Adaptar los ejemplos (UIP): 1. Negro y blanco - juego de ordenador. Utiliza un AI (inteligencia artificial) para hacer el juego más interesante. El AI se puede entrenar para realizar las acciones basadas' adaptado en las metas/los gustos del usuario. 2. Extensión sobre Microsoft Office - el ayudante del Microsoft Office analiza cómo el usuario está obrando recíprocamente con el software de la oficina. Si el usuario está presionando aleatoriamente teclas y los botones ofrecerá ayuda. Si el usuario comienza a escribir una letra ofrecerá la ayuda que da formato a la letra. 3. La tecnología no es donde necesita ser proporcionar una experiencia verdadero adaptante. La mayoría de los diseñadores se centran en la fabricación del software intuitivo para que el usuario final y las herramientas de la oferta adapten manualmente el uso al gusto de los usuarios.

COMPUTACIÓN INTUITIVA (UIP)

La computación intuitiva es mucha de qué información de usuario lo hace la programación. Con los usuarios computacionales intuitivos colaboran sus actividades con un ayudante digital inteligente que modele a usuario [vía analizador del comportamiento]. Sugiere o realiza acciones que predice satisfará ese intento. Los sistemas de cálculo intuitivos se pueden marcar con etiqueta y seguir a los usuarios individuales, viajar con ellos, y analizar' sus necesidades. Pueden supervisan activamente el ambiente físico; aprender de experiencia anterior; buscar y utilizar la información distribuida y los recursos de cómputo; utilizar los algoritmos innovadores para computar las líneas de conducta más prometedoras frente a entradas complejas, incompletas, o contradictorias; y emplear la lengua hablada de gran alcance con todo natural y los interfaces gráficos.

El término "intuitivo" [el `predice] se aplica a la intuición del usuario con respecto a comportamiento de sistema y a dos formas de sistema "intuición": inferencia/predicción del intento del usuario, y de la selección de acciones prometedoras para satisfacer ese intento. Son mutuamente de apoyo, en el sentido que el modelado y la ayuda del intento del usuario hace sistemas dramáticamente más fáciles utilizar, permitiendo que obren recíprocamente con seres humanos de una manera que más satisfyingly se asemeje a las maneras de las cuales acto de los seres humanos solamente, y o con otros y el ambiente.

Aunque puede emplear los recursos separados a través del Internet, un sistema de cálculo intuitivo puede tener un lugar geométrico interactivo que pueda también viajar con el usuario o la invención móvil, como PDAs de hoy. Puede, sin embargo, tener componentes físicos múltiples, algunos encajados en desgaste personal o aún el cuerpo. Usando (el sensor) haber entrado multisensorial, incluyendo sonido (SA) y la visión (VA), el sistema puede supervisar el ambiente físico y el foco del usuario de la atención. Puede entonces combinar esta información sobre el medio ambiental con experiencia anterior, conocimiento de sentido común, y conocimiento task-specific para conducir un modelo sofisticado del intento y de la viabilidad del usuario, permitiendo que resuelva peticiones ambiguas, de proponer acciones apropiadas, y de anticipar necesidades del futuro.

Maneja una variedad ilimitada de tareas. Puede aumentar memoria humana, contestar a preguntas, y recopilar y organizar la información para las actividades próximas. Puede notificar a' usuarios, educarlos' y dirigirlos'. Dinámico y a pedido, puede negociar con los sistemas asociados a otros seres humanos, a organizaciones, y a los objetos en el ambiente circundante. Como criado, está disponible cuando está necesitado; y puede ser no hecho caso por el usuario. Mientras que las tareas de computación intuitivas pueden ser a corto plazo y obligadas alto, otras pueden ser mucho más ampliables, y capaces de consumir cantidades arbitrarias de recursos de cómputo y otros. Los algoritmos para realizar estas tareas pueden también emplear: técnicas heurísticas y tradicionalmente rigurosas, con la opción entre ellos conducidos por complejidad de problema intrínseca, disponibilidad de recurso, y la naturaleza (lo completo, consistencia, exactitud) de los datos de entrada. Las funciones desafiadoras incluyen: eligiendo las acciones más prometedoras de la ausencia de conocimiento completo del estado y de consecuencias externos, de requisitos de recurso de equilibrio contra la calidad de resultados, asignando recursos disponibles entre metas competentes y granes cantidades de las

obligaciones, del manejo y de la mina de información sensorial de la corriente y del pasado (de las bases de datos' (compiladas por el UIP)), y seleccionando la orden del acceso' a las fuentes de información exteriores.

En un mundo internetworked (donde están las piezas alto - interconectado de maneras unlimitedly potenciales), un sistema de cálculo intuitivo puede comunicar extensivamente con otras piezas de la invención, y fuentes de información alrededor del Internet. Para la eficacia económica, e.g. preservación de la batería, y poder de computación del ahorro (en una pieza de la invención), puede sacar datos cómputos costosos cuando es factible. Puede sacar datos a los servidores próximos siempre que sea posible. Cuando los recursos son abundantes, el sistema puede recopilar y organizar especulativo la información en anticipación de las necesidades futuras. Cuando los recursos son escasos, puede utilizar su conocimiento del foco del usuario y de su modelo del intento del usuario, para asignar qué recursos tiene que las tareas sus cómputos determinar puede las mejores necesidades de usuario (más probable) de la reunión.

Diagrama: Dato colección (base de datos, siguiendo)/UIP (computación intuitiva) = el servicio proporcionó = usuario.

DESAFÍOS DE S DE LA INVENCIÓN'

Representación de la inteligencia artificial, de lenguaje natural, y de conocimiento:
planificación para el futuro basado en conocimiento incierto o incompleto; comprensión de lenguaje natural para los locutores múltiples (usuarios') en ambientes ruidosos; modelado del intento en contextos generales; adquisición y representación de conocimiento (que recogen la información para la base de datos del UIP'); aprendizaje e inferencia; agencia inteligente: decidiendo qué hacer y cómo hacer lo (W5), metas y obligaciones en conflicto de equilibrio cara a cara, y contra recursos disponibles; integración de las base de conocimiento simbólicas y espaciales (bases de datos').

- Visión de computadora (VA'), robótica, y realidad virtual (VR'):
reconocimiento de objeto en ambientes generales; reconocimiento de la localización espacial/del contexto y del usuario/de la actividad humana; conexión de la opinión visual a los primitivos útiles en de lenguaje natural y el planeamiento; seguimiento' y explotación de la atención y del foco del usuario; integración en tiempo real de la realidad aumentada con la visión y el seguimiento del ojo

Sistemas informáticos:
generación de componentes móviles seguros con el recurso encajado (cómputo, comunicación, datos, energía) y requisitos de la calidad de servicio (tiempo de reacción, rendimiento de procesamiento, exactitud); mecanismos de la división y de la relocalización del uso; técnicas de optimización para distribuir estos componentes para maximizar funcionamiento y para reducir al mínimo coste; compilar la predicción (del tiempo)' y la supervisión run-time del acceso de datos' patrones para la optimización del lugar y la predicción del uso'; atención y previsión intención-conducida y descarga componente dinámica; nombramiento (que sigue'), descubrimiento, y encaminamiento' para los agentes y los recursos de la área extendida, usando técnicas ad hoc entre iguales y móviles; proceso y comunicaciones de alto rendimiento, de poca energía para las plataformas móviles

Teoría del cómputo:

descomposición algorítmica de la tarea y paralelización flexible de la serialización; computación de anticipación vía algoritmos exactos y de la aproximación, y modelado estocástico del ser humano/del comportamiento y de los ambientes de máquina; algoritmos de la aproximación (aproximaciones progresivas incluyendo); estudios de la complejidad para aclarar la línea de demarcación entre las subtareas exactamente solubles y ésas que se acercarán aproximadamente o heuristically; computando con incertidumbre (en relación con entrada, ambientes, y rentabilidades); seguridad criptográfica (acceso'); explotación minera de datos (de la base de datos') /warehousing/classification/clustering;
teoría de la preguntar-orden para mejorar patrones del acceso de información'.

Lo que sigue es una lista de las patentes pedidas por cómo es relevante parecían estar al UIP. No he encontrado hasta ahora cualquier cosa bastante como él. Puse 1s por las patentes que parecían ser bastante similares, 2s por los que tenían cierto tema en campo común y 8s o 9s por los que parecían como él PUEDE SER QUE tenga un poco a hacer con ciertos aspectos de él, pero posible poco a ninguna importancia. Aquí es lo que lo hice: Comencé buscando por palabras claves e intentando leer cada patente que parecía similar intentar decir cómo está cercano estaba la suya, después siguiendo los acoplamientos en esas patentes a las "referencias citó" (otras patentes) pero que parecían tomar demasiado largo, y saltó alrededor de demasiado. Terminé encima de la búsqueda por palabras claves después que hojeaba para eliminar los que no cupieron (como la materia humana del inhibidor de proteasa) y que pedía los que parecían relacionarse. Iba a ir a través y a leer sobre los que parecían emparejar mejor y dar un porcentaje de cuánto emparejaron, y siguen los acoplamientos de la referencia dentro de la patente para determinar si cualesquiera de ésos eran relevantes también.

Los números de patente siguientes son apenas de una búsqueda preliminar de la "base de datos" Y del "sastre". Subió con sobre 2.300 golpes, y he acabado la eliminación y pedir las patentes más relevantes. Iba a leerlas encima y a dar una mejor idea de apenas cuánto relacionan o si algunas de ellas no cupieron tan bien como pensamiento de I en el primer vistazo etc. Otras combinaciones de la búsqueda subieron con sobre 30.000 golpes. Esto parecía tan como el mejor comenzar con.

CONCLUYE ESTE ARCHIVO DEL ARTÍCULO DEL UIP

Archivo: Adaptar/adaptar las secuencias

ADAPTANDO LAS SECUENCIAS ALGO TENER GUSTO:
SECUENCIAS ADAPTADORAS DEL CÓDIGO EN SOFTWARE, LA DNA, EL ETC.

DEMANDA:
NUESTRO SISTEMA TAMBIÉN SE ADAPTA A LOS NUCLEÓTIDOS, A LAS SECUENCIAS DE AMINOÁCIDO Y A OTRAS ESTRUCTURAS MOLECULARES BIOLÓGICAS:

Adaptación a la necesidad de abordar los gérmenes caso por caso. El adaptador dirige a usuario dándoles las fórmulas químicas diseñadas para neutralizar peligros de los gérmenes específicos y de sus secuencias. Por ejemplo las bacterias (P.gingivalis). Los indicadores químicos notifican si y cuando los artículos puestos en la solución se han limpiado bastantes. Las mismas características usadas para adaptar la situación con esta secuencia se aplican a electrónico codifican en software también.

. Más detalles en secuencias químicas a través del uso incluyendo, de nuestros indicadores químicos, analizadores contentos, etc.

ADAPTÁNDOSE A LOS NUCLEÓTIDOS, A LAS SECUENCIAS DE AMINOÁCIDO Y A OTRAS ESTRUCTURAS MOLECULARES BIOLÓGICAS:

. Analizador contento: busca y reacciona a las situaciones señaladas incluyendo: combinaciones químicas, y/o rasgos del comportamiento (véase el analizador del comportamiento).

- Puede buscar: cambios en la situación y/o las circunstancias señaladas (composiciones [en las ciertas temperaturas y/o cantidades (el por ciento de la solución)].

. Notifica a usuario (reacción del `) que ocurre el sistema W5 que acciona acontecimiento.

. Fijar la combinación de productos químicos/de soluciones es tener acceso requerido/disparador al acontecimiento. Una forma de contraseña se alcanza cuando los nucleótidos y/o los aminoácidos correctos se encuentran en criterios señalados [porcentaje de la solución]/otros.

. ¡Los nucleótidos y/o los aminoácidos así que ellos del ingeniero se adaptan a las circunstancias necesarias! Los componentes del los nucleótidos y/o los aminoácidos, y o los nucleótidos y/o los aminoácidos enteros de cadena pueden [automáticamente] ser alterados' corregido para adaptarse.

- Juego (video): La adaptación de los nucleótidos y/o de los aminoácidos puede ser un juego de la estrategia.

EL ELEMENTO QUÍMICO PUEDE SER CARACTERÍSTICAS DE UNA ALTERNATIVA:

Cada los nucleótidos (sabidos) y/o las secuencias de aminoácido tienen la opción/la alternativa de ser una de las características de este uso de la palmadita (invenciones) (basadas en características de ser sinergizado con algo más tal como otras (las partes de) secuencias de los nucleótidos y/o de aminoácido.

- Como con cualquier parte de este uso de la palmadita, cuanto más fuerte es el conocimiento con otras secciones de este uso de la coronilla, más fácil será entender/uso sus características.

- El software del `se utiliza para analizar/los nucleótidos coordinados y/o las secuencias de aminoácido [basadas en qué reacción de la dirección del analizador contento la'].

- Encoger o ampliar los nucleótidos y/o las secuencias de aminoácido y sus características inventivas en este uso de la palmadita.

. Las ventajas de alterar [`que corrige] los nucleótidos y/o las secuencias de aminoácido incluyen:

- Medicinas y/o alimentos de Bioengineered. La vida no orgánica/natural/las formas químicas puede ser seguida así que se utilizan correctamente. EG.: colocar las etiquetas in/near las secuencias de los nucleótidos y/o de aminoácido.

. Las moléculas interactivas pueden funcionar como las características [el sinergizar]. Las secuencias de los nucleótidos y/o de aminoácido de las características comunes [también para no] como el acceso también tienen [puramente] el producto químico/los nucleótidos y/o características de las secuencias de aminoácido (a cuyas características se buscan y se reaccionan), e.g.:

- Una secuencia correcta es necesaria accionar/accede/' notifica = para alcanzar la reacción (química) señalada.
- Los bolsos de aire de la seguridad (del automóvil) (cualquie método anti del infractor en el uso) pueden ser instituidos [rápidamente]: Dibujo figurado:

--El acontecimiento (de la infracción) ocurre = persona/sistema identifica [vía análisis de estructura de oración] el acontecimiento = el analizador [redactor del `] se adapta al acontecimiento por = (activando) sus acoplamientos se paren que sean asociados (con la infracción posible prevista) = solicitud de patente de los archivos (del usuario) (con la ayuda del sistema) = patente concedida = [`previsto] infractor (éste protege a operador de este sistema (que funciona como un bolso de aire)).

DIBUJO FIGURADO (diagrama) de nucleótidos y/o del ejemplo de la secuencia de aminoácido:

. Dibujo #1:

1 necesidad de usuario determinada - > entrada de teclado 2 - de > analizador 3 computadoras - > 4 cambios la constitución (secuencia) (adaptarse) - > 5 secuencias de los nucleótidos y/o de aminoácido de la tenencia del envase.

--Notas encendido sobre diagrama:

---1: un qué usuario o sistema necesita adaptado; sus necesidades se pueden anotar/seguir de cambios a (las secuencias) en nucleótidos y/o secuencias de aminoácido.

---2: controles teledirigidos/de reacción lo hace qué #3.

---3: adapta la situación/los nucleótidos y/o las secuencias de aminoácido

---4: nucleótidos alterados y/o secuencias de aminoácido (basadas en cómo las secuencias son/fueron corregidos) (por la adaptación).

---5: puede ser movido (cuidadosamente) vía (`WA) en el laboratorio de investigación. Se supervisan cualesquiera accidentes/derramamiento' seguido por los sensores, con las notificaciones hechas cuando están necesitados.

. Dibujo #2:

El `señaló la computadora del → de la necesidad (determinada por el analizador de la entrada/del sensor de teclado) = los movimientos mecánicos del dispositivo (de los brazos)/las cosechadoras/altera los nucleótidos y/o los aminoácidos (junto con los productos químicos que pueden cambiar su característica/características/las características del carácter/(del agente del juego de %video)).

ENLACE DE LOS NUCLEÓTIDOS, DE LAS SECUENCIAS DE AMINOÁCIDO Y DE OTRAS ESTRUCTURAS MOLECULARES BIOLÓGICAS:

. Adaptar los recursos disponibles como codifica en software o los productos químicos para alcanzar resultados adaptados.

. Empalmando y o los productos químicos de conexión y/o (nuestro) codifican en software tienen muchas semejanzas (y nos predecir más tan en futuro).

. La realización de las secuencias adaptadas/codifica en software = se puede hacer teniendo un analizador hizo salir las fórmulas/dirección para cómo esta secuencia puede ser W5 creado.

CÓDIGO DE SECUENCIA ESCRITO POR NUESTRO ANALIZADOR DEL COMPORTAMIENTO (CHEMICAL/ELECTRONIC), ACCESO, EL ANALIZADOR CONTENTO Y OTRAS CARACTERÍSTICAS:

El `se adapta señala una necesidad = entonces dirige a técnico/automatizado corrigiendo el dispositivo del programa informático = preparar un programa del secuencia/informático se adapta predice alcanzará la necesidad de tener acceso a través de las medicinas necesarias membrana del cerebro del cuerpo. Pasos:

1. El analizador da instrucciones la molécula #1 = mezclarse con la molécula #2 y #3 = creando el producto químico #1 y #2 = que tiene las características de conseguir a través de la membrana del cerebro. #1 es un analizador químico del comportamiento que puede encontrar #2 y #3. Estes 3ultimo no pueden acceder al cerebro sin el otro (#2 y #3). Pero #2 y #3 no pueden encontrarse mientras que carecen el analizador del comportamiento ellos mismos, pero sus sensores son bastante buenos determinar un #1 cuando están bastante cercanos.

2. Mientras que solamente los productos químicos #2 y #3 se necesitan en el cerebro, y #1 se debe quitar para que #2 y #3 funcionen según lo deseado; el producto químico #4 es lanzado más adelante en el momento adecuado y la situación [`w5] por el analizador = desalojar #1 ya detrás de la barrera del cerebro. El problema médico (necesidad de cambiar las características del cerebro que causan problemas del cerebro, eg. ; la epilepsia o el cáncer) fue solucionada vía esta adaptación. Pues cada persona/situación es diferentes, dirección de la prescripción la' se adaptó a todas las circunstancias, eg.: la otra persona de las drogas está tomando, su edad, peso, y/o qué pudo (no) causar las sensaciones enfermas (náusea).

NUESTRAS SECUENCIAS Y TABLAS:

. Nuestra característica enumera la función como nuestras tablas creativas.

. Las características demuestran las secuencias (cadena de acontecimientos/diagramas) que pueden representar características químicas.

. Nuestro sistema es más fácil (para la gente puesta) de entender comparado al formato tradicional en el cual las secuencias son requeridas actual por las oficinas de patentes.

PATENTES EXISTENTES DE LOS E.E.U.U.:

Uso 6.974.706 de los biosensores para la diagnosis [análisis del `] y el tratamiento [adpatation del `] de la enfermedad. La invención sujeta también proporciona un método para la investigación [acceso del `] esos analitos/biomarkers [etiquetas del `] probablemente para estar presente en la respiración exhalada.

Analizador de computadora personal de la respiración 20020007249 para la modificación de comportamiento relativa a la salud [analizador del comportamiento del `] y el método (no menciona los aminoácidos, sino se relaciona con la patente antedicha - 6.974.706)

7.129.554 Nanosensors:

Los dispositivos eléctricos abarcados de alambres nanoscopic se describen, junto con métodos de su fabricación y uso. Los alambres nanoscopic pueden ser nanotubes, nanotubes preferiblemente solo-emparedados del carbón. Pueden ser arreglados en órdenes de la barra transversal usando las superficies químicamente modeladas para la dirección, vía la deposición de vapor químico.

- Nuestras características: los sensores, arreglos mencionados pueden estar en una manera adaptada.

7.062.092 sistema, método, y producto de los programas informáticos para el ajuste de aumento (adaptación del `) en (el explorador [biológico] del microarray) (analizador del `).

FENOLFTALEINA - un notificador químico del pH (indicador):

. Las vueltas pH rosado se convierten sobre 10.

. Cuando hacer una fenolftaleina de la titulación podía ser utilizada. Medir la concentración de una solución (su acidez) para predecir cómo rápidamente comerá a través (la O.N.U) sustancia sabida o de una poca sabida. La fenolftaleina se puede utilizar como dispositivo para anotar esa acidez, con este Info uno puede determinar una manera adicional de saber en lo que está comiendo la sustancia él lejos (analizador contento del `). Las características de una sustancia incluyen cómo rápidamente un ácido de ciertas fórmulas comerá lejos en algo (un número prescrito de milímetros).

Microorganismos de la matanza - dañosos a los seres humanos/a los animales, eg.: Bacterias (P.gingivalis).

Búsquedas y/o guías adaptadas (usuario) del sistema con sus fórmulas generadas para alcanzar la acidez deseada o para basar asociado con un producto químico que mata (las búsquedas del `y reaccionan) los insectos (del específico):

. Bacterias (P.gingivalis) su secuencia: tga del cct del ttt del aat del tcc del ttt del aat del tga del gaa del ttc del cct att del gct del ttt del gaa del aat del tcc.

2: Insertado en fórmulas químicas diseñó matarlo e.g. ácido cítrico en una concentración de 0.1 normal. Esto da lugar a las fórmulas que van claramente (por lo tanto es la caja fuerte (r).

--Cuando (`w5) la solución que es bastante baja (demostrar color de rosa del indicador), usuario del hidróxido del peróxido/de sodio de hidrógeno sabe que es una buena solución para poner el elemento de las bacterias en, e.g. las dentaduras.

. El analizador visual determina de un indicador que el estado de una solución química ha anotado arriba bastante para ser adaptado a la necesidad de matar (`marcado con etiqueta) el insecto señalado.

La solicitud de patente entera ([poder] con sus explicaciones) ser uno o más secuencias y/o codifica en software. Hay bien sobre un millón combinaciones posibles que deseamos someter a la oficina de patentes sin embargo, las regulaciones actuales de la oficina de patentes nos requeriría pasar bien sobre US$12,000,000.00 apenas adentro por honorarios de limadura de la página. Los limadores tradicionales de la secuencia están exentos de pagar $12 por la página después de las primeras 430 páginas (primeras 30 páginas libremente, más 400 adicionales por honorarios de la página). Por lo tanto los lectores necesitan leer nuestra versión condensada adjunto. Podría ser condensada pero pusimos en los años y los honorarios adicionales de la página a la ayuda con la comprensión. La información necesaria se enlaza de esta solicitud de patente.

Adaptaron la secuencia del sistema puede utilizar: Analizadores contentos, orden más y sincronización. Se aplican a cómo los elementos de los átomos hasta las moléculas complejas y (software para) las características electrónicas se organizan. Incluso la colocación y la pedido apropiadas de las características pueden implicar el ordenar.

Introducción a los sistemas de la generación de las fórmulas: Software usado en las fórmulas el convertirse/el analizar/evaluación para el alimento, la química, los indicadores, el etc.

- el uip de la función deseada es el matched= w uip de elementos/de ingredientes/de productos químicos/de elementos de diferenciación del alimento = dando por resultado fórmulas de los ingredientes que pueden (mejor) alcanzan meta deseada.

--las características de la meta son tied= vía uip = a las características de ingredientes disponibles/sabidos o (KN) sistema.

+ partes importantes: UIP-Adaptar, 7G050, banda, Pista-Analizar (analiza para cuál es el mejor de seguir = DB), inspirándose el interruptor, 2E010 20 30 40 50 softwares de la receta.

. Ejemplos generales:

1] desarrolla un nr para el uso deseado = alertando la presencia de sales/de ácidos/de elementos peligrosos = de in/for: líquidos/polvos/contacto de la superficie. 2] Otros usos para 7G050. 3] El sistema del interruptor puede ayudar simplemente a u ofreciendo posibilidades sugeridas: fórmula/equipo/fuente de información (material de referencia,) en línea/tipo de las fuentes experimenta. 4] UIP-Adaptar = UIP-DB: ajusta a las necesidades del u. Da ideas a u = de qué u puede elegir = entonces sistema reacciona por consiguiente ofreciendo tales funciones adaptadas.

- Ejemplo: u que usa software de la autopista de la información requiere a menudo más de dos minutos antes de que u requiere M (ordenador central) actuar = dando por resultado el interruptor que pide u si todavía quieren permanecer conectadas = la frustración u requiriéndolo responder a tales preguntas pequeñas. Puede también ser problemático para que u localice donde en el software deben entrar parar tales avisos, pero si el sistema fuera ofrecer una sugerencia tal como, usted tienen gusto del modo de defecto para darle 10 minutos antes de que tal pronto (después de que el sistema ha determinado ("estado") el 80 por ciento de las últimas 50 interacciones entre u y m era por lo menos actividad del wo de 10 minutos).

--Resultado: el sistema se adapta a u, por primer u de donante una opción en materia - u no quisiera quizá que el cambio ocurriera wo su reconocimiento. El fabricante determina a qué grado uip-adapta sugerirá o puenteará anterior y se alterará simplemente a la necesidad del u.

5] La constitución necesitó en resinas plásticas/metales/la cubierta del producto ("cm", el "cp") o piezas, porque = tolerando niveles señalados de: el estirar, doblez, tirando = dentro de ambientes señalados de la variación (extremo): temperaturas, luz, abuso, desgaste excesivo, plazo del uso del elemento (edad de N). 7G050 relacionado.

6] Estrategia de búsqueda de la patente para el sistema de la generación de la sugerencia de la idea: software y (fórmulas o receta o ingrediente)

7] Farmacéutico: ingredientes que se convierten para las drogas; ideas para la investigación.

- KN: el sistema del pronóstico médico que estudia todas las características de la enfermedad en la determinación del tipo de enfermedad = de 2E sugiere medicaciones posibles.

- Sugiriendo las combinaciones posibles para que la droga solucione señaló enfermedad/problema: el archivo para cada aspecto en la situación (uip-DB) emparejó w = los archivos de la existencia/las drogas o los productos químicos futuros potenciales.

8] Reunión de reflexión: El software diseñó simultáneamente ayudar a investigadores a aumentar su (relacionado sociológico, psicologicamente) creatividad: KN

9] Generadores alimenticios de la receta basados en necesidades.

Ejemplos del indicador: 7G050

1] Tipo guía del indicador [también llamada suggester']: El investigador los anticipa será entrando en el contacto w 7G050 relacionado: los productos químicos (peligrosos) diversos/los ambientes ásperos - > esos productos químicos/ambientes se afinan en la computadora - > C "analizan" para el tipo indicadores que puede nr más de uno de estos productos químicos/ambientes (sin relación) [el interruptor intenta encontrar los indicadores que pueden ser compatibles en buscar los productos químicos/los ambientes diversos] - > las sugerencias se hacen a u - > u necesidad de mayo próximo de hacer la investigación adicional vía: este mismo interruptor/otras fuentes de referencias/hace los experimentos que prueban hacia fuera las hipótesis/los hechos indicados del interruptor.

2] Suggester del dispositivo de protección del cuerpo: Las llaves del investigador en ésa que trabajarán con tres productos químicos de diferenciación (de acidez de diferenciación) - > interruptor sugieren qué 7G050 tipo guantes a utilizar para todos/cada situación/ocurrencia/tipo actividad (eg.: el trabajo con los objetos agudos en tales líquidos requiere guantes más gruesos) - > los guantes señalados se pueden identificar por el fabricante del guante/el número de modelo/el tipo genérico. El sistema puede también sugerir el otro engranaje protector usado en situaciones peligrosas, eg.: los delantales, juegos del cuerpo, máscaras, anteojos, caretas antigás, zapatos, (reemplazables) filtran para HVAC [sistema de la calefacción, de la ventilación, del aire acondicionado].

- interruptor usado encendido caso por caso, día por base del día, o proyectos de largo plazo futuros del planeamiento, o + diseñando nuevos laboratorios de investigación, eg.: mecanografiar las superficies (pinturas, suelo, materiales de la tapa contraria, los filtros de aire....).

3] UIP: Las características de u "se analizan" - > el sistema hace la sugerencia: U tendrá ocurrencias probablemente señaladas (contorneadas en 7G050) = interruptor sugiere: tipos de protección (engranaje protector); métodos de investigación (cautelosa) (protocolos) determinada ya para ser seguro vía los manuales.N-POS=30 de referencia en el tema o el interruptor (DB).

- "Banda": el interruptor (con referencia a) se programa = según lo controlado por el UIP; el programador puede ayudar a dirigir/interruptor del control.

. Para Techies: U = este ~ del sistema de N (interruptor que sugiere fórmulas) C = ACCESO (); ANALIZADOR (); CUENTA (); CARRO (); EDIT (); EDUC (); MULTIUSOS (); Banda (); Q (); RANURADOR (); +SCORE (dado a cada aspecto = atado a cada elemento de: ingredientes de la meta y del potencial); SENSOR (7G050); ESTADO (); TDS (cuentas de retraso de tiempo en conseguir efecto de NR); PISTA (historia (producto químico/alimento) de los experimentos anteriores conducidos cerca: u, cuerpo de organización, DB, m); U (investigador, estudiante = "educ"); UIP ().

. Descripción de D - cómo las piezas pudieron caber:

. Para Techies: U/otro (KN) sistema = este ~ del sistema de N (software usado en las fórmulas el convertirse/el analizar/evaluación para el alimento, la química, el etc.) C =

. Para Techies: Picosegundo - R - Inclinación; Zonas - supervisión; Zonas - utilización; Acceso: u necesita continuar generalmente desarrollando las fórmulas que emparejan eso el sistema desarrollado u de w antes. Los bandidos wo la mayoría del conocimiento apropiado pueden ser notados (nr). El acceso permite porcentajes

normales de los resultados negativos de los casos w (causados por error humano). secretario 4E020. imagen 4E030. Sistema del acceso de la entrada.

+ indicadores: 7G: peligros, novedades, supervisión del EL de acontecimientos: fórmulas para los indicadores necesarios que se convierten desarrollados.

. Técnico: En cómo los archivos DB = fósforo/comparan para arriba con relacionarse/cuenta w = los datos proporcionados para comenzar búsqueda cerca: u/otro sistema.

. Pasos del generador de la receta de la evitación de la sal: Sugerencias en el reemplazo de la sal en sopa de habas:

1] El usuario puede preferir normalmente el gusto de la salinidad para comparar en 0.5% de volumen de la sopa para ser sal verdadera.

2] Este porcentaje preferred es resuelto vía: qué u k/nr puso en sopa.

3] U k 2 litros de sopa será hecho, y enumera volúmenes de ingredientes que componen 2 litros (ambos antes de combinar, después después de venir (y de la evaporación) - aunque estes 3ultimo se pueden calcular algo por el sistema). Ejemplo: agua de 1 litro, habas de riñón de .4 litro, patata de .3 litro.

4] U deja el sistema recomendar otros ingredientes (si no hay sal verdadera realmente ser utilizado).

5] DB del sistema "analiza" /shows (s/printer) otro no los ingredientes de la sal demostrados para satisfacer estadístico un porcentaje grande de la población (en la zona del u) que están en dietas restrictivas de la sal. "Cuenta" para cada uno de esos ingredientes en valor de reemplazo de la sal. 6] Esos ingredientes que subieron en paso anterior son siguientes "anotados" para su compatibilidad con los ingredientes existentes u (bastante) decididos ya para mantener sopa. Cada ingrediente alimentario en el DB tiene muchos subarchivos, cada subarchivo que es el tipo uso/situación/tipo alimento tal ingrediente se puede utilizar en = y la "cuenta correspondiente". Ejemplo: las zanahorias consiguen la alta cuenta para las sopas generalmente con todo una cuenta más alta en secundario-secundario-archivo: sopas occidentales del vehículo o de la carne, pero una cuenta más baja en secundario-secundario-archivo en el tipo japonés sopa de la haba del miso.

7] La diferenciación "anota"" coordinado/"del are= "analizado" - > sugirió que los ingredientes estén agrupados en sistemas/archivos de diferenciación de ingredientes. Compatibilidad de ingredientes con uno a en sistemas señalados (ingredientes incluyendo requeridos por u) basado en el DB del gusto estadístico del pasado estudian para cómo tales combinaciones (poder) satisficieron a gente.

8] Las demostraciones de S/de la impresora = sugirieron recetas = al U. La orden en la cual se demuestran puede ser que sean esas w más arriba "cuentas" para el sistema, o por otros medios, eg.: costar, "anotan" para cómo todos los ingredientes están comúnmente disponibles en los supermercados de la zona del u, uip - el DB para lo que tuvo gusto u en el pasado, etc.

. Pasos del generador de la idea del desarrollo del indicador: El interruptor sugerirá que qué u puede utilizar//substituir/alterar en su plan/estrategia/proceso (de la investigación).

1] Todo el tipo materiales en la situación es computadora entrada del into=, eg.: mecanografiar los materiales peligrosos (ácido, nivel del pH, productos químicos 7G050 enumerados). Eg.: tipo + guantes, tipo + envases

que llevan a cabo los productos químicos, + ácidos y donde están, donde los ácidos pudieron derramarse, efectos ambientales (temperatura, duración (en qué ácidos estarán en contacto), otras circunstancias.

2] Los archivos para las características para cada uno de estos elementos son cualquiera sabido por el sistema (uip-DB). Si existe el DB fue compilado cerca: el "análisis" del material de la investigación, exámenes de los químicos %, se convirtió por u (o su compañía) para los usos futuros (por otros investigadores de la compañía).

- Cada elemento tiene diversos archivos, según la circunstancia de su uso. El "analizador" determina vía qué subarchivos ser aplicable, eg.: etiqueta del archivo, % de la búsqueda de la palabra clave, "estado", uip.

3] Se emparejan los archivos. Ejemplos: los solamente 2% de tipos del guante/del envase son convenientes para trabajar con los ácidos = interruptor determina después tres mejores guantes/envases para el ácido dicho, enumerando mejor primero.

4] Si u es incapaz/poco dispuesto de realizar cambios en guante/envase, el sistema puede sugerir los ácidos de diferenciación, o el plazo durante el cual el trabajo debe ser terminado.

5] Si todas las sugerencias por u son buenas, el sistema puede "anotar" qué u planeó hacer/todavía da otras opciones/precauciones mejores/buenas pero peores (si usa productos o no, y si es así cómo deben ser utilizados) = S/Printer.

6] Mientras que está ocurriendo la investigación = "sensor" = "analizador" = NR: cuando el sistema determina hay o podría ser (basado en cuenta) una situación que necesita la especial atención (peligro, pérdida de dinero, inhabilidad para que u consiga resultados deseados).

El diagrama grande comienza aquí: El "parte movible siguiente #1 del diagrama" está para el diagrama grande debajo de él, titulado: "D-#1". El OTD D debajo de "D #1" es un subconjunto de estes 3ultimo. Todas las piezas convergen en la computadora central en "D #1".

. "Parte movible #1 del diagrama": Para +D-#1

CARACTERÍSTICAS DEL SASTRE - SOTTO N

la VIDA FUTURA 4J030 - ENCONTRAR a GENTE QUE FALTA:
Esto puede ser provechoso en encontrar niños que falta o a fugitivos. ¿Existe ya el arte de la progresión de la edad que predice lo que parecería alguien después de cierto período, pero qué sobre como lo que suenan, acto como, el etc.? Esto puede realzar tal descripción de la progresión de la edad. Las pistas, predicen.

CÓDIGO de COLOR 6B-590 - ETIQUETAS del PRODUCTO de la LECTURA:
Esto se puede utilizar para las etiquetas del alimento/de la droga de la lectura. Suponer que necesito algo que es azúcar libre, por ejemplo. Podría leer la etiqueta entera para ver si contuvo el azúcar o no, o podría haber un color asociado a esto; Programo mi explorador para comprobar si la etiqueta hace que este color y, si lo hace, sepa que cabe este criterios. Analizador visual, lector de clave de barras, cuenta.

3J070: AJUSTADOR AUDIO - APTITUD:
Esto se puede utilizar para las clases del ejercicio o las sesiones individuales del ejercicio. Si usted ha tomado nunca una clase de aeróbicos, usted sabe que el instructor utiliza diversa música para el calentamiento, de intensidad alta y después enfría las etapas de la clase. Suponer un dispositivo detectado automáticamente si un grupo o una persona necesitó aumentar ritmo cardíaco, desaceleración, necesitó un cambio del paso, del etc. y utilizó la música adaptada para estas situaciones. Hospitalidad, guía, ejercicio.

MISCELÁNEO:
. Falsificación del cheque: Tener una pluma las ediciones de un ese banco con un talonario de cheques. Si una cantidad del cheque es sospechoso grande, o el cheque es sospechoso por cualquier otra razón, el banco puede

comprobar y ver si fue firmado con la pluma de acompañamiento o no; si no, fue robado probablemente; pueden llamar al cliente y ver si, de hecho, él eran su firma o no.

. Uso científico: Los científicos pueden poder utilizar esto para identificar compuestos químicos viendo si son exactamente el mismo color que algui□n compuesto sabido.

. Agricultura: Una planta es cierto color cuando es madura. Quizás el explorador puede determinar cuando es maduro, así como cuando es enfermo. Las plantas que no son un color maduro, sano accionarán el explorador.

. Educación: Como el ejemplo de la aptitud, el dispositivo podría decir es un estudiante o la clase estaba cansada, nerviosa, distraído, etc. y la música del juego que era apropiada para sus necesidades. Puede ser utilizada para ambas clases y al estudiar en el país. Confía encendido: sensor de movimiento, analizador del comportamiento.

. Insomnio/somnolencia: Quizás este dispositivo podría jugar la música adaptada que permite a gente dormir más a fondo cuando ella está durmiendo, la sensación completamente despierta cuando ella se levanta.

. Apegos: Como el ejemplo antedicho, quizás este dispositivo puede bajar los cravings para la nicotina, el cafeína, el alcohol o los somníferos permitiendo a gente sentir más completamente despierta o relaxed como necesidad estar vía adaptado: música/sonidos, ejercicio, hospitalidad, educación.

El sistema adapta sus funciones a las necesidades únicas de usuarios específicos. Cada usuario puede hacer su perfil único almacenar en la adaptar-Base de datos, que incluye su: necesidades, preferencias, y rasgos del comportamiento. El sastre entonces empareja la base de datos, con un menú de las opciones de la función. La función elegida es la que ese mejor resuelve las preferencias de usuario.

- La adaptar-Entrada desarrolla la adaptar-Base de datos cerca: 1. comportamiento del usuario que analiza, usuario que permite 2. para entrar sus preferencias, 3. que ligan a otras bases de datos a las preferencias de usuario.

- Integra: Corregir, educar, EGH (Educ consigue más difícilmente), guía, obrar recíprocamente, predecir, buscar y reaccionar, TGH (la terapia consigue más difícilmente), adaptar-Aparición (2G180), adaptar a sastre.

- Efecto marcado con etiqueta 7J08 de la cascada: Las piedras de afilar del sistema adentro en una frecuencia (sonido), entonces cancelan otros sonidos que hacen clarificante sano marcado con etiqueta. El sistema reacciona cuando ocurre la acción marcada con etiqueta. Piedras de afilar adentro en cualquier cosa que efectúa los sentidos del hombre cinco. el analizador contento, corrige, busca y reacciona, reconocedor sano, sastre, analizador visual.

ANALIZADOR

Como la palabra "analizador" sugiere, él intenta emparejar el cerebro humano en tomar decisiones. Las decisiones se toman de una opción de reacciones posibles preprogramadas. Usando lógica confusa, adquiere las funciones necesarias del software, como ser necesario manejar las tareas aplicables pedidas.

El sistema intenta pensar como un cerebro humano (donde (w5) factible), sistema (sistema) intenta saber sus limitaciones. Utiliza el mejor conocimiento en el campo. El analizador se modifica para requisitos particulares. Utiliza el mejor conocimiento en el campo (de los sensores, del UIP, del etc).

Adaptar los cuadros a su gusto. El analizador visual del sistema con energías amplias, determina las características de la imagen que se alterará.

. Para Techies: Corregir los cuadros. El usuario altera cuadros o el texto. El sistema altera las imágenes para el usuario (en forma adaptada).

. Funciones: acentúa imágenes; corrige automáticamente según lo programado (para el mejor sastre sí mismo); mejora la visibilidad, legibilidad, entusiasmo, interés del usuario en la presentación (de los medios multi); las imágenes se hacen para obrar recíprocamente con (con) el usuario u otras imágenes en la pantalla; cortar y pegar la función del software; el usuario dibuja imágenes; el analizador visual estudia las imágenes creadas por el usuario o la otra fuente.

Los siguientes son elementos electrónicos de la generación del arte:

- #1 OTD: D =

artista principal 5A-110-042003: hacer las obras maestras similares a las obras maestras o elegir sus los propios. Seleccionar la pintura deseada, y el dispositivo electrónico ayudará al usuario de la guía en de muchos métodos. Incorporar diversas piezas vía selecciones y o el dibujo.

redactor de la cámara 5A-120-042006: Tomar las fotografías, que usted puede entonces corregir en el sistema informático relacionado {la cámara y los aspectos el corregir pueden estar en mismo o diversos pedazos de equipo}.

palillos del color 5A-130-042004 para el cojín del dibujo de la computadora: Simplifica el sistema de gráficos de computadora para los niños. El niño inserta el pedazo plástico para el color deseado.

arte de la antena 3A-110

cojín del aire 3A-580

"Analizador de sonidos", y "Sonido-Visión": utilizado para convertir sonidos en visiones.

"Composición": la composición del efecto sonoro pudo trabajar paralelamente o en sinergia con el "artista"

"Telecontrol"

pluma mágica del aire 3A-790

laboratorio de la invención de la realidad virtual 5A-620.

"Bill"

TERMINAR ESTE ARCHIVO DE ARTE

ARTISTA - SUB-FEATURES SIMPLIFICADO:

"COLOR" = cuaesquiera colores. Cualesquiera fósforo "corregido" de los colores.

La "CORREA ESLABONADA" = externamente controló la imagen que creaba arrastres del modo a través de la pantalla.

El "VIRUS de la CORREA ESLABONADA" = correa eslabonada ataca otras funciones. Funciones del jugador opuesto del "juego" representadas visualmente. La correa eslabonada "corrige" el inturn de las funciones del opositor que efectúa sus capacidades.

"CORTAR y GOMA" = terminología estándar de la computadora más más.

El "DRENAJE" = crea imagen.

El "EDIT" = altera imágenes en algoritmos complejos. Eg.: "arrastre"; hace los colores o las formas compatibles; "cortar y pegar".

La "GUÍA" = sugiere cómo la fuerza del usuario procedió en crear imágenes.

"IMAGEN" = cuadro.

"IMÁGENES INTERACTIVAS"

"MULTI-COLORER" = iguales que la correa eslabonada exceptúa controles del usuario cómo la correa eslabonada se mueve.

"MULTIUSOS" = cada usuario "corrige imágenes" de cada uno "".

"Interruptor" = ("artista") software; programa.

"INSTRUMENTO de la ESCRITURA" = ratón, aguja, "inclinación".

Archivo: Arte \ AR-IMI
ARTISTA - FUNCIONES COMUNES PARA CADA ARTISTA KN:

Introducción: Cada tema de la función del "artista" abajo incluye diferente variaciones detalladas en agrupar del "artista relacionado" invenciones.

"ANALIZADOR" =
El sistema tiene una mente sus los propios. Cómo automáticamente: "Corregir", "Dibujar", "arrastre". "Señalando" "imágenes" para etiquetar/ "coordinando".
% "sigue"/"anota" las ocurrencias/las funciones del "artista".
"ANALIZADOR DEL COMPORTAMIENTO" =

Patente de los E.E.U.U.: 5507649 = las "imágenes" son fósforo "señalado" del to= comportamiento del accessor. Eg.: los niños reciben diversas imágenes de adultos.

"COLOR" = cuaesquiera colores.

. - Selector del color: La guía (impresa) demuestra el código numérico para colores numerosos. Versión del programa también.

[Productos Co (catálogo de la fidelidad del invierno 95 del Co del pedido por correo - encendido Archivo), ruta verde de 5601 Int'l, Minneapolis, manganeso 5540. 800 326-7555 Fax 800 842-2725; todo el P. 4, P. 5, P. superior 6]

--cada código numérico usado por "color" = el "analizador" para: color "coordinación" u otra "que corrige"; "humor" y vagos (cómo cada color efectúa espectadores).

. - los "colores" son cambiables/recargables: Marcador (recargable) de la tinta Sistemas.

[Productos Co (catálogo de la fidelidad del invierno 95 del Co del pedido por correo - encendido Archivo), ruta verde de 5601 Int'l, Minneapolis, manganeso 5540. 800 326-7555 Fax 800 842-2725; p. 6, 7, 8, 10]

. Acceso: Cañizos para tener el "acceso": mecanografiar W5 usado los colores.

"COORDINADOR" =

Cualesquiera "corrigieron" colores/el fósforo de las imágenes. Modos de colores de coordinación y las imágenes son similares.

Coordinación del color:

. Proceso bien escogido del color (para la "correa eslabonada"):

+ colores compatibles: Los colores utilizaron la mezcla (bien - como banda), eg.: fósforos/mezclas verdes con el azul, creando medio azulverde; rojo y mezcla azul para hacer púrpura...

+--la manera de los cambios del color pre- "analiza" cómo los colores mezclan junto

--Los colores utilizaron mezcla bien, eg.: mezclas del amarillo con el azul, crear medio verde; rojo y mezcla azul para hacer púrpura...

--la pedido de los cambios del color considera cómo coordenada de los colores y

mezcla junto

- el dispositivo utiliza solos colores, y o colores deseados las mezclas como usuario selecciona.

+ la compatibilidad de colores puede implicar eso: están de un relacionado tema, función, u, uso. El "coordinador" "señala" colores por consiguiente.

+--La 'imagen de carácter retrata (compatibilidad/tipo) de tema materia. Ver: Guía = carácter.

+ cómo los colores seleccionaron: 1] sys= "analiza" compatibilidad del color cartas. 2] El segundo color utilizado tiene pigmentos del color que sean iguales/color de w (con) primer y compatible similares/compatibles con segundo color. Se aplica a tres o más too= de los colores por el que todos los colores agregaron en otros colores deben ser w compatible (con) cada otro color. 3] UIP que adapta según: u o gustos del cliente; parámetros del comportamiento del público objetivo. 4] Ver el "designador".

+-Style de colores = del uip= coordinados outputted depende encendido "señaló" deseos del color. Usos: mayor o menos coordinación o contraste del color (coger la atención de la gente o crear el "humor relaxed" para la "hospitalidad" o el "educ" o el "tgh").

Coordinador de la imagen:

Compatibilidad de la proyección de imagen: cambios realizados para ser (no) coordinación. El sistema "corrige"/los "cortes y las gomas"; ajusta/coordina la existencia/futuro tamaños de los colores de las formas w (con) (dar deseó/[la "correa eslabonada" generada] aspecto). Software de coordinación de la imagen R24-1.

Software de coordinación de la imagen de ++ R24-1:

"Analiza" para los colores/la textura de la imagen/las formas compatibles/color intensidad.

Analiza y tarifas como de bien se coordinan los colores elegidos.

Genera colores compatibles en modos de salida de "multi-colorer" y "correa eslabonada". Usos: analizar las fotografías, arte gráfico software (opciones limitadas del color influenciadas por el tipo impresora o software compatible).

- "corrige" colores/formas incompatibles - > eg.: los colores/las formas se convierten compatible algorythmicly:

--#1 que cambia colores/formas señalados. Colores señalados:
esos lo más menos posible compatibles; usando la carta de la preferencia de color del uip del u, 1696
omisión de los colores más cercano a espectro tenido aversión (todos junto);
colores necesarios para efectuar resultados deseables vía ""/"de los vagos uip", eg.:
aplicaciones amarillas o rojo para coger la atención de la gente (en emergencia/
para el "nr").
--#2 que cambia todos los colores/formas - > eg.: trayéndolos más cerca adentro
línea compatibilidad sabia - > agregando/que omite agentes de colorante.
. - ARTISTA: (el sistema seleccionará colores según colores a
cuál debe 1 fósforo/[2: banda ()/uip = interruptor (software del programa del `) sabe w5 para colorear
el coordenada, entonces hace tan (automáticamente)].
. - el usuario selecciona uno o más colores, después el interruptor ofrece (disponible)
opciones de colores compatibles.
. - INTERRUPTOR D DE C: determinador del color (sensor, sensor = lente, "c" del color
códigos) = "analizador" = s/impresora
- OTD D: Este sistema de N (coordinador de la imagen) =
TENER ACCESO (la persona debe usar los colores (coordinados) particulares para
acceso (entrada, uso)) - copiado al "acceso" 7.96; ANALIZADOR;
+ARTIST (el sistema completa colores (después de que se hacen ciertas áreas;
ajusta/coordina existiendo/los tamaños futuros de los colores de las formas w (con) (a
dar deseó aspecto según lo definido por las escuelas de artes gráficos);
CÁMARA (entrada de imágenes ("corte y goma") - > procesado ("corregido"
por este sistema); CARRO (tipo que coordina el interruptor); COMPOSICIÓN
((automáticamente) combina la composición audio del gráfico w); S;
EDUC (aprender la coordinación, arte, estudian encendido a pintores del pasado;
las guías/enseñan al fósforo if/when/w5 (colores)) de u (usuario); M (sofisticado
interruptor, colores, analizadores de coordinación); MULTIUSOS (cómo cada u
tiene gusto de su interruptor); banda (programa); CUENTA (como de bien coordinado: color,
formas, textura (2.o o 3D)); SENSOR (para los colores); SONIDO
ANALIZADOR; ESTADO (el sistema juzga su capacidad de hacer
necesario/pidió a tarea/a jueces qué lo hizo; demuestra numérico
posibilidad del error); UIP; ANALIZADOR de +VISUAL.
Monitor inteligente -2E251: el sistema de las aplicaciones (sistema) para mejorar el sistema del aviso w5
(sistema) es
el estudiar/que sigue.
. - Sistema de la enumeración de R: porque este KN tiene un dígito adicional (R24-1),
su terminantemente un KN y no incluye N existente, con todo el R24 de

R24-1 se relaciona con N existente que se ate remotamente a R24-1.

- textura de la imagen, definida: abarcado de muchos/de puntos pequeños/grandes de escoger/multicolor; la imagen de la sustancia parece (tela, la piedra, brillante (metálico, plástico), áspero (madera), cartulina, papel, (vivir) materia vegetal.

Software de la dislexia -5G061.

- los iconos de los interruptores ("guía") se pueden "corregir" entre diversas formas: ajustado/redondeó (círculo/óvalo)/(los perímetros) w triangular el "color" w/in cambió según lo "señalado".

+ "acceso": los u "carro" /sw= deben haber señalado las formas/colors= a aumento "acceso". Es decir: el pr= del in= de las formas de u (usuario) debe tener corregir el for= "acceso" de los parámetros de la "imagen". ¿Patentable?

--el nivel del sw= del u "analizaba" para el nivel del compatibility= de "tener acceso" dado resuelto por la proximidad de la compatibilidad.

--los accessors enterados de este sys= pueden cambiar su tipo images= dentro de la gama de imagen que les dio un cierto acceso.

=

. El mezclador de la pintura R24 hace gamas de colores.

. - [Pintura Co 3-1-47 Himejima, Nishi-Yodogawa-ku, Osaka 555 de la roca 06 473 1551 15 de febrero de 92 NK]

- D: cart (el envase del ~ del ~ c del cartucho del `) para diversos elementos para la pintura = transferencias del mezclador = de la pintura al dispensador = al dispensador (la pintura de las gotas del cepillo/del aerosol/la pintura de los partes movibles en usuario de los envases puede quitar y utilizar como pintura (fresca)) = superficie de las pinturas = superficie.

- diversas formas de las pinturas, texturas, gruesos de la pintura, etc. según instrucciones (pr) de la programación/del usuario.

- el sistema analiza la textura/la superficie sobre las cuales pintará, y en golondrina de mar determina la mejor mezcla química (palillo y estancia en para periodo de tiempo deseado) y grueso y número de capas necesario. analizador superficial (superficie = pruebas de los rascados en su laboratorio; "cámara" = "analizador visual"; tipo superficie y cualquier otra del usuario "k" información (si es de interior/al aire libre; parámetros de la temperatura año redondo...)

- OTD:

ACCESO: (gamas de restricto posible de los colores así como cualesquiera acceso); CÁMARA: (estudios (color existente del ambiente) a determinar el mejor color para mezclarse); CARRO: (banda; tintas; pinturas;

productos químicos; olores pintura [de la mezcla w (con)]); COMPOSICIÓN: (automáticamente pinturas según las señales del analizador de sonidos - D: sonido = analizador de sonidos = R-24 = superficie pintada); ENTRETENER: ; MFH: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; Banda: ; IMPRESORA de color : ; Picosegundo: ; Q: ; R: ; S: ; CUENTA: (tds); SYNTH: ; Teléfono: (tr); UIP: (combinación de color según el uip de la blanco audiencia/usuario y o según efecto deseado (según uip del público objetivo, eg.: el color quizá mejor a aumentar la productividad en obreros de la mezclilla azul en Tailandia es luz Borgoña pintó las paredes)); WA:.

selector del color 3C-210: (un KN más viejo?)
- El dispositivo del punto en cualquier cosa, y sus colores se alteran o disecado, eg.: algo verde se puede dividir en amarillo y azul; o cambiado en conjunto, eg.: a blanco, a rosado o a marrón...

. (d) Dibujo: "Artista" ()/el artista del coordinador o del selector del color "corregir" El software de coordinación de la imagen R24-1 (coloreado) "imagen" hizo salir = C ((Color) "analizador") = CORTE de // de la "CORREA ESLABONADA" (manera de los efectos del color coordinado hecho salir) "y GOMA " (cada sección puede tener colores coordinados diferentemente, adentro otro redacta el método y el estilo outputted diferencia según la sección (todo visible simultáneamente en el mismo s)) // "DRENAJE" (la manera del dibujo acciona "color de diferenciación" modos de generación/de coordinación) // "EDIT" (cómo está coordinado) // "DIRIGIR" // "IMAGEN" // "MULTI-COLORER" // "MULTIUSOS" // "INTERRUPTOR" // "INSTRUMENTO DE LA ESCRITURA".
. Cañizos para tener el "acceso". W5: Manera de la cual siguiendo estar coordinado: imágenes; comportamiento del usuario ("vagos"); colores; formas; W5 sistema alcanzado u.
+ apresto/color/el Shaping%: "Corregido" según lo necesitado para compatibilidad. Eg.: el tamaño del árbol no excede tamaño de la casa cerca dos, y su fruta es el tamaño doble de la perilla de la puerta principal de la puerta. El sistema puede alterar la forma del árbol y o de su fruta en la diferenciación manera. D: los "cortes y las gomas " = entonces "corrigen" por consiguiente.

Extremo "coordinador" = "artista"

+ la "CORREA ESLABONADA" = externamente controló la imagen que creaba arrastres del modo a través de la pantalla. También las funciones tienen gusto de un organismo que se arrastra a través imágenes que dejan efectos visuales alterados en su estela. Diferencia de multi-colorer cuyo movimiento es controlado por el U.

- %crawler puede estar en la forma del carro/interruptor (el software del `) (insertado en la función/ modo/sistema ()/interruptor/c)/icono o "imagen interactiva" del sistema.

- Algoritmos de D: correa eslabonada de las características de la imagen anterior (f1) X (F2) - > f3 X cuaesquiera otras variables (tiempo, entrada adicional dada la correa eslabonada (por u)) - > sinergizó la función (f4) - > las imágenes alteradas - > pausa del tiempo - > imagen pasada pueden ser re- "corregidas" (en algo nuevo /repitiendo algoritmo relacionado)

--cada "f' = función: ha ocultado códigos. Se ocultan estos códigos en ése no hacen (necesario) se relacionan exactamente con la imagen demostrado; pero influencia: "correa eslabonada subsecuente" - mecanografiar los acontecimientos.

. Leer (d) el dibujo posterior: u (usuario) = este ~ C (computadora del sistema del "artista" del `) = COLOR (elige aparecen qué colores cuando y cómo (w5)) DRENAJE de // (la correa eslabonada sí mismo decide a cómo dibujar/"corrige" la GUÍA de // (u puede correa eslabonada de la "guía". Aunque la correa eslabonada puede elegir no hacer caso de peticiones del U.) // MULTI-COLORER (lo hace qué correa eslabonada también) // MULTIUSOS (cada correa eslabonada se puede considerar un u (usuario) en este circumstance= dando por resultado cada correa eslabonada "que corrige" imágenes cada correa eslabonada generada, o cada correa eslabonada puede alterar otras correas eslabonadas (de vida)) // INSTRUMENTO de la ESCRITURA (la correa eslabonada toma la forma de cualquier escritura instrumento).

- Ver las adiciones a la "correa eslabonada". Estaba en archivo: k \ AR \ IMI& en 7.96.

. Cañizos para tener el "acceso". La correa eslabonada W5 se utiliza vía una o más de siguiente:

- U ata la su llave o el otro elemento relacionado al correcto correa eslabonada que los toma a través de los cañizos, aunque u (usuario) puede ser requerido para tomar "señaló" las acciones que controlaban la correa eslabonada y o cualquier cosa en sus alrededores W5.

- La correa eslabonada se debe reprogramar según lo "señalado " = entonces tomado encendido (una) de las rutas de la trayectoria ha diseñado para acordar (según mecanografiar el uso/el acceso deseados).

- W5 cómo los controles de u (usuario) o reacciona o crea la correa eslabonada (virus) en cualesquiera manera: "juego", "artista", "acceso" = "orden y sincronización " +, "correa eslabonada " = " carro". 1703

- ver el "juego", "juego" = "arrastre"

- la "correa eslabonada" sabe W5 (qué, donde, cuando, porqué y cómo) para conseguir u (usuario) al punto deseado del acceso, ahorrando u de afinar en los movimientos innecesarios/información. Como señal electrónica: u selecciona que los marcan una dirección de la Internet quieren la correa eslabonada para llevarlos.

+ el "VIRUS de la CORREA ESLABONADA" = correa eslabonada ataca otras funciones. Funciones del jugador opuesto del "juego" representadas visualmente. La correa eslabonada "corrige" el cumplimiento del interno de las funciones del opositor su capacidades.

- Una función algorítmica de la cual altera la función lo que su diseñó atacar/efecto; El virus es un subconjunto de "correa eslabonada".

- También funcionan como la correa eslabonada sin embargo los resultados alterados también incluir los functionings correlacionados a las imágenes atacadas.

- Ver la "correa eslabonada".

Leer (d) el dibujo posterior: u (usuario) = cambios de este sistema del "artista" las capacidades de otra capacidades del jugador adentro debajo del ~ C (computadora de las maneras del `) = GUÍA (cómo pueden controlar sus jugadores/correas eslabonadas) // MULTIUSOS Interruptor de // ((parcialmente) inhabilita su ("artista") interruptor) ESCRITURA de // INSTRUMENTO (qué puede/no puede hacer).

. "Acceso": Cómo piratas informáticos de los ataques: Búsquedas de la correa eslabonada (vía "analizador") Los piratas informáticos W5 están presentes en pirata informático de los ataques/de las neutralizaciones del sys=: sistema o porción (interruptor) de eso que permite técnico el acceso de u, eg.: borra los códigos necesarios del interruptor (software del `) para la banda (programa) para conseguir en el sistema durante eso o el futuro intenta en el acceso.

"CORTAR y GOMA" = terminología estándar de la computadora más más.

Cortar los espacios en los cuales las imágenes insertaron: estas imágenes son:
fotos/otra en/imágenes/de la "cámara previamente dibujada dibujada"
imágenes (transferidas); el corte del fragmento/el pegar aparece
(aleatoriamente) sobre la secuencia (banda) de tiempo.

+ las búsquedas del VA (analizador visual del `) "señalaron" el images= entonces "cortes y gomas " = como "señalado" (por "corregir"). La búsqueda del interruptor y substituye.
Usos:
- crear los collages;
+ texto asociado de compilación de las imágenes w del tema necesario:
Caras asiáticas de la característica; (porciones de) iconos de la contraseña (w "señalado" función).
- "hospitalidad".
+ el sistema da a usuario un menú de imágenes para elegir el from= "para cortar y goma " como deseos de u (usuario).

. - Rompecabezas "juego": el corte y la goma omite secciones de la imagen/de la pantalla = u debe conjeturar cuál falta.

. D posterior leída: u (usuario) = ~ del ~ C del "artista" (sistema "cortado y goma") cuál es "Corte y Pastable" =
CORREA ESLABONADA de // del COLOR (colores pero no no necesario las formas o el texto)
INTERRUPTOR // DE // DE LA GUÍA DE // EDIT // QUE ESCRIBE EL INSTRUMENTO.
- "cuenta" demostraciones W5/cuantas veces los elementos fueron utilizados/vistos/"cortados y pegado " antes por u "señalado" (usuario) para los usos señalados.

+ jazzes del "artista" automáticamente encima se corta y se pega de qué: selecto "corregir" el modo.

+ cualquier función se puede etiquetar con una "imagen": Cualquier cosa representable como "imagen" es cortado y pastable. Cualquie función de KN (invención) (demostrado en su s). Eg.: Las peticiones VA (analizador visual de U del `) al seek= entonces "corrigen " = todos
iconos con las características (piezas) que están sobre el 80% verde, el azul y o azulverde.

Cuál es cortado y pastable (w o wo "imagen" (las piezas)/otros elementos): cualquier pieza de KN, eg.: "cuenta"; elementos deseados del uip (deseados funciones, porciones de influencia del DB qué uip determina como siendo funciones deseables); piezas (presentación visual o función) de iconos.

- "Tipo de la función"/KN del artista ganado o perdido: el "drenaje", "corrige", "capacidad del instrumento de la escritura".

. Cañizos para tener el "acceso". W5: "Fusión" = "artista" = "cortado y Goma ".

- Líneas donde el "corte y la goma" cortaron resuelto cerca: cómo el interruptor demuestra donde comienzo y extremo de las imágenes según lo "señalado". Eg.: Búsquedas del VA (analizador visual del `): caras (wo el pelo o el fondo), las imágenes (bloqueadas) precortadas es adentro cortada totalidad.

"DESIGNADOR" =

Los colores, las formas u otras imágenes se utilizan o "se corrigen" a alcanzar el resultado "señalado". El sistema determina automáticamente vía cualquier criterio de la "designación" del kn qué necesita destacarse/sea "corrigió". Resultados en mayor ayuda a u: "nr"; qué necesita atención; "estado"; intuitivo el usuario puede saber lo que "señaló" los cambios significan, ahorrando tiempo de tener que leer el texto, miran para arriba significando o tener s estorbado. "Corregir" modo selecciona: color, "coordinador" (compatibilidad llana), "arrastre".

- formar de búsqueda y "reaccionar": Aunque nada puede necesitar supervisar o el "seguimiento", o esté ocurriendo accidentalmente u ocasión; el sistema (sistema) o u (usuario) quiere ""/(de las imágenes correspondiendo) %functions alterado como "señaló".

. Ediciones de la patentabilidad: cómo la designación trabaja automáticamente w juntado (con) las ventajas.

. Necesidad "señalada" del resultado determinado cerca: "nr"; "uip"; "cuenta"; "tds": demuestra el plazo que sube; "analizador"; el "sensor" es

accionado; creando "humores señalados" para: "hospitalidad", "educ", "tgh", "milímetro".

Usos:

Qué necesita la "designación":

- diseño cualquier cosa (casa o planes de N): ciertos colores/formas es (coger la atención) el wo necesario que crea un desagradable total forma/color/otro (cómo u utilizaría N= determinado vía vagos) esquema coordinado; esta coordinación es tal que el importante los colores se destacan al grado deseado también.

. --Eg.: tener botón anaranjado [de la parada] mientras que el resto del producto está adentro Borgoña blanca o gris, pero no oscura (que entierra la naranja).

- (automáticamente) da iguales/se relacionó colores/imágenes con cada tipo de la función (icono del interruptor). Resultados en el ojo del u que es más fácilmente capaz de clasificar "imágenes".

--"señala" color según "cuenta" del color de la función es atado a.

- "nr": da cambios "señalados" a: atención del retén. Eg.: rojo es la mayoría de la crisis seria en el departamento A, mientras que cortinas más ligeras (colores de rosa) ser menos serio en el mismo departamento. Naranja y alumbrador cortinas para el departamento B de compañía.

. --Los cambios inducidos de "Nr" pueden solamente ser temporales o en efecto hasta el problema solucionó.

+ quién lo hizo/está/las necesidades de hacer cuál, porqué, donde, cuando y o cómo (en el sistema): ("juego") quién y W5 (estaba en picosegundo-zona)

- generación del "humor" de las influencias: según W5.

- Indicadores químicos: El interruptor (software del `) demuestra "estado", "nr", w5

- "'/Nombres o iconos del archivo del texto de CID/de "C": Saber w5/la "cuenta" de valor sobre tema/llamador.

- Demostraciones si no pertenece algo donde está. Eg.: cliente archivo en directorio incorrecto del interruptor; el causar químico incorrecto del utilized= indicadores posibles peligro/7G.

- número de épocas alguien "alcanzada" (que secciona) del sistema y W5.

- cómo el material bien u (usuario) es el buscar/lectura/experiencing= empareja

su UIP. Para ver títulos de los artículos del Internet. "Cuenta"
ocurre vía la palabra clave/el tema el emparejar como con el interruptor de Yahoo.
- M/DB: u "señalado" hojea World Wide Web, y él o sistema
"anota" el valor de las vistas (que creaban señales de "señaló
colores ") para otros/ellos mismos en "el acceso futuro" de tales
vistas. Sistema de grado del interruptor del Internet de Magellan.
--"Anotó" los datos usados por consiguiente para desarrollar UIP-DB. Colores
dejado otros ver rápidamente que como de bien las vistas fueron clasificadas (por anterior
persona/sistema).
--el material "encaminó" al files= pertinente de la categoría sujeta en c del u
/DB.
-
. Búsquedas del VA (analizador visual del `) - > "reacciona":
- "cortes y gomas": las búsquedas del va "señalaron" "imágenes " = entonces: "corrige"
según lo "señalado". Ejemplo: búsquedas del va con DB (base de datos del `) para las "imágenes" de
masks= "cortes y gomas" el found= de las máscaras sobre pumpkins= entonces
cambios y colorante de los "coordenadas" en cortinas de la naranja y
negro para Víspera de Todos los Santos =
. --Después - >: u (usuario) puede seleccionar después preferred generada nuevamente
"imágenes " = y: imprimirlas (sobre etiquetas engomadas)/utilizarlas para las etiquetas
para los iconos o los carácteres de las "correas eslabonadas" o del "juego".
- Las imágenes señaladas atraen los carácteres/las pequeñas "imágenes" que miran
diferente según para qué carácter hay:
--Tema de las etiquetas: el va busca "imágenes negativas " = entonces los lugares
=character "imagen " del "juego " = al lado de la imagen negativa. Este nr
el carácter es diferente según cuál es nr/
"señalando". Eg.: El carácter es a: perro al etiquetar seguridad
o ediciones del "acceso"; bebé al etiquetar los juguetes o la cosa para los bebés;
muestra roja de la parada al etiquetar la mayoría de las precauciones importantes.
--El carácter representa la información adicional del interest= como
referente a qué carácter de imágenes es cercano o punteagudo.
--señalado imágenes alteradas de otra manera: para conseguir la atención, eg.:
circundado/color o tamaño cambió.
- "Sonido al convertidor visual" - KN viejo. Eg.: conver de las claves de barras
- Imágenes señaladas de las "rutas" a: archivos organizados cerca: tema
categoría, "cuenta", "estado", "uip"; u (usuario) que necesita imagen (según
uip).

--(las búsquedas del sistema y el tr (transmite) señalaron (uip-adaptar, "analizador visual") imágenes)

- CUENTA (cómo viene de cerca cada imagen (el sistema puede "analizar") dentro paradigma de la imagen deseada) - > el sistema (sistema) "reacciona" con: mayor o menos "corrigiendo".

- Investigador del DB de la imagen (base de datos del `): VA (analizador visual del `) explora DB ()/World Wide Web de la base de datos del `para imágenes "señaladas" ("rutas" él y cualquie texto/página atados/ el texto de la vista de la tela/el otro archivo "señalado" del to= de las imágenes).

. D: ""/"Del artista imagen" hecha salir = C (siguiente de las búsquedas del "analizador" (según (qué, donde, cuando, porqué y cómo) los criterios W5) - >) = "COORDINADOR" (cuál es o no es (mal) compatible) // "CORREA ESLABONADA" VIRUS" // de la CORREA ESLABONADA de // el "cuál era "CORTADO y PEGÓ" (acordando a W5) // "DESIGNADOR" (qué/W5 alteró según ""/"del designador corrige") // "IMAGEN" // qué fue creada cerca "MULTI-COLORER" (según W5) // // "MULTIUSOS" "interruptores" // "SINERGIA" - > - > "reacciona" según lo "señalado": "Corrige"/altera la información o códigos o imágenes.

. (d) Dibujo: S ""/"/u (usuario) de W5 de las imágenes/"de la cuenta/en qué parte is/was (no) operación = ~ del "designador" del artista C = ACCESO; ANALIZADOR; CUENTA; CARRO; EDIT; EDUC; MULTIUSOS; NR; OSCILADOR; Banda; Picosegundo-Zona; Q; R ; RANURADOR; CUENTA; SENSOR; ANALIZADOR DE SONIDOS; ESTADO; TDS; T (teléfono del `); INCLINACIÓN; PISTA; U; UIP; ANALIZADOR VISUAL; VR; WA (caminata del `alrededor).

Misceláneo:

. - Funciones automáticamente, o menú dado u de las mejores opciones ("dirección"), y u ocurre mientras que u (usuario) "dibuja". Relacionado con: "corregir", "coordinador".

. El "acceso" = "señaló" imágenes:

- Cañizos para tener el "acceso". "Contraseñas necesarias W5 del access'" sus
se crean las imágenes (generación de la contraseña): El "designador" crea
la contraseña necesaria (o imagen que representa contraseña) = acordando
para "señaló" necesidades de las aplicaciones u.
- Piratas informáticos que atacan: Se atacan las imágenes/sistema de la contraseña de los piratas informáticos ("corregido") como "señaló". el sistema (sistema) puede también parar/hace difícil para que computadora del pirata informático acceda posteriormente vía: fabricación de ella difícil para ellos (con referencia a) crear las imágenes necesarias para ganar tener acceso.
--""/Los "del VA VAGOS" "analiza" cómo las imágenes del posible pirata informático (contraseñas) diferenciar de criterios "señalados".
- Cada uso (según W5) necesita la diferenciación "señalada" imágenes (contraseñas).

El "DRENAJE" = crea imagen.
Pintura; mover el ratón de la computadora a la imagen del drenaje; "inclinación"; cepillo encendido; seleccionando y utilizando "color"; excluye normalmente tomar cuadro vía cámara; % del crawl'; % del `" de la cámara " toma los cuadros (entonces sistema "corrige"); los palillos del color utilizaron; multi-colorer; pluma (interruptor) o cepillo; pintura; frotación (dedo en la pantalla "interactiva"); "danza"; movimiento "R" en crear/"de la manera corrigen" imagen.
. D posterior leída: u (usuario) = este sistema del "artista": ~ del "drenaje" C = CORREA ESLABONADA de // del COLOR (lo hace qué correa eslabonada) // EDIT ("artista" = "corrige " = cuál era) GUÍA dibujada de // drenaje (de las ayudas u (usuario)) // MULTI-COLORER (manera de "dibujo") interruptor MULTIUSOS de // // (determina cómo el uso del u del "instrumento de la escritura" viene hacia fuera) // QUE ESCRIBE EL INSTRUMENTO (herramienta para el dibujo).

. Cañizos para tener el "acceso". W5: las formas/los colores necesarios son dibujado; en se están dibujando qué imágenes de las velocidades (ratón (el promedio) velocidad) o tiempo (duración) del comienzo de terminar.

“”/“DEL EDIT QUE CORRIGE”/“EDICIÓN” =

Altera imágenes en algoritmos complejos. Ejemplos: “arrastre”; hace
colores o formas compatibles; “cortar y pegar”.
- Corregir los modos: “Cortar y pegar” (interruptor, función algorítmica); %
cambio en función o efecto puede estar controlado por u ()/“del usuario de la correa eslabonada”/
otros modos controlados del no utilizador. “Multi-colorer”.
- D: U (artista) - > “ratón” - > c (“corregir”) - > salida de la imagen.
=

5A120 cámara “redactor”: Tomar las fotografías que usted entonces puede
corregir en el sistema relacionado de “C”.
- la cámara toma un cuadro que se demuestre en sistema de “C”. Esto da
chispa al artista (los estudios demuestran a mayoría de “semi-artistas”
ser inspirado cuando tienen tal escena para trabajar a la moda
es más difícil crear arte nada)
- agregar los carácteres animated (el usuario puede encontrarlo más fácil crearlos
si eligen a partir de 1. carácteres existentes, 2. caras, los cuerpos,
los colores del pelo, los etc después “se pegan y pegan” en “C”. Los carácteres pueden
incluso se esté moviendo.
- los carácteres pueden comunicar en forma escrita o del “oscilador”
7.96
+ “analizador visual”:
+ - las búsquedas y alteran imágenes “señaladas”: las búsquedas señalaron imágenes
/aspectos de eso - > se alteran (“corregido”) como señalado - >
salida: imágenes alteradas.
--búsquedas “imágenes” vía: “cámara”; “DB” de “imágenes” (en m/c).
- Las imágenes de la cámara son alterables como en “guía”: amo 5A110
Artista.
- “acceso”: u (usuario) debe “corregir” imágenes de la manera “señalada”.
=

. D posterior leída: u (usuario) = “corrige” el ~ C (computadora del sistema del `) =

=
pinturas de la foto 6B180: dibujar sobre cuadros (color o negro y blanco) con colores de su opción. Hacer mientras que la cámara todavía está adentro indicar, después con drenaje del ratón o de la pluma y o moverse alrededor de pedazos. Implica tomar del cuadro antes y o después de (la memoria requerida)

- los cuadros desarrollados pueden recibir colores queridos aplicando el special las tintas enderezan encima de impresiones especiales o del estándar.
- los cuadros desarrollados entraron en la computadora ("C") para el futuro el corregir
- agregar el color sobre las fotos blancos y negros
- substituir todos los ciertos colores por color deseado

- Versión del interruptor de: Dispensador de la cinta de corrección: puede ser mecanografiado/ escrito encendido. "Cortar y pegar" en la cinta.
[Productos Co (catálogo de la fidelidad del invierno 95 del Co del pedido por correo - encendido Archivo), ruta verde de 5601 Int'l, Minneapolis, manganeso 5540. 800 326-7555 Fax 800 842-2725; p.9]
- "Restricter": algunas "imágenes" son banda (el programa) a ser (completamente) "editable" mientras que no son otros (en absoluto).
- "Edición" = imagen "que es corregida después".

El extremo "corrige" = "artista"

EDUCAR =

Dirige a usuarios para dibujar mejor.

profesor particular del movimiento 3E061: Dirige a usuarios para mejorar su dibujo movimientos, eg.: guías cómo sus brazos se mueven.

+ ""/"de la GUÍA DIRECCIÓN" = instructor del arte. Sugiere cómo usuario pudo proceder en la generación de "imágenes". Útil para el sector grande de población.
Completar los colores en localizaciones señaladas. Guías/avisos del sistema u para cuando/cómo (w5) pueden crear arte.
Subconjunto de: "Educ".

- Preguntas" del usuario de la respuesta las ", así que u (usuario) pueden alcanzar mejor
"señaló" deseos.
Da instrucciones u (usuario) cómo aprender uso de cada elemento de sistema del "artista".
=
. (d) dibujo posterior leído: U = este ~ del "artista " = de la " guía" C =
CORREA ESLABONADA de // del COLOR (opciones/cómo del color "se corrigen" los colores) (cómo
su controlado dentro de las limitaciones o del temperamento) // de la correa eslabonada
DRENAJE (cómo dibujar (dentro de deseos "señalados")) // EDIT (cómo
utilizar corrigen) el interruptor MULTIUSOS de // MULTI-COLORER // //
(controles "guía") // QUE ESCRIBE EL INSTRUMENTO.
=
artista principal 5A110: hacer los pedazos principales similares a
obras maestras. Seleccionar la pintura deseada, y el dispositivo electrónico
ayudará al usuario de la guía en de muchos métodos. Incorporado
diversas partes vía selecciones y o el dibujo.
Métodos rectores:
. - esquemas cada área del color, en blanco izquierdo restante, permitiendo a usuario
al anuncio sus opciones del color y diversas cortinas. El usuario pudo
seleccionar de las opciones sugeridas, la primera decisión entonces tomada
influencia la opción disponible posteriormente (la coordinación del color)
- cajón del esquema: al hacer los esquemas, el ratón o la palanca de mando
es totalmente restricto, o consigue un poco más difícil a
maniobrar cuando sale un pedacito lejos las líneas requeridas - por lo tanto guías
artista. Y o, una luz va encendido a demostrar llano en cuáles son
en curso, eg. una luz verde y roja, y quizá incluso un amarillo
luz. "C" o el usuario puede señalar que las líneas ellas están intentando
para dibujar tan "C" sabe ayudar a dirigirla
- arte abstracto y relacionado: hacer las marcas de cepillo salvajes, y solamente ésas
esa caída dentro de los parámetros programados lo hace en el arte
pedazo. Eg.: la tinta es como el polvo metálico a el cual se pega solamente
donde se encuentran las áreas magnéticas
. Dirección: tgh, educ.
. "Restricter": "Dirige" u (usuario) con el restricter. Formar de dificultad
en maniobrar consiste una forma de dirección.
. Técnico: el artista puede ver sus creaciones que son hechas directo
sobre la pantalla o el papel. La impresora posterior pudo transferir imagen de pantalla

a la impresora. Impresiones en color; blanco y negro (con diferente cortinas del negro)

- Versión electrónica de H-Non: el dispositivo mecánico pudo dirigir pluma/cepillo/lápiz/etc. con o sin la mano del artista que es utilizada realmente en el tiempo. El artista selecciona colores. El instrumento de la escritura puede ser establo mientras que movimientos de papel, o versa de la visa

- "inclinación": controla las funciones del sistema, sus r = cepillo de pintura.

=

- Completando colores (para la "correa eslabonada"): "Coordinador".

--se convierte/colorea (preexistiendo) forma (como en el relleno encima de a libro de colorante): 2.o/3D/círculos/cuadrados/puntos/bolas/ prismas/puntos - > cambiando en 2.o o las imágenes 3D.

--artista principal 5A110:

+ UIP = "guía": el sistema (sistema) sugiere formas de generación del arte. Sistema sabe datos del UIP vía: el pasado "imágenes" u del "va" creó; menú de preferencias elegidas por u: la "imagen" mecanografía (los "colores", las formas, tamaños, tipo "coordinación" (compatibilidad).

. Cañizos para tener el "acceso". W5 "instrumento de la escritura" (poder)
función = "acceso".

Maneras adicionales de jugar a artista:
- "Restricter": la cuerda eléctrica de la herramienta real 3D puede ser
representado por hasta dónde la herramienta puede alcance alrededor en S (como
"señaló"/para no efectuar negativamente seguro (importante)
elementos. Las cuerdas del wo de las herramientas son más móviles/w (con) menos
"restricciones".
+ vacíos/ventiladores: Limpiar (de la mentira floja) los desechos indeseados/
vacíos del w= de los elementos. p77, 63. Especialmente para las secundario-imágenes eso
no es la imagen más grande firmemente fijada de w/in. Eg.: el va determina eso
los de hojas sueltas o el documento o la suciedad sobre césped pueden estar arrancados o ser aspirados
encima del resto perjudicial del wo de imagen, y de resultados en resto (césped) de abajo
el llegar a ser visible. (Entonces para arriba aspiradas las imágenes pueden ser: recogido/
"combinado" para el "corte y pegar" a otra parte.
+ la carretilla de rueda/coge los carros = "cortar y pegar" (que toma y
la descarga) = entonces u (usuario) debe "corregir" de allí de una manera más cuidadosa.
p68. Las trayectorias viajaron pueden dejar las marcas interesantes/"rastreables"
la marca así que u sabe qué "fue cortado y pegaron" W5 (por la edad de la pista
marcas).
- ropa/cascos de la materia textil (usados por el "carácter" = el "juego")
los protege contra: colores/""/"de las imágenes correas eslabonadas" (que se pierden
(por lo tanto perder pocos puntos)).

- calentadores: hace (semi) "" congelado/las "de las imágenes correas eslabonadas" más móvil /funcional (hasta sus ("acceso") capacidades completas). p77
- tornillos/clavos: más fuertes son el más largo/las imágenes W5 "se cortan y +pastable ".
- mezcladores concretos: verter en los moldes (3D) creados previamente por U= haciendo nuevas "imágenes". p79
- termómetros: "/"del estado de las demostraciones "cuenta" de imágenes. p83
- cintas métricas/calculadoras: tamaño de imágenes (para "coordinador"). p83
- detectores (del metal) = buscador del va: imágenes "señaladas" de las búsquedas.
- motores: la energía de la herramienta asoció el tipo motor de w (con) usado. p88

+ cepillo: "sensores " = en la tableta de la entrada de la imagen (kn) = movimientos del cepillo de s. % también: el cepillo puede tener material (productos químicos/electro carga elementos/pequeños objetos duros/cerdas resistentes/alambre) cuyo la presencia es detectada más fácilmente por el "sensor".

Archivo: El arte \ AR-Escribe
PIEZA DE ART-WRITE:

Software para los disl3exicos de enseñanza y los escritores jovenes cómo escribir.
. Tableta de la escritura de la entrada de la imagen:
- Qué usuario escribe se representa en la "pantalla" después de que "fuera corregida rápidamente".
- en otras palabras: mientras que u escribe cierto OCR del letters= (reconocimiento de caracteres ópticos) "corrige automáticamente" carácteres "señalados". Permite al escritor mejorar leen su material/ven cómo los disl3exicos leerán su material.

+ instructor de la escritura:
Enseña a gente a escribir correctamente. Alarmas para el disl3exico o el cursivo pobre. Ahorra de tener que pagar a profesores para leer el material para las correcciones.
. - D: u (usuario) = "escritura instrumento" (la aguja = la imagen entraron la tableta) = VA (analizador visual) del `(de caracteres ópticos)/"del reconocimiento guía" = nr: siempre que u (usuario) escriba una letra no estándar, palabra, %phrase.

- D: ""/"Del artista imagen" hecha salir = C (computadora) del `("analizador visual"/de caracteres ópticos reconocimiento/interruptor del disl3exico) =

+ "COORDINADOR" (compara últimos errores del presente del w= (escrito/leído) - > UIP-Adaptar/"guía") // "DESIGNADOR" // % de // " MULTI-COLORER" // (tiene diverso programa del "educ") // "MULTIUSOS" "interruptor" // "INSTRUMENTO de las "IMÁGENES INTERACTIVAS" de // de la "IMAGEN" de // "EDIT" (cuál es written= es "corregido") // del "DRENAJE" (escritura "imágenes") de la ESCRITURA".

- UIP-Adaptar: El sistema se adapta en estudiante de enseñanza para escribir según sus capacidades pobres. Es decir: este sistema "analiza visualmente" el errors= del estudiante después desarrolla UIP-DB= para UIP-Adapta, así que el interruptor (software del `) se adapta al usuario.

- VAGOS: cursivo "analizador": [KN de A, de B o de C Dir] - > da el pronóstico del comportamiento (relacionado posiblemente con los problemas de la lectura/de la escritura).

- Mecanografiar el cursivo enseñado en cualquier lengua. Para aprender: escritura del no-disl3exico; buena caligrafía;

- Ver: + "guía" del "artista", "restrictor" del "artista".

. El otro interruptor de los apuros enseña:

. - escritores dejados de la mano que necesitan hacer su mirada de la escritura como si fuera de la mano derecha.

+ NR: Demostraciones del software cómo las letras deben haber sido escritas sobreponiendo la forma correcta en un color alternativo sobre lo que fue escrito.

. --Es decir: Cómo el sistema (demostraciones necesarias) corrige (los sions): en un diverso sistema del color= semi estupendo impone donde la pluma debe tener gone= mientras que demuestra lo que "fue dibujado".

. - estilo pobre del cursivo definido como: si u presiona demasiado difícilmente o demasiado ligeramente (de manera desigual) = el nr W5 (qué, donde, cuando, porqué y cómo) fueron hechos incorrectamente; letras escritas demasiado grandes/pequeñas/escritas irregularmente; ilegible (aunque el VA (analizador visual del `) pudo poder leer); escrito demasiado rápidamente (por lo tanto ilegible).

- NR incita a escritores/a lectores lentos ir más rápidamente. "Anotar" las señales sonoras cuando u (usuario) es demasiado lento. Recompensa a usuario cuando su escritura es buena vía "humor positivo" en formas de: oscilador, texto.

Estrategias de búsqueda de la patente de los E.E.U.U.:

- str: (software o programa) y (enseñar o educat o aprender o dar instrucciones) y (escribir o escritura o drenaje o pintura).

- Patentes de los E.E.U.U.: 4138719 4972496 5365598

-5486122 dispositivo y método computacionales usables autónomos de expresión artística usando el "juego": Los dispositivos educativos que usan métodos educativos process-oriented se divulgan para preparar a niños para el 'teclado adaptante interactivo. El dispositivo incluye sistemas de guantes y de indicia aplicados a los dedos de guantes para proporcionar las representaciones ilustradas del teclado.

Archivo: El arte \ AR-Causa

PARTE: ARTE - CAUSA

Qué "se señala" como necesitando "corregir" y porqué:

Cosas misceláneas "se corrigen" que:

+ enumeración: Los disl3exicos de algunos números pueden tener apuro con: número (dígitos, eg.: 3 contra 8, 2 contra 7, 6 contra 9, 5 contra 6, 1 contra 11. --Eg.: la porción izquierda de 8 sería más en negrilla que derecho, y likewised para la parte inferior de 2, e izquierdo inferior de 6; los dígitos de 11 serían separados un poco más que generalmente y cada dígito se hace quizá para parecer levemente diferente. Las comas se pudieron boldened, juntado con el mayor espaciamiento entre cada sistema de tres dígitos.

