del ser humano].
- Más gente confiará en puertas del animal doméstico, incluyendo ésos que usan los millares que datan de años - una aleta de los diseños sobre un agujero en la pared o la puerta.
- Animales domésticos y dueños más felices.
- Salud: [los animales domésticos no congelan en exterior frío, y la reducción en no convidado [los animales]]. Trabajo de fractura menos trasero para que gente limpie manualmente las patas del animal doméstico - dando por resultado menos lesiones [traseras].
- Seguridad: menos fango [para los seres humanos] a deslizarse sobre en pisos brillantes.
- La suciedad es qué guarda a gente de conseguir animales domésticos [más]. Más fácil para que la gente arriesgue el adoptar de animales domésticos adicionales como la puerta del animal doméstico reduce los riesgos de animales domésticos que se relevan dentro.
- Mercado mundial enorme del lugar, especialmente en países más ricos.

LADOS DE LA LIMPIEZA DEL ANIMAL DOMÉSTICO:
- Los animales domésticos se inducen a cepillar o a rodarse contra (colocándose/plano) los objetos que quitarán elementos indeseados: suciedad, pelo, insectos, etc. Esta característica es menos central al concepto principal de quitar la suciedad de pie.
- Animal doméstico de enseñanza: El dueño puede enseñar los animales domésticos a que la puerta se abre más rápidamente cuando el animal se cepilla. Los convites del alimento de animal doméstico se pueden también dar para aprender cualquier característica.

CONTADOR DE TIEMPO:
- El sistema sabe la presencia on/near del animal doméstico la estera/la puerta vía:
1. o dispositivo que mide el tiempo 2. que va encendido sobre contacto próximo inicial con la puerta vía transmisor del laser/del collar.
- El número máximo de tiempos de acceso (que vienen dentro) se puede fijar, para reducir tráfico.

ESPERAS del ANIMAL DOMÉSTICO (para el dueño alertado):
- (Serie de señales sonoras) dueño de las alarmas (en etapa) que ese animal doméstico tiene/que (los VAGOS) entra probablemente. Permite al dueño comprobar (para la suciedad) si el dueño elige.
- La zona de espera de la jaula (punto del acceso del pasado') puede:
1. reducir la suciedad en área de la jaula (como área de la pre-entrada, o vía otros medios), por ejemplo al llover; 2. dar el tiempo (más) para que el dueño venga; 3. no prohibir a animal doméstico la entrada de interior, sin interior que viene hasta que el dueño abra la puerta interior.

TÉRMINOS DE BROADEN-ABLE:
- Animal doméstico: Cualquie organismo móvil, de microscópico (las amebas a los seres humanos, o a los

animales estudiados/indujeron (para los estudios o la agricultura zoológicos). % incluye la ropa del animal doméstico, zapatos. Perros, gatos, (animal doméstico/levantado) hámsteres de los gerbils de las cabras de las ovejas de los pájaros de los cerdos/del ganado de las aves de corral (mofetas fijas).
- Puerta: acceso.
- Induciendo (animal doméstico): ellos (la ayuda esté implicada adentro) proceso/sistema del retiro de la suciedad; (no aumento) tener acceso, o volver a dirigir a la otra localización/acceso.
- Suciedad: ruina encendido o patas cercanas, o entre los dedos del pie; cualquier cosa encendido o animal doméstico cercano (pulgas, materia vegetal (semillas con las etiquetas engomadas) en la piel, señales, dander, caspa, (vertiendo el pelo/la piel).
- Collar (del animal doméstico): da el acceso. Identificación (encajada) del animal doméstico
- VAGOS: conecta el UIP (del animal doméstico o del amo) = el animal doméstico de w (comportamiento/las necesidades del animal doméstico/del dueño)
- Acceso (puntos): hogar, establos, jaulas, cualquie límite (artificial) in/outdoors. Umbral.
- Sensores: nivel de la suciedad (de la pata), animal doméstico location/ba, distancia del animal doméstico (cambio) de: punto de acceso; localización in/out del dueño [casero], [el permiso por lo tanto requerido de la notificación/de acceso puede diferenciar].
- Elementos de la limpieza: doormats y otros dispositivos relacionados erizados o que se peinan. La tiesura y la longitud de cerdas y de dientes el peinarse pueden emparejar la casta animal, el tamaño, (queriendo) el comportamiento del animal doméstico, cómo es sucio es el terreno, el etc.