- Pedazos del tiempo: cara del tiempo de reloj: digital o dial [se corrigen", o no se utilizan las demostraciones/recuerdan de la marca u, que el lado correcto e izquierdo, que tapa y parte inferior], los números "en absoluto.

--Otras alteraciones: formas de la cara o del dial; sus colores o texturas. Hacer fácil para los niños y los disl3exicos y avistar impared. Cada hora puede tener diversa cortina en fondo. Ver el reloj del olor de KN en 5J.

+ daltónico: las ayudas enseñan a gente daltónica a identificar mejor entre los colores. Ejemplos: el texto contra colores de fondo es ésos que dan dificultad del lector; la prueba de /exercises de los "juegos"/recuerda u que las luces rojas en las luces de la parada están sobre el amarillo, con verde en la parte inferior; las muestras de la parada de la calle se demuestran en colores con excepción de rojo, para de ser efectuado más por su forma, y las localizaciones comunes en esquinas.

--los grados de diferencias sombreadas (según lo experimentado por el tema daltónico) se alteran (en un cierto plazo).

UIP [información de usuario que programa]: El sistema identifica qué necesidades que alteraban después tener "analizaba" el patrón de comportamiento anterior del usuario, tal como sus errores en la computadora. Éste es un ejemplo de qué porciones de software que pueden ser demasiado difíciles de convertirse para sus versiones de la liberación temprana.

- "Corregir"/"ruta" localiza ciertos términos del interés especial al usuario basado en UIP = interno que el sistema destacará tales capítulos (menú del texto de w/in)/párrafos/oraciones/palabras/letras/imágenes.

- el sistema decide (basado en el uip) qué palabras son importantes para u, eg.: el "cerezo" se marca en rojo de cereza mientras que el texto restante es un el resto del solo color (blanco, o gris, etc.), porque el lector funciona una huerta o tiene gusto de cerezas.

SECCIÓN 1 DE LA INTRODUCCIÓN:

. Parte 1 de la introducción: ¡Adentro PRIMERO LEÍDAS - entonces invenciones interesantes de la búsqueda de la palabra clave!

. Características - versión práctica corta. Leer esto pronto.

. Abreviaturas - versión corta

. Símbolos - versión corta

SECCIÓN 2 DE LA INTRODUCCIÓN: Leído mucho más adelante

. Concesiones que dimos

. De la investigación décadas continuas del pasado adentro

. Buscar y substituir

. Abreviaturas y símbolos detalladamente

+ el usuario selecciona palabras que necesitan ayuda con: U desarrolla los archivos abarcados del texto que tienen problemas especiales con (sobre y más allá de cómo su interruptor maneja imágenes). Eg.: el interruptor común del procesamiento de textos tiene capacidad para que u incluya las nuevas palabras para su comprobador de ortografía, pero se utiliza este archivo mientras que un seeker= después corrige.

"Educación": Las imágenes difíciles se utilizan más frequently= que da a lector más entrenamiento y experiencia. Vía el thesaurus= del interruptor las palabras se substituyen por otras palabras similares (incluso si puede ser levemente torpe). Alternativo, las imágenes difíciles se substituyen por imágenes más fáciles (si el usuario está estando sobre whelmed).

"Señalando" que las palabras necesitan "corregir":

El sistema decide a qué necesidades que alteran para ayudar a cada usuario según sus propios problemas. El software busca para las letras/las palabras señaladas (según el UIP/los PP), después altera "imágenes apuntadas" por consiguiente.

- UIP: si el sistema determina u está incurriendo en ciertas equivocaciones que "corregirá" "imágenes" según lo "señalado".

--. Ejemplos para cómo el sistema determina las dificultades/"del u cuenta": el cheque de encanto del interruptor demuestra que substituyen incorrectamente ciertas letras tales como <Better> se convierten en <Detter> (cuando mecanografían = K); Prueba del cuestionario/interruptor del UIP: determina el tipo problemas que U tiene.

-. El lector de las demostraciones del interruptor de la lectura de la velocidad (KN) es más lento en ciertos puntos que sean cuáles son ("señalado ya" como disl3exico probable) problemas.

- Todas las letras difíciles a través del texto pueden no conseguir posiblemente corregidas para facilitar la capacidad de la lectura del disl3exico. Solamente los elementos destacaron para cualquier razón tiene ocasión de conseguir poner en contraste adicional/que destaca para el disl3exico.

PIEZA PRINCIPAL DEL EXTREMO DE ART-CAUSE

Archivo: El arte \ AR-Se arrastra

CARACTERÍSTICA DE LA "CORREA ESLABONADA" DE S DEL ARTE'

+ <4, 4, 4, 3 $ (si software del n)> AR5-1C310 del hw Multi-colorer:

El dispositivo decide a cuando cambiar color. Los disparadores múltiples causan los cambios automáticos del color. Los cambios del color de la pantalla pueden también significar el estado de la situación, eg.: nivel del visto bueno de seguridad de los accesos. Su cambio de las capacidades de la "hospitalidad" según criterios externos: carácteres del juego; "componiendo"; "tgh".

- En versiones del programa de la pluma o del "artista".

+ causas: Causas externamente generadas para el cambio del color:

- "Cuenta": Los u "cuenta" correlacionan modo del color de w. Tipo cuentas: "juego"; grado dado a su examinación (anterior) del "educ".

--El color de la cuenta del u permite a otros jugadores saber los u "estado" que pueden incluir las capacidades del carácter las energías/del "juego adicional". Los carácteres del juego de colores de diferenciación pueden ganar o perder una muesca en su jerarquía del color si pueden tocarse, eg.: un color más bajo gana una muesca mientras que gotas más altas una muesca o muere.

- "Acceso": el estado del acceso del u correlaciona color de w (en "s"). - si u es un cliente/empleado/vendedor/un estudiante. Su nivel de valor: la altura en la organización/volúmenes vendió o compró.

- Castigo: se gira el sistema castiga a piratas informáticos cambiando color por consiguiente por la computadora del pirata informático señalado del tiempo después de eso. % también se aplica a c del pirata informático en la localización distante. "Cuentas pobres".

- Niveles del peligro: eg.: el amarillo es utilizado cuando u está repartiendo w peligroso (la localización w/in "c" del u es donde están más propensos los accidentes del producto químico/de la investigación); sensibilidad de la información (llana de secretos tener códigos de color correspondientes).

- Tema: del DB; mecanografiar el interruptor utilizado.

- D: U = este ~ del sistema de N (causas para el color que cambia) C = TENER ACCESO () a la Picosegundo-Zona de // EDIT (tipo modo que corrige usado por u/sys) // NR (tipo de nr = de tipo color demostrado) // (zona de la gente/de elementos aplicables) // Q (el tipo q u pide) // R (si r está o no se está utilizando/de si está activado) RANURADOR de // (cómo se está encaminando algo) ESTADO de // de la CUENTA de // () () // TDS (la sincronización de la ocurrencia da lugar a color correspondiente) // T (si "T" is/was utilizó: si el Info fue obtenido de la PISTA de // del Internet) (tipo actividad de persona/de objeto/de elemento/de proceso seguidos) // UIP (si está activado o no/si el uip fue utilizado para alcanzar el panorama actual (q, información). Modifica las características para requisitos particulares artísticas.).

- los programas o el fabricante de usuario programa el intervalo de tiempo entre cada color (el intervalo puede estar en: el tiempo de la escritura, tinta del tiempo está pegando hacia fuera listo para ser utilizado, cantidad de tinta para ser utilizado, etc.); o decidido por al azar (con un período mínimo y máximo para cada color)

- banda del tiempo (fecha): los programas del usuario o el fabricante programa el intervalo de tiempo entre cada color (el intervalo puede estar en: el tiempo de la escritura, tinta del tiempo está pegando hacia fuera listo para

ser utilizado, cantidad de tinta para ser utilizado, etc.); o decidido por al azar (con un período mínimo y máximo para cada color)

. Tema: diversos tipos de información/DB/funciones tienen colores correspondientes. Deja rápidamente a u y a espectadores saber esa naturaleza general del tema. "S" puede tener colores múltiples, cada sección/color que señala el tema de diferenciación.

- identidad del comunicador: persona/compañía/departamento/país/varón o hembra/edad/nivel de precedencia o influencia o valor.

- sugerencias para u: El sistema "analiza" el interés posible (uip) para que u "encamine" sí mismo en el otro tema, eg.: ideas adicionales que se relacionan con qué u está trabajando encendido; u debe mecanografiar más rápidamente (véase KN: and= "nr" del "analizador" de la velocidad mecanografiado del u); el tiempo se fue para el usuario al sistema del uso ("tds").

- saber el día/la hora por el color.

- "juego": el ganar/los puntos perdidosos da lugar al cambio de capacidades/de colores.

Los cambios del efecto (color) tienen/los cambios (del color) significan:

. "Juego": Cambio de funciones.

tipo color y función de las armas/de las armas de los carácteres del cambio de las emisiones por consiguiente. Cada juego/su carácter necesita ajustar a los cambios (rápidamente), requiriendo agilidad. El jugador puede tiene uno o más carácteres. Ejemplos:

1] Modo que ataca: el cambio rojo de las balas del then-> de la matanza de las balas al azul y puede nombrar solamente a otros jugadores - > requiriendo a tiradores cambiar su shooting y juego/movimiento total/patrones ofensivos/defensivos por consiguiente; cada jugador puede tener colores de diferenciación, cambiando en diversas horas. Si ocurren los cambios del color wo que incita, el jugador pudo evitar estar lejos de la cubierta defensiva mientras que están en modo ofensivo (de la bala roja).

- otros modos que atacan sobre otros carácteres/jugadores: (temporalmente): inmovilización de otras; cambio de sus lealtades al atacante; trampas (del bobo que activan); atacantes inactivos que activan que ayudan al jugador.

2] Picosegundo-Zona - tipo cambio de las barreras: contra qué protege; el atacante cambiante de la distancia necesita ser de la blanco a atacar; localización de barreras; proteger el carácter circundante donde está nunca (proteger sin embargo no pudo ser eficaz en las zonas señaladas (picosegundo-zonas). Las energías (el atacar) de carácteres cambian en zonas señaladas. El color de la zona puede cambiar. Carácter o su color del cambio de las armas dando por resultado = efecto que cada zona tiene en él.

3] Modos del movimiento del carácter:

=

. "Hospitalidad" D: U = este ~ del sistema de N (los cambios externamente controlados del efecto tienen en funciones señaladas) C =

COMPOSICIÓN/DANZA de // del CARRO de // de la CÁMARA de // del BALANCEADOR de // del ARTISTA () (el grado a los cuales los sonidos es de derecho izquierdo o) (la cámara de la dirección está

señalando) (cada carro tiene banda de diferenciación para efectuar los cambios) = (capacidad del u de componer alterado, eg.: cada icono de k/del interruptor cambia sus capacidades de generación sanas) // DB~UIP = (el sistema saca a colación datos según lo señalado, eg.: nombres de la gente famosa; puntos en la historia del mundo o de u; hechos relacionados) // + RECEPTOR ACÚSTICO del MOVIMIENTO de // del MD/del HUMOR de // del JUEGO de // del EJERCICIO del EDIT (el sistema altera imágenes) // del watches= de u () () () () // MULTIUSOS

JUGUETE DE // DE LA INCLINACIÓN DE // SYNTH () // TGH () // DEL ESTADO DE // DE LA CUENTA DE // PICOSEGUNDO () // R () // DEL OSCILADOR DE // DEL NOTIFICADOR DE // DEL MILÍMETRO/DE LAS MULTIMEDIAS () () () () () () () // UIP () // WA ().

=

. Selector de la imagen: ""/"del va cámara" saca a colación imágenes en s para el flash de las imágenes del U. (periódico) para arriba (la creatividad del u inspirador; dando ideas relacionadas). Ejemplos:

- u es objetos circulares del dibujo (muchos) mientras que en los "artistas" la publicidad del interruptor del program= del interruptor de la escritura de la idea entonces selecciona el images= relacionado eg.: las burbujas, bolas, globos, bolas de la pintura de la señora, la muchacha en polca puntearon los vestidos (con las bolas destellando)...
- u que dibuja cualquier sistema del images= entonces explora el sitio del u en el fashion= al azar que demuestra imágenes sobre el S.

=

"Corregir". U ("obra recíprocamente" con "entretenido" cerca) = sistema altera imágenes/luces de los sonidos (el destellar)/otros efectos vía:

- u/sys tira abajo de sobre/chasca de la "voluta" encendido el image= que se altera posteriormente según la banda señalada.
- cambio todos o de las porciones (siempre)
- cómo los elementos o las porciones señalados se alteran cerca: color; tamaño cambiante de toda la/de pedazos/de secciones separados pantalla; reemplazo de porciones; porciones de la conmutación; el rebanar (que combina slicings de las rebanadas w de otras imágenes); los boquetes vacíos crearon (permitiendo que u inserte las imágenes/drenaje dentro).
- synth: cambios según modos de sintetización preferred del uip.

=

+ correas eslabonadas:

- la "correa eslabonada" altera imagen mientras que se mueve a través de imagen.

La imagen que altera el punto se mueve sobre imagen en formas de: scrollers;

- formas de correas eslabonadas: puntos/bloques grandes/pequeños/otras formas; anillos de espuma; tipo imágenes/iconos de la escoba;
- cómo la correa eslabonada se mueve: packmen (de los juegos video de los últimos años 70); el caer/deslizar los objetos/nieve; marcas de la pista de vehículo del juguete; carros que descargan imágenes en las

localizaciones señaladas; serpiente; el cualquie otro mamífero/reptil/pájaro/pescados/insecto/microorganismo/el otro organismo móvil; cómo la planta crece (excesivamente); sombras o impresiones hechas por cualquier cosa (imagen de KN (generador)); "inclinación"; "danza"

- La imagen original de la influencia tiene en imágenes alteradas subsequently=: la correa eslabonada extrae elementos señalados de imagen original, eg.: cambia elementos circulares a los polygrams, azules a los verdes, puntos a gotas más grandes, cáscara de los cambios solamente/perímetro/centro de imágenes originales.

--función y característica de la correa eslabonada de la imagen que alimenta en la correa eslabonada ambas independiente/simultáneamente/del efecto del synergistically= que altera proceso.

- Combinación de las correas eslabonadas:

--un upon= del arrastre del can= de la correa eslabonada otra correa eslabonada dando por resultado: nuevamente generado correa eslabonado/combinándose de todo o algunos de correa eslabonado función (a un) exponencial/que cancela de la energía fuera cualquie correa eslabonada tocada/sin tocar

--como los imanes que pueden +tend (vía lógica confusa) atraer/que rechazanse (en términos de ocasiones combinarse/tacto). Otras capacidades del efecto de los aspectos/ocasiones de correas eslabonadas "obran recíprocamente": mecanografiar la banda/los u que mueven alrededor el interruptor/la mudanza de la correa eslabonada (por el sistema/u).

- Virus de computadora: las "correas eslabonadas" se arrastran a través de la banda/de las imágenes digitales señaladas/s, en las computadoras/los sistemas señalados (de sistemas apuntados). Ejemplos:

---utilizado en "juegos": territorios de los opositores que atacan/funciones/correas eslabonadas/capacidades que atacan/capacidades del dibujo. Eg.: el jugador de a] que la correa eslabonada de #1 va a través de/penetra/destruye la pared del jugador #3 (punto del "acceso") que permite a jugador #1/#2 a introducen más fácilmente ("acceso") = interno que hace el daño señalado (limitado por las funciones de la correa eslabonada). b] elimina las funciones señaladas del sistema informático del "juego" del opositor. medios de c] de la movilidad (que se mueve sobre la banda/el cursor): dibujo/movimiento de la correa eslabonada/de la velocidad del "juego".

---"Acceso": los "virus de la correa eslabonada" pueden: contraseñas de la grieta; trabar hacia fuera esas contraseñas correctas de w teniendo acceso y en contraseña de proceso del cambio contra usuarios legítimos anteriores

---Encajonar el virus de la tenencia: el jugador puede abrir la caja de Pandora para el virus deseado correspondiente, aunque el virus puede atacar el abrelatas si el jugador de apertura no es cauteloso o si el abrelatas tiene mala suerte (debido a la correa eslabonada que es controlada por circunstancias externas). La correa eslabonada se pudo tener capacidades de abrir estas cajas de breca y efectuar negativamente también.

---la correa eslabonada se demuestra en color/modo del oscilador cómo el virus efectúa la blanco, eg.: la computadora apuntada da vuelta a rojo (cierran), o a las vueltas azules (retrasa/limitó capacidades de funcionamiento).

---la correa eslabonada puede también funcionar como otros virus (dañosos) existentes (pero en modo juguetón del "juego"). Str de la búsqueda de la patente: virus y (imag o pictur o representación visual) y (computadora o software o eléctrico) no (sangre o célula o órgano o médico o liv o vida)

--¡Utilizado solamente bajo circunstancias legales! ¡Utilizar esta limadura de la solicitud de patente como argumentos adicionales para castigar a piratas informáticos de computadora malévolos!

- Correa eslabonada D: U = este ~ del sistema de N (cada tipo controles/de la "correa eslabonada" (y sus funciones variables) se controla cerca) C =

JUEGO de // EDIT () // de la DANZA de // de la COMPOSICIÓN de // del CARRO de // de la CÁMARA ((lente de la toma panorámica) envía imágenes a la pantalla) () () () (la correa eslabonada efectúa funciones del juego, eg.: modos/cómo del ataque RECEPTOR ACÚSTICO señalado o protegido del territorio del jugador) de // del MOVIMIENTO (el dispositivo altera según la correa eslabonada) // (cada u genera/recibe diverso tipo correa eslabonada) // MULTIUSOS milímetro de sonido/JUGUETE de // de la INCLINACIÓN de // SYNTH () // del ESTADO de // de la CUENTA de // R () // de la Picosegundo-Zona de // del OSCILADOR de // del NOTIFICADOR de // de las MULTIMEDIAS () (cómo notifica) (cómo suena) (cada zona efectuó diferentemente según el tipo correa eslabonada y en qué modo su adentro) () () () () // UIP () // WA ().

- la pluma/el otro instrumento de la escritura: las funciones tienen gusto de la "correa eslabonada"

=

. Era 1C-311:

Versión de "C": El color de comandos cambia automáticamente color sin incitar. Éste puede tener diversión y valor para el artista que tiene gusto de hacer arte espontáneo, abstracto. Él anuncios una nueva dimensión a la fabricación del arte.

. - Puede revelar imágenes del interruptor de muchos tipos (dibujar), eg.: punto de bola, extremidad del fieltro, plomo para el lápiz mecánico, tiza, pastel, ciertos tipos de artículo existente pintura-como cepillos, etc

=

Misceláneo:

- NR: notifican al usuario cuando el color cambia vía: una luz, tecleo de piezas mecánicas, o sonido; o ve el cambio del color en "s".

. - versión manual también: demasiado costoso puesto que el mercado quiere la unidad a menor preico.

. - Éste puede tener diversión y valor para el artista que tiene gusto de hacer arte espontáneo, abstracto. Él anuncios una nueva dimensión a la fabricación del arte.

. - Puede ser el dispositivo electrónico que cambia el color de la tinta (punto de bola, extremidad del fieltro

-- llevar para el lápiz mecánico, tiza, en colores pastel

- ciertos tipos de artículo existente pintura-como cepillos

- relacionado con: 1C-311

- notifican al usuario cuando el color cambia vía: una luz, tecleo de piezas mecánicas, o sonido

. - el usuario puede también pedir cuándo un color es cambiar

. - el dispositivo utiliza solos colores, y o las mezclas desearon colores como el usuario selecciona

. D1: Versión D del interruptor: 1 u - > 2 c (carro) = 3 interruptor = 4 encierran/5 imágenes de alteración/impresora/m/uip = 6 tintas/7 imágenes que crean.

- Notas al pie de la página: exhibición ("S"); "C"; pp; P.M.; Reino Unido; interactivo; cada color cuando está utilizado los disparadores diversos colores sanos, mezclados mezcla los sonidos; educ; juguete; todos; hospitalidad; ejercicio del arte; portable; punto de ebullición; vc; egh; cuenta; tgh; md; carro (colores, sonidos, funciones...); cp; uq; carácter; según el tipo sonido el color generó cambios.

=

. Patentes de los E.E.U.U. - disco de 12.95 baberos:

- str: (pluma o plumas o lápiz) y tinta y color

% de la palmadita de los E.E.U.U.: 5412021 5411344 5376958 5368405 5352051 5306092 3552867

- WWW 1977-6/96 del str USPTO: (imagen o pictur o color) y (software o computadora) y (chang o al azar) y (drenaje o pintura o cepillo o gam) no (datos o documento o simulat)

- Imágenes que pueden cambiar colores. Todos o partes señaladas de: dibujos/cuadros/texto de la "cámara". El sistema puede efectuar colores en todos de o parte de: "s", las impresiones de la "impresora", los datos transfirió a: del disco blando/otra "c" o "m".

. Instrumento de la escritura:

- anchuras cambiables para: "correa eslabonada"; se está dibujando/se está cambiando qué. - Herramienta del punto del Multi-control de la palmadita 5325110 de los E.E.U.U. para el dibujo de la computadora.

. Ventajas de colores cambiantes:

- otros (los compañeros de trabajo) saben el nivel de u dado acceso, por lo tanto más fácil coger el acceso excesivo de los piratas informáticos w.

. El cambio del color que acciona efecto también causa después de ocurrencias:

- "OSCILADOR": sonidos diversos. Diversos sonidos conectan con los factores que accionan de diferenciación.

+ " correa eslabonada ": El "corte y" el elemento pegado se convierte en una "correa eslabonada": Altera lo que o W5 toca o "(ed)" obra recíprocamente el W.

- Éste es un método para crear las "correas eslabonadas". U selecciona del menú de los cortes posibles del crawlers= y el pastes= entonces puede "corregir" la "correa eslabonada " = funcionar como deseado (por u).

EXTREMO - PARTE: ARTE' S "CORREA ESLABONADA"

Archivo: Arte \ AR-Educ

GENTE DE ENSEÑANZA A LEER (NUEVOS VOCABULARIOS)

Archivo AR-educ

Software para enseñar a los jóvenes a leer: Lectores de la guía de las ayudas en el texto cada vez más difícil. El propósito que es una introducción gradual a un texto más complejo, ahorrando el tiempo del profesor.

(Búsquedas de la patente en el uso para los niños jovenes no conducidos.). También ver la lectura de la "educación", y de la encapsulación, y de la velocidad.

Nuestro software anota el perfomance del usuario, y se ajusta a las habilidades de lectura mejoradas del usuario que han cogido usando el software. Por ejemplo, parará el acentuar de ciertas nuevas palabras que el lector ha aprendido.

+ enseñando a los jóvenes a leer:

El texto tiene imágenes aplicables al lado de ciertas palabras. Eg.: cuadro para los adjacents de la casa la palabra "casa". El cuadro puede ser mismos tamaños como texto (de gran tamaño); o el número al lado de la palabra empareja número al lado de cuadro a otra parte en la pantalla o el material impreso.

- el sistema aprende que el número de usuario de las épocas ha parecido tales palabras (en el sistema).

. --el sistema o el profesor humano asigna # las épocas del texto de la visión balanceadas con la complejidad de la palabra.

- Destetando: Después de ocurrencias señaladas de la palabra/del concepto dichos, los cuadros pueden aparecer no más (lector de destete de la ayuda).

D: El lector (de los jóvenes) = ""/"del artista imagen" hizo salir = C ("analizador") =
EL "COORDINADOR" () // "CORTÓ Y PEGA" () // "DESIGNADOR" () // "DRENAJE" () // "EDIT" () // + "EDUC" // "GUÍA" () // "IMAGEN" () // "IMÁGENES INTERACTIVAS" () // () // "MULTIUSOS" "INTERRUPTOR" () // "SINERGIA" // "INSTRUMENTO DE LA ESCRITURA" ().

Estrategia de búsqueda de la palmadita:

- kilovatio: diccionario, defintion de la palabra
- str: (software o programa) y ((la definición o aprende o educat o enseña) near9 y leyó)

Patentes de los E.E.U.U.: Dispositivo programable 4118876 de la pregunta y de la respuesta; Método 4579533 de enseñar un tema incluyendo uso de un diccionario +; 5180307 5218537 3999307
Método 5421731 para enseñar a la lectura y al deletreo

Archivo: Introducción del arte \ AR ReadHelp

PARTE: SOFTWARE DE LA AYUDA DE LA LECTURA DE S DEL ARTE'

software de la ayuda de la lectura 5G061: Este archivo es un subconjunto del archivo titulado: "Artista - corregir". <3, 3, 4 palmadita-interruptor-versión, 1.5 mk, 3>

Información de carácter general:

+ las nuevas palabras reciben a special "que corrige" la atención:

- Qué señaló: El sistema busca las palabras según las cuales "se señalan": tema; novedad (a u, campo del estudio (nueva idea)); la dificultad u ha tenido adentro últimas ocurrencias según lo "analizado" por (la prueba) la "cuenta"; qué u o sus supervisores determinar él debe aprender/"obra recíprocamente" con (para más experiencia, "educando" sí mismo (en sus aplicaciones y contextos múltiples)). Qué ""/"" del educ/"" del ranurador/nr del humor: "analiza" el aprendizaje/atención de las necesidades.

- Destetar a usuario de esto que corrige después de que hayan visto el número señalado palabra de épocas. Más carácteres en la palabra/el tipo tema determinan el número de épocas que u lo lee en forma "corregida", con los modos de cogida del ojo disminuyendo cada vez que la han leído o han escrito.

- Sin embargo, el nivel de especial atención se puede variar, o no existente.

- El usuario puede señalar en cualquier momento para chascar encendido la palabra problemática o el cuadro correspondiente "encapsulado" del párrafo y de la visión. En tal caso, el sistema (fuerza) continúa demostrando el cuadro para tal palabra segura # las épocas más.

- éste que aprende leer el uso es un ejemplo de cómo el sistema marca (UIP-DB, fósforos) cierto material con etiqueta (palabras), "corrige simplemente después" /alters él por consiguiente. La búsqueda del interruptor y substituye.

- .sw tiene (invisible en s) ranura en la cual la imagen pueda aparecer/cambio.

- chascar encendido la imagen para conseguir: oscilador que pone en palabras qué cuadro o texto representa; programa video; cualquie otro sistema que acciona uno de los sentidos del u cinco en persona (véase el kn).

+ enseñando a los jóvenes a leer:

El texto tiene imágenes aplicables al lado de ciertas palabras. Eg.: cuadro para los adjacents de la casa la palabra "casa". El cuadro puede ser mismos tamaños como texto (de gran tamaño); o el número al lado de la palabra empareja número al lado de cuadro a otra parte en la pantalla o el material impreso.

- el sistema aprende que el número de usuario de las épocas ha parecido tales palabras (en el sistema).

. --el sistema o el profesor humano asigna # las épocas del texto de la visión balanceadas con la complejidad de la palabra.

- Destetando: Después de ocurrencias señaladas de la palabra/del concepto dichos, los cuadros pueden aparecer no más (lector de destete de la ayuda).

Destete:

Usuario de destete apagado del sistema de la ayuda de la lectura. Como el aprendizaje bike primero con las ruedas del entrenamiento, entonces ellos que quitan lentamente la ayuda adicional.

- los modos de acentuación de texto señalado, se pudieron reducir en un cierto plazo. Esta reducción puede aplicarse a todos/a la mayoría de las palabras difíciles.

--Las palabras "señaladas" con las buenas "cuentas" que demuestran a lector no tienen apuro (mucho) se pueden destetar más rápidamente.

- el destete de proceso es controlado: automáticamente o por u/por el guarda (doctor) o profesor o uip.

- si el usuario está teniendo un maì□n día [lectura de la dificultad], pueden alterar el grado/tipo de sistema de la diferenciación hacen para (previamente/nuevamente) el texto señalado/otros problemas.

- (En texto normal) las imágenes pudieron boldened o subrayado, adjunto iguales se pueden hacer, con los cambios adicionales a sus sombras, etc. substituyen otro "que corrige" modos.

. Cambios esporádicos. Las letras problemáticas se señalan esporádico diferentemente de las letras/de las palabras restantes/texto. Ejemplos: cada tercera letra problemática dirigió tan; dirección especial manejada vía el proceso al azar (interruptor).

- el mismo tipo problema se pudo señalar diferentemente en diversas épocas/situaciones. Eg.: las confusiones entre las letras b y d pueden ser verdes contra rojo; y en otras veces blancas contra negro.

- TDS: las letras problemáticas de diferenciación de los días se representan en colores de diferenciación. Valor: el usuario no espera que las letras difíciles estén siempre así que representado, eg.: para el periódico de la lectura, el etc. donde tal "bagaje de la ayuda" puede no existir.

--las ayudas del sistema destetan u apagado del interruptor de la ayuda.

- ayudando destetar u apagado de esta n: cualesquiera letras/palabra difíciles pudieron simplemente tener tipografía o color de diferenciación, tan allí son dos modos, aspecto normal y el segundo aspecto que no es diferente en relación a las otras letras/palabras difíciles. Ayuda a u para tener extraordinariamente cuidado al venir sobre problema potencial.

- el tamaño de la ventana [vía se lee qué texto] se puede hacer tan pequeño o grande como deseado, mientras que cualesquiera de otras características pueden aparecer dentro de esta ventana en S. 5G060.

Existe:

Software del dísl3exico: Toda lo que lo hace es palabra u oración del punto culminante uno a la vez. Si el lector tiene apuro, (oscilador) lo anuncia verbalmente. El producto existente llamó: Chascar-Lector del MOLDE para US$20.

- si la palabra está en ampliación de foto (título) /italics, leerá el material en una voz más ruidosa.

- Chascar-Lector: Plantilla de la lectura para cualquie texto y cuadros. Incluye las ayudas auditivas adaptables para descifrar, el seguimiento visual, y la organización.

- fabricado cerca: MOLDE - centro para las tecnologías especiales aplicadas. 508-531-8555. 39 St. cruzado, Peabody, mA 01960.

. - Patente relacionada: Patente no 4875432 de los E.E.U.U.: color en cambios del tablero de la "cuenta" cuando la cuenta se ata en (voleibol) "juego".

. - (El nivel "de"/"de la cuenta estado" efectúa el tipo de cambio del color encontrado en S/Nr de cualquier producto/sistema; eg.: 7G)

Software que demuestra la naturaleza de la situación simplemente por la manera que ha corregido, espacio de ahorro de la pantalla del texto excesivo.

- También ver el archivo separado + "el estado" del "artista".

- Naturaleza de los problemas representados en cómo las imágenes alteraron: tipo de problema del disl3exico o del lector joven demostrado por el tipo "edición".

"Cuenta":

- "Educ": el sistema puede tener el contador de tiempo y u otros análisis electrónicos para cómo las habilidades de lectura del usuario están mejorando, eg.: capacidad de leer o de escribir correctamente; velocidad de la lectura.

--el sistema puede forzar/sugiere a usuario para acelerar tamaño de la ventana de la lectura/del aumento cuando su "cuenta" mejora.

- Cómo "cuentas": cuando u juzgaba (no) para haber hecho el nr del sys= del error=.

Patentes de los E.E.U.U.: Estrategia de búsqueda: dyslexi. Hasta 8.96. DB buscado vía la palabra clave del texto completo de la patente.

Problemas del usuario de comprensión.

D: El "anotar" - > desarrollo del DB del UIP - UIP-Adapta SW= para el lector. Se anota qué y (W5): Niveles/tipos "que anotan" de las dificultades del usuario (ojo//reading cognoscitivo); "VAGOS"; "cuenta" de los "educ"; "estado". Las patentes relacionadas siguen:

TERMINAR LA PARTE PRINCIPAL SOFTWARE DE LA AYUDA DE LA LECTURA DE S DEL ARTE'

Archivo: Arte \ AR \ ReadHelp

INFO MENOS PERTINENTE A LA INVENCIÓN DE COMPRENSIÓN

Introducción: Buscar y substituir/"corregir":

- Programas de usuario (pr) cómo el software hará las alteraciones deseadas (nr).
- Las búsquedas del software entonces alteran las palabras particulares que causan problemas.
- Se modifica para requisitos particulares el corregir del `.

Hay una versión plástica de esta invención con programa de gestión electrónica. Esta versión plástica puede estar de plástico, o de sus funciones representadas en software también. Detalles:

Software/versiones plásticas de la ventana rectora 5G060:

- Ejemplos: ver apenas uno o más letras, palabras, oraciones, párrafos a la vez.
- la ventana puede tener claro y o cambiable coloreada para ver a través el plástico. Ciertos fondos de los colores pueden realzar la lectura y o aumentar comodidad
- ciertas formas y o las letras en las áreas del recorte pueden ser demostradas, si es provechoso. Eg.: el usuario tiene apuro el distinguir entre "b" y "d", así que la tapa del área (en blanco) cortada tiene uno o más letras de "b" y la parte inferior tiene uno o más letras de "d". El usuario puede referirles siempre que necesiten recordar mejor sus distinciones.
- construcción del plástico y o de la cartulina. El tamaño de la ventana del cuadrado creado cerca ajusta a partir la uno a tres de los lados.

El sistema analiza la velocidad del lector vía:

- globo del ojo "analizador": el movimiento de ojo del reloj, cada movimiento representa: una letra, sílaba, palabra, grupo de palabra; calcula matemáticamente vía la configuración (triangular) qué ojo está viendo, vía su posición al texto demostrado (s).

- el lector golpea llave mientras que progresan cerca: letra, palabra, oración, párrafo.
- el usuario enrolla el texto

Patentes y patentabilidad:

El tratamiento de señales del software es la edición patentable a un cierto grado.

- Versión simple (mecánica): colocado sobre el texto impreso. ¿Puede explorar el texto a mano a mano sobreescrito o a mano la versión eléctrica menos patentable?

. - Búsqueda de la palmadita: necesitar comprobar las capacidades del módem de los dispositivos disponibles para asistir a avistadas parcialmente para leer.

PATENTAR la estrategia de BÚSQUEDA y algunos números de patente relacionados de los E.E.U.U.: software de la dislexia 5G061: (). Str: dislexia o disl3exico

- Str APS 69 ' a 6.92: dislexia o disl3exico:

--No. de la palmadita de los E.E.U.U.: ¿+538880 demostraciones materiales poco a la vez? el lector mueve tan ojos como mínimo.

--83 ' - 86 ': + 4379699 mejora eficacia de la lectura, aumenta contraste ligero. Sin embargo mi invención cambia color por lo que se refiere a letras adyacentes. Considerando que la patente existente aumenta la intensidad de letras en relación al ambiente.

--+ dispositivo de lectura de la dislexia 4979902 1990: restringe el campo visual. Sin embargo esto puede no parar mi versión del interruptor de la restricción de la visión. Método cifrado 5421729 colores % del catálogo y de las ventas; 5420653 método y aparato para el mejoramiento de la tensión y de la dislexia visuales.

Misceláneo:

- los nuevos códigos del interruptor se utilizan para las "imágenes "corregidas"". El envío y los lados receptores pudieron haber abreviado formas de interpretar éstos las "imágenes diferentemente alteradas" para apresurar la transmisión vía: módem; carro.
- versión del interruptor: Info dado electrónicamente: explorado/en línea/carro (diskettes, cd) - > el interruptor convierte el texto - > s/impresora.
- El software utiliza la versión simple (5G060) también. Cosechadora con el producto 5G070.

- este número de la invención fue cortado de y un subconjunto de 5G060, después cambiado a 5G061 en 7.95.

- Versión del programa también. D: interruptor = c = exhibición (efectos deseados y 2.as (o 3D) imágenes). Tiene iguales y más funciones que la versión mecánica.

Diagrama de la versión plástica:

- D1: (en electrónico) versión plana:

.....

. .....

. 1.

. -------.

. .....

.....

Los gráficos imprimieron sobre la tarjeta están en el perímetro externo. El perímetro interno es el considerar con área. Las barras a través de la demostración media que una posición posible en la cual la ventana se cierra parcialmente con el material opaco coloreado (puede todavía leer quizá fácilmente con él). La puerta deslizante (viene de la parte inferior).

- colores usados en el obturador opaco/cualquie cubierta de la ventana (1); más los colores para el perímetro externo se pueden elegir por los psicólogos/dislexia experts/u, según los colores (combinaciones) los mejores resultados de esa demostración/preferred por el U.

Diagrama en segundo lugar relacionado:

- D2: .....

: b d:

: .....:

: : 1: :

: .....:

: .....:

Notas: El diagrama tiene cuadrado grande, con un cuadrado más pequeño dentro - etiquetado 1. ventanas cortadas 1=; las letras b y d se imprimen sobre (no-cortar) el área externa, lado sobre/below/to de la ventana (de la lectura).

. - La epilepsia y Parkinson tienen síntomas similares a la dislexia. Por lo tanto estos productos mencionados como ayuda de estos problemas se pueden aplicar a ayudar las otras enfermedades. Eg.: vía la alteración de la manera de la cual centran sus mentes.

OTD D: Este ~ del sistema de N (interruptor dyslectic) C =

ACCESO ("interno" de los estudios del analizador del comportamiento (comportamiento de la lectura): solamente permite que a ésos el estilo de lectura de w (dyslectic/inusual) acceda); ANALIZADOR (el sistema ajusta sus modificaciones según las necesidades/los comportamientos/uip/pr del u); CARRO (texto de la lectura, interruptor, efectos multi-media, uip, acceso); EDUC (mejora la lectura, hábitos del estudio, la lectura

de la velocidad); M (texto, uip, acceso); MULTIUSOS (la lectura de diferenciación de cada u necesita encontrado); NOTIFICADOR (cuando lector que no lee rápidamente bastante/según lo necesitado); OSCILADOR (); Banda (cómo alterar el texto); Q (); S (); CUENTA (velocidad, retención de la memoria de las pruebas del material leído); SENSOR (velocidad de la lectura del u); ESTADO (); SYNTH (ajustar el oscilador según: uip, analizador del comportamiento, banda, texto); TDS (velocidad, cuenta de la lectura); T (MES); UIP (el sistema estudia el estilo del lector (lectura), eg.: velocidad, comprensión = formación más mejor/programas de ayuda de ofrecimiento (interruptor)); ANALIZADOR VISUAL (movimientos de ojo del lector).

OTD D2: Este ~ del sistema de N () C =
TENER ACCESO (la contraseña demuestra el interruptor necesario/el uip actual y la cuenta de u); ANALIZADOR (que adapta el uip a cómo mejor de los datos presentado); ARTISTA (); BALANCE (el oscilador ajusta sonidos según el uip del u según cualquier tipo problema de la audiencia/necesitó ayuda, eg.: sonido siempre más ruidosamente en el oído izquierdo del u); CÁMARA (explorador); CARRO (arte, interruptor preceptoral); EDUC (tgh); K (palillo de alegría); M (DB del uip); MES (); RATÓN (); MQ (); MULTIUSOS (); NR (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (); CUENTA (los estudios nivelan de la situación (problema dyslectic, interés del u en material, comerciabilidad del material) vía: hacer preguntas (dyslectic) de u determinar: la retención de la memoria, la velocidad de la lectura), utiliza la existencia dyslectic/las pruebas de lectura (los interruptores)); DISCURSO (); ESTADO (compara las cuentas del u en un cierto plazo, curva de la mejora del u de los gráficos; el analizador = sugiere que los tipos futuros de actions/sw u puedan utilizar para alcanzar mejor punterías deseadas); TDS (); Público objetivo de U (dyslectic, general de la gente no deteriorada); UIP (lectura/hábitos personales (del interés)); UQ ().

O - El sistema tutors a artistas en la mejora de su fabricación de la imagen:
- D: Artista = analizador = C = U (artista humano). U extrae sobre C/material explorado por C/carro (del)/tr del trabajo de arte de otro C = C = los parámetros solicitados (como banda) se seleccionan = los parámetros comparados de w del interruptor preceptoral (banda) = cuenta/analizador = las sugerencias hechas = los ejemplos visuales/comentario escrito/hoja de la cuenta/sugirieron los libros para leer (seleccionado vía emparejar del uip del artista del UIP w del libro (en ese tiempo que anota)).
¿- Esto un KN viejo?
- similar al instructor de la música, con todo a éste es más en el modo visual.

. Las circunstancias de desarrollar esta invención incluyen: Sr. W.S., senior. está interesado en el tema y tiene una fábrica electrónica grande. La versión del interruptor creció fuera de la versión del producto de hardware. El inventor es sano y no disl3exico.

Pista del `: la posición del u en el material (texto) "siguió" (vía el sistema similar al interruptor de la lectura de la velocidad: 5G070)

El `modifica para requisitos particulares (UIP-Adaptar): "/Interruptor así que su material del texto/"de la hospitalidad de los convertidos del sistema se convierte/se procesa según el uip. Eg.: explorar el periódico [digital] y poder mejor leer el texto; conseguir los periódicos/las letras de email después convertir; mejorar los "juegos video" del juego.

% de la realidad virtual: VR: el dar une vuelta y tiene todos los elementos convertidos según lo querido. La "cámara" = el "analizador visual" = convierte según lo programado.

Se alteran las formas. Forma "corregir-AR" de la imagen:
el ver de la dificultad de los lectores w/formas particulares de la lectura, eg.: los polígonos "se corrigen" en las formas curvadas (círculos).
- en acontecimiento hay formas legibles y difíciles en las mismas formas difíciles de los convertidos de la pantalla/del interruptor del file= solamente en unas las formas existentes del w= compatible.
--los detalles en" la subdivisión de IMI "del "artista corrigen". Dentro "corregir" ven imagen del `de la subdivisión el coordinar del interruptor".
=
. OTD D: U = de la dislexia del ~ 5G061 del "artista" (señalado las imágenes de las funciones interruptor "dirigir" /wording) "corregidas" para el ~ del disl3exico) C =
COLOREAR (ajusta el colorante a las preferencias del lector) el interruptor de // %MULTI-USER () // de la GUÍA de // EDIT () // del DRENAJE de // de la CORREA ESLABONADA de // () () () () // QUE ESCRIBE EL INSTRUMENTO (las palabras entradas aguja - > interruptor de caracteres ópticos del reconocimiento - > convierten el texto a digital en letras - > "corrige" según lo "señalado").

. - el texto usado en el tipo diverso softwares se altera también: procesamiento de textos, hojas separadas, cad, interruptor de la telefonía, interruptor utilizado en LCD (simple) (s) para = cualquie n/kn.

. - Lo que sigue es información algo repetida: El interruptor hace secciones de la "pantalla" tener el mayor contraste/elementos diferenciados (de la imagen) basados encendido: uip, banda, kilovatio. Ciertas palabras, imágenes, palabras referente a nr están especialmente y prestan automáticamente atención gráfica especial (como en este 5G061) cuando la especial atención podría ser de uso. Ejemplos:

% consideran "Synth" para adaptar los sonidos para ésos con problemas auditivos. Los sonidos se alteran de las maneras relacionadas con cómo "se corrige" el texto visual.

Qué se puede "corregir":

- "encaminamiento": cuando los movimientos de u a diverso sistema de file/sw recuerdan qué u era la experimentación/lectura (uip-DB, kilovatio) y ayudas del último excepto el tiempo del u acentuando los materiales en el archivo siguiente que puede emparejar el interés del u (de cualquie manera). Ejemplos: U leía sobre cirugía del ojo en Chicago, después abre el archivo de los números de teléfono, se acentúan los menús/teléfono # ' s referente a cirugía del ojo, después ésos # ' s en Chicago se acentúan aún más (se destaca un deletreado más en negrilla o más brillante o). El sistema no sabe naturalmente todos los intereses posibles en u, y ahorra solamente el tiempo de la exploración del ojo del u, puesto que u puede leer el material destacado primero que piensa que tiene mayor ocasión de ser lo que él quiere.
- ciertas palabras de los convertidos en otras idiomas, eg.: los japoneses están trastornados a menudo que las palabras inglesas (escritas en katakanas) están substituyendo el suyo, en este caso tales términos ingleses se cambian (kanji o los hiragana) al texto japonés.
- la fraseología que aparece en la "hospitalidad" programa: películas, televisión, interruptor, "juegos".
- aparato de la visión (anteojos/prismáticos electrónicos): U capaz de leer el texto que ven en mundo real mientras que: conducción, caminando. VR.
- Interruptor: el texto convirtió para el programador, mientras que están haciendo el texto programado. Eg.: el interruptor de la lengua que es autor tiene su texto/comandos/avisos/etc. convertidos (para una legibilidad más fácil).
- cualquier cosa que puede ser representada, eg.: se corrige el "estado", "cuenta", "notificador". Eg.: mecanografiar el problema, nivel de seriedad.
- velocidad del lector (kn del interruptor de la lectura de la velocidad). "Anota" velocidad.
- mecanografiar el texto o la "hospitalidad", eg.: solamente cierto material en modo de la "hospitalidad" se corrige.

Los controles del usuario cómo este software trabaja. Ejemplos: U (usuario) controla el nivel de contraste/agregado en "las palabras (problemáticas) acordadas/texto del bagaje de la ayuda". Eg.: poner en contraste llano de b contra d contra el resto de las letras.

El otro texto de las maneras aparece y o es transmisible:
Todo el texto escrito se pone a disposición los usuarios vía el email, conversión de la materia impresa vía el explorador, discos. El interruptor funciona con los ordenadores personales especiales del hardware o del hogar. Los monitores de color (grandes) ayudarían, sino no serían requeridos. Trabajos con todas las idiomas, incluyendo japonés, chino, árabe, otras idiomas europeas.

Haciendo iguales "corrigió" el texto fácil o menos inusual leer para los no-disl3exicos:

- las sombras creadas por las letras pueden ser tales que la fuente de luz para la mitad derecha viene de la derecha, y el lado izquierdo tiene poseer el source= ligero dando por resultado el derecho que tiene sombras el ir al lado izquierdo. Las letras elegidas (por el escritor) necesitan simplemente tener letras como "b" en derecho (de s) y "d" en lado izquierdo. Los disl3exicos acostumbrados a la forma de la sombra de "corregir" más rápidamente.

Vidrios o contactos:

- el mismo texto leyó sin desgaste del ojo de los lectores regulares, aparece como texto normal. El desgaste del ojo cambia imágenes. Permite que diverso tipo lectores vea el mismo texto. "Multiusos": esos problemas de diferenciación de w (grados de).

- Las lentes especialmente coloreadas del contacto visual se pudieron utilizar para que la gente daltónica/del disl3exico ayude a aliviar sus problemas. Investigación necesaria. D: lente de contacto =). U = ojo =) = área de la visión [alterada por la lente]. O color del cambio de: "C" "S"; vidrios del ojo; cortinas sobre los vidrios del ojo; bombilla; coloreado superficial rodeando la "C" "S" (puesto que este contraste del color puede efectuar a diversa gente diferentemente por ejemplo los hombres que consiguen retorcidos siempre que ella vea rojo o verde debido a su ser daltónica.

% de los lectores pueden tener lentes que también permitan que u vea se opongan bastante normalmente no en s, así que u no necesita usar el special cualquier cosa apenas para la visión de s. Poco probable trabajar. Ver a doctor de ojo.

+ el usuario lleva algo como un compás que les diga siempre se deja qué lado cuál correcto, no obstante esto puede también ser hecha simplemente llevando una tarjeta (impresa en lados) y viable mientras el lector sepa cuál es la tapa y la parte inferior de la tarjeta. Algunos disl3exicos olvidan su izquierda de derechos. Utilizar este sistema de la idea w. Compás estándar útil también.

- D: "Analizador visual": reconocen al lector de caracteres ópticos/un cierto reconocimiento de caracteres = texto/las imágenes una vez señalados (vía uip-DB) = entonces hace la asignación de la alteración al texto señalado vía: color/tipografía/etc = exhibición de la CRT (s)/impresora (del color).

. - el interruptor rechaza la reparación - si el carácter no se puede leer por la máquina - el sistema destacará ese texto.

- El sistema solamente demuestra a usuario lo que él quiere ver. Es decir: el "analizador visual" (solamente/especialmente) demuestra imágenes/datos de u qué u (la mayoría) quiere. S = da preferencia a las imágenes al grado que su "cuenta" es más alto.

. UIP-KW:

Las ciertas palabras/letras se alteran en su color en términos de:

. - qué palabra representa, eg.: la cereza de la palabra se demuestra en rojo, mientras que "sobre" cereza madura puede tener una tonalidad más oscura. Sobre las cerezas maduras de ciertas variedades/de ciertas partes del mundo pudo tener una tonalidad purpurina también.

. - el uip-analizador determina vía (color) el DB lòs colores, los sonidos (oscilador, sonidos registrados), el etc apropiados = que emparejan la letra, palabra, párrafo, página, capítulo.

. - las imágenes aplicables se pueden insertar cerca de los términos/de los conceptos señalados, así que las imágenes están en la misma página o acercan a palabras señaladas. - Designación para vía la cual los términos reciben las imágenes determinadas: petición del u (k); interruptor; uso del programa (uip).

. - Designación/selección/creación de imágenes aplicables vía: "analizador de imagen" = "artista" = uip.

. - Usos: el mismo texto/"hospitalidad" para las audiencias de diferenciación, cabritos/adultos se puede "corregir" para emparejar su uip. Las imágenes, colores, incluso el texto sí mismo (el saltar del canal 9G220, "redactor") se pueden alterar también.

El usuario/"corrigió" (instruction/nr) la "imagen" hecha salir = este ~ del sistema de N (interruptor de la conversión del disl3exico) C =

ACCESO (); ANALIZADOR (); CUENTA (); CARRO (); EDIT (); EDUC (); MULTIUSOS ("corregido" diferentemente para cada u); NR (); OSCILADOR (); Banda (); Picosegundo-Zona (); Q (); R (); RANURADOR (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); TDS (); T (); INCLINACIÓN (); PISTA (); UIP ().

Usos adicionales:

. Deletreado de los tableros dominantes. "K". El teclado "corregido" puede estar vía: cambiando la "imagen" en cada llave; representan al tablero dominante en la "pantalla" (las demostraciones qué y cómo el usuario (w5) es el mecanografiar/"dibujo".

--El teclado (plástico) de la "computadora" (k) (tinta) puede también tener sus letras alteradas y o las pudo estar en la "pantalla". Cualquier letras pintadas sobre k/el cojín dominante son una pantalla interactiva/cada llave tienen una pequeña pantalla (LCD) que sea programable.

. "Juego": los jugadores tienen que conjeturar qué deletreados "se corrigen incorrectamente". El "corregir incorrecto": imágenes de espejo (como disl3exico puede interpretar lo que él ve ayuda del wo). La "cuenta" según el número de jugador de las épocas coge errores en lo que él ve.

. Aplicaciones adicionales de colores múltiples: Las ayudas de diferenciación de los colores (con referencia a) entrenan a people/u que sean: daltónico; vista deteriorada; lectura deteriorada (de una cierta otra manera); tener

problemas de la vista del ojo; tener ojo a las dificultades cerebrales de la cognición (debilitaciones físicas o psicologicas).

. Etiquetando cuál es importante: "Artista" = "designador": etiqueta lo que necesidades la mayoría de la atención (vía el va) = w una etiqueta.

El sistema lee qué usuario está leyendo.

OSCILADOR = "imagen": cada letra leyó/mecanografiado hace sonidos "señalados".

--El sistema sabe que la letra /word/line/paragraph u está leyendo en el momento. En golondrina de mar, el sistema leerá esas palabras (que los problemas del lector de la causa vía pr/uip).

- ver la patente existente relacionada mencionada en esta limadura de la dislexia.

% del deletreado en la dimensión cuatro pueden ser cualquier uno o más característica además de "corregir tridimensional".

Braille: avistar a lectores deteriorados que sufren de un cierto tipo de confusión relacionada - esas palabras/letras pueden tener otros factores mejor el distinguirse, eg.: topetones más altos o más gruesos o tienen topetones adicionales cerca especialmente el alertar de u/reader (nr).

% del material que es leído se pueden experimentar en una amplia gama de maneras: Las diversas letras/palabras/imágenes tienen correspondencia de diferenciación: sonidos/olores/gustos/modos audios (oscilador, "discurso").

- como el lector lee/experimenta el material, los otros modos puede ayudar al usuario.

¡- apenas utilizar su imaginación!

Hace a usuarios interesados más en la lectura y en computadoras en general.

Archivo: Arte \ AR-Dys-Ed

PARTE: ARTE' S "QUE CORRIGE" MODOS

Introducción: puesto que la gente con dislexia necesita nuevas maneras tener las imágenes entradas en su cerebro, el sistema altera imágenes de la mayoría de la manera eficaz según las preferencias de usuario, u otro necesita. Los siguientes son solamente ejemplos posibles limitados:

+ letras retratadas en la dimensión tres:

- cada letra se puede demostrar en la dimensión tres, eg.: la letra "b" tiene luz vertida en ella de la izquierda, y "d" tiene luz demostrada de la derecha (o de la iluminación opuesta). La otra forma en la cual tridimensional ocurre es demostrar los lados de las letras, como si fueran bloques de madera.

. --Sombras o lados también demostrados de: tapa o parte inferior, o frente o parte posterior, u otros ángulos.

. - cortinas o lados: puede estar de diversos colores según lo "señalado" según: qué letras/palabras/tipo problema del lector. U puede "programar" cómo aparecen las cortinas, como cualquier otro elemento del "artista". --El tamaño de las cortinas/ángulo del shading se puede aumentar/disminuir para el énfasis cambiante.

- Cada lector tiene diversas dificultades, eg.: algunos en "b de desciframiento" y "d". También algunos pueden mejorar leen la misma dificultad después de que "se hayan corregido" en una manera adecuada mejor a ellos, eg.: algunos prefieren lados rojos o verdes.

. --"b" y "d" tienen diverso colorante; las letras difíciles todas se destacan/se colorean diferentemente del texto restante.

- Destetando: esa gente que puede mejorar su lectura puede entonces lentamente hacer las designaciones de las letras/de las palabras difíciles hacer cada vez menos distintas todo el texto es tan gradualmente igual. En días difíciles las distinciones se pueden hacer otra vez.

"Letras específicas de reajuste" y palabras:

Las secciones de las letras que mejoran se distinguen pueden utilizar la tipografía especial que exagera las diferencias. Puesto que el deletreado de la lengua es simplemente una invención de por sí, no hay razón re-representa a levemente o totalmente cada letra en un diverso tipo "imagen".

- las líneas rectas en b y d se pueden acentuar, más quizá la pieza (de la parte superior) de la curva que resuelve la barra.

- n contra m, la línea media en m se acentúa.

- n contra u, o m contra el W.

- c contra la letra o - el espacio abierto en c es más ancho, mientras que el derecho de o puede ser más grueso.

- e contra c, la línea en e se pone en el deletreado en negrilla. O la E capital contra 3 o 8.

- g contra p - barra del p y línea del g que va abajo de acentuado, barra del q acentuada.

- p contra q alteró de la manera similar a b contra la D.

- b contra h - parte inferior de la curva en b acentuado, mientras que la parte inferior abierta de h hizo más ancho y acentuado.

- i contra l - punto acentuado, quizá acción de i más en negrilla, mientras que l letra extraordinariamente alta, y cortocircuito de i extraordinariamente.

- u contra o - la parte abierta de u abrió como h contra el B.

- s contra z - s hecho más curvaceous - sus líneas del comienzo y de conclusión es extraordinariamente curvy, z hechos más posición en cuclillas y por lo tanto zagged.

- q y p contra b y d - sobre cuál está o abajo es el grueso adicional acentuado de w.

- la sierra contra era, o dan contra y, whte contra con, o su contra los ist - puede ser distinguido teniendo: primer y pasado y o letras medias de diversas letras de uno a. Purpose a mejor lector de la ayuda para molerse en cuál está en la derecha contra izquierda.
- etc.

. Compatibilidad del color/de los Especial-efectos:

el sistema (automáticamente) "analiza" que los efectos/los colores son apropiados para cada situación, eg.: el rojo en relación a verde tiene más contraste que gris contra blanco; se utilizan otros efectos cuando son necesarios (según el uip).

- la presencia de ciertas formas/texturas que sean en/cerca/entre las líneas de texto puede ayudar psicologicamente a lectores. Los lectores/los instructores seleccionan se desean qué efectos.
- El tipo "edición" demuestra el tipo dificultad: dependiendo de tipo problema, cada "edición" puede ser diferente así que el lector sabe qué tipo problema es al lado de tipo "edición", eg.: el texto cambiado al perímetro rojo implica diversos problema/significado de sombras azules del azul de la letra o del texto w.
- El usuario "programa" el sistema: El usuario puede seleccionar lo que él quiere corregido seleccionando de menú el tipo códigos de color queridos o no queridos. Es decir: El usuario puede "programar" el sistema (no) al seek= después altera ciertos problemas del grupo del color.

Encapsulación:

Se encapsula qué: Las secciones pequeñas o grandes del texto (problemático) se encuentran en cualquier forma/fondo/otro encapsulados formato "corregido".

- Formas: Cuadrados, círculos, esferas, cubos, prismas triangulares, tubos, etc.
- División del texto en pedazos más pequeños del tamaño de la mordedura: cada párrafo puesto en diversos cuadrados, propósito que es romper para arriba pedazos grandes de texto que asusta comúnmente a lectores jovenes o del disl3exico. - Cada encapsulación puede funcionar como "imagen interactiva".

. --encapsulación del tirón/de la vuelta para ver definiciones o funciones adicionales de la imagen interactiva.

. - Hacer girar la bola/el cubo: texto escrito en la esfera (que necesitan dar vuelta (por el ratón)) para proceder al texto adicional. Sonidos del OSCILADOR mientras que su movido.

H-Ver que software de KN que ése suena cuando se dan vuelta las páginas.

--. "Juego": hacer girar y aterrizar en lo que "imagen": éste es parte del juego, eg.: hacer girar la botella, o siempre que la opción de a (al azar/que juega) sea necesaria.

Efectos adicionales de la muestra:

- Líneas de cubos minúsculos en los colores señalados alineados entre las líneas, o alrededor de perímetro de "s" o de la página impresa.

--cada línea o palabra está de diverso color: las ayudas paran empañar del texto. Dentro de cada palabra, cada letra puede tener variación (leve) en color.

--Las imágenes del interruptor se pueden también demostrar entre líneas, con o sin un forro coloreado especial para estas imágenes implantadas.

--hace que el usuario siente más seguro en los remolinos de la impresión. Servicio de mayo como cierto tipo de poner a tierra psicologico o de incitar o de reforzador de la motivación o del "humor".

. - el cuadro que representa ("señalado") palabras aparece adyacente al texto. El cuadro/la palabra es la imagen interactiva. El programador "programa" en cuadros vía: de "dibujo"/"cortado y goma" (w= "cámara"). La duda es patentable.

--el movimiento del cuadro representa el mensaje también. Eg.: hacia qué está señalando; expresión facial de su carácter que señala "humor".

- cualquier acentuación puede ser que destella o de mudanza para mejorar la atención del retén. La velocidad de destello puede ser así que el usuario la ve apenas el ir con./desc., y en el 75% de tiempo, del 25% de tiempo.

- Marcador: el texto está en un lado de cubo, y las sombras/las líneas/los marcadores emanan del texto difícil al otro lado del cubo.

. Adicional "corrigiendo" modos de letras/de palabras:

- haciéndolas más grandes/más pequeñas.

- el grueso alteró, eg.: las porciones de la curva de las letras b y D.

. - la tipografía alteró (valioso en no las pantallas del color, y el destete del sistema).

H ver "el estado" del "artista": La edición demuestra la naturaleza de la situación, ahorrando de necesitar el texto adicional que estorba la pantalla.

. Fondo detrás del texto:

- ciertos fondos del color realzan legibilidad, eg.: vía contraste o no accionar del color síntomas psicologicos. Ver los estudios médicos de la dislexia.

- imágenes (del fondo) controladas cerca: uip/banda/qué vino texto de w cart/el. Eg.: leer la ficción de la selva y ver/para oír los leones rugido y monos que hacen pivotar de árboles. El fondo "ha corregido": "colorea"/textura/texto/el sounds%

Los movimientos propios alteraron para el uip/el uso.

- OTD D: U = este ~ del sistema de N () C = NR (); OSCILADOR (synth); El VR% (); WA (); realza "humor " = para las tareas "señaladas" (conducidas por u).

. Versión del interruptor de la lectura de la velocidad (entrenamiento): el marcador demuestra en donde el lector debe estar mientras que están leyendo el texto. Cuando el cursor se enciende sobre secciones difíciles,

marca imágenes "señaladas" por consiguiente. Esta ayuda solamente cuando ha llegado el marcador, ayudas induce a lectores lentos que aceleren, ganar la ventaja de "corregir" la función.
Ver 5G060.
PARTE: ARTE' S "QUE CORRIGE" MODOS
Archivo: Arte \ AR-Dys-IMI
GLOSARIO DEL "ARTE' S" DE TÉRMINOS

Cualquier concepto (parte) w/in cada uno debajo del grupo es normalmente permutable. Definiciones más profundas divulgadas en otros archivos.

Acentuar: la parte de texto se hace un texto más que restante más visible o alterado, eg. vía: color, tipografía, tamaño, boldening (hecho en el deletreado en negrilla), punto culminante. "Corregir".

Causas para corregir: Qué necesita corregir y porqué. Altera secciones del texto según los criterios del software. Ejemplos: redacta difícil para los disl3exicos, nuevas palabras. Ver "para señalar" en la cañería IMI y el "artista". El comportamiento del usuario de los estudios de sistema y determina cómo qué texto crea más problema - ver UIP [información de usuario que programa].

Modificar para requisitos particulares: las imágenes se adaptan a los propósitos señalados. Puede ser sistema de la edición de textos de una imagen automatizada el' controlado/dirigido en parte (junto con la entrada del usuario) por el arreglo para requisitos particulares.

El texto señalado alteró: La búsqueda del interruptor y substituye; las porciones de texto alteraron para mejorar legibilidad/la comprensión; los accentuations deseados hicieron.

Disl3exico: La lectura/vista deterioró. % de los lectores y espectadores que se colocan para ganar vía cualquier tipo de "corregir".

Programa del disl3exico: "Corrigiendo" (interruptor/banda); %sw; %pr.

Corregir: Acentuar el texto. Convertir la imagen para ayudar al lector a leer. Los ejemplos diferencian en <b> y <d> de las letras destacarse más.

Educar: El software enseña a gente a leer: disl3exicos, lectores jovenes, para las nuevas idiomas secundarias. Enseña a la lectura de la velocidad.

La ayuda leyó: mejorar la capacidad de la lectura, ayudar al disl3exico, mejorar la legibilidad o la visibilidad. "Educ". Usuario de la ayuda en material de %understanding.

Imagen: Cualquie elemento visible en la pantalla: texto, cuadros.

Letras/carácteres: Cualquie letra o dígito en alfabeto o la representación matemática, o % "de la imagen". Las letras se pueden "corregir" en cualquier nueva letra, que pueda parecer similar o totalmente diferente de la letra (inglesa) original de la lengua. Eg.: b - > un triángulo del tamaño similar, d - > cuadrado.

Nuevas palabras: El software acentúa nuevas palabras, tales como inusualmente a largo plazo, o uno lector joven no han leído antes a través del software. Puede ser un constructor del vocabulario: ésos referente a un nuevo usuario del tema están aprendiendo. Utilizado con programa de la "educación".

Leído: Material de la visión; material/programa de la experiencia (con el texto o las imágenes) que se centra más en los aspectos visuales. % "interactivos" con visualmente el actual material.

Texto: (Parte de) texto, letra, palabra, material, %paragraph, ("interactivo") "imagen" - ver a "artista".

Destete: Este software se puede diseñar como muleta que enseñe más adelante a usuarios a leer en sus los propios.

Archivo: Arte \ Ar-Dys1

Software de la ayuda de la lectura

Archivo: Ar-D1. software de la ayuda de la lectura 5G061: Este archivo es un subconjunto del archivo titulado: "Artista - corregir". <3, 3, 4 palmadita-interruptor-versión, 1.5 mk, 3>

+ las nuevas palabras reciben a special "que corrige" la atención:
- Qué señaló: El sistema busca las palabras según las cuales "se señalan": tema; novedad (a u, campo del estudio (nueva idea)); la dificultad u ha tenido adentro últimas ocurrencias según lo "analizado" por (la prueba) la "cuenta"; qué u o sus supervisores determinar él debe aprender/"obra recíprocamente" con (para más

experiencia, "educando" sí mismo (en sus aplicaciones y contextos múltiples)). Qué ""/"" del educ/"" del ranurador/nr del humor: "analiza" el aprendizaje/atención de las necesidades.

- Destetar a usuario de esto que corrige después de que hayan visto el número señalado palabra de épocas. Más carácteres en la palabra/el tipo tema determinan el número de épocas que u lo lee en forma "corregida", con los modos de cogida del ojo disminuyendo cada vez que la han leído o han escrito.
- Sin embargo, el nivel de especial atención se puede variar, o no existente.
- El usuario puede señalar en cualquier momento para chascar encendido la palabra problemática o el cuadro correspondiente "encapsulado" del párrafo y de la visión. En tal caso, el sistema (fuerza) continúa demostrando el cuadro para tal palabra segura # las épocas más.
- éste que aprende leer el uso es un ejemplo de cómo el sistema marca (UIP-DB, fósforos) cierto material con etiqueta (palabras), "corrige simplemente después" /alters él por consiguiente. La búsqueda del interruptor y substituye.
- .sw tiene (invisible en s) ranura en la cual la imagen pueda aparecer/cambio.
- chascar encendido la imagen para conseguir: oscilador que pone en palabras qué cuadro o texto representa; programa video; cualquie otro sistema que acciona uno de los sentidos del u cinco en persona (véase el kn).

+ enseñando a los jóvenes a leer:

El texto tiene imágenes aplicables al lado de ciertas palabras. Eg.: cuadro para los adjacents de la casa la palabra "casa". El cuadro puede ser mismos tamaños como texto (de gran tamaño); o el número al lado de la palabra empareja número al lado de cuadro a otra parte en la pantalla o el material impreso.

- el sistema aprende que el número de usuario de las épocas ha parecido tales palabras (en el sistema).

. --el sistema o el profesor humano asigna # las épocas del texto de la visión balanceadas con la complejidad de la palabra.

- Destetando: Después de ocurrencias señaladas de la palabra/del concepto dichos, los cuadros pueden aparecer no más (lector de destete de la ayuda).

Usuario de destete apagado del sistema de la ayuda de la lectura. Como el aprendizaje bike primero con el entrenamiento rueda, después ellos que quitan lentamente la ayuda adicional.

- los modos de acentuación de texto señalado, se pudieron reducir en un cierto plazo. Esta reducción puede aplicarse a todos/a la mayoría de las palabras difíciles.

--Las palabras "señaladas" con las buenas "cuentas" que demuestran a lector no tienen apuro (mucho) se pueden destetar más rápidamente.

- el destete de proceso es controlado: automáticamente o por u/por el guarda (doctor) o profesor o uip.
- si el usuario está teniendo un maÌ□n día [lectura de la dificultad], pueden alterar el grado/tipo de sistema de la diferenciación hacen para (previamente/nuevamente) el texto señalado/otros problemas.

- (En texto normal) las imágenes pudieron boldened o subrayado, adjunto iguales se pueden hacer, con los cambios adicionales a sus sombras, etc. substituyen otro "que corrige" modos.

. Cambios esporádicos. Las letras problemáticas se señalan esporádico diferentemente de las letras/de las palabras restantes/texto. Ejemplos: cada tercera letra problemática dirigió tan; dirección especial manejada vía el proceso al azar (interruptor).

- el mismo tipo problema se pudo señalar diferentemente en diversas épocas/situaciones. Eg.: las confusiones entre las letras b y d pueden ser verdes contra rojo; y en otras veces blancas contra negro.

- TDS: las letras problemáticas de diferenciación de los días se representan en colores de diferenciación. Valor: el usuario no espera que las letras difíciles estén siempre así que representado, eg.: para el periódico de la lectura, el etc. donde tal "bagaje de la ayuda" puede no existir.

--las ayudas del sistema destetan u apagado del interruptor de la ayuda.

- ayudando destetar u apagado de esta n: cualesquiera letras/palabra difíciles pudieron simplemente tener tipografía o color de diferenciación, tan allí son dos modos, aspecto normal y el segundo aspecto que no es diferente en relación a las otras letras/palabras difíciles. Ayuda a u para tener extraordinariamente cuidado al venir sobre problema potencial.

- el tamaño de la ventana [vía se lee qué texto] se puede hacer tan pequeño o grande como deseado, mientras que cualesquiera de otras características pueden aparecer dentro de esta ventana en S. 5G060.

Existe:

Software del disl3exico: Toda lo que lo hace es palabra u oración del punto culminante uno a la vez. Si el lector tiene apuro, (oscilador) lo anuncia verbalmente. El producto existente llamó: Chascar-Lector del MOLDE para US$20.

- si la palabra está en ampliación de foto (título) /italics, leerá el material en una voz más ruidosa.

- Chascar-Lector: Plantilla de la lectura para cualquie texto y cuadros. Incluye las ayudas auditivas adaptables para descifrar, el seguimiento visual, y la organización.

- fabricado cerca: MOLDE - centro para las tecnologías especiales aplicadas. 508-531-8555. 39 St. cruzado, Peabody, mA 01960.

. - Patente relacionada: Patente no 4875432 de los E.E.U.U.: color en cambios del tablero de la "cuenta" cuando la cuenta se ata en (voleibol) "juego".

. - (El nivel "de"/"de la cuenta estado" efectúa el tipo de cambio del color encontrado en S/Nr de cualquier producto/sistema; eg.: 7G)

Software que demuestra la naturaleza de la situación simplemente por la manera que ha corregido, espacio de ahorro de la pantalla del texto excesivo.

- También ver el archivo separado + "el estado" del "artista".

- Naturaleza de los problemas representados en cómo las imágenes alteraron: tipo de problema del disl3exico o del lector joven demostrado por el tipo "edición".

"Cuenta":

- "Educ": el sistema puede tener el contador de tiempo y u otros análisis electrónicos para cómo las habilidades de lectura del usuario están mejorando, eg.: capacidad de leer o de escribir correctamente; velocidad de la lectura.

--el sistema puede forzar/sugiere a usuario para acelerar tamaño de la ventana de la lectura/del aumento cuando su "cuenta" mejora.

- Cómo "cuentas": cuando u juzgaba (no) para haber hecho el nr del sys= del error=.

+ "educando" a gente en el aprendizaje leer palabras difíciles.

- Qué "se analizan" como siendo palabras difíciles:

todo redacta probablemente para ser nuevo o sobre número del sistema las letras "se señalan" como probablemente para necesitar la especial atención; esos de las palabras disl3exicos no y los disl3exicos tienen a menudo with= del apuro según el DB. Ver la sección del words> del <new.

--una nueva manera de introducir nuevas palabras. Eg.: para la gente que aprende nuevas idiomas.

--el usuario puede chascar el ratón en esto palabra distinguida y el software demostrará su significado. El tipo definición dada se puede señalar según:

---uip; contexto de la palabra; lengua materna del usuario; inteligencia del usuario, capacidades o habilidad o experiencia técnica...

- El usuario puede seleccionar (de menú) las categorías sujetas/las palabras de raíz/tipo ayuda de la palabra necesaria.

- Las palabras "señaladas" pueden ser las "imágenes interactivas" que cuando está chascado: dar (Webster/Britannica) la definición; demostrar (moviéndose) las "imágenes" que representan (definición/uso a u (el uip)) /"ruta" u según lo "señalado" (a los archivos relacionados (por el tema)) /el oscilador da los ejemplos para cómo el concepto suena.

. Apresto de la letra: con bastante espacio entre las líneas, "imágenes más difíciles" pueden ser hechas (más grande). % si está hecho más pequeño: su para hacer el concentrado de la mente en las imágenes más pequeñas (diverso colorante de w a ayudar a identificar).

--el más larga la palabra la tipografía (más grande): para los cabritos.

. El texto "corregido" se puede demostrar en contextos siguientes:

Rompecabezas cruzados de la palabra; "juegos"; milímetro (multi-media); texto que está debajo de películas o de Karaoke; libros; artículos (del diario); WWW; publicidad; etiquetas en los productos (con./desc./la energía/el volumen/la otra k); el "nr"/las muestras impresas de la precaución (usadas en las instalaciones frecuentadas por los disl3exicos), la escritura puede ser así que los no-disl3exicos entienden también el /are suspendido no también; Cualquie tipo (interruptor/banda) de instrucciones (librete/"guía"); "imágenes interactivas"; sistemas de catálogo de la biblioteca (interruptor) (para los disl3exicos).

. Generación de la "imagen No-INTERRUPTOR": El estarcir: han cortado salidas de las hojas plásticas a través de las cuales (aerosol) de las letras se pintan. Frotar apagado las letras. Precortado pegado en el deletreado. Impresión de las etiquetas engomadas w.

- Un proceso que estarce de dos fases se puede utilizar a los efectos coloreados/textured creados diferente. Ejemplo: sombras o secciones que necesitan la acentuación especial.

. Atención del usuario de los focos: Enseña a gente a enfocarse; los actos como el entrenamiento ruedan para los principiantes de la bicicleta, usuario consideran poco a la vez, aumentando la cantidad demostrada, así que no consiguen abrumados. El texto de acentuación es una forma de centrarse en lo que debe mejorar el ojo el retén. La encapsulación limita el efecto de forma aplastante.

- Las palabras importantes, oraciones, párrafos, capítulos, títulos se pueden señalar para demostrar: (tipo de) importancia [según código de color].

Archivo: Arte \ artista misceláneo

ARCHIVO MISCELÁNEO DEL ARTISTA

- Ver KN: Software de coordinación de la imagen R24-1; selector del color 3C210

- Diagrama: usuario = ratón/r = imagen del ~ de c que genera o que corrige software = la pantalla o la impresora.

- Designador del `: Los colores, las formas u otras imágenes se utilizan o "se corrigen" para alcanzar resultado "señalado". El sistema determina automáticamente vía cualquier criterio de la "designación" de la invención qué necesidades de destacarse/"se corrija". Resultados en mayor ayuda a u: "nr"; qué necesita la atención

-

- En otras palabras: Cambiar el aspecto gráfico. La alteración es cualquier medio de manipular imágenes, eg.: corte y goma; arrastre; (u) dibujo.

- Imagen del `- el término definió: cualquie diseño gráfico, o interfaz gráfico, que se puede dibujar o corregir por el artista.

- "Imágenes "interactivas"" - el término definió: para las computadoras o las pantallas interactivas: u/el sistema puede crear las pantallas táctiles "interactivas" con sus "imágenes necesarias". Las imágenes generadas (iconos) tienen funciones accionadas según cómo se tocan/se activan. Icono del software (relacionado).

- Diagrama: U/"señaló" funciones = (las "imágenes interactivas") ~ C = función señalada [del kn].

- Razones para dibujar: hospitalidad; función en juego; creando la presentación embalada en el milímetro o el material impreso.

- Estado del `: "Corrigiendo" el estado de las demostraciones de la situación: mecanografiar el tema/el nr/la "encaminamiento" demostrada por cómo "se corrigen" las imágenes. Valor: requiere menos explicación del texto que estorba la pantalla. Ver: IMI "cuenta", "estado".

- (artistas del `') "ESCRIBIENDO EL INSTRUMENTO" = ratón, aguja, "inclinación".
"Ratón"; "R"; Pluma (EL) o cepillo; Cursor de la "computadora"; % "de la correa eslabonada"; "Inclinación".

- Cómo (adaptado) sastre "dibujado" "corregido" del usuario de las "imágenes" ser y o (por'):

- Cualquier alteración/generación puede ser parte del proceso del "artista". Puede crear alguno el efecto relacionado del "artista":. Eg.: incluso un arma de la grapadora sale de una marca (demostrada en color de diferenciación), y se sujeta con grapa lo que es un "corte y una goma" porque ésta es la función más común de la herramienta. Los controles del "ratón" debajo del icono filetearon los movimientos/"que corregían".

. - Los modos de la generación de la imagen se relacionaron con las herramientas y las funciones como encontrado en el "pesebre de la herramienta" de las ventas del norte catalogar el agosto de 1996 #966. Las páginas mencionadas son solamente una de ejemplos múltiples posibles en catálogo.

- La plantilla vio = cortar la porción de "cortar y pegar".

- tallando los sistemas/ranurador (no "ranurador")

- chorreadoras/taladros (más anchos): el conseguir más profundo en áreas "señaladas" trae colores acodados para arriba correspondientes. Los caminos de la herramienta se demuestran.

- linternas: qué se brilla sobre tiene color "corregido"

- los destornilladores salen de la marca que algo "fue cortado y la pegaron" previamente.

- Etiquetado de cada herramienta como icono: los instrumentos reales se pueden representar como iconos en s= así que el usuario puede chascarlos encendido para comenzar la función deseada del "artista".

- Cortar/arena de secciones de la madera (las imágenes) = "corrigiendo"

- Pulidores/chorreadoras: la textura cambia por consiguiente (w o los cambios (drásticos) del color del wo)

- Rociadores del "color". p39

- colectores de polvo p39

- Pega/los vicios/(resorte del potro) afianza con abrazadera = (temporalmente W5) "cortado y goma".

- El benches= del trabajo tiene herramientas en el banco (para el "artista"). Un banco de trabajo puede ser un archivo/un icono con las subpartes (secundario-iconos).
- Motosierras del césped y del jardín: más móvil y puede cortar más fácilmente donde deseado. p59

. Cada uno/la mayoría del artista KN también tiene una versión del interruptor - D: U = ratón/r/k = c ~ imagen generando interruptor = s/impresora/[tr = otro]/acceso de c.

CONCLUYE ESTA SECCIÓN CENTRAL DE DISCRIPTION PARA EL ARTISTA

Archivo: Introducción/VAGOS de las características

ANALIZADOR DEL COMPORTAMIENTO EN GENERAL

¡Utilizar nuestra solicitud de patente Masterminded de mejorar sus ideas en la adaptación a las necesidades del cliente por una mejor comprensión de ellas! Aprender sobre nuestras licencias rápidas y fáciles. Llamar (+1) 707-428-5000 www.LicenseItToday.com

(La mayor parte de la pieza de los VAGOS se archiva bajo pieza del acceso)

Introducción. También mirada debajo: UIP-Adaptar, desarrollo de UIP-DB. Los usos para los VAGOS incluyen: ¡UIP, UIP-Info, juegos, mucho más!

REACCIÓN DEL ANALIZADOR DEL COMPORTAMIENTO =

Utiliza medios múltiples en la determinación del comportamiento de quién o de cuál es observación bondadosa. Esta información está disponible para el sistema que desea adaptar una función para los gustos del usuario. El sistema se adapta al humor del usuario. Diversos humores del user= (influencia de la ayuda) dan lugar a diversos códigos de comando en sistema que controla. Una forma de UIP-Adapta el ajuste al comportamiento del usuario.

LEÍDO MÁS ADELANTE:

- El sistema determina el comportamiento/el humor del speaker= que reaccionan según lo señalado. El comportamiento del user= es resuelto vía el analizador de sonidos. Diversos comportamientos dan lugar a reacciones de diferenciación.
- 'Programar el grado a el cual el sistema altera el itself= por el shift= anotado en el comportamiento del usuario.

Ejemplos:

alarma interactiva 3A280: En el tiempo señalado se acciona la alarma, persona debe utilizar su voz para vocalize el sonido para parar alarmar. Con eso dependiendo del tono de la voz de la persona la máquina reacciona en el acompañamiento. El micrófono y el "cerebro" de la máquina sabe responder. SA. Propósitos: hace el durmiente obrar recíprocamente con la máquina, que consigue su funcionamiento del cerebro, y en el modo interactivo despertado para el mundo. Una novedad comercial interesante, regalo para sus amigos que necesitan la ayuda que despierta en la mañana.

- La alarma espera cierto plazo antes de alarma del principio otra vez (da un plazo de hora de desactivar la alarma)

- Opción: si se suena la palabra, la máquina expone la palabra de la persona en forma modificada en la manera diferente diseñada psicologicamente para ayudar a waken los para arriba. La alarma interactiva puede responder diverso cada vez/día que crea curiosidad sobre la reacción "desconocida" de la alarma a su voz (el suspenso ayuda más lejos a despertar). El sonido saliente inicial por mañana puede también cambiar.

. D posterior leída: Sonidos creados del u (voz/palmada/producido por máquina (oscilador)) = este ~ C (computadora del sistema de N [sa/access] del `) =

Carro de // de los VAGOS [] (cartucho) del `[] // [diversos sonidos de diverso u] // MULTIUSOS NR [cuando el comando es el triggered= u notificado (por el oscilador/la señal sonora)] Banda de // del OSCILADOR de // [controlado por la voz del u] (programa) [ajustar qué suena causa qué reacciones] CUENTA de // [el tipo suena para sus características o importancia o grado...] // BUSCA y REACCIONA [a los sonidos] la PISTA de // TDS [] // T [] // del ANALIZADOR de SONIDOS de // del SENSOR de // [] [] [w5 suena hecho] // UIP [] // VR [] // WA [].

-' Notifica a jugador del juego cuándo hacer algo según w5/el UIP.

VIGILANTE de la EMOCIÓN A3-13: le dice cómo es unrelaxed usted está por cómo: el producto (bola, tapa, muñeca, moneda, etc) hace girar en envase, en la CRT. Puede hacer salir las palabras, sugerencias, lemas. Comprueba p cerca: u (usuario) que toca un cojín que mide a su temp; detección de la tensión en voz (el producto existe) siempre que hable (y por lo tanto funciona siempre que la máquina encendido). Prueba del humor (er). Mezcla con la idea del producto de la máquina de la terapia (certificada ante notario el 13 de diciembre de 91). Opción portable también, con todas las funciones incorporadas.

- Llano/tipo 'cuenta del humor/de la tensión del u puede ser demostrado en cualquier manera: nr, pantalla, images= educativo, artístico que cambia por el tipo humor.

. --el sistema analiza cómo u reacciona a su cuenta.

- funcionamiento anotado del jugador del juego de las medidas

Cambios en: (grado/color/tipo de) iluminación o sonido; synth; cómo obra recíprocamente el sistema w (con) u; cualquie otra función alterable, tal como ésos enumerados en: UIP-Adaptar, R, K, reaccionar...

MARCADOR DEL COMPORTAMIENTO =

- Determina los tipos y los grados del behavior= de la persona según lo que se programa el sistema al seek= y los analiza.

+ R132-1 comportamiento - analizador médico del síntoma: El sistema correlaciona a paciente del comportamiento con sus síntomas médicos. El gráfico del paciente para cambiar el estado emocional se empareja con los gráficos del síntoma del cuerpo, dando a investigadores análisis necesario adicional. La invención es la combinación del software de datos. El sistema asiste a siquiatras y a otros en correlacionar mental con síntomas físicos.

- patentabilidad: La conjetura de Steven es una faceta de esto pudo existir en mercado. La patentabilidad pudo cubrir esas otras áreas que no existían.

- Usos: estado mental que correlaciona w: dieta; ritmo cardíaco; actividad metabólica; genética; agentes contaminadores o venenos (internados en cuerpo); etc. Investigación general. Identificación de dolencias médicas por los comportamientos irregulares/cambiados.

- el sistema correlaciona los síntomas y las señales del cuerpo de usuario (eg. cardiógrafo) con el comportamiento del tema (w5 hacen). D: organismo - > sensores = C.

- "cuestionario" completado por el usuario = el uip-db= que es utilizado por los vagos. Los síntomas médicos son against= comparado este los vagos.

- OTD D: Este sistema de N (sistema) =

ACCESO; ANALIZADOR; ARTISTA; C; CARRO (tipo análisis); S; EDUC (aprender la medicina, el uso en puestos de interno médicos o las clases); M (la base de datos de los síntomas médicos que atan hasta las dolencias médicas posibles (enumeradas primero en orden de la dolencia mencionada de la probabilidad más grande es la diagnosis real); MIC (oye a partes del cuerpo); MULTIUSOS (recuerda los datos/el análisis/uip para diversos pacientes); NOTIFICADOR (cuando las dolencias serias son found= predicen las ocurrencias futuras); OSCILADOR; Banda (cómo analizar a paciente); Q (mq para mejorar "análisis"; el doctor hace preguntas, eg.: qué doctor debe hacer, prescribir, cómo curación, cómo mejorar/del sistema del uso analiza más lejos a paciente); R; CUENTA (síntomas médicos notados/que son estudiados); SENSOR; ANALIZADOR de SONIDOS (síntomas del cuerpo, eg.: toses, respirando, golpe de corazón, el otro funcionamiento oral); DISCURSO; ESTADO (dolencia (cambio)); TDS (w5 de cada ocurrencia médica); T; UIP (del comportamiento y dolencias que son analizados); ANALIZADOR VISUAL (analiza imágenes médicas); WA (caminata del `alrededor) (dispositivo portable de la supervisión de cuerpo (cualquie tipo según lo necesitado).

+ todos los tipos de equipamiento médico que pueden estudiar a paciente, después dar vuelta a resultados en señales numéricas y de interno crean los datos para emparejar con este sistema, R132-1.

- utiliza R132-1-5, un subconjunto

-

- Estrategia de búsqueda de la palmadita: (comportamiento o psycholog o psiquiátrico o personalit) y (el médico o scien o physiolog) y (software o computadora)

- Patentes de los E.E.U.U.:

--Sistema de 4751642 simulaciones interactivo de los deportes con la detección fisiológica y el condicionamiento psicologico. Substituir la manipulación sicofisiológica" w de la patente ": el comportamiento/el "humor" del usuario que predecía en "señaló" circunstancias.

--4852578, 4818234

--Sistema de gestión de la pérdida de peso 4951197 = "vagos": para las causas en desordenes de consumición/cambios en el comportamiento causado por el tipo dieta.

- el Info ganado está para: UIP-Info; entidades/jugadores más fuertes constructivos del juego; usuario rector mientras que los educa.

ANALIZADOR del CURSIVO A2-170: el interruptor estudia lo que escribe p sobre la exhibición especial ("S") o el papel (entonces leído vía lector óptico). Disponible en 28 idiomas. M busca los carácteres y sus desviaciones que puede identificar, más otras tendencias generales si los carácteres son o no son identificables. Encerrar la escritura preferred (el mejor es plumas) para la versión de papel. El fabricante programa la máquina para buscar los estilos clásicos aceptados comúnmente para sus implicaciones.

- u pidió escribir algo con la "inclinación " =pen qué is= "analizaba"

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

ESCALADOR del COMPORTAMIENTO A2-610: como el sistema que detecta si la persona está mintiendo por la tensión... en voz, detectar cómo:

a] sexual otra persona siente. Incluso intentarla en se para ver que trabaja. Saber si usted persigue otro por una fecha caliente.

b] confiable y o constante y u organizado y o confiado y o capacidad de seguir el plomo de o

De Op. Sys.: da la lectura de muchas otras características del comportamiento posibles vía el po, DD, CRT del usuario; cara del usuario de la entrada y po/show en la CRT qué mirarán como la fecha futura de los pp, o el de sus niños...

TD: JK (hasta ciencia han avanzado bastantes para validar resultados)

- Opción portable: Pequeño y portable - mantener bolso o bolsillo y mirar más adelante para determinar análisis, apenas giran el interruptor para escuchar adentro longitud de tiempo preprogramada. Y o uso guarda la mano en el interruptor en cuanto a cuando quieren a o no recibir la entrada para el análisis, eg.: determinado por la sincronización de declaraciones importantes, mientras que el hablar del menor de edad pudo ser menos importante para el análisis.

analizador del comportamiento 4A09: región de los jueces (del producto futuro) de altavoz, y quizá estatura social - basada todo en la opción de la palabra, el acento, el etc. Puede buscar todas las preguntas posibles al comportamiento y al tipo psicología de altavoz actual capaz de ser hecho por el oído humano (como adentro sobre la conversación de "T").

5A1080 alimento - analizador del cambio del comportamiento: observa cambios del comportamiento en los animales, insectos, bacterias, virus, gente - según los tipos alimentos, cuando está servido (y aún disponible), donde servido y servido bajo qué condiciones. Observa cambios en los gustos hechos a los alimentos estándar, eg.: más sal...

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

sonidos 5A1090 y música y palabras puestas en palabras y analizador de sonidos de la criatura: observa cambios en comportamiento según tal que es emitido por sí mismo, u observa qué sucede cuando los organismos realizan tales cambios entre sí mismos. Él también notas al volumen de sonido hecho.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

Lector de huella digital A1-290: Analiza el comportamiento de una persona por su huella digital. También empareja pares con las huellas digitales compatibles. Relacionado con los sistemas existentes de "C" basados en horóscopo, tipo de sangre.

- fósforo del dedo (ing): el servicio de la datación que emparejaba tipos del comportamiento se asoció a la impresión genética del dedo. Fósforo genético del dedo (ing)

EFECTO DEL EXTERNAL SOBRE COMPORTAMIENTO =

analizador del olor 5A1100: observa cambios en comportamiento sobre emisiones de cualquier olor (humo, flores, olores del sexo, etc) o de la materia que es estudiada.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

analizador de la vista 5A1110: qué hacen las criaturas ven y cómo ellos responde a las visiones de las exhibiciones, cuadros, otros animales (amistosos/antipático puesto en jaulas cerca de ellas.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

CÓMO LOS VAGOS AYUDAN AL USUARIO =

Software de la identificación de la actividad A1-320: dedos de los sentidos en el teclado y señales si usted no está escribiendo. Detecta cuando usted está careciendo en la creatividad, claridad, confianza por la manera de los ritmos del golpe de teclado. Mezcla con la máquina de la terapia, máquina del taro.

. - "Inclinación": controla las funciones del sistema. Si "inclinación" no usada (correctamente) lo nr (notificador) también.

Retroacción biológica de ++ R132-1-5 - analizador de la función del cuerpo: El sistema es un analizador del uno mismo, enseñando los usuarios a porqué son de actuación y de sensación de la manera que son. Versión sin hilos portable también.

. - El usuario puede mirar sus analizadores médicos y ver cómo son/realizaban (psicologicamente) a interno que el usuario se familiariza con mejor.

-

. Qué usuario aprende: W5 efectúa su comportamiento:

- aprenderlos cómo (intuitivo) al psych para arriba de la manera deseable.

- Mente/cuerpo = síntomas/señales ideales. Uso con el equipo que se divierte.

- Dieta: efecto sobre su ser humano: "humor": optimismo, depresión; comportamiento (determinado vía vagos); se divierte capacidad: coordinación del cuerpo, estilo de pensamiento; pensamiento: estudios, puntuaciones del test, memoria, creatividad; seguridad: reducción en error humano o control de calidad pobre (al trabajar con los productos químicos peligrosos u otros trabajos peligrosos); calidad de conseguir junto con la otra gente (vagos, "cuenta").

- Deportes: jugador de tenis que está ganando (las estadísticas demuestran en ese punto que son históricamente (uip) el 62% de ganar el juego/el sistema enteros) = debe tener golpe de corazón (dentro de parámetros del sistema) basado en sus latidos del corazón del uip en otras situaciones/veces, el 71% de tiempo. Si el usuario no está ganando, pero su golpe de corazón está en el patrón del golpe de corazón de este ganador, después las ocasiones de los aumentos que ganan del usuario por el 8% (puesto que el usuario tiene confianza/actitud/energía/sensación correctas). El sistema puede enseñar al jugador vía R132 y u otros sistemas del comportamiento del analizador para considerar su comportamiento analizado = las demostraciones en s/notificador = en usuario de la golondrina de mar consiguen mejores en controlarse (internally^: las psiques ellos mismos hasta aceleran/se relajan/hacia arriba o hacia abajo la creatividad/etc)

-

. - Misceláneo: Versión portable con la transmisión sin hilos. También puede desarrollar la base de datos del perfil físico del usuario.

- El uso del cardiógrafo es un ejemplo: nivel de entusiasmo/de actividad física = determinado por ~behavior de c (analizador)

analizador = notificador (R131/R131-10)

- este sistema usado como componente para los sistemas del "analizador del comportamiento"

- uip: determined/s para el usuario aplicable (humano/animal) (por especie/tarea/la situación/el ambiente) que qué golpe de corazón representa que modo del comportamiento (cómo el usuario siente/qué piensan) (con la ocasión señalada del por ciento de la validez)

-

- D: el analizador/el sensor=tr=c del comportamiento (analizador/mfh del comportamiento del analizador/uip/) = desarrolla uip (para el analizador del comportamiento) /notifier (R31, R131-10) /s.

sistema de +-attach al equipo de deportes: ruedas de ardilla, equipo del edificio del músculo, walkman impermeable para los nadadores (wa), podómetros, etc.

- utiliza R132-1.

. Analiza las entidades/el tipo acciones/comportamientos del juego del jugador para: qué están haciendo w5 y anotado por la calidad/la eficacia, etc.

EL `B.A. PREDICE =

- Analizando los diversos determinantes/causas para la personalidad o el moods= del usuario [actual/previsto] vía el ba= predecir puede estimar los probables panoramas futuros/cómo los sistemas se pueden adaptar mejor para el usuario/los sistemas/las funciones señalados.

Analizador Info del comportamiento general:

Detectores del comportamiento del teléfono: Utilizado por los centros de atención telefónicas del teléfono, e.g.: las oficinas de las demandas de seguro que silbarán como una bala señalaron declaraciones puestas en palabras de los llamadores; y en golondrina de mar han reducido fraude [por el 25%]. Los algoritmos pueden detectar: irritación, duplicidad, placer, despertar sexual. El almacén archivado y el fósforo de los expedientes afinados en datos por el tomador de la llamada, y pueden almacenar por tiempo largo [para la UIP-Entrada]. El sistema responde [la búsqueda del `y reacciona] a las palabras claves señaladas, después transfiere [a llamador de las rutas del `] al jefe/etc. Ver el compartimiento atado con alambre, el junio de 2005, página 44.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1.74-2.97 www.qpat:

Palabras claves quizá: retroacción biológica (análisis del ajuste del cursivo); comportamiento - la palabra del problema, trae para arriba eg.: comportamiento de productos químicos...

- Str: (comportamiento humano near/5) y (el estudio estudia el analyz)

--Patentes de los E.E.U.U.: 5227874 medidas de la eficacia de estímulos en la toma de decisión, eg.: anuncios en espectadores.

Los métodos incluyen "análisis" vía: uip; "analizador"; "acceso"; frecuencias de la voz del usuario, eg.: detectores de mentira de la voz. Sistemas más baratos pueden buscar simplemente los de alta frecuencia que representan la tensión.

+ VER: "Access'" = "analizador del comportamiento", eg.: es "comportamiento del grupo". Los "VAGOS" allí tienen más detalles que este archivo.

- "mic" - > "analizador" (el sistema analiza la voz de la persona) - > sistema responde según banda (control)/u del programa.

- D: Voz = "sonido analizador" ("mic" = sonido al convertidor de señal)/M = C (computadora del `) = función ()/oscilador del uso

Usos: #1: fósforos del oscilador del sistema (comunicador sano saliente del `)/del usuario del imitador la voz para solicitar la respuesta deseada (el informe de la emoción/de la sensación/hace que quieren actuar de cierta manera (productividad de la compra/del trabajo, modificación del comportamiento). Psicólogos establecidos según quienes el tipo de voz/de frecuencias sanas es el más conveniente alcanzar el efecto deseado: circunstancias (estado de ánimo del UIP/del u (en un rato particular)). TDS: la modulación sana del oscilador se pudo efectuar antes el día (U puede necesitar energizarse en la mañana temprana).

%#2 Info aprendido sobre U se alimenta en el UIP. Los datos existentes del UIP pueden ser: consideraba más o menos importante que el análisis del BVA (en aquel momento de los u que interconectan) según la banda. El sistema puede ajustar a los humores que fluctúan del u.

Las funciones +might del producto %#3 (levemente) se alteren según los u determinados (vía: Comportamiento de BVA/UIP).

- El este ser una nueva parte, referencias a esta parte no habrá utilizado esta abreviatura, aunque las descripciones habrán discutido el concepto de esta parte, que se puede mirar para arriba detalladamente adjunto.

- La calidad de sonido Del OSCILADOR (pudo ser) es así que excelente/similar en características vocales a u/listener que suena como la persona verdadera que habla al U. Los sonidos también tienen tal color, ellos: hacer que los oídos del u sienten como pueden visualizar el altavoz/la función (si hay o no es un S).

--El sistema "analiza" el tipo (sonido, del comportamiento) persona apuntada los archivos empareja mejor = entonces comunica w ellos para crear el impacto psicologico máximo (ventas, "humor") según lo determinado vía ""/K/banda del analizador. D: mic = bva/uip = c = oscilador.

- Detector de mentira C43: Juez vía la tensión de la voz de la persona (en el teléfono), si son honestos o no. (Útil para el UIP) (d) dibujo: C43=tel~c~remote

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- OTD D: Organismo que es estudiado (ser humano, animal, otro) = este ~ del sistema de N (sistema) (VAGOS) C =

TENER ACCESO (el sistema sobre el "acceso" supervisa el organismo (2E251)); ANALIZADOR; AP (% científico, % psicologico, % médico, % de negocio de los proyectos de investigación); CEREBRO; C (computadora del `); CÁMARA (monitor inteligente 2E251); CARRO (interruptor, DB, carro de diferenciación para el tipo organismo o ap); EDUC; GPS; K (teclado del `); M (DB, cerebro); MIC (analizador de sonidos); MES; RATÓN; MQ; MULTIUSOS (investigadores de diferenciación (u), organismos que son estudiados); NR (w5 requirió parámetros tiene/haber sido encontrado (vía "cuenta" = "analizador")); OSCILADOR; banda (programa); Picosegundo (sistema de colocación del `); Q; R (`teledirigido); CUENTA; SENSOR (movimiento); ANALIZADOR DE SONIDOS; ANALIZADOR VISUAL SANO; DISCURSO; ESTADO; SYNTH ("analiza" para los sonidos organismos de esa mejores influencia (por pr/u/k)); TDS; T; u (usuario) (investigador/organismo que es estudiado); UIP (uip del organismo/u (estudios/objetividad de las pruebas de investigadores)); UQ; ANALIZADOR VISUAL; VR; WA (caminata del `alrededor) (uso al aire libre).

. str: (psycholog del comportamiento, sociolog, movimiento [movimientos, mudanza, movimiento]) y (- animal, ser humano, persona, gente) y (estudio, estudios, analyz, monitores, supervisando)

Patentes de los E.E.U.U.: Monitor del tráfico del vídeo 5465115 para los establecimientos al por menor y similares; Sistema electrónico de la responsabilidad 5433612 - "pistas" u (usuario) y equipo = ""/"" de la picosegundo-zona/"de la pista uip" (desarrolla uip-DB); 5428392; 5426425 inteligente localizador sistema = pista/vago ()/picosegundo del analizador del comportamiento del `; Método y sistema = pista/vagos/picosegundo de detección 5424745; 5386990; de + sistema de vigilancia del monitor/5245314 localizaciones de la actividad 5250941 clientes = picosegundo/picosegundo-zona/pista/vagos.

. Mejora en patente de los E.E.U.U.:

5377258 método y aparato para un sistema de dirección del comportamiento automatizado e interactivo: u recibe los mensajes de motivación (oscilador) para mejorar patrones del comportamiento; incluye DB del cliente (uip); tensión "analizador" de la voz; respuesta del cliente requerida]

OTD (otros detalles técnicos) leído más adelante. Dibujo: u (usuario) = este ~ del sistema de N (sistema) (VAGOS/5377258) C =

TENER ACCESO AL ANALIZADOR // EDIT de // (el sistema corrige hacia fuera menos entrada necesaria de: u, uip-DB) // NR (penaliza u cuando u actúa mal (comportamiento indeseable) = descarga eléctrica al uso del sistema N del cuerpo/de la "hospitalidad" es limitado (véase KN)) Picosegundo-Zona de la banda // de // del OSCILADOR de // (penaliza vía sonidos = synth ásperos) (u entrenó a donde no está necesaria su caja fuerte/u para el trabajo, eg.: hogar, sitio del café, sitio de reconstrucción, sitio de TV) // Q (construir uip-DB = necesitado por el sistema entrenar u) a la PISTA // UIP de // TDS (w5 u comportado - > acumula UIP-DB) // del ESTADO de // de la CUENTA de // R // (como de bien comportamiento del u está alterando) (del comportamiento del u).

-8/96

- Ejemplo de la fuente que "analiza" comportamiento: ¿"Quién usted le piensa es? ", un CD-ROM publicó por Harper Collins interactivo. También leer su versión y bibliografía del libro, y hablar con los reveladores de este y los libros relacionados (según lo encontrado en la sección del tema de la Biblioteca del Congreso o de la impresión de Bowker los "libros en") para el tipo formatos dependieron de cada uso de KN.

- BVA es un subconjunto de ambos vagos (analizador del comportamiento del ') y de "analizador de sonidos".

. "Acceso = VAGOS": identifica no sólo piratas informáticos pero (semejantemente) también cualquier tipo "señalado" de:

- empleados incompetentes/mentalmente - gente/terroristas enfermos/accessors legítimos que (pudo ser el preguntarse demasiado curioso más allá de sus "localizaciones "señaladas"" en el sistema)/regulador del acceso ("pistas" W5 (qué, donde, cuando, porqué y cómo) que monitors= castiga), puesto que no puede ser confiado en siempre tampoco.

- Determina tal tipo accessors basados en su: el funcionamiento o el trabajo resulta "cuenta"; errores que él hace; comportamiento sicopático; búsquedas de la palabra clave.

- "Alarma de la mañana" (y su "motivador del trabajo"): el sistema despierta y mejora el "humor despierto" del usuario según su comportamiento.

Ver el amaestrador de la lengua 7J02 y el analizador de la voz: Enseña a principiantes de lengua a pronunciar nuevas palabras. Predice cómo el usuario [incorrectamente] habla, y las guías por consiguiente. Está en propio archivo.

Final de este VAGOS - general

Archivo: Introducción/VAGOS de las características

ANALIZADOR DEL COMPORTAMIENTO - SECCIÓN MISCELÁNEA

La REACCIÓN de los VAGOS, MARCADOR de los VAGOS, EFECTO del external SOBRE el COMPORTAMIENTO, USUARIO de las AYUDAS, UIP-Adapta

ANALIZADOR DEL RIESGO DE LOS VAGOS: determina la ocasión prevista del occurrence= señalado vía cuenta.

. Ejemplos se anota de qué:

- "Tener acceso" al analizador del comportamiento: determina ocasiones que el usuario es un usuario ilegítimo.
- Capacidad de las habilidades del usuario anotada.
- Ocasión del usuario de hacer un error, o de la ejecución hasta la cuenta señalada.

CÓMO LAS CUENTAS DE USUARIOS SE HACEN. Ver: uip; uip-DB; analizador; tuvieron acceso a vagos; limadura del usuario (y sus jefes y compañeros de trabajo y sistemas de seguimiento) hacia fuera o entrando en las formas/los cuestionarios interactivos automatizados que desarrollan un perfil de la personalidad del usuario;

- anotan al usuario más allá del funcionamiento (uip-DB) (como en un gráfico)
- PONER LA NOTA DE LA CONEXIÓN: en los vagos de los accesos (analizador del comportamiento del ') - para arriba, abajo a la reacción.
- el 'analizador calcula la reacción del usuario en cada scenario= típico del caso vía funcionar con el tipo posiblemente existente softwares del panorama del negocio, usada posiblemente por los hombres de negocios que intentan inspirarse estrategias empresariales y o aprender cómo el negocio funciona y los efectos de la toma de decisión del negocio...

ANALIZADOR DEL COMPORTAMIENTO DEL INSECTO: Supervisar electrónicamente el comportamiento del insecto para las ventajas de la investigación. ¿Qué comportamientos se pudieron supervisar, y cómo? Métodos posibles: El analizador visual sigue patrones del movimiento y los envía en informes digitales. Puede utilizar otros tipos de sensores creativos.

COMPORTAMIENTOS ANALIZADOS: La personalidad/los elementos sicosociológicos, historias, riesgos analizados. La persona:

- creatividad [ver el artículo sobre el aumento de creatividad]
- valor a la compañía: habilidades; confiabilidad; velocidad del trabajo; su historia del trabajo
- habilidades sociales: capacidad para que ellas consigan junto con amigos; pares; compañeros de trabajo; profesores...
- perfil psicologico
- perfil sociológico

Archivo: Introducción/balanceador de las características

BALANCEADOR

sistema de equilibrio del altavoz automático 8B110: Los volúmenes de cada altavoz ajustan según donde usted está. Ajusta mientras que usted se mueve.

EQUILIBRIO PERSONALIZADO DEL ALTAVOZ: El sistema de sonido compensa automáticamente la localización de la persona en sitio. Cuando están más cercano a un altavoz, el altavoz más lejano consigue más ruidosamente. Para el hogar, el coche, los altavoces del etc.

- Multiusos: sentidos donde está y ajusta el centro "hecho un promedio" de toda la gente el balance del altavoz por consiguiente

- el sistema identifica la localización de la gente vía: indicar el "sensor", y o el dispositivo que dispara del laser, el etc.

- identificar la localización de la gente también cerca: los transmisores portables que ella está usando o que está llevando; puede ser atado a un dispositivo de control de "R" que también tenga muchas otras funciones; sensores en asientos, eg.: en automóviles

- Opción de lujo adicional: Si hay más de una las personas en el cuarto, y una tienen gusto de la alta base mientras que la otra la prefiere punto bajo; sistema pueden hacer una cierta remuneración ajustando según el lugar de cada persona en su sitio. Cada uno usa un diverso dispositivo que transmite; o sitio del programa de modo que permanezca así permanentemente. La opción de este funcionamiento sobre una base del transmisor no se requiere.

OTD:

Control de "R"; "S"; "C"; P.M.; pp; Reino Unido; juguete; todos; "mic"; synth; portable; "M"; punto de ebullición; oscilador; vc; cuenta.

Vueltas de la estereofonia R198 para hacer frente al transmisor ALEJADO del control del oyente ("R"). [eg.: dar N# para nuestro balanceador). 22 de febrero de 93 NK

Seguidor y balanceador sanos: Mientras que camina la persona, los altavoces cerca de ellos se activan.

- Ap: - juegos; - conseguir la información mientras que camina abajo de vestíbulos; - los altavoces pueden ser portables, así como los micrófonos

- pares como sistema de radiobúsqueda en edificios grandes;

- la posición del grito de la televisión ajusta a la mejor posición por donde están las personas.

=

- el sistema identifica a persona, localización del animal vía los sensores del movimiento; entonces puede anunciar declaraciones vía altavoces lo más cerca posible su localización

- el mismo producto se pudo también utilizar para difundir vía los altavoces según el control central del producto (no basado en la colocación de seres humanos
- relacionado con el producto 1C-291
O-Caminar alrededor:
+-According a la localización del usuario, los altavoces balancean sus sonidos por consiguiente.
- transmisor del usuario (picosegundo); o el detector de movimiento de los sistemas determina el lugar de personas y decide a qué altavoces necesitan más o menos sonido.
--si hay más de una personas, entonces los balances de sistema suenan según el centro áspero de la gente múltiple
- ap: televisión, radio, cualquie otra música o dispositivo de generación sano
=
Lo que sigue de O-The era el número 1C-050 del producto: Caminata de los sonidos alrededor:
continuar oyendo el sonido de lo que usted está escuchando sin importar donde usted entra en la casa o la otra premisa.
- cuando en el teléfono del altavoz, usted puede continuar hablando a la persona a través de su sitio/premisa puesto que el área cubierta tiene el micrófono y altavoces múltiples
- cuando la observación de la televisión o el escuchar el sistema de sonido, usted puede oír casi igualmente también sin importar donde usted va. Incluso diversas pantallas de la TV pueden ir automáticamente en cuando usted entra en una diversa localización. (La gente ecológico importada no quiere las TV múltiples encendido en la misma hora).
- la persona que da une vuelta tiene transmisor el identificar de su localización y o el transmitir de su voz saliente vía su micrófono.
- no relacionado con el producto ningul□n 1C-110
- OTD: teledirigido del balanceador; pp; P.M.; fecha (a veces el balanceador se programa para eliminar donde está la gente y tiene un equilibrio del sistema que sea necesario); el interactive%; básico; vc; el score%; md; cp; mq; acceso; UIP; palmada; distancer.
- BALANCE: TENER ACCESO (trabajos del sistema solamente para cierto u (usuario) (quién tienen acceso))/C (computadora del `)/CARRO (interruptor para el balanceador que controla)/PALMADA (control)/DISTANCER/K/LOCALIZADOR/P.M./MQ/MULTIUSOS (cada persona (u) tiene diversos ajustes preferred para el balance y otros ajustes (de la estereofonia))/NOTIFICADOR/R (`teledirigido)/SENSOR (localización del u)/DISCURSO/SP teléfono (los altavoces para T (teléfono del `) son equilibrados)/ESTEREOFONIA ()/SYNTH del balance (según la localización del u en área, los sonidos se sintetizan diferentemente (compensar) (para el ruido de la calle, estructura acústica del área, otra necesidad como)/UIP de los pp (el sistema determina w5 balance trabaja)/UQ/VISUAL ANALIZADOR (determina la localización de uno o más)/VR/W5 (pp de los usuarios cómo trabajos del balance) = BALANCE.
Para dos o más personas, sistema utiliza el punto medio en el centro (aproximado). "Balanceador también titulado". Ver 1C-290.

--La estereofonia C93 da vuelta para hacer frente al transmisor alejado del control del oyente ("R"). 22 de febrero de 93. D: telecontrol ("R") = C93 (oscilador/altavoces)

- D: 1 telecontrol ("R") = 2 tr/3 "sensor" = 4 convertidor de señal de "C" = 5 = amplificador 6 = 7 speakers/8 display/9 la otra función

- OTD: modo 4 de balance demostrado en la exhibición ("S"); tipo de 4 controles del carro (cartucho del software) de balance; entretener; 4 Reino Unido; 4 pp y equilibrios de los controles de la P.M.; 4 multiusos (cada usuario tiene diverso ajuste para cómo quisieran que el equilibrio trabajara para ellos, eg.: las llaves del usuario en el código o cierto botón que significa el programa son funcionar según sus pp previamente incorporados); discurso 7 8 9; 3 personas de los sentidos vía: los paneles piezosensibles en las sillas, sensores del calor; para su telecontrol de uno o más usuario ("R") señala su localización, puesto que el "sensor" juzga la distancia y la localización del alejado ("R") (vía cambios en longitud de onda de la luz/de la radiofrecuencia, GPS); 1 puede también controlar manualmente qué altavoces son más ruidosos vía los botones (llaves de flecha: < o > el no ir para arriba, abajo /sideways). Telecontrol" de los usuarios" de los usuarios "localización también identificable por ": el usuario puede función deseada de "Reino Unido"/cómo 7 8 9 se adaptan al usuario. 8: El grito de "C" o de TV/Cable ajusta/se pesca con caña, para dar a usuario una mejor visión. 9: anillos de tr/remote del usuario más cercano del teléfono.

- acordando a la localización del paladio (GPS), oscilador (comunicador sano saliente del `) balancear automáticamente por consiguiente. Fijar manualmente el equilibrio para dos o más altavoces en uno o más cuartos

- incluye las funciones sanas encontradas en realidad virtual (vr). Otros ejemplos: pues el oyente cambia la distancia del oscilador de los altavoces se pudo modular para representar la griterío (con hacer señas a ese oyente volverse más cerca para más /whispering "interactivo".

- Control de K del r cómo los altavoces son equilibrados, eg.: el desplazamiento de la perilla empuja a la izquierda o a la derecha/las flechas (2 a 4 (entrando en las 4 direcciones: Altavoces del control de N (invención) S W E)) (de manera similar como en la mayoría de las estereofonias). Complementa otras maneras descritas de controlar el balanceador. D: K (teclado del `) (botones (de la flecha)/tr perilla del desplazamiento = r = (transmite) = C (computadora) del `(fuente sana (registrador del jugador) = oscilador (altavoces (2 o más))) Los E.E.U.U. patentan = balanceador

- str: balanc, audi, altavoces.

Patentes de ++ los E.E.U.U.: 5287102 "siempre que el indicador esté situado entre el el extremo izquierdo y derecho la mayoría de los iconos, el volumen equilibrio substancialmente igualmente entre los dos altavoces" I.B.M. = "balanceador"

- ver propio uso de la palmadita de KN.

OTROS ELEMENTOS AJUSTARON SEGÚN LOCATION^ DE LA PERSONA: Ángulo del s, el soplar del viento de HVAC [acondicionador de aire de la ventilación de la calefacción], iluminación (para reducir fulgor permitiendo que el usuario lea "S" comfortablemente.

. - Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- No. de la patente de los E.E.U.U.: 3.497, 622 balancearon teledirigido, el an o 80. Esto es muy similar a la sección principal de esta partición del "balanceador".

. - "Inclinación": controla las funciones del sistema, eg.: el extremo de la vuelta del palillo a la izquierda al grado el altavoz izquierdo es aumentar la disminución/altera (vía synth) sus (señalado porción de) frecuencias sanas.

EXTREMO DE ESTA SECCIÓN DEL BALANCE.

Archivo: Introducción de las características/básico

BASIC

LEER ESTO MÁS ADELANTE

Aplica opcionalmente [todos] descripciones centrales electrónicas de nuestras funciones enumeradas en la sección de las funciones, y bajo números de la invención, más sus acoplamientos.

OTD: #1+: cada producto de hardware electrónico tiene una "C" (computadora) en su diagrama. Esta "C" se etiqueta "C1" dentro de esta partición "básica" #2: las idiomas para el programa informático, etiquetas del botón, imprimieron instrucciones: Inglés, japonés, ruso, alemán, español, francés, italiano, chino de mandarín. (Conecta con C1: #2=C1). #3: Fácil y rentable reparar. #4: Automáticamente interruptores a la moneda eléctrica aplicable: 100/110, o 220 voltios. (#4=C1). #5: Diseño duradero: una garantía del año; diseñó tomar choque (puede ser caído 8 cm al piso duro sin daño); prueba del semi-agua; una versión del producto funciona en temperaturas entre -10 C a +45 C. #6: Emite un sonido breve y agudo un sonido de uno o más sonidos sobre la activación o el torneado de características cruciales, eg.: interruptor con./desc. Diversas señales de la señal sonora cuando: todos los sistemas están en puesta en marcha, cuando el usuario gira el sistema, el sonido para cada uno llave separada, el dibujo del etc. (d): Estado del sistema = del tr (transmite) = oscilador. (#6=C1). #7: Tiene el otro hardware y funciones y botones del software comunes a los productos relacionados. (#7=C1). #8: ¡Para el consumidor y o anuncio publicitario y o usos científicos pacíficos y amistosos solamente! Es bueno para la humanidad. Ecológico amistoso. #9: Memoriza todos las señales programadas previamente incorporadas después de ser apagado. Por ejemplo: ajustes anteriores para: control de volumen; manera de la cual la máquina debe responder o funcionar en diversas situaciones. El usuario reprograma fácilmente (los "pp") para hacer alteraciones. (#9=C1). La vieja parte usada antes de 1994 para esto era "yo". #10: El diseño de producto, y las funciones incluidas de la "P.M." y de los "pp", se diseñan con el intento esperanzadamente para ser interesantes, y como fácil aprender y utilizar. #10=C1. #11: Intentos de la especificación para mantener bajos costes de fabricación. #12: Uno o más variaciones tienen diseño de producto miniaturizado liso. #13: El malfuncionamiento Alerter señala W5 (especialmente: porqué) ha ocurrido una probable falta

técnica. Sensor = analizador = oscilador/exhibición/impresora. (#13=C1). 14#: La cubierta y los colores del producto externo diseñaron maximizar las compras potenciales basadas en la psicología del comprador. 15#: Cumple los otros muchos requisitos del sentido común de fabricantes y de usuarios occidentales. 16#: Opción: Con pilas ("BP"). (BP=C1). Recarga automáticamente las baterías (situadas en la parte inferior trasera del dispositivo) cuando está tapado en el zócalo de pared eléctrico. Automáticamente sistema de energías si la otra fuente de energía eléctrica falla. La exhibición se puede hacer para demostrar la cantidad de energía en batería; advierte 30 minutos o más antes de que la batería salga vía sonido o luz o aviso en la exhibición ("S") o %notifier. funciones estándar de %uses para la energía del ahorro (el dispositivo parcialmente o cerró completamente después de 10 o más minutos de no utilización, el diseño de producto requiere menos energía para la mayoría de las funciones, el sistema puede ahorrar energía de la misma manera si está extrayendo de estándar o de la corriente eléctrica de la batería). baterías recargables accionadas movimiento 4E010.

. --Opción accionada solar: el producto está conectado con los paneles solares, o tiene los paneles situados en producto donde está más probable recibir la exposición máxima del sol; los paneles solares portables; batería como respaldo (opciones recargables y no recargables de la batería). Los paneles solares/enchufe = cargador/analizador/exhibición = batería eléctricos.

17#: diseñó ser menos obstructor en interferencia electrónica posible con otros productos, por ejemplo: seguridad del transporte aéreo, computadoras, otros productos sin hilos, etc. #18: Sistema impermeable (los botones guardan hacia fuera el agua usando diafragmas especiales). #19: Diseñó tomar desgaste normal y el rasgón (semi-dar una sacudida eléctrica la prueba). #20: Las transmisiones ("tr") vía uno o más unidades en el sistema ("telecontrol") pueden estar vía: radio/alambre. #21: El producto se puede encajonar en: cc/cm/cp/cr. #22: El estándar, y modelos exclusivos más costosos del sistema estándar pueden ser desarrollados. #23 "facturación". #24: software de la reparación +R28-1 que analiza el sistema: Historia del producto de los estudios.

EXTREMO DE ESTA SECCIÓN DEL BASIC

Archivo: Introducción/facturación de las características

FACTURACIÓN

Esta función creativo determina las maneras de las cuales cargar honorarios de usuarios:

. Los honorarios se pueden cargar digital, y o vienen bajo la forma de impuestos sobre patente pagados como derechos. Las tarifas de derechos pueden ser porcentajes planos de la tasación (al por mayor) (con o sin un mínimo mensual).

. Usos - adicionales: Comportamiento = UIP del u del estudio; "pista".

. sistemas de facturación de 3E190 GPS: Ver la subdivisión de la "pista" de la parte del "picosegundo".

. Modificado para requisitos particulares facturación basada encendido: cuenta para el tipo función/servicio hecho [cuentas más altas señalan una función más costosa]; volumen o descuentos promocionales; sobrecargas [basadas en el perfil de usuario (vagos del `)]; moneda del país; delincuencia [penas]; recargos tributarios; servicios/funciones ofrecidas pero no utilizadas [según lo determinado por el analizador/el perseguidor].

LICENCIAS DE EXLUSIVE: El acceso puede restringir uso, o lejos de usuarios señalados y o de mercados (los japoneses - región surcoreana). Las cuentas pagaron por el concesionario [primario] (usuario autorizado).

METRO del DINERO 6B220 - GENERADOR de los DERECHOS:

El dispositivo demuestra a través de ventana la cantidad y la tarifa en las cuales el metro interno está chascando lejos, pagando el metro [del estacionamiento]. Ahorra de tener que recoger monedas, tienen monedas, ocupándose de los metros quebrados, funcionando y de nuevo al coche. Pagar solamente las características/los servicios/qué de la invención usted utiliza, alguna gente pudo sobre estancia porque están sobre pagado. De punto de vista económico, la gente pudo conseguir su negocio hecho era más rápidamente ella que no planeaba pasar un sistema cantidad de tiempo predeterminada que hacía algo puesto que "está haciendo tictac el reloj".

- las ciudades pudieron tener tarifas más bajas por el minuto para parkers más a corto plazo; limitar el tiempo total del estacionamiento (demostrado en la exhibición ("S"), y tal la exhibición ("S") se apagará solamente después de que el conductor haya conducido el número requerido de metros, no reinsertando más dinero en el metro)
- las muestras pueden indicar en qué conductor de la tarifa debe fijar su metro
- para la gente que viaja a las ciudades fuera de su estado, el estado de origen (o dondequiera que se coloque el metro) consigue el dinero, con todo quizás un número de gente igual está viajando de su estado tan todos los equilibrios hacia fuera.
- si el producto es bastante barato, todos los dueños de coche pueden conseguir tales dispositivos cuando consiguen su cheque de seguridad del coche según los requisitos de ley
- ahorra el espacio en las aceras, puede quitar los parquímetros
- el dispositivo puede destellar, etc si el coche se parquea ilegal, eg.: en un cierto plazo el límite, funcionó del dinero
- códigos de color: dependiendo del tipo lugar y restricciones de estacionamiento según lo programado por el conductor, los colores aparecen para la identificación fácil de los inspectores de policía del parquímetro
- los conductores con los boletos de tráfico sin pagar no pueden poner más dinero en sus parquímetros. Pagar metros en las gasolineras, etc. [el dinero deducido automáticamente de la cuenta corriente de la persona]
- o-considerar se deduce automáticamente para las violaciones de tráfico: el dispositivo del coche transmite el mensaje cifrado del número de licencia y la provincia de la edición, la policía ase el Info en los coches que apresuran, o los receptores se pudieron hacer por las computadoras que trabajaban sin un ser humano; violaciones del estacionamiento: limpiar simplemente la llave en el su del sistema el otro número carnet de conducir o que crea automáticamente una deducción de la cuenta

- los dueños de coche consiguen declaraciones periódicas que explican el tipo deducciones hechas
- el dueño de coche pudo tener combinación especial vía la cual activar ciertas características, eg.: el estacionamiento, el etc. reduce la capacidad para el uso desautorizado.
- "Perseguidor".

CUENTA - SECCIÓN POSTERIOR LEÍDA QUIZÁ =

. Funciones/servicios/información utilizada:

- Dibujo de OTD (d): U = esta subparte del sistema de N (sistema) (cuál es se puede hacer disponible; paga para éstos) ~ C (computadora del `) =

ACCESO; ANALIZADOR (tener propósitos deseados alcanzados del "cerebro", o "analizar" el tema señalado; como contratar a un pensador automatizado); carro (cartucho del software); EDIT; EDUC; MULTIUSOS (permitiendo el múltiplo u); nr (notificador) (paga para este servicio); OSCILADOR; Banda (paga para que capacidad reprograme); Picosegundo-Zona; Q; R; RANURADOR; CUENTA; SENSOR; ANALIZADOR DE SONIDOS; ESTADO; TDS; T; INCLINACIÓN; PISTA; U; UIP; ANALIZADOR VISUAL; VR; WA.

. Limitando el "acceso": de acuerdo con la cantidad u (usuario) pueden/pueden/hicieron/las promesas de pagar.

- OTD D: U = este sistema de N (llano del "acceso" permitido = determinado vía; tipo/llano del ~ C (computadora del uso hasta la fecha) del `) =

. Misceláneo: cuentas en cualesquiera (moneda importante/fuerte). Cheques de crédito usables. Tarjetas de crédito y otros instrumentos financieros, eg.: las cuentas corrientes del banco se pueden verificar antes de servicio/de crédito de ofrecimiento. El buen crédito de U w (con) puede todavía ser bloqueado si/cuando son (percibido = vía: uip-DB, + " acceso ", bandidos del personal de seguridad), piratas informáticos, u otros

elementos indeseables (de la sociedad) (que necesita ser restringido (en.beneficio de sociedad/de economía (del local)).

- GEN D: u (~ C (computadora) del '(carro)/sistema del usuario (que intenta ganar ""/del acceso para utilizar), acceso) = M = se desea qué (por U): función/servicio/DB (información).

. - Ver el artículo: ¿"Copyright mal? Una lucha elabora cerveza sobre a quién consigue poseen el futuro", noticias de los E.E.U.U. y informe del mundo", de sept. el 18 de 1995, página 99.

- patentar la estrategia de búsqueda para esta parte general: (cuenta o facturación o cuentas o (tarjeta del ajuste del crédito) y (información o (servicio electrónico near5) o Internet o (carretera del ajuste de la información) o tela)

- los programas de la facturación y los horario de honorario ofrecieron a u basado en la historia anterior del u (qué servicios/funciones fueron utilizadas (w5); todos los clientes pueden calificar para cualquier tarifa de facturación aplicable, pero ésos ofrecidos pueden ser diferentes, puesto que el vendedor maximizará ocasiones probables de su beneficio/rédito cada vez mayores.

. Averías y cómo está superado - adicional:

- Problemas: "acceso ilegítimo", fraude del crédito, inhabilidad de pagar. Soluciones: "pista", el grado de solvencia divulga convertido/pedido, uip para apuntar fabricantes probables del problema.

- Costo excesivo: descuentos dados a u envejecido caritativo y educativo y más joven (usuario) (servicios limitados de w para tales audiencias apuntadas, y tiempo limitado).

. Usuarios de carga que utilizan la información/las funciones/servicios (EL). Limitando el "acceso": de acuerdo con la cantidad u pueden/pueden/hicieron/las promesas de pagar. Límites: Funciones/servicios/información utilizada.

- R127 [boleto de tren de viajero de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en puerta del boleto. JR (ferrocarril de Japón)]. También copiado al "acceso", "picosegundo", "cuenta", "pista".

FINAL DE LA FACTURACIÓN' S ESTA SECCIÓN

Archivo: Introducción/cerebro de las características

CEREBRO (inteligencia artificial)

Esta más vieja función ahora se cambia sobre todo a: Computadora, analizador, coordinador, funciones del etc

Inteligencia artificial - el software que intenta emular a un cerebro de ser humano funciona como mejor es posible, incluyendo inventores, y gente brillante y/o creativa que investigamos en las últimas décadas en todo el mundo.

(C, interruptor, analizador, UIP, acceso) = cualquiera de la sección del cerebro en este archivo:
Sinónimo con la pieza de la "computadora"; similar a "Peter".
El sistema intenta pensar como un cerebro humano (donde (w5) factible), intentos del sistema a saber/aprende (memoria, analizador) sus limitaciones. Utiliza el mejor estado plus ultra en el campo. Lógica confusa.

DIAGRAMA #1: 1 Reino Unido = 2 c = 3 tr (transmite) = función 4 M/5. D1 leído más adelante: La explicación para piezas de los diagramas anteriores las' se basa en el número en el diagrama. Las comas abajo no se utilizan generalmente para separar los números de parte, eg.: "25" es iguales que "2, 5"
25: el acceso/el analizador/uip se puede cambiar vía pp, P.M., carro, u con más arriba (acceso predominante/analizador/uip, eg.: supervisor, sistema sí mismo de C (computadora del `)); carácter; 24 tds (matriz) de la fecha del tiempo del `(cuentas w5: cuando, cómo, qué, %why, que ganó "acceso" en sistema - [puede también ser utilizado para el contenido uip [base de datos], 4E020 y el verificador de la fecha]; 25 "S"; el distancer del 23% activa/desactiva la cerradura; contenido C", 4E020 de 245 "y verificador de la fecha, monitor inteligente 2E251; el 245% interactivo (activa/desactiva el acceso/el analizador/uip, 2E251).
13: las señales para la activación/la desactivación de Analyzer/UIP/Access se pueden recibir y o activar vía: micrófono ("mic") (las señales de sonido activan/desactivan access/2E251); teléfono ("T"); MES; tr; %fs (imagen correcta eg.: firma); alejado ("R").
2: inclinación (2E251 activado por el movimiento de la n); distancer (eg.: chapaleta); P.M. 245; 24 mq (antes de la activación/de la desactivación; para la mejora de la base de datos del uip, Analyzer/UIP/access); 24 multiusos (Analyzer/UIP/access; el individuo requiere para poseer la contraseña o el otro activador/deactivator para acceder); notificador 245 (quién, qué, cuando, está accedido %where, porqué, y o está utilizando el sistema, y o Analyzer/UIP/osc); oscilador 25 (si el Analyzer/UIP/password o el otro activador/deactivator efectuaron la función deseada, eg.: accedido); 24 uip (Analyzer/UIP/access dibuja en la base de datos del UIP al mq antes del acceso de usuario de Analyzer/UIP/allowing al usuario; 24 preguntas para Analyzer/UIP/access - cambiar según uip del usuario (mq un usuario de la acción hecho en sistema en una de actividades anteriores [importantes]); 24 pp; 24%score (2E251).
2 la necesidad para cualquier característica de Analyzer/UIP/access pudieron de vez en cuando ser triviales, pero pueden en la ayuda mínima en la comercialización, y las ayudas organizan diferencias entre multiusos; uip. 24tds del usuario más allá del acceso se utiliza desarrolla/altera Analyzer/UIP/access. Uso excesivo o escaso (según lo determinado cerca: Analyzer/UIP/Access) puede excluir/límite u (usuario) de alguno/de todas las funciones, accionar el "notificador", e informar al supervisor del usuario vía el teléfono ("T"), MES, email; ayudas en la facturación u; nr (notificador) enviado (al supervisor, a la seguridad) para la cantidad inusual/tipo actividad.
24 el tipo de uq puede por lo tanto (según uip del sistema, P.M., pp) afectar/control Analyzer/UIP/password/manner necesario para activar/desactiva; altavoz 5.

- incluye (c) los sistemas sabidos que "analizar" /UIP/restrict "acceso" de la gente/de otros sistemas: utilizar, trabajar el EL particular N. de w (con).

El explorador del canal -9G220 salta las estaciones que tienen anuncios publicitarios:

la computadora %-o-C112 predice error humano. Entrada UIP (condiciones de trabajo de la persona). El sistema predice errores que son probables hacer. El 30 de sept. 92 yarda.

- utiliza lógica confusa

- El sistema analiza las acciones del u - > base de datos (comportamiento). Eg., computación ubicua: u (usuario) lleva (minúsculo) "c" en que comunicar con la otra "c" encajada: aplicaciones, t, coches, paredes, KN. Eg.: Lengüeta de Parc de Xerox, y otros productos mencionados en "ciencia popular" el febrero de 95 de p.47.

el sistema 2D-021 reacciona a los productos externos según el "analizador" /uip/ "acceso" /w5:

Eg.: Entrante-Llamar el identificador - cribador/identificador externo del elemento. Las llamadas de números deseados del teléfono tienen un diverso anillo. El llamador sabe por este medio si coger la llamada o no. - (Señalando diverso tipo conexiones/llamadas (entrantes) relacionadas con otras de nuestras ideas?): el sistema (sistema) responde dependiendo de cuál quiere el otro producto de N/sys/existing "obra recíprocamente diferentemente" con él.

--el sistema sabe identidad de la otra parte/sistema vía su: ""/código/teléfono del acceso #/uip (características del comportamiento de N, o U: cómo se mueve/las funciones/responde (estimular de "C central" o de "M")/analizador visual/analizador de sonidos.

- D: Producto central/sistema = C = sensor/pieza del sistema de la identificación del analizador/de llamador del analizador/uip = tr/rc = producto externo/sistema.

- OTD: NOTIFICADOR (cuando el contacto deseado se ha hecho con la parte o el organismo); Picosegundo (la localización del producto externo es un factor de determinación en decidir a si se va cualquiera/el tipo conexión/contacto a ser hecha); R; RANURADOR (producto externo de las rutas por su tipo naturaleza); S (estado de las demostraciones).

- UIP=Analyzer: Un sensor que conecta con u (usuario) (cuerpo humano, eg.: abrigo del dedo; animal) para leer las señales electromágneticas generadas por la piel. El software propietario interpreta esas señales y las traduce a acciones. Siendo investigado por la compañía: Other 90% Technologies Inc., Sausalito - ver Wall St. Journal 1995 (quizá artículos de 6.95) titulados: Juegos de mente: Pronto usted zapping a chicos malos sin la elevación de un dedo. El abrigo del dedo venderá para $100-$200.

OTD D: Este secundario-n ()/C del monitor =

Encargado de registro de -3E020 GPS: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

Correlador y regulador de la circunstancia de -3E151 GPS: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

La grabación -5E040 incitó sobre la presencia de ciertos sonidos: cuando el objeto entra/fuera de gama/deseó uip = monitor (comienza) "análisis".

% consideran el verificador del contenido 4E020 y de la fecha: Secundario-n de "cerebro".

% de 9G220 del EXPLORADOR del CANAL SALTA el INFO PARTICULAR: Secundario-n

- Este secundario-n principal está para los anuncios de televisión que saltan.

- La difusión de códigos a partir de la 3ro fuente de la compañía, difunde continuamente las señales que dirigen el sistema de la hospitalidad para evitar los canales que están en modo comercial a cualquier momento. Carga $20.00/mo.

- tipo datos/demostraciones de los códigos de sistema cerca: estado/"analizador" /uip/ "acceso". En golondrina de mar, el sistema (sistema) sabe (mejor) qué (w5) para centrarse en/"analizar".

- OTD: D (este N) =

TENER ACCESO (a la organización de la supervisión/u (usuario)/evita que no los suscriptores utilicen servicio); ANALIZADOR (uip); CUENTA; CARRO (interruptor de uip, hospitalidad previa); M (servicio de la supervisión); MIC (voz); MULTIUSOS (cada u quisiera que las estaciones de diferenciación gozaran); NOTIFICADOR servicio de la supervisión (de la conexión w (con) terminado o si problema); OSCILADOR (w5 que hace publicidad de comienzo/de paradas; W5 (qué, donde, cuando, porqué y cómo) deseó programas es (sobre ser) difusión); Banda (uip; synth; oscilador; estereofonia); Picosegundo (la difusión demostrada en el sitio u (usuario) está adentro en el tiempo); Q (cómo sistema del uso); S; CUENTA (u más allá del patrón del uso, eg.: w5 para el tipo hospitalidad; T (teléfono) del `(MES; sistema del u/este N = c) del servicio del monitor; +UIP; ANALIZADOR VISUAL; WA.

% otros (lejos hacia fuera) usos: nr de u (notificador) cuando los servicios deben más barato caer en uso de otros usuarios.

- usuarios para uso general de: electricidad; (interurbano/celular/costoso) telecomunicaciones (t); uso basado en los satélites; Uso de M (base de datos, crujido de número, etc); gas (cocinando, calentando).

--el nr de u (notificador) cuando los servicios se están utilizando menos, por lo tanto carga gota en estas horas (inesperadas), o los precios se levantan en las oleadas inesperadas en uso.

- El sistema determina vía su "analizador" /uip/ "acceso" el contenido del material

--especialmente útil cuando el material/el locutor/el prestatario de servicios no suministra los códigos/acceso que ayuda al sistema de la selección del u (sistema) selecto para sus gustos/necesidades.

- "analizador" /uip/ "acceso": la situación del u cambia rápidamente por hora (para el negocio), por lo tanto el Info necesario del u cambia por consiguiente = "analizador" determina qué necesita seleccionar = este N.

EXTREMO DE LA SECCIÓN DEL "CEREBRO"

Archivo: Introducción/cámara de las características

CÁMARA

MICROSCOPIO INTERACTIVO 3A930: cuando 1) los colores, o las formas cambian más allá de cierto punto, o 2) ciertos colores comienza a tomar la prominencia en un crecimiento microscópico - alarma de los disparadores

- el cerebro del sistema memoriza el punto (del cuadro sincronizado) de la referencia de el cual debe notificar al usuario del cambio

- ENCIMA del nivel aproximado de cambio quiso antes de ser notificada

- movimiento "sensor" {pudo tener reloj que las estampillas de fecha y memorizan cuando ciertos movimientos fueron hechos, y almacenar posiblemente visualmente tales ocurrencias, eg.: el pequeño organismo da a luz, o movimientos a través de la pantalla} - tiene fecha, el calendario del tiempo, que puede también estampilla de fecha cada cuadro

- construido en alarma diseñó apagarse en cierto tiempo (basado en el reloj solamente) y o si algo cambia perceptiblemente bastante en imagen

- ahorra horas de trabajo humanas

- aplicador del microscopio: el inyector inyectará, rociará o gota en productos químicos, alimento, el etc en las áreas que son observadas por el microscopio.

La inyección ocurre en la hora designada en su reloj y o cuando han ocurrido ciertos cambios

- en la sincronización/las ocurrencias deseadas, invención poder (en diapositiva del microscopio): corte; o conectar dos porciones/regiones; agitar, etc vía: laser, instrumentos de corte, agujas, sacudiendo el dispositivo, el etc. Estas funciones se pueden manejar vía un pequeño tipo dispositivo de la palanca de mando; el tipo ratón del viajero que demuestra en la pantalla qué necesidades de ser alterado y entonces dispositivo maneja basar en sus los propios.

- la exhibición demuestra qué fueron hechos y cómo y cómo está efectuado, y mantenido memoria

- la computadora con su software, que funciona un o mucho microscopios simultáneamente, puede registrar nuevas tendencias científicas generales y trazar gráficos y las tablas numerosos de datos recogidos

- el software tiene funciones [todos] comunes {muchos} cualquier base de datos o software científico.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias

6B110 CÁMARA ALERTER: Señala a cameraman cuando las dificultades técnicas están ocurriendo durante la película. Para las cámaras inmóviles o del movimiento.

- cuando ocurren los movimientos excesivos, el dispositivo emitirá ligero, [sonido] vía externamente medios de la difusión (la gente de la no-cámara pudo saber sobre problema), y o a través del espectador del ojo (véase por el cameraman). Propósito: hacer de nuevo la cinta mientras que los agentes, el sistema, los etc todavía están en el lugar; quizás el cameraman no estaba así que enterado (o director no es todavía consciente de las capacidades pobres del cameraman).

- retenes: luz corta; cuando artículo que es fotografiado movido a rápidamente (el cameraman no hace caso simplemente de esta advertencia cuando la falta de definición de velocidades excesivas se quiere)

83

- señales a los cameramanes siempre que ocurra cualquier problema técnico normal de la película: luz pobre; malas frecuencias sanas (demasiado agudas)
- para las cámaras inmóviles y del movimiento de todos los tipos

OTD:
Señales siempre que ocurran estos problemas: ciertos colores que no están bien reproducidos (o reproductivos) sobre la película; Códigos: todos; "S"; "C"; pp; P.M.; Reino Unido; fecha; educ; "mic"; synth; portable; sst; "M"; punto de ebullición; alerter; oscilador; vc; cuenta; enseñar; carro; cp; para las cámaras inmóviles y del movimiento.

("R") CONTROL ALEJADO 6B100: controlar el balanceo de la película; dirección de la cámara (la cámara pudo demostrar lo que está cogiendo en una pantalla de la TV - permitiendo que el usuario mejore la cámara directa); luz; velocidad; etc.
- el control con el alambre para con./desc. existe

CÁMARA de la CADENA DOMINANTE 6B160: la cámara portable o regular ató a la cadena dominante. Tiene el foco auto y capacidad excepcional de tomar cuadros en todas las condiciones ligeras, especialmente obscuridad y trabajo con el flash infrarrojo (no puede ser visto cuando está destellado por los seres humanos). Toma el cuadro bastante reservado.
- propósito: representar al usuario que ataca de la gente, o a criminales at large; las ocasiones especiales cuando usted le desea realmente tenían una cámara
- puede tirar en blanco y negro si la calidad de la foto es más fácil en este modo
- pudo llevar a cabo 20 a 36 cuadros; o solamente 8 o tan si esto permite que la cámara sea mucho más pequeña
- tiene característica que tome todos excepto cuadros del último dos (o así que) en secuencia rápida automáticamente (la cámara reenfocará entre cada tiro)

ACTITUD ELECTRÓNICA 6B170: antes de tomar el cuadro encendido aún o la cámara de vídeo, el dispositivo entretiene y o anima para arriba y o hace a gente que es más relaxed fotografiado y o fotogénico. por:
- luces que destellan y o sonidos
- demostraciones de la exhibición móviles o inmóviles: carácteres, caras,
- la muñeca hace estallar hacia fuera, con o sin sonido y sorpresa
- el audio indica cosas o hace sonidos
- el dispositivo se construye en o a parte de la cámara, cámara de vídeo

ACTOR de la CÁMARA 3C-440-083005: Crea las sorpresas para mejores cuadros. Ejemplos: algo hace estallar hacia fuera un segundo antes del flash de la cámara; tiene 1.000 diversos mensajes audios posibles. Similar a KN (invención) del directorio de A o de B.

- Actor del trípode: pone a cabritos, adultos en los buenos humores para tomar de la foto.

. - Trajes: - cada uno de tres piernas hechas para parecer el de una criatura eg.: dragón, cerdo, pollo, ángel, señora, bruja, elefante, cabra, perro, gato, pescados, etc.

. - atar la hospitalidad electrónica, eg.: las luces que destellan, con o sin los sonidos (ACEPTABLES para la vida inmóvil) - sonidos pueden incluso estar de risa, de etc.

el número del producto -4A-41 se combina adjunto

- Solamente el below se quiere para la solicitud de patente. Las ayudas antedichas explican los fundamentos. El dispositivo puede moverse, incluso de maneras inesperadas de crear las reacciones interesantes para la foto. Hay apenas un segundo o más a partir del tiempo el dispositivo hace estallar hacia fuera algo inesperado al tiempo que la cámara toma el tiro.

- el dispositivo puede tener muchas diversas opciones de crear el entusiasmo, de tal modo permitiendo varias diversas recaudaciones del cuadro.

+ la "sorpresa que genera el dispositivo" puede también ser parte de cámaras, incluso la clase disponible

- el dispositivo asombrosamente reduce la ocasión del choque a la cámara, tan pudo haber por lo menos un segundo entre la sorpresa y la cámara tiró =

Tipos posibles de sorpresas:

+ - algo hace estallar hacia fuera y cuelga

+ se crea un aviso, un sonido o una música verbal que pueden ser chistosos, choque, etc.

- las sorpresas pueden también ser un sonido que se selecciona de una memoria de 10.000 sonidos posibles, de palabras, y de frases inesperadas interesantes.

OTD: "R"; "S"; pp; P.M.; Reino Unido; ratón; fecha (activación de sorpresas); interactivo; juguete; hospitalidad; portable; sst; punto de ebullición; oscilador; vc; cuenta; tgh; md; carro; cm; carácter.

CÁMARA TRIDIMENSIONAL 3C-490-083005: El sistema automatizado analiza forma y reproduce imagen en el plástico. La cámara especial memoriza la distancia de cada sección de la lente. Los cuadros se toman de ángulos múltiples. El sistema combina todos los datos para componer dimensiones de objeto. Los datos están para el análisis y o transmitido al dispositivo de reproducción. Usos del ejemplo: Escultura de copiado, piezas de la máquina; fácilmente objetos del reajuste con exactitud.

3 DIMENSIONAL, ETC: La cámara demuestra las alturas y las profundidades para todos los elementos en el marco fotografiado. Esta información se combina con una fotografía de la vida real. Cada factor de la distancia

(de la cámara, del etc) se cifra cerca: un diversos color/cortina; o, pequeños números a través de la fotografía que demuestra las distancias; o fotografías adicionales que ejemplifican distancias...
OTD: "S"; "C"; pp; P.M.; Reino Unido; ratón; el educ%; el toy%; básico; (micrófono y sintetizador: sonidos del convertido en imágenes correspondientes y entonces sobre objetos, eg.: cantar en una voz profunda y hacer la escultura de la secuencia, cantar en una alta voz y crear la imagen del mono de risa) %; impresora; au; t; c; oscilador; el speech%; el vc%; el egh%; cuenta; carro; tr; MES; cm; uq; mq; acceso; el pi%; carácter; el clap%; distancer (usado para generar imágenes) %; multiusos; el remote%; notificador; cojín del aire; analizador visual (compara el producto final con lo que dijo "C" que el dispositivo debe parecer).
- El sistema permite uno mismo-dirigir en mundo tridimensional. Usos: "localizador"; distancia de juicio ("distancer") del objeto/del bandido/de su velocidad; relación de comprensión entre el ambiente señalado de los elementos (objeto/persona) w (con).

DATOS GENERALES 2E-100 SOBRE LOS BUSCADORES de VISIÓN (N 2E100 a 2E130): para el ^ de los cuadros móviles (vídeo, cinematografía), aún vida (color, negro/blanco; con imágenes sobre la película y o almacenado en memoria).
- D1: 1 lente de cámara = cámara 2 de = conversión/computadora 3 imágenes de = transmisión 4 imágenes = buscador de visión 5
- D2: 7 "impresora" /8 computadora 3 del "mfh" = ("C") = 6 "Reino Unido" /9 "oscilador"
Notas sobre D1: 1 2 3 para: cualquie tipo de película, eg.: el vídeo, cinematografía, todavía indica fotografía; 3: memoria enorme

OTD para los datos generales: 1 acceso; 1-7 cojín del aire; artista; balance 9; básico; carro 3 (cartucho) del software (el corregir de imagen, modos de /transmission de la tratamiento de la información/de la organización (tipo menús))); cc; au; ch; carácter 5 7; composición; fecha 3; exhibición 5 ("S"); educ; entretener; 3 "C"; flotador; 7 fs; juego; interactivo; localizador 3; md; mfh 8 (para la difusión viva, corrigiendo posibilidades, almacenaje en "MFH" de imágenes); 8 "mic"; 3 MESes; 3 receptor acústico de 9 movimientos; ratón 3; P.M. 3 6; mq 3 5 6; 3 multiusos; notificador 3 6; oscilador 9; 3 8 uip; portable; 3 6 pp; impresora 7; RCP; telecontrol 6 ("R"); cuenta 3 6; analizador de 3 sonidos; discurso 3 9; teléfono del SP 3; estereofonia 3; 3 conecta con cualquier exhibición video/sistema de la recuperación/de grabación; juguete; tr; Reino Unido; uq; vc; analizador visual; wa 3 4 5 6 8 9.

Usos adicionales para "él" [esta nueva sección general 2E100 - 2E130 de la categoría de producto]: cualquier uno o más de los usos/de los productos siguientes en "sus" campos se pueden utilizar por separado y o junto; con o sin "él":

ANALIZADOR de la LUZ de la CÁMARA de $ 2E110: Determina de qué luz adicional de la dirección es necesaria. Sugiere el tipo ideal fuentes de luz para integrar con la iluminación existente, vía uso de su analizador ligero de la frecuencia. Esta invención no cubre cómo esto podría ser hecha.

- (Cámara/"Lens'") analizador/manifestante de la iluminación: la fuente de la cual más luz pudo ser necesaria y o de cuánto más luz (vatios necesarios). ¿Mk? ¿Coste a producir?
- D: luz "sensor" = "analizador" = computadora ("'"/"de C cámara") = la exhibición/la otra salida
- OTD: u k/sistema "analiza" los colores visibles vía la lente de la "cámara" - > en golondrina de mar la luz necesaria/otra descompone en factores necesario para el efecto deseado (via^ sabido: uip; banda; q; se da a conocer el analizador) - > a u/al sistema (sistema) - > sistema/u ajusta el sistema por consiguiente - > proyección de imagen mejorada (sobre"/proyección (sobre la pared)/diapositivas) de la película/del memory=c/"de la impresora.
- para los semi-professionals, con todo los profesionales de la tapa no necesitarlo.
- trastos de la cámara estados alrededor desde 1800's
- Para hacer más patentable: El sistema o u dice un lado de las necesidades del rostro humano más luz, porque es una cara, él ajusta necesario ligero sugerida (eg., porque idea leída lector en artículo). U lo dice do/do para no querer ligero balanceado uniformemente.
- Estrategia de búsqueda de la patente:
. - (guía o profesor particular o analyz) y dirección y luz
- guía y dirección y luz y ángulo
- problemas que necesitan ser superado: sistema que sabe sugerir (vía "analizador") en qué dirección adicional/menos iluminación es necesario.

BUSCADOR de OPINIÓN del COJÍN del AIRE 2E-120: Existe

- Mirarse al hacer los vídeos mirando en el visor mientras que filma. Bueno para dentro o al aire libre.
--el visor puede estar con los alambres; la versión sin hilos transmite de cámara al ^via del buscador de visión: tecnología celular del teléfono ("T")
- Reloj qué está sucediendo en otro sitio, o parte del mundo. Una versión avanzada del teléfono del vídeo de AT&T ("T")
- también ver TV/VCR en sistema
- D: cámara = computadora ("C") = transmisión = exhibición ("S")

IMPRESO de 2E-130 IMAGE-DATA: Transportación del medio de la no-película de las imágenes: impreso, transmisiones de la teleconferencia de fax/tv/recepciones de la opinión. Uso: demostrar las imágenes a los directores en una diversa localización - las ayudas consiguen aprobaciones rápidas de ^directors/customers mientras que los ^things están en el lugar.

--las líneas del teléfono del ^via de las transmisiones, alambre, radiofrecuencia, teléfono celular alinean

- el remitente del = las audioseñales visual/% = la computadora ("C") y software = altera las imágenes = la impresión/los transmite.

El receptor de la transmisión puede decir al filmer lo que él quiere alterando la manera de los ^this de la imagen.

--eficaz para las situaciones para las cuales el tiempo es crucial, eg.: bastidor vivo de las noticias de la TV

- Marcador de la fecha: "TDS" cada pantalla ("S") y o segmento de los tiros tomados.

CÁMARA del VCR 2E250: Una mejora de la cámara miniaturizada de Sony.

1 cámara = registrador 2 base/3 = 4 parte posterior del juego de tr/5 editing/6 7 otra.

OTD: convertidor de imagen 2; cojín del aire 2tr (cámara del espectador/del control); artista (corregir las imágenes registradas, eg.: agregar los gráficos); básico; carro 2 (el corregir); cc; 2clap; 2composition (efectos visuales corregidos cosechadora con audio compuesto/corregido/sintetizado); cp; 2date; 2display; distancer 2 (activa/desactiva la cámara/el sistema); entretener; 2 "C"; flotador 123; trabajos de 1 cámara (debajo del agua 5000 metros debajo del nivel del mar, y en condiciones para cualquier estación); 2fs (del fs imágenes hacia fuera hechas); %game; satélite 7; 2gps (el sistema indicar/demostración que la localización en la cual la visión fue hecha, ayuda a analizar correlaciones entre la localización y/visuales para recogido los datos audios/de tales localizaciones); las imágenes de los controles w5 del satélite se tiran/"tr registrado"; interactivo (lanzamientos de la cámara en ciertos casos: cuando 3 el " analizador visual" se acciona de cualquier manera como un movimiento que es detectado, el tipo de imagen hecho es automáticamente 3routed/edited según cómo imagen analizada del "analizador visual"); 2 " localizador" busca desearon el objeto/la situación que necesitan ser tiro, y dirige la cámara; md; mfh 7; 2microphone; 2mouse (que corrige A/V); 2mp; 2mq; 7notifier; oscilador 7; portable; 2pp; impresora 7 (las imágenes de impresiones copiaron; 2remote; analizador 2sound; altavoz; estereofonia del 7% (disfrutar de las imágenes hechas con el sistema de tv/vcr/VTR/stereo; 1tilt; 2uk; 2uq; 2vc; analizador 2visual; %vr; %wa.

El VCR R30 REGISTRA el MOVIMIENTO de SUPER-SLOW. Capturas 500 secuencias por segundo en tiempo real.

. - [Nac Inc 2 de mayo de 92 NK]

- el sistema de grabación visual puede también ser "cámara" (aún la foto sobre la película/la memoria digital)

Monitor inteligente -2E251: permite un "análisis más exacto" para los cambios en plazos más pequeños. Convierte imágenes en formato digital.

OTD:

Esta N (monitor inteligente 2E251, registrador de la cámara lenta) = ARTISTA: ; CÁMARA: ; CARRO: ; COMPOSICIÓN: (la representación visual (s) empareja el oscilador (comunicador sano saliente del `) (por tempo; tema (eg.: la música optimista tiene imágenes optimistas)); ENTRETENER: ; MFH: ; MAÑANA: ; MULTIUSOS: ; NOTIFICADOR: (analizador visual = C (computadora del `) = notificador); OSCILADOR: ;

CÁMARA PORTABLE MINÚSCULA DE A4-71C. Subsistencia para las fotos de la emergencia. Un tamaño más pequeño permite portabilidad fácil con una cierta pérdida en calidad.
Usos: conductores del atropello y fuga del retén; ladrones; dar a los oficiales de policía

Captura visual imagen y traduce ellos en dos o tridimensional imagen en electrónico medio (digital)/película (tipo negativo del vídeo/del color). (d) Dibujo: camera=tr/rc=c=tr/rc=viewer/r - Muchas características opcionales, ejemplos: La cámara puede enfocar/cacerola según lo dirigido por c/system/user/"telecontrol". El espectador deja a usuario ver lo que ve la cámara. Luz/flash (la dirección de la luz puede ser controlada). Auto-focus.

%-Location de paladio ()/persona del dispositivo de colocación (basada en señales que generan: el calor, vibraciones, movimiento visual detectado por el "sensor" de la cámara dirige el ángulo de la lente de cámara.
- Ángulo de cámara controlado vía r, banda (programa) en vista, y o de la posición remota.
- OTD: % del analizador visual =uip/notifier. + "pista", "pista" = "analizador visual".
- expedientes electrónicos de la cámara o-C86 todavía y imágenes móviles. Ricoh 3 de octubre de 92 NK y 8 de marzo de 93. D: R (`teledirigido) = C86
Matriz contenta de la fecha -4E020: Los registros y organizan ocurrencias anteriores.
- "Bill"
- Sistema avanzado de la foto (APS) (sobre todo para las cámaras portables) descrito en la "ciencia popular" 6/96, p.86. Cámaras digitales.

"Cámara - control" IMI. Cada uno de su imi pertenece en otro imi más grande. La cámara es cerebro del wo por sí mismo, por lo tanto no se amplía adjunto. Foco: focos de la cámara w5; ampliado en el "va". pista: ampliado en pista

VA: la cámara ve entonces responde por consiguiente; ampliado en el VA

ANALIZADOR de la LUZ de la CÁMARA 2E110: Determina de qué luz adicional de la dirección es necesaria. Sugiere el tipo ideal fuentes de luz para integrar con la iluminación existente, vía uso de su analizador ligero de la frecuencia. Esta invención no cubre cómo esto podría ser hecha.

- para los semi-professionals, con todo los profesionales de la tapa no necesitarla.
- trastos del camero estados alrededor desde 1800's
- Para hacer más patentable: el sistema (sistema) o u dice un lado de las necesidades del rostro humano más luz, porque es una cara, él ajusta necesario ligero sugerida (eg., porque idea leída lector en artículo). U lo dice do/do para no querer ligero balanceado uniformemente.
- <3, 3, 2, mk> 3

CÁMARA TELEDIRIGIDA 2E251: Las funciones de la cámara se controlan según lo dictado por la computadora distante. Expedientes de computadora según lo que está buscando su analizador visual: qué, cuando, cómo, porqué. Ejemplos de cuando ocurre la grabación: células en divisoria del plato de petri; la gente particular entra o sale (el sistema determina a persona vía su transmisor u otros medios); hay cualquier tipo de amenaza o de desastre. Éste es un uso del analizador visual que es otra invención.

- <$, 4, 3>
- La cámara sí mismo del mando a distancia no es nueva.

--Existe: c controla la cámara, eg.: cuando: cada 30 segundos, o cuando la palanca de mando se mueve. Cuando no hay piezas que vienen abajo planta de fabricación, el sistema se para. C (computadora del ') mueve la cámara bajo manera preprogramada, eg.: filtrado de vez en cuando - probablemente no adaptándose a los cambios ambientales.

--Existe quizá: los pixeles probablemente de menor importancia cambian en el marco-a-marco debido a los parásitos atmosféricos eléctricos. Pero el sistema no hace caso de tales. Busca para los cambios grandes. Entonces el sistema sigue el movimiento del cambio grande. Pero no pudo haber mejorado arriba.

--Quizá patentable: el sistema identifica a persona (del detalle) (vía uip (acceso, color, altura, w5), después la cámara sigue. Entonces el sistema va automáticamente a rematar a la 3ro parte de la persona. El sistema sabe para ir a la tapa de la imagen.

---nr cuando la parte inferior del plato de Petri se llena.

---señalar la cámara en la central nuclear, punto en el área inusual (caliente), cámara (infrarroja) entonces mueve su cabeza a otras partes importantes (después de eso, que pudieron internar efectuarse).

Investigador de la imagen -2E210: la cámara busca las imágenes particulares, interno tira, sigue, las cacerolas, etc por consiguiente (a la banda).

- si hay circunstancias inusuales/solicitadas múltiples, el sistema puede (rápidamente) filtrar entre los dos, dando tiempo igual a cada uno, o proporcional más a el que está por cómo es inusual es (con un 65% máximo de tiempo a cualquier un punto).

--si uno de los puntos llega a ser menos inusual (el bandido dejó su bolso en piso y caminó más lejos), el sistema presta menos atención (desde su mudanza (mucho) más)

--el sistema funciona w uno o más cámaras que (parcialmente) traslapar la misma área de la visión.

- la cámara enfoca en la actividad deseada, persona, objeto, (como cambios ocurrir)

. Sistema de detección - la cámara busca actividad (inusual) vía:

- detector de movimiento: (vieja N, KN), sensores del calor, cambios en pixeles visuales, el disparar de las luces laser, sensores de la vibración, "analizadores de sonidos", cambios en la luz (conmutación en el interruptor ligero (el sistema no hace caso (vía c) el movimiento cambiante del sol)), etc.

- el sistema puede no hacer caso (banda): sonidos de frecuencias particulares - "analizador de sonidos"; movimiento por otras cámaras (dentro de su opinión); sombras móviles vía fuente de luz de la ventana, vía: sol, luna, coche o calle u otras luces exteriores (debido a los sistemas c=memory (uip de tal tipo ocurrencias).

- Obra recíprocamente w (con) el otro sistema: esta n "obra recíprocamente" w (con) cualquier sistema de la supervisión de seguridad de KN/el existing%: gana el Info adicional (vía la supervisión, el uip (colección de datos = para los datos que emparejan)/la policía de las ayudas/las ayudas determinan la naturaleza de la actividad inusual.

. El reaccionar al bandido: cuando el 1r del sistema (sistema) identifica la actividad inusual/determina allí es (probable) un bandido.

. - la policía, seguridad interna entró en contacto con

EXTREMO DE ESTA SECCIÓN DE LA CÁMARA

Archivo: Introducción/cartucho de las características

FUNCIÓN DEL CARTUCHO (PARTE)

Éste puede ser más de una opción auxiliar que muchas otras características

Los cartuchos contienen los accesorios como software. Los objetivos, las funciones, y los procesos adicionales se venden como alto beneficio separado que rinde cartuchos.

- D: 1 carro (cartucho) del software = 2 C (computadora) del `= 3 tr (transmite) = 4 function/5 otro

- OTD: 1Software contiene bases de datos; el software 1each tiene funciones y objetivos diversos pero similares; 1examples: programas informáticos para los procesadores de textos, cartuchos de juego para los dispositivos del juego electrónico; las características centrales 2345the del sistema pudieron ser sin cambios por los cartuchos; 1cartridges se diseñan para ganar los beneficios arriba adicionales (práctica normal) puesto que el usuario puede querer las muchas características adicionales que se diseñan para el producto específico; 1 acceso (cada carro es un tipo de acceso dominante, cada carro puede alterar el método requerido de acceso); carro del 1% para el artista; 1character está dentro del carro; carro del 1% para la composición; 2display demuestra el carro funcionando; ciertos 1cart permiten que la invención tenga acceso a los 5M [vía su construido en contraseña y o parámetros del software]; alarma 1%morning; los 2% Reino Unido, telecontrol, movimientos del ratón se interpretan diferentemente según el carro (cartucho del software) que es utilizado; 2mp y pp el carro; 2user y u otras compañías puede diseñar el nuevo carro para la invención; 1 carro se diseña para %multi-user; el 1% cada carro tiene sus propios parámetros/métodos vía los cuales recoger, analizar, dispensar y o utiliza el uip; carro 14 para 4printer; los 1% tabulan y la cuenta 2keeps; 1cart para el analizador de %sound; discurso del 4%; synth del 2%; 2 tds; 1 carro para mq/uq; 2fd-hdd. Tarjetas permutables de la ROM (broche de presión en ranuras (en la parte posterior del sistema)) (según lo utilizado por el sistema del libro de Digital de Franklin (biblioteca del microchip), de los E.E.U.U.; etc).

- Subpartes: CARRO-INTERRUPTOR: permite funciones de diferenciación; CARRO-UIP: multiusos, acceso.

- El sistema "sigue" cómo u utiliza el carro (w5).

- El registro/la cuenta de las subsistencias del carro para el carro de la frecuencia/las funciones particulares del carro fue utilizado (para los usos específicos).

--El mayor uso efectúa la facturación del cliente. El cliente compra los tiempos de uso limitados (tds: horas totales usadas).

. - Los controles del "carro" cómo el "ranurador" localiza then= recuperan el data= necesario para esta partición.

- Un código (acceso, marca de agua del EL (electrónico) "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado. Ver: "Tener acceso", "corrigen". + "facturación"

. - Patentes de los E.E.U.U.: sistema 5426762 para determinar la autenticidad del software = ""/"del acceso c"; 4553252; 4870605.

--str: cartucho y (computadora o software)

- el "carro" tiene (impreso) información del "acceso" (en fuera de disco) esa necesita ser leído (vía el explorador ("va") antes de que el carro sea utilizable. Eg.: claves de barras impresas o microchipes en el carro.

. protección de seguridad del "carro" de $ 9G180: la superficie tiene capacidad especial de conseguir/conserva huellas digitales.

--Esta superficie puede también ayudar a la sincronización de la fecha de tales impresiones, vía análisis químico posterior.

Archivo: Introducción/carácter de las características

CARACTERÍSTICA DEL CARÁCTER

Los detalles extensos en el juego ofrecen la carpeta.

Guía-Carácter: Adquiere características para mejorar a usuario de la ayuda. El carácter cambia su imagen al tipo información necesaria de la oferta, mientras que su imagen crea el mood= deseado para sacar mejor respuesta deseada del usuario. Los cambios de la imagen consideran la sinergia de: tema; uip del u; nr; el mandar la cuenta [cantidad debida hasta la fecha en esa transacción; la tarifa de facturación para el carácter del tema está adentro en ese momento].

- La imagen de carácter se corrige según el tipo dirección. La diferencia en imagen permite:
- u a los interruptores chascan partes encendido de diferenciación del carácter para: preceptoral; encaminamiento.
- el humor de la imagen de carácter: cabe la tarea [vía su traje, tamaño, partes, colores, ambiente alterados en los cuales su panorama encontrar-que empareja del usuario].

. --eg.: el interruptor educativo para la gente de las ventas demuestra el carácter confidente y ambicioso en juego de negocio; tiene sonrisa visible y cara abierta.

. --eg.: carácter del juego demostrado para ser amistoso, contra hostil al jugador que es dirigido. Por ejemplo vía: traje del carácter de la guía, facial y otras características del cuerpo siendo amistosos, confidentes y similares a los carácteres que están en el lado del jugador del juego. Es decir el carácter es diferente de otros elementos [del enemigo] de los carácteres o.

- uip: perfil de los u del fósforo de la imagen (comportamiento/comprobación), eg.: colorante del pelo/de la piel, edad. Multiusos.

+ tema u que encuentra en C: u sabe que tipo DB (base de datos del `) u otro campo de interruptor ()/internet= u del software del `adentro está basado en cambio en la imagen de carácter. Valor: una manera más rápida para que u sepa donde (W5) está u sin tener que leer para la información en alguna parte en la pantalla.

+--área grande extensible. eg.: cada tipo de la cuenta/tds o del otro elemento mensurable se puede retratar en la imagen de carácter cambiante.

Archivo: La introducción de la característica/compone

LA FUNCIÓN DEL COMPONER

INTRODUCCIÓN: ¿Qué sonidos pudo usted tiene gusto de componer? ¿O usted tienen gusto de una invención que ha aprendido sus gustos para sintetizar algo para sus gustos?

Se conoce como compone o compositor. Mejoraron últimas piezas musicales interactivas. Ver la carpeta del N. musical. Primero ver las piezas: Balancear, educativo, hospitalidad, guía, K, Mic, OSCILADOR, R, SA, SoundVis, UIP, WA, VA

+ el TECLADO 3K-3 DEMUESTRA LLAVES NECESARIAS:

Un teclado musical que demuestra solamente las llaves necesitó para la tarea deseada. Ahorra de principiantes confusos con demasiado Info. Pueden centrarse mejor en qué intereses ellos. Es más fácil vender las invenciones que apenas demuestran las llaves necesarias para lo que quisiera la caminata en cliente que el sistema hiciera.

. La programación de la información de usuario aprende qué llaves son probables ser las más necesarias por el usuario. El sistema ha aprendido qué llaves ha utilizado el usuario para los usos señalados en el pasado. También predice que las nuevas llaves que que el usuario puede necesitar basado en sus cambios en hábito, tal como su curva de aprendizaje.

. Ideas de la extensión:

- Funciones nuevas dentro y fuera el mundo de la música.

////

- solamente se demuestran las llaves necesitaron para el tipo el componer
- más fácil vender: el vendedor juzga llano a qué usuario sabe la composición de música, y les demuestra las tareas complejas que correlacionan deseadas; la demostración de la necesidad del vendedor solamente esas funciones queridas por el usuario, diciendo a usuario, allí es casi tantas funciones como funciones deseadas (solamente estas adicionales no conseguirá demasiado de la manera de las funciones que el usuario quiere/que entiende)

--deja a usuario levantar el mercado comprando el "carro"

- una versión más barata: solamente los botones aplicables para el programa deseado se encienden para arriba

. Leído más adelante:

ACCESO: ; ARTISTA: ; CARRO: ; PALMADA: ; COMPOSICIÓN: ; S: ; ENTRETENER: ; FS: ; MFH: ; MAÑANA: ; Picosegundo: ; PP/MP: ; Q: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: ; R: ; CUENTA: ; ESTEREOFONIA: ; SYNTH: ; TDS: ; Teléfono: ; UIP: ; K: ; WA:.

Esta idea se convirtió original antes del '94, su anterior N # no enumerado aquí.

- idea quizá compartida con Korg en 1991, quizás sin diagramas.

+ PATÍN AUDIO 3K-4:

Los cabritos pueden insertar opciones del efecto sonoro en el dispositivo. Entonces diversos sonidos se emiten basaron en cómo se utiliza el dispositivo.

- Ejemplos del patín: cada nivel de la velocidad, y el tipo vuelta o salto tiene un sonido correspondiente. Los sensores dicen a sintetizador del comunicador sano saliente qué está sucediendo.
- Otros usos: Cualquier juguete con las piezas móviles suena por cómo y o cuando se mueven. Los juguetes incluyen: robustezas, vehículos, incluso juguetes del animal doméstico.
- ampliar el mercado del teclado dejando a usuarios hacer los sonidos para su producto (patín, bici, pcteres de ruedas, coche) moves/is usado.

. Leer más adelante:

CARRO: (tipo música querida (u hace música en su sistema entonces insert/tr en su patín); COMPOSICIÓN: (el mfh/la otra computadora); S: (luces/gráficos mientras que la fabricación suena); ENTRETENER: ; Picosegundo: (el patín hace diversos sonidos según la localización (hace sonidos de risa mientras que u va por ésos él no es amigos con); PP/MP: (oscilador); Q: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; R: (el observador puede controlar los efectos de a/v); CUENTA: (para anotar del juego (velocidad/# de los trucos realizados con éxito); ESTEREOFONIA: (juego en comida campestre al aire libre tapando en altavoces (del portable)); SYNTH: ; Teléfono: (móvil); UIP: ; K:. Esta idea se convirtió original antes del `94, su N anterior (invención) # no enumerado aquí.

+ GENERADOR de la MÚSICA del VIENTO 3A420:

Los convertidos enrollan en sonidos electrónicos agradables. Fijar cómo usted quisiera que la invención cascabelee o hiciera otros sonidos basados en el viento. Los sensores del movimiento de aire demuestran la dirección y la velocidad del movimiento de aire. Esas señales son utilizadas por el sintetizador de generar sonidos. Programa cómo usted quiere el viento interpretado en sonidos.

- Otras variables que el sintetizador puede utilizar: hora que el viento está soplando, temperatura, nivel de la humedad, día o mes, etc. Cada uno variable cogido por el sensor puede tener su propia pista sintetizada de sonidos.
- Sonidos del ejemplo: aumenta el volumen de los sonidos reales que el viento está haciendo. Bajar la echada. Tener Navidad como campanas de cascabeleo. Ciertos panoramas pueden accionar música previa. El sistema puede indicar verbalmente la velocidad del viento exterior y u otras condiciones.
- Más variables: Los sonidos generan imágenes asociadas en una pantalla del LCD. Las esculturas giratorias pueden moverse con el viento mientras que generan los sonidos de la invención.
- Extensiones: ¿Qué otras invenciones comerciales del juguete pudieron hacer los sonidos basados en el viento u otros patrones de tiempo?
- convertir electrónicamente los vientos en música única de la "nueva edad". Los sonidos generados se pueden sintetizar en cualquier manera posible con tecnología y estándares actuales.
- las latas del usuario hacen/para escuchar otros sonidos en mismo o el instrumento conectable, eg.: otros sintetizadores, sonidos previos/música. Los otros sonidos se pueden jugar en la conjunción (primero plano o fondo) o por separado de los sonidos generados viento.

- el viento puede moverse, eg.: la curva, cascabeleo, girado, invertido, empuje, efecto apalanca los instrumentos que efectúan el "mic"
- velocidades de los calibradores del viento
- viento del convertido en las imágenes de vídeo que pueden ser sintetizadas vía los métodos algo relacionados, creando a/v, audio, o las impresiones video
- categorías: tiempo, música, viento
- las diversos velocidades, sonidos, etc pueden crear diverso audio y o señales visuales
- la máquina puede imprimir la música compuesta y o efectos visuales
- ha construido en clases particulares

+related a la invención del compositor del agua 3A-96-1.

. Leído más adelante: exhibición ("S"); "C"; pp; P.M.; Reino Unido; el interactive%; juguete; todos; hospitalidad; "mic"; synth; portable; impresora (gráficos de las impresiones generados por los sonidos); "M"; punto de ebullición; SP; oscilador; vc; el score%; md; carro (cartucho) del software (softwares de generación sanos).

INSTRUCTOR de la VOZ 3K-1:

- el sistema puede saber que el tipo usuario de la canción cantará, analizar mejor

. Leído más adelante: ACCESO: ; %ARTIST: (guías en como de bien el usuario puede copiar (los pedazos principales); BALANCE: ; CÁMARA: (véase la boca del u el moverse y la analiza para el movimiento correcto, vía el movimiento correcto del labio de las demostraciones del sistema de los c=s (enseña a discurso también)); CARRO: ; COMPOSICIÓN: ; Exhibición ("S"): ; ENTRETENER: ; FS: ; MFH: ; MAÑANA: ; Paladio: ; PP/MP: ; MQ/UQ: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: ; Telecontrol ("R"): ; CUENTA: ; ESTEREOFONIA: ; SYNTH: ; TDS: (progreso del usuario de las demostraciones, para el UIP); Teléfono: ; UIP: ; Reino Unido: Ver las descripciones originales archivadas antes de 94 (su N # no está aquí).

ENMASCARADO SANO 3K-2:

- el UIP de 30 segundos anteriores se utiliza para mejorar los ruidos actuales de la manija, estes 3ultimo que 5 segundos se dan mayor peso.
- emite el sonido constante
- el usuario controla el tipo del "synth" del gris/del otro sonido deseados a los ruidos de las máscaras
- el usuario puede componer la música (teclado), el sistema después lo modula para enmascarar ruidos ambientales

. Leído más adelante: ACCESO: ; BALANCE: ; CARRO: ; COMPOSICIÓN: ; S: ; ENTRETENER: ; MFH: ; Picosegundo: (ruidos particulares de cierto ambiente (un s en localizaciones de la demostración de la

base de datos/uip (para el usuario) ciertas necesita la cancelación sana de diferenciación según el tipo sonidos oídos en tales localizaciones); PP/MP: (cómo el sistema puede cancelar/altera el sonido (indeseado)); Q: ; MULTIUSOS: (los sastres graban la cancelación por cada preferencia de usuario (en estilo)); NOTIFICADOR: (alarmas oídas por u si important^: teléfono, fuego); OSCILADOR: ; R: ; CUENTA: (el analizador de sonidos estudia el comportamiento del ruido indeseado); ESTEREOFONIA: ; SYNTH: ; TDS: ; Teléfono: ; UIP: ; K: ; WA:. Esta idea se convirtió original antes del `94, su anterior N # no enumerado aquí.