Otros animales domésticos de las acciones se animan en:
- No raspar/maullido mientras que espera. El analizador de sonidos' desactivará o atascará el abrelatas sobre la audición de tales sonidos. Por ejemplo, la puerta puede no abrirse por un plazo del sistema después de ninguna ruidos del animal doméstico o de otros fastidios (sin importar si se han resuelto otros parámetros del comportamiento del animal doméstico).
- % del animal doméstico aprende nuevos trucos: el sensor se ata para determinar cómo ha actuado el animal doméstico (w5).

Ediciones:
- Ningul□n dispositivo de la limpieza puede ser perfecto pero éste es quizá en gran medida el mejor.

OTROS PRODUCTOS CONECTABLES:
- pudo conectar este dispositivo con otros productos para quitar elementos indeseados, eg.: puerta del animal doméstico del vacío (= que sigue esta invención en la cadena de los acontecimientos de la entrada).
- crear sobre/alrededor de la cubierta de la estera que ayuda a forzar el animal doméstico a permanecer puesto (en la estera).
- Los doormats [cabidos]/los cepillos/etc diseñaron para la invención específica [apretones el el reemplazable/lavable] [cepillo como] dispositivo de la limpieza.

REDUCE LA ENFERMEDAD cogida vía: transferencias entre in/outdoor, zonas. Animales del campo sucios que entran en la proximidad de granjeros pobres en áreas subdesarrolladas, eg.: Asia Sur-Oriental.

TIPOS DE LA ESTERA/DEL SENSOR:
- Colocado (verticalmente): animal doméstico inducido (vía los sensores encajados de los sensores/laser) a rasguñar las patas/cuerpo para accionar el acceso.
- La estera es ni demasiado erizada guardar el animal doméstico de la colocación en ella, ni demasiado débil para no quitar un nivel de suciedad. (Caber adentro) la estera reemplazable diferencia basado en el tipo perros, terreno (las ediciones de la materia de la arena, del fango o del vehículo), tiempo (lluvioso).
- Nivel de la suciedad.
- También: analizador visual, analizador del olor: buscan y reaccionan a [suciedad en la entidad (pies/los neumáticos)]

[PÁJARO/INSECTO] COLECTOR DEL EXCREMENTO:
Puerta del pájaro: Enseña a pájaros al impulso antes de que vuelen dentro del hogar de la persona.
- La jaula es donde el pájaro consigue su alimento, agua, juguetes, etc.
- El movimiento de intestino (BM) del pájaro es el mayor problema con el goce de pájaros del animal doméstico.

- El sensor' determina el BM ocurrió. Entonces la puerta se abre automáticamente. La puerta se cierra solamente (lentamente y suavemente) después de que se haya vuelto el movimiento que el sensor' determina el pájaro adentro.
- El sensor del BM se puede accionar cerca:

1. Analizador del olor del BM del pájaro.

2. El pájaro debe tener el BM sobre cualesquiera o parte de la jaula del piso del pájaro. El sensor determina el BM vía, mayor) vibración del A. ((que la norma) de la gota del BM. Presencia del B. de cualquier porción/elemento de BM que acciona el sensor, e.g. humedad.

CONSTRUCCIÓN DE LA PUERTA DEL PÁJARO:
. General:
- Cuidadoso no lastimar o no cerrarse sobre pájaro.
- Percas colocadas en ambos lados de la puerta. El pájaro entonces empuja la puerta o la cortina (no pesada) para ganar la entrada. La entrada se convierte en más tiesa o menos mueble cuando en "cerró modo".
- Salón del pájaro con dos puertas. El diseño de la jaula no anima al animal doméstico que entre en el salón o el umbral a menos que cuando es la entrada (visiblemente) abrirse (capaz).
. Pájaro alentador a no seguir siendo jaula exterior demasiado larga (antes de que él tiene el BM siguiente):
- El alimento mínimo (automáticamente) se da a la vez, así que el pájaro necesita volver adentro alimentar a menudo.
. Custodia hacia fuera de otra [pájaros/insectos/criaturas]:
- Los' pájaros señalados usan el transpondor minúsculo a pie, solamente permitiendo su acceso'
- Útil para tener pájaros que viven afuera también.