3K-5 PERSONALIZÓ el SELECTOR del MANTRA:

- el sistema simple, o se puede ahora hacer en el teclado
- los mantras de la venta según el tipo ayuda necesaria, "synth" en golondrina de mar pueden alterar según el UIP del usuario.
- Fósforos del sistema: 1. perfil del comportamiento del usuario; 2. forma sugerida de los vagos de terapia; 3. sonidos/música que los fósforos sugirieron modo de la terapia.

. Leído más adelante:

CARRO: ; PALMADA: ; COMPOSICIÓN: ; S: ; ENTRETENER: ; FS: ; MFH: ; MAÑANA: ; Picosegundo: (oscilador de los cambios por la localización); PP/MP: ; Q: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: (mensajes (el horóscopo o el otro consejo del interruptor (del UIP)); R: ; CUENTA: (cuando u meditated); ESTEREOFONIA: ; SYNTH: ; TDS: ; Teléfono: ; UIP: ; K: ; WA:. Esta idea se convirtió original antes del `94, su N anterior (invención) # no enumerado aquí.

COMPOSITOR del ASIENTO 3K-6: Obrar recíprocamente con sus composiciones/etiquetas de la música de la marca de fábrica conocida. Eg.: cambiar el volumen, triple, voz, ritmo tocando los botones/que se mueven.

. Leer más adelante:

BALANCE: (tipo effects^ del movimiento del cuerpo: qué altavoces hacen un sonido más ruidoso, las influencias los efectos sonoros también (OSCILADOR); carro (cartucho del software): ; PALMADA: ; COMPOSICIÓN: ; S: ; ENTRETENER: ; MAÑANA: (vibra u a (ayuda) lo despiertan); Picosegundo: ; PP/MP: ; Q: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; R: ; ESTEREOFONIA: ; SYNTH: ; Teléfono: (vibra los muebles cuando el teléfono suena); UIP: ; K: ; WA:. Esta idea se convirtió original antes del `94, su anterior N # no enumerado aquí. Al parecer siendo producido por Pioneer, y otros fabricantes japoneses antes de 94.

DIVISOR de los SONIDOS 3K-7:

- cada llave del piano emite efecto ligero/visual de la correspondencia. Degrada el coste de producciones. Crea más interés en teclados.

. Leído más adelante:

ARTISTA %: ; BALANCE: ; CARRO: ; COMPOSICIÓN: ; S: ; ENTRETENER: ; PP/MP: ; Q: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: ; R: ; ESTEREOFONIA: ; SYNTH: ; TDS: ; Teléfono: ; UIP: ; K:. Esta idea se convirtió original antes del `94, su anterior N # no enumerado aquí.

3K-8 ALEJADO ("R") CONTROLÓ el "MIC":

- seleccionar que el "mic" se activa y cuando. Usos: para la sección del sitio/almacenar/al aire libre/proximidad a las cuales los instrumentos.

. Leído más adelante:

ACCESO: ; ARTISTA: (demostración de a/v); BALANCE: ; CÁMARA: (activación del control/(ángulo, zumbido) movimiento de la cámara de la manera similar); CARRO: ; PALMADA: ; COMPOSICIÓN: ; S: ; ENTRETENER: ; FS: ; MFH: ; MAÑANA: ; Picosegundo: ; PP/MP: ; Q: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; R: ; CUENTA: (para el UIP); ESTEREOFONIA: ; SYNTH: ; TDS: (cuando ocurrió cada incidente, para MFH/UIP/etc); UIP: ; K:. Esta idea se convirtió original antes del `94, su anterior N # no enumerado aquí.

-1.06: El SA (analizador de sonidos del `) y el VA (analizador visual del `) y la pista' sugieren/el control que los sonidos y las localizaciones necesitan una mejores supervisión/foco. Ver estas otras piezas para los detalles.

ARPA del LASER 3A550: Hacer los sonidos interceptando cada secuencia de rayo láser. La interceptación cuanto más cercana está del dedo de la fuente de luz, más alta es la echada. También en la forma de la guitarra, del piano, del etc.

- el artículo puede hacer los sonidos relacionados con cualquier otro instrumento común que corresponda a los patrones antedichos; cada secuencia representa diverso instrumento
- exhibiciones: sonidos, frecuencias, instrumentos, etc siendo emitido
- hace el sonido según distancia de la fuente de luz (posición respecto a secuencia).

. Leído más adelante: pp (qué sonidos ("oscilador") puede ser generado vía acorde del laser, etc); P.M.; Reino Unido; el interactive%; juguete; todos; el microphones%; el synth%; portable; sst; punto de ebullición; oscilador; vc; md; carro (cartucho) del software (softwares de generación sanos).

GENERADOR de SONIDOS del MOVIMIENTO del CUERPO 3A752: Pues la persona se mueve sobre sitio que dispara diversas luces laser que generarán el sonido correspondiente, creando una clase de nueva música. Puede tener fuentes de luz múltiples y o utilizar los reflectores ligeros.

- Miburi de Yamaha salió con esta idea después de que archiváramos esta idea pero abandonó la solicitud de patente.

AMBIENTE 5A150:

cuando son sanas las frecuencias en sitio carecen ciertas frecuencias (eg.: el entusiasmo) o llegado a ser demasiado controvertido (en grandes cantidades agudo) la invención compensará agregando el sonido a la mezcla de conversaciones que ayuden a crear un mejor ambiente.

- substituye sistemas musicales de la hospitalidad
- uso en hogar, reuniones de negocios, restaurantes, barras, el etc.
- modelos más baratos emitirán simplemente los sonidos diversos diseñados para ayudar a la guía hacia el tipo meta (reunión de reflexión creativa; planeamiento; diversión y juegos para los adultos o los cabritos; discusiones levemente más serias; etc). Los sonidos se demuestran ayudar a aumentar creatividad. El usuario selecciona el tipo discusión/meta para conseguir el tipo ambiente

Ionizer del aire del o: ioniza el aire para dar la sensación fresca creada enseguida después de una tempestad de truenos

PESEBRE MUSICAL 5A160: El bebé descubre que cada forma coloreada en el pesebre tiene poseer el sonido. Las barras hacen música por el tacto del bebé. Las barras que hacen música pueden estar de cierto color según el tipo sonido creado. Si más de una barra tiene mismo color, el bebé aprende que todos los colores idénticos hacen el mismo sonido.

- el mecanismo del tacto es tapa cercana de cada barra, así que el bebé debe colocarse para hacer el sonido. La localización de este mecanismo se diseña para reducir el tacto accidental frecuente; pudo ser levantado o ser bajado.
- el número de barras con capacidad de producción sana puede ser una o toda. Este dispositivo se pudo atar a la barra o a la barra sí mismo que pueden ser reemplazables o conectables a la barra
- el guarda puede registrar al bebé o poseer voz adulta u otros sonidos para que el bebé accione también
- puede atar los instrumentos musicales, los juguetes, la entrerrosca para la alimentación líquida, el etc al pesebre también (para la búsqueda de la patente, ésta no es parte principal del producto)
- ENCIMA de sonidos
- el bebé puede aprender que la una sola pieza se puede presionar llamar a madre (el receptor de la madre le dice que el dispositivo fue presionado)
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip); estudiar el bebé/el comportamiento humano/animal = los usos/sobre del uip/de la investigación conseguir o hacer la cosa correcta = el aumento "acceso" %.

LECTOR de la BOLA A1-141: comprar la bola y dejarla despedir alrededor de la taza que crea música. Elegir a los cubos, a las pirámides, a las prismas rectangulares, a las formas del buñuelo, a lector del etc. puede también leer elementos adentro (los elementos internos están de sustancia no uniforme). Utilizar también para la prueba. m en vez de crear sonidos, crea frecuencias, calienta, las vibraciones, comandos verbales. Sostenido a mano y o atado a cualquie dispositivo o a una versión tablero.

La música de Opti, música óptica, sonidos de la visión, considera sonidos, considera la música, cruce giratorio de la música, hombre de la música

- opción: hacer el arte sobre cualquier computadora/pantalla electrónica. Después la máquina lo leerá y hará los sonidos correspondientes/música.

+ "inclinación": controla las funciones del sistema

- copiado a 5e020 8.95

2/97

- diversa K representa que programan/sintetizador están interpretando los movimientos. Cada movimiento de la bola o el ratón [A1-141A] puede interpretado de 1.000 maneras. Usar interpretaciones múltiples crea simultáneamente efectos adicionales.

A1-141A: COMPOSITOR DEL RATÓN: la manera que cualquier tipo de ratón es moved= corresponde tipo sonido de w (con) generado. Similar al lector de la bola A1-141: el ratón puede estar en cualquier forma.

ECO del TAMBOR A-370: el golpe en el escritorio y M replegará música del patrón. Usted o la máquina puede ser que elija la opción del sonido adicional del fondo compatible al ritmo dado. Bueno para la gente sola, y las que como la sensación del control. Apagan después de breve tiempo (puede ser fijado por el usuario). Teclear a socio. Mezcla: máquina de la terapia. El humor, BP, HH, TT, S, yo copió a 5e020 8.95

COMPOSITOR DEL ASIENTO DE A2-04A//: los movimientos de la manera u en asiento crean música. Cada parte del asiento tiene diversa música el hacer de posibilidades. Eg.: cada área dentro de los restos del brazo, piernas, silla más baja media superior, lados, debajo y detrás (hasta hasta dónde estiramiento normal de los brazos) tiene botones o calibradores de espesor ahuecados de la respuesta del tacto. Los sonidos oyeron vía los auriculares los altavoces de un o, almacenando sobre disco.

. - Palillo 5E020 de la inclinación: Controla las funciones de esta n

COMPOSITOR DEL AMBIENTE DE A2-04B//: mezclarse con el vibrador del asiento de la música, asentar a compositor #4B. Tiene cojines de la respuesta de 2 - 12 pies; poner los lasers (función permutable con alternativa del signaler del fq) en la cabeza, la muñeca, el pecho, la correa, hombros, rodillas, los tobillos, el etc y dejarlos accionar sano al golpear los receptores en sitio. Co-componer con el amigo/el socio. Realizarse en el país o en etapa (los receptores de la banda para activar luces, o luces pueden ser banda (programa) a responder automáticamente). Cada laser/la señal de light/fq y el sistema de la respuesta podían elegir entre los receptores múltiples, eg.: cada laser tiene sus propios 1-5 receptores, cada fabricación posee el sonido. Los receptores de cada laser agrupados por el tipo suenan categoría. O cada laser/signaler puede pegar cualquier objeto y C (computadora del `) hace el sonido particular basado en el fq único reflejado (basado en el material). Para la

diversión/el juego, (contenido de la conjetura del doblez de las persianas de w o wo) del material distante basado en sonido. - Palillo 5E020 de la inclinación: Controla las funciones de esta n

COMPOSITOR DEL UNO MISMO DE A2-04C: atar el micrófono (registrador de w atado fisicamente o remotamente) a cualquier objeto de mudanza o vibrante: cola del animal, cuello, pie; zapato; reloj; puerta del lugar ocupado; cuerpo o cama mientras que teniendo sexo, roncando; etc. Dependiendo del fq recibido diversas conversiones del sonido se hacen en algo interesante oír. O el parte movible registró pedacitos en cualquiera de mis sistemas y juego que componían alrededor con él cerca: cambio de él; el usar como sonido del fondo/del primero plano; etc. También actúa como al revés para el número de movimientos (eg.: mide el tiempo de la puerta de los flapes del pájaro o del refrigerador abierta por la persona en dieta)
TD: P.M. adulta exc de los pp del ll del truco de la diversión de los cabritos del contra del vp del ep del punto de ebullición del tt del hh del interruptor C (computadora) del `e (registrador bajo)
. - Palillo 5E020 de la inclinación: Controla las funciones de esta n.

CONVERTIDOR de la MÚSICA A2-080: Hacer (quizás no la música fácil de la voz que escucha) aplicable a los niveles de energía deseada, conservador, liberal, cerebral, intuitivo, seriedad del ambiente querido para el efecto deseado. Para las oficinas, iglesias, elevadores, almacenes, lugares públicos, taxis, aeroplanos. Por ejemplo: cuando una vieja viuda rica viene al pequeño banco a la cuenta abierta, la música señaló para subir sus buenas visiones () del futuro (para sus niños), felicidad; después de que el banco se cierre (solamente para los clientes), conservador de la necesidad, música cerebral para reducir al mínimo errores en la contabilidad; las oficinas el las mañanas de lunes, los días lluviosos pueden querer una música más feliz, más liberal. Tomar la hornada estándar de la música para el sistema y el programa por consiguiente. Hay demasiada confusión en la compra de álbumes diversos para el propósito. Puede incluso convertir ciertas estaciones de radio y todavía conseguir noticias. Los cambios reales pueden ser: bajo, tono, velocidad, volumen y cambios uces de los alterables en los sintetizadores sofisticados. Para propia música, pueden incluso los sonidos adicionales del anuncio a la música. Hay número limitado de estaciones de radio que escuchan fáciles suaves permitiendo las opciones mínimas para la multa - adaptación del moldeado ambiental. El humor adulto LL B PP D. PP del autobús del MED W2 del EP de E TT puede necesitar el código de los mgr, o realzar la productividad, las ventas, el etc fijando de los co las jefaturas regionales o del int'l. Las aduanas del aeropuerto, seguridad pueden cambiar según el origen del aeroplano/del barco, u hora, etc y los sonidos deseados para mejorar a gente del retén más probablemente para tener respuesta deseada. Música/sonido/oficina/almacén - reforzador/Upgrader/convertidor.
. - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)
. - Palillo 5E020 de la inclinación: Controla las funciones de esta n.

SOMBRERO MUSICAL A2-230: el concepto w del walkman (con) enciende destellar a batir, éste da el fondo para la persona que baila solamente a la música que oyen y otros para ver. De Op. Sys.: vibraciones a batir. Iluminación: pequeñas luces alrededor del perímetro del sombrero 1-2.5 cm sobre borde, alrededor del perímetro del borde externo, en la grieta antedicha del borde. Tiene ranura para recibir los Cdes, cassettes, radiofrecuencias.

ANILLO DEL LASER DE A2-24A: sh. joyería, dedo del guante que envía los lasers.
. - "Inclinación": controla las funciones del sistema
- copiado a 5E020 en 8.95.
-2.97: resultado de los movimientos del laser/de la mano en los sonidos correspondientes/música.

> teléfono A2-310 ("T") REGIONALIZER: el llamador oye el acento y la música populares para su región de país, según código de área del teléfono mientras que pasa a través de correo de voz o en asimiento.
- movido a T 2.97

A4-24AB: MÚSICA QUE HACE EL LASER
el pasillo de la tierra de los Ninguno-hombres es donde el laser viaja sin la fabricación del sonido, entonces él se enciende sobre cualquier llave de cualquier lado. Puede también utilizar el teclado tradicional que manda la señal al receptor. Se golpea ciertas llaves y o la manera cualquier llave crean sonidos de la feria a la duración duradera, permitiendo las llaves mono o múltiples que se jugarán simultáneamente.
Opción: laser de la cosechadora con el sistema de la hospitalidad teledirigido

A4-72 RETORNADOR del teléfono fq: el fq registrado, entonces música/sonidos del llamador en fq similar, tensión, felicidad, nivel/tipo de sensación es oído por el llamador mientras que están en asimiento. Propósito: hace que el llamador siente a la una con el otro partido. e m pudo hacer alteraciones para cambiar el comportamiento del llamador. P oye grabaciones de la voz o del sonido o de la música. La máquina está atenta solamente la echada, no contenido de la palabra.

INVERSOR DE LA VOZ DE A4-72B: la voz de la persona de registro, entonces adminículo se repetirá en revés. ¡Los sonidos apenas tienen gusto del altavoz con todo de las palabras no identificables! Como broma, decir a persona que usted los registró que hablaban en su sueño, incluso anuncio, "esto es su voz". Si la persona no es su amante se preguntarán cómo usted los oyó el hablar en su sueño, y puede ser que incluso pierdan el sueño que intenta imaginar los asuntos.

COLLAR MUSICAL A6-010: La muchacha hace sonidos y luces interesantes exprimiendo cualquier acoplamiento en su cadena. Las características interesantes adicionales activaron cuando los acoplamientos múltiples se exprimen simultáneamente.

- La muchacha crea fácilmente sonidos interesantes cerca, exprimiendo cualquier pedazo en cadena, o al tocarse en maneras especiales. Luces de los flashes.
- Música de cadena: jugarlas juntos pueden hacer que la música también, el etc. ponen todos en el collar o la pulsera. Sonidos cuando se tocan individualmente

Opción: el tacto hace el sonido.

Hace luces

- activa sonidos simples/complejos musicales de los pedazos, da avisos verbales (eg.: "hola", dice historia, el etc).
- altavoces y luces situados en cada acoplamiento, y o en uno o más otros acoplamientos en cadena (de mismo o de un tamaño más grande)
- cuando los acoplamientos múltiples se activan (exprimido o tocado, o cambiar activado de cualquier manera) simultáneamente, comunican juntos vía radiofrecuencias. Una composición de más de un acoplamiento activa otras características.

(Patente diversa con todo relacionada de los E.E.U.U.: 4936185)

El pedazo de los ENCANTOS A8-04 usado por los aficionados a los hobbys para crear sonidos interesantes y o a inventores para poner parte junto en prototipos del producto, en sus combinaciones que producen los sonidos orquestrados, diseñados para obrar recíprocamente mágico con uno a. Marca: Bloques mágicos de la música.

- Sonidos de los encantos [oscilador del `] cuando tacto de dos zapatos por criterios señalados [orden y sincronización del `].

A8-14 ENCANTA la FABRICACIÓN de la MÚSICA. Crea sonidos sobre su laser de recepción. El sonido puede continuar a partir de un segundo a varios minutos, permitiendo los sonidos solos o múltiples que ocurren simultáneamente. Una opción más barata: los encantos se pudieron activar solamente manualmente. La intensidad de luz del transmisor se puede alterar para efectuar el tipo música del encanto. Puede también parar y comenzar la luz por el botón del transmisor o agitando la mano en corriente ligera.

Los ENCANTOS A8-15 tienen muchos pequeños encantos del pájaro que puedan sonar simultáneamente. Comprar algunos y disfrutar, después volver almacenar de comprar más para el mayor efecto. ¡Gozar el tener de gojear entero del sitio o de la casa!

GENERADOR SENSIBLE DE LA MÚSICA DEL MOVIMIENTO DE B7-09A: Sonidos según cómo se mueve el dispositivo. Programas del usuario cualquie tipo movimiento que se convertirá en un arsenal infinito

de sonidos. Son muchos instrumentos musicales en uno. Ejemplo: simplemente la sacudida "a y desde" puede los sonidos creados de la confusión, de golpes del tambor, o de salpicar el agua.

. Juguete de la música del revoltijo: según el movimiento del dispositivo se acciona el sonido/la música. El sonido resultante puede ser una consonancia del sistema, o secuencia de sonidos, para la duración del sistema, volumen... O, el sonido puede ser resuelto según cómo se mueve el objeto.

-83: tener opciones sanas tres o más diversos. Cada opción sana es diferente de las otras (no apenas diferente en términos de velocidades del sonido más rápidas o más reducidas)

- sonidos según cómo se está girando; dado vuelta también

O el Jiggling del instrumento de la escritura crea (o) el sonido correspondiente (o posibilidades sanas múltiples). Cuando la escritura del instrumento hace sonidos - grandes para los cabritos creativos.

- Tiene botones que permitan más de un tipo de sonido en cierto modo. Eg.: en la cámara lenta una el botón permite un tipo sano, y en el mismo movimiento con otro ajuste de botones hay otros sonidos posibles para el mismo tipo movimiento.

. Leído más adelante: La música puede ser registrada; pp; P.M.; Reino Unido; interactivo; educ; juguete; juego; hospitalidad; "mic"; synth; portable; mfh; punto de ebullición; oscilador; vc; egh; enseñar; md; cart (cartucho) del software (posibilidades del efecto sonoro); RPC; cp; cm; uq.

JUGUETE del BAILARÍN B7-120-022001:

Crear los sonidos interesantes como usted baila. Los movimientos del bailarín pueden ser convertidos en un arsenal infinito de diversos sonidos, según lo programado. Ejemplo: La mudanza de la pierna izquierda puede generar sonidos de campanas o de tambores. Cada zona del cuarto en el cual el usuario mueve la pierna izquierda, crea un diverso sonido, según el área.

- Música móvil: Según donde en sitio el usuario entra sonidos cambiará
- Los niños pueden bailar en el piso, haciendo diversos sonidos según cerca qué dispositivos están bailando. Eg.: si están cerca de un bloque (que transmite o que recibe señales) entonces los zapatos o el bloque hará un diverso sonido. Eso se pone los bloques donde usted quiere, estos bloques crea "zonas sanas".
- Para el uso de interior o al aire libre
- En lugar de los zapatos, usuarios puede usar la joyería: collares, pulseras, etc.

. Leído más adelante: Todos; "R"; "S"; pp; P.M.; Reino Unido (sonidos deseados); interactivo; juguete; juego; hospitalidad; "mic"; ejercicio; portable; sst; punto de ebullición; SP; oscilador; vc; egh; cuenta; md; carro (cartucho) del software (sonidos); cp.

DANZA del CUERPO B7-160: Componer la música según cómo usted baila. Los transmisores en cuerpo se registran, se analizan y se sintetizan.

- Los accesorios al cuerpo de la persona (que transmiten señales al receptor) permiten el siguiente cuando la persona baila: luces y sonidos en sitio según la colocación del cuerpo.

+ profesor particular del movimiento 3E061: Dirige a usuarios para mejorar sus movimientos, eg.: la invención de Yamaha Miburi.

. Leído más adelante: Todos; "R"; "S" (según el movimiento, los gráficos se pueden crear); pp; P.M.; Reino Unido; interactivo; juguete; juego; hospitalidad; "mic"; ejercicio; portable; sst (para la caja que lleva de piezas al dispositivo); índice de inteligencia; punto de ebullición; alerter; oscilador; vc; egh; cuenta; tgh; md; carro (cartucho) del software (sonidos); cp; cr; mq; uip; carácter.

MÚSICA del GRUPO B7-040 VÍA el TELÉFONO:

Creativo obrar recíprocamente con sus amigos sin viajar.

- Una persona con una línea de "T" puede hacer jazz digital con su amigo sobre la línea telefónica. Porqué recorrido cuando su tan fácil jugar junto ahora. ¡Debido a su novedad del esquileo, usted puede incluso jugar en su propio sitio con el al lado del amigo! Grande para los invalids, las nuevas madres que tienen que mirar a su bebé/cabritos, ésos de los ancianos de la edad (esperemos algunos más años), aburrido pero creativo e interesante que esperan una entrega reparar la llamada etc. del instalador "T" del cable del hombre.
- Tener una opción a cambiar de componer de la música; música que escucha, registrando, comunicación verbal, opción del etc.
- Para dos o más números del teléfono que trabajan simultáneamente
- el dispositivo compensa la audibilidad pobre en líneas del teléfono transmitiendo digital, así que los usuarios pueden oír sonidos de la alta calidad

. Leído más adelante: Todos; uso con el correo electrónico; "R"; "S"; pp; P.M.; Reino Unido; beh del usuario; interactivo; educ; juguete; juego; hospitalidad; "mic"; synth; portable; sst; índice de inteligencia; au; t; "M"; alerter; oscilador; vc; egh; cuenta; enseñar; md; cart (opciones para: efectos sonoros, posibilidades compositivas); "T"; teléfono del SP; MES (para la comunicación digital con otras computadoras); fs (efectos visuales de los faxes como parte de la diversión del grupo musical, eg.: enviar los cuadros a...); RPC; cp; uq; mq; acceso; uip; carácter.

. - "Inclinación": controla las funciones del sistema

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

JUGUETE QUE COMPONE B7-150:

Los tipos diversos de sonido se crean según:

el presionar de o de botones (como una flauta con los botones)

el instrumento de +o transmite vía transmisor de 360 grados (uno secciona del palillo) al receptor que amplifica el sonido - muy posible. Transmisión vía el alambre incómodo innecesario.

o que se mueve a de izquierda a derecha upside-down produce el sonido

la sacudida de +o produce el sonido también

Viene en las formas siguientes:

- Bola: Botones produciendo música. Puede torcer las capas de la crepe dentro de la bola para los efectos sonoros. La mudanza al etc izquierda-derecha produce el sonido.

- Palillo: Cada posición de la muesca es diverso sonido. Puede girar el reloj o el reloj contrario sabio.

+-Sounds según cómo se está girando

- Puede poner el objeto sobre la pantalla del software y el juego vía el teclado del ratón o del tipo o de la música de la máquina de escribir. Pueden tener dos o más pedazos que juegan con uno a. Incluso adminículos en los principios similares para los pies, cuello (collares gruesos efectuados por tipo el cuello que pone).

- Otras formas: buñuelo, formas de la fruta, gente, edificios, animales, plantas con las frutas o vehículos, ejércitos con cada hombre un diverso sonido, instrumento de "T" (cada botón un diverso sonido, otros botones es memorias de secuencias sanas, incluso tiene diverso tipo voces del operador...), zapatos (posiblemente incluso para caminar también), cuerpo atractivo (IES). CÓDIGOS: Todos; "S"; pp; P.M.; Reino Unido (opciones sanas); interactivo; educ; juguete; hospitalidad; "mic"; synth; portable; t; "M"; punto de ebullición; alerter; oscilador; vc; md; carro (opciones sanas); cp.

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

> 2D-160 destella ligero según el golpe/el ritmo oídos por el oyente. Deja otros saber el "movimiento" sentido por el usuario.

- movido para componer 2.97

+ CORRELADOR de 5E090. Venda sin hilos de la música: El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades portables múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. La mayor portabilidad, libertad, suena de fabricación de la experimentación, una grabación más barata.

- Música del grupo: Hay una unidad principal que obra recíprocamente con las unidades "alejadas" llevadas a cabo por los participantes, creando (jazz del grupo, el foro educativo)

- D: r (compositor) = tr/rc = analizador (carro, compositor, m) = oscilador

- Ejemplo: Venda sin hilos de la música: El dispositivo de cada usuario entra música en sistema central.

- Adentro localizado dir de I (en fecha el julio de 2000).

YOYO MUSICAL 7G040: Sonidos generados según el movimiento.

- Yoyo musical: Mientras que el yoyo va arriba y abajo de sonido/de música/de declaraciones puestas en palabras se generan.

¿. - aplicaciones R248, ES 95, N anterior (invención) (dir de A?)?

- el acordar al movimiento del yoyo, sistema (sistema) genera: oscilador; %r.
- D: yoyo = sensor = oscilador del movimiento (oscilador (digital))
- existe: yoyo que luces cuando movimientos. Sonidos del aro de Hula cuando movimientos; yoyo que silba.
- esta n es salto corto del N. existente.
- EL o versión mecánica.
- fuente de energía: batería; o alternador 4E010.
- Estrategia de búsqueda de la patente: + (yo del ajuste del yo) y (sonido o música)
- No. de la patente de los E.E.U.U.: 5017172 convertidos del yoyo a una tapa (puede también crear sonidos en cualquier caso); 4418494 4437261 4442625 4492057 4632245 3452474 3564763 3805443 3895457 3924114-illuminated yoyo 3936974 3953936 4081924 4130962
- Existe en fecha por lo menos 2005.
-1.06: diversas declaraciones de motivación, mantra, fortunas son emittable.

arpa 8G050: Instrumentos musicales relacionados con: Cualquier persona puede silbar - el catálogo, ["buenos 7.95 directos], POB 4407, Kingston, NY 12401. Teléfono Disconnected en fecha 1.06:800 - 435-8863, 800-898-9338, fax 800-331-4470.

-

Arpa: el pvc del lugar rebordea sobre secuencias - > altera sonidos respectivamente. Atadura del grano a la secuencia: broches de presión encendido; se pliega; lugar en secuencia mientras que secuencia separada del instrumento.

- coloreado diferentemente/textured/los granos clasificados que hacían desplumando la secuencia más fáciles (para los niños).

1.06:

Los granos electrónicos obran recíprocamente con el sistema musical para componer/la música del juego:

- Cada grano (con diversos color, forma, tamaño, textura y o botones) cuando está colocado en puntos/secuencias señalados del sistema, generará sonidos señalados. Sinergia/interacción programada entre las piezas separatable específicas y los puntos señalados (estaciones de muelle) generan diversa música basada encendido: W5, UIP, y un control más directo del usuario.
- Ver

Más funciones que componen de la música

ELEMENTOS: #1 posterior leído (PARTE UNA):

pluma mágica del aire 3A-790: Los movimientos de la pluma alejada se transmiten a la computadora. Hacer los movimientos en el aire o en cualquier superficie plana.

% de B7-040 de la música interactiva del grupo vía transmisor/receptor, eg.: telecomunicaciones, alambre, radio. M.

% de B7-09A del movimiento del generador sensible de la música: Sonidos según cómo se mueve el dispositivo [incluye su parte alejada también]. Programas del usuario cualquie tipo movimiento que se convertirá en un arsenal infinito de sonidos. Son muchos instrumentos musicales en uno. Ejemplo: simplemente la sacudida "a y desde" puede los sonidos creados de la confusión, de golpes del tambor, o de salpicar el agua.

% de B7-120 del juguete del bailarín:

Crear los sonidos interesantes como usted baila. Los movimientos del bailarín pueden ser convertidos en un arsenal infinito de diversos sonidos, según lo programado. Ejemplo: La mudanza de la pierna izquierda puede generar sonidos de campanas o de tambores. Cada zona del cuarto en el cual el usuario mueve la pierna izquierda, crea un diverso sonido, según el área.

% de la danza de B7-160

Los accesorios al cuerpo de la persona (que transmiten señales al receptor) permiten el siguiente cuando la persona baila: luces y sonidos en sitio según la colocación del cuerpo.

% de 3CQ-090 Distancer sano:

Instrumentos musicales que juegan junto el cambio sus sonidos según cómo está cercano o lejano se mueven desde uno a. Puede estar para una sola persona utilizar dos o más porciones; o dos o más personas con sus instrumentos.

% del caleidoscopio musical de 3A-762: según las luces y o las formas consideradas, se crean ciertos sonidos. Las luces/las formas se pueden generar vía medios electrónicos puros o los más viejos métodos.

% de 3A-420 de la música del viento

% de 3A-630 del analizador de sonidos (las transmisiones de este producto se alimentan en el sintetizador de los sonidos, y o inician otros sonidos correspondientes)

% de 3A-980 del vídeo del Karaoke; palillos del color 5A-130: los usos para este producto se cambian de modo que cada pedazo insertado genere la transmisión correspondiente para: el sonido, o la otra función deseada.

interruptor de 5A-460 Touchless: cómo activar funciones musicales/sanas;

Collar del Musical A6-010

OTD para cada invención tiene siguiente: "synth"; "oscilador"; "básico"; "C"; balanceador; "composición"; entretener; Reino Unido.

VIBRADOR DEL ASIENTO DE LA MÚSICA 4: empareja la música jugada. Conectar la silla por el alambre con música/fuente sana, o la silla tiene micrófono. La silla hace la conversión. Puede substituir la silla por (cama, asiento de coche, asiento del transporte público, sala de baile, vidrios, reloj, pulsera, collar, pendientes, guantes, pluma, taburete, vidrio de consumición (para el disco también), persianas, cortinas. El tipo portable puede ser el asiento puesto de on/below (todo arriba) que reacciona (para la portabilidad, la broma cuando usted grita, el etc.) las vibraciones sanas [Vibra (tor/los tions)], Vibrador de la acción. HH, TT, W1, BP, E, contra, pequeño grande directo, cabritos, adulto, diversión, humor, LL. ALETA

COMPOSITOR del ASIENTO 4A//: los movimientos del usuario de la manera en asiento crean música. Cada parte del asiento tiene diversa música el hacer de posibilidades. Eg.: cada área dentro de los restos del brazo, piernas, silla más baja media superior, lados, debajo y detrás (hasta hasta dónde estiramiento normal de los brazos) tiene botones o calibradores de espesor ahuecados de la respuesta del tacto. Los sonidos oyeron vía los auriculares los altavoces de un o, almacenando sobre disco. ALETA

COMPOSITOR del AMBIENTE 4B//: mezclarse con el producto del vibrador del asiento de la música, y asentar a compositor #4B. Tiene cojines de la respuesta de 2 - 12 pies; poner los lasers (función permutable con

alternativa del signaler del fq) en la cabeza, la muñeca, el pecho, la correa, hombros, rodillas, los tobillos, el etc y dejarlos accionar sano al golpear los receptores en sitio. Co-componer con el amigo/el socio. Realizarse en el país o en etapa (los receptores de la banda para activar luces, o luces pueden ser banda (programa) a responder automáticamente). Cada laser/la señal de light/fq y el sistema de la respuesta podían elegir entre los receptores múltiples, eg.: cada laser tiene sus propios 1-5 receptores, cada fabricación posee el sonido. Los receptores de cada laser agrupados por el tipo suenan categoría. O cada laser/signaler puede pegar cualquier objeto y c hace el sonido particular basado en el fq único reflejado (basado en el material). Para la diversión/el juego, (contenido de la conjetura del doblez de las persianas de w o wo) del material distante basado en sonido. ALETA

COMPOSITOR del UNO MISMO 4C: atar el micrófono (registrador de w atado físicamente o remotamente) a cualquier objeto de mudanza o vibrante: cola del animal, cuello, pie; zapato; reloj; puerta del lugar ocupado; cuerpo o cama mientras que teniendo sexo, roncando; etc. Dependiendo del fq recibido diversas conversiones del sonido se hacen en algo interesante oír. O el parte movible registró pedacitos en cualquiera de mis sistemas y juego que componían alrededor con él cerca: cambio de él; el usar como sonido del fondo/del primero plano; etc. También actúa como al revés para el número de movimientos (eg.: mide el tiempo de la puerta de los flapes del pájaro o del refrigerador abierta por la persona en dieta). TD: P.M. adulta exc de los pp del ll del truco de la diversión de los cabritos del contra del vp del ep del punto de ebullición del interruptor C (computadora) del `e HH TT (registrador bajo).

producto de 4D A PRE VR: usar tecnología actual. El fabricante puede ejecutar opciones de un menú ancho cuyo algunos se incluyen adjunto.

COMPONER =

- Puede ser compatible con equipo y programas de computación la existencia de las "multimedias".

D: uk/mic = "C" (carro/exhibición) = oscilador/parte posterior/estereofonia del juego

Ver el apéndice de este archivo para los detalles.

% existe: Carillones accionados solares. Energías del panel solar que giran el huelguista. Vendido vía una imagen más aguda - 94-95

. (d) Dibujo: uk/mic = computadora (carro/exhibición) = oscilador/parte posterior/estereofonia del juego

. Misceláneo:

"sintetizador", capacidad de transferir la señal al audio o a la videocinta, CD registrable.

- Las señales creadas se pueden sintetizar en imágenes de vídeo. El dispositivo puede imprimir el musical y o las creaciones video en los gráficos del color/del negro y del blanco, imágenes, artista ['iconos], códigos.
- tiene exhibición el demostrar de las señales que son recibidas, cómo se están convirtiendo, almacenado, enviado.

- el sistema sintetiza, archiva en memoria, y corrige todas las señales de cualquier manera que la tecnología ahora permita

- las señales se pueden convertir a también controlan luces según sonidos, ritmos, el etc. correspondientes (eg.: el destellar, mudanza, alteraciones del color vía la rotación de la hoja multicolora translúcida de la empanada, o uso de bombillas coloreadas deseadas, alteración del color ligero por el cambio en las señales electrónicas de los transmisores que generan diversas frecuencias ligeras de la misma fuente general - eg.: la misma pantalla o bulbo o pieza del bulbo

- las señales pueden crear las vibraciones que corresponden al sonido, al ritmo, al etc, efectuando: cualquie massager portable o inmóvil estándar, eg.: massager de control manual para todo el o cualquier parte cuerpo, asiento, cama, masaje del agua de la piscina del giro, etc. Estos massagers emiten en explosiones, velocidades, ciclos, rotaciones, el etc.

- señales de alertar al usuario de cuaesquiera estímulos externos vía los efectos resultantes uces de los descritos en esta categoría de producto, eg.: notificado de la vivienda que entra de la persona, sitio; fuego; ladrón; problema con el niño - gritando, despertó, alarma del tiempo, teléfono que sonaba, campana de puerta, o cosa activando cualquier llamada para la comunicación o la ayuda con o sin el usuario que sabía el tipo de situación con un código para el tipo situación. Tales señales pueden ser el único propósito del producto, o sean una característica, que interrumpe cualquier otro sistema descrito adjunto u otro (eg.: sistema de la hospitalidad, TV, juego video, etc). También aplicable para los minusválidos físicamente, ayudando saben el what que sucede, o utilizado como la rehabilitación/terapia físicas/psicologicas.

- jugar con el instrumento de percusión del laser (el laser substituye solamente el palillo), los "cojines del tambor" responden a los lasers (cada laser "palillo" que tiene diverso efecto). Libera a jugador de estar en la localización del sistema

- alternativo, el dispositivo se puede hacer en el instrumento manualmente conducido con un micrófono opcional y sin un sintetizador

OTD #3: exhibición (el tipo sonidos que son generados, el tipo modo del sintetizador del sonido actual en la activación); fd-hdd; pp y P.M. (cómo se sintetizan/se crean los sonidos); Reino Unido (el tipo sonidos quiso, midiendo el tiempo, how and when almacenar sonidos en memoria, y el resto de las acciones relacionadas de la computadora comunes al equipo que componía sano electrónico); tds (matriz) de la fecha del tiempo del `(cada serie de sonidos dentro del pedazo compuesto); el interactive% (grito interactivo de la computadora para generar sonidos señalando al lugar correcto); juguete; básico; entretener; micrófono (sonidos creados por el usuario en el cuarto); synth (control del usuario, eg. el teclado y o el software sintetiza); el printer% (impreso las cuentas musicales); M% (para operaciones más complejas, eg.: para conseguir esloganes raros [eg. ; llamadas exóticas del pájaro], como una biblioteca de sonidos); oscilador; balance; el speech%; vc; el tgh% (la terapia de música, jugando y siendo dirigido en manera apropiada según los textos y las pruebas psicologicos, usuario puede hacerse la sensación mejor; md; el cart% (sintetizando softwares, esloganes, la extensión de memoria); cp; uq (cómo utilizar el sistema, pidiendo menús); mq; el pi%; carácter; receptor acústico del

movimiento (la manera de la cual cualquier movimiento del pedazo [incluso si la necesidad todavía sea conectada por el alambre] genera por separado el sonido correspondiente según el programa del sintetizador de los sonidos, o control del usuario); multiusos (cada usuario puede tener sus los propios "pi", memoria, y las versiones de softwares (eg.: sintetizadores) cuáles diferencian de el de otros que usan el mismo sistema); cc; alejado (maneras en las cuales de generar señales (crear y o sintetizar los sonidos); notificador (el usuario ve sin ser disturbado por el sonido que "estado" de la generación del sonido o del estado trasero del juego); cojín del aire (las transmisiones generan sonidos e imágenes).

- Lugar de reunión del EL:

Mejora en la patente 5347306 de los E.E.U.U.: Lugar de reunión electrónica Animated del ~ de "C" para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" = TENER ACCESO (necesitado para cada participante (u) ensamblar) AL ANALIZADOR de // ((qué, donde, cuando, porqué y cómo) sistema cómo/W5 funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la banda de // del OSCILADOR de // NR (cuando u se pide para responder o debe notar ocurrencias señaladas) // (comunicación verbal) (cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) el RANURADOR de // R (el dispositivo del control/de comunicación del u) // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (u) el envío/que recibe están/W5 (qué de u, donde, cuando, porqué y cómo) de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus acciones) // TDS // T (teléfono del `) (cómo "obra recíprocamente" cada u w: el otro u/m) PISTA de // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada u = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

. Los E.E.U.U. patentan = "componen"

- str: (sonido o música) y juguete y eléctrico
- Patentes de los E.E.U.U.: 5451709 5375501 5369216 515057 4314499 53713136 5239124 4616547

. Patente 5368308 de los E.E.U.U.: Corriente de los sonidos registrados rotos en los segmentos entonces reordenados. La palmadita publicó 11.94.

% de la manera de la cual el "artista" genera "imágenes", o el accessor tiene el "acceso" se relaciona con la manera de la cual "se componen" los sonidos.

. Guía - composición (de sonidos): la determinación del uip del usuario de los sonidos que el likes= se da el trato preferente (uip-adaptaron proceso de selección) está dirigiendo a usuario.

. Usos de la guía:

- Da las ideas para la nueva música: cuando pegan al usuario [carece las ideas para que cómo continúe su picadura de sonidos o la música] = guía [que estudia uip-DB y el patrón del usuario para la parte anterior de los

pedazos pasados] da sugerencias en cómo continuar la música: de acuerdo con los u más allá de los patrones de la música compuestos

--UIP del composer= analizado para dar la dirección: qué se estudia en el usuario más allá de pedazos de la música [de acuerdo con W5 de los pedazos elementales de la música]. Preferencias del u en tipo: llaves; grupos identificables de llaves [ritmo, tempo, golpe]; donde el clímax de canciones se pone...

- Sugiere el tipo sonidos que mejor alcanzar [sicosociológico/humor] el effect= deseado para los oyentes:

--D: u = selecciona del tipo del menú de efecto deseado = k en la información sobre el público objetivo [uip] = analizador = guía sugiere: las pistas/tipo de sonidos [de la existencia] que sintetiza = el ~ u del oscilador (comunicador sano saliente del `) oyen = el usuario K (teclado del `) en su respuesta a los sonidos sugeridos [eg.: bueno o malo u otros indicadores para mejorar el tipo sonidos sugeridos] = el analizador configura de nuevo sugerencias más cercano a qué usuario desea = suena creado = almacenado en memoria.

- 'Guides= el simulador del movimiento 2D-040:

Los sonidos aparecen empezar con los altavoces delanteros, y van a la parte posterior.

- Instrumentos musicales de enseñanza 4281579 de la palmadita 4331061 de los E.E.U.U.

Archivo: Introducción/computadora de las características

COMPUTADORA - PARTE CENTRAL IMPORTANTE DE LA SOLICITUD DE PATENTE

C/la COMPUTADORA = esto es la unidad central de proceso (CPU) y o computadora. Uno de la parte central más importante [cada uno] de la función y de la característica electrónicas. Los detalles siguientes no son necesario de ninguna importancia central al concepto de "C". La capacidad de la función de la computadora es generalmente sinónima con las funciones del cerebro, del analizador, y de la unidad central - donde una de ellas se incluye en una especificación, asume que los otros dos pueden estar también. Como con la solicitud de patente entera, cualquier conflicto de una función puede ser omitido/ser sometido si es deseado por el usuario/sistema/el analizador = [entonces modificado para requisitos particulares].

OTD PARA "C":

. - Si un tamaño deseado de la unidad restringe/no permite una computadora dentro de él, computando las capacidades (memoria, "M", "pi") está conectado con la "C" en via^ del diagrama: radio (radio, sonido, luz) o por el alambre, transferencia de discos.

- "C" se puede conectar con otras partes en sistema vía el "tr sin hilos".

- Gamas en todos los tamaños y capacidades.

- Usos posibles del ejemplo: permite alterar usuario/sistema/control/monitor/memoria de /keep del "estado" de la demostración. Este hardware puede ser grandemente tamaño estándar de miniaturist/be. Notas sobre diagrama: también conectado posiblemente con la computadora: "carro"/[alarma si se mueve usando el "distancer"]/""/"de la impresora" función multiusos.

- D para "C": el 1M = 1A tr = 2c/3fd-hdd = 4display/5output

- Notas sobre D: 1: opcional. 1A: opcional; transmisiones vía: radio, luz, ondas acústicas; el "carro" se puede transferir entre "M" = "c". 2: en el mínimo, una pequeña unidad central; analiza datos entrados y determina respuesta. 3: opcional.

"C" también incluye la partición vieja de "FD-HDD".

--FD-HDD = el sistema incorpora una unidad del tratamiento por ordenador. Tiene memoria, y "exhibición".

- D: 1 regulador = 2 tr = 3 fd-hdd = 4 tr = función 5

--OTD: interactivo; 1mouse; 5osc; 1 telecontrol; 3 aplicaciones una impulsión floja con la impulsión de disco duro, y un microprocesador y otros elementos necesarios para la automatización; 3 pp (computadora de los programas del usuario a sus gustos vía la selección de menú); 3mp (el fabricante provee del sistema software de funcionamiento incluyendo menú y de la posibilidad para 3pp); 1uk (sistema por intervalos de torneado; exhibición que activa o 5printer); 5printer; carro 3 (el nuevo software funciona vendible).

- Funciones del producto (el interruptor con./desc. de la activación) controladas vía: botones, "telecontrol", "palmada" (activada por voz). Cada producto incorpora el diagrama opcional: Reino Unido (pp/mp) /remote (pp/mp) /clap/ [señales de control de otras unidades o piezas del producto] = tr/rc = C [el título para esta computadora central es "C1"] = tr/rc = ""/"" de la exhibición/[del notificador la otra función]. Usos posibles del ejemplo: permite alterar usuario/sistema/control/monitor/memoria de /keep del "estado" de la demostración. Este hardware puede ser grandemente tamaño estándar de miniaturist/be. Notas sobre diagrama: también conectado posiblemente con la computadora: "carro"/[alarma si se mueve usando el "distancer"]/""/"de la impresora" función multiusos.

- El sistema incorpora "básico"; % de la señal pueden venir de/van a través, otro sistema (relacionado) (M/[[c/tr/rc] =12C]) antes de ser conectada con 12C: ([1 a 10]/[14 a 21]);

-1 o más puertos en interfaz de "C" con todos los periférico/otros productos. Eg.: ver el interfaz P1394 en la edición del compartimiento 4.94 de la "ciencia popular", la página 51, y otros productos relacionados que son by^ desarrollado Apple, IBM, Digital, NCR, Texas Instruments.

programa informático del antivirus de %-Includes, si el sistema está en la posición posible para recibir un virus. C= " Bill "; C= " coordinador "

DIAGRAMA #1: 1uk (2pp/3mp)/4 el telecontrol (2pp/3mp)/5 aplaude (" P.M. "/pp/del discurso 6)/%7 [las señales tr entre otras unidades del producto/piezas (relacionadas)/9 mq/10 el uq]/8 M = 11 [tr/rc] = 12+C ("coordinador") = 13 [tr/rc] = las funciones deseadas de la descripción de producto 14+applicable es/16 carro deseado controlado/15 otro" del ~ usos de la "cuenta" del ~ 17 del "notificador" (oscilador) 18 "/19/21 "impresora" de la "exhibición/20 UIP".

COMPUTADORA =

. Misceláneo: El ACCESO = accede a los controles de producto electrónicos con afinado correctamente en la combinación. +ANALYZER = los programas informáticos analiza cómo manejar la situación. "CUENTA". BVA = analizador del hielo del comportamiento. El sistema analiza voces de la gente, así que el sistema puede responder apropiadamente (vía el UIP). +C = computadora. El centro del sistema a menos que esté descrito de otra manera. M/MFH = opción de la transmisión en circuito del ordenador central para tareas más complejas. Banda = sistemas "cerebro" del programa (software) a la función según lo deseado. %PS = sistema de colocación. Identifica la posición del paladio (dispositivo de colocación) vía sus ondas difunden, sistema responde por consiguiente. Q = usuario/sistema se hace preguntas. Ayuda a cada uno mejor a entenderse. Vía el "analizador" /UIP/ "tener acceso" al sistema sabe qué preguntas a pedir. CUENTA = el estado de la situación y o del funcionamiento del usuario. Ayudas: "Analizador" /UIP/ "acceso". Ayuda del SENSOR = de los sensores: "Analizador" /UIP/ "acceso". El ANALIZADOR de SONIDOS = analiza el tipo sonido. Ayudas: "Analizador" /UIP/ "acceso". El ESTADO = el sistema demuestra el estado de la situación. +UIP = programación de la información de usuario. El sistema utiliza la información recogida sobre usuario para mejorar lo sirve. ANALIZADOR VISUAL = alarmas cuando la cámara ve un cambio en su opinión.

D1: señales 1 - > 2 datos de la entrada particular (artículo que es analizado (para: uip, acceso)) - > 3 pusieron en file1 = 4 tr/rc = 5 c (6 archivos existentes) = 7 archivos entrados comparados matched/8 de w 9 = 10 semejanzas y 11 diferencias observaron = 12 tipos/llanos de diferencias 13 determined/14 = la señal hecha conclusión "analizada" 15 = 16 = la acción 17 hecha por s 18 sistemas/19 o la conclusión de las demostraciones de la impresora.

- Notas D1: 1: parte opcional de flujo de datos; sonidos de = analizador 2 sonidos; luces; movimiento del cuerpo = (2 sensores); visiones = analizador visual. 2: comunicación w otros productos del EL; c. 3: interruptor; diversos archivos son presión o etiquetado automáticamente según el tipo situación según circunstancias/ocurrencias (1). 6: los archivos se convirtieron anterior por el fabricante (mp), o la banda del u. 7 y 8: las semejanzas/las diferencias observaron/analizado vía: palabras claves/el paragraphs%, analizador visual, crujido de número del interruptor. 9: datos a partir de 1, 2, 3, 4, 5. 13 y de 14: análisis del interruptor. 15: análisis del interruptor. 16: etiquetas del código de computadora que el tipo interruptor de la situación ha

determinado ser el caso, eg.: favorable, desfavorable, y o qué medidas son necesarias ser tomadas (debido al "estado" de la situación).

- D2: entrada - > c (analizador (interruptor, uip, acceso)) - > resultados/función (alterada según cómo el sistema puede querer adaptarse según las determinaciones/las conclusiones hechas por el analizador).

- D3: C (analizador del interruptor, UIP, acceso) =

ACCESO (determina w5 puede tener acceso en cualquier sistema dado (c, m, cualquier porción de eso, eg.: particular archivo o informático programa/característica)/CARRO (interruptor de diferenciación para el tipo análisis necesario)/COMPOSICIÓN ()/FECHA ()/S ()/EDUC (el interruptor determina el nivel de la sofisticación del u (w sys/sw) = interno simplifica/las complejidades el interfaz del interruptor (y las funciones/los pasos disponibles necesitó alcanzar puntería deseada (vía pr/k))) desarrollo del uip)/MULTIUSOS (analiza/uip (tareas/cosas/ocurrencia) diferentemente según el tipo/uip de u; desarrollo del)/NOTIFICADOR del uip (u alertó cuando el analizador/uip/acceso determina necesidad de u (poder) de saber (estado))/OSCILADOR ()/banda (cómo el analizador/uip/acceso es funcionar/qué su buscar y cómo información de proceso/para w5)/picosegundo (determina la localización de objetos, información de procesos por consiguiente (como banda))/Q (decide qué preguntas para pedir u según circunstancias, eg.: qué u quiere o es haciendo (w5), u estado)/R ()/CUENTA (las nuevas cuentas emparejaron con archivos desarrollados anteriores para el análisis/uip/acceso; crea los nuevos archivos para las nuevas cuentas, el desarrollo del)/SENSOR del uip (compara los archivos para las señales entradas w antes qué se quiere/necesario/expected/is estándar/ha ocurrido históricamente (uip/m/database))/SONIDO ANALIZADOR (compara archivos previamente almacenados entrados de los sonidos de los sonidos w)/DISCURSO (analizador de sonidos)/ESTADO ()/SYNTH (synth del sistema (automáticamente) según: pr/uip/u k) TDS (cuenta de los efectos, desarrollo del uip)/T (usos del interruptor de la telefonía)/UIP (compara archivos)/VISUAL ANALIZADOR (compara los archivos,) inteligente/VR del monitor 2E251 (compara archivos).

- en algunas circunstancias (más simples), el analizador/uip/software del wo de las funciones de acceso, eg.: torneado simple con./desc. según la situación.

- D: entrada de datos = analizador/uip/acceso = memoria (M, carro, reconoce multiusos) = analizador = salida = función de datos

- OTD #1:

consejero 5A-810: compila y analiza la información de usuario.

- OTD #2: fd-hdd; los pp y el programa de la P.M. cómo quisieran que el sistema recogiera, recuperan y el "analizador" /uip/ "acceso" los datos en base de datos; Reino Unido; tds (cuando y cómo ocurrieron los elementos); el educ%; M%; cuenta (la información de la cuenta se puede procesar para la base de datos del UIP; y el UIP puede ayudar a generar cuentas deseadas); carro (para los datos adicionales para la base de datos; y o softwares para procesar la base de datos); uq (la base de datos del pi se utiliza para ayudar a generar respuestas alrededor, eg.: sobre el usuario más allá de preferencias y o de actividades); P.M. (la base de datos y o el software puede ayudar a preguntas pronto, eg.: para ampliar la base de datos, dirigir a usuario en la pregunta

correcta si el sistema primero consigue la información correcta); "analizador" /uip/ "acceso" (los límites tienen acceso a la información delicada dentro del todo o una parte de la base de datos a la gente con la contraseña correcta).

- Artículo en "americano científico", p.64, abril de 1995. Título del artículo: "Máquinas que aprenden de indirectas". Su alrededor: El aprendizaje de máquina mejora perceptiblemente aprovechándose de la información disponible de indirectas inteligentes; discute el proceso del algoritmo de modo general; da ejemplos de diferenciación, eg.: juicio de las computadoras cuánto crédito dar a los usos de la tarjeta de crédito basó en las últimas historias de la otra gente similar

- Pieza #1 de OTD: El dispositivo electrónico obtiene la información sobre el usuario por uno o más del siguiente: recordar el funcionamiento anterior del usuario, eg.: sus capacidades y o dificultades en esto, o dispositivos relacionados (que transmiten datos del uip a otras unidades vía el alambre, o %wireless); pidiendo preguntas del usuario, o "M"; el usuario toma uno o más pruebas, el tipo y la cantidad es determinada por el uso deseado del producto; otra persona o dispositivo (m) da la información sobre usuario; etc. El dispositivo reconoce a más de un usuario por multiusos, eg.: sus códigos usados para acceder en el dispositivo. La información personal se almacena en memoria y es utilizada por el dispositivo más inteligente al sastre sí mismo a las necesidades particulares del usuario. La manera de la cual la invención se adapta a las necesidades de usuario puede alterar según: cambios pequeños o grandes en la base de datos del uip, págs.

- Pieza #2 de OTD: el usuario puede llevar su carro (su "analizador personalizado" /uip/ "acceso" para todos los productos idénticos o relacionados) de la máquina la máquina; analizador" /uip/ "acceso" de diverso del carro usuario de los efectos "diferentemente con los cambios correlacionados en funciones; tipo cambios del carácter según el uip (si se utiliza una exhibición ("S")); fecha; del "acceso" de /uip/ del "analizador" puede ser visto en la exhibición datos ("S") y o ser impreso; el uip se utiliza para aumentar el cociente de la satisfacción del usuario, eg.: entretener, (^possibly cerca: la manera de la cual la función funciona, sonidos, luces, palabras se utiliza para crear mejor el tipo del efecto electrónico uip indica es más probable aumentar la reacción positiva del usuario a usar el producto [los estudios de la prueba se conducen para considerar las reacciones de la gente en estudios del caso de prueba de 50 - 1000 personas]); "C"; % "del analizador" /uip/ "acceso" pueden apoyar interactivo (dando los datos adicionales necesitó mejorar la invención del sastre al usuario; % de los datos obtenidos para la memoria del uip del micrófono ("mic") (reconocedor de la voz); ratón; P.M.; multiusos; la base de datos del "acceso" de /uip/ del "analizador" dirige las funciones de sistema (determina el tipo, manera, sincronización, independientemente de si notificar, mq, oscilador, synth; pp; del uip de la base de datos de las influencias de la impresora del impreso los parámetros, cuenta, discurso, vc, la manera de la cual funciona mientras que un semi-juguete, él incita - aceptan - el uq de los procesos; tds; Reino Unido. Los datos son via^ también obtenido: "Reino Unido", "carro", "teléfono", "MES", explorador; El UIP se puede programar/entender con la ayuda de: psicólogos, sociólogos, expertos de comercialización; Ciudad del u (código de área del teléfono/código postal)/identificación de llamador/localización basada en efecto del paladio cómo interfaces de sistema w U.

- D: entrada-salida =tr/rc=c de los datos

- el traductor electrónico o-C85 habla palabras/frases hacia fuera deseadas. Fuji/Xerox 29 de agosto de 92 NK. D: C85= " teléfono "

+ organizando y procesando los datos D: Este sistema de N (C=SW para organizar y procesar datos. "/uip/"acceso" del monitor inteligente C/2E251 del verificador del contenido y de la fecha de // 4E020//"del analizador =

TENER ACCESO (mejor determinar quién puede acceder, trabajando w: analizadores del uip, de la representación visual, sanos y del comportamiento); ANALIZADOR (cómo archivar w5); CUENTA; CARRO (datos que se colocarán); EDUC (); M (almacenaje para: registro, DB); MIC (); MULTIUSOS (procesos diferentemente); NOTIFICADOR (cuando uno o más elementos w5 de la ocurrencia de a (almacenada previamente) como banda se resuelven por requerimiento por u); OSCILADOR (); Banda (cómo procesar, organizar, colocarse, los datos del nr; controlando qué incluso para registrar y cómo (w5)); Q (); S (); CUENTA (las cuentas de diferenciación determinan cómo los datos/los archivos organizaron/procesado, eg.: por el uip, requisitos del DB o de la banda); ANALIZADOR de SONIDOS (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); ESTADO (); TDS (); T (datos del tr vía el módem, el fax, el email, paginadores, el etc); UIP (); ANALIZADOR VISUAL (si suceden ciertas ocurrencias - > (los expedientes - >) registrado); WA (sistema de los controles).

Los intentos del sistema a pensar como un cerebro humano (donde (w5) factible), sistema intentan saber/aprenden (memoria, analizador) sus limitaciones. Utiliza el mejor estado plus ultra en el campo. Lógica confusa.

- El "cerebro" es una combinación del siguiente:

El ACCESO = accede a los controles de producto electrónicos con afinado correctamente en la combinación. +ANALYZER = los programas informáticos analiza cómo manejar la situación. BVA = analizador de la voz del comportamiento. El sistema analiza voces de la gente, así que el sistema puede responder apropiadamente (vía el UIP). +C = computadora. El centro del sistema a menos que esté descrito de otra manera. M = opción de la transmisión en circuito del ordenador central para tareas más complejas. Banda = sistemas "cerebro" del programa (software) a la función según lo deseado. %PS = sistema de colocación. Identifica la posición del paladio (dispositivo de colocación) vía sus ondas difunden, sistema responde por consiguiente. Q = usuario/sistema se hace preguntas. Ayuda a cada uno mejor a entenderse. Vía el "analizador" /UIP/ "tener acceso" al sistema sabe qué preguntas a pedir. CUENTA = el estado de la situación y o del funcionamiento del usuario. Ayudas: "Analizador" /UIP/ "acceso". Ayuda del SENSOR = de los sensores: "Analizador" /UIP/ "acceso". El ANALIZADOR de SONIDOS = analiza el tipo sonido. Ayudas: "Analizador" /UIP/ "acceso". El ESTADO = el sistema demuestra el estado de la situación. +UIP = programación de la información de usuario. El sistema utiliza la información recogida sobre usuario para mejorar lo sirve. ANALIZADOR VISUAL = alarmas cuando la cámara ve un cambio en su opinión. - D1: 1 Reino Unido = 2 c = 3 tr = función 4 M/5.

- El "cerebro" tiende un puente sobre funciones de uno o más piezas mencionadas (vía "analizador") según lo enumerado: dentro del "cerebro general" parte/el "sistema" en general. % Eg.: integra el uip con el "acceso" en el monitor inteligente 2E251.

. Computadora: la parte central más importante de cada uno electrónico [menos] relacionó generalmente la característica, número del producto.

Los detalles siguientes no son necesario de ninguna importancia central al concepto de "C". Sinónimo con la pieza "cerebro"; Analizador....

OTD para "C":

. - Si un tamaño deseado de la unidad restringe/no permite una computadora dentro de él, computando las capacidades (memoria, "M", "pi") está conectado con la "C" en via^ del diagrama: radio (radio, sonido, luz) o por el alambre, transferencia de discos.

- "C" se puede conectar con otras partes en sistema vía el "tr sin hilos".

- Gamas en todos los tamaños y capacidades.

- Usos posibles del ejemplo: permite alterar usuario/sistema/control/monitor/memoria de /keep del "estado" de la demostración. Este hardware puede ser grandemente tamaño estándar de miniaturist/be. Notas sobre diagrama: también conectado posiblemente con la computadora: "carro"/[alarma si se mueve usando el "distancer"]/""/"de la impresora" función multiusos.

- D para "C": el 1M = 1A tr = 2c/3fd-hdd = 4display/5output

- Notas sobre D: 1: opcional. 1A: opcional; transmisiones vía: radio, luz, ondas acústicas; el "carro" se puede transferir entre "M" = "c". 2: en el mínimo, una pequeña unidad central; analiza datos entrados y determina respuesta. 3: opcional.

"C" también incluye la partición vieja de "FD-HDD".

--FD-HDD = el sistema incorpora una unidad del tratamiento por ordenador. Tiene memoria, y "exhibición".

- D: 1 regulador = 2 tr = 3 fd-hdd = 4 tr = función 5

--OTD: interactivo; 1mouse; 5osc; 1 telecontrol; 3 aplicaciones una impulsión floja con la impulsión de disco duro, y un microprocesador y otros elementos necesarios para la automatización; 3 pp (computadora de los programas del usuario a sus gustos vía la selección de menú); 3mp (el fabricante provee del sistema software de funcionamiento incluyendo menú y de la posibilidad para 3pp); 1uk (sistema por intervalos de torneado; exhibición que activa o 5printer); 5printer; carro 3 (el nuevo software funciona vendible).

- Funciones del producto (el interruptor con./desc. de la activación) controladas vía: botones, "telecontrol", "palmada" (activada por voz). Cada producto incorpora el diagrama opcional: Reino Unido (pp/mp) /remote (pp/mp) /clap/ [señales de control de otras unidades o piezas del producto] = tr/rc = C [el título para esta computadora central es "C1"] = tr/rc = ""/"" de la exhibición/[del notificador la otra función]. Usos posibles del ejemplo: permite alterar usuario/sistema/control/monitor/memoria de /keep del "estado" de la demostración. Este hardware puede ser grandemente tamaño estándar de miniaturist/be. Extremo de esta sección de la "computadora"

Archivo: Introducción de las características/analizador contento

ANALIZADOR CONTENTO

Analizador contento físico: Exploradores del CAT, radiografías, escalas, detectores de metales, escalas del peso, analizador del olor, sensor ligero. Analizador contento de la base de datos: Los tipos de bases de datos analizadas incluyen: vago-DB; pista-DB.

DETECTOR DE METALES DE A4-R29A QUE IDENTIFICA EL TIPO SUSTANCIA LOCALIZADA, EG.: tipo metal, sustancia química, etc.

Problema: el producto pudo ser demasiado grande para identificar el tipo sustancia, forma es más fácil.

-

ESCALA de la RADIOGRAFÍA 8B420: Descubrir el peso, la densidad y otras características para las secciones internas del artículo.

- Escala para el análisis de la subdivisión: utilizar las frecuencias eg.: sonido, radiografía, etc para juzgar densidad y el peso sección interna o de la otra secundaria de un artículo. Esta manera una puede conseguir una mejor idea del peso y o de la densidad de una sección algo cuyo una no está deseando cortar.

- la escala se pudo utilizar para pesar el artículo total también. "C" resta el peso de piezas indeseadas.

- OTD: "S"; "C"; pp; P.M.; Reino Unido; fecha; básico; educ; portable; impresora; au; t; "M"; punto de ebullición; cuenta; carro; uq; mq; uip; carácter; notificador; Radiografiar y el resto de los modos estándar de contenido de comprensión se pueden utilizar, eg.: analizador de sonidos; cómo la luz se transmite a través (si es semiopaco); etc.

-

Analizador contento de la base de datos: Los tipos de bases de datos analizadas incluyen: vago-DB; pista-DB. El desarrollo de UIP-DB es un tipo de analizador contento. Usos: desarrollar uip-DB o uip-adaptar.

+ <3, ESCALA de 3> 4C170: Alerta a usuario si algo no está en orden perfecta:

4C171: Alarmas si no está en los gramos cero antes de la persona que pone el artículo en escala. Ahorra a usuario de tener que leer la escala antes, o el usuario puede olvidar comprobar para saber si hay polvo u obstrucciones.

4C172: LAS ALARMAS SI HAY LAS VIBRACIONES O ESCALA NO SON COMPLETAMENTE BASTANTE. También se supervisa para los problemas mecánicos.

+-alerts con el OSCILADOR, el etc si la escala está o no está cerca de los gramos cero cuando entonces alguien pone algo sobre escala. Propósito: asegura solamente artículos queridos se están pesando

+-system comprueba a uno mismo si todos los sistemas de medición están en orden perfecta; si no se alterará y o alertará a usuario a la necesidad de correcciones

+ (para las vibraciones y o si la escala no es plana)

- provechoso para los usuarios frecuentes de escalas (en laboratorio). La mejor opción puede estar para que un sonido semi corto vaya en cuando había un peso cero antedicho en la escala por más de 5 minutos = cuando más peso entonces se agrega.

- D: escala - > determinador del peso (analizador) = c = osc/s

EXPLORADOR MÉDICO de ++ 2D-200: El sistema analiza las superficies para cualquier color anormal, texturas del cuerpo vía transmitir frecuencias ligeras diversas para ayudar a identificar reflejos de luz

particulares. La base de datos de sistema empareja imágenes de la luz reflejada contra la base de datos grande de enfermedades sabidas y de sus patrones asociados del color, y otros síntomas. Los doctores de las ayudas de la base de datos diagnostican el tipo enfermedades con un arsenal de otras pruebas existentes. También explora sustancias químicas para ayudar a determinar sus constituciones.

-

Comprobaciones para colores anormales o texturas en superficies de la piel y de cualquie órgano.

- transmite cualquier arsenal (diferenciando) de frecuencias ligeras para analizar la superficie para la anormalidad del color. Mecanografiar el tipo de los efectos del tr (transmite) de reflexiones posibles, por lo tanto una amplia gama de diversos espectros "que se analizarán".

- D: C (computadora del `) = transmisor (luces/sonidos/etc) - > (superficie de) objeto que es estudiado) - > reflexión (s) - > sensor = analizador = c =s/printer/m/cart

- exploraciones la superficie para la aspereza de la textura (analiza las diferencias minuciosas en distancia del transmisor/del receptor)

- el examinador del globo del ojo correlaciona el ojo que es examinado con su memoria de otras imágenes normales y anormales de globos del ojo

- ap: para lo que sea partes del cuerpo expuestas normalmente, o los órganos internos durante cirugía

- todos estos datos son analizados por el analizador médico de la computadora "C" para determinar: dolencia, curaciones, cantidades de y cómo la prescripción debe ser administrada, etc

- más datos sobre normal y las condiciones no normales del cuerpo, mayor es la base de datos del uip desarrollada en el paciente/el objeto - > interruptor (software del `) "analiza" las ocasiones matemáticas probables = para el tipo diagnosis.

--necesidad primero de desarrollar la base de datos grande de síntomas de dolencias sabidas - > base de datos de la c.

--modo de cálculos: el uip de otras diagnosis se empareja contra estudio actual = cuando todos/muchos fósforo a la dolencia particular - > el doctor/el científico "notificó".

- Tipos de software (carro): uip (sistema = m)

-2D-201

VAPOR del CUERPO 2D-201/ANALIZADOR de las EXCRECIONES: "Analiza" partículas aerotransportadas del cuerpo: la respiración, el olor de cuerpo, el sudor, los rasgones, el etc. estudia características de las partículas obtenidas para cualquier cosa inusual/normal.

- interruptor (similar) de las aplicaciones (software del `) como en: 2D-200. Relacionado con KN (invención) del directorio A, donde correos de u en excreciones corporales y grabaciones de los sonidos del cuerpo/de los pulsos para el análisis por el técnico/el doctor médicos.

MEDIDOR LIGERA y ANALIZADOR de $ 1G19:

Se mide y se analiza Sun o el nivel de la luz eléctrica recibido. Para: meteorología; horticulturalists; estudiar relaciones entre la luz y el producto químico relacionado/las reacciones biológicas, eg.: 7G N.

- número del shows^ de minutos recibidos para qué niveles de luz, eg.: luz del sol directa en el punto más alto en cielo = 310 minutos, luz directa del P.M. (2-4pm) = 59 minutos.
- D: "sensor" = C (computadora del `) = contador de tiempo
- Estrategia de búsqueda de la patente: measur ligero near5 - pero esto trae 400 patentes en el CD de USPTO.

3J170 SALUD ALERTER: Analiza cuando es humano/el animal/la otra salud de la forma de vida poder/ha entrado en zona peligrosa. el sistema (sistema) estudia todas las señales convertidas a digital del organismo, eg.: sonidos, sistemas de vigilancia existentes de la salud. Muchos KN relacionados.

- diferencia de sistemas existentes incorporando KN, eg.: + 3J160, + 1C250, UIP (para se busca qué - > nr)
- OTD D: U = este ~ del sistema de N (sistema) C =

TENER ACCESO (solamente ciertas señales accionarán: proceso del "análisis" - > nr); ANALIZADOR; CUENTA (carga por nr ()/hora del notificador); CARRO (carro de diferenciación por el organismo/la enfermedad estudiados/ambiente/estudio); EDIT (el sistema filtra hacia fuera datos menos pertinentes antes de que el "analizador" consiga = él); MULTIUSOS (ajusta según diferente: estudios/científicos/pacientes u organismos); nr (notificador) (notificador); oscilador (comunicador sano saliente del `) (conseguir el Info en organismo vía el audio/la impresora/s); Banda (w5 necesita "análisis"); Picosegundo-Zona; Q; R (`teledirigido); RANURADOR (señalado "corrigió" los datos encaminados (a DB/a m/científico (doctor))); CUENTA (salud del sistema/del organismo); SENSOR (sensores médicos existentes que estudian "estado" del organismo); ANALIZADOR de SONIDOS (estudios: respirando, ritmo cardíaco, flujos arteriales, cuerpo el movement%, etc); ESTADO; TDS ("analiza" el espaciamiento de la frecuencia y del tiempo entre los acontecimientos que son estudiados); PISTA (historia del organismo); UIP (estudios dentro del resulting= del parámetro programado en solamente ocurrencias deseadas del nr (notificador); el sistema se ajusta a las circunstancias cambiantes con el organismo y o se está estudiando qué (w5): los problemas de salud del organismo que el cambio (síntomas de diferenciación) empeora/que mejora); ANALIZADOR VISUAL (imagen médica KN: Radiografías); WA ("analiza" el organismo mientras que camina sobre/vive su (cerca) vida normal).

MISCELÁNEO:

. (Laboratorio) analizadores contentos

. Este equipo relacionado de la radiografía de las cubiertas de archivo, sistemas que analizan contenido del otro material.

. (d) Dibujo: el elemento que era analizado/estudió = las ondas (ligeras/de radio) de la señal que era transmisor/receptor transmitidos del ~ (el conseguir señala (siendo despedido detrás) = C (computadora del `) = exhibición/el listado/tr (transmite) = la otra C/mfh

. Los analizadores contentos sinergizan con: UIP (en los elementos que son estudiados), bases de datos.

. Los cambios en "estado" del contenido (en un cierto plazo/en respuesta a estímulos) se pueden estudiar también con UIP (en los elementos que son estudiados), bases de datos.

ANALIZADORES DE LA SUPERFICIE: se envían diversas frecuencias de radio/ligeras, la reflexión resultante se analizan por consiguiente. Para médico/no médico.

- Los datos obtenidos se reúnen con muchos otros datos para entender mejor el pronóstico
- Humano/el animal/la planta/el otro analizador de la piel. Analiza cualquier superficie, también: ojos, uñas, pelo, formaciones de tierra del satélite

UIP Y BASES DE DATOS:

Compilado usando analizadores contentos en elementos numerosos con condiciones sabidas. Por lo tanto, las características de tales se pueden emparejar con otros elementos (con la condición desconocida) que también exhiban iguales/la superficie/análisis del contenido similares.

Incluye: Analizadores del comportamiento. Calculadores para el contenido probable futuro - un día incluso ESPECIALMENTE un analizador avanzado (de la energía sensorial adicional) pudo ser desarrollado (para la diversión).

. Olor/analizador químico: analizar el olor en el ambiente donde se está tirando el vídeo. Los resultados del olor serán convertidos a digital y transmitidos para descifrar por sensor de un decodificador del olor' en cualquier exhibición o punto de u (usuario). Desarrollo del análisis del olor y del protocolo del código que se podría agregar a las capas de los datos y de la comunicación de dispositivos. Confía en los sensores/los indicadores del olor. Por ejemplo los detectores de humos pueden analizar ciertos gases. Cómo sobre el adición de un código para cada gas analizable y transmitir el código a otros dispositivos que tienen emisores del olor.

- Lista de los olores: El alimento huele, los olores de la flor, humo, niebla con humo, contaminación, gases, perfumes por la marca de fábrica (Calvin Klein, Liz Taylor, el canal.) Etc
- Efecto marcado con etiqueta 7J08 de la cascada: Las piedras de afilar del sistema adentro en una frecuencia (sonido), entonces cancelan otros sonidos que hacen clarificante sano marcado con etiqueta. El sistema reacciona cuando ocurre la acción marcada con etiqueta. Piedras de afilar adentro en cualquier cosa que efectúa los sentidos del hombre cinco. El analizador contento, corrige, busca y reacciona, reconocedor sano, sastre, analizador visual.

EXTREMO DE ANALIZADORES CONTENTOS

Archivo: Introducción/coordinador de las características

COORDINADOR

Esta característica coordina diversos partes y aspectos dentro del sistema electrónico. Los seres humanos se coordinan naturalmente, como sus ojos, postura, manos y cerebro como leen sobre invenciones interesantes adjunto. Esta función describe cómo las diversos piezas/aspectos se pueden coordinar [dentro] el sistema. Llaman el "coordinador" también un correlador, o el correlacionar. Puede ser estrechamente vinculada asociarse o el asociarse.

Las diversos piezas/aspectos se coordinan dentro del sistema. El "coordinador" es correlador de a (+software).
D: Coordinador = C = aspectos de invenciones/de piezas/de funciones.
- Coordinador - importancia: Los coordenadas entre la diferenciación "anotan"/los valores/los niveles de importancia etiquetados sobre ocurrencias. El "analizador" determina qué ocurrencias son más valiosas = ellas se procesan/grado usado de w (con) mayor (de influencia).
- Coordinador - cuenta: Cuenta: los coordenadas/hacen juegos malabares del sistema (sistema) diversos piezas/archivos/funciones posibles según su "cuenta" = coordinador-importancia/coordinador/corrector; la cuenta de las influencias de la ocurrencia cómo coordenadas del coordinador que el w= de la ocurrencia señaló protocols/sw del sistema.
- traslapos: el analizador (lógica confusa), uip-adapta, corrige, coordinador de la venda de la música 5E090
- "Access'" "VAGOS": "coordina" entre diversas características del comportamiento (del accessor). La cuenta para un archivo puede efectuar la cuenta de otros archivos relacionados.
- Ver a coordinador del sensor: qué coordenadas entre los sensores múltiples en mejor determinar la naturaleza de la ocurrencia.

COORDINADOR - IMPORTANCIA: Los coordenadas entre la diferenciación "anotan"/los valores/los niveles de importancia etiquetados sobre ocurrencias. El "analizador" determina qué ocurrencias son más valiosas = ellas se procesan/grado usado de w (con) mayor (de influencia).
- D: ocurrencia = sensor~analyzer = c (coordenadas) = función/proceso/resultado.
. D posterior leída: U = este sistema de N (invención) (coordenadas cómo las piezas trabajan w C (computadora del `) y otras piezas) ~ C =
TENER ACCESO (protección; el nivel de visto bueno de seguridad concedió el nivel del uso de los límites de otras partes en el sistema; análogo a la gorila de la puerta principal de la barra que no permite en la mala gente (bandidos según lo explicado en el acceso) trastornar el partido feliz (funciones, secreto, atando encima del sistema tan barran los que necesitan utilizarlo temporalmente)); ANALIZADOR (cómo coordinar); CUENTA (cuentas según las cuales las piezas eran w5 usados/durante cu3anto tiempo; si diversas piezas fueron utilizadas simultáneamente la facturación por minuto puede ser más alta, pero dice no el doble si solamente dos porciones fueron utilizadas); CARRO (controles cómo la coordinación hizo posible; multiusos); EDIT (cómo corregir facilita efectos deseados; modos que corrigen múltiples de coordinación (simultáneamente/para el mismo

uso/función)); EDUC ("analiza" cómo u puede aprender mejor qué sistema/student/u/guardian quisiera que u aprendiera); MULTIUSOS (ejercicio de equilibrio entre los usuarios de diferenciación); nr (notificador) (diversas ocurrencias que correlacionan con NR correspondiente); Banda (modo de la correlación en (con referencia a) programable); Picosegundo-Zona (las zonas u/sistema de los correlativos están en señales correspondientes del w= = cómo se interpretan/se procesan tales señales); Q (correlativos qué sistema sabe sobre el material preguntado, eg.: DB, uip, preguntas del u del w= uip-DB (atando características de las características de q w (con) en la base de información del sistema); RANURADOR (cómo el ranurador facilita efectos deseados; modos múltiples de coordinación del ranurador (simultáneamente/para el mismo uso/función)); CUENTA (decide qué cuentas o sistema de la cuenta (sistema) a utilizar - correlacionando entre varios de éstos dependiendo del uso señalado); SENSOR (correlativos los valores (diferenciando) de las señales del sensor, eg.: cuál/qué debe ser w repartido (más) seriamente;); ANALIZADOR de SONIDOS (los correlativos que los sonidos cogieron por DB del w= del mic (base de datos del `) de sonidos = ayudando identifican = los sonidos del proceso/de la etiqueta cogidos por mic = efecto resultante; correlativos entre más y sonidos menos importantes/pertinentes); ESTADO; TDS; T; INCLINACIÓN; PISTA; U; UIP; ANALIZADOR VISUAL; VR; WA.

COORDINADOR - "REDACTOR" Y "RANURADOR": (d) dibujo posterior leído: U = este ~ del sistema de N (ranurador del coordinador = del redactor) C = ACCESO; ANALIZADOR; CUENTA; CARRO; EDUC estudiante (de los efectos W5 (qué, donde, cuando, porqué y cómo) aprende; determina qué material/métodos usados para enseñar, o la necesidad a enseñar; uip); MULTIUSOS (cada u tratado diferentemente).

COORDINADOR = MULTIUSOS: D posterior leída: U = este sistema de N (sistema) (diversos piezas/aspectos/funciones de los coordenadas para las cuales está disponible o utilizado por u) el ~ C = ACCESO (diversos piezas/aspectos/funciones de los coordenadas para las cuales está disponible o utilizado por u = basado en la contraseña del u); CUENTA (detalla cuentas según u, y por la sesión/el tipo uso); carro (cartucho del software); RANURADOR; CUENTA; PISTA; U; UIP (el uip de diferenciación se desarrolla para cada sistema del then= de u (sistema) coordina = las funciones para cada usuario por consiguiente).

COORDINADOR - CUENTA: (d) dibujo posterior leído: U = este sistema de N (cuenta: los coordenadas/hacen juegos malabares del sistema diversos piezas/archivos/funciones posibles según su "cuenta" = coordinador-importancia/coordinador/corrector; la cuenta de las influencias de la ocurrencia cómo coordenadas del coordinador que ocurrencia protocols/sw señalado w= de ~ del sistema) C = ACCESO; ANALIZADOR; CUENTA; CARRO; EDIT; EDUC; MULTIUSOS; nr (notificador) (la cuenta de las influencias de la ocurrencia cómo coordenadas del coordinador que ocurrencia protocols/sw señalado w= del sistema); Banda; Picosegundo-Zona; Q; R; RANURADOR; CUENTA; SENSOR; ANALIZADOR DE SONIDOS; ESTADO; TDS; T; INCLINACIÓN; PISTA; U; UIP; ANALIZADOR VISUAL; VR; WA.

COORDINADOR - CORRECCIONES: El sistema ajusta al funcionamiento de la mal calidad (según lo medido vía: "cuenta", uip, vagos) cerca: degradación/cortando elementos/modos menos deseables, o "encaminándolos", o "corrigiéndolos". D posterior leída: U = este ~ del sistema de N (coordinador - correcciones, coordinador de la venda de la música 5E090) C = CUENTA (cuentas para un aspecto más pertinente del uso del usuario, eg.: cuando se utilizan los servicios múltiples/los modos); CARRO (Correlador-correcciones de los controles); EDIT; EDUC (da mejor/una información del principiante más pertinente/entrenamiento); MULTIUSOS (el correlador balancea uso entre varias personas que usan el sistema (simultáneamente)); Banda; RANURADOR (se encaminan las señales/el punto bajo asociado los archivos "cuentas" del w= = (corregido) por consiguiente); CUENTA (cuenta usada para señalar qué correcciones de las necesidades/alteraciones w5); ANALIZADOR de SONIDOS (sonidos pobres/indeseables del "synth"); ESTADO; U; UIP; ANALIZADOR VISUAL.

Esta parte estaba antes solamente: coordinador de la venda de la música 5E090: < (3.5-pat, 2.5 mk), 3.5> el dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. Corrige averías de jugadores vía: 1] u delinea a cierto jugador cuyo se reduzca sonido [porque necesitan jugar pero el grupo no los quiere];] el sistema 2 "analiza" (analizador de sonidos) cómo cada jugador juega entonces = ajusta el oscilador (comunicador sano saliente del `) por consiguiente, eg.: sonidos de los cortes que exceden parámetros sanos de la frecuencia.

El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades (portables) múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. La mayor portabilidad, libertad, suena de fabricación de la experimentación, una grabación más barata.

- Mercado limitado: apunta a jóvenes - el mercado grande, "quiere ser ejecutantes", los profesionales no necesitan ni utilizan a personal sano profesional.
- el sistema puede también ser un acompañamiento (necesitar a pocos jugadores); no limitado a la fijación/a alterar su música pobre.
- la pieza del tratamiento de señales es qué haría esto patentable
- puede reducir al volumen de jugadores particulares.
- "cojín del aire"

Otros usos: cualquie portable N ()/parte de la invención del sistema de N.

- "juego": cada jugador conectó vía (radio) el tr con la C. central.
- "c portable": cuadernos
- t = sistema principal de T (teléfono del `) recepcionista (automático) (de w, KN relacionado)

Terminología: Unidades externas: las unidades móviles/portables que están conectadas con el sistema central (c=brain) vía (radio) el tr.

Dibujo #2 de OTD: (Múltiplo) U = unidad externa/este ~ C (computadora del sistema de N (5E090) del `) = ACCESO; ANALIZADOR (cómo obra recíprocamente cada unidad externa w (con) y o la central c); ARTISTA (fabricación del arte del grupo - cada u tiene poseer la unidad que agrega al arte del grupo, eg.: 1] cada jugador dado solamente ciertos colores/formas/modos de escritura/los plazos - en cuál para hacer lo que (arte, el compose%) él desea.); BALANCE (los promedios/consideran del sistema cada localización de u/player.); CEREBRO (determina son qué piezas externas: comparativamente más importante para las funciones señaladas que consideran (w5); para comunicar w que partes del sistema, eg.: unidades externas #2 y #99 y c central; volumen audio que se oirá por cada u; volumen audio que debe ser generado (a la otra u) por cada unidad externa); C (cada unidad externa puede asumir el control (muchos de) las funciones de c central vía: tener acceso, consenso de la otra unidad externa (su u), tds (matriz) de la fecha del tiempo del `(franja horaria) de esa unidad, uip/cuenta = "juego": quién está ganando el juego); CÁMARA; COMPOSICIÓN (palillo 5E020, Yamaha Miburi); DISTANCER; EDUC (que aprende el terminal); K; M; MQ; MULTIUSOS (c central distingue entre diversas unidades externas vía: acceso/uip/analizador); CUENTA (juego, uip que se convierte); SENSOR; ANALIZADOR DE SONIDOS; ANALIZADOR VISUAL SANO; DISCURSO; ESTADO; ESTÉREO; SYNTH; TDS; T; tr (transmite) (sin hilos, celular, infrarrojo); U (jugadores, receptores de servicios/de transmisiones (la unidad externa puede ser (bastante) voz pasiva)); UIP; UQ; ANALIZADOR VISUAL; VR; WA.

OTD D3: [(Cada uno) la unidad externa tiene tales funciones) (que efectúan el sistema entero) según lo enumerado en piezas siguientes]: C (5E090) =
ACCESO; %ANALYZER; ARTISTA; BVA; BALANCE; CÁMARA; CARRO; COMPOSICIÓN; EDUC; GPS; K; M; MIC; MES; RATÓN; MQ; MULTIUSOS; nr (notificador); OSCILADOR; Banda; Picosegundo (sistema de colocación del `); Q; R; CUENTA; SENSOR; ANALIZADOR DE SONIDOS; DISCURSO; ESTADO; ESTÉREO; SYNTH; TDS; T; UIP; UQ; ANALIZADOR VISUAL; VR; WA.

Estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U. para 5E090. Venda de la música:
- No. de la palmadita de los E.E.U.U.: Stringless piano-toca eléctrico... %636035; aparato de control Movimiento-controlado de tono musical [Miburi de Yamaha?] 636035.
. - sir APS 69 ' a 8.92: :
--No. de la palmadita de los E.E.U.U.: palmadita del diseño: D245,197 1977 portable, instrumento musical del teclado electrónico, teledirigido, sin hilos
. ---esta palmadita encontró vía mala estrategia de búsqueda: (sin cuerda o sin hilos) y (música o venda)

- S: esta N es una versión sin hilos de 5E080.
- Str APS 79 ' a 82 ': (sonido o música) y (analyz o analys)
- kilovatio: el perno prisionero del audi [estudio] corrige
- No. de la palmadita de los E.E.U.U.: ¿+? Instrumento musical electrónico 5063820 que ajusta automáticamente un funcionamiento dependiendo del tipo de jugador.

LUGAR DE REUNIÓN ELECTRÓNICA: Mejora en la patente 5347306 de los E.E.U.U.: Lugar de reunión electrónica Animated del ~ de "C" para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" = ANALIZADOR de // del ACCESO (necesario para cada participante (u) para ensamblar) (/W5 (qué, donde, cuando, porqué y cómo) sistema cómo (sistema) funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la banda de // del OSCILADOR de // del nr de // (notificador) (cuando u se pide para responder o debe notar ocurrencias señaladas) (comunicación verbal) (cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) // R (el dispositivo del control/de comunicación del u) RANURADOR de // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (u) el envío/que recibe están/w5 de u de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus acciones) // TDS // T (cómo "obra recíprocamente" cada u w: el otro u/m) PISTA de // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada u = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

EL COORDINADOR LEYÓ QUIZÁ LA SECCIÓN POSTERIOR =

- Las diversos piezas/aspectos se coordinan dentro del sistema. El "coordinador" es un correlador.

Archivo: Introducción/Distancer de las características

DISTANCER

Las señales o sistema responden siempre que cuaesquiera dos o más porciones: separarse o tocar o altera en ciertos dominios algorítmicos del tiempo o del espacio. Notifica cuando se han resuelto ciertas funciones algorítmicas, eg.: separado por cierta distancia; para los palmos del momento específico más de largo que. La parte principal de esta función vino en el mercado después de que trabajáramos encendido alrededor 1990 y 1991.

¡Utilizar nuestra solicitud de patente Masterminded de mejorar sus ideas! Aprender sobre nuestras licencias rápidas y fáciles. Llamar (+1) 707-428-5000 www.LicenseItToday.com

Ver el "GPS" para otros detalles.

- D: 1 = 2tr = 3 "C" (PALADIO) = 4tr los = 5/6/7satellite/8M

Señales vía las ondas de radio si separación (de 1356...) está la distancia más o menos que deseada/fijada/programable. Diversas distancias cambiables entre dos o más partes (1356...) crea señales aplicables (especialmente en 3, pero también 1568..., estas señales en las funciones aplicables 3. del comando de la golondrina de mar.

- La distancia se calibra vía: Tecnología del GPS (sistema de navegación mundial) (véase el apéndice a este archivo para los detalles), y radiofrecuencias (véase el apéndice)

. - Ver Parts& y otros archivos para: GPS; sistemas de la radiofrecuencia de los distancer para los detalles; solicitud de patente separada del distancer.

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

. Los E.E.U.U. patentan el disco de 12.95 baberos:

- str: (hallazgo o localizador) y (eléctrico o computadora o software o mobil)

- Patentes de los E.E.U.U.: localizador de 5463597 pescados; instrumento de la posición y de la goniometría de ++ 5461387; Goniómetro de 5280293 móviles; goniómetro 5173709; goniómetro 5146231.

ALARMA de A2-28 DISTANCER: 3 pedazos. Microchip minúsculo atado a cada guante, un pedazo más grande de los pedazos w (con) mantenido capa/monedero. Si es separado por más que distancia de la P.M., alarmar. el vb s w1 del punto de ebullición del hh cons las clases adultas. Ahorrar un guante, guante/manopla - ahorrador/alarma/buscador/protector.

El producto se aplica que todo lo demás uno puede no querer separado por distancia de la banda (programa), eg.:

animales domésticos (las alarmas del pedazo del dueño, pedazo del animal doméstico en el collar dicen en la voz "Charlie casero venido" del dueño, o"... "o tienen quizá perro del silbido son acostumbradas a ser para él entrenamiento anterior de w (con) por el dueño. Algo prestó/utilizado por el empleado/el amigo/el extranjero (pluma del almacén). Los automóviles, carpetas, monederos, joyería, efectivo acortan, el compañero de la herramienta del carpintero del etc. (pp); Ladrón/mejor amigo del fugitivo;

INTRUSO 6B040: Atar el distancer secreto a la persona indeseada (eg.: en zapato, empaquetar, en el coche, el reloj...) y siempre que vengan cerca o en de premisas se acciona una alarma. Utilizado como broma

6B930 ANIMAL DOMÉSTICO DISTANCER: saber si son cercanas o lejanas. El receptor del usuario puede decirles si el animal está consiguiendo más cerca o más lejos como caminan, receptor demostrará el número de metros, o los códigos para muy cercano, cercano, el etc mientras que dan une vuelta.

- mientras que está caminando la persona más cerca o más lejos, y el sistema reconoce esto, él en vez de decir cierre, decir "basado más cerca" simplemente en cambios en distancia del transmisor de la frecuencia del aire de los animales

GATOS de SALTO 3C-110-08300Q DISTANCER:

Distancers entre las piernas o los brazos. Cada vez que la persona ejercita separando sus piernas o brazos más allá de cierta distancia, el distancer sonará.

- el distancer puede también contar el número de épocas que el movimiento fue hecho (si las piernas o los brazos fueron más allá de distancia mínima.)

- otra manera de medición: las distancias viajaron por los animales a pie o por el ala; la cantidad de trabajo conducida por cierta maquinaria, eg.: pistones (la cantidad y el grado a los cuales van hacia arriba y hacia abajo)

RESTRICTOR de la CAMINATA 3C-111-08300Q: (DISTANCER)

Distancer entre las piernas crea efecto si las dos piernas se dividen nunca más allá de cierta distancia. Substituye las necesidades de cadenas en las piernas de convicts.

- El efecto cuando las piernas van a lejos: sonidos; o crea dolor; o alarmas "C central" vía las ondas de radio...
- Una manera civilizada de guardar a presos del funcionamiento lejos
--Los accesorios a las piernas son casi imposibles de sacar ilegítimo

3CQ-090-000000 DISTANCER SANO:
Instrumentos musicales que juegan junto el cambio sus sonidos según cómo está cercano o lejano se mueven desde uno a. Puede estar para una sola persona utilizar dos o más porciones; o dos o más personas con sus instrumentos.
- se aplica siempre que el volumen de sonidos, frecuencia, o tipo sonido deba ser alterado según hasta dónde o cerca dos o más porciones de uno a.
Ap: juguetes - cuando un coche policía conduce cerca de un cierto objeto o lugar, sirena, o una declaración audio se enciende, eg.: "tirar sobre"
- cuando la persona o el otro organismo u objeto viene cerca bastante (o va suficientemente lejos), acciona (o desactiva) a: el sonido, la luz, o la otra función electrónica

Este archivo copió de n \ de c \ de distancia a "Distancer".
Archivo de Distancer - función: Siempre que dos o más porciones se separan más allá de cierta distancia programada, la pieza del receptor alarmará.

APLICACIONES: Los guantes, niños, animales domésticos, ex-convicts guardaron dentro de cierto radio, usos militares, dispensador vital de la medicación, caminantes (para inhibir también vagar demasiado lejos), los libros de consulta que necesitan ser mantenidos ciertos áreas o cuartos dentro de bibliotecas, cuando la madre va lejos dejar el dispositivo del bebé juega automáticamente los sonidos/música que distrae a bebé del griterío (el "oscilador" se engrana psicologicamente para reducir sensaciones gritadoras y para crear sensaciones de la independencia)

HURTO: oficina y electrónica casera; los almacenes que demuestran modelos de "S" sin los alambres - saber que algo fue levantado antes de que usted descubra a persona que camina hacia fuera la puerta y después que funciona abajo de la calle; descubrir si es su coche se está tomando que (las alarmas no son buenas si usted no puede ver el coche de la ventana) le da hora de entrar en contacto con a policía en un minuto. Alarmas si las ventanas o las puertas parte más allá de cierta distancia (otro adminículo al ladrón de la hoja)

HURTO MISCELÁNEO: trabajar/envía del artículo de las causas no la alarma que se puede coger más adelante por la policía cuando ella tiene más adelante bastantes receptores; si el dueño no allí, receptor entra en contacto con a policía, etc.

VERBORREA: puesto la detrás/entonces "esto se está robando"; la voz del dueño o del padre dice "vuelto a casa", o si entonces van demasiado lejos, da el sonido del "alimento", eg.: abrelatas de poder

TÉCNICO: reducir la batería del tamaño enviando pulsos ocasionales. Puede funcionar encendido una frecuencia de la FCC o del juguete. Relativamente barato producir. El tamaño pequeño permite que sea ocultada dentro de ladrones foiling del equipo - puede también ser construido como pedazo de equipo disfrazado.
Opciones: Sobre la separación más allá de cierto punto el distancer puede enviar dos explosiones del sonido cortas, o continuar sonando. El comprador selecciona de diversos modelos accionados para alarmar cuando está separado más allá de diversas distancias. O, para modelos más costosos, el usuario puede programar la distancia permitida.

USOS DEL JUEGO: los pedazos necesitan ser puestos en la distancia correcta de ciertos otros pedazos (resultados en sonidos queridos o indeseados como confirmación). Juego al aire libre: si un amigo está más allá de gama (vida real también). Usted sabe si alguien se está acercando (la vida real también)

USOS MISCELÁNEOS: envía el aviso si la máquina remota no se está realizando según plan. Parte movible en la cosa o coche usted es siguiente: dice a detective despertar y comenzar a seguir después de una breve pausa. Monitor auto de la velocidad: señal única de la fijación al vehículo - los receptores de la calle pueden coger electrónicamente los reductores de velocidad, ésos que toman vueltas ilegales (un vandalismo más propenso de la cámara y tiene problema de la visibilidad, etc.)

PERSEGUIDOR DE LA GENTE: insertar sensor del transmisor' en el coche de la persona, el monedero, el etc. Siempre que se vayan recibiendo la máquina indica la hora de salida y la vuelta. Ver si la persona es honesta al preguntar cuándo estaban hacia fuera. Para los esposos que se miran, encargados que pasan mucha hora fuera de la oficina, militar. Relacionado con el Loach existente para los coches - vehículos robados pistas vía el GPS.

FUTURO: Monitor vía la recepción de los satélites - movimientos de observación del mundo.
El transmisor comienza a transmitir sobre la separación, eg.: de la tarjeta de crédito de la carpeta. carpeta del monedero. M indica si el elemento que vaga es semi o muy lejano. TM: Vagabundo

SOBRE CIERTA DISTANCIA CREADA, los artículos envían sonidos o la alarma redactada (tal como personalmente escurrimiento con por el asaltante - el altavoz se implanta bien así que el asaltante debe parar y encontrar el dinero que pudo estar en un compartimiento del semi-secreto.)

OTRA IDEA EN EL DISTANCER es medir la distancia que las dos piezas son de uno a en términos de zonas. Cuanto más fuerte la frecuencia escogió para arriba por el receptor, más cercana está la distancia. También, ambas piezas pueden tener sus propios transmisores y receptores para los usos particulares.

Misceláneo:

. El extremo de la sección se movió desde c:\n\c\distancer

1G12 "sensor" para la gente/las robustezas ocultas. "Distancer" calibra distancia a continuación de los objetos que pueden obstruir su trayectoria (el caminar, rodando). Existe probablemente con las robustezas móviles actuales. D: "sensor" = c (analizador)

> R130 Distancer. Taiyo Elecs Co: ALEJADO ("R") suena si el niño es 2 - 7 metros de ausente. Diciembre de 92. Número ruso del uso de la palmadita de KN: 045892 23 de sept. 93 para "Distancer", KN archivó por profesor Tsibin. Movido al "distancer" 6.96

FINAL SECCIÓN DE S DE ESTE DISTANCER'

Archivo: Introducción/redactor de las características

EDIT [NOMBRE DE LA CARACTERÍSTICA/DE PARTE]

Introducción: Mucho de corrige se encuentra en parte Artista-Corrige también. Esta edición de textos de las cubiertas de archivo principalmente, aunque también cubierta adentro Artista-Corrige. La función modifica el material para requisitos particulares.

9G220-EDIT: El explorador del canal salta las estaciones que tienen anuncios publicitarios:
La difusión de códigos a partir de la 3ro fuente de la compañía, difunde continuamente las señales que dirigen el sistema de la hospitalidad para evitar los canales que están en modo comercial a cualquier momento. Pudo cargar el honorario mensual del acceso. También explora y corrige: radio; controles contentos parentales - por el que el contenido indeseable que es visto por el menor de edad en aquel momento se corrija; material impreso [demostrado en línea]; música; [en línea mudanza] imágenes gráficas; programas educativos; ¿qué más?
- También cifra el tipo demostraciones, eg.: aventura, misterio; tipo demostraciones de las prioridades del usuario que prefieren, así que al practicar surf, el sistema da preferencia a las demostraciones deseadas. Existe actual un cierto grado.
- Las palabras claves para las búsquedas incluyen: anuncios publicitarios, haciendo publicidad, televisión (del cable), radio, difusión (ing)....

- OTD: Este ~ C (computadora del sistema de N (invención) del `) =
ACCESO (a la organización de la supervisión/u/evita que no los suscriptores utilicen servicio); ANALIZADOR (uip); CUENTA; CARRO (interruptor de uip, hospitalidad previa); M (servicio de la supervisión); MIC (voz); MULTIUSOS (cada u quisiera que las estaciones de diferenciación gozaran, así que el sistema se adapta por consiguiente); NOTIFICADOR servicio de la supervisión (de la conexión w (con) terminado o si problema); OSCILADOR (w5 que hace publicidad de comienzo/de paradas; W5 (qué, donde, cuando, porqué y cómo) deseó programas es (sobre ser) difusión); Banda (uip; synth; oscilador; estereofonia); Picosegundo (la difusión demostrada en el sitio u está adentro en el tiempo); Q (cómo sistema del uso); S; CUENTA (u más allá del patrón del uso, eg.: w5 para el tipo hospitalidad; T (MES; u sistema ()/este del sistema N = c) del servicio del monitor; +UIP; ANALIZADOR VISUAL; WA.
- utiliza KN que explore (la hospitalidad, la autopista de la información, el cable, TV, radio) los canales/los servicios/los foros/los nódulos que (algo) de cerca emparejar uip/pr/type Info del u o mantenerlo querido. La parte de este aspecto particular existe.
- Nr: u dijo cuándo el tipo particular servicio/difusión está (convirtiéndose) disponible, aunque u no pudo buscarlo en ese entonces. El sistema continúa la exploración/rc (receptor) (de c) exterior en el modo de fondo de la c del u.
- Los anuncios publicitarios pueden incluir cualesquiera [difusión] en modo del no-programa, e.g. el jinete de radio que se jacta la hora próxima es anuncio publicitario libremente, parásitos atmosféricos o no recepción, difundiendo el programa cuyo contenido no empareja las preferencias de los espectadores [basadas en la base de datos del UIP de la TV del usuario prueba].

Los elementos incluyen: texto; imágenes [de la mudanza]; funciones del software; ADAPTARSE (UIP) - como las bases de datos, funciones adaptadas como guía; Funciones de edición/software [para los reveladores del juego]. Un realce para Apple, Microsoft, Cisco, Sun Microsystems, linux, y más software y sus editores. El accionar la palanca de la goma (nuestras marcas registradas futuras.
. -' Corregir o el sastre altera cómo las secciones del código de computadora se buscan y se substituyen.
- Efecto marcado con etiqueta 7J08 de la cascada: Las piedras de afilar del sistema adentro en una frecuencia (sonido), entonces cancelan otros sonidos que hacen clarificante sano marcado con etiqueta. El sistema reacciona cuando ocurre la acción marcada con etiqueta. Piedras de afilar adentro en cualquier cosa que efectúa los sentidos del hombre cinco. el analizador contento, corrige, busca y reacciona, reconocedor sano, sastre, analizador visual.
3G050-EDIT: Encaminamiento de programa:
El sistema encamina a usuario a (software) (preprogramado) las características que se adaptan mejor. Detalles:
--rutas del `a otros (relacionado/mejor) programas, e.g.: de acuerdo con el UIP de u/programs.
--u puede no quisiera que el sistema parara el demostrar de programas existentes, por lo tanto el redactor da a u los mejores programas siguientes (de qué u puede elegir otro programa si desean) (para no interrumpir/cólera u/viewer).

--u puede no ser consciente que se están encaminando to/from programas, e.g.: 1] usuario no realizará que el sistema está buscando otros programas mientras que el usuario está viendo programa actual. Es decir u que experimenta un modo (un programa) mientras que el "analizador considera la encaminamiento al programa alternativo que es hecho disponible. 2] aspectos de los programas u están experimentando se están bloqueando simplemente, eg.: no demostrado en opciones del menú (o aún en manual escrito).

- El contenido de la mejor reunión del programa señaló necesidades, puede después ser corregido y ser adaptado.

. - dislexia 5G061: los disl3exicos pueden ver el material de la manera diseñada para asistir a su interacción/visión.

- Ver el cribador relacionado del anuncio de televisión 9G220: defiende los anuncios publicitarios (de modo semejante el sistema defiende el material indeseado).

- ver la pieza de la encaminamiento también.

STYLIZER del TRADUCTOR A2-300: Stylizer (TM) traduce lengua para emparejar la forma de vida del uso, situación, tipo comm w de p (con) (contra la verborrea añeja para todas las ocasiones). STYLIZER ALTERA o agrega: la entonación, estilo del discurso, opción de la palabra, deletreo, cuadros (aún o que se mueve), tipo estilo, volumen (más ruidosamente para los discos), dulzura, exactitud, argot, amistad, negocio (reservado), partido salvaje, sexo coge, liberal, conservador, P.M. del etc. por la cultura, ciudad, código postal (eg.: más salvaje en Bronx que Wall Street [eg.: la comunicación del estilo del partido/el estilo diferencia por la localización; reducir al mínimo la dificultad wo u que sabe causa exacta] por el que el concreto y o la sensación/el contenido relacionado sonido estén alterados para alcanzar efecto deseado.

TD: U: el 1r selecciona estilo, después mecanografía adentro el concepto de la lengua original que quiere ser traducido, m se reclina. el ep s w1 del punto de ebullición del tt del hh de e cons P.M. adulta exc D. del ll b de la diversión del autobús.

DE OP. SYS.:

1] Convierte las monedas, zonas de épocas (cambios calculadores de la luz del día), enseña al vocabulario (nivel de los pp de la lengua).

2] En tiempo posterior demuestra qué términos utilizó, así que u puede repasar lo que usted ha utilizado (el aprendizaje usando en vida real es mejor para la memoria, y ayudado por m que imprime o que defiende las palabras - párrafos usados con la fecha.

3] sonidos que representan es qué idea (eg.: el descortezamiento, bebé ríe nerviosamente/el griterío, choque, buena sorpresa, pasión [voz del ahh cuando soda/líquido de apertura para apagar la sed - significado doble], la risa, cantando (sexual, chistoso, con dolor, sensaciones...)- comunica la diversión de w y o sensaciones y una

excusa para decir algo más difícilmente en a las palabras (grandes para hacer publicidad no-dirigir la descripción de producto).

MK: 1] Psicología: traducir o que habla nuevas idiomas (w o wo m) es difícil de todos modos usted rebanada él. Las opciones actuales son normalmente demasiado reservadas (a veces demasiado sin reservas y si la comunicación no compensa tan delicadezas). 1A] La P.M. no reservada de los pp de los stylizers será diversión de todos modos (después de que toda él es máquina de a [objetos curiosos]). Si u es bajo en energía o no en el gran humor para la ocasión, m ayuda al puente para abrir (aún más útil para los que consiguen se energizó por otros que son in/put en buenas bebidas espirituosas. El japonés de trabajo de w requiere reservedness en autobús y el wildness en la barra, occidentales es inepto en cambiar las culturas (a Japón y entre sus secundario-estilos) - adv: "dejar ayudar/guía/acompañamiento de la máquina usted."

El mejor triturador de hielo.

TM: Acompañamiento (er), vida real/partido/diversión/hoy ('s) - máquina/electrónica/traductor/comunicador . - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (sistema) (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

OTROS (LEJOS HACIA FUERA) USOS: nr de u (usuario) (notificador) cuando los servicios deben más barato caer en uso de otros usuarios.

- usuarios para uso general de: electricidad; (interurbano/celular/costoso) telecomunicaciones (t); uso basado en los satélites; Uso de M (base de datos, crujido de número, etc); gas (cocinando, calentando).

--el nr de u (notificador) cuando los servicios se están utilizando menos, por lo tanto carga gota en estas horas (inesperadas), o los precios se levantan en las oleadas inesperadas en uso.

- el sistema puede estar libre por razones del U.: este prestatario de servicios de la selección se predispone levemente en la inducción de clientes que dediquen ciertos programas de w (con) (eg.: los sistemas de la reservación de la línea aérea de c son libremente debido a sus diagonales); cierto tipo selecciones quiso por u no permisible por el interruptor; los ciertos canales/servicios no pueden ser explorados/ser supervisados.

. Sistema que recompensa u (espectadores) con más programas de la "hospitalidad" basados en el comportamiento del u (el tiempo pasó estudiar, comportándose bien (uip, "anotando" por el guarda/el observador/sistema). Más programación = más tiempo disponible/mayor selección de programas (demostraciones clasificadas "x").

Perro guardián del estudio -3A-350: más TV que programa (9G-220) vía = un mejor comportamiento del estudiante. progreso 3A-430

3A-1190 TV INTERACTIVA: cuando el carácter de la película tira hacia fuera el laser o la linterna regular tira fuera del transmisor de la TV en sitio. Cuando adminículo electrónico de los golpes del laser cierto algo puede suceder

- D: La TV sistema = activa (el external del sitio) = oscilador ligero del ~ del emisor. - Otros efectos: los efectos del "humor" de /osc/ de la "hospitalidad" del EL (electrónico) son activados por el sistema central de la

"hospitalidad", eg.: luces en flash del sitio; los olores lanzaron; "t" suena (con voz (automatizada) la comunicación algo referente ("hospitalidad") al programa que es experimentado por el U. efectúa los u: wa/vr. --el sistema activa las palomitas, dispensa soda cuando es comercial para el producto dicho experimentado por u en el sistema. Tales productos dados como las recompensas ("TGH").

- U elige para conseguir/defiende hacia fuera programas con esto u otras características (inusuales) del milímetro.

CRIBADOR PRINCIPAL de los SONIDOS del TELÉFONO 4A-140/del OSCILADOR: defiende hacia fuera ciertas frecuencias exteriores que sean indeseadas, eg.: alta echada, en grandes cantidades. Uno puede escuchar o no experimentar la "hospitalidad" (música) simultáneamente.

- hace tan (automáticamente) según: uip (del programa/de u) de la "hospitalidad"
- la versión del auricular del consumidor de esto salió después de que pensara en ella. Muchas compañías hacen esto desde febrero de 1994, una se llaman Sound Buster.

% de 5A-700 del REGULADOR del NIÑO: Limita uso de "t" o de la "hospitalidad". Nota: esta n escrita inicialmente como T (teléfono) del `n, entonces ampliado para incluir corregir de la hospitalidad (TV).

- para activar [llamada saliente/el programa particular (TV)) la característica, primero presionar un botón especial (una vez o cualquie número de épocas repetidas en orden) que le deje conseguir [señal para marcar/programa]. El llamador debe marcar los números/código pronto después de eso o se pierde señal para marcar/la conexión/connectability/"acceso" y el cualquier presionar de otras llaves en el cojín se no hace caso.
- Además, habrá un anillo/señal sonora (oscilador) si (t/%program) viene un call/tr entrante y se puede escoger solamente encima de (si el microteléfono está de gancho) presionando iguales o el otro botón especial - esto previene a cabritos de [contestando al teléfono (si son demasiado jovenes)/mirando programas particulares].
- los padres no pueden controlar siempre a sus cabritos de usar el sistema ("T"), por lo tanto esto es una característica valiosa.

COMPORTAMIENTO del U de SEGUIMIENTO 5A-720: supervisa el número de llamadas y longitudes de la conversación entre ciertos departamentos. Una base de datos de "C" puede demostrar todos los tipos de gráficos para los propósitos diversos, eg.: qué departamentos pudieron necesitar moverse más cercano a otros (durante o sin cualquie reestructuración corporativa), los planes futuros, viendo los valores y los flujos de departamentos, el etc.

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

- la frecuencia u de las "cuentas" experimentó programas particulares, eg.: cierta serie televisiva/novela de suspense contra las películas románticas/los tipos música/tipo "interacción" con nodos particulares o servicios en la autopista de la información. desarrollo UIP-DB - > utilizado para UIP-adaptar - > programas deseables de las experiencias de u (w5 u lo quiere (w5))

- estudio de mercados ap: los programas del estudio w5 son experimentados, y lazo = con las características de compra (vagos) de u (espectadores) (vía el uso del u de seguimiento de sus tarjetas de crédito de banco/"acceso" usado en los puntos de venta (cajas registradoras en los almacenes)).
- substituye el servicio de los servicios del grado de Nielsen - el por ciento de los monitores de la población que experimenta la TV o quizá en futuro cualquier "hospitalidad".

SINTETIZADOR de 5A-730 TV (OSCILADOR): programas del convertido a su estilo sano preferred. Ir más allá de la base tradicional, triple y así sucesivamente. Cambiar según el tipo acentos y expresar los estilos preferred. UIP-Adaptar

PROTECTOR de 5A-740 TV: Los estudiantes de las ayudas estudian más recortando su tiempo de visión de la televisión. El padre restringe épocas que el dispositivo puede ser activado.
- cortes de la televisión después de cierto plazo (encima de la duración permitida mirar). Ciertos modelos permiten que el usuario devuelva la TV encendido, otras no están permitiendo esto, eg.: las interrupciones (de la longitud de la banda (programa)) son forma de castigo, o qué u consigue cuando su nivel de recompensas ha funcionado hacia fuera.
- expedientes cuando la TV fue vista
- llaves del vigilante en su código para girar la TV. No se prohiben los minutos/día o mes del número limitado... La cantidad de tiempo dado un plazo se pudo determinar cerca: sus grados en escuela, el otro funcionamiento.... El padre que considera a más de una persona el ver de la TV sin cada uno de sus códigos afinados adentro puede hacer la TV no permita que vean la TV para cualquier plazo como castigo
- OTD: "S"; pp; P.M.; Reino Unido; fecha; tds (el máximo # las horas que anotaban permitieron por día, o mes de la semana; # las horas que pueden ser miradas ("acceso") basaron en el funcionamiento de la persona (eg.: cuentas de la escuela)); educ; básico; alerter; acceso.
- Efectos de sistema de la recompensa/del castigo:
--ciertos programas son más restrictos/acentuados (colocado más arriba para arriba en menú para animar eso contra otros programas).
--tipo de funciones de edición en el lugar, eg.: el cabrito (cuando en período travieso) consigue elementos impetuosos/abrasivos de programa quitados/alterados, en la golondrina de mar que ayuda positivamente a ayuda el su crecer, mientras que realiza la omisión de todos los elementos abrasivos de programas puede ser poco realista.
--Los VAGOS determinan lo que (w5) se anima u que experimente. Propósito: la personalidad del espectador del molde, espectador puede ser: niño, convict encarcelado, clientes (inducir la comerciabilidad de productos)
--Dibujo de OTD (d): U = este ~ C (computadora del sistema de N (sistema) del ') =
ACCESO; ANALIZADOR; CEREBRO; carro (cartucho del software); EDUC; M; MULTIUSOS; NOTIFICADOR (cuando u es el cortar/que puentea controles que corrigen); OSCILADOR; Banda; Picosegundo (picosegundo-zona); Q; S; CUENTA (el espectador consigue puntos del brownie cuando eligen

experimentar los programas sugeridos por el sistema); ESTADO (qué espectador experiences/d); SYNTH; TDS (2e251); %T; UIP; ANALIZADOR VISUAL (para corregir); WA (vr, tipo dispositivos del walkman, eg.: corregir las difusiones sin hilos).

EL "BROWNIE SEÑALA":

- Cómo son: perdido o recompensado [al espectador]/calculaba ("anotado"). Las ayudas del sistema también substituyen a profesores/a guardas vivos en la ayuda de sus temas positivos/del logro deseado "experiencia" de los estímulos:

1] [programa (de la escuela/del guarda/(carro) del interruptor) sistema "que anota" de la prueba o del funcionamiento] = "analizador" ("cuenta") = brownie señala = la memoria (c, o carro (u puede llevar el carro con los puntos los sistemas compatibles de diferenciación, eg.: to/from escuela, hogar (del amigo).

] nivel 2 de ejercicio alcanzado por u ("ejercicio" = "cuenta"); la batería accionada movimiento 4e010 es otra recompensa (u debe ser bueno recargar sus baterías). Solamente este sistema puede recargar las baterías necesarias para funcionar la función deseada (vía el modo "portable").

3+] VAGOS: El sistema mira el comportamiento de u (vagos, monitor inteligente 2e251). los vagos (analizador del comportamiento del `) "anotan" el comportamiento del u (vía el sistema "que anota" señalado).

4] U selecciona programas más deseables (según lo determinado por el sistema), aunque u tiene una opción para experimentar la programación menos preferred. Quizás la observación de algunos programas puede comer encima de más puntos (por minuto/programa) que otros programas; o la observación de algunos programas no toma ninguÌ□n punto o puntos de los anuncios (si está mirado de comenzar a terminar (según lo evidenciado por el kn los "sensores", o como de bien u "anotó" en la contestación de q sobre lo que experimentaron/aprendieron (TGH)).

5] D posterior leída: U = este ~ del sistema de N (invención) (sistema) C = ACCESO (los puntos no se pueden ganar por todo el u, o cuando u no tiene contraseña correcta para ciertos programas/sistema); %ANALYZER; %EDUC; MULTIUSOS; NOTIFICADOR (cuenta dada u); Banda; Picosegundo-Zona; Q (cuentas cómo es q del buen u); CUENTA; ESTADO; UIP.

El usuario debe estar en el buen estado de ánimo a utilizar/continúa usando el sistema, o mira programas particulares = "del comportamiento"/uip del analizador:

CORRECTOR de la MENTE A2-070: cuando la mente entra el fq patológico, los modos, envía la alarma (oscilador) (suavidad de pr/choose, MED, ruidosos) que que dice a persona corregir sus ondas de la mente. La gente mandila y puede a menudo ser ayudada cuando u es dicho por la máquina cuál comprueba para saber si hay beta, alfa, la theta y otras. Usar como collar, reloj, pulsera, mantener el bolsillo, bolso. Llaman la policía cuando la persona está a punto de entrar las frecuencias peligrosas (asesinato, suicidio). Si usted siente loco/malo/necesitando pep, confianza puede enviar los sonidos curativos/música/voces - declaraciones/comandos/ayuda. Calma la cólera, celos, tristeza, comportamiento maníaco. Donde se juega el juego: en 1 o teclados múltiples/crt/dd; gráficos del tablero del po fijados al papel en blanco del po del recortes del tablero; gráficos del pedazo del juego del po conectables al tipo plástico pesos por el clip, pegamento, imán...; una máquina que produce solamente juegos y jugada en la PC...

JUEGOS DEL PEDIDO POR CORREO DE A3-R12B=: mezcla w (con) 12 12A. Costes de inversión bajos. un co pudo tomar solamente el Info personal y ser un orderer del correo de los juegos personalizados que personalizaban los juegos/comercialización por u/el mercado para: el registro cons, los terapeutas, registro/escuelas/clases especializadas; cons los compartimientos (nuevos edad, militares, artes de la aguja, fantasía, lucha, coches...). Quizá la garantía de la parte posterior del dinero, o libera/barato. Dejar a compradores de m ser su propio vendedor del juego, yendo a las escuelas, los amigos...

CENSOR de la HOSPITALIDAD de A3-15//: TV, radio, música sistema, el sitio limpio del teléfono ("T"), el juego de ordenador cortó después de tiempo de la banda (programa) (por el padre, el profesor, el jefe, el fabricante, el minorista, el gobierno) y dice u estudiar, ejercicio, concierta su cita (eg.: ir a la escuela, ver la fecha), o da el aviso de la seguridad comercial, nacional (eg.: el reloj de tornado), o las llamadas de la persona/del padre adentro para decir la comida está listos, alguien en el teléfono ("T") o en la puerta para usted.

O, la unidad acaba de cortar quizá automáticamente - bueno para los adultos que no quieren el apego. Vigilante del apego, apego, parada. O, pudo apenas marcar el número de horas o de tiempo mirado en los canales semi-restrictos. Agregados a la unidad. El EP W1 Cons P.M. adulta d de los pp del ll de los cabritos del autobús

- el segundo programa ("juego") (automáticamente) recomienza antes de donde se fue apagado (cuando el anuncio publicitario anterior, o u eligió parar w que obraba recíprocamente (con) tal 2do programa) (vía señal (electrónica) del EL).

- el monitor del ser humano/sistema que cifra cuando allí is/is no un comercial/deseó programa = transmite sus códigos vía: m; autopista de la información; al módem del u; t (línea del teléfono); radio fq; etc.

- este sistema comercial mejor que existente de la canceladura del sistema porque los locutores/producers/tr de las difusiones (del anuncio publicitario) pueden llegar a ser más sofisticados en engañar"/sistema de la "de la hospitalidad del receptor "TV" que hay/no es anuncios publicitarios; más nuestro sistema (sistema) es más exacto y con más características.

- si u/viewer quiere más tiempo del aviso para cuando los anuncios publicitarios paran/comienzo, pueden elegir para tener un retardo en cuanto a cuando su sys/tv (casero) recibe programa. Es decir: el programa tiene 1 vez y espectador mínimos de retardo dados un segundo aviso 50 (nr) antes de cambio en el canal que es experimentado.

MISCELÁNEO: Los términos dentro de cada grupo son normalmente reemplazables:

- Material: Programa; "Hospitalidad"; demostración/programa del "carro" de tv/cable/radio/cd/; Texto: ficción, non-fiction, texto legal, periódicos (en línea), CD del texto; Música; Sonidos registrados/vivos (oscilador) o voces (véase el kn - canceladoras de los sonidos también); Imágenes; Qué la "cámara" ve

- Corregir: Saltos; cortes; proceso el corregir/de selección

- Analizar contenido: UIP: "analiza" el contenido (kilovatio) y cortes; "Anota" el material; % corrige; "analizador visual"

- Material indeseado: anuncios publicitarios; anuncio; material con la "cuenta pobre"

- Reacciones del sistema (más allá de corregir más simple): % se traslada a/lejos de la cámara/del "analizador visual" del material según su "cuenta" (el monitor inteligente 2E251); "encamina" u al otro material (solamente durante pausa mientras que se está cortando el material); dice u allí no es no más de "cuenta deseable" del material w (con); Clips de los collages de un mejor material.

. - Experiencia: la visión/leído/oye el material; "obra recíprocamente el material" de w (con)

. - "Hospitalidad": película; demostración; "juego"; % del material.

- Espectador Rewarding: consiguiendo más tiempo/visión/lectura o experimentación de la "hospitalidad" de tiempo; el nivel de recompensa emparejó por lo que él puede experimentar (ciertos parámetros de la "cuenta" del material w/in); consiguiendo los puntos del brownie (incluso w (con) o wo que es traducido a ser concedido más experiencia del sistema); concediendo u/student/player (jugador del "juego")

. Subpartes: Corregir-Programa; Corregir-Recompensa; Corregir-Encaminar; Corregir-Enseñar: altera/encamina datos para enseñar mejor al estudiante (el uip)

BLOQUEAR 6B-12: omitir/corregir las partes del cuadro no digno de ver borrando hacia fuera con un sistema (o SUBIR [usuario programado] la forma, el tamaño y el color, eg.: una gota neutral redonda del color (el color es simplemente una mezcla de los colores que son borrados hacia fuera, o una mezcla de los colores en los alrededores.

- la característica se activa en la época de los cuadros del shooting

. para la vida inmóvil o la cámara móvil de la imagen

. El defender/que corrige programas seleccionados - el sistema encamina el espectador a los programas alternativos.

- Programas: TV, juegos, música, interruptor (aspectos del programa), el otro milímetro.

EXTENSIÓN DE N: Los términos siguientes son normalmente w/in permutables cada grupo:

- Agrupar 1] programa, interruptor, milímetro, demostración de la TV, programa de la hospitalidad, material que es visto/studied/%experienced; película; vídeo; música; el channel%; canal [del molde amplio];
- Grupo 2] defendido; alterado; ajustado; (parcialmente) bloqueado; restricto; el access%; el reroute%.

+ UN CÓDIGO (ACCESO, MARCA DE AGUA DEL EL "") INCORPORADO A LOS LÍMITES DE DATA/SW CÓMO PUEDE SER: "corrigió"/copiado/utilizado (funcionar el dispositivo).

El productor/el surtidor/el locutor del programa/de datos pueden vía su límite del código (acceso) cómo (w5) el material consigue "corregido".

- Ejemplos: no puede copiar; si la parte está cancelada = el programa/los archivos enteros de datos, o de la porción de eso se borran (automáticamente) o se hacen unaccessible (por u/sys que intentó "corregirlo").

. - este "cifra" o las "filigranas" descritas en NY las épocas el artículo del 7 de agosto de 1995, comercio de p5 "Digitaces - dos planes para las filigranas, que pueden atar la prueba de la profesión de escritor a los trabajos electrónicos", referencia # artículo #2.

- las derechas del uso (derechos reservados/honorario pagado # las épocas del uso) pueden ser arriesgadas "corrigiendo" si están hechas en métodos señalados.

- una llave (sw) especial (para qué honorario necesita ser pagado (activar)) es necesario "corrige"/experiencia el programa. Las funciones de límites del "acceso" de "corrigen".

- la "marca de agua" permanece w (con) cualquier dato que "fuera corregido" (cortado y transferido).

- Los códigos efectúan "corregir" del interruptor [el tipo de programa (disponible para la compra)]: cifra límite a cómo el interruptor (carro) puede (con referencia) ser programado/ser alterado/a qué productos puede controlar/efecto. Ejemplos:

--el padre restringe las funciones del interruptor a tres de doce (separarse) productos (electrónicos) del EL. De los tres mencionados, solamente un producto puede ser utilizado completamente, el segundo puede solamente tener mitad de sus funciones utilizadas, y el tercero puede ser utilizado solamente si se cumplen otros criterios: W5 (qué, donde, cuando, porqué y cómo)/picosegundo-zona/vagos.

--D: u/guarda = C (computadora del `) (interruptor = código) = controles señalados productos/funciones en esto u otro sistema (separado) = función deseada

"Bill":

- Ver también 9G150 el conseguir del Info durante los anuncios de televisión.

Se alteran % tienen gusto de sintetizar, los sonidos. La sintetización es una forma de corregir o de alterar el contenido [sano] para los resultados señalados. Ver la pieza el sintetizar.

HYPERVIDEO (existe): los usuarios chascan encendido (moviéndose) iconos de las imágenes los', y consiguen los videoclips encaminados/información (`adaptado a sus necesidades). El software del seguimiento de objeto (existe) hace (moviéndose) imágenes clickable.

- Usos de redactor: determina qué imágenes del hypervideo serán demostradas y cómo [w5]. Las imágenes son editable. Controles del redactor: cómo dirigen al usuario a quien las imágenes [w5], eg.: para conseguir mejor: educación, egh, tgh.

EDIT - ARCHIVO POSTERIOR LEÍDO QUIZÁ =

- Alteraciones automatizadas de la imagen: vía cualquie algoritmo cambiante de la imagen en + " artista ".

. El sistema corrige automáticamente funciones disponibles del sistema (para el U/el otro Sys/C).

- El sistema (SW) corrige/altera los programas (interruptor, "hospitalidad") /functions según lo señalado por UIP, acceso.

. La viruta de V: cuál corrige hacia fuera cierta televisión, radio, WWW u otras demostraciones o canales de los medios electrónicos.

. El sistema determina vía su "analizador" el contenido de la transmisión del servicio. Monitor inteligente 2E251: el interruptor del proceso de selección de c (software del `) = el sistema de C del u (computadora del `) mira (las demostraciones del tipo de la TV) para = analizador del comportamiento (palabras claves habladas/analizador impresa, de sonidos, analizador visual).

--especialmente útil cuando el locutor/el prestatario de servicios no suministra los códigos/acceso que ayuda al sistema de la selección del u (sistema) selecto para sus gustos/necesidades.

- UIP: la situación del u cambia rápidamente por hora (para el negocio), por lo tanto el Info necesario del u cambia por consiguiente = "analizador" determina qué necesita seleccionar = este N.

- OTD D: U (espectador, usuario de C, informático) = este sistema de N (selector de datos) este ~ del ~ C (computadora del sistema de N (selector del servicio/de la difusión) del `) U =

ACCESO; ANALIZADOR; CARRO; EDUC; M; MIC; MULTIUSOS; NOTIFICADOR; OSCILADOR; Banda; Picosegundo; Q; S; CUENTA; SENSOR; ANALIZADOR DE SONIDOS; ESTADO; SYNTH; TDS; T (teléfono del `); UIP; ANALIZADOR VISUAL; WA.

- El usuario despierta (TV, cable, estéreos) para programar en la hora untada = (tds = alarma) = los hallazgos del explorador del canal 9G220 se apropia de la estación según el u estación de las opiniones del UIP = de U. . Existe: R42 omite los anuncios publicitarios: el sistema sabe cuándo los anuncios publicitarios comienzan y terminan. [Arista, Hauppauge, NY picosegundo 4.94]

- el ser humano o el monitor (electrónico) del EL puede supervisar: TV (difusión/cable del aire); cualquier cosa en la autopista de la información (programas del milímetro, correos electrónicos recibidos (aislantes similares/mensajes idénticos enviados a los partidos de diferenciación - y por lo tanto probablemente de un vendedor de una cierta clase). Ahorra el tiempo del u.

- ver KN (invención) en el archivo G1: las pantallas/corrigen del sistema el material, eg.: cabritos que miran los programas clasificados "x" sobre la TV, milímetro.

. Estrategia de BÚSQUEDA de la PATENTE y algunos números relacionados de la palmadita de los E.E.U.U.: También ver IMI-Intro& para los detalles.

el explorador del canal 9G220 salta las estaciones que tienen anuncios publicitarios:

. str viejo [estrategia]: (puente o ignor u ocultado o cubierta o salto o erase) y (anuncios publicitarios [la subsistencia s consigue de otra manera comercializa] o advertis)

- nuevo str: (televisión o TV o difusión o cable) y (anuncios publicitarios o advertis) y (1ra sección del str viejo - pero por otra parte borrarla)

- No. de la patente de los E.E.U.U.: Clasifica patrones de los programas y de los anuncios publicitarios de la TV basados en el discernimiento de las señales audios/video 5343251 de la difusión; el 5343239%; 5319455; 4647964

- los anuncios/sobreponen del sistema sobre los anuncios publicitarios otro programa: Palmadita de los E.E.U.U. # 5264933; 5233423; 4724491; inserción automática 5424770 de una señal de la televisión de una fuente alejada

- identificando cuál es y no es un anuncio publicitario (automáticamente hecho monitor humano del wo): 4739398+; 4750053+

- corrige automáticamente los anuncios publicitarios (monitor humano del wo): 4390904+

- 5404566 misceláneos genera la señal audio de la "hospitalidad" interrumpida haciendo publicidad de audioseñales y del dispositivo para realizar el proceso; el 5319455% distribuye los anuncios publicitarios modificados para requisitos particulares a los telespectadores; El 5233423% encajaron los anuncios publicitarios dentro de un receptor de la TV usando la cartelera electrónica integrada.

+-5241428 Variable-retrasar el video: Permite la grabación y el aparato de lectura simultáneos del material del programa, incluyendo los medios para controllably variar un de retraso de tiempo entre la grabación y el aparato de lectura del material registrado. Material previamente registrado parado temporalmente y después reasumido sin la interrupción de la grabación del nuevo material. El usuario puede interrumpir aparato de lectura (eg.: para tomar llamada del teléfono) sin la detención de la grabación, y entonces reasume el aparato de lectura, usuario mira el resto del programa retrasado por período del contador de tiempo. El usuario puede "rápido adelante a

través de esas porciones registradas [indeseadas, anuncios publicitarios] y alcanzar a la difusión viva. La patente publicó el 31 de agosto de 1993.

- Corregir otros elementos: El sistema corrige cualquier tipo del programa/de los datos/de las imágenes/de las palabras indeseadas (palabras claves)/del otro contenido cortando el material entero que se presenta dentro de ciertos parámetros del tiempo (eg.: el centro 45 segundos), o el programa continúa pero se cortan ciertas secciones, eg.: el kilovatio, así que la longitud entera del programa es igual.

- el sistema puede ayunar adelante a través (tiene "cuenta media") del material cuestionable de /unwanted.

- Sistema "que anota": continuado: kilovatio; aplicabilidad a la tarea/a la necesidad actuales. Especialmente para el texto de la lectura; uip.

- El sistema desarrolla un collage de pedazos de material, encadenando los clips en orden y o al lado de uno a en términos de su - "anotando": conexidad del material el uno al otro; cómo el lector pudo mejorar la visión Info introductorio para entender mejor el material subsecuente - tarea compleja para el interruptor; "analizador visual" - para de entonado de colores (más fácil hacer), llano de la toma panorámica, cantidad de acción (movimiento); etc.

- Investigación vía:

--El contenido de los estudios del "analizador" entonces determina la conveniencia del material para u/el espectador/el ser humano o el monitor del sistema/otro sistema del "analizador".

--El analizador determina contenido vía:] palabras particulares que buscan 1 (búsqueda de la palabra clave)/imágenes (analizador visual)/tipos de sonidos (pasión, shooting del arma, coches screeching, desplomes, rompiendo el vidrio, el etc - vía "analizador de sonidos"). 2] uip: los fósforos qué u lo hace/no quiere w (con) los programas de broadcast/sw/mm.

- Dibujo de OTD (d): U/Viewer/Guardian = este ~ C (computadora del sistema de N (invención) (cribador del programa) del `) =

ACCESO (+password, llave); ANALIZADOR; CÁMARA (analizador visual: opiniónes qué está ocurriendo en otras localizaciones); CARRO (interruptor: cómo se defiende/se altera el programa; o el programa real que se comprobará/alterado, eg.: cinta video, CD, interruptor, datos (novela)); K; M ("analizador" para juzgar el tipo contenido; supervisando al individuo que experimenta entonces "cuentas" cada programa (y o sus secciones); MQ (qué u/guardian desea el sistema (sistema) para corregir); MULTIUSOS (identificado vía su acceso); NR (notifica if/when/w5: sistema que es cortado; material de observación del vigilante (cabrito) que podría ser corregido; guarda notificado); OSCILADOR; Banda (investigación); Picosegundo (u debe estar en cierta localización (sitio)); Q (menú de los programas disponibles); R; CUENTA (el guarda/u puede ver qué programas son disponibles y su cuenta/es cómo es bueno ellos); ANALIZADOR de SONIDOS (para la investigación); DISCURSO (para la investigación); ESTADO; ESTÉREO (radio de la pantalla); SYNTH (para alterar el material en subproducto deseado); tds (matriz de la fecha del tiempo del `) (los tiempos de los límites u puede experimentar programa); tr (transmite); U (estudiante, niño, adulto (tipo de diferenciación de defender de cabritos), audiencia general (empleados, estudiantes para la clase, clientes, usuarios de las

búsquedas del otro sistema (sin relación) que incorpora los programas que consiguen defendidos)); UIP; ANALIZADOR VISUAL (para la investigación); VR; WA.

- ACCESO: - cambios de calificación del "estado" del u (en un cierto plazo) debido a: códigos dados a ellos por el guarda del ser humano/sistema; edad (del crecimiento) de u; material anterior u experimentado, eg.: el tgh después de u aprendió más; uip.

- abuso del acceso, eg.: el cortar de c - > nr (notificador) al guarda.

- el guarda K (teclado del `) en (diverso) código (cada uno) u necesita experimentar programa. O, u que tiene un código puede experimentar cualquier programa, y un u (más joven) puede no tener el código por lo tanto es restricto.

- EDUC: - (elementos en programa (eg. sus archivos de diferenciación) se cifran (por el sistema de manufacturer/u/guardian/this) para su dificultad/aplicabilidad del educ (tgh) llanas (para la tarea, el estudio, el estudiante particulares). U pudo todavía poder ver todos/la mayoría de los aspectos, con todo ha deseado el material presentado en la mejor orden (consigue lógicamente un edificio más complejo en previamente el actual material) mientras que el otro material que no cabe está en: parte inferior del menú/en diversa ventana (necesitando el "acceso", o el "brownie señala (véase el kn) para el buen comportamiento" antes de la abertura/de la experimentación);

- el UIP determina el material u necesita aprender vía: las respuestas/las declaraciones incorrectas/q presentaron por u/student. El UIP de todo el material anterior estudió por el estudiante ("perseguidor").

- Qué defendió/alterado. Los programas que deben/tienen/sugerir/perdonan: violencia (de la comprobación); (pobres/tipo) idiomas/ideas; sexo: los actos, sugerencias, sexo inseguro practican (eg.: ningu□n condón); visiónes religiosas; racismo; ideas políticas; formas de vida particulares; tipos de música/de conciertos.

- u puede tener material selecto del sistema hacia fuera que sea o no puritano bastante, o demasiado puritano (agujereando).

- Cómo el programa/el material/interruptor/milímetro alteró/reencaminado:

- los programas dados tienen subprogramas múltiples que puedan substituir porciones múltiples del programa (de la cañería). Ejemplos: la señora hace una oferta cortésmente a buenas noches del hombre en su umbral, algo que su besarse; al pasar noche en el hotel, cada carácter tiene cuartos separados algo que el mismo sitio, así que acciones antes y después de que la escena del hotel no necesita ser efectuada. El fabricante de película pudo tirar simplemente la cantidad normal doble, con especial atención al programa principal. Resultados en la gente de diferenciación que ve el mismo programa vía versiones de diferenciación.

- cada escena/aspecto/elemento del programa se cifra

- los paquetes enteros de programas se pueden bloquear, eg.: filma #4, #8 se encaminan a las películas #30 que sea también un tipo lleno acción película (paquete) de la novela de suspense.

- KN relacionado: Retardo del teléfono -3G010: U puede necesitar retrasar temporalmente programa interactivo" de la capacidad w del uso "(con) hasta que se haya defendido/se haya alterado el programa.

- Qué es defendido (bloqueado)/corregido/alterado/sintetizado:

- TV; Juegos; Música; Interruptor (aspectos del programa); El otro milímetro ("hospitalidad"); "hospitalidad";

- Transmisión (al espectador) vía: difusión tradicional del aire; satélite; cable; M; T (línea, celulares); otros modos sin hilos (rf, infrarrojos); "tr" = recibido ("rc") por u (espectador).

. - Nota: Los medios de comunicación de los E.E.U.U. comenzaron a cubrir la capacidad de padres de corregir hacia fuera programas indeseados sus difusiones de la televisión desde quizá el julio de 1995. Mi extensión importante de este tema comenzó el 6 de agosto de 1995. Sin embargo, anterior, desarrollé varios N relacionada, más la parte imi archivo.

. El sistema (SW) corrige/altera los programas (interruptor, "hospitalidad") /functions según lo señalado por UIP, acceso.

- El sistema "sigue" u: score/ba-track determina cómo el sistema puede corregir funciones o los programas para el U.

- U puede accionar la palanca fácilmente entre la experimentación de los canales selectos, más, o de todos los tipos datos:

--Los diversos canales/archivos tienen deseabilidad de diferenciación "anotan". Este sistema de grado preferencial se almacena en archivos de diferenciación. U selecciona que tal archivo se quiere. Ejemplos: 1 que] quieren experimentar películas de la novela de suspense, "R" practicará surf (solamente) los canales w (con) tales programas (entonces después de que (todos) hayan sido (una vez) w/in vistos (los 10 minutos pasados, el sistema (sistema) puede permitir que el usuario considere todos/después bajar los canales de la "cuenta" (también)).

- El cojín de K tiene los interruptores/ajustes de diferenciación del control, que permiten que U seleccione el tipo "corrigen" modo.

- El "ranurador" es un subconjunto de "corrige".

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado.

. - el interruptor corrige hacia fuera sexual - imágenes explícitas. (Bloquea TCPIP fluye). Sus empleados supervisan la tela de la autopista de la información, actualizaciones se envían al usuario que entonces no puede "tener acceso" a ciertas vistas.

--Software de Surfwatch, de Surfwatch Software, Inc., avenida de 105 Fremont., #F, altos del Los, CA 94022. 800 458-6600.

A partir del 5.96:

- La nueva V-Viruta existente bloquea violencia y el sexo de la TV. Bloques: "cajas de plena pantalla o del cuadro-en-cuadro, y ajuste del reloj de la TV y del VCR." From Zilog, Inc en Campbell, California. Nombre de parte: Z86129. 10 línea artículo de la crónica de S.F., P.D 1, y de mayo de 29, 96.

-12.95 Las patentes de los E.E.U.U. del disco del babero = "corrigen"

- str: (corregir o corrigiendo o corrige) y (computadora o el software)

- Patentes de los E.E.U.U.: 5465324 relaciones geométricas de definición en el cad; 5442744 "que corrigen" las multimedias.

- "Se corrigen" los sonidos: Patente 5368308 de los E.E.U.U.: La corriente de los sonidos registrados rotos en segmentos entonces reordenó. La palmadita publicó 11.94.

¿-? entraba solamente la media manera el dir de A para combinar w (con) vieja N; w ya combinado (con) IMI.

. El sistema corrige automáticamente funciones disponibles del sistema (para el U/el otro Sys/C). Busca entonces da qué usuario o sistema puede querer.

FINAL DE ESTO QUIZÁ MENOS SECCIÓN DE IMPORANT

FINAL SECCIÓN DE S DE ESTE EDIT'

Archivo: La introducción de las características/educa

EDUCAR/GUÍA

La guía del `es un subconjunto de educa

MISCELÁNEO: . - "Guía": Instructor del arte. Sugiere cómo el usuario pudo proceder en la generación de "imágenes". Útil para el sector grande de población. Completar los colores en localizaciones señaladas. Guías del sistema/avisos u para cuando/cómo (w5) pueden crear arte. Ver: "Guía" del "artista", "guía de los accesos". Subconjunto de: "Educ".

. realizar 8B290 su situación anticipada futura y o actividad. También aprender las nuevas ideas y estrategias sobre qué hacer. Herramienta excelente del entrenamiento. El sistema pudo o no pudo dar la dirección en cuanto a las mejores estrategias para adoptar vía: sugerencias, advertencias, alarma cuando la persona está alrededor a o ha incurrido en una equivocación....

. Como dispositivo de entrenamiento, la situación del programa a representar cerca de las representaciones de la vida [en juegos] que requerían habilidad necesitó en el futuro. Dirige u en entrando información []/cómo de la UIP-Entrada utilizar el sistema.

. Instructor del discurso (patología): estudiante speaks= sa= compara hablado sonido w (con) DB de correcto speech= oscilador (comunicador sano saliente) del `(correcto)/impresora/cuenta del discurso.

- ver a instructor de la música de los kn.

PRINCIPIANTE AUDIO DE LA COMPUTADORA DE A453A UIP-TAILOR: El principiante selecciona de su fuente de la información electrónica (Educ-DB; uip-DB) qué él quiere oír y aprender. La información transfirió electrónicamente a la viruta del reproductor portátil del usuario, la cual puede ser escuchado mientras que viaja. Grande porque el usuario oye solamente lo que él necesita. Para aprender el material difícil, tal

como fechas de la gramática de la lengua o de la historia, el usuario puede corregir en apenas en qué él necesita centrarse más. Las cintas de entrenamiento en mercado dan a usuario el todo o nada acercamiento.

Técnico: también trabajos con las cintas de cassette. Este producto es más probable ser un accesorio para un sistema educativo/del aprendizaje/de información más grande tal como #53.

. El software dirige a usuario para aprender destrezas señaladas.

- Las habilidades que pueden ser enseñadas incluyen:

vocacional; entendiendo el producto que viene con esta característica de las educaciones [trenes cómo utilizar]; escuela u otros programas de entrenamiento institucionales [entrenamiento computarizado].

. Cómo el sistema determina qué necesidades de ser enseñado: busca que funciona usuario carece habilidad.

. Ver el amaestrador de la lengua 7J02 y el analizador de la voz: Enseña a principiantes de lengua a pronunciar nuevas palabras. Está en propio archivo.

. UIP-Acceso: la ganancia de altas [er] cuentas del proceso educativo consigue puntos' tiene acceso

. UIP-Corregir: material corregido para adaptar proceso de aprendizaje

. UIP-DB de hechos, del Info y de uip-rasgos - las ayudas enseñan a la' guía

. UIP-Q&A: usuario que hace preguntas y que consigue respuestas en la forma de educación

. UIP-Ranurador: conseguir encaminado a los asuntos, capítulos, ventanas basadas en los UIP-rasgos, alta educación que aprende cuentas.

. Progreso de aprendizaje del estudiante de las UIP-Pistas.

ALCANCE de EXTENSIÓN de la INVENCIÓN - los ejemplos embarullados siguen %:

[las piezas seccionan #1]: U/Student (usuario de esta invención) = funciones aplicables del ~ educativo C (CPU) de las características =

[Sección #2 de las piezas]: TENER ACCESO [más elegante/más rápidamente principiantes] AL ARTISTA de // [VAGOS de // del ANALIZADOR del pensamiento creativo de los aumentos [basado en la comprensión de los juegos de la cultura del papel en el proceso creativo del pensamiento] // [proceso de adaptación de la educación de los controles] (analizador) del comportamiento [sastres del `que aprenden al perfil del comportamiento del usuario] // EDIT [(juego del `) el contenido educativo corregido a la edad del usuario/al nivel de formación)] La banda MULTIUSOS de // del OSCILADOR de // del NOTIFICADOR de // [] // [] [] (programación) [] // PS-ZONE [material educativo adaptado a la zona del usuario] // del `QUE PREGUNTA [menú de las preguntas corregidas para adaptar] la CUENTA // SA (analizador/reconocedor sano) // del RANURADOR de // [] de sonidos [] // BUSCA y REACCIONA [el `reacciona con la dirección cuando el usuario carece conocimiento/habilidades] la PISTA de // TDS [] // T (telefonía) [] // [] // UIP (usuario Info que programa) [] // VA (analizador visual/reconocedor visual) [] // WA (caminata alrededor) [].

Secciones 1 y 2 interactivos.

. EGH (la educación consigue más difícilmente) es una parte de "EDUC", aunque EGH puede ser una función separada del ED. Ver el "ED" para los detalles. Subconjunto de "educación". Ver el "cerebro": la característica del system (también vista como parte) se adapta según circunstancias. EGH = producto educativo del

entrenamiento consigue más difícilmente, compensando a usuarios para su funcionamiento mejorado. El sistema recuerda el funcionamiento del usuario anterior y consigue más difícilmente por consiguiente; "Educ".

- Dibujo: 1 usuario en K (teclado) = = 3 función 2c (computadora).

- Para Techies: 1 multiusos: cada u (usuario) o el jugador es 2 reconocidos como diversa identidad por 1 que mecanografía en su nombre o parte; 2cart; 3display; entretener; % interactivos; 3osc; 2pi; impresión 3; 2score. "Corregir".

EDUCACIÓN - LEER MÁS ADELANTE QUIZÁ =

- Estiramientos la mente del usuario, eg.: aumento de su creatividad. Ver el documento de KN (invención) sobre asunto.

- D: 1 Reino Unido = 2 c = función 3

- OTD: %interactive; el sistema vendió con un manual/un libro de textos educativos en "C" o forma del libro (dejar); multiusos; notificador; P.M.; Reino Unido; % "de M"; págs.

Archivo: Introducción/hospitalidad de las características

HOSPITALIDAD %

El uso de la invención puede ser: un tipo de hospitalidad; una experiencia nueva/feliz/de la diversión; una experiencia creativa; utilizado para estimular la creatividad del usuario.

INFO EMBARULLADO MISCELÁNEO:
- generalmente las experiencias del placer/del bienestar compensan los aspectos de los program/%product que sacan emociones de otros tipos, eg.: horror, susto, fricción; pp; P.M.; %educational; juguete de %educational; % " del juego ".
- el HUMOR = el uso de los efectos/mejora de la invención a menudo el humor del usuario. La literatura de las ventas del producto indica que mejora y o que altera humores, sensaciones, emociones, o llano humanas de la felicidad. Los siguientes también se utilizan para alcanzar esta puntería:
--El juego interactivo del `que UIP-Se adapta para que al usuario saque señaló emociones en jugadores.
--carro del juego del `; carro; carácter; tonos/sonidos agradables en el OSCILADOR, synth, discurso; fraseología del software, etiquetas del botón, instrucciones en manual impreso. Esta parte pudo de vez en cuando equivocadamente haber sido llamada "entrada en este caso el contexto justifica el significado. "Corregir".
. - "Ranurador": localiza el then= recupera necesario ("entretener") programa = como controlado por UIP-Adaptar.
- Un código (acceso, marca de agua del EL (electrónico) "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado. Ver: "Tener acceso", "corrigen".
. Subpartes:
- Entretener-Programa: películas, música, % " de los juegos ". El programa puede digital ser almacenado.
- Dibujo de OTD: U = (entretener) ~ C =
%ARTIST; %BA (adaptar [nuestras] invenciones al usuario); CEREBRO; C (computadora del `); %CAMERA; CARRO; %COMPOSITION; EDIT (uip); EDUC (el uip hace más entretenido); K; M; %MM (entretener es experimentado por u vía el milímetro); %MIC; MULTIUSOS; NR; OSCILADOR; Banda (u

programa W5 (qué, donde, cuando, porqué y cómo) de la hospitalidad); Q; R; RANURADOR; %SCORE; ESTÉREO; SYNTH; %TDS;
UIP (uip-adaptar); UQ; VR; WA. "Facturación"

LUGAR DE REUNIÓN ELECTRÓNICA: Mejora en la patente 5347306 de los E.E.U.U.: Lugar de reunión electrónica Animated del ~ de "C" para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" = ANALIZADOR de // del ACCESO (necesario para cada participante (u) para ensamblar) (sistema cómo/w5 funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la banda de // del OSCILADOR de // del nr de // (notificador) (cuando u se pide para responder o debe notar ocurrencias señaladas) (comunicación verbal) (programa) del `(cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) el RANURADOR de // R (el dispositivo del control/de comunicación del u) // (cada participante/sus comunicaciones, encaminado diferentemente a otros = según: quién (u) el envío/que recibe están/w5 de u de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus acciones) // TDS // T (teléfono del `) (cómo "obra recíprocamente" cada u w: el otro u/m) PISTA de // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada u = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

ENCAMINAMIENTO de PROGRAMA de la HOSPITALIDAD 3G050: El sistema encaminará a usuario a otros (relacionado o mejorar) programas, eg.: de acuerdo con el UIP del usuario/de programas. Ver la pieza del redactor para los detalles.

la HOSPITALIDAD 5J0411 LLEGA A SER MÁS REALISTA EMITIENDO OLORES CORRESPONDIENTES

. Emisor del olor de la película: Los olores y otros estímulos se emiten para la gente según cualquier criterio. Ejemplos:

- La película/los espectadores/los usuarios electrónicos de la hospitalidad tienen sus (cinco) sentidos estimulados en las horas señaladas (w5), de emparejar el efecto deseado en el.
- La educación del `, guía, terapia consigue más difícilmente.
- El olor puede tener propósitos simultáneos múltiples: hacer agradable [a ser humano] olfatear; efectos del comportamiento múltiples; función como notificador [alertando peligro o el estado de la situación]. Eg.: el olor ambos notifica a usuario, mientras que motivan los para actuar [por ejemplo olor lemony cuáles pudieron combatir holgazanería], o la emisión de los olores del alimento cuando su hora para que la persona comience a preparar el alimento o para cuando motivan a los clientes para comprar el alimento [en el tiempo señalado en cine]
- D1: la persona fija el olor del tiempo [s] debe ser emitida en escenas de la conjunción w (con) en película [según lo dirigido por la guía automatizada/impresa] = tipo del olor emitido considera el tipo escena [por lo

tanto qué olores son los más convenientes motivar a usuarios en que humor temporal] y el tipo alimento que los están motivando para comprar en el cuarto delantero. Los olores se pueden también utilizar para realzar la experiencia de la película [este 3ultimo existe en artículo de los tiempos de Japón a partir de los años 90 tempranos?]

- D2: los vagos determinan comportamiento [de la persona o del organismo] = los vagos del altered= del comportamiento del emitted= del olor determinan la cuenta para el cambio en comportamiento señalado.

-5J041 y 5J0411 son relacionados

. Ver que emisor del olor del juguete del animal doméstico 5J0412 crea un impacto más grande con el animal doméstico. El olor pudo ser emitido cuando el sensor de la vibración del juguete lo determina se está jugando con.

- Diversos olores pueden emanar según cuando y con cómo [W5] se juega.
- La invención adapta sus funciones para el usuario, el animal doméstico y o el uso.

-5J0412 está en subparte de la Animal-Hospitalidad

HOSPITALIDAD - SECCIÓN POSTERIOR LEÍDA QUIZÁ:

El uso de la invención puede ser: un tipo de hospitalidad; una experiencia nueva/feliz/de la diversión; una experiencia creativa; utilizado para estimular la creatividad del u.

- OTD: generalmente las experiencias del placer/del bienestar compensan los aspectos de los program/%product que sacan emociones de otros tipos, eg.: horror, susto, fricción; pp; P.M.; %educational; juguete de %educational; % " del juego ".
- el o-HUMOR = el uso de la invención mejora a menudo el humor del usuario. La literatura de las ventas del producto indica que mejora y o que altera humores, sensaciones, emociones, o llano humanas de la felicidad. Los siguientes también se utilizan para alcanzar esta puntería:

--OTD: carro; carácter; tonos/sonidos agradables en el OSCILADOR, synth, discurso; fraseología del software, etiquetas del botón, instrucciones en manual impreso. Esta parte pudo de vez en cuando equivocadamente haber sido llamada "entrada en este caso el contexto justifica el significado. "Corregir".

. - "Ranurador": localiza el then= recupera necesario ("entretener") programa = como controlado por UIP-Adaptar.

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado. Ver: "Tener acceso", "corrigen".

. Subpartes:

- El tipo usuario de los resultados puede desear tener en themselves= y qué él selecciona de menú del interruptor (software del `): una energía más física/más mental [capacidad del pensamiento creativo]; mejorar el condition= médico en la consideración con la dolencia del u, eg.: sus dolencias específicas; el guide= de la terapia física considera las limitaciones corporales del usuario y cualquier área del cuerpo que necesiten el foco/el handling= especiales [para la rehabilitación]; la guía compensa daño/limitaciones permanentes en usuarios, eg.: edad avanzada, problemas con las partes del cuerpo particulares o miembros.

--'Sugerencias del analizador: longitud de tiempo y rigor del ejercicio; frecuencia por semana...

- Ver: Dirigir los trabajos con: movimiento NR del cuerpo 1J010: para el síndrome de túnel de carpal; formas entretenidas de movimiento; movimientos del cuerpo atados para componer.

EXTREMO DE LA SECCIÓN PRINCIPAL DE LA HOSPITALIDAD

Archivo: La introducción de la característica/rodea protege

PROTECCIÓN DEL MEDIO AMBIENTE

[Automáticamente] funciones para aumentar o para proteger completamente el ambiente en uno o maneras múltiples.

. Ambiente del monitor de los sensores del analizador - busca y reacciona según lo programado. Las reacciones incluyen: notificación alguien; alterando cómo funciona un producto, por ejemplo uno o más de desactivación o de aumento de sus piezas/funciones. [automáticamente] cambiando cómo funciona el producto cuando es necesario [basado en w5 (qué, donde, porqué, cuando y cómo)], para reducir/consumo de energía del aumento, y o ventaja/daño ambientales.

. El analizador del comportamiento estudia los usuarios'/el comportamiento del dispositivo, después los sugiere que' educa' guías el usuario/sistema para ser más EP amistoso.

. Las historias educativas del juego video dan los puntos para el comportamiento amistoso del EP. Los carácteres antipáticos del EP son bandidos.

. Las guías/educan a usuarios [con la hospitalidad] para utilizar los productos para un mejor EP.

. Cuenta: El sistema se anota/otros dispositivos para el nivel de buen/malÌ□n efecto al ambiente. El Info se puede enviar al analizador.

. Los sensores supervisan y analizan niveles del EP: olor/sensores químicos, analizador de sonidos [las búsquedas del `y reaccionan a la contaminación de ruido, o a los sonidos correlacionados con una edición del EP].

. Adaptar (UIP) de los sastres ambientales señalados de las características los productos a ser respetuosos del medio ambiente.

. Diagrama: El sensor = unidad central de proceso (analizador del `) = hizo salir [la invención se ajusta para que haya el mejor EP].

. W5 (qué, donde, porqué, cuando y cómo): el sistema ajusta sus funciones y autodominio basados en cuando, donde, porqué más qué está sucediendo y cómo.

. Qué necesita la protección, e.g. las publicaciones de la sierra club, Naciones Unidas, Agencia de Protección Ambiental de los E.E.U.U. [gobierno federal]. Más ejemplos: Reducción de la contaminación. Reducción del gas de la casa verde. Reducción del alergénico. Reducción cancerígena [del lanzamiento]. Protección [salvaje] del organismo. Control de la erosión. Reducción electromágnetica/de la radiación.

. Protejamos nuestro planeta en cualquier tecnología de desarrollo de la manera permite. Los descuentos en la autorización pueden ir a las organizaciones que son más respetuosas del medio ambiente con nuestras y otras invenciones.

Archivo: Introducción/ejercicio de las características

EJERCICIO

También pudo funcionar como el compañero, la guía, o el organismo provechosa de la regla en ejercicio físico.

- D: 1 - > 2 - > 3

- OTD: el usuario se mueve desde la postura/el punto 1 a 2 del cuerpo mientras que el usuario está obrando recíprocamente con el producto en 1 y 2; la persona 3 continúa el ejercicio (123456...); el sistema es bueno para la persona que se mueve alrededor en por lo menos una manera de menor importancia, aunque no no necesario requiriendo actividad física vigorosa. "Mandando la cuenta": cuentas

Juego (archivo)

. PIEZAS del JUEGO (características):
- Juegos de la subparte del UIP
- Puntos de acción
- Partes de nuestros juegos de los años 90
- Inteligencia artificial UIP
- Características comunes de la industria
- Lista del diagrama del RPG
- Facetas grandes del UIP
- Juegos de la entrada del UIP

. Aumentar otros juegos

Las invenciones adaptantes del juego hacen su propio diagrama o son funciones incorporadas en una.

El ANALIZADOR del COMPORTAMIENTO selecciona las opciones del juego que excitan a jugador. Ejemplo: Un individuo que ama rescates de los blondes su muchacha ideal.

El MODELADO del JUGADOR ajusta la plantilla del juego según el modelo de comportamiento de cada jugador.

ALGUNOS DE NUESTROS JUEGOS ADAPTANTES: Estrategias mágicas de la contraseña. Juegos del despertador de la mañana. Sin hilos. GPS Geodashing. La pista entonces atrapa a bandidos.

Los juegos de la adaptación de la personalidad dan a jugadores apenas se quiere qué.
Los juegos educativos refuerzan sutil buenos rasgos de la personalidad.
Ayuda a grados de ESRB mientras que guarda el entusiasmo.
Nuestro IP es así alto adaptable alto propietario. ¡Más...!

SOFTWARE Y JUEGOS DE LA DATACIÓN: ¿Qué su amante de la fantasía se comporta y parece? Obrar recíprocamente con su amante ideal de las maneras que le hacen feliz.

JUEGOS DE LA PREDICCIÓN: Ganar las energías valiosas de predecir cómo los carácteres del juego se comportarán. El analizador del comportamiento educará a jugador sobre los rasgos del comportamiento del carácter. El analizador del juego correlacionará el modelo de comportamiento del jugador, con los panoramas próximos del juego, así que puede predecir cómo actuará un carácter del juego. Prediciendo cómo actuará un carácter del juego, el jugador tiene una ocasión más alta de ganar. El nivel de confiabilidad en el juego que predice el comportamiento del carácter puede variar de carácter al carácter - éste crea un nivel de suspenso. Al mismo tiempo, la característica de la predicción trae una nueva dimensión a los juegos video.

GUÍAS DEL ROMPECABEZAS Y DEL LABERINTO: El sistema señala a usuario si están consiguiendo más cerca o más futuro del resultado deseado. Los rompecabezas de software y del soporte físico pueden ser cualquier número de dimensiones, y estén en las formas tales como los cubos de Rubik. Para ser más interesante, allí puede ser rutas múltiples a solucionar el rompecabezas o a conseguir a través del laberinto. Los cortes cortos serían identificados con una luz verde; mientras que son largas las rutas pueden encender para arriba amarillo; y las luces rojas demuestran callejones sin salida. La función de adaptación de este juego trabaja correlacionando la localización actual, con el punto de la blanco. Mientras que la localización del jugador cambia, las señales verdes y rojas del juego se adaptan a la nueva localización del jugador.

PAPEL INTERACTIVO QUE JUEGA A JUEGOS CON LA GENTE VERDADERA: Obrar recíprocamente con la gente que usted conoce. Predecir los resultados posibles de cada tipo de interacción, en juegos imaginarios de la vida. Aprender cómo solucionar problemas interpersonales en trabajo, familia y otros ajustes sociales. Consecuentemente, explorar cómo las relaciones se desarrollan en el juego y los mundos reales.

JUEGOS DINÁMICOS EN TIEMPO REAL DEL INTERFAZ: Obrar recíprocamente con las facetas del mundo real. El juego mezcla realidad con la ficción. Obrar recíprocamente con los líderes de mundo para discutir y para solucionar problemas; o responder a las gotas en precios demasiado caros de las propiedades inmobiliarias invirtiendo en fondos de capital de riesgo. Obrar recíprocamente con las características de productos de competidores, para subir con mejores ideas de la invención. Aprender. Solucionar los problemas. Divertirse. ¡Más.!

LOS COLLARES DEL HÉROE ENTONCES CONTROLAN A OPOSITOR: Piedras de afilar de la lógica confusa de un collar adentro en los rasgos de los opositores, que están obstruyendo a héroe. El collar recompensa comportamiento cooperativo, y acciones obstructoras de los límites. ¡Más...!

JUEGOS DE LA MODIFICACIÓN DEL JUGADOR DEL RPG: Los padres descubrirán que esto puede enseñar a cabritos a ser comportado mejor, mientras que disfrutan del juego. Los padres pueden elegir de una lista de ediciones del comportamiento que su niño está haciendo frente. Los diagramas de la plantilla del juego cambian para emparejar el diagrama con las características del jugador. Las áreas de la mejora incluyen: prestar la mayor atención al padre; y teniendo más ambición en escuela. Los muchachos o las muchachas pueden trabajar en sus miedos sobre tener éxito en universidad y conseguir una fecha agradable. ¡Más...!

TERRITORIO UNCHARTERED DE LA DEMANDA: Descripciones de ensanchamiento de la característica intelectual en la reivindicación de más territorio. Cualquier persona que desea entrar en nuestro territorio (desarrollar nuestros conceptos inventivos) puede pagar altos honorarios para autorizar las derechas de patente del monopolio por hasta 20 años.

NUESTRAS INVENCIONES SON EJEMPLOS: Estamos buscando patentes amplias en las invenciones para las cuales los ejemplos específicos. Las patentes pueden darnos el derecho exclusivo para cualquier jugador del juego que utilice nuestros conceptos esperanzadamente amplios del juego. Pensar en los beneficios potenciales.

ESTRATEGIA DE RAMIFICACIÓN DEL ÁRBOL: Las invenciones en una categoría se pueden utilizar para ampliar invenciones en nuestros otros campos electrónicos. Las descripciones de la invención incluyen piezas; se explican amplio en otros archivos también enviados a la oficina de patentes. La inserción de una parte abreviada una palabra puede ampliar automáticamente la invención por el número de páginas de eso partición. Cada parte hace conexiones extensas a otras piezas, y esas piezas a otras piezas y números de patente. A menudo uno conecta simplemente con una pieza, y la invención se adapta a un nuevo uso. Las solicitudes de patente del tonel generalmente se titulan "diseño adaptante".

UIP (INFORMACIÓN DE USUARIO QUE PROGRAMA): Tiene usos extensos en la mayoría de los productos electrónicos del OEM. Los juegos son un fondo excelente en el cual ampliar el UIP, pues es una "cultura muy flúida". Centrarse en los usos del UIP para estos e invenciones posteriores.

Archivo: Juegos/Lic R/collar GA

RESTRICTOR y GUÍA 2G150 del COLLAR

Restrictor del collar: Los carácteres del jugador y las otras criaturas del juego pueden ser asignados los collares que influencian las habilidades fuertes y débiles de la criatura. El collar se adapta al usuario con la inteligencia artificial. Zaps a portador basado en en lo que están haciendo y son bien expertos. Los collares pueden en peor, hacen los carácteres a zombis, o en el mejor de los casos igualan habilidades entre dos o más de ellos. Por ejemplo un jugador bueno con las espadas puede encontrarse penalizados con un collar que obstaculice sus habilidades de la espada o del shooting. La penalización puede ser más débil o más fuerte según el castigo, y los sistemas de la habilidad del carácter o del jugador.

Detalles:

+ el collar tiene todas las funciones de cualesquiera de nuestras piezas de la invención, particularmente las que efectúen comportamiento.

--Agentes del UIP de los collares (llevar todas las características del) que efectúan características señaladas al nivel resuelto, para el resultado deseado.

- Los jugadores pueden ganar en formas múltiples. Por ejemplo: Quitando su collar y ejercitar las habilidades completas aumentadas anterior; o el aprendizaje de cómo evitar las restricciones del collar encontrando los lugares por los cuales pueden ejercitar sus habilidades - sin embargo el collar puede aprender cómo se evita, dando por resultado el jugador que tiene que encontrar otras grietas en la restricción.

(GPS) Característica G105 del juego del collar: Las búsquedas del UIP del collar y reaccionan a las situaciones señaladas. Enseña/recuerda a portador (carácter, persona, animal) qué hacer basó en guía' EGH/' TGH de qué UIP/señala la'. EG.:

- Popeye: alza el conocimiento de usuario/la fuerza cuando (los acercamientos del opositor). El picosegundo del collar sabe a cuándo está en proximidad designada (punto (ocultado) del acceso/del escape). El collar puede emitir: olores (del café); vibraciones (a verdadero o aumentar la vigilancia); notificación de los sonidos (oscilador); imágenes/luces para que cualesquiera y todos vean. Envía las señales negativas para (malo/peligroso) el comportamiento (descarga eléctrica).

. Jefe del usuario el' entrena a su animal doméstico/robusteza/ayudante con el collar del UIP. El amaestrador/el portador da la UIP-entrada. Los portadores no pueden multiplicarse en gran número, cada uno que tiene collar (iguales), haciéndolo más fácil hacer a un grupo (luchar/acto para el amaestrador/el jefe).

- El jefe del `ata con correa el collar sobre opositor/miembro del grupo (puede ser sacado solamente con el acceso (obtenible por el jefe/el bandido)).

Utilizado antes: ¿Demostrado en la demostración de Star Trek TV?

Panorama del juego de la serpiente: Esclavos [transformados parcialmente/cambios de la forma] en los animales [viven cerca] [conservando características/energías humanas]. El jugador [tal esclavo] obra recíprocamente con un humanoid/una serpiente [enorme]. El jugador evita zona cerca de serpiente. El jugador toma medidas que mantienen la serpiente ausente [de jugador que ataca]. El collar puede ayudar/jugador del cesto en: siendo detectado por la serpiente; serpiente de la lucha. El collar predice cómo la serpiente reaccionará [si el jugador alarma /triggers una reacción de la serpiente]. El collar utiliza a' sastres al ambiente como un recurso/arma para UIP- [entrada]: camufla a jugador.

- El collar camuflará los sonidos/los movimientos del jugador trampeando la serpiente en el pensamiento de la conmoción fue causado por otra entidad, eg.: presa del roedor/de la serpiente. El jugador trampea a bandido en la interpretación del' comportamiento del jugador que predice en cuanto a ser algo diferente para cuáles es.
- el collar da estrategias del jugador en cómo a: puente/acercamiento/ataque/lucha (lucha).

COLLAR-UIP: La inmunidad a los problemas señalados, ese analizador realiza que' predice existe.

El ajedrez tiene gusto de la función del juego del collar: el jugador mueve un empeño; antes de que sea opuesto los movimientos que juzgarán' predigan cómo los otros movimientos anticipados. El jugador ataca a bandido [este 3ultimo evade ataque].

Guía del modo del ataque: de acuerdo con el UIP de la blanco [percibida], el collar sabrá [a un mejor] ataque que da estrategias/las herramientas. Otras debilidades de la blanco.

UIP-Entrada: el collar aprende de acciones en juegos [anteriores]. Busca debilidades [a través de menú] en opositor.

Hombre mega de Nintendo - aquí niveles de trabajos del jugador a conseguir al jefe principal.

Guía del collar

En gran parte el inverso del restrictor del collar. El collar aprende la debilidad del jugador principal y los dirige a través de puntos ásperos. Por ejemplo:

- Aprender para los puntos: A cambio de algunos puntos, la guía dará el jugador sesiones de práctica, y a indicadores. Los indicadores pueden ser simplificados así que el entrenamiento muy largo no se requiere. Los indicadores incluyen la declaración: punto débil de etiquetado de opositores; sabiendo cuáles de los muchos botones necesitan ser presionados en el arma para dominar a opositores; palabras mágicas (acceso del `) que ampliarán su vida del juego.

Alcance de la invención de extensión del diagrama: Usuario = esta base de datos/UIP [de los rasgos del portador y de las funciones del collar o reacciones potenciales de los efectos/UIP [en la experiencia del portador o del jugador] // educan/UIP [portador] de los profesores del collar // corrigen/UIP [función] del collar // del analizador/UIP del comportamiento de // de la entidad/de la invención de // de los agentes de // del acceso de // del analizador del ~ de la computadora del ~ de la invención = de la cerradura del carácter [el collar accede] [los agentes pueden tener acceso/corte otros agentes, tales como collares que sean agentes] [el collar es una invención] [el collar adapta al portador] // (al comportamiento del portador)] // Aparición-AI/guía/UIP de Peter [sugiere y cómo el collar dirige a portador] // [en donde y cómo puede el portador las opciones de la secuencia de la introducción de // de la orden y de la sincronización de go/act w5] // Heurístico-AI [la mejor acción dirige a usuario] // de las selecciones [el collar da la dirección múltiple del paso] [explica el collar (con ejemplos móviles de la acción)] //.más vida [la toma de los collares/agrega vidas] // poniendo/UIP [los padres lo dijeron que ayuda con los cabritos' educación] // humor/UIP [alterar' corrigen humores] // multi OBSTÁCULO [el collar puede ser obstáculo superable] // paladio (Puzzler de ciclo inicial del ping-pong/UIP)/UIP [funciones efectuadas por zona] // del dispositivo de colocación del collar [el collar actúa, después las búsquedas y reacciona ocurren a qué acontecimientos externos] // botón (derecho) [de la prensa que se accionará para arriba o (involuntario) abajo] // [quitar o collar del acceso] // VR [el collar es un dispositivo de la realidad virtual (con el engranaje que transmite a todos cinco funciones más relacionadas de // de los sentidos del humanoid].

Archivo: Detalle de la fecha GA

DETALLES OPCIONALES DEL JUEGO DE LA DATACIÓN Y
PLAN EMPRESARIAL ABREVIADO

Descripción: Esta oferta implica varios aspectos de este extracto. La parte principal consistiría en el producir de un algoritmo de la inteligencia artificial basado más cercano a la manera que razona el cerebro humano [el `analiza]. Esto sería basada en la información presentada en el Web site http://www.awayfrompain.com. Este sitio y publicaciones de él proporcionan un modelo de funcionamiento de la persona consciente y cómo van alrededor a tomar decisiones. Desarrollando este modelo en un algoritmo sería esperado que los carácteres serían más verosímiles.

Archivo: Detalle de la fecha GA

El segundo aspecto cubierto es la creación [de los carácteres del juego del `] y sus personalidades y comportamientos.

El tercer aspecto que se cubrirá en este documento es dos usos de la vida real que se podrían perseguir una vez las otras dos ediciones son resolved.

ALGORITMO del CEREBRO HUMANO 1.THE:

El modelo conceptual del cerebro consistiría en una base de datos de la información incluyendo una línea de fondo que comienza la base de datos tan bien como los datos adicionales determinados [analizador del comportamiento del `] [por el carácter]. Todos los datos tendrían seis grados numéricos adicionales asignados a ellos. Éstas serían importancia moral de la información en las categorías de amor, de sabiduría, de energía, de justicia, y de humor. Éstos serían equilibrados contra los deseos del carácter con respecto a los datos que son analizados. Pues el carácter experimenta decisiones las cuentas para estos aspectos en un tema dado se alteran que proporcionan un modelo evolutivo de la toma de decisión.

Los datos entrantes se analizan contra la información anterior y se obtiene el mejor fósforo. Las cuentas con esta información así como una cuenta al azar del humor serían determinadas para la decisión. Las respuestas se podrían atar en las respuestas múltiples basadas en cuentas, o una respuesta reflejada basó en la petición. Una vez que la decisión se toma en una respuesta, los nuevos datos y cuentas actualizados se almacenan para el uso

futuro. De esta manera el carácter está cambiando constantemente sus encendido últimos datos basados toma de decisión, humor actual, y deseos de la corriente. De esta manera se espera que el comportamiento del carácter sería más humano como.

Otro ejemplo sería un deseo cada vez mayor basado en conversaciones anteriores. En un cierto punto ganaría hacia fuera sobre las aplicaciones morales las otras cuatro cualidades. Un método para restaurar moralejas podría ser hecho por ejemplo si el carácter era tener una conversación basada en la religión o buen comportamiento. Esto después bajaría la cuenta del deseo y traería el carácter nuevamente dentro de un estado moral correcto. Esto sería relacionado con una conciencia en una persona. Su conciencia puede corregir su comportamiento recordándolos la moralidad de una situación dada sobre la reflexión y afectar así al resultado de las situaciones similares futuras.