DIAGRAMA DEL BASIC: el animal doméstico (patas) = piso (alfombra erizada) = "acceso" (el collar del animal doméstico) acciona tds = después de que las esperas señaladas del animal doméstico del tiempo (en la estera) = puerta se abran (permitiendo el animal doméstico adentro).

DIBUJO FIGURADO (DIAGRAMA TÉCNICO):
Usuario (animal doméstico del `) = este ~ del sistema de N [abrelatas de la puerta del animal doméstico] C = ACCESO [el collar del animal doméstico señala a usuario; diversa (RF emitido) contraseña de cada usuario permite el acceso de diferenciación, eg.: animales domésticos más sucios deben esperar más de largo (incluso si un animal doméstico más limpio con el acceso también está esperando; salida de la entrada prohibida a veces: al llover; deseo de los seres humanos que se irá solo (mientras que teniendo un partido))] CARRO de // de los VAGOS de // del ANALIZADOR de // [] [los tiempos acarician es decir venir a través de puerta] [atado al collar; emite olor (atraer/rechazar los insectos/otros perros)] // EDUC [enseña al animal doméstico a esperar por la puerta; Animales domésticos de enseñanza de TGH para esperar más de largo] // MULTIUSOS [cada ser humano/animal doméstico tiene diverso acceso, y características del control, eg.: Maria quiere perros en casa durante tarde, mientras que Bob (si él es hogar y sus demostraciones del RF que él es hogar) los quiere afuera; tan una vez que los animales domésticos, licencia no pueden volverse adentro durante épocas señaladas.] Picosegundo-Zona de la banda de // NR [cuando el animal doméstico/el ser humano es in/outside que notifica al animal doméstico/al usuario] // [] // [la invención existente Steve que Kays concibió antes de otro lo fabricó: estancias del animal doméstico dentro de los límites señalados (basados en donde el alambre subterráneo transmite la señal al collar de perro, suavemente dándolos una sacudida eléctrica hasta que sepan para no cruzar la línea.] las BÚSQUEDAS de // de la CUENTA de // Q [u pide el sistema para seguir' comportamiento del animal doméstico y se dice animal doméstico cómo/when/W5 comportado/pasó a través de puerta] // R [el usuario controla la abertura de la puerta remotamente - esto es fácilmente una característica sola del soporte] // [] y REACCIONAN [cierto comportamiento del animal doméstico de las búsquedas; entonces no les prohibe el ANALIZADOR de SONIDOS de // del SENSOR de // del acceso'] [el detector de movimiento necesita ser activado por el tiempo señalado (TDS), reduciendo al mínimo el animal doméstico de la ocasión se sentará y espera] [reconoce el ruido del animal doméstico (corteza, maullido, chirrido) que puede también ser necesario acceder; guardando hacia fuera los animales domésticos indeseados] // TDS [] // T [el usuario puede supervisar remotamente cómo el animal doméstico está haciendo; y cómo eran'] el ANALIZADOR VISUAL seguido de // UIP [manera del acceso del animal doméstico dada basada en preferencias de usuario] // de la PISTA de // [] el animal doméstico [de las demostraciones (que) necesita el acceso; y si se movieron y de qué manera] // WA [puerta portable del perro (para al visitar (la casa de la abuela)].

MÁS PASOS:

Adicional etapa/aspecto [tener acceso a proceso] pudo estar agregado on/made más difícil, en etapa como [el animal doméstico aprende/se convierte en] acostumbrado/[limpieza adicional necesaria]. Pueden atar en dispositivos de la restricción del acceso de la otra limpieza [previamente patentada] los'.

OTRAS ENTIDADES QUE BUSCAN EL ACCESO:
. Limpiar los dispositivos móviles [vehículos]: [Neumáticos/cuerpo] ser/debe ser limpiado antes del acceso. Reduce la extensión de la contaminación. Protección del medio ambiente. Los pasos pudieron incluir: 1. pasando con [pasos señalados de la colada de coche]; 2. [suciedad/descoloración que buscan del sensor de la representación visual del `]; 3. La limpieza continua reacciona al paso anterior [análisis de la suciedad], después las guías' predicen para los pasos necesarios adicionales de la limpieza. 4. Iguales/diverso proceso de la limpieza [con diversos agentes de limpieza señalados para el tipo [suciedad] la edición encontró.
. La ropa de trabajo/los juegos de espacio/el otro anillo del material o de la cubierta [seres humanos/animales/robustezas/dispositivos móviles. El portador/el poseedor de material protector necesita iniciar/los pasos de la manija [en sus los propios] [con la dirección].
. Artículos que vienen abajo transportador [de la fábrica]. ¿Variación patentable?

REFERENCIAS:

http://boards.hgtv.com/eve/ubb.x/a/tpc/f/1974011632/m/2351090681/r/8791031681_-_8791031681I construyó una "cubierta" hecha de la oscuridad de piedra y de las pavimentadoras fuera de la puerta del perro de modo que los perros caminaran a través de ése antes de que consiguieran en la casa. Entonces tenía una variedad de mantas que caminaron encima antes de que hicieran su manera arriba. El fango muy pequeño la hizo arriba. En esta casa

Puerta del animal doméstico del cepillo de la preparación de la PALMADITA 5.546.895 de los E.E.U.U.
Una puerta del animal doméstico que consistía en una abertura llenó por las cerdas de un cepillo o de cepillos. Un animal se mueve con la abertura apartando las cerdas flexibles, que confiablemente y reservado resellar la abertura después de que el animal pase. La mudanza a través de los cepillos es tan natural a un animal como moviéndose a través de hierba o de maleza del bosque alta. Los cepillos realizan una función de la preparación quitando la suciedad y la ruina de la capa del animal mientras que entra. Los cepillos tienen valor aislador del colmo debido al volumen de aire atrapado entre las cerdas.

anillo-vacío de http://www.halfbakery.com/idea/Vacuuming_20Pet_20DoorA que circunda la puerta del animal doméstico. Para los perros o los gatos: Un accesorio de forma anular del aspirador monta alrededor de la puerta del animal doméstico a la casa. Cuando el animal doméstico pega su cabeza en la puerta, el vacío se acciona automáticamente, y el animal doméstico se barre de cualquier suciedad y pulga mientras que culebrea a través. Sure, los asustará al principio...

COMPETICIÓN DÉBIL:
- Trampero de la suciedad: Un piso del algodón que absorbe el agua, la suciedad y el fango de las patas del perro para ayudar a mantener sus pisos limpios. Subsistencias antideslizantes del forro del látex él estable en la mayoría de las superficies. www.plowhearth.com 800-494-7544 del precio $24.95 - $74.95

Las ideas de la BÚSQUEDA de la PALABRA CLAVE incluyen:
- pista, suciedad, fango, pata, limpiada
- estera (de la puerta), cerdas, peine, rastrillo
- animales, manta, alfombra, piel, "palillos (de la suciedad)"
- esperas, esperando, (adentro) paciente, paciencia, electrónica
- animales domésticos, puerta, petdoor, doormat, automático (aliado)
- Más piezas: movimiento (sensor), RFID, collar

LAS ADICIONES DE LA PUERTA DEL ANIMAL DOMÉSTICO SIGUEN (PROBABLEMENTE A

PARTIR DE 2006).

Acceso limitado del umbral: La invención consigue [los animales domésticos] [limpiar sus propias patas]. El dispositivo único reduce la suciedad seguida adentro por los animales domésticos. Los animales domésticos se dirigen' para limpiar sus patas. Los animales domésticos caminan en la estera matosa del piso mientras que esperan para ganar la entrada a través de nuestra puerta electrónica del animal doméstico.

La demanda está para cualquier acceso que busca de la entidad, por el que una pausa que requiere pasos no idénticos múltiples sea necesaria antes de conceder la entrada física.