Éste está todo en las etapas conceptuales y está conforme a cambio. Apenas estoy intentando proporcionar un modelo de funcionamiento de cómo éste podría ser realizado.

2. PERSONALIDAD Y COMPORTAMIENTO DE CARÁCTERES

Cada carácter también vendría con características de la personalidad de la línea de fondo. Para facilitar la función de crear un carácter tomarían el usuario a través de un cuestionario detallado sobre cómo el carácter reaccionaría. Esto entonces llevaría a un módulo actualizado de la personalidad [UIP] para el carácter que después afectaría al humor y sería descompuesto en factores en la toma de decisión [`que analiza]. Como las menciones abstractas, si la persona de la vida real/[cosa del juego del `] reacciona diferentemente esto se puede observar [uip-entrada] y después modificar [`adaptado] en el programa.

El usuario también completaría el cuestionario [uip-entrada] de modo que el carácter tenga un perfil de la personalidad de la línea de fondo para de lo que un poco está tratando la persona él. Esto sería similar a lo que hace la compañía Eharmony en su Web site con su cuestionario extenso para la gente que empareja junto. De esta manera el carácter puede tener una idea de lo que dará la respuesta a resultado deseado.

3. USOS DEL MUNDO REAL PARA EL EXTRACTO

Aunque sea evidente que hay usos de gran envergadura para esta invención, algunas ideas vinieron importar inmediatamente que pudieron ser interesantes y están fuera del alcance del extracto. Los interfaces que vinieron importar para mí eran el sistema de Nintendo ds como es handheld, tiene capacidad de comunicación del IR para dos jugadores, y es también capaz de conectividad de Internet sin hilos. Con dos pantallas visuales, un carácter se puede poner en la pantalla superior, con los parámetros de modificación hechos con una aguja en la

pantalla inferior. El carácter podía entonces ser actualizado en la pantalla superior. Esto podía ser muy útil a través del modelo programado.

Otra plataforma que siento tendría un rato al mercado rápido sería los usos del Internet de esta idea. Debajo de usted encontrará que que dos usos que pienso tener súplica amplia y ser fácil ejecutar.

Un amigo virtual de los envíos de mensajes de texto para los teléfonos celulares/caminata Abouts.

1. Un Web site en línea adonde el usuario va y suscribe. Entonces toman un concurso de la personalidad para sí mismos y cualquier carácter que deseen fijar. También pueden utilizar construido en carácteres. Este uso sería un servicio de los envíos de mensajes de texto para los teléfonos celulares de la gente del novio virtual o de la novia de una persona.

Podrían fijar la frecuencia, el tono, y la persistencia de su pal en línea. Podrían incluso tener un modo psico de la novia donde los mensajes de texto extraños se envían en todas las horas. Si el usuario reacciona o envía un mensaje de texto al Virtual Server, se analiza y se responde de la manera del mejor. De esta manera el usuario podría tener una conversación corriente con la novia virtual. He/She/It también podría transferir su cuadro de modo que apareciera en el teléfono celular [con las características del picosegundo] cuando transmisión de la llamada se recibe la'.

La persona pudo querer utilizar este servicio para impresionar a sus amigos, para hacer un compañero celosa, la hospitalidad, o apenas para la diversión. Las personalidades del alto nivel podrían ser dadas el mismo concurso [uip-entrada] y poner en el sistema también. Esto se podría poner como Web site independiente en donde los réditos son generados por las suscripciones, así como la publicidad en el sitio debido a el volumen.

Amigo virtual del email [realidad virtual del `]

Esto sería un servicio similar a el arriba y se podía funcionar del mismo Web site o diverso. El concepto y la base de las suscripciones serían igual a menos que el amigo virtual enviara email al usuario así como la respuesta a los email. Sería similar en el resto de los aspectos.

Éstos apenas están comenzando ideas. Creo pues estoy seguro que usted hace que hay muchas otras avenidas inexploradas para este concepto. Creo que debe ser desarrollado en el contexto de sistemas de envío y de plataformas existentes del juego y ser autorizado y ser puesto a través de estos canales. Esto aceleraría el desarrollo de los conceptos.

Una compañía de Hong Kong tenía una novia virtual similar pero no exactamente qué se propone aquí en finales de 2004. No estoy seguro qué sucedió a esta idea. El problema era que quisieron cargar el dinero de los usuarios comprar regalos y flores para mantener a la novia virtual feliz. Esto estaba encima de un honorario de suscripción. Si usted no guardara su feliz ella no hablaría con usted. http://news.bbc.co.uk/2/hi/asia-pacific/3591856.stm

Archivo: Fecha GA

SOFTWARE y JUEGOS 2G140 de la DATACIÓN

SOFTWARE Y JUEGOS DE LA DATACIÓN

Obrar recíprocamente con su amante ideal de cuatro maneras. La lógica confusa empareja a jugadores para arriba con las fechas anticipadas que son verdaderas o imaginarias. Los estudios de sistema las características del comportamiento de los jugadores de la vida real, a hacen el mejor fósforo, o diseñan a amante imaginario. La interacción del amante de la versión del juego contrata a gente jugar con su amante imaginario. La versión de la vida real es casamentero virtual. Fechar enseñan las guías a jugadores del juego a mejorar habilidades sociales de la vida real, para alcanzar hacia fuera a la gente, y después consolidan la relación. El derechos de propiedad intelectual se está desarrollando para el ™ virtual del amor que abarca versiones de una realidad más avanzada, más virtual de estas invenciones que se tomarán para poner cuando los costes de la tecnología llegan a ser comprables.

Detalles:

- Gozar el obrar recíprocamente con sus amantes ideales.
- Mejorar la uip-Info-entrada por cómo el jugador selecciona a sus compañeros [potenciales]. Las personalidades, el cuerpo/las características faciales, la voz del jugador y la opción de palabras, etc... se emparejan y chispean interés en jugadores [y otras entidades].
- `Interactivo cuando está agujereado/solo.
- El `educa a uno mismo en cómo mejorar habilidades sociales; o conseguir sobre miedos al resolver gente/entidades elegibles ideales.
- Luchar para conseguir (muchacha): (dos) (hombres) luchar, y ganar dominando el otro (sabiendo sus características).

Versiones y usos del programa:

- Juego para dos o más entidades/jugadores
- Servicio de la datación de la vida real: predice cómo una gente dos o más verdaderos obrará recíprocamente en diversos ajustes y uno o más metas diversas, eg.: amante, amigo, socio comercial, jefe [patrón o bandido del juego a enredar con], y vigilante que buscan.
- Juguete [del software] a obrar recíprocamente con y para alcanzar fósforos [mientras que placer de sensación]: amigo [romántico]
- `Educativo/guía: aprender cómo hasta la fecha, ser y crecer con los amigos/el amante [ideal] del negocio partners/an.
- El análisis del comportamiento del `/la UIP-Entrada para los usos en el otro UIP programa [también]: aprender sobre jugador, adaptar cualquier dispositivo relacionado software para ese [tipo de persona] entonces o en futuro.

Juego existente "Sims". Apenas la descripción sigue:
un juego de la estrategia, construye un desarrollo de la ciudad o de tierra. Fecha caliente de Sims; aumenta personalidad y la confianza, encuentra eventual a persona adecuada. Chascar donde irá su jugador. Crear la personalidad de su carácter, eg.: arrojar, trabajo orientado, saliente, apenas colgar hacia fuera con los amigos....
- Cómo se aumenta el carácter: vida de un mundo de fantasía [carácter] - jugado durante muchos días - causando el apego - como vida viva; esto ayuda a desarrollar un perfil del comportamiento, usado para decidir a cómo un fósforo trabajará/pasado.
- el jugador es 3ro juego de la estrategia de la opinión de la persona.

Otro juego: Construir los puntos para el carácter, para atraer a mujeres. Un juego basado de destello - del Internet.

EL DIAGRAMA AMPLÍA ALCANCE DE S DE LA INVENCIÓN':

Usuario = este analizador del ~ de la computadora del ~ de la invención =
- Acceso/UIP: la cuenta señalada necesidad de los compañeros (gama) a jugar/consigue emparejada
- Juego del `de los agentes del `: explora las características del compañero [cada uno]
- Entidad/invención del `: la muchacha/el individuo emparejó a una muchacha/a un individuo; (raro/difícilmente criar) animales/animales domésticos

- El analizador/UIP del comportamiento del `busca el Info en cómo las entidades ser emparejadas pueden: interactivo, y qué tipos de interacción darán lugar a qué patrones del comportamiento [en una orden y un patrón que mide el tiempo].

- Jefe del `: la muchacha esa los mejores fósforos el jefe para: haciendo al jefe/a la muchacha felices; la audiencia de los choques en sus contrastes tiene gusto con King Kong y su muchacha.

- Corrigen/UIP del `: los diseños/eligen del jugador de menú a compañero ideal [para la interacción subsecuente]

- Educa/UIP del `: aprender cómo hasta la fecha/no ser tímido cuando con la persona ideal. El discurso/que se comporta de la práctica = entonces consigue anotado/dirección.

- Efectos/UIP del `: voces apasionadas/parámetros sanos preferred del jugador del fósforo de los colores/etc.

- Base de datos/UIP del `: las entidades/sus características/uip = al fósforo/obran recíprocamente/guía

- `Aparición-AI/Peter: creando a amante ideal/o cualquie otra criatura con buenas/malas características señaladas, eg.: jefe, agente. El crear [ideas/parámetros] para: acess, jefe, corrigiendo, educando, efectos, estructura de la base de datos, cómo la aparición puede trabajar [computadora que se enseña para realizarse mejor], grupo, guía, ping-pong, viscosidad para alcanzar el resultado deseado, terapia, cómo buscar/Info de proceso para la UIP-entrada, realidad virtual.

- Juego del `del grupo del `: grupos que emparejan con otros grupos/solas entidades/invenciones. El mago que la entidad [automáticamente] da/que ofrece la invención que los fósforos [todos] de las necesidades de la entidad.

- Guía/UIP del `: ofrece a compañeros [más] diseñados para educar la entidad [en cómo hasta la fecha/' obra recíprocamente

- `Heurístico-AI: el sistema pone cualquiera un neutral/conjeturado en la cuenta para las características sobre las cuales tiene Info directo o correlacionado de little/no.

- Secuencia de la introducción del `: sonrisa/entidad feliz demostrada.

- Más vidas: si va una fecha/un fósforo malo - soltar una vida; los buenos fósforos agregan/amplían vidas

- Comercialización/UIP: Lemas: "Encontrar su fósforo" "estar con su amante ideal" "garantizó que el amante emparejará sus sueños".

- Humor/UIP del `: humores anotados, entonces emparejado. Un cierto valor de cuenta dado para las características que balancean cada entidad, eg.: el inventor infundado alto imaginativo, emparejado con práctico, "va persona de comercialización del estilo del comprador".

- Obstáculo multi: la muchacha juega difícilmente para conseguir vía obstáculos.

- Orden y sincronización del `: el proceso de la datación arrastró hacia fuera; el funcionamiento casero viene más adelante.

- PALADIO/UIP: la intimidad puede suceder en zona del dormitorio.

- Predicen/UIP del `: cómo el fósforo resultará hoy, y en cualquier número de años.

- Juego verdadero del `del `- tiempo -: trabajo con las celebridades, cuyas características se pueden cambiar al jugador/a la entidad' S. del fósforo del UIP.

- Juego/UIP del `de la viscosidad del `: flexibilidad de la medida en gustos y capacidad de ajustar su personalidad para adaptarse a la otra. La viscosidad baja en un rasgo no compatible, mejorará la cuenta para ese rasgo, aumentando la cuenta [hecha un promedio] total para la entidad/el fósforo.
- Juego/UIP del `de la plantilla del `: hacer estallar el perfil del jugador, y mecanografiar a amante querido en la plantilla.
- Terapia/UIP del `: amor usado para curar [jugador]
- UIP-Entrada: comportamiento de los estudios [jugador] para crear la base de datos en su comportamiento
- Realidad virtual % del `: juego con su amante, usando los cinco sentidos. ¡Más sentidos, el mayor su efecto sinérgico! Guardar [hacia fuera] todo el juguete adulto sabido y adaptable [con grados de G a de R] como función adicional; ese trabaja con otros efectos del sistema.

CONCLUYE ESTE ARCHIVO DEL JUEGO DE LA FECHA.
Archivo: Detalle de la fecha GA

DETALLES OPCIONALES DEL JUEGO DE LA DATACIÓN Y
PLAN EMPRESARIAL ABREVIADO

Descripción: Esta oferta implica varios aspectos de este extracto. La parte principal consistiría en el producir de un algoritmo de la inteligencia artificial basado más cercano a la manera que razona el cerebro humano [el `analiza]. Esto sería basada en la información presentada en el Web site http://www.awayfrompain.com. Este sitio y publicaciones de él proporcionan un modelo de funcionamiento de la persona consciente y cómo van alrededor a tomar decisiones. Desarrollando este modelo en un algoritmo sería esperado que los carácteres serían más verosímiles.

Archivo: Detalle de la fecha GA

El segundo aspecto cubierto es la creación [de los carácteres del juego del `] y sus personalidades y comportamientos.

El tercer aspecto que se cubrirá en este documento es dos usos de la vida real que se podrían perseguir una vez las otras dos ediciones son resolved.

ALGORITMO del CEREBRO HUMANO 1.THE:

El modelo conceptual del cerebro consistiría en una base de datos de la información incluyendo una línea de fondo que comienza la base de datos tan bien como los datos adicionales determinados [analizador del comportamiento del `] [por el carácter]. Todos los datos tendrían seis grados numéricos adicionales asignados a ellos. Éstas serían importancia moral de la información en las categorías de amor, de sabiduría, de energía, de justicia, y de humor. Éstos serían equilibrados contra los deseos del carácter con respecto a los datos que son analizados. Pues el carácter experimenta decisiones las cuentas para estos aspectos en un tema dado se alteran que proporcionan un modelo evolutivo de la toma de decisión.

Los datos entrantes se analizan contra la información anterior y se obtiene el mejor fósforo. Las cuentas con esta información así como una cuenta al azar del humor serían determinadas para la decisión. Las respuestas se podrían atar en las respuestas múltiples basadas en cuentas, o una respuesta reflejada basó en la petición. Una vez que la decisión se toma en una respuesta, los nuevos datos y cuentas actualizados se almacenan para el uso futuro. De esta manera el carácter está cambiando constantemente sus encendido últimos datos basados toma de decisión, humor actual, y deseos de la corriente. De esta manera se espera que el comportamiento del carácter sería más humano como.

Otro ejemplo sería un deseo cada vez mayor basado en conversaciones anteriores. En un cierto punto ganaría hacia fuera sobre las aplicaciones morales las otras cuatro cualidades. Un método para restaurar moralejas podría ser hecho por ejemplo si el carácter era tener una conversación basada en la religión o buen comportamiento. Esto después bajaría la cuenta del deseo y traería el carácter nuevamente dentro de un estado moral correcto. Esto sería relacionado con una conciencia en una persona. Su conciencia puede corregir su comportamiento recordándolos la moralidad de una situación dada sobre la reflexión y afectar así al resultado de las situaciones similares futuras.

Éste está todo en las etapas conceptuales y está conforme a cambio. Apenas estoy intentando proporcionar un modelo de funcionamiento de cómo éste podría ser realizado.

2. PERSONALIDAD Y COMPORTAMIENTO DE CARÁCTERES

Cada carácter también vendría con características de la personalidad de la línea de fondo. Para facilitar la función de crear un carácter tomarían el usuario a través de un cuestionario detallado sobre cómo el carácter reaccionaría. Esto entonces llevaría a un módulo actualizado de la personalidad [UIP] para el carácter que después afectaría al humor y sería descompuesto en factores en la toma de decisión [`que analiza]. Como las menciones abstractas, si la persona de la vida real/[cosa del juego del `] reacciona diferentemente esto se puede observar [uip-entrada] y después modificar [`adaptado] en el programa.

El usuario también completaría el cuestionario [uip-entrada] de modo que el carácter tenga un perfil de la personalidad de la línea de fondo para de lo que un poco está tratando la persona él. Esto sería similar a lo que hace la compañía Eharmony en su Web site con su cuestionario extenso para la gente que empareja junto. De esta manera el carácter puede tener una idea de lo que dará la respuesta a resultado deseado.

4. USOS DEL MUNDO REAL PARA EL EXTRACTO

Aunque sea evidente que hay usos de gran envergadura para esta invención, algunas ideas vinieron importar inmediatamente que pudieron ser interesantes y están fuera del alcance del extracto. Los interfaces que vinieron importar para mí eran el sistema de Nintendo ds como es handheld, tiene capacidad de comunicación del IR para dos jugadores, y es también capaz de conectividad de Internet sin hilos. Con dos pantallas visuales, un carácter se puede poner en la pantalla superior, con los parámetros de modificación hechos con una aguja en la pantalla inferior. El carácter podía entonces ser actualizado en la pantalla superior. Esto podía ser muy útil a través del modelo programado.

Otra plataforma que siento tendría un rato al mercado rápido sería los usos del Internet de esta idea. Debajo de usted encontrará que que dos usos que pienso tener súplica amplia y ser fácil ejecutar.

Un amigo virtual de los envíos de mensajes de texto para los teléfonos celulares/caminata Abouts.

2. Un Web site en línea adonde el usuario va y suscribe. Entonces toman un concurso de la personalidad para sí mismos y cualquier carácter que deseen fijar. También pueden utilizar construido en carácteres. Este uso sería un servicio de los envíos de mensajes de texto para los teléfonos celulares de la gente del novio virtual o de la novia de una persona.

Podrían fijar la frecuencia, el tono, y la persistencia de su pal en línea. Podrían incluso tener un modo psico de la novia donde los mensajes de texto extraños se envían en todas las horas. Si el usuario reacciona o envía un mensaje de texto al Virtual Server, se analiza y se responde de la manera del mejor. De esta manera el usuario podría tener una conversación corriente con la novia virtual. He/She/It también podría transferir su cuadro de modo que apareciera en el teléfono celular [con las características del picosegundo] cuando transmisión de la llamada se recibe la'.

La persona pudo querer utilizar este servicio para impresionar a sus amigos, para hacer un compañero celosa, la hospitalidad, o apenas para la diversión. Las personalidades del alto nivel podrían ser dadas el mismo concurso

[uip-entrada] y poner en el sistema también. Esto se podría poner como Web site independiente en donde los réditos son generados por las suscripciones, así como la publicidad en el sitio debido a el volumen.

Amigo virtual del email [realidad virtual del `] ·

Esto sería un servicio similar a el arriba y se podía funcionar del mismo Web site o diverso. El concepto y la base de las suscripciones serían igual a menos que el amigo virtual enviara email al usuario así como la respuesta a los email. Sería similar en el resto de los aspectos.

Éstos apenas están comenzando ideas. Creo pues estoy seguro que usted hace que hay muchas otras avenidas inexploradas para este concepto. Creo que debe ser desarrollado en el contexto de sistemas de envío y de plataformas existentes del juego y ser autorizado y ser puesto a través de estos canales. Esto aceleraría el desarrollo de los conceptos.

Una compañía de Hong Kong tenía una novia virtual similar pero no exactamente qué se propone aquí en finales de 2004. No estoy seguro qué sucedió a esta idea. El problema era que quisieron cargar el dinero de los usuarios comprar regalos y flores para mantener a la novia virtual feliz. Esto estaba encima de un honorario de suscripción. Si usted no guardara su feliz ella no hablaría con usted. http://news.bbc.co.uk/2/hi/asia-pacific/3591856.stm

Archivo: Los juegos/guía Behav se modifican

MODIFICACIÓN DE COMPORTAMIENTO (JUEGOS)

Una subparte de la guía. 2G190

La guía del `castiga o las recompensas basadas en buen comportamiento.

PASOS:

- La base de datos del UIP tiene lista de comportamientos [del malo] deseados para ser modificado.
--La UIP-Entrada viene de: [menú] enumera cada potencialmente característica [del comportamiento] de la negativa, de fumar o de llevar las drogas, las cuadrillas que ensamblan; Ver la partición de la UIP-Entrada.
- Cuentas de UIP/parent/user para las cuales las características aparecen las más problemáticas [niño]. Esto corrige el juego/la educación de la plantilla del software. Por ejemplo:
--el bandido del juego del `tiene vicio de fumar indeseable - el bandido fuma; y para el cabrito perezoso que no hace su preparación, demuestran el bandido [en el juego] como uno quién no estudió en escuela. O el bandido puede tener el otro jugador/niño de las características negativas sabe es malo, eg.: violencia, drogadicción.
- las recompensas por puntos ganaron para el buen comportamiento: el jugador puede permanecer para arriba más adelante/tiene más privilegios como un adulto para los buenos puntos ganados vía buen comportamiento.
Compensación: el jugador consigue más responsabilidades.

USOS/PANORAMAS [DEL JUEGO]:

- la novia quiere fidelidad de su novio: el carácter masculino del novio consigue enfermedad venérea de fechar con demasiadas mujeres; y su vida se deshace [pierde a muchacha, trabajo, no puede hacer pagos de coche...]
- el profesor quisiera que los estudiantes estudiaran más difícilmente: los carácteres del estudiante flunking clases, consiguen extraescolar golpeada con el pie, después golpeado con el pie fuera de hogar, y van al orfelinato, y consiguen enfermos. El cabrito consigue una ocasión de estudiar y de comenzar de nuevo - si está hecho bien su vida es mejor/grande [otra vez].
- la conducción insegura/persona cogió la conducción bebida: las bebidas y los choques de coche del carácter, causando víctimas mortales, o lisiando desventajas así que jugador no pueden anotar tantos puntos para ganar.
- AGREGAR o ADHD: el carácter que no intenta enfocarse hace que su vida se deshaga.

MALA VARIACIÓN DEL JUEGO: Los puntos/las ventajas que ganan' tienen acceso para malo/grosero/poco ético/no-paz-promover [comportamiento del juego del `], se cubren en esta invención, pero no asignable para autorizar.

MERCADOS DE BLANCO/VENTAJAS: Cualquie forma de modificación de comportamiento; Padres/profesores que compran para los niños; Utilizado con los productos educativos/los servicios; rehabilitación de la justicia penal; toxicomanías []; enseña a habilidades sociales; terapia física/mental.

la GUÍA del `PUEDE SER SUTIL así que el jugador no rebelará fácilmente contra programa educativo de una modificación de comportamiento'. EG.: el bandido está fumando, pero no ponen demasiada atención en ella.

INVENCIÓN DE ENSANCHAMIENTO:

- Los intentos [del usuario] a corregir/alteran cualquier rasgo del comportamiento que uno o más gente/entidades desee inculque a positivamente o negativamente en cualesquiera jugadores, grupos [de jugadores], y o cosas.
- Diagrama:

--#1: Conceptos/archivos de la base de datos de la mente de "A" [padre/uip/usuario] tiene en los' sobre [los comportamientos que quiere efectuar/interactivo con] = base de datos/juego del UIP funciona [`corregido según lo señalado por el UIP] = las interacciones = jugador/las entidades del juego.

--#2: Cuando ocurrieron el acontecimiento/la situación/el panorama "A" is/has [buen/mal□n comportamiento] = después jugador pueden/no pueden hacer "B" [juego (aspecto) del juego.

- Rasgos del comportamiento [quiso ser modificado]: maneras apropiadas; orden [en dormitorio/casa/en el escritorio]; hacer la preparación; puntualidad [estampilla de fecha del tiempo del `]; dicción apropiada [que evita palabras crudas]; dieta sana [alimenticio y calórico]; obediencia [casa/escuela/gobierno] de reglas; ejercicio [estilo y cantidad apropiados]; evitar las drogas ilegales; el asociarse a los buenos amigos/gente [basados en sus cuentas del `del uip- interpretadas por el padre]; cualquier cosa [típicamente] interesante a los psicólogos o especialistas de la delincuencia juvenil u oficiales de libertad condicional o especialistas psiquiátricos del hospital o médicos [de la terapia física].

COMUNICACIÓN ADAPTADA

Asunto amplio con muchos offs de la vuelta de la variación de la invención.

La comunicación se corrige para alcanzar mejor resultado deseado en recipiente.

Las imágenes y los mensajes transmitidos se adaptan automáticamente a la persona de la blanco. Usos: las imágenes de carácter del juego y su verborrea generan mayor impacto emocional en el jugador se adaptan a los gustos del receptor; tarjetas/mensajes de la ocasión especial; [calendario controlado] recordatorios para el uno mismo y otros.

Usos:

- Notas enviadas por correo electrónico a los amigos y a los amigos del juego: el remitente pide el sistema para corregir el material de opciones del menú, eg.: "letra a la novia [muy íntima]" - > agrega imágenes de flores y del oso de peluche mimoso; más agregaron la oración "te amo"; oferta para intercambiar palabras claves señaladas tales como "mí gozo el estar con usted" "te amo".
- Juegos onlines especiales: efectos adaptados al usuario.

El AVATAR NOTIFICA A USUARIO DE LA CUENTA [sin la necesidad de números convertidos a digital]. La expresión facial es la cuenta.

Avatar: Definió cualquier [imagen del juego del `] de a [cara del carácter]. El carácter puede estar [imagen corregida `] de cualquier persona/celebridad existentes [usted sabe].

--Poner su imagen de la foto o del favorito en los blogs, foros, juegos onlines donde usted fija algo. Hindú para la "encarnación de un immortal que es".

. Sastre del UIP:

- El avatar adapta su imagen al humor del usuario/de la situación; es expectativas.

. UIP entrado:

--Redactor de imagen del UIP: Cada persona [basada en niñez/patrones cultural limitados del pensamiento] tiene [levemente] diversas reacciones a la misma imagen [del avatar]. Adaptan al avatar a los UIP-rasgos del usuario.

--UIP entrado: Sistemas' Q&A de la respuesta del usuario en la reacción del usuario a las imágenes para su cara cambiable, dadas características de la invención del cuerpo facial/humano, color, efectos del traje.

--El usuario de las cuentas de los asociados del sistema da imágenes, con otras imágenes similares [del avatar]; de tal modo ensanchar la UIP-Base de datos para las imágenes.

- El avatar le transporta vía la identificación de llamador y comunicaciones relacionadas de la tecnología.
- El avatar transporta al usuario/a su [`asociado] dueño cuenta de la calidad'/anticipó a usuario del humor experimentará en cuando la apertura/lectura/la experimentación del archivo digital el avatar está situada [antes del usuario (completamente) que tiene acceso].
- El archivo comenzó en el artista, corrige, imagen, los archivos del etc. Entonces alterado por Stamos y Kays en 3.06.
- Invención de ensanchamiento: Cualquier letra de la imagen/de forma, es editable y demostrada durante las épocas y los propósitos señalados (w5), basado en preferencias del UIP [como en vieja parte archiva a artista, corrigen, UIP].

SISTEMA DE MENSAJERÍA ADAPTADO AUTOMATIZADO:

[Juego/UIP del `] el castigo/la recompensa/adaptó el comunicador:

- el remitente entra en contacto con un partido [el remitente de la entidad sabe] vía [email, llamada, letra] la declaración de un mensaje adaptado positivo o negativo. O el Info consigue fijado encendido: tela, blog, la otra fijación.

--Los remitentes incluyen: jugador/opositores del juego; juego [sí mismo] en juegos del solitario; [juego/patrón del `] jefes.

- Tipo mensajes: ocasión especial/día de fiesta adaptado al usuario, eg.: el recipiente que ama marionetas y colores verdes consigue una tarjeta de Hanukah con el un montón de verde y las marionetas/texto [del rojo] con la redacción a tales temas.

¿- Relacionado con sistema de s de Google.com el' de enviar el email de los desperdicios basado en las palabras claves encontró en su texto?

OTRO:

. Esta parte general incorpora: El artista y corrige, imagen

SASTRE [JUEGO]

FUNCIONES 2G110 [JUEGO]

DESCRIPCIÓN: Los rasgos de la entidad emparejaron por el UIP. Esto ofrece opciones interesantes [del juego]: los jugadores interconectan de la manera que crea la mejor experiencia deseable.

- Las semejanzas entre los grupos de entidades se anotan.

EL EMPAREJAR BASADO EN BASE DE DATOS DEL UIP: comportamiento, últimas cuentas. Compatibilidad rasgos de las entidades' [por las últimas cuentas, los rasgos].

- las preferencias audios de usuarios se emparejan.

CÓMO ESTÁ EMPAREJADO:

- Jugadores encaminados al tipo juegos o secciones de eso que emparejan su y u otro UIP.

- Selector múltiple de la entidad: las entidades múltiples del juego son seleccionadas por las calidades sinérgicas potenciales para cuando obran recíprocamente, e.g.: El administrador y Donald Trump de Martha que juegan juntos tienen más chispa que; Codornices anteriores de VP Dan, y Bill Gates. UIP del jugador también usado para seleccionar el múltiplo (entidades de la celebridad).

MISCELÁNEO:

- utilizar las funciones de la desventaja (golf) esa ayuda/restringir las capacidades.

- Punto bajo que saca con pala - reacción: cuando Martha falla, el perfil característico de Donald viene adentro, y él dice que "le encienden" [esta característica vino de cómo Donald actuaba históricamente en la TV].

EL TAUNTING: Poner la entidad en la situación torpe para los propósitos [chistosos]. UIP de las demostraciones de la entidad de la blanco qué tipo el taunting provocará una mejor respuesta de la blanco/de la audiencia, y qué puntos débiles a la blanco.

--Base de datos histórica del `: La parte 1. Martha tiene historia de celebridades de invitación a la TV y el sugerir ellos hacen algo fuera del perfil característico de este 3ultimo'. Parte 2. Donald Trump sensible sobre su toupee.

--Inteligente artificial emergente del `: Estilo que pregunta de Martha del fósforo; con la sensibilidad de Don; resultados en Martha que invita a Donald que discuta productos de pelo en ella demostración (con ella están las características adicionales).

IMPULSO DEL EGO: contrario de Taunting, y punto bajo que saca con pala. La entidad presiona los botones felices para otras entidades y o el jugador. O cuando el jugador tiene éxito, la manera de la alabanza (verbal) es cómo jugador la mayoría de los gustos que son elogiados.

GRUPOS DE ENTIDADES:

- Cuentas/[del `] características hechas un promedio dadas para cada equipo/el miembro de la cuadrilla; y para el grupo total.
- Efectos ambientales influenciados por las solas entidades, o promedios para un grupo. Uno o más entidades (jugador, jefe) pueden poner más peso en cuenta hecha un promedio.
- Las cuentas hechas un promedio de cada equipo, interactivas con cada otras' hicieron un promedio de las características, creando un juego dinámico.

El UIP EMERGE 2G180

CUANDO UIP-EMERGE RECIBE UNA PETICIÓN de llenar una necesidad adaptada; el sistema pasará a través de su base de datos y asoció uno o más ficheros de datos que puedan emparejar la necesidad. Intenta datos necesarios para crear la reacción señalada como una invención necesaria tirada de nuestra base de datos, después adaptada para llenar más lejos el vacío entre se quiere y se da qué.

UIP-EMERGE [poder] integrar señaló datos de archivos múltiples. Los archivos incluyen: rasgos del usuario; rasgos del problema que es tratado; rasgos de soluciones potencialmente sugeridas. Después de levantar este el tipo archivos, sistema analiza' predice cómo diversas combinaciones pueden encontrarse indicaron metas, con una cuenta asignada a cada sugerencia/invención.

La APARICIÓN DIBUJA asociaciones entre disponible [los datos] y quiso [los resultados adaptados `]. Cuentas más altas de los fósforos de los ficheros de datos, con los archivos deseados de los rasgos, entonces dirigen [usuario a] sugerencias, ideas y o el Info.

- UIP entrado: El UIP genera los archivos para se quiere qué o necesitado, después las búsquedas y reaccionan [] los datos convertidos a digital que representan: hechos, teorías, leyes, predicciones junto con todo el Info asociado y características en la' realidad verdadera del juego.

- Abajo hace que otros aspectos sean entendidos no completamente por Kays.

El `PETER = el CEREBRO CENTRAL QUE HACE GIRAR APAGADO las invenciones [él sugiere para los usos adaptados].

Presume las ideas para las invenciones, funciones inventivas, soluciones científicas: Formula' analiza predicciones/hipótesis [científicas] [y funciones/experimentos de diseño y de funcionamiento probar' analizarlos]. Puede manchar patrones en los seres humanos detectados reconocibles de la base de datos [uip] no [normalmente]'/otros sistemas. Puede agarrar' analizan el tamaño y la complejidad [de un] base de datos y asociado/conecta con otro [la base de datos del `, uip-necesita]. Las guías/realizan de Peter en invenciones. Piezas: el analizador, contenta el analizador, predice, reconocedor video audio, analiza tan cómo mejorar a sastre.

Ver el "compartimiento del economista, edición del 25 de marzo de 2006, página 83.

NUESTRAS PIEZAS TRASLAPADAS:

El `corrige, educa, EGH (Educ consigue más difícilmente), guía, obra recíprocamente, predice, busca y reacciona, TGH (la terapia consigue más difícilmente), UIP-Aparición (2G180), sastre del UIP.

[SEMI-RANDOMLY] El UIP COMBINA LOS ELEMENTOS MÚLTIPLES (funciones características) de su base de datos; entonces asocia las características de cada combinación posible a las características del resultado deseado.

- Para la eficacia, sistema primero asocia archivos más probablemente para alcanzar resultados deseados. Hace esto vía: Trabajo más con los archivos con cuentas más altas para más ser asociada a las tareas actuales. Muchas combinaciones anotadas bajas, causas UIP-Emergen para buscar otros archivos.

+ PETER (PRODUCE INVENTIONS/IDEAS EN COMO BASE NECESARIA). La aparición puede "pensar fuera de la caja" y sugerir la' guía en [las ideas intelectuales (de la característica)] él no pudo sugerir de otra manera, especialmente si no ha visto/almacenó tal ocurrencia/sugerencia antes. Peter sugerirá las invenciones aplicables a la necesidad actual. La aparición de Peter es otro ejemplo para la unidad de esta solicitud de patente. [Ésta es una adaptación creativa de] "teoría del caos" [que trae ciencia a (desorden)].

- Cuanto más grande es [`asociado] la base de datos, más las combinaciones [de la idea] posibles. Ampliar la gama de combinaciones consiguiendo la entrada de tantas fuentes como sea posible, eg.: el obrar recíprocamente con otras bases de datos [diseñadas para UIPs (similar)). Ampliar la base de conocimiento

Las ÁREAS GRISES PARA EL COMPORTAMIENTO APROPIADO, y o el asociado correcto de la diagnosis [o (parcial) carecer de eso] con emergen las funciones 2G180 del análisis. Ver: educación sanitaria 2G240 [juego], buenas intenciones 2G360 [juego].

- Manipulación de las imperfecciones de Peter: Donde Peter puede sugerir grandes ideas; Peter tiene opciones del menú para que el usuario perfeccione sugeridas [invención (y cómo ha funcionado/programado)].

DETALLES EMBARULLADOS:

- Lazos con las funciones de la aparición de la inteligencia artificial; nuestra partición de Peter.

El diagrama embarullado amplía el alcance de la invención:

Usuario = este analizador del ~ de la computadora del ~ de la invención =

- Acceso/UIP del `: elementos para corregir dado/influencia de los derechos de acceso de las características [del comportamiento] [puede ser como agentes del juego] diverso cómo función del analizador del UIP/'
- Entidad/invención del `: quién/cuál es w5 creado
- Corrigen/UIP del `: la heurística controla se combina qué Info' corregido = y entonces cómo suben los resultados [en una cosa] uip programado actuar
- Educan/UIP del `: las cosas creadas aparición las cosas educan/de la guía [los jugadores]
- Juego del `del grupo del `: se crea la identidad del grupo
- Guía/UIP del `: la aparición puede ser una cosa señalada rectora del agente/de la entidad del juego [agente] [por enseñando una invención a cómo adaptarse a una entidad/a una necesidad [imaginarias].
- Secuencia de la introducción del `: sensaciones de estar en un ambiente impresionante
- Más vidas: las entidades con sus agentes de las habilidades y de la aparición, pueden agregar/pierden vidas.
- Comercialización/UIP: Decir, "utilizar nuestro emerge fuera de las funciones del ™ de la caja en su desarrollo del juego."
- Humor/UIP del `: el entusiasmo se saca en jugadores [por el uip]
- Obstáculo multi: [barreras artificiales] hacer la llegada las soluciones apreciadas
- Predicen/UIP del `: el valor de la idea de la aparición/agente de la entidad del' es anotado, por cómo ha predicho para cubrir las necesidades [del jugador]. Los ejemplos incluyen: jugadores/amantes que emparejan [por nuestros juegos de la invención otro/datación]; el agente previsto de la entidad corregida de las cuentas' vive emergido y' puede conseguir [en relación a] los niveles de habilidad anotados de otros obstáculos de las entidades y del juego.
- Juego del `de PowerUp- del `: ciclo inicial vía la aparición

- Juego verdadero del `del `- tiempo - - sostenerse de traer este aspecto "en tiempo real" al público hasta 1997 quizá mediados de: inspirarse para las soluciones de la vida real [abordar problemas del mundo con los contaminadores, los pederastas del niño, los taludes de la esposa, thievery].
- [Apenas] jugar al juego puede accionar soluciones [bajo la forma de cosas que surgen, con las acciones controladas del uip atadas a dirigido/sugirió soluciones.
- el sistema empareja [las características de] cada elemento que abarca los problemas y las soluciones [posibles], que cada uno se anotan para su: importancia a las ediciones y a los otros elementos en la lista y anotados para cada fósforo del potencial [el funcionamiento algo como nuestro otro emparejar relacionó juegos y software, incluyendo Peter; y juegos para el amante que empareja, y el emparejar del jugador. Ver todas las nuestras herramientas de la invención de la invención/del hardware del software del pensamiento creativo, y escrituras en la socio-psicología de realzar el pensamiento creativo.
- Juego/UIP del `de la viscosidad del `: cuentas cómo cada elemento que abarca la cosa emergida es pegajoso; por lo tanto más fácil trabajar con para cosas que obran recíprocamente con los otros elementos en elemento principal, u otras.

Archivo: Los juegos/GA 3/predicen la función del GA

FUNCIÓN 2G160 del JUEGO de la PREDICCIÓN del ARCHIVO

JUEGO DE LA PREDICCIÓN: Ganar las energías valiosas que predicen cómo actuarán otras entidades. Incluso predecir cómo otros pueden predecir sus comportamientos, y recibir la dirección en cómo responder antes de que sea demasiado atrasada. Una alta función de la inteligencia bien adaptada para los jugadores inteligentes. Esta función pendiente de la patente se puede hacer en juegos basados en el software de la predicción, o un adición en característica en otros juegos independientes.

Predice lo que hará la otra entidad o invención.
- Ver la invención 1G108 del GPS
- La función del previsto tabula (como uip-entrada y análisis) qué enfocado sobre y la entidad seguida está haciendo. Las búsquedas del juego de la predicción y reaccionan para coincidir con las reacciones previstas de la blanco reacciones de las acciones del calculador las'. La cadena continúa hacia adelante, y puede incorporar' obra recíprocamente con los elementos adicionales/las acciones en futuro [orden y sincronización del `].
- El jefe del `nos dejó soltar [en el campo del juego] sus cosas [bandidos/máquinas extrañas] con predice las funciones, autorizando a su grupo para luchar (los bandidos o buen grupo de la gente [jugador] y del jugador).

- El bandido que puede acceder al calculador puede alterar a calculador como el bandido [con referencia a] lo programa/corta, e.g.: borrar la función del calculador; o hacer que gire el jefe.
- El jefe del `con la mayoría (UIP) del Info en otras cosas puede ganar, sabiendo dónde ser (w5) (y sorprender al bandido) y actuar w5.

. UIP-Carácter: los estudios otros carácter, y hacen pasado/interacciones actuales/futuras el beneficiarse de la UIP-Entrada: jefe, jugador, dirección para otra [propósitos educativos de la vida real].

. Cerradura del UIP-Carácter: castiga a opositor cuando se desvían de perfil del comportamiento (por ejemplo vía acceso del collar el')

. UIP-Recordar: sabe qué recordar quién (jefe del `) W5, base en predicciones. Ver el principio relacionado del número de la invención del GPS con 1G... ¿[quizá 1G108?

. UIP-Guía: cómo utilizar la guía para ganar vía predecir

. UIP-Cuenta: probabilidad de la acción futura señalada (por el opositor).

Existen - los X-Files de la demostración de la TV: La persona podría doblar detrás la voluntad de una persona/la energía de voluntad. El carácter preguntaría a otro qué sucedería si lo hizo el bandido "X" [sugerir arañas pudo venir, cuando otras arañas de los miedos].

-

UIP: sastre que ataca a los miedos/a las debilidades del opositor.

Las funciones/las opciones de la predicción del `incluyen: El jugador puede ver en futuro [vía ventana seleccionable]; telepatía [ventana]. Selección una de puertas/de ventanas múltiples.

El padre controla el contenido del juego vía el UIP:

- si el jugador en vida real fuma el pote, el calculador sugiere que el cabrito pueda crecer en drogas peores, por lo tanto que pinte malos cuadros sobre drogas peores, eg.: el bandido/el jugador pierde los puntos para ser [semi] - duped en tomar las drogas duras.

Cosas de qué jugadores las' pueden querer predicho:

- es la opción de la acción del jugador haciendo basada encendido: qué sienten, ayudar a otros, o para su [torcido (estimación de la vida real) sin la ayuda de la predicción] opinión sobre qué sucederá.
- movimientos/fuerzas del futuro del opositor. De acuerdo con cómo el comportamiento del opositor fue seguido/base de datos.
- cuál está alrededor de la esquina
- velocidad [conduciendo] de ir [alrededor de la esquina] sin deslizarse/que se estrella. Más puntos, cuanto el más de gran alcance, y más de gran alcance más los puntos generados....

- ETA: cuando donde cómo el opositor [w5] llegará/conseguir algo [basado en patrones de la trayectoria - cómo rápidamente han estado yendo hasta ahora].
- Probabilidad de conseguir/puntos/vidas perdidosos para se/el opositor. Dirige cómo actuar dentro de este parámetro para maximizar aumento probable.
- La capacidad de pasar por/evita la barrera/el ataque.

Cómo las predicciones dadas' notificaron al jugador:
- OSCILADOR
- Efectos del juego del `: color (rojo)
- Texto/imagen: marca de exclamación [cuidado]
- vibra: carácter, cosa, tierra, obstáculo, opositor, palanca de mando
- acción/movimiento de la pausa
- expresión facial: pausa, sacudida principal/actuación confundido; la actuación perdida/desconcertó
- cambios del ambiente: tiempo, lluvia, terremoto, asoleado.

Cómo la predicción trabaja:
- analizador del comportamiento del `: sigue el comportamiento de la entidad cuyas se están prediciendo acciones.
- características de los fósforos para uno o más de siguiente - [llevando a los resultados previstos]:
--metas del jugador
--predicciones del `de las acciones de los opositores
--territorio, ambientes, armamento, artículos, invenciones
- vidas, índices de fracaso
- elementos de la incertidumbre - normalidad de los anuncios: deseo a o tener capacidad de predecir [no puede existir].
- requiere un collar/energías especiales/agente

Dibujos para los juegos de la predicción:
. [El jugador = el UIP [base de datos/Info entrada]/predicen = opositor] - > juego que anota = que gana.
. el jugador = predice que = la entrada del usuario = la computadora = la salida = la predicción de computadora ocurre/que resultado.
. Software para hacer que los juegos incluyen: ¡flash, maya, 3D máximo, etc!

El dibujo EMBARULLADO AMPLÍA ALCANCE de S de la INVENCIÓN':
Usuario = este analizador del ~ de la computadora del ~ de la invención [UIP] =

- Acceso/UIP del `: solamente los elementos importantes/las noticias con las altas cuentas consiguen el acceso en la base de datos analizable para predecir/uip

- Juego del `de los agentes del `: cada agente tiene poseer predicciones. La invención puede hacer un promedio de cada calculador del agente [que da más peso a agentes anotados más altos (basados en cuentas de sus resultados anteriores [que era realidad comprobada])].

- Real/predijo las acciones por los agentes [otra], predicciones finales de la influencia [dadas al jugador principal].

- Analizador/UIP del comportamiento del `: el comportamiento anotado tabuló para las predicciones.

- Jefe del `: puede llevar más peso en juego el predecir/cabalmente resulta las' reacciones

- Corrigen/UIP del `: El UIP corrige las acciones dirigidas/sugeridas para Peter [el otro jugador], según las predicciones para cómo actuarán otras cosas, y cómo Peter reaccionará a ése, y cómo otros reaccionan a la reacción subsecuente de Peter. La cadena continúa...

- Educa/UIP del `: el sistema educa a jugador [del ser humano] [que demuestra cómo llegó sus predicciones] [vía el donante de la lista de elementos/de acciones/de características anotados del pasado usadas].

- Efectos/UIP del `: puede tener menos importancia en cálculos de la predicción

- Base de datos/UIP del `: anotar el índice de éxito para las predicciones previstas del pasado/futuras que/se pueden hacer por cosas.

- `Aparición-AI/Peter: formar de predecir

- Juego del `del grupo del `: los promedios predijeron los comportamientos para cada miembro del juego. Mientras que permite que [la buena] entidad seleccione [aislada a miembros por lo tanto más débil], entonces interactivos/trastos, basados en predecir cómo actuará el opositor, y la reacción...

- Guía/UIP del `: de acuerdo con predicciones

- Secuencia de la introducción del `: se convierte algo de una plantilla de la cual la UIP-entrada comience a recoger datos. Punto cero [si los datos cualquier cosa antes de juego se excluyen]

- Más vidas: predecir quién conseguirá más/menos vidas w5. Predecir las demostraciones cómo reaccionar a las predicciones en [si no] aumento/víctimas mortales/capacidades previstos cambiantes.

- Humor/UIP del `: descompuesto en factores en proceso de la predicción.

- Obstáculo multi: prediciendo la predicción de otra entidad, es una predicción valiosa [para la dirección].

- Orden y sincronización del `:

- Ping-pong/UIP del `:

- Juego del `del Puzzler- del `: dirige a jugador

- Juego verdadero del `del `- tiempo -:

- Terapia/UIP del `:

- UIP-Entrada:

- Realidad virtual del `:

Predice el non-entity y ocurrencias de la no-invención, eg.: tiempo, noticias, cosas intangibles que efectúan cualquier cosa [en juego/vida real].

GUÍAS 2G170 del ROMPECABEZAS Y del LABERINTO

Guías del rompecabezas y del laberinto

El sistema señala a usuario si están consiguiendo más cerca o más futuro del resultado deseado. Los rompecabezas de software y del soporte físico pueden ser cualquier número de dimensiones, y estén en las formas tales como los cubos de Rubik. Para ser más interesante, allí puede ser rutas múltiples a solucionar el rompecabezas o a conseguir a través del laberinto. Los cortes cortos serían identificados con una luz verde; mientras que son largas las rutas pueden encender para arriba amarillo; y las luces rojas demuestran callejones sin salida. Una vez que una persona ha dominado el rompecabezas o el laberinto, pueden jugarlo sin la guía. La gente de todas las edades aprende cómo abordar rompecabezas resistentes y los laberintos a través de juegos de la muestra, o el rompecabezas o el laberinto real que ella jugará de nuevo más adelante sin la guía.

DETALLES:

- Las cuartas y adicionales dimensiones pueden ser: franja horaria en la cual el pedazo del rompecabezas necesita ser movido; el jugador necesita estar en una zona particular al jugar con el rompecabezas; o al mover pedazos específicos; en vez de la mudanza un jugador del pedazo del rompecabezas necesita hacer algo como da una contraseña del acceso, salta o no hace caso y ni responde algo.
- Cubo de Rubik musical: Conseguir en la combinación correcta y los sonidos y o las luces como usted consigue más caliente (más cercano a la terminación deseada) sistema pueden dar señales si usted se está enfriando más caliente o sonando/iluminación

OTD: "S"; "C"; P.M.; pp; fecha; interactivo (e.g.: a la exhibición de estado del disparador); educ; juguete; todos; juego; hospitalidad; ejercicio; portable; punto de ebullición; SP; oscilador; egh; cuenta; tgh; md; carro; cp; uip; carácter.

- Indicador de progreso: Cualquie tipo de rompecabezas/de desafío/de juego/de proceso en conseguir la regeneración (no limitada a Rubik)

Conseguir en la combinación correcta y los sonidos y o las luces.

- mientras que usted consigue (más cercano a la terminación deseada) un sistema más caliente puede dar señales si usted se está enfriando más caliente o sonando/iluminación.
- parte de guía del cubo de 3CE200 Rubik y de los bloques huecos mágicos 3CE292. Copiado a esos el N.
- Ver a instructor del juego 2J02, bloques huecos mágicos 3C292.

. Dibujo: U = este N~C~ANALYZER = EDUC [aprender cómo jugar al adminículo/al juego; cerebro que ejercita] la PISTA MULTIUSOS de // TDS [] // del SENSOR de // de la CUENTA de // de la Picosegundo-Zona de // del OSCILADOR de // del nr de // [cada usuario tiene diversos niveles de dificultad, o llano en cuál le ayuda la guía] // (notificador) [] [] [] [qué (pedazo) se ha movido] [patrones] del movimiento del jugador // UIP [].

. Otro: Ver el laberinto del juego 4C141 y desconcertar las características. Las invenciones provienen la breve descripción en 4C140

+ características del laberinto y del rompecabezas del juego 4C141: Los jugadores pueden ser dirigidos a través de los laberintos/de las características del rompecabezas, que son solamente aspectos del juego. Ejemplos:
--Laberinto: el jugador está funcionando después de un jefe. El jefe sabe el laberinto perfectamente, y es llanura adicional el laberinto (a veces visible al jugador). Perjudican al jugador con la carencia de saber el laberinto funciona. Desarrollar las variaciones del juego de allí.
--Rompecabezas: necesitar conseguir el acceso imaginando el rompecabezas. Tener tiempo limitado, antes de que el bandido: el jugador/el bandido del ataque consigue lejos. ver el rompecabezas 4C140 y la guía del laberinto.

PAPEL INTERACTIVO QUE JUEGA a JUEGOS CON la GENTE VERDADERA 2G120

Papel interactivo que juega a juegos con la gente verdadera:
Obrar recíprocamente con la gente que usted conoce. Predecir los resultados posibles de cada tipo de interacción personal, o del jugador-a-jugador, en juegos imaginarios o de la vida real. Aprender cómo solucionar problemas interpersonales en trabajo, familia y otros ajustes sociales. Consecuentemente, explorar cómo las relaciones se desarrollan en el juego y los mundos reales.

DETALLES:

- asignar/carácter del carácter de la estructura [elegir del menú de modelos]. El UIP pellizca los modelos que el usuario/uip selecto. Comportamiento seleccionado pellizco vía: los agentes, corrigen, los efectos, guía, y prediciendo cómo actuará la entidad.
- las entidades incluyen: gente (jefe, familia, amigos, conocidos, (cerca) extranjeros, anticipados (patrones, amantes), más allá de/animales domésticos actuales...
- usuario de la práctica: habilidades sociales; prepararse para que cómo comunique' obran recíprocamente con sus uip-características. Terapia para otras ediciones - ver a otra parte.

- cada entidad puede demostrar diversos lados de sí mismos, se accionan que [por acontecimientos externos u otras entidades].
- `interactivo con el jefe del juego, o el jefe del patrón [a partir de vida real]
- `interactivo con los grupos [juego y vida real]
- del realizar diversos humores. Ver que cuál uip-adaptó los humores [elegidos consciente por el jugador] tienen que anotaron resultados de la interacción del ping-pong.
- descubrir la' cuenta que las características en uno mismo/otras entidades son pegajosas.
- terapia del `
- la interacción social es UIP-Entrada para el jugador
- sobre tomar del jugador qué aprendieron de juego, en el mundo real; las reacciones de la otra gente se deben anotar [por el jugador], para mejorar el UIP de la invención para cada entidad señalada [de la persona verdadera] en el juego. Las interacciones futuras llegan a ser cada vez más más exactas y más UIP-Info viene de fuentes diversas.
- cada jugador [de la vida real] sabe jugar iguales/al juego uip-adaptado [de la misma plantilla]. Entonces: la uip-entrada mejora la base de datos; mientras que cada jugador mejora habilidades. Cuenta pegajosa/cómo se cambian las características anotadas del jugador [cada uno]' corregido; después de que fueran educadas por la interacción del juego. Mientras que el jugador [s] se desarrolla, características de los otros jugadores las' pueden cambiar de acuerdo; entonces el efecto de ondulación de esto [la orden y la sincronización, búsqueda más del `y reaccionan] progresa [en el infinito/las posibilidades infinitas basados en otros elementos/acontecimientos de la vida real (mientras que vienen jugar)].

JUEGOS DINÁMICOS EN TIEMPO REAL 2G130 del INTERFAZ del ARCHIVO
JUEGO Y INVENCIÓN DEL UIP

Juegos dinámicos en tiempo real del interfaz

Obrar recíprocamente con las facetas del mundo real. El juego mezcla realidad con la ficción. Obrar recíprocamente con los líderes de mundo para discutir y para solucionar problemas; o responder a las gotas en precios demasiado caros de las propiedades inmobiliarias invirtiendo en fondos de capital de riesgo. Obrar recíprocamente con las características de productos de competidores, para subir con mejores ideas de la invención. Aprender. Solucionar los problemas. Divertirse. ¡Más.!

- Juego de la vida. De acuerdo con la vida real Info. Se divierte a jugadores relacionados dinámicamente.
- "Dinámico" definió: entra en mundo real; esos datos aparecen en el juego, eg.: El usuario de las decisiones del efecto de los precios del petróleo desea hacer.

- Ver los clips de qué está sucediendo a otra parte: el UIP del analizador visual selecciona imágenes/escenas [entonces corrige].

- Realidad de los puentes con fantasía/el juego. Juego con vida real. En vida real hay no el 100% las predicciones garantizadas.

- Solucionar los problemas/juego del mundo con la historia (base de datos histórica) para los juegos:

--Solucionar las ediciones de la investigación de la DNA (entonces conseguir acceso de la concesión'/reconocimiento público). Soluciones necesarias presentadas al jugador en el nivel/el formato que pueden entender/que obran recíprocamente con.

- Una cuenta del jugador efectúa la cuenta de otra persona. La cuenta de la primera persona, hace más duro para la persona siguiente ganar. Definió "más difícilmente": necesitar más puntos; el jefe es más duro de conseguir; se deterioren las habilidades del carácter (menos). El UIP cambia las características/las cuentas de los obstáculos (objetos/bandidos) de emparejar el nivel señalado de facilidad.

- Regeneración de otros jugadores: Juego online. Capacidad/cuenta de su carácter basada en la otra entrada, eg.: el jugador que es mordeduras de perro usted, o la criatura retrasa a jugador principal.

- Todos los jugadores pueden votar [cuenta del `] sobre (todos) los otros jugadores: anotar una o todas sus [funcionamiento del juego del comportamiento] características. Miembros de equipo compañeros de la selección [basados en sus (cuentas del funcionamiento del pasado)].

- La UIP-Entrada del `selecciona qué datos en tiempo real a utilizar, después adaptar a los usuarios.

- Alterar (el `corrige) la vida real: La gente/los objetos/las situaciones de la vida real hacen entidades/otros elementos manipulados cuyas características se pueden alterar cerca: usuario, UIP, eg.: comportamiento de Donald Trump de la torcedura alrededor; exagerar a su bandido como rasgos.

. Representación del carácter de la vida real (Martha Stewart). Pasos: 1. El jugador hace la pregunta de la celebridad a partir de cuatro opciones múltiples. 2. El jugador escoge "cuando usted venderá la acción en su compañía." 3. El UIP analiza el perfil del comportamiento del jugador para las cosas como: preferencia por humor jovial contra humor sarcástico. 4. La pregunta de cada jugador tiene cinco respuestas posibles, cada uno basada en las características del jugador. El UIP da la respuesta cuyas características del mejor jugador de los fósforos de la cuenta. 5. El jugador mejor disfruta de la interacción.

--Cada celebridad puede obrar recíprocamente con otras celebridades y o los jugadores, y o las invenciones. Las celebridades secundarias (no escogidas o no controladas por el usuario) son controladas algo menos por UIP de player's, porque las necesidades principales de la celebridad (una escogida por el usuario) para tener sus características emparejadas con características secundarias de las celebridades, más las características del jugador, de tal modo mitigando influencia de las características del jugador la' sobre interacciones, para hacerla más verosímil.

--Usos: educativo; hospitalidad.

. Representación del panorama verdadero. Juego de Invention Start Up Company: Característica del jugador, de ser influencias más optimistas o más pesimistas cómo el juego se desarrolla (la logística/los parámetros del juego). Un pesimista gana prediciendo un no-éxito. Sucede el pesimista goza de esto porque éste les da vuelta

en más que viendo algo realmente bueno (pues torcido como éste puede ser, es una característica humana común). Las reglas del juego cambian tan, y está sobre ganar en un panorama del co del fall, eg.: el jugador consigue activos de compañía en los precios bajos antes de que se arruinen, y gana un beneficio revendiendo lo que consiguieron.

El juego es como jugar: Dios; vendedor [que promueve el producto]; el intentar luchar el sistema [político].

El `predice resultados de la vida real con una ocasión señalada de la ocurrencia. O el calculador da la oportunidad de la ocurrencia, o el jugador decide la ocasión. Los puntos ganaron correctamente usando las predicciones.
CONCLUYE los JUEGOS DINÁMICOS EN TIEMPO REAL 2G130 del INTERFAZ del ARCHIVO

Archivo: Buenas intenciones de los juegos/GA 2

BUENOS JUEGOS 2G360 de la INTENCIÓN del ARCHIVO

Es una raza al día del Juicio Final. Los bandidos amontonan generalmente puntos más rápidamente que los buenes chico, cuando fingen jugar ético. El descubrimiento de las intenciones verdaderas de jugadores es dominante a ganar. ¿Cómo hace uno toman decisiones difíciles tales como la manera del fuego de la lucha con el fuego para los propósitos éticos? La definición de los éticas se ata en gran parte a la opinión de cada jugador. La mente que ejercita desafíos viene cuando los jugadores analizan las perspectivas de diversa gente en cuál es buen comportamiento. Conseguir los puntos aprendiendo qué esperar. También aprender cómo tomar decisiones difíciles, tales como cuánto fuerza deben ser utilizados, y cómo, contra un bandido. Otros usos de la modificación de comportamiento enseñan a la toma de decisión de la vida real y a las consecuencias a los niños normales, e incluso al mercado del sistema de justicia penal.

MÁS DESCRIPCIÓN: Ahora expresar la frustración en el engaño con nuestra invención del juego de video. Anotar las entidades [del juego] para sus [`fiable] niveles de la honradez, y [dirigirse] para actuar por consiguiente. Los jefes pueden ganar temprano en el juego, pero sufren cerca de la terminación cuando son anotados por el carácter de God.

UIP-TOPICS USADO EN JUEGO:
--Botones emocionales del jugador del tacto. [vida real relacionada] ediciones en asociado del juego con aspectos emocionalmente sensibles o verdaderos vidas de los jugadores'.

--Corriente [el negocio, político, guerra, sistema de justicia [encarcelamiento de celebridades], corporativo asume el control, y otras noticias] [del mayor interés para el jugador].

- Los jugadores pueden jugar: haber discriminado, jefe, ángel, dios, guarda del acceso/regulador del cielo/del infierno/de otros mundos [antes de día del Juicio Final]
- Los jugadores pueden no saber que los están anotando para la honradez [al jugar esta función opcional del juego que (tapa aleatoriamente en el juego)].

Las MANERAS DE GANAR [las vidas/los puntos] o de prolongar/acortan los juegos:

- siendo puntos honestos, y que pierden [del aumento a corto plazo]. El perdido más a corto plazo, mayor es el aumento de largo plazo [si jugador consigue al día del Juicio Final].
- ir al cielo
- besarse hasta [diablo] mientras que vive/que pierde en el infierno [el punto lento que gana modo]
- el jefe del `acumula puntos [bastantes] del maì□n comportamiento a tiempo para evitar día del Juicio Final, o para donar [porción de] los puntos ganados [entonces teniendo el acceso del cielo vía el método más rápido de Rockefeller].
- Las víctimas estorban, daño y o jefe de la matanza [y o su capacidad completa de ganar puntos en [tiempo crítico] el juego.
- acabado antes de que los opositores consigan puntos necesarios [evitar día del Juicio Final e ir al infierno]. El primer acceso necesario llano [de puntos] trae el día del Juicio Final [si desean, o puede prevenir hasta que sus compinches consigan puntos necesarios antes de que haya predicho que los opositores.

EL FANFARRONEAR PARA LA DIVERSIÓN: Distinción entre otros errores de las entidades y engaño deliberado: castigar los errores de fabricación uno lastimó el atacante y lo atacó. Determinar las acciones equivocadas de otras vía: cómo su comportamiento errante no empareja a último jugador del comportamiento observado/[sistema] seguido. La entidad es al menos quizá más que se convierte/menos honesto - así que el juicio de errores no es prueba completa [solamente manera de determinar si el jugador está cambiando sistema de sonorización de su modo ético [constantemente cambiable] del comportamiento'.

SIENDO COMPORTAMIENTO GRIS BUENO Y MALO/QUE CONFÍA: Cambiando modos, y ofreciendo sentidos falsos de la confianza en otras; el jugador puede ganar más puntos. El fanfarronear [agrega más/menos puntos] asociado a las buenas/malas acciones se fanfarronean que.

- Más fácil hacerle furtivamente y trampear [y robar] cuando otros piensan son honestos, especialmente hasta: realizan sus acciones, y o pueden [equipar con nuevas máquinas para mejorar] reaccionan.
- Como cuentas de crédito [FICA]: [más allá] el maì□n comportamiento toma muchos [más] buenos puntos para reducir al mínimo historia del erase.
- Las ocasiones son que unas maì□n comportamiento practicante [en general poder] tener mejores ocasiones de ganar; dando a bastantes malos jugadores para hacer que el juego trabaja. Las víctimas que pierden han

adaptado los efectos [A/V] que hacían les la sensación mejor/mártir-como durante y cerca de la conclusión del juego; [y consiguen a más puntos del arrancador la vez próxima.]

- Fuego de la lucha del buen chico con el fuego: Sin embargo [las ocasiones muy mejores de ganar] venido de ser un purista, y malo que lucha con malo, y fuego con el fuego, mientras que mantiene muy bien las líneas éticas [que no matan (demasiados civiles inocentes) mientras que abusa de la ciudadela enemiga].

- Comportamiento = acciones grises que se pueden ver como buenas o malas, e.g.: niño inocente del bandido del secuestro, forzar a bandido a hacer algo bueno; atacando fuera de la rabia para allí ser comunicación, por lo tanto malentendido pobres que eso llevó al sufrimiento/daño.

--[Buen chico] [opositores] con una inteligencia/una experiencia con el juego/un más joven más bajos en edad para no entender líneas finas de los éticas, [fuerza] la tiene más fácil ganar puntos mientras que siendo buena y [durante comportamiento cuestionable].

--Definición de los éticas corregidos para los patrones cultural limitados del pensamiento de jugadores. Para para no ofender, dejar su imaginación funcionar salvaje en este juego.

--La entidad que ataca para confiar la acción del área gris [interpretada sin embargo como malo por el atacante] lastima el atacante.

- Las áreas grises para el comportamiento apropiado, y o el asociado correcto de la diagnosis [o (parcial) carecer de eso] con emergen las funciones 2G180 del análisis. Ver: educación sanitaria 2G240 [juego].

EDUCACIÓN': ¡Grande para los delincuentes y los criminales juveniles/adultos! Los guarda active mientras que aprende [no darles otros juegos [no educativos]. Las ayudas forman buenos comportamiento/éticas para [cada uno] todos los asuntos y los valores morales y espirituales del (existe?) "' no robar del almacén" a "aprender maneras de amar otras [a través de guía espiritual]"

- Incorporar [las características del juego del `] en nuestras invenciones con los enchufes opcionales en: educación, guía, analizador de sonidos, analizador visual.

--Actos grises - aspecto cultural limitado del patrón del pensamiento: predecir, seguir, adaptar [al usuario de la guía sin sugerir maì□n comportamiento], se marca con etiqueta qué (w5).

DÍA DEL JUICIO FINAL: Hablar con el carácter de dios y recibir los buenos/malos puntos entonces tienen acceso a cielo/a infierno [como el ambiente (del juego)]. Educación:

- [cerca] las cuentas perfectas son (im) posibles]. Los éticas de las demostraciones tienen calidades subjetivas. El anotar negativo de las acciones que se podrían describir mejor como siendo grises, se archiva en archivo separado [y' asociado analizada' anotado diferentemente].

- La pista del `y analiza honradez de [otras (entidades del juego del `) (vía asociar los archivos para sus acciones actuales/del pasado, y qué prometieron y para cuál está en el archivo ético del comportamiento.

- Ver: [familia/grupo] juego de la pelea 2G370. Números de patente de los E.E.U.U.: 6149157 6120028

LAS SUBPARTES DEL UIP EJEMPLIFICARON:

. UIP-Acceso: buenos/malos puntos para el cielo/el infierno; mientras que los chicos malos [tener más maneras de atacar a buenes chico o de hacer malas cosas para conseguir puntos], cada uno golpeado de un buen chico traen puntos mejor al buen chico, y puntos más negativos para el chico malo. Comenzar el juego con [uip-base de datos para el jugador más allá de la cuenta del nivel de la honradez].

. UIP-Corregir: valores culturales/personàles que influencian la cuenta para el buen/malì□n comportamiento

. UIP-DB: + cuentas para muchos tipos de buen/malì□n comportamiento. Cada comportamiento ha asociado el número de bueno (1 a 100), o malos puntos.

. UIP-Entrada +: cuentas éticas, opiniones, respuestas de la pregunta [psicologica] y respuesta del jugador.

. UIP-Guía +: con la decisión sobre cómo actuar bueno/malo en situaciones grises

. UIP-Predecir: cuenta del modo honesto de la intención de otra entidad

. UIP-Ranurador: encamina a jugadores al infierno/al cielo

. UIP-Pista: comportamientos anotados de escenas/de juegos anteriores.

. Ediciones amplias:

--El `predice, anota, educa, tiene acceso, analizador del comportamiento, etiqueta y la guía aprende etiquetar situaciones/archivos con los valores [éticos] vagos [basados en la perspectiva del jugador].

--El `anotó las interacciones basadas en niveles [percibidos] de la honradez.

. Términos/piezas reemplazables:

- Honradez [llana] = [entidad de la invención'] confiabilidad [basada en uip-base de datos del Info histórico en ella y cosas relacionadas; integridad; cuenta alta-baja [para las acciones hechas] basada en analizador del comportamiento. Buenas intenciones.

- Juego del `= panoramas [falsos] de la vida de %real [realizados]

- La educación del `= aprende comportamiento honesto; Dirigido en formas de buen/malì□n [social/negocio/escuela] comportamiento; cómo tener acceso a éxito en [vida] [vía comportamientos señalados].

CONCLUYE EL BUEN ARCHIVO DE INTENSTIONS

JUEGO DE LA SALUD DEL ARCHIVO

FUNCIONES del JUEGO de la EDUCACIÓN SANITARIA 2G240

También funciones agrícolas de la educación 2G250. El UIP se relacionó.

INTRODUCCIÓN: Los jugadores revolucionarios de la manera aprenden curarse con el papel que juega a juegos. Se genera el entusiasmo del juego mientras que está sobre las ediciones de la vida real del jugador. También los médicos facultativos aprenden cómo cuidar para los síntomas específicos. El 2G250 similar enseña los granjeros a cómo cuidar para sus cosechas, de las maneras similares a cuidar para se con la modificación de comportamiento.

JUEGOS [DE LA SALUD]: adaptado para enseñar al jugador a mejorar sus habilidades de la salud [(dolor) el hacer frente] dándoles UIP-Características se asoció a [su/campo común] las preocupaciones [médicas]. Cada

jugador tiene diversos tipos/grados de una enfermedad señalada, que se refleja en el juego que adapta; usuarios de enseñanza por lo tanto mejores cómo supervisar/salud de la pista de la subsistencia' buena. Ganar y perder los puntos/las vidas para el buen comportamiento.

EJEMPLOS DE LA FUNCIÓN:

- Los niveles del producto del azúcar limitan, y deben comprobar a los diabéticos niveles de azúcar de sangre por consiguiente como en vida real.
- Dental: mayores problemas de cierta causa de los alimentos que otros; y requerir el cepillado. La falta de cepillar/come se anota correctamente.
- Los estudiantes de medicina aprenden cómo supervisar' educan a sus jugadores [pacientes], y anotado en la salud que da' siguiendo habilidades. Adaptado al médico facultativo: mecanografiar la educación, nivel de formación educado juego.
- Juego del agente del `: El jugador es jefe del agente' que representa la preocupación de la enfermedad/de la salud los puntos - y del triunfo provocando el malì□n hospitalizado de las cosas (s)/los hospitales (gerencia/organizaciones). Experiencia cómo la enfermedad se comporta.
- El cambio de los requisitos de la respuesta del jugador como [el paciente] cambio médico/de la capacidad/de la energía se corrige: Castigos/concesiones: efectos peores/mejores de la experiencia de la enfermedad de /side [de drogas incorrectamente administradas]; por el que el sastre reaccione con síntomas cambiados y el usuario asociado de las características del síntoma debe ahora obrar recíprocamente con diferentemente que con síntomas anteriores.
- Agilidad de los juegos peligrosos de los actos: el jugador aprende cómo ir cerca pero no cruzar la línea que causa problemas. Ejemplos:

--Dieta: Necesitar comer un poco de pero no demasiado [de un tipo] alimento [o conseguir colesterol subalimentado, exceso... morir de hambre, hacer el llevar obeso a las enfermedades asociadas/víctimas mortales].

- Ejercicio: Gente que [que necesidad] el ejercicio se levanta al nivel señalado/preferred, después sufren [con ataque del corazón] si hay demasiado poco/mucho. No caer [especialmente para más viejo [las señoras] quién olvidó la protección/los dispositivos apropiados/ayuda. Cuentas del jugador cómo las entidades se mueven correctamente para su dolencia, o dentro de los parámetros de qué se considera sano [los aeróbicos/yoga] en cabritos/adultos del ajuste. Cuentas: apresurar, jaggedness del movimiento, balance, W5 asociado a la edad/a la dolencia del carácter.
- Juego de la seguridad: los carácteres identifican/evitan/quitan materias peligrosas en su ambiente [uip-adaptado], e.g.: asbesto, molde, alambres eléctricos flojos, materias peligrosas para los niños [de los jóvenes], peligros del viaje.
- Reducción del dolor basada en [`que adapta actitudes del comportamiento sobre dolor/drogas [de la comprobación]]. El fondo en tratamientos alternativos del dolor considera a Dr. talentoso Robo Woodman en Davis y Sacramento California. DavisPainClinic.com

- Salud mental: 1r: el analizador del comportamiento se dice vía el UIP para entrar qué necesita curar; o confía en sus propios métodos de los VAGOS. 2do: sigue entonces analiza el comportamiento del paciente; vía cuál se supervisa: qué entradas pacientes, y o lo que los VAGOS [del comportamiento] de los datos pueden conseguir y analizar. 3ro: se anota el comportamiento del paciente; y dirigido por consiguiente.

--Ejemplo: si las palabras claves del paciente en sus email demuestran la preocupación excesiva en una enfermedad de la úlcera estomacal, los VAGOS dirigirán a persona a: relajarse, meditate,' texto/poesía/las imágenes, y o medicación corregidas señaladas leídas de la búsqueda que calman. El dolor de estómago del maÌ□n comportamiento es [exagerado para el efecto].

UIP-ACCESS: ganar los privilegios [en vida real] como concesiones, eg.: más tiempo del juego, tiempo libre del trabajo/de la escuela/del hospital. UIP-Corregir: el jugador puede alterar uip de sí mismos, enfermedad. Analizador/filtro de la UIP-Entrada.

EL UIP INFO ENTRÓ:

- bases de datos médicas para las dolencias existentes - las características necesitaron: cómo la condición/el paciente se puede seguir en un cierto plazo; del cómo los síntomas o la carencia aparecen adentro [color de piel, nivel de energía de la vida, otros síntomas [que puede accionar enfermedades asociadas]; asociaciones entre la edad/la forma de vida/la respuesta de cuerpo [im] al comportamiento apropiado.
- base de datos del UIP del paciente: qué es entrada por programa del usuario/del doctor [juego del `] [para esa situación].
- Recompensas/castigos: licencias médicas que consiguen/que pierden; vidas perdidosas
- Los asociados/comparan del analizador del comportamiento del `comportamiento del jugador con el cambio en su dolencia. Las ayudas demuestran [qué aspectos] ayuda/daño del juego, para las mejoras en actualizaciones del juego.
- el juego continúa a partir de minutos a los años [después de paciente hasta que se curen].

UIP-GUIDE + CÓMO A LIVE/ACT/GET MÁS SANO

. UIP-Q&A para que el usuario aprenda sobre la mejor acción [siempre que en juego él desea/necesidad de tomar una decisión] y consiga educado' dirigió

. UIP-Predecir: ocasión de conseguir mejor/peor basado encendido: enfermedad/comportamiento/perfiles del paciente otros. El jugador puede intentar trabajar alrededor/con la predicción.

. UIP-Ranurador: el jugador encaminó al doctor adecuado/al proceso educativo basados en su funcionamiento.

. Cambios de las UIP-Pistas en salud, comportamiento y factores asociados.

OTRO: Las áreas grises para el comportamiento/el cuidado médico apropiado, y o el asociado correcto de la diagnosis [o (parcial) carecer de eso] con emergen las funciones 2G180 del análisis. Ver: buenas intenciones

2G360 [juego]. Patentes de los E.E.U.U.: 6699188, 6458080, 6168563, 5960403, 5901246, 5879163, 5601435, 5596994.

2G250 que cultiva los juegos de la educación - agricultura sana: Organismos con las ediciones de salud: gente, animales domésticos, otros organismos zoológicos, y plantas [necesidad de los granjeros de levantar y de fertilizar para una mejor cosecha anotada]. Ver 2G240.

. Adaptarse: UIP-Acceso: concedió más tierras de labrantío, una cosecha más grande, guía del método de la agricultura con habilidades más educativas así que el jugador puede estar en una mejor ocasión de ganar más adelante. UIP-DB: + características relacionadas agrícolas. El jugador de UIP-Q&A. hace preguntas del AG. UIP-Pista: para la cuenta total del jugador.

CONCLUYE EL JUEGO DE LA SALUD DEL ARCHIVO

BÚSQUEDA del ARCHIVO Un JUEGO 2G330 de la REACCIÓN

Búsqueda también llamada de Part "UIP de la categoría de la invención una reacción"

El UIP sabe "qué botones a empujar hacia adentro otros, conseguir la reacción deseada." Es decir: Las piedras de afilar del UIP adentro en una entidad o las características de la invención predijeron para sacar la reacción señalada. Esto amplía sobre subparte "búsqueda del UIP de la reacción".

Una invención/un arma que las pullas UIP-Apuntaron a entidades/a enemigos y los engañan más cerca [por Ratchet. El Taunting se centra en UIP-características para conseguir mejor/reacciones más fuertes de [los jugadores]. Cualquier entidad puede tener su uip-blanco taunting del agente cuál debe taunted en otro [conseguirlos para moverse, para dormir, para caer en amor (con usted)]. Ver 2G330

Ping-pong de la reacción del `: sobre "A" que accionaba una reacción en agente "B" de la entidad el', puede ser que intente provocar "A" en golondrina de mar; entonces disparador "B" de "A" y así sucesivamente. Ejemplos: reacción en cadena [química]; efecto de dominó, círculo vicioso.

- Entidades múltiples: La intensidad/las sinergias de sensaciones puede aumentar/disminución abajo de la cadena; y llevar a causar reacciones en cualquier número de entidades, al crecimiento o a la contracción en gran número. Cualquier patrón es ACEPTABLE.

Cómo el agente "A" consigue reacciones de la entidad "B". Las formas en las cuales esto [búsqueda del agente/UIP del juego del `una reacción] funciona/consigue una reacción:

elogio [backhanded]; censura; reaparición; descarga; mofa; ultraje; sarcasmo; palmada; el conseguir rápido; embromar; incomodidad; ofender; poner en el suelo; concurso; reunión; explorador; atormentar; gorjeo;

molestar enfrentan; señal de socorro; repugnancia; exasperar; aguja; codazo; dejar perplejo; perturbar; pester; plaga; perseguir; paseo; susto; inculcar una reacción señalada UIP del' humor' de la sensación en entidad deseada o cosa; despertar; disparador; desafío; electrificar; incitar; aviso; stir; emoción; waken; amolar; abogado; ayuda; perdonar; conspirar; egg encendido; animar; endosar; ayuda; promover (mercado); impulso; estimular [pensamiento creativo de la entidad del `]; inspirar; conspirar; referir; coludir; cocinar para arriba; cooperar; legado; encanto; cosechadora; demostrar las asociaciones; indirecta; pescados para; diagrama; plan; socio; recursos de la piscina; demostrar la buena voluntad; lado con; mantener; unir; maniobra [con las predicciones para que cómo maniobre w5]; juego [juego del `] con; determinación de la otra; pregunta; impuesto; prueba; intento; dirección; súplica a; pedir; ordenar; recoger.

- `interactivo/intercambio [con sinergia]: humores, palabras, imágenes, acciones físicas o movimientos, más.

Invención de la sinergia: la suma de la acción que acciona, y una reacción no asociada hecha en una reacción asociada pueden ser mayores que la suma de las piezas. Éste es una de las demandas de la invención.

ALCANCE de EXTENSIÓN de la INVENCIÓN - los ejemplos embarullados siguen:
[las piezas seccionan #1]: U (usuario de esta invención) = las funciones aplicables [juego] del `[agente del `] [de la búsqueda del UIP y reacciona] el ~ C (CPU) =
[Sección #2 de las piezas]: TENER ACCESO (al control de seguridad) [el usuario que juega con/sistema taunting es una contraseña] ARTISTA de // [el taunting es una forma de arte (cómo las imágenes se provocan)] NOTIFICADOR EDUCATIVO de // EDIT del ANALIZADOR de // [COMPORTAMIENTO] [la mejor manera de provocar] [las palabras/Info a (mejor) provocan] // [estudiantes del golpecito] // del cambio [conseguir la atención del usuario por la provocación] // PS-ZONE [las provocaciones son activadas por qué usuario de la zona adentro (w5)] el PREGUNTAR de // [preguntas a provocar; // SA (analizador de la UIP-Entrada] de sonidos del `) o PISTA de // del SENSOR de // de la CUENTA del VA (analizador visual/reconocedor sano) [qué sonidos provocan] // del `[el `predijo llano de la provocación de un disparador propuesto] [uip-entrada para la provocación] [acciones del pasado de la entidad apuntada usada por el analizador del comportamiento, para concebir' las buenas formas de la cuenta de provocaciones futuras].

Secciones 1 y 2 interactivos.

Ventajas de la "búsqueda del UIP una reacción":

- Las reacciones del `son la UIP-Entrada [después de ir al analizador del comportamiento]
- Personalización. UIP-adaptación. El sistema que usa esta función aparece más humano/natural.
- [Una interacción más emocionante del juego del `], esa sensaciones verdaderas de mejores disparadores [en jugador].
- Una educación más eficaz, y dirección.
- Ejercicio y educación mentales para el usuario: aumentar el sentido del ingenio/del humor.

- Accionar la amplia gama de la sensación, de pensamientos, y de acciones, para alcanzar [sobre razonable] la reacción/el humor [humano posibles] señalados.
- Una mejor forma de castigo [en juegos], y manera de mantener entidades indeseadas ausentes o de la vuelta.
- Probar la inteligencia/el humor/el comportamiento del usuario en cómo reaccionan [y el juego "búsqueda del UIP y reacciona" ping-pong].
- Con el estilo apropiado, sistema se regionalizará [adaptarse a los patrones cultural limitados del pensamiento del local (para el humor o el ingenio)].
- Mejora las capacidades del siguiente cuando la "búsqueda del UIP y reacciona" se incorpora dentro: Predecir, educar, dirigir, tener acceso, EGH, entretener, juego, interactivo, generación del humor' que corrige; Notificador; OSCILADOR [adaptación sana].

Los ejemplos para la "búsqueda del UIP y reaccionan": el señuelo, gancho, carismático [encanto], puso un encanto [entidad del juego del `], incentivo, atracción, camuflaje, trampa, invitación, imán, ratonera, tirón, dulcificante, tienta, encanta [mágico], hostiga, presiona, cuelga, atrapa, embroma, seduce [con imágenes, el oscilador y otro los sentidos], el juego [secuestro/copiado] [de (invención/los datos) (las ideas)],

Archivo: Juegos/GA 1/juegos a partir de la 3-06

ARCHIVO DE LOS JUEGOS DEL ARCHIVO DE MARZO DE 2006:

PALABRAS CLAVES: Carácteres (del usuario o del miembro temporario en juego), características (de la persona/del carácter del juego). Comportamientos, perfil del comportamiento. Psicología, análisis psicologico. Juego, juego video, juego de ordenador, juego de arcada, papel gameplaying que juega, papeles. Juego adaptación adaptante. Juego ajuste ajustado. La adaptación adaptada sastre aprende (de (el usuario)), aprende de..., aprendiendo, comportamiento aprendido.

MÉTODOS de CAÍDA del PROTECTOR AMISTOSO 2G260 PARA UIP-INPUT: Conseguir a jugadores revelar a sus uno mismo internos, ellos pudo normalmente mantener ocultado; entonces el uip puede funcionar mejor. Métodos:
- el modo de la uip-entrada es menos obvio al jugador
- el jugador puede pensar que se están analizando sobre X (efectuado), pero que están realmente sobre el Y.
- las respuestas de sistema a los usuarios pudieron también desviar del Info buscado más por el UIP
- no diseñado para los propósitos fraudulentos. Incluye todo el uso adaptable de los ayudantes de sanidad mental de las técnicas en vida real
. Ejemplos:

- El explorador debe elegir una trayectoria que va por un gato del amigo o el perro amistoso, mientras que la demostración más grande del cuadro una criatura borrosa o lisa que guarda la entrada.

---Opción de la textura: El jugador conjetura quién tiene el anillo mágico, y debe elegir de un carácter verde borroso o de otro iguales pero es verde azul y lo alisa. Uno puede mejorar la prueba para las preferencias del color o de la textura, cuando la opción siguiente está entre un verde azul borroso y alisa la bola verde.

--Un animal doméstico mágico debe ser seleccionado después, y su opción demuestra probablemente su preferencia del gato/del perro.

--Después que el tipo animal doméstico será dado a su carácter principal, mientras que el opositor juega con el otro... que hace cumplir más lejos una normalización/un culturalization que hacen a jugador más cómodo. La gente que prefiere gatos pudo ser más aseada, y tal es un más pedacito a sugerir que tal es el caso para la UIP-entrada y el análisis.

2G270 MASTERMINDING el UIP DE CADA UNO:

. Aprender (el `se educa) sobre el uip de otra persona, entonces: superarlos (control esa persona/invención); suprimir (partes de) su UIP archiva (dando por resultado el partido que las partes perdidas del UIP al malfuncionamiento/no saber qué archivos fueron suprimidos por lo tanto cómo funcionar correctamente; o como un virus, el parte movible cifra al distrupt su UIP y o los resultados del UIP.

. Virus anti. construir las defensas (del software) contra los atacantes del UIP (virus de computadora/los bandidos listos): se diseña el software anti/la protección del virus (UIP) (atacante) (para los virus específicos).

- El `corrige puede alterar el UIP que programa para se/otros. Corregir las búsquedas señaladas los códigos/las características (como explora el sistema), después' reacciona realizando cambios señalados (al código o (temporalmente) a los resultados de adaptación del UIP).

- El antivirus analiza virus del UIP siempre que: uno de los cambios adaptados de los resultados (según lo reconocido por el sistema separado/alejado); otros programas antivirus sabidos, eg.: por Microsoft, utilidades de Norton.

- el UIP de funcionamiento o nuestras otras invenciones en Apple u otros no programas del ms pueden ser más estables; más seguro contra los virus (debido a muchos defectos de Microsoft).

. Sabiendo el UIP de otra persona, deja la persona/la invención mejor saber con ellas: obrar recíprocamente (a su ventaja); tener una mejores coordinación/comunicación (técnicas) (con menos averías/insectos). Un UIP puede uno mismo generar alrededor de defecto de a (técnica/característica) en otra invención/persona. Ejemplos:

--El teléfono celular del usuario está incorporando un calabozo (véase nuestra invención); y como el UIP del llamador/del receptor sabe están entrando en tal zona, una reacción se hacen, eg.: juega la música que consolida paciencia; dirige el teléfono celular a otra frecuencia/portador (mientras que en el calabozo). También, las características (únicas) de cada calabozo son UIP registrado.

--Nuestra invención de la puerta del animal doméstico: cuando llueve, el animal doméstico espera un exterior más largo. El transmisor del collar del animal doméstico emite humedad (los gatos y los perros no sudan?). La

congruencia programada de la información de usuario resulta cuando uip del collar del animal doméstico (demostrarlo era tiempo tan adicional mojado de la limpieza de la estera de puerta necesario), fósforos con el uip de la puerta del animal doméstico (hacer el animal doméstico

JUEGO del CUMPLEAÑOS 2G280: Por ejemplo, cuando su niño consigue más viejo, él puede parecer una escena del juego donde los muchachos están celebrando el cumpleaños de su padre - pero éste sucede solamente una vez dentro de una semana de su cumpleaños. Él gana si él puede soplar hacia fuera las velas a pesar de que el "chico malo" está guardando a papá de la torta. Él tiene 8 minutos antes de que las velas queman, y está consiguiendo a ayuda de él hijos y la esposa. Mientras tanto un inventor llama la esposa y las transferencias ella las energías mágicas necesarias. Feliz siempre después...