EL ANIMAL DOMÉSTICO [SOLAMENTE UNO] TIENE ACCESO A LA VEZ: Intensificar sobre la opción de la plataforma: solamente un perro a la vez. La puerta se cierra después de que el 1r perro entre. Evita que un perro haga la limpieza de la pata y la 2da de scooting en la derecha detrás del 1r perro y a través de la puerta.
- Puertas múltiples del animal doméstico, con uno o más collares asignados solamente a las puertas específicas del animal doméstico.
- RFID del collar del animal doméstico requerido para el acceso. Guarda hacia fuera otros animales domésticos, animales salvajes [mapaches].

[ANIMAL DOMÉSTICO] SABE/PREDICE que LA PUERTA ESTÁ ABIERTA por uno o más:
- sonido (s)
- olor (s) de: alimento, dentro del hogar
- (la O.N.U) el chascar de la puerta oído por el perro (s)
- puerta colocada en la posición (leve) de la inclinación. Entonces la puerta abre un pedacito cuando su (s) lanzado.
- la puerta se abre parcialmente (así que el perro empuja el resto de la manera), o se abre completamente.
- empujando en ella
- la ve el moverse [en viento] o el vibrar o el inquietar del dispositivo mecánico

MÉTODOS DE LA ABERTURA DE LA PUERTA: las diapositivas se abren/se cerraron; abrir el lado de /to, y hacia fuera al ángulo (de 90 grados) (que se pega fuera de la casa).

MISCELÁNEO:
. Muchas características relacionadas en las carpetas de los juegos, e.g.: controles de acceso.
. La mayoría de los perros no consiguen la suciedad solamente en sus patas, ellos la consiguen para arriba un poco más alta también. Tan quizá un proceso de dos fases SIMPLE o un material/un cepillo más profundos para lavar la pata y el pie. O (estera ajustable) por el que la mediados de sección alcance el pecho del animal doméstico,

AJUSTAR LOS TIEMPOS DE ESPERA: El usuario puede ajustar' corrige los tiempos de espera del animal doméstico/de la persona para el acceso para la persona/el animal señalados/específicos (un animal doméstico/una casta más sucios). El tiempo es ajustado por ocurrencia señalada, eg.: perro más sucio grande forzado a esperar y a limpiar a uno mismo en la estera más de largo.
- Diagrama: Privilegios de acceso del perro (juego del ') del bandido (con la cuenta baja de la honradez) del =more de la espera grande de la suciedad (fango/mala historia seguida) =longer/shorter/altered' (más/más de largo las cerdas debe estar más allá a través). Poco tiempo de espera del dirt=shorter del dog=little en la puerta. Programado del acceso de la puerta del collar' picosegundo'.
. Dispositivo del tiempo que trabaja con el mecanismo de bloqueo, a la cerradura después de cierto rato, de modo que el animal doméstico no pueda venir in/out. El animal doméstico enseñado o a vuelto a casa antes de demasiado tarde, o no puede entrar; y o ése no pueden salir después de tiempo del sistema.

LIMPIEZA [DEL AGUA]: de la fuente de agua o de líquido se rocía sobre animal doméstico como requisito antes de entrada. Nadar quizá a través del agua/de la charca/del compartimiento del agua. Entonces quizá secador del ventilador/del aire para el paso siguiente, colgar (trapos secos a caminar a través) u otros métodos de sequía (usados para cuaesquiera objetos móviles). Entonces el animal doméstico debe esperar quizá [en salón (con que sopla caliente)] para secarse [en un tiempo más fresco].

EL ÁREA ALREDEDOR DE LA PUERTA RASTRILLA LAS PATAS DE FUR/CLEANS: Hacer la puerta real hecha fuera de/atado con a una cierta clase de dispositivos de la limpieza, esteras de puerta, plástico cubierto con el paño (o cerdas) de modo que cuando golpear con el pie/asimiento de los intentos del perro abre la puerta que están limpiando sus patas delanteras. Los perros/los gatos pueden incorporar las piernas/cabeza primero.

CERDAS: Hacer las cerdas (muy suavemente, como cerdas del cepillo de dientes). Esa manera, incluso si el perro no se mueve alrededor mucho, todavía están bajando de la suciedad apenas por la mudanza de las cerdas.

¿ESTÁ EL ANIMAL DOMÉSTICO ADENTRO O AFUERA? localizador del animal doméstico 8B-010: (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.
- La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera.
- el collar del animal doméstico tiene transmisor que demuestre si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la pantalla especial;
- + el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala si el dueño está consiguiendo más cerca o más lejos de animal.
- útil para localizar a niños. Animales en parques zoológicos grandes; áreas de la naturaleza; etc.
- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral
- Nota al pie de la página: Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; etc.

SENSORES: Detectar la suciedad [las patas o piel de on/in]. Una cuenta requerida [para la limpieza] necesaria para el acceso. Una versión más costosa para un segmento del mercado más pequeño.
- Sensores situados en [adentro] la estera/los sensores de tierra que necesitan ser caminados encendido. También sensores colocados encendido [pared].
- Los tipos del sensor del `incluyen: analizadores visuales, analizadores del olor, analizadores contentos. Mientras que puede ser difícil hay la opción de los sensores que son colocados en los extremos de cerdas/de otros dispositivos que resaltan que [en parte] caber entre la pata/los clavos de los dedos del pie/fingers/%finger del pie.
. --Otros analizadores contentos seguros pudieron ver a través las patas [suciedad que busca del `], por ejemplo luz muy brillante por el que el analizador visual mire las patas de la tapa.
. Entrenamiento: ser más difícil. Pero a tiempo los animales domésticos pueden aprender que necesitan [la repetición] el proceso de la limpieza ganar la entrada. [Poder] aprender esa suciedad que sienten entre los dedos del pie son bastante para que guarden el limpiar, en vez incluso de intentar acceder.
- El dispositivo de entrenamiento/el amaestrador humano puede dispensar el alimento/las galletas afuera. El animal doméstico debe pasar a través [de diversos] tipos de suciedad/de lío a [vuelto] a la puerta. Necesitan limpiar a uno mismo para conseguir más alimento de dispensador automático [similar] dentro. Como solamente se da un poco a la vez [y una salida/entrada] se requiere entre cada porción, animal doméstico puede continuar los días de proceso en extremo [sin tiempo de trabajo humano].
- [Animales domésticos] puede ser entrenado para hacer otras cosas adentro como proceso, e.g.: limpiar su piel. Versiones más simples/seguras pueden aplicarse a los niños humanos [que vienen adentro de jugar afuera]. Ejercitar [y solucionar el aburrimiento] [cuando la recuperación de lesión y [animal doméstico] no desea caminar/funcionado/mosca (pájaro)].
- Arreglo para requisitos particulares del `: la computadora leyó a dueños de la demostración de las salidas que los animales domésticos de W5 traen en menos suciedad basada encendido: hora, ambiente [tiempo lluvioso]. El sistema/el dueño puede adaptarse por consiguiente, e.g.: aumentar los requisitos del acceso [durante el tiempo inclemente]; dar recompensas del alimento y un animal doméstico más pequeños de la guía en más educación [del uno mismo] en el aprendizaje limpiar sus patas.
- Las recompensas desfavorables [ver nuestras otras invenciones del animal doméstico] pueden ser dadas cuando: los animales domésticos intentan tener acceso cuando [sucio]; caminan fuera de áreas [fangosas] sucias cercanas.

La mayor parte de esta sección a partir de la limadura de 2005 patentes. Invención inspirada por el perro de Neighbor de Steven.

CONCLUYE LA SECCIÓN PRINCIPAL DE LOS LIMPIADORES DE LA SUCIEDAD DE LA PUERTA [DEL ANIMAL DOMÉSTICO]

DEMANDAS DEL ACCESO DEL UMBRAL
(Incluye los conceptos patentables para el limpiador de la pata de la puerta del animal doméstico)

LIMPIANDO CUALQUIER COSA ESTO PUEDE ADAPTARSE A:
. Funcionar con la prueba del software en el texto para analizar para su contenido. Si pasaron esta prueba siguiente de la prueba entonces se requiere.
. Quitar las características de una invención (ésos incluyendo en esta solicitud de patente) en como deseado/necesitó base [en la manera adaptada]. Corregir las búsquedas señaladas los criterios [el `anota cuál es necesario y coste/disponibilidad de piezas/de recursos/educación del tiempo de la']. Las ayudas simplifican [los aspectos de (éste)] invención/sistemas existentes.
. Acceso: omitiendo criterios que efectúa su cuenta del acceso. La orden y el seguimiento del comportamiento marcado con etiqueta de las entidades [vagos] pueden [alterar] tener acceso [dejar personalmente/el dispositivo animal/móvil].