INTERACTIVIDAD del DISCURSO 2G290 Y del SONIDO CON los JUEGOS: Invención para tener interactividad sin hilos e interactividad de la radio como parte de juegos. Por ejemplo ahora hay juegos de señal controlada. Cómo sobre emisión de radio, los efectos del reconocimiento de discurso agregaron para el discurso o la comunicación al azar en un campo del juego para la interacción conversacional con los objetos virtuales. La interacción podía ser controlada o izquierda a los efectos al azar, ambiente.
E.g objetos virtuales que bailan a la música, respondiendo al ruido; marioneta que responde a un golpe del tambor, guitarra, piano, flauta, pipa. Una banda que responde a un conductor verdadero o virtual cualquier manera.

El OTRO 2G300 puede repetir este párrafo: Control múltiple del objeto. Control cada vez mayor de la interactividad y del objeto por controles electromecánicos que substituyen con el control sin hilos de la voz acanalado a poseído o dominio de la interacción. Decir poder tener 10 jugadores y árbitros interactivos en un juego de bola video de la cesta en vez de uno controlado por una palanca de mando. Participación alejada y en Internet en un juego que será jugado de otra manera personalmente solamente.

CONTROL 2G310 OTROS JUGADORES A TRAVÉS de SUS MANIJAS:
. Las "manijas" son lo que pueden asir y controlar los jugadores en la entidad apuntada.
. Controlar otros carácteres [vía sus puntos de control que son los nódulos [del rfid] agregaron a la cara/al cuerpo del carácter. Limitando una expresión facial señalada, el carácter es prohibido de la sensación/del pensamiento [qué jugador predijo que pudieron sentir/think/do].
- opciones del control: mover sus tales nódulos [relacionados] los propios/del vudú; el sueño/lo piensa para arriba [extrayendo o seleccionando del menú [que ascendente del estallido basado en la predicción del juego/del carácter de qué opciones del control pudieron ser queridas.
- los puntos en regulador/recipiente pueden efectuar la fuerza de causar/del control de resistencia [para uno o más carácteres/invenciones de la blanco].

. Ping-pong del control: un esfuerzo supremo entre los jugadores de two/%multiple y cómo se controlan [mente/comportamiento/acción] [vía agentes]. Los agentes pueden tener acceso/corte en otras entidades [mientras que siendo cortado en sí mismos (simultáneamente/en dimensiones limitadas de (zona del `)).

- intentar controlar analizador de la función que controla del otro jugador el'; el su cortar [en su jugador] se para/se obstaculiza/se despide tan detrás [en] a pirata informático.

- meta: conseguir otros carácteres para dar a jugador señalado el panorama/la experiencia deseados. Los agentes hacen quizá esto cuando dos jugadores humanos juegan; con la lealtad del agente alterable [vía cortar asociado]. PVP [juegos del jugador del verso del jugador].

- otro carácter puede ser un agente para controlar otros carácteres, actuando como [un agente].

- Control indirecto en PVP: cuando un jugador guiña, la expresión [facial]/la experiencia del carácter del otro jugador puede ser asociadas, eg.: sentir/las sensaciones apasionadas de la demostración [y actuar por consiguiente (sin control [completo] del jugador).

- `Equilibrio entre las fuerzas de los jugadores múltiples posibles, eg.: la energía igual empuja al centro, y al empuje del 66% a partir de un lado, y al 33% en los otros resultados en estes 3ultimo que pierden la cantidad/longitud de [mitad el delantero/el controlar/energía de la entidad de la fuerza del 66%].

el JUEGO 2G350 y APRENDE De CELEBRIDADES y de FIGURAS HISTÓRICAS: Educación': obrar recíprocamente' con las figuras históricas. Se ríe entre dientes un pedacito. El software interactivo ofrece la persona difunta o el animal doméstico más allá de la personalidad sobre el sistema.

- TM posible: Obrar recíprocamente con historia; Software de Séance.

- El usuario pregunta la invención en cuanto a cómo la entidad [pariente/celebridad difuntos] contestaría. El usuario obra recíprocamente con [histórico/ficticio] [entidad del juego del `] basada en cada los UIP-rasgos.

--El UIP Info entró de: bases de datos históricas; qué alguien entró en en cuanto a reacciones de las acciones probables las' de quién está retratando el carácter.

. --El usuario pregunta el sistema - > el sistema de c (sistema) "analiza" todas las preguntas 1000+ y respuestas en su DB (base de datos del `) en las sensaciones/las opiniones/los comandos/las peticiones/creencia/etc del partido difunto - > U siente un poco más en el país por la persona muerta" de w semi "que obra recíprocamente (con) más allá de declaraciones/de respuestas (de la opción múltiple).

--utiliza el software de lengua que es autor, y el otro interruptor interactivo del entrenamiento computarizado.

--El sistema adapta su respuesta a la situación del u (las sensaciones, parental/dirección necesitan, etc). Éste es un ejemplo del UIP doble o el UIP interactivo, en ese sistema y U ambos se adapta el uno al otro.

- Control remoto de la patente 5357427 de los E.E.U.U. de los pacientes de riesgo elevado que usan la inteligencia artificial: Las preguntas al paciente son = elegido usando AI ("analizador", el "uip") = basado en la respuesta del paciente...

- quitar el archivo/los datos de c basada en su "cuenta baja": crear menos alboroto (para el uip- el "analizador" a funcionar, dejó a programador mejor ver esencial (para la modificación)).

JUEGOS 2G370 de la PELEA de la FAMILIA: Ver las buenas intenciones 2G360

Archivar el GA otro
Juego, UIP relacionado, etc

RESPUESTA DEL JUEGO: jugar de nuevo el juego usted/el otro jugador hecho. El UIP puede presentar [cuenta del `que consigue] las situaciones más importantes. El UIP puede utilizar la contestación Info del juego. Pista.

PARA EL SISTEMA DOLBY:
- la codificación [si hay dos suena como señales simultáneamente], y el 2do no es compatible con el primer, el primer se altera para ser compatible al 2da.
--convertir la cinta a digital está codificando.

El UIP es preferencias definidas por el usuario del AI.

OTRO:
. Piezas traslapadas:
El `corrige, educa, EGH (Educ consigue más difícilmente), guía, obra recíprocamente, predice, busca y reacciona, TGH (la terapia consigue más difícilmente), UIP-Aparición (2G180), sastre del UIP.

ARCHIVAR estos juegos 2G200 concibió sobre todo antes de año-2000

JUEGO 4A460 POR el MODEM: obrar recíprocamente con uno a. La máquina del usuario tiene acoplador permitiendo el recibo de los mensajes para el juego cuando el remitente presiona el botón derecho.

5A830 DEMUESTRA que los puntos adicionales (cuenta del `) necesitaron ganar el juego
- simultáneamente demostrar el número de minutos se fue en juego (o número de tiempo previsto dejado basado en el índice de funcionamiento).

JUEGO ELECTRÓNICO del PATIO A2-470: se aplica a los juegos y fue ampliado en 5E020.

TABLEROS del JUEGO A2-480: su listado atado al tablero (por los clips etc) y a él produce a agregados de papel de los pedazos u del tablero del juego a objetos más pesados. Elegir el juego u quieren, eg.: monopolio, su

propio juego que usted ha programado, o comprado e insertado en el M. Puede alterar reglas. Mezclar el juego electrónico #47 del patio de w (con). TD: el MED w2 del ep del punto de ebullición del tt del hh del interruptor C (computadora) del `e cons P.M. adulta exc de los pp del ll del humor de la diversión de los cabritos

ASPECTOS A2-560 del JUEGO: MI el resto del G descrito anterior y más adelante según si su nrl del rl o.
1] Mapa G del zapato: mapa del zapato del MI 55. rl. seguir otro olor cogiendo solamente donde han estado retardo fijado del tiempo/de la distancia de w (con) creado por el producto del seguidor. Incorporar el aspecto en un G. más complejo.
2] Invertir la orden de la cinta/del microchip de extranjero y su lengua y sus dialectos. Conjeturar qué lengua. rl. Puede también ser jugado adelante.
3] El destructor crea las trayectorias de la destrucción. Con o sin el enemigo que reconstruye/las estructuras/destructor de las luchas. nrl.

JUEGO de A6-03 PASCUA: Cuando el usuario encuentra una sola pieza y presiona el botón de los sonidos del encanto, el primer sonido activa el encanto siguiente (que recibe el primer sonido) debe hacer un sonido, pedazo siguiente de los hallazgos de la persona y va al pedazo siguiente en círculo completo hasta todos encontrados. o algunos puede tener tipo corto seguro grueso clavo de la chincheta que se pueda asegurar en la corteza del árbol
uso de o en los juegos para el detective, encontrando y persiguiendo a la persona que deja adrede señales detrás
- Opción: Para despertar - rodar todos alrededor de la casa (una persona más rápida se levanta las pocas alarmas que tienen que desactivar).
- patente relacionada 4936185 de los E.E.U.U.

A8-16 ENCANTA el JUEGO del BOLSO de HABA: pequeño bolso del tamaño de la mano del tiro el uno al otro. Se ata a un lado de piel el casquillo y debajo de un control robusto sobre el cual los usuarios puedan entrar algo.

A8-16A ENCANTA EL JUEGO DEL HOMBRE DEL CORREO: las llaves de cada jugador en la oración corta (limitada a 12 palabras), entonces pasan a la persona siguiente que ve solamente la oración pasada de la cual ella hace la alteración. En el extremo de redondos el encanto puede volver a las 15 oraciones pasadas afinadas adentro y demostrar la progresión del cambio.
- "Indirectas" dadas a los jugadores vía: Ver a instructor del juego 2J02

PSICOLOGÍA DEL JUEGO: Limitar el número de palabras para facilitar afinar en la función, releyendo oraciones más adelante. ¡Maximizar las oraciones del número en memoria para inducir la conmutación frecuente de modos de afinar en proceso a la distribución y a la risa!

FUNCIÓN de la ESPERA 6B460: llave en la cantidad de tiempo usted anticipa tener que esperar. El juego y las reglas se alteran por consiguiente. Eg.: U tiene llamada entrante de T (teléfono del `). Durante pausa, u pudo no poder ver s (que le da ventaja del tiempo).

KARAOKE 6B610 QUE JUEGA: pagar jugar, ganar las bebidas, alimentos, otros premios. Juicio hecho cerca: Karaoke; voto de patrón; empleados del Karaoke corriente de la organización; ocasión al azar
- conjeturar el nombre de las porciones de la bebida, pequeño o regular del tamaño
- el mejor cantante y o músico (que usa normalmente los sintetizadores)
- la mejor actuación: el Karaoke puede pedir que la gente personifique a persona famosa
- bingo; lotería; máquinas del bote; juego de juego o de no-juego común que tiene objetivo del nombre que conjetura que gana de la bebida (pudo costar poco) mientras que da un propósito de beber también - consiguiendo gente bebida)

PASO 6B960 ADELANTE: comenzar una historia y pasar a lo largo del artículo a la persona siguiente que continúa historia. En el extremo, después de ir por ejemplo uno o más veces alrededor del círculo, la gente puede escuchar la historia final
- también hace sonidos, o música y paso adelante, o las ideas del comienzo para las invenciones, y el paso adelante
- ENCIMA del límite de tiempo para hablar por persona reducir exceso de tiempo requirió escuchar los pensamientos poco importantes

8B300 PIENSAN: Utilizar la información docta para progresar en juego. Juego mayo o mayo no educar a usuario sobre hechos, habilidades, el etc antes de comenzar. Este tipo función puede ser una parte o de la característica principal de juegos. Las preguntas o los avisos se pudieron contestar o respondieron vía a la opción múltiple, o a la selección vía una pantalla táctil del ratón o del dedo
Muestras:
- impresionar al mago, al rey, al amo, al profesor, y a persona con la información para: ganar su favor, ganar la entrada, conseguirlos para ser su aliado, etc
- ganar el acceso a través de puerta o la puerta contestando a la pregunta correctamente. - habilidades: aprendiendo cómo hablar con la gente y conseguirla para tener gusto de usted (eg.: cómo usted responderá o actuará - grande para la gente de enseñanza las habilidades sociales);
- aprender las leyes: cada acción puede dar lugar a la fractura de la ley con la acción incorrecta. El juego tiene las leyes para la parte del mundo real, o sus propias reglas - gente de enseñanza el patrón del pensamiento del funcionamiento dentro de una estructura legal. Eg.: usted está conduciendo alrededor de una esquina de 90 grados, sus demostraciones de la exhibición ("S") su km/hour y usted desean ser la primera persona para acabar una raza, pero le serán paradas por la policía si usted pasa 60 km/hr - esto causa su retardo

- TM: Doctor: funcionar encendido a gente, animales, plantas. Descubrir o recibir la información sobre problemas que tienen, después hacer la cirugía o prescribir la medicina. ¡Un desafío de la diversión!
- qué a hacer y a no hacer en ciertas situaciones, eg.: amigos entretenidos, o familia, o negocio en su o específico la otra cultura.
- Ver a instructor del juego 2J02

IMÁGENES de la SOMBRA 1C-020-083003: Proyectar las sombras sobre la pared que las hace en formas artísticas interesantes; jugar conjeturar del juego cuáles la sombra es.

1. conjetura cuáles son
2. sombras de la fusión que crean nuevas posibilidades
3. hacer un juego de él, la persona que conjetura consigue correctamente un punto. Más será interesante descubrir lo que se conjeturan las sombras si no.
4. juego de la cama, del etc.
5. apagar las luces y la visión desde las paredes, o el juego en una CRT

- Notas al pie de la página: alejado ("R"); exhibición ("S"); c; pp; P.M.; Reino Unido; ratón; interactivo; juguete; todos; juego; hospitalidad; impresora; punto de ebullición; oscilador; cuenta; carro; cojín del aire. "Hace alusión": Ver a instructor del juego 2J02. Sombras/siluetas demostradas en la "pantalla" también.

#<2, 2or3, 3 ver mech $> #<1, MK del version> #<4 del interruptor (software del `): ¿rúbricas todavía que son puestas? >

GUÍA del SOFTWARE 3C200: [Título anterior: Guía del cubo de Rubics]: Al jugar a un juego de la habilidad w (con) una persona, sistema dice u si están haciendo progreso o no.

- # = rubics sw/hw N (invención) demostrado solamente.

ejemplos de o:

- Software del cubo de Rubics: demostraciones # de los pasos necesarios para terminar tarea. Si # de pasos aumenta después del paso pasado, u puede mover hacia atrás la pista a la posición anterior.
- Ajedrez: demuestra que tiene que el número de los pasos u y o de opositor jaque mate posible.

. --El sistema calibra vago: nivel de cada jugador/probabilidad de humano jugador hacer particular movimiento en aislado situación (basado en el uip para los millares de últimos jugadores en)/preve de la base de datos movimientos posibles/otros aspectos en inteligencia de los programas informáticos.

- "S" en uno de los cubos demuestra el número de pasos adicionales necesarios para terminar rompecabezas. Actúa mientras que una guía en usuario de ayuda sabe qué movimiento es mejor.

+-verbally dijo la versión del interruptor (software del `) existe, pero quizá sin el modo educacional cuál puede ser patentable.

- Le dice el número de pasos que permanecen a un cubo corregido del rubics. Este número se asemeja al número más corto de pasos posibles. Si un cambio es realizado por el usuario el número puede aumentar o disminuir; si el número es mucho más grande, el usuario pudo evitar ese paso.

- otras versiones en software solamente: y puede tener posibilidades interesantes de los gráficos, eg.: poner 100 círculos en orden correcta; rompecabezas de la sierra de la plantilla; estacar artículos en 8 columnas; etc.
- puede también "notificar" la cuenta, eg.: (vía sonidos, combinaciones de código de las luces)
- se aplica a la mayoría de las otras versiones electrónicas de juegos con un jugador que controle todos los movimientos

CONJETURA 2D-220 El SONIDO: Los sonidos comunes se sintetizan, haciéndolos más duros y más duros conjeturar cuáles son. Movido a la carpeta de la música en 1.06.

CONJETURA 2D-221 EL JUEGO del ___: Similar a 2D-220. El juego deja conjetura de los jugadores cuáles uno o más de los estímulos siguientes son (cuando está dado consecutivamente): imágenes (sillouhette, esquemas, color (combinaciones)); sonidos; vibraciones; palabras del oscilador habladas; texto escrito; circunstancias: histórico, otras pistas ambientales; etc (2D-240, 2D-250). Ver a instructor del juego 2J02

CONJETURA 2D-240 El JUEGO del ARTÍCULO: Utilizar el microscopio para conjeturar qué artículo usted está mirando. Las muestras pueden ser así que pequeño y mantenido cubierta así que usuario puede la mejor conjetura viendo vía el microscopio. Consigue cabritos muy curiosos sobre ciencia.
- el acompañamiento de la información exhibida electrónicamente o por el manual puede explicar lo que miraban, con los detalles explicando porqué qué vieron miraba la manera que hizo....
-2D-220. ven el "analizador visual".

OTD (otros detalles técnicos) 1: la definición del juego es avanzada que supuesta comúnmente en sociedad; pp y reglas del juego de la P.M., sistemas de sonorización, cuenta; Reino Unido; interactivo; %exercise; %portable; carro (para más de un juego practicable - software); cc: uip (el nivel de la dificultad del juego ajusta a la capacidad del u (tgh)). Reglas de juego alterables por u vía: el carro, banda, %uip, + " entretiene ", + " corrige ".
- D: U (jugador) = ~c [de la unidad portable de r] = (U (jugador))
- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- Subpartes: Juego-Vídeo; Juego-Al aire libre: las piezas comunican vía la radio = C. principal.
% "del ranurador": localiza el then= recupera el data= necesario para el "juego". Los jugadores pueden necesitar los datos/el papel especiales que juegan habilidades del "juego".
- Código (acceso, marca de agua del EL "") codificado en sw/data límite cómo sistema ()/programa del sistema puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado. Ver: "Tener acceso", "corrigen".
- Dibujo de OTD: U (jugador del juego) = este ~ del sistema de N (invención) (juego) C =
ARTISTA (tipo imágenes/de la banda de u (programa) efectos visuales deseados para el juego según lo visto en S); %BA (el comportamiento de U determinado, así que sistema puede mejorar UIP-Adapta cómo el juego gira

alrededor de jugador, eg.: tgh); CEREBRO; CARRO (cartuchos de juego - diverso carro tiene diversos juegos que se puedan jugar); EDIT (el guarda puede cortar ciertas características del juego, eg.: palabras/imágenes (analizador visual)/ciertos juegos (en el carro/en línea/vía la difusión) todos junto); EDUC (U aprende destrezas mientras que sistema de w "que obra recíprocamente"); K; M (abajo cargar los juegos adicionales); MES; RATÓN; MULTIUSOS (diversas "cuentas anteriores" de cada jugador recordadas y por lo tanto el modo del tgh diferencian por jugador; la diferenciación "corrige" para cada jugador); nr (notificador) (u dijo cuándo pierden o ganan el juego, o dijo su "cuenta actual" o "estado" (la escena del juego de la posición física w/in)); +OSC; +PR (el jugador cambia los papeles desempeñados por los carácteres, cambia las reglas, jugador puede diseñar (casi) nuevos juegos (vía uso del interruptor de la lengua que es autor (software del `) para el juego (los prototipos))); +%PS-Zone (principalmente la versión de WA de N, o la Picosegundo-Zona solicita a la porción de R (`teledirigido) de sistema de N (invención); localización física del jugador: las necesidades de ser cambiado para u más con eficacia al juego del triunfo (que desempeña su papel en juego), jugador pueden girar mientras que guarda su establo de las piernas (en granangular), u se sienta, solamente su posición cambian un poco como tuercen su cintura, o mueven el dispositivo portable (pedazo del juego) con sus manos/brazos; multa - adaptación de la localización provechosa, eg.: vía el GPS no actual); Q; +R; RANURADOR; CUENTA (el jugador de los puntos ganó, y compara a jugador con otros jugadores (vía "multiusos"); %SENSOR (=effects del " analizador " del sensor= cómo se juega el juego, eg.: el sensor de movimiento es necesario si u es responder a la situación del juego, o la química/la energía eléctrica de la mano (de cuerpo humano) efectúa la reacción del juego (u debe ser relaxed o u pierde puntos)); ANALIZADOR DE SONIDOS; DISCURSO (el jugador puede responder a/los elementos de control del juego vía el discurso); ESTADO; SYNTH (el estado del u en juego efectúa SYNTH usado por el oscilador); + INCLINACIÓN (funciones del palillo de alegría); UIP (uip-adaptar, tgh); UQ; ANALIZADOR VISUAL; +VR; +WA (VR, tipo del walkman, juego jugado (solamente encendido): modo audio - u oye que las acciones y u del juego responde vía sonido (y o K (teclado del `) que presiona también); todavía u capaz de ser semi consciente de sus alrededores de la vida real (contra (VR))).

- "Facturación"

. Lugar de reunión (electrónico) del EL: Mejora en la palmadita 5347306 de los E.E.U.U.: El ~ de "C" animó el lugar de reunión electrónica para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" =

TENER ACCESO (necesitado para cada participante (u) ensamblar) AL ANALIZADOR de // (/W5 (qué, donde, cuando, porqué y cómo) sistema cómo (sistema) funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la banda de // del OSCILADOR de // NR (cuando u se pide para responder o debe notar ocurrencias señaladas) // (comunicación verbal) (cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) el RANURADOR de // R (el dispositivo del control/de comunicación del u) // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (u) el envío/que recibe están/w5 de u de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus acciones) // TDS // T (cómo "obra recíprocamente" cada u w: el otro u/m) PISTA de // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas

diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "Educ": cada u = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

. Patente 5368308 de los E.E.U.U.: La corriente de los sonidos registrados rotos en los segmentos entonces reordenados ['orden y sincronización], palmadita la tiene como juego también = "juego": con otras posibilidades: conjetura que el botón tiene que los sonidos pidieron de qué manera; crear las combinaciones sanas diferentes de ésas oídas antes por factores señalados de la diferencia (los mismos segmentos sanos pero solamente 1/10 movidos a otra orden)

- % de la palmadita del str de la búsqueda: juego y (eléctrico o talud) no (vídeo o ajedrez o billar automático o (juego del ajuste del tablero))

Dispositivo de la palmadita 5486122 de los E.E.U.U. y método computacionales usables autónomos de expresión artística usando el "juego": Los dispositivos educativos que usan métodos educativos process-oriented se divulgan para preparar a niños para el teclado. El dispositivo incluye sistemas de guantes y de indicia aplicados a los dedos de guantes para proporcionar las representaciones ilustradas del teclado.

. VENTAJAS EN JUGAR AL JUEGO: "Educación": aprender las destrezas (de la vida real) aplicables a las funciones "señaladas". Importante para la patentabilidad. Ejemplos:

--cómo buscar, pescar, o alza con desgracia mínima o ganar: alimento, o punto de la destinación.

--construcción de su personalidad: fuerza, resistencia, capacidad de maniobrar en la vida real, habilidades del negocio, negociando, batalla (boxeo, artes marciales); deportes (competitivos).

--aprendiendo cómo utilizar (KN) el sistema/interruptor (software del `)/herramientas.

--la práctica que viene de jugar del juego enseña en muchos niveles: intuición; patrones del comportamiento subconsciente dictados; respuestas automáticas

. - misceláneo: generación de la "imagen"; juego a ganar: dinero, puntos, otro juego libre; "entretener".

. UIP: el sistema (sistema) mejor entiende la personalidad del jugador, y ajusta por consiguiente. Ejemplos: interruptor (clases particulares); cómo (KN) presenta la información, opciones, funciones; aprender que una habilidad tal como cómo utilizar un product= entonces u no sólo sabe mejor utilizar el producto, pero to= u de los sastres del uip sí mismo del producto un mejor: u = aprende que la habilidad/uip aprende adaptar a u = interconexión mejorada entre u y KN.

- Pensamiento creativo de siguiente de las necesidades: Ventajas del servicio del comportamiento del jugador, eg.: vagos, uip, acceso, Educ, egh, creatividad del u de los aumentos (véase los métodos del realce de la creatividad).

D: C (computadora del `) = "anota" = usuario: como u consigue más cerca o más lejos de ganar.

- el jugador = "interactivo" en modo/juego de la "hospitalidad" = ~ del "juego" C = movimiento "analizador"/movimiento del juego del jugador "anotado" = "guía" sugiere/predice los movimientos/los movimientos futuros del opositor.

. Str de la búsqueda de la patente:

- ajedrez. O: ajedrez y (el software o la computadora da instrucciones o enseña o demuestra o improv).

--Patentes de los E.E.U.U.: 4098106; 4492581; 4515371+ - las exhibiciones corrigen movimiento después de número "señalado" de movimiento incorrecto del jugador.

- (juego o juego) y (dar instrucciones o enseñar) y (software o computadora o eléctricos)

--Los E.E.U.U. patentan: 5035625 3866338; 5497999; 4228596; 4289313 4416454 4611996 4421487 5169319 4122952 4990093.

- ((jugador u opositor o usuario) near/5 (comportamiento) y juego y (computadora o software o eléctrico).

. --Patentes de los E.E.U.U.: 4569526 4666160 498003 498002 4518267 4494202

- 'R = "inclinación"; teledirigido; palillo de alegría; "aplaudiendo"; arma del laser; (tridimensional/teledirigido) "ratón"

. Dibujo posterior leído: U = este ~ del sistema de N (invención) (sistema) (juego/"educador" de los sonidos) C =

TENER ACCESO (determinar la naturaleza del sonido correctamente para acceder) A LAS BÚSQUEDAS MULTIUSOS de // de la CUENTA de // del RANURADOR de // R (`teledirigido) // de la Picosegundo-Zona de la banda de // del OSCILADOR de // // (programa) // (diversos sonidos oídos/generados por zona) (llana de las respuestas correctas del usuario) y REACCIONA (a los sonidos) el SENSOR de // (el mic/otros sensores "busca" el tipo de naturaleza del occurrence= así que u puede determinar mejor W5 de la ocurrencia (entonces "reaccionar")) el ANALIZADOR // TDS (cuando ocurrieron los sonidos/los acontecimientos) // T // de SONIDOS de // SIGUE (los sonidos) el ANALIZADOR VISUAL de // UIP-DB (de sonidos) // (las ayudas determinan la naturaleza de la ocurrencia para: pistas).

. USOS (DE LA VENTAJA "EDUCATIVA"):

- Aprender los nuevos sonidos: "Educa" a usuario en como qué artículos sonar. - Malfuncionamientos: El aprendizaje de U qué el funcionar incorrectamente suena es el w= asociado que problema. analizador defectuoso mejorado 4C150 de sonidos.

- Caminata de la naturaleza: sonidos del organismo del fósforo; tamaño de la conjetura del agua móvil y o su distancia, o altura de las caídas del agua. Velocidad/tipo/índice de agua para el tiempo: lluvia, viento, tornado. Mecanografiar el animal (incluso cuyo animal doméstico); mecanografiar la llamada de acoplamiento (si varón o hembra) o la otra comunicación animal y qué significa.

- Caminata de la ciudad: número de vehículos; el oyente de la altura está en rascacielos de ruidos de la ciudad.

- Respuestas de emergencia: qué tipo suena están w asociado (con) qué problems= y cómo u debe responder.

- Conjeturar el producto: mecanografiar el vehículo y hacerlo. Sonidos emitidos ocupándose vanamente con el producto cerca: caída, golpeo, separando, recombinando en nuevos productos. Conjetura que piezas (con W5 (qué, donde, cuando, porqué y cómo) se utilizan).

- Quién es él: Mecanografiar el discurso del "carácter"/del agente. Bueno para las pieles de ante de la película.

--Los amigos pueden disfrazar sus voces (vía "synth") = requiriendo a otros jugadores conjeturar. Los jugadores saben hablar hacia fuera las pistas para otros aspectos del "juego" también.

- El sistema "portable" se permite conjeturar el tipo sonidos, vía su "analizador de sonidos". Ver: "SA".

- Conjeturar el tipo ""/comportamiento (tipo) del humor del altavoz. Ver: analizador de la voz 5A880. analizador de la voz 6B830. analizador de la voz 1C300

MISCELÁNEO: Efecto "redactor" del juego del UIP: U se pide experimentar diversos efectos como sonidos y mecanografiar imágenes. La respuesta del u "se anota" e interna los efectos del juego se adapta para conseguir una respuesta más deseable de los jugadores. Los aspectos de cada juego tienen opciones "editable" múltiples, y el sistema (sistema) utiliza esas preferencias del mejor jugador que empareja. Esta subdivisión copiada al UIP. "Acceso" = "VAGOS": Limitar las capacidades del opositor restringiendo esos parámetros (del comportamiento) correctos del acceso del wo. Sus jugadores (y los jugadores de equipo) que sabe los comportamientos "señalados" tienen acceso más fácil. Los jugadores pueden diseñar poseer contraseñas del "acceso = de los VAGOS".

CONCLUYE el ARCHIVO 2G200

ARCHIVO: INVENCIÓN GA

JUEGOS DE LA INTERACCIÓN DE LA INVENCIÓN DE LA VIDA REAL

INTRODUCCIÓN: Invenciones relacionadas del juego. Puede aplicarse a la vida real donde está disponible la tecnología alcanzar las punterías deseadas, y o la realidad del juego. Algunas definiciones - ampliadas en ejemplos reales:

FUNCIONES MÁGICAS DEL JUEGO DE LA INVENCIÓN
UNO O MÁS ASPECTOS INTEGRARON EN UN JUEGO:
INVENCIÓN DE LA PUERTA (DEL ANIMAL DOMÉSTICO) (ACCESO)

. Danza a la puerta abierta. El acceso que busca del jugador debe bailar/movimiento en patrón señalado y seguido, delante o en de una puerta mágica de la zona (cerca de), para abrirla (conseguir al uno mismo o a otros in/out). Puede sobrepasar contraseñas, y es más duro de escribir rápidamente y fraudulento de copiar. Los vigilantes no pudieron incluso saber que se está haciendo este método. Detalles en la partición del acceso. El deseo simple de un jugador puede exigir el párrafo anterior. O el ganador consigue/ase la invención con las señales que representan los movimientos requeridos del acceso.

--El uip del jugador para los movimientos característicos (típicos) del cuerpo (rápido, dentado, hunched) puede (ser bastantes para conseguir el acceso)/permite que el analizador del sensor de movimiento permita variaciones del movimiento dentro de las características del uip del jugador.

--La contraseña del "movimiento correcto" se puede substituir por cualquier medio del acceso según lo explicado en el archivo del acceso, eg.: discurso, imágenes de dibujo, velocidad (de la variable) - tempo - ritmo (picovatio) de /moving/speaking/breathing que mecanografía...

. Cualquier otro medio del acceso puede puerta abierta, eg.: reconocimiento de la imagen del facial/de la mano.

(Solamente) el usuario con la mano/la cara vivas accede - algo que (no puede ser perdido) ser efectuado por malfuncionamiento del acceso' (causado por el bandido (virus)).

JUGAR EL VIAJE de la TIERRA - recordatorio (de G101 picosegundo (sistema de colocación del `)):

- Dirigen al jugador (vía el GPS) hacia puntos educación de la hospitalidad'/el interés del usuario. El uip de cada jugador crea un diverso guía turístico. Maximizar su placer.
- Saber qué invención para comprar donde y cuando. El UIP de ambos la invención y el jugador (principales) comunica así que la invención (auxiliar) se modifica para requisitos particulares para los jugadores.

RESCATE DEL OCÉANO: notificador de la corriente del agua 2G210. La invención que analiza del usuario reconoce cuando los, o a la persona que necesitan rescatar (unknowingly) cogen en una corriente del agua (del océano). Otros sin el dispositivo no reconocen la edición, autorizando tan uno con la invención.

- el objeto/la persona en la corriente puede ser seguido. Un tesoro se puede poner tan a la corriente, y ocultar de bandido; y debe el intento del bandido que coge la invención (de la trampa), después el bandido (unknowingly) consigue cogido en corriente (y no puede venir detrás luchar/triunfo el juego).

+ INVENCIONES de DISTANCER (cambios en proximidad). Ver G102, archivos de la Picosegundo-Zona.

GUÍA ESCAMOSA DE LA PERSONA: 2G220 castiga y recompensa a gente, basada en cuánto ella (no hacer) desviarse del comportamiento señalado (como en el UIP). Los comportamientos seguidos y analizados incluyen:

- el ser/que hace en la zona del sistema (w5).
- (largo) correo (invisible) que emana las buenas/malas señales (`remotamente) a la persona (collar/dispositivo en su persona (que toca su piel)).

LOCATION/MODE BASÓ EL COMUNICADOR: 2G230

- hablar en las nuevas idiomas basadas en usuario de la zona está adentro. Llegar a las zonas señaladas/caseras y los opositores no pueden entender/comunicación de la intercepción/Info/las estrategias de la distribución entre los miembros del grupo.
- la lengua correcta de discurso puede ser acceso para esa zona.

AJUSTADOR del CAMBIO de la DIMENSIÓN 2G240. Primero con tres o más dimensiones corregidas para el jugador [uip]. Ver 5J07

2G250 EXTIENDEN JUEGOS EN NUEVAS ZONAS [sin la conexión directa del GPS]. (Suplemento G115 del GPS). Para los juegos del jugador de Vers del jugador, el etc.

Archivo: Juegos/juego

JUEGOS

Ver nuestras muchas invenciones del juego.

El objetivo del juego es: el triunfo [puntos], participa en un desafío, practica una actividad, o solamente experiencias interesantes. Una definición amplia de jugar del juego se utiliza. Ver los archivos enormes del juego.

. Ejemplos: las funciones interactivas pueden ser desafiadoras, recompensando, y educativo. Las funciones no electrónicas/con programa de gestión limitadas del juego se aplican.

. Funciones del producto de programa para hacerlas más de un juego para el usuario. Eg. capacidad de diseñar: reglas; funciones del juego; interconexión de las multimedias [se pueden todos adaptar a las preferencias de la hospitalidad del jugador].

- El jugador cambia los papeles desempeñados por los carácteres, cambia las reglas, player/UIP puede diseñar (casi) nuevos juegos (vía uso del interruptor de la lengua que es autor para el juego (prototipos)).
- General: Manía. Valor. Ajustar [las necesidades de la otra entidad, las reglas, los resultados previstos]. Juego. Valiente. Colusión. Conspiración.
- Dificultad del juego adaptada cuenta de las habilidades del jugador'.
- El juego incluye: competición, torneo, redondos [del múltiplo]

. Tipos amplios de juegos éticos:

- Estrategia/hospitalidad: [usuario invocado/dirigido] diseño, broma, broma, esquema, orden y sincronización [pensado hacia fuera] de estratagemas, cebo-y-interruptor ético para batir el opositor/a jefe. Triunfo prediciendo mejores estratagemas. Reconocer y tomar las oportunidades [reconocedor sano del `, el reconocedor visual]
- Juegos que esperan: gato-y-ratón, mintiendo bajo, esperar-y-ver-actitud
- Características no tradicionales [del juego] para nuestras invenciones: Jazzing encima de las características interactivas de invenciones aplicables vía: reconstrucción [mental], aventura, diversión, juego, festividad, alegría, follow-the-leader [quién podría ser el juego/su guía de la' entidad' del carácter], diversión, hospitalidad.

SECCIÓN MENOS IMPORTANTE QUIZÁ:

OTD 1: la definición del juego es avanzada que supuesta comúnmente en sociedad; pp y reglas del juego de la P.M., sistemas de sonorización, cuenta; Reino Unido; interactivo; %exercise; %portable; carro (para más de un juego practicable - software); cc: uip (el nivel de la dificultad del juego ajusta a la capacidad del u (tgh)). Reglas de juego alterables por u vía: el carro, banda, %uip, + " entretiene ", + " corrige ".

- D: U (jugador) = ~c [de la unidad portable de r] = (U (jugador))
- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- Subpartes: Juego-Vídeo; Juego-Al aire libre: las piezas comunican vía la radio = C. principal.

% "del ranurador": localiza el then= recupera el data= necesario para el "juego". Los jugadores pueden necesitar los datos/el papel especiales que juegan habilidades del "juego".

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"del dispositivo corrigió"/copiado. Ver: "Tener acceso", "corrigen".
- OTD D: U (jugador del juego) = este ~ del sistema de N (juego) C =

ARTISTA (tipo imágenes/de la banda de u efectos visuales deseados para el juego según lo visto en S); %BA (el comportamiento de U determinado, así que sistema puede mejorar UIP-Adapta cómo el juego gira alrededor de jugador, eg.: tgh); CEREBRO (); CARRO (cartuchos de juego - diverso carro tiene diversos juegos que se puedan jugar); EDIT (el guarda puede cortar ciertas características del juego, eg.: palabras/imágenes (analizador visual)/ciertos juegos (en el carro/en línea/vía la difusión) todos junto); EDUC (U aprende destrezas mientras que sistema de w "que obra recíprocamente"); K (); M (abajo cargar los juegos adicionales); MES (); RATÓN (); MULTIUSOS (diversas "cuentas anteriores" de cada jugador recordadas y por lo tanto el modo del tgh diferencian por jugador; la diferenciación "corrige" para cada jugador); NR (u dijo cuándo pierden o ganan el juego, o dijo su "cuenta actual" o "estado" (la escena del juego de la posición física w/in)); +OSC (); +PR (el jugador cambia los papeles desempeñados por los carácteres, cambia las reglas, jugador puede diseñar (casi) nuevos juegos (vía uso del interruptor de la lengua que es autor para el juego (los prototipos))); +%PS-Zone (principalmente la versión de WA de N, o la Picosegundo-Zona solicita a la porción de R de sistema de N; localización física del jugador: las necesidades de ser cambiado para u más con eficacia al juego del triunfo (que desempeña su papel en juego), jugador pueden girar mientras que guarda su establo de las piernas (en granangular), u se sienta, solamente su posición cambian un poco como tuercen su cintura, o mueven el dispositivo portable (pedazo del juego) con sus manos/brazos; multa - adaptación de la localización provechosa, eg.: vía el GPS no actual); Q (); +R (); RANURADOR (); CUENTA (el jugador de los puntos ganado, y compara a jugador con otros jugadores (vía "multiusos"); %SENSOR (=effects del " analizador " del sensor= cómo se juega el juego, eg.: el sensor de movimiento es necesario si u es responder a la situación del juego, o la química/la energía eléctrica de la mano (de cuerpo humano) efectúa la reacción del juego (u debe ser relaxed o u pierde puntos)); ANALIZADOR DE SONIDOS (); DISCURSO (el jugador puede responder a/los elementos de control del juego vía el discurso); ESTADO (); SYNTH (el estado del u en juego efectúa el synth usado por el oscilador); + INCLINACIÓN (funciones del palillo de alegría); UIP (uip-adaptar, tgh); UQ (); ANALIZADOR VISUAL (); +VR (); +WA (VR, tipo del walkman, juego jugado (solamente encendido):

modo audio - u oye que las acciones y u del juego responde vía sonido (y o k que presiona también); todavía u capaz de ser semi consciente de sus alrededores de la vida real (contra (vr))).

- "Facturación"

- Lugar de reunión del EL: Mejora en la patente 5347306 de los E.E.U.U.: El ~ de "C" animó el lugar de reunión electrónica para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" =

TENER ACCESO (necesitado para cada participante (u) ensamblar) AL ANALIZADOR de // (sistema cómo/w5 funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la banda de // del OSCILADOR de // NR (cuando u se pide para responder o debe notar ocurrencias señaladas) // (comunicación verbal) (cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) el RANURADOR de // R (el dispositivo del control/de comunicación del u) // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (u) el envío/que recibe están/w5 de u de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus acciones) // TDS () // T (cómo "obra recíprocamente" cada u w: el otro u/m) PISTA de // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada u = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

- Patente 5368308 de los E.E.U.U.: La corriente de los sonidos registrados rotos en los segmentos entonces reordenados, palmadita la tiene como juego también = "juego": con otras posibilidades: conjetura que el botón tiene que los sonidos pidieron de qué manera; crear las combinaciones sanas diferentes de ésas oídas antes por factores señalados de la diferencia (los mismos segmentos sanos pero solamente 1/10 movidos a otra orden)

- % de la palmadita del str de la búsqueda: juego y (eléctrico o talud) no (vídeo o ajedrez o billar automático o (juego del ajuste del tablero))

Dispositivo de la palmadita 5486122 de los E.E.U.U. y método computacionales usables autónomos de expresión artística usando el "juego": Los dispositivos educativos que usan métodos educativos process-oriented se divulgan para preparar a niños para el teclado. El dispositivo incluye sistemas de guantes y de indicia aplicados a los dedos de guantes para proporcionar las representaciones ilustradas del teclado.

Archivo: Subpartes GA de Parts/UIP

ADAPTAR LAS CARACTERÍSTICAS RELACIONADAS JUEGO:

Programación de la información de usuario ejemplificada en usos del juego video. El UIP es la lógica confusa que

adapta automáticamente funciones con programa de gestión, para los propósitos señalados. Ver los detalles del UIP en otros archivos.

Términos del juego

Carácter:

- Perfil de la personalidad/de la personalidad. El analizador del comportamiento también define el carácter.
- Confusamente, adentro pasado esto pudo también (pero mucho menos a menudo) imagen mala de la criatura en la pantalla video. Ahora ha llamado la "entidad".

Entidad: Las criaturas del jugador, u otras criaturas en el juego. Incluye: héroes, bandidos, y cuadrillas de criaturas con identidades compartidas.

Cosa: Entidad y o invención que tienen algunas características.

Piezas y funciones

Vistas excesivas generales de cómo el UIP obra recíprocamente con los juegos:

- el UIP es preferencias definidas por el usuario del AI.
- Entrada: El acontecimiento/el elemento digitizable/scorable [del juego] es adaptables.
- Salida: cualquier efecto potencial puede corregido según lo señalado [dentro de parámetros programables].
- Es el aprendizaje y la adaptación autónoma a los jugadores.

UIP-Juego-Acceso:

- Acceso del `ofrecido a los jugadores que demuestran comportamiento correcto/contraseña.
- Las entidades que desarrollan comportamiento correcto/el carácter acceden.
- La edad del jugador emparejó el grado del juego/de la hospitalidad. Calidad de miembro basada.
- Una mejor cuenta de juego/la habilidad/el nivel llano/particular de la vida da mayor/tiene acceso más de largo [los períodos]. El mayor acceso da capacidad de conseguir mayores cuentas, en acceso de permisión adicional de la golondrina de mar el mejor - efecto de la bola de la nieve.
- Controles del UIP que relacionaron las ventanas del juego para las cuales el acceso está disponible.

Picosegundo: puede obrar recíprocamente las áreas señaladas in/from. Ciertas zonas dan energías/limitaciones diferenciadas [a las entidades]. El sistema sabe' pistas qué usted tiene gusto basada en lo que usted/quiso w5 para la UIP-Entrada - preferencias determinadas por UIP-Entrar. Utilizar [diente/wifi azules/teléfono] allí para jugar - la posibilidad de los disparadores del picosegundo de la conexión.

- el nuevo acceso [ventanas] en perfiles adicionales/de la alternativa' corrigió los juegos accesibles a los jugadores con de las cuentas señaladas' del uip.

UIP-Juego-Analizador: Lógica confusa.

- El uno mismo del sistema analiza para el nivel UIP se ha desviado de la forma de la plantilla - para el usuario y o los clientes y u otras entidades. El grado de UIP puede ser un aumentador de presión de la desventaja o de la energía, e.g.: castigar a uno mismo un pedacito teniendo UIP a ganar.
- Galletas de la computadora: cualquier clase de datos es juego justo para el UIP.

Memorias asociativas del UIP: Las memorias asociativas trabajan recordando la información en respuesta a una señal de la información. Las memorias asociativas pueden ser auto-asociativas o hetero-asociativas. las memorias Auto-asociativas recuerdan la misma información que se utiliza como señal, que puede ser útil para terminar un patrón parcial. las memorias Hetero-asociativas son útiles como memoria. La memoria de largo plazo humana es probablemente asociativa debido a la manera en cuál pensó que recuperado de él lleva a otro. Cuando queremos almacenar un nuevo artículo de la información en nuestra memoria de largo plazo que típicamente nos tarda 8 segundos para almacenar un artículo que no se pueda asociar a un artículo depositado, solamente solamente uno o dos segundos, si hay una estructura de información existida con la cual asociar el nuevo artículo.

UIP-Audio:

- Cualquier situación digitizable tiene componente audio adaptado correspondiente. El ciertos Info/acciones/colores hacen el OSCILADOR UIP-Audio reaccionar.

. Modos:

- Los acordes de menor importancia (a menudo) sacan sensaciones de: dolor, cólera, y obscuridad
- Los acordes importantes (a menudo) sacan sensaciones de: optimista, de gran alcance, brillante, enérgio
- Base - baja/de alta frecuencia

Para la audiencia - deteriorada: hacer en sonidos más profundos [la base]

- Charla en [la manera adaptada del tipo de los sonidos]. Ver nuestra invención del convertidor del dialecto en la carpeta 1G.
- UIP-Entrada: reconocedor audio: reconoce/ordenado por comandos del discurso de altavoces.
- Lento/velocidad' corregir el discurso/los sonidos para los oyentes [que necesitan entender/de la ayuda disfrutar mejor mejor de música].
- La voz/el sonido de entidades y las invenciones se adaptan. [Basado en características de la personalidad; ser más frenético cuando [consiguiendo] más cerca - la voz de la entidad cambia cambiando proximidad [a cualquie cosa señalada].
- La función habla hacia fuera palabras en la voz del jugador en las horas señaladas: Captura audio/micrófono: cuando el jugador pierde el juego [movimiento] y dice una palabra asociada (de la inteligencia artificial), eg.: la palabra el "canguelo" o el otro sonido. El sistema comienza la grabación del micrófono momentos antes que un

juego de acción positivo/negativo predice, antes de que el jugador realice su reacción del `de la acción (sensación reactiva) [disparadores su punto perdidoso].

UIP-Color: Modos: Verde y azul (a menudo) sacar las sensaciones de: calma. Rojo, amarillo, naranja: intenso, energía. Negro: energía, control. Blanco: franqueza, pureza, honradez, claridad.
. Iluminación del juego: da 3D. El UIP afecta la iluminación del juego - más arriba el nivel de entidad del `el el más alto/más bajo la iluminación/el color (intensidad) en hola efecto/pantalla entera, el etc.
- Efectos ambientales donde adaptan al jugador [es] juego de la situación'.

Analizador del UIP-Juego-Comportamiento: Analiza comportamiento/funciones de entidades y de invenciones. Desarrolla una base de datos informativa de esas características, con los archivos asociados en cómo se interpretan, y puede ser reaccionado a depender lo que se necesita la adaptación en lo que se estudia, o la entidad/el objeto que obrará recíprocamente con la cosa estudiada.

Cerradura del UIP-Juego-Carácter: Bloqueable definido: Ni el UIP o todo lo demás puede (normalmente) cambiar el carácter/las características funcionales/sistema/programa. Ver la UIP-Juego-Viscosidad.
- El perfil de la personalidad del jugador es bloqueable contra: piratas informáticos, tratando de forzar.
- Las acciones del jugador son gamas dadas restringidas. Eg.: pueden saltar solamente así que arriba, y se inclinan tan bajo, estén tan rápidamente/lento, elegante, ágil, ágil, combativo, (sexual) apelando (y atrayendo avances de amor).

UIP-Juego-Distancer: Las búsquedas y reaccionan en la manera del UIP a las situaciones cuando dos o más cosas están adentro fuera de zonas señaladas de distancia de uno a.

UIP-Juego-Corregir:
- El `corrige/altera cualquier porción del juego: carácter de la criatura del juego; uip; mirar y sensación del juego [lograr la necesidad del uip señalado].
- El accionar la palanca adaptado de la goma: Cuando (corte y) el pegar/que mueve cualquie Info/objeto/entidad; El UIP alterará las características de qué (que es) se mueve. Ejemplos:
--El jugador coge un círculo, después consigue alterado en un protector verde de la burbuja que guarda entidades lejos señaladas.
--Sintetización de la música (seleccionada por el jugador).

UIP-Juego-Educar:
- cuando (a) el propósito del juego es aprender.

- gente de la guía del tren' a tener gusto/entidades/invenciones de la aversión dando efectos positivos/negativos señalados. EG.: el mal□n olor se asocia de lo que debe aprender el cabrito para permanecer claro. Ahorra de usar/que confía en palabras de la advertencia, del etc. reduce la sobrecarga del Info donde los efectos apretarían necesario la mente llenada del Info: trabaja más subconsciente.

Cortar y pegar múltiple del realce del UIP. El accionar la palanca de la goma (TM - marca registrada): Cortar y pegar varias diversas cosas y no hacer la memoria borrar después de que cada nuevo corte o cancelación que la manera usted pueda accionar la palanca entre un número de serie de cortes y pegar selectivamente o en atraso.

UIP-Juego-Entretener: Hospitalidad adaptada.

UIP-Juego-Entidad: Cualquie criatura en (juego). Incluye: jefe; miembros de cualquie cuadrilla; jugador (esto tiene dos definiciones - el usuario o la criatura que juegan como en el juego)

UIP-Juego-Imagen: Las imágenes señaladas reflejan la preferencia del jugador por: colores, formas, patrones, tamaños, relaciones especiales (eg.: acentuar la fuerza por la criatura principal (que representa a jugador) que es mucho más grande que otras).
- Las imágenes faciales son/relacionado con las imágenes que son/representan personalidades ideales. Existe: patente para el corte y pegar su cara sobre el carácter US5595389 del juego.

UIP-Juego-Grupo: Tentativas de alcanzar las ventajas señaladas/resultados para dos o más multi-usuarios. Los promedios/las fusiones del UIP' obran recíprocamente (integra) los perfiles para cada jugador/invención.
- los jugadores señalados `tienen más/menos peso para alcanzar las necesidades del programador/user's/UIP.
- El `agrupa educado' dirigido en las destrezas/aprendidas de las experiencias para: (respecto/los éticas) hacia/de uno o más jugadores adentro fuera del grupo; trabajo junto (vinculación) para los propósitos señalados; con medios señalados (como aplicable para el tipo negocio; cultura; categoría de edad).

UIP-Juego-Guía: Enseña a qué juego/vida/movimientos/estrategias del negocio les ayudarán (el triunfo/toma pista del control/del beneficio la' y coge a bandido). Se anota cada sugerencia (potencial)/resultado/reacción (reales); entonces emparejado con los archivos: perfiles; resultados necesarios.

UIP-Juego-Entrada: Historiador - cuantifica quién/se está estudiando qué: Las pistas señalaron a usuarios (de la cañería) para: cualquie convertible de la acción a los archivos convertidos a digital reconocibles/labelable. Usuario/Info/acciones de la persona entradas en UIP (base de datos del `).

UIP-Juego-Comercialización: La gente/los consumidores puede ser convencida utilizar características del UIP y reducir al mínimo sus preocupaciones por pérdida de la aislamiento (especialmente en el mercado norteamericano) (también que beneficia a vendedores) cerca:
- descuentos para usar/que compra lo que experimentaron
- los servicios (de alta tecnología) libres/los productos con UIP (comercialización) agregan en características.

UIP-Juego-Humor: Generar el humor deseado en jugador y otras entidades. Un humor pudo también llevar a otros panoramas: una mejor manera de engatusar potencial a amante la manera del jugador; o el triunfo sobre sensaciones contrarias del bandido, y crea paz.

UIP-Juego-Multi-Usuario: Juegos del solo jugador contra se: Tomas del usuario en el papel de jugadores múltiples. Cada jugador tiene (una) base de carácter (la plantilla del uip puede adaptar). El juego alterar/sastre medidas tomadas por el usuario, en cómo el usuario controla a sus jugadores, por ejemplo el jugador lanza una bola a Maria, pero la adaptación aparece como viento y pone la bola en las manos de Beatriz - ésta agrega (los grados señalados `de) incertidumbre; el usuario no está jugando tan completamente con sí mismos.
--El usuario señalado `del nivel de control tiene sobre sus jugadores: Esta forma semi-solitaria del juego es entre 1. un jugador que juega un juego de mesa del ajedrez con sí mismos (muy a solas); y la manera más común 2. que un jugador juega: jugador que juega con reglas de los juegos (el jugador no tiene ningul□n control sobre las otras entidades con excepción de por cuál es jugador lo hace (a las entidades).

UIP-Juego-Order&Timing:
- el UIP reacciona a la orden y a la sincronización señaladas de acontecimientos, eg.: cuando el analizador determina A entonces B sucede, después el UIP reacciona con la función/la acción de C (computadora del `).
- Acciones modeladas. El UIP puede controlar sus acciones en alrededor de cualquier secuencia de la orden y de la sincronización. Cada faceta es sola o en la sinergia de otras acciones (por el UIP) diseñadas para crear efecto deseado.

UIP-Juego-Colocación de sistemas:
Invenciones importantes en cómo el juego y sus entidades reaccionan a la posición de uno o más entidades o invenciones (de mudanza). Para los usos, los cielos son el límite hasta las estrellas caen abajo. Crear el archivo separado.
- Una función más fría/más caliente del juego: el más cercano/más lejos [geográficamente o conceptual] la entidad gets/is de la zona/del concepto/de la respuesta/de la solución señalados/necesitó el Info [ganar el juego].

UIP-Juego-Silbar como una bala-Pong: Ping-pong: 1. La entidad (marioneta) controló (por la voz (del jugador)). 2. entonces la entidad reacciona (con voz). La reacción de la entidad adaptada para el jugador y la

entidad de la manera predice que el usuario reaccionará de nuevo a la entidad (marioneta). 3. El jugador reacciona a la entidad (de manera (consciente) se está adaptando a la entidad. 4. La entidad reacciona al usuario adaptado en la manera como el paso 1.

- El silbido de bala Pong diseñó ser más fácil o más duro para el jugador, según las habilidades del jugador, eg. ; la computadora es más fácil en jugadores de ajedrez del principiante, que amos del ajedrez.

--Dificultad que adapta: el analizador anota la habilidad/la capacidad/la aptitud/el conocimiento del usuario, y se compara la dificultad el nivel del juego está para el jugador = los dos y emparejado (en diversos puntos a tiempo (como el cambio de las capacidades del usuario) = el usuario juega al juego en la dificultad/el nivel de enseñanza señalados del interés'.

- El `predice donde el jugador (w5) go/end para arriba: geográficamente, espacial, con las cuales el jugador de las entidades obrará recíprocamente y cómo [w5] actuarán el jugador y las entidades. Adaptado para el efecto/la reacción/el aprendizaje señalados/experiencia (en jugador).

- Juegos de ajedrez automatizados estudio para los detalles [en analizadores].

UIP-Juego-Predecir: Se predice qué. Cómo: 1. otra entidad (bandido) actuará (en la reacción a las acciones del jugador). 2. cómo el jugador predice (sí mismo) acto en el panorama futuro, por lo tanto cómo es UIP-pegajoso y deficiencia/neediness de características ser [alcanzar meta].

UIP-Juego-Recordar:

UIP-Juego-Reglas: Fijar los parámetros del juego para el UIP. Las reglas de juego diferencian para cada entidad.

Siguiendo sobre todo el UIP-Juego de las repeticiones en general:

JUEGOS PERSONALES DE A2-12A (IZED): mezcla w 11 11A 12. El juego desarrolla las reglas específicas para el Info personal del u. Cada persona tiene ciertos aspectos del juego que causen: temer, tensionar, aventurarse, entusiasmo, interacción, armonía, romance... ese tienen gusto o no tienen gusto.

Reglas de la DD de M po o y estrategia más probablemente para crear respuesta más satisfying personalmente. M puede combinar los perfiles personales para los jugadores múltiples del juego, desarrollando el más satisfying, llano de la complejidad,... manera enérgia para que él obre recíprocamente; puede incluso ser utilizado para mejorar sus relaciones solucionando problemas; dejar hacia fuera el vapor cuando sea útil; evitar a opositor que ataca donde está mínima/ellos la mejora potencial es psicologicamente frágil. Toda la gente tiene iguales o diverso sistema de reglas del juego y o de paradigmas. M imprime nombre del número del juego y o ambos con el tipo categoría del juego, u pueden reelegir el juego otra vez (w o wo los mismos jugadores); M puede jugar el número múltiple o ilimitado de juegos, uniforme nunca teniendo reglas siempre otra vez el absolutamente mismo w (con) o sin págs.

ELEMENTOS de la banda (programa) (opciones, aplicaciones, ventajas, ayudantes de entrenamiento...): u/m/programmer/party que da las peticiones personales/selecciona del Info automáticamente: tipo categoría del

juego; # jugadores; juego al aire libre; juego de interior (a bordo, el tipo C (computadora) del `(HH, TT, modela ninguì□n); usar el sitio/la casa como tablero del juego (incluir quizá los planes de piso para el Info personal); parar y jugar, eg.: si el ur en la espera larga del trabajo w (con) abre; enseña a los modelos para los cabritos, adultos para la vida generalmente que es un empleado/un jefe/una posición particular del trabajo de las ventas person/a, -- manipulación de crisis: emergencias médicas, guerra, terrorismo... (hace esto creando semi-vida como situación donde u debe jugar, para combatir w, construcción, situaciones de de/re-construct); aprender las idiomas como el discurso del natural vivo de w (con), teniendo conversaciones afinando en una lectura dd/po o in/out-put verbal; programar totalmente el ur propios juegos personalizados del rasguño o del software de lengua que es autor, - o hacer sus propios prototipos generales de los cuales crear personalizó los juegos para otros; las reglas se pudieron cambiar, agregado, suprimido en el centro de los JUEGOS del EJEMPLO del juego (basado en desventajas que se convierten a un cierto grado contra ganador, Info personal creciente): El juego ya publicado "riesgo", los papeles jugó: la máquina da países de p según culturas, las historias... que tienen gusto - p menos agresivo que es w fascinado (con) Mussolini consigue Italia y si son agresivos África norteña va al opositor semi-emparejado al Info personal de cada uno. Los amantes de la paz consiguen Suiza, Escandinavia. El phobics de Japón consigue Extremo Oriente Asia para atacar Japón. El p que es diferente de la norma, sobre la inteligencia media y siente atrapado consecuentemente consigue Japón o Israel w los ejércitos fuertes ampliarse. En "Scrabble" de cualquier lengua, p consigue las letras que deletrean las palabras que las satisfarán, jugadores en cualquier juego no necesita saber las reglas de los aparejos de m para el Info personal (eg., no decir a abuela del ur; hacer que m lo haga más fácil para que ella/un p más joven gane).

MK: ahora cada uno puede estar de acuerdo con juegos jugar; el único juego que usted necesita nunca comprar; TD: La memoria de los últimos juegos jugados y el funcionamiento y nivelan quizá de la satisfacción y del conocimiento creciente del Info personal; Mfh adulto de la CRT del humor LL del ed de la broma del truco del juego del juguete del cabrito del MED W4 del ep del punto de ebullición del interruptor de C (computadora del `) (software) del `e HH TT (para Info personal, nuevos juegos, adaptaciones a los sucesos actuales...) P.M. b vc exc (juegos al aire libre) aca v de los pp del cp del RPC

DONDE SE JUEGA EL JUEGO: en 1 o los teclados múltiples/crt/dd; gráficos del tablero del po fijados al papel en blanco del po del recortes del tablero; gráficos del pedazo del juego del po conectables al tipo plástico pesos por el clip, pegamento, imán...; una máquina que produce solamente juegos y jugada en la PC... . - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/el modes%/programs%). Copiado al agosto de 95 9G220

. - Palillo 5E020 de la inclinación: Controla las funciones de esta n.

- Ver: Favorable indispensable, que es un software de la gerencia de los requisitos.

UIP-Juego-Cuenta: Cuentas usadas como UIP-Entrada.

UIP-Juego-Efecto: Efecto del olor que adapta:

- los olores pueden también ser muy sutiles, y uip señalado. El olor en la tecnología futura se pudo programar/manipular vía los electrodos del cerebro u otros medios (ahora entendidos no todavía completamente) de sacar la experiencia de los olores, donde los olores reales no fueron emitidos.
- cada jugador pudo experimentar diversos olores por el uip, como un efecto del olor diferencia sobre diversa gente. la cantidad real de olor pudo ser mínima.
- se aplica a otros paquetes audio-visuales del producto: Entrenamiento basado de "C"; vídeo interactivo (sistema activado por el usuario que toca una pantalla - los tableros dominantes pueden ser utilizados, pero no ser requeridos)
- oler a usuario del nuevo producto pudo desear comprar, eg.: dentro del nuevo coche; cuero del olor para los productos de cuero; olores también para los productos siguientes que son vendidos: alimentos, servicio de entrega de la flor, etc
- el producto fue combinado con el producto 8B-19.
- coordenadas del olor con: cualquie invención audio/visual, eg.: TV, pantallas de ordenador, ipod (mientras que juega música), teléfonos celulares (mientras que habla - oler los fósforos con los cuales comunicando y sobre qué, w5).
- la preferencia de usuario por el tipo perfume/flor emana según jugadores/la preferencia de usuario. Dos personas que ven a la misma actriz, olerán a diversos asociados de los perfumes con la actriz/la entidad que son retratadas.
- olores de la pista del `. Los olores actúan como notificadores para la vista/la audiencia - obscuridad deteriorada de /in.
- protector del olor: los olores adaptaron para guardar lejos (los bandidos), (mientras que atrae otras entidades).
- prevenirse antes de que una entidad se acerque, los huelen que vienen (como animales poder). Diversas (lucha/vuelo) respuestas de cierto disparador de los olores en cada entidad.

Las emisiones del control de las entidades del olor adaptado lanzan a: atraer/rechazar las entidades; sacar las reacciones/los comportamientos deseados; hacer la sensación del uno mismo: placer, energía (fruta cítrica que huele), sueño, amor (y o amarse); distraer otros.

Pantalla interactiva del olor del `: los olores se emiten para acentuar las sensaciones y para experimentarlas mientras que: televisión de observación; selección de opciones de una pantalla de la CRT (por ejemplo cuando hacen compras vía "C", ciertas maneras de la ropa pueden tener un olor elegante del cologne emitido para realzar ventas); aprendiendo algo en "C" (retención de la memoria del aumento de las ayudas - puesto que el material se experimenta más intenso, placer); anuncios: oler el detergente o la Coca-Cola de modo que usted quiera ir al refrigerador y consigue alguno
- las emisiones del olor pueden también ser en cantidades muy minuciosas para tener el efecto subconsciente eficaz

- algunas emisiones del olor se pudieron crear por los productos químicos normales en el aire; bloques de productos químicos naturales de los cuales un poco se utiliza a la vez. El factor de reemplazo más difícil pudo estar con las televisiones caseras, con todo está en el interés de la televisión y de las empresas del cable para que la gente tenga éstos, así que puede ser que sean dadas lejos barato o para libre
- la gente de la demostración de los estudios goza el mirar de programas con la dimensión del olor agregada (a menos que está también sobre accionar)

Viscosidad del UIP-Juego: Cuánto y ayunar algo puede desarrollarse. Grado a el cual la entidad/el objeto no puede cambiar (persistencia llana) al UIP. Terminar la viscosidad = la UIP-Juego-Carácter-Cerradura. Usos:
- El sistema quiere más hora de seguir las acciones de usuario para determinar cómo (otra vez) al sastre sí mismo. El programa asigna las cuentas de la viscosidad para: viscosidad se está cambiando de qué, y la cuenta para cómo cuentas de los elementos señalados influyentes del UIP las' pueden efectuar la uip-viscosidad dada.
- (Característica sabia) los aspectos identificables centrales/importantes de la entidad/de la invención pudieron ser más pegajosos tan: el usuario puede (visualmente) la identifica (mientras que juega al juego); sigue habiendo la identidad/la función centrales [razonablemente] en tacto.
- Cuanto el menos pegajoso, mejor puede adaptarse (más rápidamente) y ganar. No obstante el ser demasiado pegajoso puede causar la adaptación basada en demasiado poco Info recibido durante un tiempo demasiado corto, por el cual tomar mejores decisiones en cómo adaptar; entonces perder el juego. Las entidades inteligentes pueden determinar algo son viscosidad empujando/que juega con él en ciertos aspectos, y ver en un cierto plazo cómo él y o su clase de entidades/de invenciones se adaptó. La entidad inteligente puede hacer después adrede (como mínimo) la viscosidad adaptarse (semi) al Info falso/no-útil; los triunfos inteligentes/consiguen tan de la entidad qué T (teléfono del `) quiere.
- Cada dado/necesitó característica se anota para la importancia/(deseado/real/predicho) la viscosidad.

UIP-Juego-Blanco: Busca cualquier información/entidad/acción, o interpretación convertida a digital de eso. Puede reaccionar según lo señalado, eg.: corregir, reprogramar, parar, activar la blanco o una característica in/associated con ella. En juegos, la UIP-Blanco busca las blancos señaladas basadas en el perfil del buscador que es buscado, eg.: Bandidos.

UIP-Juego-Plantilla: Juego/entrenamiento computarizado que puede (algo fácilmente) ser alterado para alcanzar los resultados señalados en el usuario/el estudiante. La plantilla requiere menos trabajo que el juego del edificio (plataformas) (semi) del rasguño. Ahorro en costes importante. Puede adaptar las plataformas únicas para cada usuario.
- Ventajas/usos (para el usuario/el patrón/la escuela): educación; terapia mental/física; usuario de las guías (enseñarles o ayudar).
- Menú: el programador selecciona de tipo del menú: el usuario, ventaja deseó, los métodos de alcanzar deseó la ventaja, tipo adaptación deseada o se ha utilizado que, (agregar en las cuentas para los resultados de la

adaptación o de otra (análisis del comportamiento/de la salud), carácteres (y cómo uno o más ser adaptada individualmente)

- Algoritmos del analizador del `(definir por favor cualquier idea aquí: el _____) determina: cómo alcanzar resultados señalados por: UIP, qué programador/usuario (aparece pero no puede explicar completamente) se quiere.

- Guía del `: el sistema dirige el programador en cómo montar esto. Ejemplos:

el creador del juego 4A430 concibió idea básica en 1992.

- Comercialización: los compradores pueden seleccionar de menú (en Internet); y el sistema del vendedor entonces adaptará entrega al cliente.

UIP-Juego-Terapia: (Juego diseñado) usuario dar/de la guía para alcanzar la terapia para: mente/cuerpo/alcohol.

UIP-Juego-Disparador: Adaptar los disparadores señalados las reacciones (del ser humano) en jugadores/invenciones. El disparador sabe que qué reacción (sensación, pensamiento, Info, función, comportamiento) (poder) venir del disparador. Accionar controlado cerca: UIP-Predecir, UIP-Guía, UIP-Educar, UIP-Terapia.

- reacciones del comportamiento (en usuario): aventura, inventiva, miedo (fóbico) (de la invención), entusiasmo, armonía con (otra gente/carácteres en juego/sistema/el grupo/negocio).

. - A2-12A

Vibración del UIP: rumbling (como terremoto): miedo. Más rápidamente: siente como algo se está moviendo. Terreno y velocidad: cambia la vibración.

Corregido de porciones de la sección del UIP del archivo IMI25:

UIP = programación de la información de usuario.

El UIP adapta sistemas a las necesidades únicas del usuario. El sistema utiliza la información almacenada sobre el usuario más allá [`seguido] del comportamiento del juego para mejorar ayuda. Mejora funcionamiento del juego. Uno mismo optimiza sus funciones, para mejorar al sastre sí mismo a la situación actual. A menudo característica opcional de la prima de una invención.

- "Interfaz adaptante": El interfaz de la computadora que se adapta automáticamente y dinámicamente (los sastres del `) a las necesidades y a la capacidad (carácter del juego del `), de cada usuario individual (del software).

SUB-FEATURES CLASIFICÓ

UIP-Acceso: El tipo de acceso en un sistema ajusta según la situación del usuario. EG.: tener acceso a ciertas zonas de las energías/de los privilegios/Info del juego'. Podía haber tres niveles de separación del acceso de sistema para un usuario: Nivel uno: todos los datos disponibles; Nivel dos: tener acceso requiere aprobación del UIP-Acceso'. Nivel tres: Ningul□n acceso permitió.

--Las características del usuario (señales, UIP) "analizaban": determinar si permitir: "Tener acceso" (entrada, nivel/tipo u) permitida uso. Piezas a ver: + " VAGOS de Access',".

UIP-Corregir: El sistema corrige el material del juego features/UIP según las preferencias adaptables/las necesidades o las características del usuario. El material Editable incluye: texto, (porciones de) imágenes, (porciones de) pistas de sonidos, código de computadora, etc.

+ UIP-DB: El sistema compila la base de datos necesaria de la cual incluye [cosa del jugador del `del usuario del juego del `'] características: usuarios, ambiente, otros sistemas conectados, y sistemas recibiendo el UIP.
--El desarrollo y o utilización de la base de datos en las características del u: identifica/desarrolla diferencias entre diversos juegos/el interno (multiusos) de los usuarios permitiendo que el sistema mejore a sastre sí mismo (UIP-Adaptar). UIP-Adaptar las aplicaciones el UIP-DB. Ejemplos: "Tuvieron acceso a VAGOS", "pista", "artista": las maneras preferred u tienen gusto de "imágenes" "corregidas". Ejemplos extensos en archivos de KN (invención).
--Dibujo del interruptor (software): "busca" para qué needed= de los elementos para el compilation= después organiza datos (vía lógica confusa) en el form= usable UIP-Adaptan. ---Notas: Búsquedas: vía los "cuestionarios", "vagos", "pista". Organización de los archivos del DB: la información recogida sobre usuario se puede insertar en uno o los archivos múltiples según los cuales los archivos puedan utilizar la información. Entonces UIP-Adaptar asociados de las búsquedas los' que los archivos ellos necesitan para mejorar a sastre. O más trabajo se puede requerir para que UIP-Adapta encuentre la información necesaria.

+ UIP-Guía/guía: El UIP sabe cosa del mejor usuario de la demostración' cuál él es [por el juego] querer previsto/necesidad.
--Dirige a usuario para ganar más ventaja de las funciones/de las energías disponibles del juego que asocian a los gustos del usuario. Sastres sí mismo a venir cerca en el reemplazo de uno en uno tutoring y a ayudar: centrándose en las necesidades de usuarios específicos, contra formas generalizadas de ayuda. Ver la guía.

UIP-MQ = la máquina hace preguntas invención del jugador/del usuario a la':
La máquina hace preguntas del usuario para obtener la información así que el sistema puede mejorar a usuario del servicio. Respuestas usadas para desarrollar "UIP-DB". El jugador puede seleccionar deseó características ellas/otras quiere en el juego/el panorama.

UIP-Ranurador: Vía (software), dirigen al usuario a las escenas del juego/a los diagramas/a los programas/a las funciones de energía señalados del juego.

UIP-Pista: El sistema sigue al carácter/a la persona/a usuario. Ventajas: UIP-Info-Entrada; predecir [panorama/acción siguientes del juego] y las guías por consiguiente. La pista es un agente del juego [que puede luchar a opositores señalados en W5 señalado].

UIP-VA: ANALIZADOR VISUAL: Búsqueda para las imágenes señaladas [de otros jugadores (del ser humano vivo). El sistema aprende/adapta' sí mismo saber qué imágenes deben: la pista, corrige', localiza para el usuario; eg.: aunque el usuario no sabe consciente exactamente lo que él [poder] necesitar ganar/ha deseado' [experiencia señalada del juego del `].

- “”/usuario del analizador = (automáticamente) asigna el código uip-basado deseado de características a las imágenes señaladas de la' cosa' del carácter del juego = tales códigos es cerca utilizada (cad) manipular/proceso/corrige las imágenes atadas a los códigos = a los resultados en las imágenes outputted/texto/sugerencias/datos técnicos mientras que u pidió/quiere (uip) = estos datos outputted (poder) tener códigos de características = así que tal salida puede ser alterada (como pedido anterior).

-

Sentido sobre todo repetido o común Info:

- UIP-BA/analizador del comportamiento: Estudios el comportamiento de [otro] [jugadores/invenciones de los usuarios']. El sistema reacciona por consiguiente. Concluye con un perfil del comportamiento de la blanco [carácter del `], después puede reaccionar por consiguiente. UIP-BA o

Archivo: Las subpartes GA de Parts/UIP concluyeron

Archivo: Puntos GA de las piezas/acción

PUNTOS DE ACCIÓN [DEL JUEGO]

Los usos incluyen: ¡los juegos, juguetes, corrigiendo, generación del arte, composición de música para los sonidos estimados para ser cualquier manera se asociaron a acciones/a situaciones indicadas, más.!

Las armas aerotransportadas del juego se adaptan a la entidad [las capacidades y las necesidades de tipos especiales de calculador de la protección (contra opositores señalados) anticipan pueden obrar recíprocamente

con la entidad. La búsqueda de estas armas de los juguetes/golpeó blancos del UIP vía las armas del juego como: OmniWrench 8000; Guante de la bomba; Pyrocitor, arma de Visibomb.

Arenador: Un arma del fuego rápido pernos de esa energía de los fuegos. No un arma de gran alcance, pero es buena para saltar lejos el estado de ánimo mental/la salud física de un enemigo en el medio a la gama larga. Mata a enemigos más pequeños en uno golpeado pero toma a algunos golpes más para librarse de cualquier enemigo más grande/de ésos con más puntos/mejores cuentas de analizador del comportamiento.

Guante de la condenación: Esta arma despliega un huevo que lance inmediatamente cuatro pequeñas robustezas que busquen y las matanzas' corrigen/congelan a enemigos apuntados uip.

Guante de la mina: Un guante que lanza las minas de cernido que permanecerán inmóviles hasta que detecten requisitos de la uip-blanco del enemigo de un jugador de la reunión. En ese punto se dirigirá en ellos [buscando y hacer saltar. El guante de la mina, usado conjuntamente con el taunter, puede ser muy eficaz [en el golpe de blancos correctas de la manera señalada]. La determinación de algunas minas cerca, pero fuera de la gama de los enemigos, entonces usando el taunter hará las minas buscar activamente a enemigos en una distancia más larga.

El `busca la reacción - Taunter-UIP: El UIP sabe "qué botones a empujar hacia adentro otros, conseguir la reacción deseada." Mesón otras palabras: Las piedras de afilar del UIP adentro en una entidad o las características de la invención predijeron para sacar la reacción señalada. Ver 2G330

Aspirar el cañón: Actuando como vacío, aspira a enemigos para arriba UIP-Apuntados [y los tira hacia fuera como los proyectiles/agentes (que sirven los objetivos del jugador (buen chico) vía los criterios infundidos de la UIP-Blanco del jugador].

Dispositivo del abejón: Envía abejones para proteger el trinquete contra el fuego de los opositores UIP-Apuntados. Dañará a enemigos UIP-Apuntados que entran en el contacto con ellos.

Guante de la trampa
Un arma que tira hacia fuera una trampa del trinquete y distrae a enemigos [basados en la trampa relacionó características, para atraer muy probablemente/distrae a opositores UIP-Apuntados.

Morph-o-Rayo: Un arma que da vuelta UIP-Apuntó a enemigos en pollos/otras criaturas.

Devastator: Un lanzacohetes con capacidades autoguiadas hacia el blanco [sobre blancos UIP-Apuntadas].

Garra de Tesla: Un arma de gran alcance que tira un arco de la electricidad y se dirige adentro en blancos UIP-Apuntadas.

Ejemplo del juego: NUBE OSCURA - (RPG de A)
http://en.wikipedia.org/wiki/Dark_Cloud#Playable_Characters
El rey de hadas concede a Toan el Atlamillia, un cristal azul mágico con la energía de restaurar las partes del mundo basado en los criterios del UIP/la base de datos histórica, se han destruido que [físicamente o de otra manera] [de cierta manera (UIP-Apuntado)].
- Xiao: Ella lucha con las catapultas y una catapulta que habla única [su guía] del `del UIP-, que ofrece consejo sobre la derrota de enemigos, los comentarios sobre su aspecto/UIP/él es predicciones, o habla de sus últimos métodos que trabajaron.
- Reina: Puede crear los parásitos/los agentes muy rápidamente cada uno del espacio múltiple con propios criterios UIP-Apuntados.
- El jefe se puede dañar por los puntos débiles que encienden/que atacan [mentalmente/basó físicamente en criterios UIP-Apuntados. Agentes que invaden comportamiento del jefe' que programa en maneras señaladas - según lo explicado en nuestras otras invenciones.
- Pirata de Omega
Capaz de hacer salud invisible [entidades UIP-Apuntadas] y regenerada [de nuevo a él está el estado original basado en la base de datos del UIP de características].

[Juego/juguete del `] armas:
Ningunas armas y materias relacionada en este uso de la invención del juego [que no existen por lo que sabemos] no son ASIGNABLES PARA LOS USOS QUE SON MILITARISTAS O INMORAL EL DAÑO PEOPLE/NATURE.

Archivo: Piezas/partes de los años 90 GA

'FUNCIONES DEL JUEGO
Versión pero necesario viejos

"ACCESO" = maniobras del principiante a acceder.
- Detalles: El principiante necesita saber el "perfil del"/(del juego) las reglas secretas (necesarias para ganar/perder/pen¢asco) y maniobrar en zonas "señaladas" del punto/juego: juego que gana; carácter "señalado" de derrota; el llegar a la localización específica...

- UIP:

"CARÁCTER - vieja definición" = cualquie criatura movible /object/%invention que actúe en sus la propia, eg.: el atacar u organismos amistosos; (uno de) carácteres que representan a un "jugador".
- Nueva definición: Desde marzo de 2006 medios: perfil del comportamiento, carácter de la entidad, cómo uno se comporta, sus preferencias.
. - Excluye: objetos sin la mente sus los propios que tienen solamente uno de reacciones siguientes: el caer; rotura; golpe (cuchillo); explosivos; armas.
. --La exclusión no cubre ninguno de estos si él es uno mismo motivado, eg.: calor que detecta los misiles; otras armas que atacan solamente a "opositores" [a menos que el opositor tiene algo sobre él o con él, según lo visto por los jugadores para guardar tales objetos de atacarlos, eg.: dispositivo que no da hacia fuera el calor para el calor que detecta el misil].

El "EDIT" = altera las reglas/los carácteres/panorama/opositores del juego según lo señalado. Personaliza el "juego" = uip. Ver a "creador del juego".

El "GENERADOR de IMAGEN" = los patrones del movimiento hace imágenes. Aplicaciones para estas imágenes: "acceso"; generación de la "imagen" del "artista"; "arrastre" (y sus imágenes generadas).

"OBSTÁCULO" = cañizos; trampas (del bobo); otros obstáculos físicos cruzados no fácilmente/entraron: aguas de superficie, montañas, acantilados, paredes, cercas (eléctricas)... "Armas" del "opositor".
- De la perspectiva de cualquie "jugador": cualquier cosa que puede impedir su progreso: obstáculos que efectúan sus carácteres (más que su mejor capaz de los opositores (herramienta/magia de w) de superarlos); (carencia de necesario) contraseñas para el "acceso" o evitar obstáculos o los "carácteres que atacan" del opositor.

"OPOSITOR" = otros jugadores con cualquiera de su: "carácteres", "armas", "obstáculos".

El "JUEGO" = "obra recíprocamente" con (con) otros jugadores, y o el juego: "carácter", "obstáculos", "reglas", panoramas, etc.

"JUGADOR" = uno o más gente "que obra recíprocamente" con el "juego". "Usuario".

"PERFIL DEL JUEGO": Es reglas, obstáculos, "perfil del comportamiento" de "carácteres".... Características para los juegos' UIP.

El "RANURADOR" = lleva a jugador al aspecto "señalado" del "juego": (basado en sus cuentas/uip (del juego)).

"CUENTA" = bola de la cuenta de juego 3C294: Bola aislada interior del encargado de la cuenta. Tiene tapa del tirón. Para cualquie aspecto movible (versión del interruptor de) del "juego", eg.: es "carácteres", % "de los obstáculos".

. Es decir: La bola para los deportes también guarda la cuenta de juego. (Bien aislada de choque). Cojín dominante y tapa del tirón del interior de "S".

- la tapa especial se abre que deja llave de la persona en datos así que el dispositivo puede marcar y guardar la cuenta
- ap: water polo, juegos del disco volador, fútbol, fútbol americano, baloncesto, rugbi; jugar lanzado para que el perro coja y traiga detrás; otros juegos con los animales; juguetes para los bebés
- se aísla cualquier dispositivo electrónico portable.

. - también funciones como uno o más de siguiente: calculadora, dispositivo de la grabación audio, pequeño organizador electrónico, "estereofonia portable", wa, r, parte del sistema del picosegundo (sistema de colocación del `), linterna, TV, envase (para los materiales frágiles), C portable (computadora) del `(cuaderno), paginador.

- Relayer del anillo (nr u cuando: anillos del teléfono, anillos de la campana de puerta): funciones de control de la poder de u ("t sin cuerda", intercomunicador de la puerta) vía el envase aislado interior de R (`teledirigido).
- la cuenta se puede anunciar vía el oscilador: después de cada entrada de K (teclado del `)/a petición de usuario (pulsando tecla) - > el sistema (sistema) anuncia: la cuenta/el otro Info como pedido/banda.

OTD: "S" (para la cuenta, el etc); "C"; P.M.; Reino Unido; fecha; interactivo; juguete; todos; juego; "mic"; ejercicio; portable; punto de ebullición; oscilador; vc; egh; cuenta; tgh; carro; cp o cr más amortiguar el material; uq; carácter.

- activar anotar enviando las cuentas para anotar vía control de "R" al receptor distante/más tallier. Puede tener "S pequeño o muy grande". Impermeabilizar, prueba del chew (contra perros, bebés), no corrosiva.

. - diseñado para las condiciones para cualquier estación, guarda hacia fuera fango; "R"; "S"; "C"; P.M.; Reino Unido; fecha; interactivo; juguete; todos; juego; hospitalidad; "mic"; ejercicio; portable; sst; punto de ebullición; oscilador; vc; egh; cuenta; tgh.

- D: ..... 1 = ventana (s) para el dispositivo (electrónico) del EL. Los puntos son bola.

: [1]:

.....

Usuario = K (teclado del `) (1) = c (memoria) = s (1)/osc/nr/other (objects=function)

- D: juguete de la cuenta de juego 3C294 =

ACCESO (tr del modo aislado del objeto = de la entrada)/BALANCEADOR/C/carro (cartucho del software)/PALMADA/DISTANCER/LOCALIZADOR/banda (teléfono)/Q/R/CUENTA/SP del programa/ESTADO/ESTEREOFONIA/SYNTH/TDS/T/+WA.

Estado

Pista

No arma de la vida real (juego)

Ampliar cada parte IMI, y demostrar cómo u puede aprender cómo utilizar y cómo el UIP adaptará. Donde archivo esto?: uip; juego; cada parte; "predecir"... VENTAJAS a jugar al juego:

. "Acceso": ver abajo

. Predicción: ver abajo

"EFECTÚA" = los olores; oscilador; "imágenes cambiantes" correlacionadas a la situación

efectos del juego video 8B100: el olor emite cuando: golpean a la persona o a la criatura; uno entra cierta área: pantano fofo, descarga de basura, sitio hediondo; uno viene cerca de criatura hedionda; cuando está al acecho el peligro; abertura del paquete, del etc; entrar en un restaurante; el cocinar; el conseguir sudoroso de actividad; el conseguir nervioso; etc.

- llano de dificultad (en terreno)/de la capacidad del jugador puede ser alterado vía el UIP: la entidad quiere/necesita un juego más resistente.

Efecto del olor que adapta:

- los olores pueden también ser muy sutiles, y uip señalado. El olor en la tecnología futura se pudo programar/manipular vía los electrodos del cerebro u otros medios (ahora entendidos no todavía completamente) de sacar la experiencia de los olores, donde los olores reales no fueron emitidos.
- cada jugador pudo experimentar diversos olores por el uip, como un efecto del olor diferencia sobre diversa gente. la cantidad real de olor pudo ser mínima.
- se aplica a otros paquetes audio-visuales del producto: Entrenamiento basado de "C"; vídeo interactivo (sistema activado por el usuario que toca una pantalla - los tableros dominantes pueden ser utilizados, pero no ser requeridos)
- oler a usuario del nuevo producto pudo desear comprar, eg.: dentro del nuevo coche; cuero del olor para los productos de cuero; olores también para los productos siguientes que son vendidos: alimentos, servicio de entrega de la flor, etc
- el producto fue combinado con el producto 8B-19.

- coordenadas del olor con: cualquie invención audio/visual, eg.: TV, pantallas de ordenador, ipod (mientras que juega música), teléfonos celulares (mientras que habla - oler los fósforos con los cuales comunicando y sobre qué, w5).
- la preferencia de usuario por el tipo perfume/flor emana según jugadores/la preferencia de usuario. Dos personas que ven a la misma actriz, olerán a diversos asociados de los perfumes con la actriz/la entidad que son retratadas.
- olores de la pista del `. Los olores actúan como notificadores para la vista/la audiencia - obscuridad deteriorada de /in.
- protector del olor: los olores adaptaron para guardar lejos (los bandidos), (mientras que atrae otras entidades).

OTD: "S"; pp; P.M.; Reino Unido; ratón; fecha; interactivo; educ; juguete; todos; juego; hospitalidad; oscilador; vc; cuenta; tgh; enseñar; md; carro del olor que causa elementos; acceso (si el dispositivo del olor se utiliza en las arcadas [lugares públicos con los juegos video]); uip; carácter.