PARA ACCESO QUE ESPERA FORZADO: [Animales domésticos] se hacen para esperar antes de entrar en la puerta del animal doméstico.
- Comportamiento (impaciente) del animal doméstico usado para conseguir animales limpiar sus propias patas
- Las entidades se animan a la conducta señalada, actividad para alcanzar el propósito deseado (del dueño). Los animales domésticos se motivan para actuar de manera señalada para alcanzar su meta (que gana la entrada). Acciones de los disparadores de los VAGOS basadas encendido: comportamiento del animal doméstico/cómo se resuelven las acciones señaladas (ninguna entrada, los deseos del dueño). Eg.:
- Tiempo de espera requerido (aumentos y o cambios) durante tiempo de uso. El animal doméstico no cuenta con tan siempre que tengan que esperar un rato determinado del mínimo, el tiempo requerido puede desviarse, (de tal modo induciendo el comportamiento impaciente donde el animal doméstico puede moverse más (quitando más suciedad).

CUSTODIA [ANIMAL DOMÉSTICO] QUE MUEVE ENCENDIDO LA ESTERA:
El sistema reduce al mínimo animales domésticos de la ocasión apenas se sentará y esperará, y no andará por sus patas en la estera. Métodos para guardar el animal doméstico animadamente:
- Sonidos (de los dueños (animal doméstico de engatusamiento)) = vía el oscilador/recorder/ba: VAGOS = OSCILADOR de los disparadores cuando = el detector de movimiento no detecta el movimiento del animal doméstico.
- Alimento [olor] lanzado en a tiempo señalado/lugar de las etapas.
- Calor/frío (flujo de aire/estera) (según el tiempo/la programación).
- Alerter: el amo sabe cuándo accede el animal doméstico. (El dueño pudo (manualmente) quita exceso de suciedad). El animal entrenó (por el dueño/sistema) para esperar sobre la entrada (señalada tiempo).

SALÓN:
- (Semi) la zona de espera enjaulada entre las zonas geográficas' puede ser útil en circunstancias aisladas.
- El salón se convierte en el hogar principal del animal doméstico, de el cual pueden ir afuera, o entrar en la parte principal del hogar de la persona.
- Mantener más control sobre la localización del animal doméstico, y la suciedad.

SENSORES:
- Reacción requerida de la situación/del resultado la' es necesaria para acceder = entonces sensor da el acceso.
- Búsqueda de los sensores del `[suciedad] [con una cantidad [no] a excederse] por cuenta.
- Confía en comportamiento más que previsto para cumplir criterios de la entrada.
- Sensores del peso y/o de la luz, e.g.: puede dar el acceso a los animales domésticos señalados durante ciertas épocas del día (basado en horas ligeras cambiantes del día).

También ver las descripciones centrales de la característica siguiente: el acceso, se adapta, analizador, educa, el juego, gps, orden y la sincronización, paladio, predice, picosegundo, reacciona, el sensor, sa, estado, etiqueta, sastre, guía, interactivo, multiusos, va, zona.

LAS DEMANDAS AQUÍ SON EJEMPLOS RELATIVAMENTE ESTRECHOS PARA LA AMPLIA ÁREA DE TECNOLOGÍA QUE DEMANDAMOS. Es PROBABLE QUE UNA BÚSQUEDA de la PATENTE USTED PUEDA HACER NECESIDADES DE CAVAR PROFUNDAMENTE EN EL CUERPO DE ESTA SOLICITUD DE PATENTE, EN VEZ DE LA CONFIANZA EN QUÉ SE HA DEMANDADO HOY. ESTA SOLICITUD DE PATENTE ES MUCHO MÁS MULTI-DIMNENSIONAL EN SU ALCANCE QUE APARECE EN LA PRIMERA VISIÓN. INTENTAMOS HACER EL SISTEMA DE AUTORIZACIÓN UN PROCESO RÁPIDO, FÁCIL Y ÉTICO.

Para las actualizaciones y más encarnación la información ahora nos visita en www.LicenseItToday.com. Gracias.