Pantalla del olor: los olores se emiten para acentuar las sensaciones y para experimentarlas mientras que: televisión de observación; selección de opciones de una pantalla de la CRT (por ejemplo cuando hacen compras vía "C", ciertas maneras de la ropa pueden tener un olor elegante del cologne emitido para realzar ventas); aprendiendo algo en "C" (retención de la memoria del aumento de las ayudas - puesto que el material se experimenta más intenso, placer); anuncios: oler el detergente o la Coca-Cola de modo que usted quiera ir al refrigerador y consigue alguno
- las emisiones del olor pueden también ser en cantidades muy minuciosas para tener el efecto subconsciente eficaz
- algunas emisiones del olor se pudieron crear por los productos químicos normales en el aire; bloques de productos químicos naturales de los cuales un poco se utiliza a la vez. El factor de reemplazo más difícil pudo estar con las televisiones caseras, con todo está en el interés de la televisión y de las empresas del cable para que la gente tenga éstos, así que puede ser que sean dadas lejos barato o para libre
- la gente de la demostración de los estudios goza el mirar de programas con la dimensión del olor agregada (a menos que está también sobre accionar)

Analizador químico que analiza el olor en el ambiente donde se está tirando el vídeo. Los resultados del olor serán convertidos a digital y transmitidos para descifrar por un decodificador del olor en cualquier punto de la exhibición o del usuario. Desarrollo del análisis del olor y del protocolo del código que se podría agregar a las capas de los datos y de la comunicación de dispositivos.
Lista de los olores: El alimento huele, los olores de la flor, humo, niebla con humo, contaminación, gases, perfumes por la marca de fábrica (Calvin Klein, Liz Taylor, el canal.) Etc
- Por los detectores de humos de ejemplo pueden analizar ciertos gases. Cómo sobre el adición de un código para cada gas analizable y transmitir el código a otros dispositivos que tienen emisores del olor.

- Confía en los sensores/los indicadores del olor.

+ el "CREADOR del JUEGO" = estructura del juego uip-adaptó para el jugador, eg.: perfil del "carácter"; cómo el jugador de las ayudas de la "guía" del juego mejora su capacidad que juega.

- D: Generar el perfil del comportamiento del carácter creado (por u/el sistema).

3A500 afinan personalmente nombre y hacen que sean el carácter en su juego de acción portable.

- seleccionar de las opciones físicas estándar de la característica que demuestran la pintura áspera del cuerpo, eg.: colorear el pelo, la altura, la estructura de cuerpo, el color del ojo, el color de vestir, el etc.

¿- tiempo de la matanza que espera una cita? ¿Como o no tener gusto alguien?

- los carácteres se mueven en la animación (con el cuerpo no móvil del sólido o las piezas móviles
- el usuario selecciona a que el juego él desea jugar
- crea sonidos
- tiene una clase particular
- el sistema de reloj se puede dejar hacia fuera

creador del juego 4A430: Juego que crea la máquina: El usuario selecciona las opciones del elemento del juego deseadas en cartucho del software del juego de "C". La cáscara del juego es igual mientras que los elementos tienen gusto de color, opciones de carácteres, etc es cambiable. Usos: El comprador selecciona las variaciones del juego queridas en cartucho de juego del software; el usuario crea para poseer juegos dentro de parámetros del sistema; juegos para la hospitalidad, entrenando; etc.

-

7A020 eligen las entidades, las habilidades, los ambientes, los estilos y el juego (plataformas). Convertirse y o seleccionar de las opciones del carácter que crean el tipo carácteres que usted desea, ambos los con características usted desea y ésos usted puede ser que desee para luchar con (y o seleccionar carácteres confeccionados).

- después seleccionando los carácteres, elegir que el juego usted los desea para jugar adentro. Entonces, el programa del juego pudo seleccionar los panoramas, los ambientes, los combatientes, felicitar/ajuste del etc con el usuario de los carácteres seleccionado.

educación/terapia de +m: resolver las situaciones, comportamientos, tareas que usted desea manejar, y aprender.

+m seleccionan los temas, estilos, tareas

+m crean arte

- Paquetes de programas informáticos de las ventas para los juegos video. Llaves del comprador en opciones que desean en juego y la máquina expendedora desarrolla rápidamente el paquete para su gusto especial mientras que el comprador espera.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip). Demuestra el tipo programas de la compra de W5 (qué, donde, cuando, porqué y cómo) u de la "hospitalidad".

convertidor estacional 4A450: convierte automáticamente carácteres a esos apropiados para la estación. Sigue habiendo las reglas, el diagrama y todo del juego, apenas los cambios en imagen. Interruptores según el reloj interno, o por el comando del usuario. Entran efecto quizá 7 a 15 días antes del día de fiesta/de la estación.
- las herramientas/los neumáticos de nieve/los cambios de la parafernalia/clothing/HVAC según la estación/UIP-necesitan, según la estación.

El UIP-Juego repitió: A2-120 PERSONALIZÓ la HOSPITALIDAD: mezcla con 11. Después de entrada personal del Info (las cuentas anteriores y las respuestas de las subsistencias de M o de U para el análisis), tener siguiente emparejado para usted: juegos (el ajedrez, el índice de inteligencia o la creatividad o el otro entrenamiento/diversión del comportamiento, versiones/realces de juegos de ordenador en mercado), drama, música. Gama (ized) personal de /Your/Customized/John - profesor particular/instructor/profesor/ayudante/diversión/juego
. - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/el modes%/programs%). Copiado al agosto de 95 9G220.

JUEGOS DEL PEDIDO POR CORREO DE A3-R12B=: Juegos de comercialización adaptados a las necesidades de usuario.
mezcla con (con) 12 12A. Costes de inversión bajos. un co pudo tomar solamente el Info personal y ser un orderer del correo de los juegos personalizados que personalizaban los juegos/comercialización por u/el mercado para: el registro cons, los terapeutas, registro/escuelas/clases especializadas; cons los compartimientos (nuevos edad, militares, artes de la aguja, fantasía, lucha, coches...). Quizá la garantía de la parte posterior del dinero, o libera/barato. Dejar a compradores de m ser su propio vendedor del juego, yendo a las escuelas, los amigos...
. - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (sistema) (tales/las ocurrencias indeseadas/queridas señaladas/el modes%/programs%). Copiado al agosto de 95 9G220
. - Palillo 5E020 de la inclinación: Controla las funciones de esta n.

"GUÍA" = instructor del juego 2J02: Enseña los jugadores a qué movimientos puede ser que hagan así que pueden ganar.
+ problema: quizá similar a cómo las computadoras existentes juegan ya a ajedrez; diversas patentes encontradas pero en campo general, por lo tanto o unpatentable o pensaron quizá ya para arriba por alguien. Sin embargo UIP-adaptar el aspecto pudo ser nuevo.

sh: Usos:

- Tablero "juegos" de casi cualquie tipo: ajedrez (occidental, japonés, chino, coreano, etc); inspectores; otros (estrategia) "juegos"; tarjetas (qué tarjetas si se juega /shouldn ' t).
- Curiosidades "juegos": uip-DB del jugador/de los fósforos del question= de las curiosidades encima ("señalado") del information= relacionado para dar mejores pistas a los jugadores.
- Juegos de ordenador: juegos que salen de Nintendo, de Sega, de Atari, del etc.
-
- Partes importantes: "Guía". "Educativo". "EGH". "TGH". "Realidad virtual"
- Desarrollar este interruptor: La programación se puede hacer en Europa por los programadores con habilidades excelentes y el interés en ajedrez. Las versiones iniciales concentran en jugadores de ajedrez expertos más bajos. Interruptor (software del `) usado en la PC/los sistemas electrónicos del juego de ajedrez vendidos como unidades separadas.

+ "analizador del comportamiento" de jugadores: los movimientos anteriores así que el sistema del jugador principal de los estudios pueden internar sugieren movimientos similares en el futuro; las sugerencias mejor del sistema emparejan el estilo natural del movimiento del jugador, cuanto más natural la "guía" siente al usuario, y el usuario podrá mejor combinar sus patrones de pensamiento naturales con las sugerencias de la computadora. Eg.: el jugador prefiere el usar de sus obispos en la ofensiva y los caballeros en las posiciones defensivas.
--es decir: recuerda los últimos patrones del juego preferred por el usuario - > más arriba el sistema de la ocasión sugerirá tales movimientos: la "cuenta" de movimientos influenciables clasificó por "uip-DB."

sh: El sistema "analiza" cuáles son los mejores movimientos para el jugador, mucho como si la computadora jugara a su propio juego. Sin embargo el jugador debe ser el que está para hacer realmente los movimientos.

sh: "Anotando" de movimientos: Esto es hecha anotando lo que percibe es el valor de cada pedazo y o estilo o estrategia del movimiento, basada en el jugador más allá del funcionamiento. El último análisis de funcionamiento es manejado por la pieza "UIP".

- La computadora "anota" cada movimiento posible que puede sugerir. Los elementos que aumentan la cuenta de un movimiento posible son: las ocasiones ayudará al jugador a ganar; "analizarla" es estilo del jugador.
--Patrones que juegan del opositor de los estudios de sistema: el "analizar" del patrón anterior del jugador del opositor (UIP del opositor), así que del sistema puede encontrar mejor sus debilidades. "El behavior= del opositor de los estudios "del analizador del comportamiento" predice" los movimientos futuros del opositor/del jugador principal, basados en el comportamiento del opositor.
---áreas donde está estadístico más probable el opositor tener un punto oculto, o una capacidad más pobre del jugador de ver lejos a continuación en juego, o la utilización de pedazos que puede ser que necesiten.

. - Relacionado con: Movimiento "guía" del cuerpo. Movimiento "analizador" del cuerpo - ver un KN más viejo, eg.: Miburi. Deportes; La acrobacia; Danza; El caminar; Yoga.

- Ver vieja N (invención) para los detalles: guía del cubo de 3C-200 Rubics: La exhibición en uno de los cubos demuestra el número de pasos adicionales necesarios para terminar rompecabezas. Actúa mientras que una guía en usuario de ayuda sabe qué movimiento es mejor.

. Misceláneo:

- los compradores pudieron ser el tipo que juegan a ajedrez vía Internet/el "módem"/el correo aéreo. Este sistema sin embargo no es diseñado para que a la gente engañe utilizando esta guía.

"PREDECIR" = tipo predicciones para cómo pueden los "usuarios": querer "ser entretenido", juego "juego". "Predice" cómo el opositor del "juego" play= "que da lugar" al sistema del jugador principal "que lo dirige" cómo ganar. Ver la "guía". Patentes de los E.E.U.U.: 4141548 aparatos del juego para el uso conjuntamente con la visión de un deporte de espectador.

"R (`teledirigido)" = "inclinación"; teledirigido; palillo de alegría; "aplaudiendo"; arma del laser; (tridimensional/teledirigido) "ratón"

JUEGO TELEDIRIGIDO del encanto A8-17: Obrar recíprocamente entre los jugadores por medio de teledirigido que esté conectada con el receptor o sea un transmisor de la combinación/un receptor con la exhibición leída.

2A-7: accionar las funciones vía silbar cifrado o (varios años más tarde) comandos verbales. El reloj puede incluso responder con los sonidos. Puede jugar sin incluso ver el reloj.

juego del arma del laser 6B740: Objetos del vuelo del golpe con el arma del laser. Guarda la cuenta.

- "Cuentas" un punto cuando el objeto del vuelo bloquea la luz de la luz "sensor" del fondo.
- el objeto del vuelo del golpe, si se vuelve ninguna reflexión usted la golpeó. El espejo causa la reflexión. El arma debe ser acentuado de la posición correcta ganar capacidad de una reflexión si tirado para ser faltado. Además, uno puede tirar solamente en la distancia durante la caída o volar en el aire mientras que arma medio llevado aire del artículo y espejo pequeño o grande.
- sostener el arma en la posición correcta, o hacerlo de un sostenedor del arma

- el objeto del vuelo puede ser una bola del espejo, requiriendo a persona del arma golpear en ángulo recto en el centro, causando una reflexión
- objeto del vuelo, si es lanzado por el dispositivo (o la mano) de la manera correcta, su sensor en centro, al recibir el laser puede sonar: señal sonora; desplome; explosión sana; etc.
- Variante: el objeto del vuelo (probablemente bola) refleja la luz laser al receptor del arma, significando cuando un golpe fue hecho.
--para el uso al aire libre también
--la bola está de material reflector de la luz no frágil
- programas de usuario la frecuencia, la fuerza y la velocidad en las cuales se expulsan las bolas
- La exhibición demuestra la cuenta de jugadores
- OTD: Todos; pp; P.M.; Reino Unido; interactivo; educ (enseña a práctica del shooting); juguete; juego; hospitalidad; portable; índice de inteligencia; t; punto de ebullición; oscilador (eg.: cuando un golpe fue hecho); vc; cuenta; carro.
. - "Inclinación": controla las funciones del sistema
- copiado a 5E020 en 8.95.

juego del conductor 3C-560 (relacionado con otro producto):
Según cómo el usuario mueve el su "volante" o el otro producto, el sistema sabe se está moviendo y reacciona por consiguiente.
- eg: el jugador finge ser un conductor que usa su volante del control de "R", ellos ve cómo están conduciendo en la pantalla. Parte de juego, o de conducir práctica; también para el vuelo; el caminar; etc.
- el acelerador, las roturas, el etc pueden estar con los bandoleros

+ juego teledirigido 2D-150: Las unidades del jugador "obran recíprocamente" w las unidades del otro jugador vía el cojín sin hilos del aire. Ajedrez del juego, etc.
=
No usos del juego también. Cada jugador tiene el mismo o la escena relacionada del juego en sus exhibiciones de la persona. Sentarse alrededor de la sala de estar sin tener que agacharse alrededor de un solos lugar y juego. Cada movimiento hecho se refleja sobre las pantallas ("S") de los otros jugadores. Usos: ajedrez; inspectores; Batalla naval (en ruso: Muchacho de Morskoy); todos los juegos de tarjeta, eg.: póker.... Cada pedazo se puede también conectar por el alambre
¿- obvio? D: "cojín del aire" (r, s, juego o carro del interruptor (software del `)) = "cojín del aire" (r, s, carro) = "c" (carro)

Juego del arma del laser R176: el chaleco del usuario reacciona al laser cuando consiguen golpe. 30 de agosto de 93 NK
- movido al "juego" 6.96

Información de usuario del "UIP" que programa =
"VAGOS" de uno o más (el ganar/que suelta) jugadores: recuerda los últimos patrones del juego preferred por el usuario - > más arriba el sistema de la ocasión sugerirá tales movimientos: la "cuenta" de movimientos influenciables clasificó por "uip-DB." Eg.: ver a instructor del juego 2J02.

"VR" (realidad virtual del `) =

juego de la realidad virtual 1E-01: Para dos o más personas adentro o afuera. El receptor del usuario puede encontrar a los otros jugadores. Saber cuando se hace un golpe o una falta.
- protectores electrónicos de las aplicaciones para ocultar su localización o a defenderla contra el fuego del arma que viene o del misil.
- relacionado con el localizador del Walkietalkie: conocer la localización de su otro partido 3A-1280-42005

Extremo del archivo: Piezas/partes de los años 90 GA

Archivo: Piezas/piezas AI UIP GA

INTELIGENCIA ARTIFICIAL Y UIP
Los comentarios se amplían para los usos en
Información de usuario que programa, juegos, más

Introducción: Extensiones puestas a menudo debajo de las definiciones estándar, y en (soportes). Las extensiones están sobre todo en el campo programado de la información de usuario. Las definiciones originales del AI fueron cambiadas algo. Términos en en negrilla [si no cambiado accidentalmente, representar los términos comunes del AI].
- el UIP es forma de A.I.: donde (los seres humanos, las entidades del juego, y la interacción con invenciones están implicados.

Interfaz adaptante iguales que UIP-Adaptan. Una computadora obra recíprocamente y adapta automáticamente y dinámicamente a los rasgos del UIP tales como la capacidad de cada uno multiusos. Se adapta qué: [características del juego del `]; modo educativo, más. Ver los archivos enormes del UIP.

Agentes/entidad/invención: Una cosa [(entidad o invención del juego del `)] se inserta con un agente. El agente es controlable por UIP, jugador, programas del juego; para dar instrucciones el agente en qué hacer [w5], porque resultados señalados [en cualquier aspecto de la realidad/del juego tiene energías de corregir]. El agente [puede ser] una entidad o una invención [del juego], con los métodos y las características [arquitectura [sus los propios] del agente].

- El agente no tiene will-power 100%. ¿Pero qué hace? Sus padres, sociedad, etc. moldean a todas las criaturas vivas, gente incluida.
- Programación orientada al objeto: incluye agentes

Arquitectura del agente: El UIP múltiple funciona funcionamiento [simultáneamente], los coordenadas de la arquitectura del agente sus funciones (que eliminan conflictos).

A.I. Efecto: Efecto señalado/reacción del UIP.

- Efecto del árbol: La reacción en cadena de los efectos del AI, da lugar la "ocurrencia A", que entonces (poder) accionar la "ocurrencia B", como "B" es [automáticamente reaccionando/sensible] a ocurrencia de las "a". "B" puede llevar a uno o más reacciones [simultáneas] inmediatamente después de "B". [A, B, C... representa: cosas del juego, acciones causadas UIP, o reacciones].

Algoritmo: Controles de los algoritmos: predecir, adaptar, dirigir, más.

Memorias asociativas: Ver los pasos del ejemplo de la partición del asociado/de las asociaciones: En el país: 1. El perro del dueño raspa demasiado ruidosamente o demasiado de largo mientras que el dueño es hogar, mientras que el sistema y el perro del UIP están en el país. 2. El UIP dibuja memoria autoassociative, emparejando lo que oye su analizador de sonidos. 3. El UIP castiga levemente el perro. Hacia fuera en público: 1. Los sentidos del sistema está fuera del hogar. 2. El analizador de sonidos del UIP determina algu□n perro ha raspado. 3. Vía memoria heteroassociative realiza que hay un perro. 4. Vía memoria asociativa que la determina está el perro del dueño. 5. El UIP responde al perro del dueño que raspa diferentemente que cuando en el país. Ver: Archivos principales de la parte; Collar de la distancia de G105 GPS.

. Trabajo de las memorias asociativas recordando la información en respuesta a una señal de la información. Las memorias asociativas pueden ser auto-asociativas o hetero-asociativas. las memorias Auto-asociativas recuerdan la misma información que se utiliza como señal, que puede ser útil para terminar un patrón parcial. las memorias Hetero-asociativas son útiles como memoria. La memoria de largo plazo humana es probablemente asociativa debido a la manera en cuál pensó que recuperado de él lleva a otro. Cuando queremos almacenar un nuevo artículo de la información en nuestra memoria de largo plazo que típicamente nos tarda 8 segundos para almacenar un artículo que no se pueda asociar a un artículo depositado, solamente solamente uno o dos segundos, si hay una estructura de información existida con la cual asociar el nuevo artículo.

Analizador del `: Identificando los casos para la diagnosis/buscar (los datos) y reaccionar (la función)
- Sistemas de diagnosis y razonamiento basado en la casuística automatizados
El analizador del `asocia última ocurrencia, a ocurrencia actual, y ahorra el proceso más difícil más largo del análisis.
- La forma Bayesian de las redes A de analizar qué ocurrió, así que el UIP pueden identificar mejor si la ocurrencia resuelve el patrón señalado a el cual el UIP es reaccionar.
- Trabajos del analizador [en A.I. y o sentido del UIP] con: Clasificación; Agrupamiento; Ciencias cognoscitivas; Filtración de colaboración; Razonamiento de sentido común; Satisfacción del constreñimiento; Fusión de los datos; Mantenimiento de la dependencia; Sistema experto; Lógica confusa; Motor de inferencia; Filtración de la información; Fusión del conocimiento; razonamiento Modelo-basado; Redes de los nervios; Reconocimiento de patrón; Razonamiento cualitativo; Aprendizaje estadístico; Reconocimiento de patrón estructural

Visión de computadora: analizador visual

Base de datos A.I. del `: Iguales que UIP-Base de datos. Basado por A.I. y el UIP para la explotación minera de datos. Sistemas de mantenimiento de verdad, etc.

Ayudas de decisión
El UIP y la guía sugieren cómo el usuario pudo tomar decisiones. Otros ejemplos: diseño Decisión-centrado; Ayuda de decisión; Teoría de decisión; Árboles de decisión

Aparición: Peter UIP combina aleatoriamente los elementos múltiples (funciones características) de su base de datos; entonces asocia las características de cada combinación a las características del resultado deseado. +See Peter (produce invenciones/ideas en como base necesaria). La aparición puede [parcialmente] "piensa fuera de la caja" y sugiere que la' guía en [las ideas intelectuales (de la característica)] ella no pudo sugerir de otra manera, especialmente si no ha considerado/almacenó tal ocurrencia/sugerencia antes. Peter sugerirá las invenciones aplicables a la necesidad actual. La aparición de Peter es otro ejemplo para la unidad de esta solicitud de patente. [adaptación creativa de] "teoría del caos" [que trae ciencia a (desorden)].
- Cuanto más grande es la base de datos, más las combinaciones [de la idea] posibles. Ampliar la gama de combinaciones consiguiendo la entrada de tantas fuentes como sea posible, eg.: el obrar recíprocamente con otras bases de datos [diseñadas para UIPs (similar)). Ampliar la base de conocimiento.
- Ver la UIP-Aparición 2G180 y las características del juego de la aparición. La aparición incluye: Lógica confusa; Motor de inferencia; Fusión del conocimiento

Análisis cargado teoría del juego (el `anota cada función/invención sugeridas posibles). Entonces decide cuál para tomar.

Algoritmos de búsqueda genéticos de los algoritmos usados en el aprendizaje de máquina cuáles implican iterativo el generar de nuevas soluciones del candidato de combinar dos altas (o del padre) soluciones anteriores que anotan en una búsqueda para una mejor solución. Nombrado tan debido a su confianza en las ideas extraídas de la evolución biológica.

Bases de datos más grandes del UIP de la granulosidad tienen mayor granulosidad.

Tipo heterogéneo de las bases de datos de DB del UIP.

Heurístico heurístico ayudará a anotar y a elegir la mejores reacción/función [por las necesidades del UIP], después decide a qué opción es [heuristically] el mejor.

Educación inteligente de los sistemas del curso particular. Dirección.

`Interactivo: Cuando dos o más [invenciones, funciones, y entidades del juego del `] interconectar y algo sucede [tan la combinación para las acciones separadas, es mayor que la suma de su ser diferente; e.g. un lápiz con el borrador es mayor que las dos piezas por separado]. Trabajos con: Programación de Demonstration; Creación de un prototipo

Representaciones basadas en el conocimiento: Base de datos

Representación de conocimiento: UIP que adapta la información para el usuario, eg.: haciéndola más comprensible; demostrar cuentas.

LOGÍSTICA-UIP: Cómo utilizar recursos de sistema, dentro de los parámetros señalados, controlados por el UIP. Trabajos con el planeamiento y el Scheduling; Agentes del planeamiento y del Scheduling; Aprendizaje supervisado

Orden y sincronización: Análisis de serie de tiempo

El `predice el modelado: Sinónimo para la simulación. El UIP considerará' predecir cuáles será la reacción del resultado' a la acción sugerida/a la función del UIP. Trabajos con: Reconocimiento del plan; Programación de

Demonstration; Creación de un prototipo; Aprendizaje estadístico; Análisis de serie de tiempo; Sistema del juguete

Analizador de sonidos del `: Adapta datos de sonidos entrados. Filtración de la señal

Diagramas tácticos que se agregarán

Diagramas de transición de la tarea
Para ser agregado

UIP - Entrada de información: Base de datos usada para adaptar las funciones para el usuario. Trabajos con: Obtención del conocimiento, ingeniería cognitiva; Aprendizaje de máquina

Analizador visual del `: Ver los elementos de imagen visuales de los sastres del reconocedor de la lente de cámara entrada/de imágenes. Trabajos con: Filtración de la señal

Concluye el archivo: Piezas/piezas AI UIP GA

Archivo: Piezas/campo común de las piezas GA

PIEZAS Y TÉRMINOS VIDEO DEL JUEGO DE LA INDUSTRIA

Introducción:
- Los juegos del computadora y video pueden también ser un subconjunto de medios interactivos, que incluye la simulación de la realidad virtual, del vuelo y de la ingeniería.
- El estándar industrial del juego generalmente video funciona/las piezas/los términos, después modificado para esta solicitud de patente.
- Las piezas y las funciones video estándar del juego fueron ampliadas. Se colocan debajo de las definiciones estándar, y en (los soportes). Las extensiones están sobre todo en el campo programado de la información de usuario.

género de la aventura A de la acción de los juegos en los cuales el jugador avanza "fisicamente" superando obstáculos y recogiendo artículos. Los ejemplos de la acción incluyen el funcionamiento, el salto, tirar, el etc.

- Meta del UIP: carácter del jugador [s]. recoge/gana/atrae las uip-características deseadas/ganadas. Las cuentas se relacionan con la personalidad desarrollada que el jugador del sastre.

Inteligencia artificial del AI. La manera por la cual una información de procesos no humana del carácter [para el uip]. Todos los carácteres en los juegos video no controlados por el jugador se imbuyen con una cierta forma de AI.

- Formar del UIP

dirigir a enemigo que debe ser hecho frente por el carácter principal de un juego antes de que un nivel pueda ser acabado o antes de que el juego se puede considerar completo. Los jefes pueden consistir en un solo enemigo o un cierto otro obstáculo.

- dar vuelta a una negativa en un positivo

- Aumentador de presión del índice de inteligencia del UIP: el jefe' y el índice de inteligencia de los opositores pueden subir tragar, basado encendido

el anotar. El índice de inteligencia basó las habilidades uip-adaptadas para carácteres de los jugadores los', eg.: los realces del carácter principal vienen del menú de los rasgos del índice de inteligencia seleccionados por las uip-características del jugador (usuario) (el jugador quiere).

- fósforo de las características del jefe del '' el uip qué entidad les demuestra la mayoría de la aversión, e.g.: imagen adaptada de satan [basado en el libro [asustadizo] preferido de la niñez del jugador; o madrastra egoísta.

juegos de la reunión de reflexión: embroma/induce hacia fuera jugadores' (obrar recíprocamente con uno a) y sus (`accesible/rastreable) ideas/invenciones creativas. Subido con ideas de la invención [montando combinaciones de invenciones con las piezas: ver a Peter.

- Juego del `que juega:

desinsectar un error inesperado e involuntario encontrado durante la operación normal de un programa que hace típicamente un problema o un error inexplicable ocurrir.

- La presencia del insecto se convierte en parte del juego. El juego se adapta con/alrededor de insectos, eg.: desinsectar los aspectos efectuados del software/del juego (semi) se puentean/deemphasized. La versión avanzada estupenda hace la característica el insecto del juego.

célula que sombrea la técnica de la animación de los gráficos de A que hace que los carácteres 3D en un juego video parecen una 2.a historieta.

- Conmutación de la dimensión: el cambiar a partir de la 2.o a 3D puede significar diversos modos/reinos del juego (obvio?), eg.:

--entre el sueño del carácter y los estados despiertos.

--cuenta del jugador; (tipo energías); grado a el cual uip-se adapta el carácter.

cortar la escena una secuencia animated o video en un juego que proporcione la información adicional, incluyendo elementos de la historia, extremidades, trucos o secretos.

- cada escena puede ser diversos archivo/árbol/aspecto del software
- las escenas se pueden adaptar a diversos aspectos de cada usuario Info de los jugadores. Hace corregir del juego (más fácil).
- el jugador puede tener características de diferenciación (uip) en cada escena/aspecto.

Mensaje o característica secreto del huevo de Pascua A escrita en el código de un juego por el programador. Los huevos de Pascua son destapados a menudo por los gamers listos que van a buscarlos o accidentalmente. Sus localizaciones y contenido entonces se comparten en foros, salas de chat, el etc. hasta que se conviertan en más vox populi.

- huevos de Pascua adaptados `

juegos educativos de los juegos que proporcionan una cierta forma de habilidad que aprende, y o conocimiento, y o terapia. Dirige a jugadores para aprender.

efectos: Todas las sensaciones [humano experimentadas] se pueden estimular de las maneras posibles más amplias. Los sentidos incluyen: imágenes [visuales]; sonido [reconocedor audio del `(interpreta) y relais (sonidos sintetizados); sensación [comunicar vía la vibración (señales)] y sensaciones de tacto para la suavidad, la textura, la humedad, el etc; olor y gusto [vía los implantes del cerebro (para la gente que goza/no puede probar del alimento [de la hospitalidad de A/V]. %ESP (cómo las energías sensuales adicionales/intuición pudieron ser experimentadas y o transportado). Sistema [el `corrige] y [sastres del `] cuaesquiera uno o más efectos [simultáneos]: aumentar el valor de la hospitalidad; retratar [un significado/un efecto más claros]. Los efectos con mayor impacto emocional, se acentúan [por el volumen, la intensidad (del color)], y los efectos menos emocionalmente de afectación pueden deemphasized.

- Los efectos simultáneos se adaptan para felicitarse, eg.: oler la manzana mientras que la entidad de la audición mordió en ella. Una manzana roja más suave suena menos crujiente, que una manzana verde más amarga. Ver UIP-Adaptar-Simultáneo para más.

. El sistema genera vida como olores, la sensación, las imágenes etc para lo que representó: El analizador contento asocia el olor y cualquier otra característica del elemento [del juego], y crea la base de datos para sus características. Cuando [algo similar a] ese elemento aparece [en el programa informático], el usuario/la audiencia puede experimentar las sensaciones [similares a] qué exhibió/tenía potencialmente en vida real. E.G.: [audiencia de la película] ve la manzana pelar y la carne rasguñada, después se transmiten dos olores/sonidos asociados/los efectos visuales que los gustos sienten [a la audiencia/a la UIP-Base de datos].

emulador/emulador de la invención: El software de simulación virtual que permite a un gamer reconstruir un pedazo específico de hardware. Por ejemplo: permitir que alguien juegue a un juego de la consola en su computadora.

- juegos del juego con las invenciones (nuestro electrónico) se emulan que. Eg.: intercambio un producto para una invención, o el producto de divulgación. Cada invención trae sus uip-características. Otra manera para que interconectemos las diversas (los aspectos de nuestro) invenciones - ver nuestros archivos de Peter.
- diversas invenciones/los productos obran recíprocamente, trayendo a lo largo de sus uip-características respectivas. Ventajas: el estudio de mercados, abre el pensamiento creativo para mejorar la invención re-experimentándola, poniendo la invención.
- (juego (aspecto)) de la invención' Peter jugó hacia fuera de todas las maneras esto y las invenciones de nuestras otras solicitudes de patente describieron.

El comité de ESRB (tablero) de los grados del software de la hospitalidad A formó en el mediados de 90s por la industria del juego para proporcionar un sistema autorregulado para el grado y describir el contenido del juego. Similar en la función a los grados de la película.
- Grado del UIP: (fácilmente) el cambio' corrige las imágenes de los aspectos del juego/de la escena' según el grado deseado. (El juego se debe pre-diseñar por ejemplo sus carácteres, lengua, capacidades de la acción) para qué adaptó el propósito se desea, eg.: terapia, audiencia del niño.

acontecimiento-basado ligando ocurrencias [de la vida real] dentro de un juego. Otro término para la causa-efecto; los acontecimientos dentro de un juego que usted controle, influencian o hacen otros acontecimientos seguir.
- el uip = la búsqueda y reaccionan: los acontecimientos adaptados siguen (del menú (ocultado) de opciones). Los juegos (Video/VR) pueden ser (apenas) como la vida real para (gente), eg.: las cosas suceden a la gente grandemente según las características de la persona/del jugador (vida real) (vagos del `).
- incluye [telenovela de la TV] acontecimientos con guión/ficticios/creados: cuando su entidad del juego también en la TV consigue a' S.A. el nuevo amigo de muchacha, la entidad anterior es alegrada y trae después una nueva entidad al juego.

género de la fantasía A del juego que implica típicamente carácteres y acontecimientos de un plazo medieval e incluye elementos tales como criaturas míticas, tesoro, magos, etc.
- el UIP controla el grado (la cuenta del `) a la cual la fantasía se desvía de normal/de realidad sabida/otra.

posición ventajosa de la primero-persona según lo visto a través los ojos del carácter principal del juego. De uso frecuente en juegos de FPS ("tirador de la primero-persona ").

la persona de -1st puede alterar' corrige el uip de otros carácteres del juego, invenciones, animales.
la opinión de la persona de -1st es uip alterado [como si están en las drogas].
la persona de -1st consigue la opinión de otra entidad. La entidad de las ayudas predice [el uip del otro jugador].
- el jefe del `puede golpear a 1ra persona/jugador con el pie en la 3ro perspectiva de la persona. Como el UIP sabio puede efectuar 1r, 2do, 3ro... perspectiva de la persona [trasero-sitio/para-sitio].

Juego: juego que juega. Efectos adaptados al usuario.
. - Detalles: Mayores cuentas comparan con mayores ganancias. Puede apostar a las cuentas de juego [del otro jugador]. Los efectos del juego de juego adaptaron [a los gustos del jugador]. Mecanografiar las concesiones adaptadas a: el jugador, el tipo juego, (qué, donde, cuando, porqué y cómo) puntos W5 anotó.
- Huevo de Pascua del `- juego: conjeturar qué cuadrado dimensional huevo/objeto/2 accesibles [en rejilla] tiene la concesión [Info relacionado], da lugar a ganar el juego. Paga para [cada vez que el jugador conjetura si la cosa el correcto ganado para ganar].
- Efectos del `basados en cuentas: más deslumbraron' efectos corregidos ocurren cuando los triunfos/pierden del jugador una cuenta/un juego.
- Efectos adaptados `: cualquier efecto en juego [del tipo tradicional del casino] se corrige a los gustos del jugador/del jugador.
- `Geodashing: [ocasión del triunfo de] consiguiendo al almacén/a la recompensa señalados coger el punto/Starbucks; entonces conseguir [café libre, o latte del café para mayores cuentas].
. Las maneras de pagar jugar/generan el rédito y beneficios. Paga para cada uno: tiro; minuto de juego/de acción viva; error/accidente/pérdida [que permite que los jugadores (quién pre-registrados con de la tarjeta de crédito) comiencen en el dinero cero introducido al comienzo]; conseguir una nueva vida.
- EGH: cuentas para ganar atada a la capacidad del usuario.

Deporte de Geodashing por el que los puntos de referencia, o los dashpoints, ser alcanzado se seleccionen aleatoriamente. Ver también Geocaching. Ambos en wikipedia.org/wiki/geodashing

Vídeo full-motion de FMV: Una interrupción video animated dentro de un juego; utilizado típicamente para narrar la historia del juego, revelar los secretos, las trayectorias o la información cruciales a la supervivencia de su carácter. La animación vista típicamente durante una cortar-escena.
- hora para que jugador juegue con la entrada de las opciones/UIP Info del UIP; o aprender sobre (su) UIP (opciones) (en el juego).
- la educación del `[edg, tgh] puede entonces dar la dirección. Aprender de respuestas. Preguntas/sugerencias dadas jugador sobre cómo habrían podido jugar mejor peor.

la categoría del género A un juego cabe en, por ejemplo la lucha, conduciendo, acción, rompecabezas, jugando. Los juegos dentro de un género comparten generalmente estilos similares de gameplay, de metas y de carácteres. Nuestros juegos abarcan generalmente los géneros múltiples.
- géneros de nuestras invenciones (del juego): Terapia del juego, juego de la terapia, juego educativo, adaptación del juego

deporte móvil geodashing en el cual los jugadores utilizan el GPS o el otro sistema de colocación [receptores]. Los puntos de referencia que se alcanzarán pueden ser seleccionados aleatoriamente. El triunfo va al jugador [s] con la mayoría de los dashpoints en un rato dado. www.en.wikipedia.org/wiki/Geodashing
- cada zona ha asociado [`accesible] las funciones/[las capacidades/las energías del juego del `]. Jugador [s] [en zonas múltiples simultáneamente] consiguen/dan/pierden energía para sí mismos/otro [jugadores] según cualquie señalado comportamiento/acción característica de jugador []/' de s cosas/panoramas/qué uip [las búsquedas a educar/ajustan' la guía] para cualquier persona.

cortar el género de la raya vertical A del n del juego - acción o aventura típicamente etiquetada; de quién gameplay consiste en los carácteres que usan las varias armas para luchar su manera a través de enemigos incontables de alcanzar una meta.
- Los carácteres, armas, elementos del campo de batalla (paredes, puertas, túneles) tienen características editable. Cada uno característico cuando el enfrentamiento de otra característica (carácter, arma, elemento) tiene una reacción señalada. Como química, las combinaciones de elementos dan lugar al sistema (color/característica). EG.: solamente una espada roja puede romper las puertas verdes abiertas, donde sobre la capacidad del hombre de la espada de ver a través las paredes aumenta.

HUD (de las cabezas exhibición para arriba) usados lo más comúnmente posible en los primeros juegos de la persona, las cabezas para arriba exhiben refieren a la información (uip) que aparece (y o experimentado) en la pantalla tal como metro de la vida, nivel, armas, munición, mapa, (más la uip-base de datos Info de los jugadores (todos) (particularmente (fácilmente) las características reprogramables), etc.

animación típicamente corta de la secuencia A de la introducción demostrada al principio de un juego cuando primero se carga. La animación introduce carácteres del juego y fijó a menudo (las opciones del uip para) el argumento para seguir.

juego de arriba, posición ventajosa angulosa de la visión isométrica A; también conocido como visión.
- cada carácter/uip-característico puede tener sus los propios (color/tipo (sombreados) isométricos sonido) perspectiva.
- puede ser corregido como explicamos en la "1ra persona" del juego.

palanca de mando un regulador análogo o digital que consiste en una unidad baja, un palillo y un botón.
- cada uip-característico interpreta la palanca de mando y (otras funciones de control humanas) de una manera única.

los efectos especiales de los efectos luminosos usados para fijar humor, controlan el aspecto de objetos y reconstruyen condiciones atmosféricas, tales como niebla, amanecer y noche.
- el uip controla todos los efectos del juego: perspectiva de la iluminación [intensidad, color, dirección, tamaño de la viga/cobertura, cómo sigue la entidad, características con./desc.].

las vidas en algunos juegos esto mide cuánto tiempo usted se ha ido para jugar. El número de vidas o de un metro de la vida le da una idea de cuántas equivocaciones usted puede incurrir en antes de necesitar recomenzar de áreas dadas.
- el mejor fósforo uip-Info (de las ayudas del jugador) con qué jugador necesita (aprender/una mejor función), (más fácil es conseguir más vidas).

morphing una técnica de la animación utilizó a la transición entre dos formas o imágenes tales que el primer aparece cambiar en el segundo.
- el uip puede utilizar morphing para acentuar la presencia del uip durante cualquier secuencia del juego, eg.: hacer estallar el ojo cambiado sobre la consumición de espinaca, después morphed detrás.

la tecnología de la captura de movimiento A que convierte los movimientos a digital reales de un ser humano o de un animal y entonces los transfiere en 3D animado modela (después de la imagen/de la característica del uip que corrigen).
- otro ejemplo de tender un puente sobre vida real con el juego (UIP)
- juego afectado del juego del movimiento del usuario: identificador de rf/rfid.
- los movimientos seleccionados y o sus interpretaciones son uip controlado.
- El movimiento del picosegundo [dispositivo de colocación] es capturable. Velocidad de la entidad [movimiento de la vida real] adaptada: las velocidades/retardan a jugadores designados.
- el uso algún otro picosegundo (sistema de colocación del ') siguió el movimiento, eg.: donde se mueve/moved/is del presidente de co/governments.

juegos multijugadores de los juegos que permiten que más de una persona juegue al mismo tiempo.
- la programación avanzada del uip permite que cada jugador y su uip obren recíprocamente (para el uip de cada jugador señaló favorable necesidades).

multiprocesamiento que la capacidad de un sistema que contenga más de un procesador para ejecutar simultáneamente separado (UIP) procese en cada uno.

los trabajos m3ultiple la capacidad de un sistema operativo de ejecutar dos o más (UIP) procesan simultáneamente.

ciclo inicial un paquete de la salud del objeto (por ejemplo (UIP), de a (UIP) y o arma (UIP)) dentro de un juego que, cuando es cogido (tocado/mirado) por un jugador, da energías especiales o vidas adicionales (al jugador y o a su uip de ciclo inicial).

ver la cuenta no crítica de A de antemano de un juego antes de su lanzamiento que destaque las características anticipadas (UIP) que componen un juego.

género del puzzler A del juego en el cual los rompecabezas son solucionados por formas geométricas de manipulación.
- el uip corrige (oscilador de las imágenes' de) cada objeto (del rompecabezas) (y cómo obran recíprocamente . los objetos múltiples). (Diseñado maximizar valor (del egh terapéutico de' tgh/').

tiempo real en que los acontecimientos que ocurren en un juego aparecen suceder a tiempo correspondiendo a la vida real. Por ejemplo, una hora de jugar al juego iguala una hora de acontecimientos en las vidas de los carácteres y el ambiente del juego.
- puentes UIP con vida real.
- Juegos de Sim: simular una entidad, ciudad - adaptar la simulación.

Identificación de la radiofrecuencia de RFID/dispositivo de colocación: los estados (quién/qué) están allí W5. Permutable con RFID/GPS. El usuario lleva RFID (invisible) con propias funciones del UIP. Puede substituir generalmente RFID por nuestro picosegundo (sistema de colocación).

Juego de actuación de papeles del RPG. El jugador desarrolla la inteligencia (uip) y las capacidades (uip) por los puntos de recogida y solucionar rompecabezas. Las ayudas del UIP construyen [menú para] los papeles que se jugarán. Las cualidades aumentadas de los puntos ganados se adaptan.
- Elementos que efectúan las características del RPG: cualquie Info digitizable, eg.: jefe, otras entidades, ambientales, [tiempo/geográfico (terreno/zona)] las condiciones, cuenta de la entidad [cualesquiera], indicaron las metas, uip para otras entidades.

- Tener un agente del RPG. Ser un agente de un RPG. El avatar/RPG/uip/score de un situación/juego se puede transferir a otro juego/situación.
- cualquier elemento convertido a digital puede ser RPG adaptado.
- la temperatura de la vida real/el clima del jugador adapta el temp/el clima de los juegos. Cuando llueve el exterior ruidoso, el juego tiene lluvia pesada, y las reglas/los parámetros del juego cambian por consiguiente.

juego del tirador A donde está destruir el objeto a enemigos tirando, mientras que también (con el uip mejor) evitando el fuego enemigo (o el ataque/la agresión/el aumento/el engaño). Típicamente con una perspectiva de la primero-persona y se refieren comúnmente como FPS o "tiradores de la primero-persona."

simulador/género del juego del sim A que repliega acciones de la vida "verdadera".
- enlace de juegos con el UIP

juegos de los juegos de la terapia que son terapéuticos.
- Juegos (adaptados/creados automáticamente) para el usuario y (terapia de las ofertas (la terapia del `consigue más difícilmente - TGH) y educación (`EDG). Ideal para las ediciones del comportamiento específicas. La gente que consigue resistente a confiar a veces a la terapia, pero un juego ayuda. Los problemas a tratar incluyen: ediciones de la niñez/del adulto del ADA a ser irresponsable; y rehabilitación criminal/física/ocupacional/de la carrera.

empresa de informática de tercera persona de A que produce los juegos para la consola de otra compañía.
- diversos tipos de funciones relacionadas UIP pueden ser cartuchos para tratar la necesidad señalada.

Términos - No-Parte-Como términos definió y se amplió generalmente: de Steve Kays. Las piezas o los términos se pueden substituir por otros en el mismo grupo:
- Entidad: PC (carácter del jugador). Pudo incluir: buen chico, jefe, bandido, chico malo, jefe, agente
- Juego del `: método educativo para dirigir a jugadores.
- Obrar recíprocamente: cómo el jugador interconecta/juega con el juego
- Invención: objeto, herramienta, dispositivo, producto, %obstruction con energías; una de nuestras (`Peter) invenciones [según lo demostrado en (nuestros) juegos]. Las invenciones demasiado costosas investigar o la estructura pudieron permanecer en la realidad del juego [para ahora].
- Jugador/usuario: Entidad, carácter (imagen editable) de la historieta del `, persona
- PVP: Jugador contra juego del jugador
- Vida real: Mundo real que puede también estar fuera de una realidad del juego.
- Sastre del `: ajustar, UIP-Adaptar

- Cosa: la cosa es cosa animada o inanimada cualesquiera. jugador, entidad, invención
- el UIP pudo incluir: adaptado, adaptación, ajustando a, entrada del UIP, fósforo. Ver muchos archivos descriptivos relacionados enormes.

Concluye el archivo: Piezas/campo común de las piezas GA

Archivo: Lista del diagrama del RPG de las piezas/de las piezas

LISTA DE DIAGRAMAS DEL JUEGO - ESPECIALMENTE PARA EL RPG

Incluye las funciones del UIP para todos los juegos; Corregir el comportamiento, y el juego educa; y panoramas (simulados) relacionados de la vida real.

Versión ampliada de la lista

Introducción a las funciones del UIP como aplicable en diagramas del juego abajo:
- El encuentro de la PC de las dificultades (carácteres del jugador) se empareja al perfil/al carácter de la PC. La interacción educa a jugador.
- El carácter sabido o percibido de jugadores, es contra usado/para cualquier opositor. Las ayudas del UIP sugieren que cuáles son/que pueden do/can reaccionar los carácteres del opositor; no prohibiendo a ganador del Info una mejor ocasión de ganar puntos.

Piezas: Corregir el comportamiento, y el juego educa: Tiene los jugadores interactivos en maneras a su promover comportamientos positivos. EG.:
- Parada: fumando o tomando las drogas dañosas; sobre la consumición; pobres que conducen [mientras que está intoxicado] y utilizado como parte de programa de rehabilitación; hábitos pobres del estudio de trabajo de la escuela; infringir reglas/leyes; el otro comportamiento pobre, características pobres
- Promover/fomentar: limpieza de su sitio/casero/oficina/escritorio; mayor [mente (), mano] agilidad; musical que juega/habilidades del canto; [vídeo/ajedrez] habilidades del juego; capacidades de la matemáticas; cualquie tipo de material del estudio de la High School secundaria o de universidad - el jugador puede tener a [semi] panorama [verdadero] de la vida sobre el asunto que es estudiado.

- Útil para cualquie persona/el jugador/la entidad que necesita aprender: cabritos (que aprenden del UIP entrado por los padres, el etc); delincuentes [del joven] [aburridos en su célula sin la TV u otros juegos para jugar]; criminales; [mentalmente] perjudicó gente...
- los dos términos de la palabra pudieron estar en orden de las palabras opuesto, eg.: El comportamiento corrige; y educar el juego. A veces solamente uno de las dos palabras/parte de nombres se pudo utilizar, sugiriendo el alcance de la función adjunto.

Diagramas

Cazadores de tesoro

Los jugadores son los tesoro-cazadores, que han cogido el viento de una ruina tesoro-cargada. Van a explorarla, y deben tratar de sus moradores sobrenaturales para ganar el tesoro y para salir de vivo.

Variaciones del juego: El tesoro sí mismo es algo peligroso. El tesoro está no en una ruina, sino en un yermo u ocultado en alguna parte "civilizado." El tesoro es algún otro característica legítima. El tesoro puede ser su propio agente.

Funciones del UIP (el `corrige comportamiento/el juego del '' educa): Robar algo asociado a un característico-rasgo del malo [drogas dañosas; herramientas de los thieve; alimentos de la cebadura]; y sufrir las consecuencias [el `reacciona].

No comer los púrpuras

Trenzan en una zona extraña, y deben sobrevivir encontrando el alimento y el abrigo, y después se preocupan a los jugadores de conseguir detrás el hogar.

Variaciones del juego: Los jugadores deben sobrevivir solamente por un corto período de tiempo, hasta que llegue la ayuda, la nave y/o se repara la radio, o una cierta tal cosa (en panoramas de la "reparación", los jugadores deben descubrir a veces un cierto hecho sobre el ambiente local que reparará tales posibles).

Funciones del UIP (el `corrige comportamiento/el juego del '' educa): "púrpura unas" asociadas a malas características, como nuestra característica del juego de los cazadores de tesoro.

Elemental, mi estimado Watson

Un crimen o una atrocidad ha estado confiado; los jugadores deben analizarla y solucionar. Deben entrevistarse con [`interactivo] los testigos (y evitar sean matados), pistas del frunce (y evitar que sean robados o que arruinados). Deben entonces montar la prueba para entregar a las autoridades, o servir como ministros de Justicia personales.

Variaciones del juego: Los jugadores están trabajando para despejar a un innocent acusado ya (posiblemente ellos mismos). Los jugadores deben trabajar junto a un investigador especial o se ensillan de otra manera con un aliado indeseado. Quizá, a mitad de la distancia con la aventura, sacan a los jugadores "el caso" - su invitación/autoridad a perseguir la materia es cerradas (a menudo el resultado de maniobrar político de un antagonista). El clímax es la escena de la sala de tribunal o la otra arena del juicio.

Funciones del UIP (el `corrige comportamiento/el juego del " educa): El crimen es una acción relacionada con un mal□n rasgo del comportamiento.

Servicio de acompañamiento

Los jugadores tienen [`Peter basado] una invención o una persona valiosa, que necesitan ser llevadas a un lugar seguro o a su dueño legítimo, etc. Deben emprender un viaje peligroso en cuál o más facciones (y la ocasión y la desgracia) intentan privarlos de la cosa [nuestra invención] en su cuidado.

Variaciones del juego: La cosa o la persona es molesta [comportamiento malsano], e intentos escapar o desviar a los jugadores. La destinación ha sido destruida o sobornada por el bandido, y los jugadores deben tomar sobre sí mismos el trabajo que la destinación o su carga fue significada para hacer cuando consiguió allí. La persona es una persona que intenta una defección política. La llegada segura en la destinación no termina la historia; los jugadores deben entonces estipular [`interactivo] con su carga como su símbolo (que intercambia el dinero para un rehén, por ejemplo). Los jugadores deben proteger la blanco sin la blanco que saben [siendo notificado] sobre ella.

Conseguir la bandera

Los jugadores deben asegurar una blanco militar para los buenes chico. Hay los bandidos allí que lo prefieren para no ser asegurado.

Variaciones del juego: Los jugadores montan y/o educan una fuerza para hacer el trabajo con ellas. Los jugadores están trabajando con la inteligencia dañada [analizador del `] y la zona de la blanco no está según lo descrito. Los jugadores deben coordinar sus propios esfuerzos con un grupo del aliado (que pone aparte posiblemente rivalidades para hacer tan). La zona de la blanco incluye a población de gente inocente, [`Peter] invenciones frágiles, o una cierta otra cosa preciosa que no se deba dañar en el tiroteo.

Funciones del UIP (el `corrige comportamiento/el juego del " educa): Los bandidos practican comportamiento pobre.

La ayuda está viniendo

Una persona (grupo de la iglesia, nación, galaxia) está en una situación peligrosa que no pueden sobrevivir sin rescate [conseguir el acceso a la destinación]. Los jugadores están en el trabajo. En algunos panoramas, el gancho es tan simple como un grito o crackly una señal de señal de socorro distante [de un notificador].

Funciones del UIP (el `corrige comportamiento/el juego del '' educa): la ayuda viene cuando los jugadores [calcular hacia fuera/dirigido en] adquieren buen comportamiento.

Base ocultada

Los jugadores, mientras que viajan o exploran, parecen la jerarquía de un avispón de bandidos, preparándose para la maldad grande. Deben encontrar un cierto método para conseguir la palabra a los buenes chico, o a chivato adentro y para inhabilitar el lugar ellos mismos, o una combinación de ambos.

Variaciones del juego: Los jugadores deben imaginar [el `analiza] cómo utilizar recursos locales [en base de datos] para defenderse o tener una ocasión contra los habitantes [o tener acceso a las rutas de escape].

Funciones del UIP (el `corrige comportamiento/el juego del '' educa): conseguir la base ocultada vía practicar buen comportamiento.

¿Pido su perdón?

Los jugadores están importando de su propio negocio cuando los entonces notifican atacaron o amenazaron. No saben [vía analizador] porqué. Deben solucionar [el `analiza] el misterio de los motivos de su atacante, y apartan mientras tanto apagado más ataques.

Variaciones del juego del `: Los jugadores tienen algo que los bandidos quieran - solamente no lo realizan necesario. Los bandidos están hacia fuera para la venganza para un comportamiento pobre, y o el compatriota muerto [quién murió como reacción a un comportamiento pobre/bueno de la entidad] de una aventura anterior. Los bandidos han confundido a jugadores desde alguien diferente [con buen/mal□n comportamiento].

Funciones del UIP (el `corrige comportamiento/el juego del '' educa): los jugadores aprenden identificar cuáles son los malos/buenos comportamientos; y cambiándolo; ganan puntos.

¿Bifurcación larga o corta al cenar en duende?

Los jugadores son una vanguardia diplomática, intentando abrir (o puntear) las relaciones políticas o comerciales con una cultura extraña. Todo lo que tiene que hacer es manejar por un día o tan entre las aduanas extrañas sin ofender a cualquiera... y qué información tienen son incompletos y peligroso engañosos.

Variaciones del juego: Alguien eligieron a los jugadores que sabía que los no prepararon para él - un NPC que intentaba sabotear los trabajos (la fijación de este bandido pudo ser necesaria evitar desastre).

Mirar, no tocar

Los jugadores están trabajando vigilancia - espiando en una persona, recopilando la información sobre una bestia en el salvaje, explorando un nuevo sector. Sin importar la escala, el conflicto primario (por lo menos al principio) es la regla que deben mirar solamente, escuchar y aprender. No deben hacer el contacto ni se dejan ser sabidos.

Variaciones del juego: La blanco se consigue en apuro y los jugadores deben decidir si romper ninguno-entran en contacto con regla para montar un rescate.

Fabricación de una zona de seguridad

Hay una zona en donde viven las malas cosas. Los jugadores deben hacerlo seguro para la gente agradable, sistemáticamente despejándolo de peligro.

Variaciones del juego: Las malas cosas no se pueden batir con conflicto directo. Los jugadores deben aprender más sobre ellos para solucionar el problema. La casa frecuentada. La infestación extranjera. El bosque salvaje.

Persecución

Van alguien: han funcionado lejos, conseguido perdidos, o no han llamado simplemente a casa en un rato. Alguien los falta o los necesita volvió. Llaman los jugadores adentro para encontrarlos y para traerlos detrás.

Variaciones del juego: Se ha secuestrado la blanco (posiblemente engañar específicamente a los jugadores). La blanco es peligrosa y escapada de una facilidad diseñada para proteger al público. La blanco es valiosa y escapada de una zona diseñada para mantenerlo seguro, acogedor, y convenientemente práctico. La blanco tiene una razón de irse que los jugadores se compadecerán de. La blanco ha tropezado a través de otra aventura (como protagonista o víctima), que los jugadores deben entonces emprender ellos mismos. La "persona que falta" es una expedición o un peregrinaje entera de una cierta clase. La blanco no es un fugitivo o desaparecidos/perdida - son apenas alguien que han contratado a los jugadores para rastrear (posiblemente bajo fingimientos falsos).

Memorias que falta

Uno o más de los jugadores despiertan sin la memoria del pasado reciente, y ahora se encuentran en una cierta clase de apuro que no entienden. Los jugadores deben encontrar la razón del lapso de la memoria, y solucionan cualquier problema que destapen mientras tanto.

Variaciones del juego: Los jugadores olvidadizos suprimieron o borraron voluntariamente las memorias, y se encuentran el deshacer de su propio trabajo.

La mayoría del peculiar, Momma

Algo malo e inexplicable está sucediendo (la tensión racial se está encendiendo para arriba en ciudad, toda la energía está hacia fuera, se drena la fuente de la cerveza, está nevando en julio, el viajero todavía tiene ventiladores, las hordas de extranjeros están comiendo todo el queso), y él preocupa a mucha gente muy. Los jugadores deben seguir el fenómeno a su fuente, y la paran.

Variaciones del juego: Los jugadores son de alguna manera involuntario responsables de los asuntos. Qué parece ser un problema de una naturaleza (tecnológico, personal, biológico, químico, mágico, político, etc) es realmente un problema de alterno.

Nadie ha manchado el puente

Asignan los jugadores para guardar un solo punto vital (cualquier cosa de un paso de montaña a una Sistema Solar) del ataque inminente o posible. Deben planear su estrategia defensiva, fijan los relojes, trampas del sistema, y así sucesivamente, y entonces tratan del bandido cuando llega.

Variaciones del juego: La inteligencia que dieron los jugadores resulta ser culpable, pero la actuación en la nueva información podría dar lugar a mayor peligro - pero así que no podría actuando en él, y los jugadores deben elegir o crear un compromiso. Los jugadores aprenden que el bandido tiene razón buena y comprensiva del querer destruir el punto protegido.

No en Kansas

Los jugadores están importando de su propio negocio y se encuentran transportados a una zona extraña. Deben imaginar donde están, porqué están allí y cómo escaparse.

Variaciones del juego: Fueron traídas allí específicamente para ayudar alguien en apuro. Fueron traídas allí accidentalmente, como subproducto algo extraño y secreto. Transportaron algunos de los enemigos de los jugadores junto con ellos (o por separado), y ahora tienen un nuevo campo de batalla, e innocents para convencer qué individuos son los buenes chico.

¿Ahora o más adelante?

Los bandidos han llegado y han hecho algunas cosas del chico malo. Los jugadores eran inconscientes. Los bandidos ahora han hecho bueno su escape, y los jugadores han cogido el viento de él a tiempo para perseguirlos abajo antes de que lo hagan de nuevo a su guarida, a su nación casera, detrás de líneas del bandido, del etc.

Variaciones del juego: Lo hacen los bandidos se escaparon robando un transporte que los jugadores saben mejor que ellos. Los bandidos duck abajo de un lado-camino metafórico (o literal), intentando ocultar o mezclar en un ambiente (a menudo uno hostil a los jugadores). Si los bandidos cruzan la "meta" de la aventura (cruzar la línea de condado, hacen que la deformación saltan, el etc.) allí no es ninguna manera de perseguirlos más allá de ella.

Funciones del UIP: los bandidos sufren de las maneras asociadas a lo que ellos estola, eg.: el robo de las drogas y tener sobredosis, o del vehículo se estrella de la intoxicación. Educa comportamiento de los jugadores del cabrito un mejor. El cabrito no puede volver a casa porque eran descuidada/que hacían el malì□n comportamiento que permitió el hurto.

Onzas de la prevención

Un bandido o una organización está consiguiendo lista para hacer algo malo, y los jugadores han recibido un tip-off de una cierta clase. Deben investigar para descubrir más sobre la alcaparra, y después actúan para prevenirla.

Variaciones del juego: El tip-off inicial era una pista falsa significada para distraer a los jugadores de la alcaparra real. ¿Allí dos malas cosas simultáneas en la manera, y no hay manera evidente ambos ellos - cómo elegir?

Caja de Pandora

Alguien se ha ocupado vanamente con cosas que el hombre no debe, o abrió un portal en la dimensión mala de la gente, agrietado una pared en la prisión estatal, o convocado dios babilónico antiguo en un ático. Antes de que los jugadores puedan incluso pensar en el enfrentamiento de la fuente del apuro, deben tratar de las ondas del apuro lanzadas ya por él: los monstruos, viejos enemigos hacia fuera para la venganza, los extranjeros curiosos que piensan los coches/los ciudadanos/las hamburguesas de McDonald's se asemejan al alimento, y así sucesivamente.

Variaciones del juego: Los jugadores no pueden llevar simplemente la maldad lanzada la estera; tienen que recogerla y empujarla nuevamente dentro de la fuente antes de que él que la aventura puede terminar realmente. Dibujan adentro a la fuente y deben solucionar a los jugadores problemas en el otro lado antes de volver éste. El libro secreto, el código, o el otro elemento raro es necesarios tapar la abertura (quizá apenas el compañero que la abrió). Un primo cercano a este diagrama es "alguien ha viajado en el último y ha ensuciado con la historia básica de nuestra realidad".

Puerto en una tormenta

Los jugadores están buscando el abrigo de los elementos o de una cierta otra amenaza, y parecen una zona para agujerear para arriba. Encuentran que han tropezado a través algo peligroso, secreto, o sobrenatural, y deben entonces ocuparse de él para disfrutar de un poco resto.

Variaciones del juego: El abrigo contiene la causa de la amenaza que los jugadores intentaban evitar. El abrigo contiene una base ocultada (q.v.). Los jugadores deben no sólo luchar para el abrigo, ellos deben luchar para sobrevivir. La zona es un abrigo legítimo de una cierta clase, pero los jugadores no son agradables, y deben ganar corazones o mentes para ganar su cama para la noche.

Funciones del UIP: el puerto representa la educación necesaria del jugador; mejorar las habilidades necesarias/Info más adelante en juego, eg.: debilidades habilidades de los agentes del bandido' en el puerto.

Búsqueda para el Hoozits brillante

Alguien necesita un dingus (satisfacer una profecía, curar a monarca, previenen una guerra, curan una enfermedad, o qué le tienen). Los jugadores deben encontrar un dingus. A menudo un dingus viejo, un dingus

misterioso, y un dingus de gran alcance. Los jugadores deben aprender más sobre él para rastrearlo, y después se ocupan de tomarlo de dondequiera que sea.

Variaciones del juego: El dingus es incompleto cuando está encontrado (uno del diagrama más irritante y O.N.U-diversiones tuerce en el universo). Alguien lo posee ya (o lo robó recientemente, a veces con demanda o causa legítima). El dingus es información, o una idea, o una sustancia, no un dingus específico. Los jugadores deben "ir secretos" o infiltrar de otra manera a un grupo o a una sociedad, ganando el dingus por astucia o cautela.

Ruinas recientes

La ciudad, el castillo, el starship, el puesto avanzado, o la otra construcción civilizada está mintiendo en ruinas. Muy recientemente, era apenas excelente. Los jugadores deben entrar en las ruinas, explorarlas, y descubrir qué sucedió.

Variaciones del juego: Lo que arruinó las ruinas (gente mala incluyendo, radiación extraña, monstruos, una nueva raza, los fantasmas) todavía está una amenaza; los jugadores deben ahorrar el día. Los habitantes se destruyeron. Las "ruinas" son una nave o una nave espacial abandonada, descubierta recientemente. La "ruina" es un pueblo fantasma, tropezado a través pues viajan los jugadores - solamente el mapa dice que la ciudad está viva y bien.

Funcionar con el guantelete

Los jugadores deben viajar con una zona peligrosa, y consiguen a través sin ser matado, con túnica, humillado, rebajado, enfermo, o educado por lo que está allí. Los apuros que encuentran son raramente personales en naturaleza - la zona sí mismo es el "bandido" de la aventura.

Variaciones del juego: La zona no es peligrosa en absoluto, y los varios "peligros" son realmente tentativas de comunicar con el partido por alguì□n agente u otro.

Safari

Los jugadores están en una expedición de caza, capturar o matar y criatura evasiva y estimada. Deben ocuparse de su ambiente, de su propia capacidad de evadirlas, y posiblemente de su capacidad de lucharlos.

Variaciones del juego: La criatura es inmune a sus dispositivos y armas. Hay la otra gente que protege activamente a la criatura. La guarida de la criatura permite que los jugadores tropiecen sobre otra aventura.

Cuenta una para el equipo local

Los jugadores son participantes en la raza, la competencia, el torneo, la caza de limpiador o el otro pedacito voluntario del deporte. Deben ganar.

Variaciones del juego: Los otros contendientes son menos honestos, y los jugadores deben superar sus tentativas de ganar deshonesto. Los jugadores están compitiendo para un propósito más profundo que la

victoria, por ejemplo de guardar a otra caja fuerte del contendiente, o al espía en uno, o apenas de conseguir en la zona adonde va el acontecimiento abajo. Los jugadores no desean ganar; apenas desean evitar que el bandido gane. El acontecimiento es una prueba deliberada de las capacidades de los jugadores (para la entrada en una organización, por ejemplo). El acontecimiento llega a ser más mortal que ha supuesto a.

El hacer furtivamente en:

Objetivo de misión: entrar en la zona peligrosa, y recuperar al dingus vital o a persona valiosa. Superar las defensas de zona para hacer tan.

Variaciones del juego: La meta no es extraer una cosa, pero destruir una cosa o interferir con un proceso (matar el generador de la fuerza-pantalla, asesinan a rey malvado, paran el encanto del lanzamiento, arruinan los planes de la invasión, el cierre el portal). La meta se ha movido. La meta es la información, que debe ser difusión o lanzado de otra manera de la zona tan pronto como se encuentre. El trabajo debe ser hecho sin alertar cualquier persona. Los jugadores no saben que la zona es peligrosa. Los jugadores deben substituir la cosa por otra cosa.

Stalag 23

Encarcelan, y deben dirigir a los jugadores un escape, superando a cualquier protector, las medidas automáticas, y aislamiento geográfico que su prisión impone ante él.

Variaciones del juego: Algo ha sucedido en el mundo exterior y la seguridad de la prisión tiene flojo caido debido a ella. Han contratado a los jugadores "para probar" la prisión - no son internos normales. Otros presos deciden soplar el silbido para el rencor o la venganza. Los jugadores son secretos espiar en un preso, pero entonces se confunden desde internos verdaderos y se mantienen incarcerated. Los jugadores deben escaparse en un horario apretado para conseguir a otra aventura fuera de las paredes.

Llevarnos a Memphis y no retrasar

Los jugadores están a bordo un transporte poblado (Indiaman del este, el barco de cruceros, el transbordador, el durmiente Starship), cuando se secuestra. Los jugadores deben tomar medidas mientras que los normals se sientan y giran.

Variaciones del juego: Los "secuestradores" son agentes de gobierno que tiran de una alcaparra complicada, forzando a los jugadores a elegir lados. Los secuestradores no realizan que hay un peligro secundario de el cual debe ser ocupado, y cualquier tentativa de convencerlos se ve como truco. Los normals son inútiles u hostil a los jugadores porque piensan los jugadores apenas están haciendo materias peores.

Chantaje difícil

Generalmente con mañosidad (pero a veces cavando en los jugadores más allá), un antagonista tiene algo sostenerse sobre las cabezas de los jugadores y hacerles salto. Ésta podría ser cualquier clase de amenaza de

físico al social, pero depende del bandido que tiene algo - incluso si es información - esos otros no tiene. Ahora, él está tirando de las cadenas de los jugadores, diciéndoles hacer cosas que no quieren a. Los jugadores deben terminar el ciclo del chantaje, privar al bandido de su borde, y guardarlo satisfizo temporalmente mientras que lo hacía.

Variaciones del juego: El gancho de la aventura implica a jugadores que hacen al bandido una buena vuelta, que permite que él se aproveche de ellos (muy cínico!). Para tener éxito, los jugadores deben entrar en contacto con a la otra gente que también se está utilizando. Los jugadores no son las víctimas en absoluto, pero alguien que cuidan sobre/que se cargan proteger, son.

Perturbadores

Un chico malo (o un grupo de ellos, o los partidos múltiples) está golpeando para arriba un jaléo con el pie, está trastornando a vecinos, está envenenando los depósitos, o está causando de otra manera apuro. Los jugadores tienen que ir a donde está el apuro, localizan a bandidos, y paran el partido.

Variaciones del juego: Los jugadores no deben dañar los autores; deben estar viva y bien empaquetada. Los bandidos han preparado algo peligroso y han ocultado como "seguro" si los capturan. El "chico malo" es un monstruo o un animal peligroso (o una criatura inteligente a que todos piensa es un monstruo o un animal). El "chico malo" es una figura pública respetada, oficial superior, o algún otro que abusa de su autoridad, y los jugadores pudieron resolver hostilidad de los cuartos normal-provechosos que no aceptan que el chico malo es malo. Un equilibrio de fuerzas perpetúa el apuro, y los jugadores deben elegir lados para inclinar el equilibrio y para fijar cosas. El "apuro" es diplomático o político, y los jugadores deben hacer las paces, no guerra.

Aguas desconocidas

Los jugadores son exploradores, y su meta es incorporar un territorio y un alcance desconocidos él hacia fuera. Naturalmente, el trabajo apenas no va a ser que examina y de dibujo de bosquejos de la fauna local; algo está allí, algo que fascina y que amenaza.

Variaciones del juego: O la zona sí mismo está amenazando (en este caso los jugadores deben jugar geográfico nacional e intentar simultáneamente escaparse con su piel, cordura, y grado de solvencia) o el lugar sí mismo es muy valioso y maravilloso, y el algo más allí es afilado en cerciorarse de a los jugadores no deja cualquier persona saber. Otros conflictos potenciales implican daño al transporte de los jugadores o el equipo de comunicación, en este caso se convierte éste no come los púrpuras.

Estamos en el exterior que mira adentro

Los diagramas básicos uces de los en esta lista se pueden reengineered con los jugadores en el exterior de él. O los jugadores están acompañando otros carácteres en el medio de tal diagrama (a menudo siendo invitado para defender el diagrama del exterior, como si fuera), o están importando de su propio negocio cuando los otros implicados en el diagrama aparecen, y deben escoger lados u oponerse simplemente. Por ejemplo, con cualquier

puerto viejo en la tormenta, los jugadores podrían ya disfrutar (o natural) del abrigo cuando llega un grupo extraño. Si "los jugadores son incómodos" se emplea la variante, después quizás los jugadores todavía serán la única voz de la razón el fervor religioso, prejudicar racial, sentimiento del anti-monstruo, o cualquier otra cosa es la fuente de conflicto.

Variaciones del juego: Los jugadores se encuentran en el lado receptor de la aventura. Tomar los diagramas uces de los aquí e invertirlos, colocando a los jugadores en la posición donde está NPlayers (a menudo el bandido, el fugitivo, etcétera) normalmente. En vez de la caza, deben ser buscados. En vez de la fijación, deben evitar conseguir "fijaron" ellos mismos (ow). Alternativamente, dejar un diagrama clásico intacto pero dar vuelta a las torceduras al revÃ©s, haciendo las más twistier (o de forma refrescante la O.N.U twisty).

Archivo: La lista del diagrama del RPG de las piezas/de las piezas concluyó

Archivo: Facetas grandes GA de Parts/UIP

UIP - FACETAS GRANDES (DE JUEGOS)

Introducción: Los aspectos de las invenciones, de que no son fácilmente clasificables en nuestros nombres de parte.

Qué puede ser adaptada:

Variaciones adaptables de la característica [del juego]: cualquier cosa en el juego el cual se programa en [y el cual aparece] [al usuario] se puede corregir' adaptado. La adaptación pasiva crea resultados que los jugadores son no/menos capaz de controlar. La adaptación activa incluye: qué jugador dijo a UIP-Entrada que el jugador quiere; o cómo el jugador [con su dirección justa] controla otros carácteres - como sus nombres, ocupaciones, habilidades, capacidad de avanzar [en grupo]...

Ejemplos:

- Representación visual [reconocedor visual del `]: imágenes se corrigen que [en (`seguido) algoritmo motional].
- Audio - voz/sonido de: cosas de los carácteres'/armas [reconocedor sano del `]:
- Estilo/velocidad del movimiento [de los carácteres/de los juegos/diagrama/cosas]. Longitud/dirección juego de la escena/del diagrama del'. Un UIP tomará a carácter "A" en ventana "1" panorama/acción, mientras que experiencias/juegos del carácter "B" en la ventana "2"; "C" pierde el juego [y se golpea con el pie hacia fuera]; "D" consigue renacida de estado del zombi y entra la ventana "2" o "3" basados en el UIP; "E" va de la ventana

"4" a "2" entonces "5" entonces...; "F" comienza el juego en la ventana "6" [después de terminar otra [(semi/un) relacionó el juego].

- Zonas de los terrenos las' tienen gusto: Ciudad [del francés]; Riviera o terreno semiárido de las colinas similares de California; Selva del Amazonas; Desierto de Iraq; universidad/escuela; espacio [externo]; compañía [cuartos principales]; hospital [del animal doméstico]; [juguete] [fábrica de robusteza...
- Formas [redondeado, agudo o liso afilado]; tamaños.
- Colores
- Textura
- Dermatológico: pelo, piel, clavos y su condición/estilo/cómo está adaptado [por el carácter, eg.: secador del soplo del pelo o pulimento de clavo]
- Vegetación:
- Otros elementos que efectúan la mirada/la sensación/las características de invenciones/de obstáculos/de características
- la dimensión, 1D, 2.o, 3D, 4D... con las dimensiones por tiempo/[cambiando] color/cultural limita patrones del pensamiento/de comportamiento [y predicho en la asociación].
- Tiempo [(dondequiera) adentro pasado/futuro]: los tiempos [históricos] señalados se pudieron asociar al uip del jugador, [así que al jugador/al carácter se encamina allí por consiguiente].
- [geográfico/3D] divide en zonas [conjuntamente con w5]:
- Discurso: dicción, palabras, [gramaticales/idiomáticas] estilos del discurso; dialectos; varón/voces/sonidos femeninos/animalistas; foco del juego del juego
- Facial/expresión/movimientos del cuerpo: la contracción nerviosa más leve de una expresión facial del cuerpo puede transportar mucho sobre el humor del carácter, e interna efecto el humor de otros [en el juego]. Diverso tipo movimientos es asociado [por el jugador (el analizador del `)] como transportación de uno a un número infinito de los significados/Info que llevan a las predicciones [para el comportamiento].

--comportamiento de la pista del `el' analiza diversos movimientos relacionados con [los movimientos verdaderos de la persona]. Ver la robusteza de la cara de Softimage diseñada con Mike Isner, y el buque insignia XSI de Softimage.

- Culturas específicas, subcultivos, y o efectos regionales sobre [esperado/fiable]' comportamiento humano de la cosa.
- Humor del `en jugador/carácter: las sensaciones incluyen: feliz, triste, enojado, frustrado, ambicioso, deseo de rescatar el muchacho/a muchacha, humildad. Las sensaciones pueden ser buenas/malo como las recompensas/los castigos se relacionaron con las concesiones o los castigos [la pérdida del juego de puntos/de vidas]

[Gerencia de recurso del software del juego]/uso económico:

Reduciendo impuestos en [los sistemas] esa ayuda adaptar:

- La alteración [apenas] del color del pelo, de la piel, de la ropa, de los ojos, o todo lo demás en juego está gravando menos en la memoria del juego, programando tiempo/ediciones, el etc.
- Golpeando ligeramente en efectos de otros juegos asociados [del mismo editor en la misma computadora]. Pedir prestada un jugador de la herramienta especial tiene gusto en un juego y lo trae en el otro [después de que (algo) se modifica].

Requiere más impuestos:
- Cuerpo y movimientos faciales [sutiles].
Archivo: Parts/UIP-Input GA

UIP-INPUT: DETERMINACIÓN DE PREFERENCIAS DE USUARIO

[Paso 1] cómo el analizador del comportamiento [VAGOS del `] determina los gustos del jugador/del usuario:
- Diagrama: Opción dada jugador de seleccionar al compañero de equipo [s] de la formación. Cada compañero potencial del equipo tiene características muy diversas, eg.: elegir entre trigueno o las muchachas/los individuos que son altos/cortos y o listo/cariñoso y pasivo/agresivo y más viejo/más joven, el jugador rubios del etc. eligieron a blonde semi curvaceous alto.
--el jugador tira a uno o más [de 5] bandidos [algo] alineados en una fila [todo igualmente fácil golpear la' etiqueta' pista' corrige] [y jugador inminente/los compañeros elegidos del equipo]. El jugador golpea it/them [que consigue puntos].
- Notas: los primeros carácteres que escogen/golpeado/etiqueta son probables tener mayor carga emocional para el jugador, eg.: eligieron a compañero rubio del equipo de la muchacha; y para el bandido el gorila verde [teniendo más impacto que el oso negro o el tigre púrpura (para cualquier experiencia psicologica/histórica relacionó razones)].

[Diagrama de continuación del paso 1 del paso 2 arriba] haciendo el UIP que adapta efectos menos obvio a otros [usuario]. Diversos archivos se crean para cada opción del carácter/de la escena que sea adaptable:
- Un orangután del verde azul [similar (bastantes por la cuenta del UIP) al gorila] se ve el secuestrar de un blonde alto, semi oscuro medio curvaceous [con la otra muchacha algo de diferenciación de las características elegida adentro sobre panorama].
- El jugador/el padre que compró el juego no pudo reconocer la conexión entre el mono y rubio como los carácteres que surgen en números [infinitos] de variaciones.

La foto del usuario se reconoce visualmente. [Ascendente cercano] representa el' seguimiento de cada partes del cuerpo, del usuario/de sus amigos y de sus cuerpos [desnudos] de las caras, mientras que [moviéndose en patrones/acciones comunes]. Entonces puede ser asociada a las características señaladas del juego. EG.:
- como estudios que gente de la demostración prefiere a menudo las tezes opuestas en otras, usuarios rubios están obrando recíprocamente con la obscuridad - carácteres complexioned
- perfil de la representación visual/del comportamiento del usuario del fósforo de los carácteres del `[áspero].

Sonido (música de las voces):
- Jugador de las invenciones de los carácteres del `el' eligió obrar recíprocamente con más [que otros carácteres/opciones] [puede ser] considerado para poseer gustos del sonido/jugador que empareja de los parámetros de la música de un mejor.
- Los sonidos estereotipados/realistas de qué entidad o cosa [poder probablemente] tendrá sonar como adentro [los juegos/mundo real del pasado] su sonido asociado como teniendo una probable preferencia sana en jugador, incluso si el jugador no tiene/no los oirán. EG.: presumen a un granjero en Alabama como teniendo un acento meridional asociado, dicción, el patrón del comportamiento/del pensamiento que cultural está limitado (véase Kays' otras escrituras en este concepto sociológico). O significar que [obscuridad y rojo coloreados] el carácter hecho frente [con ceño fruncido y la cara unshaved] tiene voz más áspera que el dulce joven que mira [según lo reconocido visualmente] a princesa [el usar blanco y rosado].

Juegos aplicables de las fuentes de la UIP-Entrada [afuera]:
- Preferencias del jugador de últimos juegos, o cualquie otra UIP-Base de datos accesible.
- El jugador contesta a Q [cuestionario largo]. Las preguntas incluyen:
--Jugador que da la cuenta a cada juego que jugaron [de la opción del menú] que siguiente lleva a su anotar invención/característica a cada jugador'. Esto se empareja con el UIP-Info para cada juego/sus jugadores y características. Mientras que esto que empareja puede ser menos que perfecto, predecir ayudará a llenar boquetes desconocidos del Info; tan la característica de la opción en el juego [siendo jugado] que subirán los mejores fósforos [a menos que otros parámetros de programación más fuertes dominan, por ejemplo el donante jugador del contrario de lo que él tiene gusto para el castigo].
--Preferencia del jugador por gamas y los tipos de color/de sonido/de vibración/de olor [que el sensor puede también analizar la' cuenta para el tipo sensación - para ayudar a repetir' a asociado con la selección elegida con qué jugador puede experimentar [en juego].
--Cómo los amigos/los opositores humanos del jugador clasifican a' jugador de la cuenta en cualquier característica/preferencia sujetas a contribución [según lo descrito en esta solicitud de patente].
--El UIP-Analizador puede corregir las respuestas del usuario si juzga lo que él prefiere realmente [en funcionamiento del juego/otras fuentes] no mana fósforo qué dijo los preferred [así que los pudo estar político correcto/porque vive en la ilusión falsa/ellas selecciona lo que siente que debe seleccionar pero preferir emocionalmente algo diferente].

El proceso de la asociación del `entre qué analizador cree a jugador puede preferir generalmente trabajos con muchos factores desconocidos, y para cuál puede predecir lo que él [poder] no know/be bueno en analizar [para esa de la escena del jugador función de la invención del' juego/'].

Entradas de cualquie tipo de datos digitizable:

- Galletas de la computadora; Picosegundo; comunicaciones del alambre [menos]; identificación de llamador [teléfono]; envíos de mensajes de texto de la computadora; reconocedores audios/video; palabras habladas dondequiera [en el aire/el oline] y convertidas digital en el texto; reconocedor visual que convierte el Info en el texto/Info; vídeo real y contenido audio; bases de datos; imágenes del travesaño; cualquie tipo datos digitales; datos del sensor; su/otro historia del curriculum vitae/del trabajo detallado; resultados del analizador del comportamiento/de la prueba del psych; pruebas del índice de inteligencia.
- Las expresiones faciales [de usuarios] se reconocen visualmente, y se asocian [TDS] [juego del `/interfaz de la computadora] a acontecimientos simultáneamente de ocurrencia. Esto demuestra qué expresiones faciales en usuario atan con qué tipos de emociones [anticipadas] en la entidad que es vista. Confirmaciones para estas asociaciones: regeneración de usuario; las decisiones que el jugador toma más adelante entre diversos elementos se deben relacionar con su cuenta preferencial para ese artículo, y si no el corregir del UIP es [haciendo un promedio] cuentas necesarias entre qué tiene las cuentas cuestionables.
- El reconocedor de la voz del `asocia el humor del altavoz [con el analizador del comportamiento] con lo que dicen, y reacciona a. El sistema asocia palabras habladas a las emociones atadas a las palabras ellos mismos, más las asociaciones atadas a las palabras usadas en la reacción a las palabras oídas.

[Enchufar] las invenciones basaron en juegos existentes

[UIP] Ejemplos de la idea de la mejora del juego

Ejemplos de los Co con las cabinas en la conferencia de los reveladores del juego en San Jose, CA marzo de 2006

Orden para cómo el Info presentó: 1: Título del juego video del nombre de compañía 2. Un co puede tener títulos múltiples. 3. Descripción parcial para los aspectos de su juego. 4. Nuestras invenciones hechas (su) juego; incluyendo cuál está en la descripción parcial de #3.

1. teléfono 425-825-6800 de AmazeEntertainment.com

-2. Héroes de la fuerza y de la magia 3. Recursos de su juego "a capturar para construir energía. 4. Nuestra mejora: El UIP decide a cuáles son los recursos y a cómo está aplicado.

-2. Samurai Gato: La sombra de Aku: 3. [Gato] exiliado al futuro [cerca]. 4. El tema/el estilo/las cosas del futuro son uip adaptado. 3. Portal místico del tiempo. 4. los requisitos del acceso son uip adaptado. La experiencia es uip adaptado. 3. Las cosas se colocan de manera [el suyo]. 4. las cosas adaptadas obstruyen' obran recíprocamente [dañoso]. 3 aprenden utilizar las armas. 4. proceso educativo dirigido para educar a usuario [para las habilidades relacionadas vida real (del social)].

1. Juegos de Auran. Auran.com/games +61 7 3358 8888 Australia

-2. Vecinos del infierno. 3. Vecino verdadero del infierno. 4. Cabe descripciones del tipo persona/vecino ellas la mayoría de la aversión. 3. Tener su venganza, con trucos siempre más elaborados 4. De manera eso: el A. es lo que usted teme le sucedería muy probablemente, b: experiencias que usted ha visto/experimentado antes (en la TV), trucos de la C. el jugador ha jugado/ha gozado/fantasized antes [en juegos anteriores]. 3. Las concesiones prestigiosas 4. relacionadas con cómo el jugador visualiza concesiones/puntos sean mejor hecho/mientras que juegan una celebridad famosa.

-1. BioWare Corp Bioware.com 780-430-0164 Edmonton, Alberta

-2. MDK. 3: controlado en perspectiva de a [3ro persona], 4. O cualquie otra perspectiva/ventajoso. 3. el juego elegante le dio las energías, 4. que pueden cambiar la ropa adaptada [para las energías corregidas].

Concluye el archivo: Piezas/mejora otro GA

CONCLUYE ESTA SECCIÓN DEL JUEGO (FOLDERT)

Archivo: Introducción/guía de las características

'GUÍA

La 'guía es un subconjunto de la pieza educa.

INTRODUCCIÓN: Sugiere cómo el usuario pudo proceder. Guías del sistema/avisos u para cuando/cómo (w5) pueden ser "educados". Subconjunto de: La "educación, "UIP-Adapta", "pregunta".

- Ver: "Guía del artista", "guía de los accesos"; "Guía del juego".

. Qué u se puede "dirigir" encendido:

- movimiento del cuerpo (danza, deportes, terapia física; ver un KN más viejo)

¡Utilizar nuestra solicitud de patente Masterminded de mejorar sus ideas de la invención! Aprender cómo es más rápido y más fácil autorizar, que intentando evitar esta solicitud de patente. Llamar (+1) 707-428-5000 www.LicenseItToday.com

GENERAL:

. Usos: en el models= de la demostración usado en "punto las situaciones de la compra".

. Responde a cuantas veces se utiliza la dirección: Los determins W5 del sistema y el grado a los cuales el usuario está o no está respondiendo a la guía, o uip-adaptan [ediciones de las alteraciones generadas las ']: en tern= la guía ajustará por consiguiente.

- Ejemplos: los aspectos de la dirección, tales como sus sugerencias que estén o no se utilicen/se chasquen prendido [interruptor] = son en el futuro [de] acentuado por consiguiente.

. La guía se ajusta a las necesidades de usuario. UIP-Adaptar.

. Maneras de ampliar áreas patentables: usos

. Usos:

- 'Entrenamiento de la realidad virtual, eg.: vehículo o simuladores de vuelo:
- La habilidad basó juegos:
- Cómo el usuario puede utilizar/interpreta la información [uip-adaptada] proporcionada por la computadora:

. La guía integra y o traslapa estas piezas: Corregir, (los traslapos educan fuerte), EGH (Educ consigue más difícilmente), obrar recíprocamente, predecir, buscar y reaccionar, TGH (la terapia consigue más difícilmente), ADAPTARSE (UIP) - la aparición (2G180), sastre del UIP. Ver 2G190: La guía castiga o las recompensas basadas en comportamiento el bueno [en juegos].

'PIEZAS DE LA GUÍA:

ANALIZADOR DEL COMPORTAMIENTO: La guía ajusta al tipo comportamiento de usuario. Ranuran a la gente/a los usuarios en una de 100 categorías del comportamiento, eg.: cerebral y directivo y atento al detalle;

. - llano o maestría y o tipo lengua en programa de la guía (porción de) uip-se adaptan por consiguiente; el grado de temas/de archivos se ajusta.

. - la 'guía determina el tipo necesidades/prefers= del material/usuario de la educación le enseña.

- 'dirigir el proceso de aprendizaje del usuario de las pistas [predice]/el curve= y se ajusta.
- el sistema determina a usuario del apuro está teniendo: entonces trae las herramientas/ayuda por consiguiente. Apuro determinado vía: pausas en actividad del usuario en el punto en programa del interruptor (software del `); número y tipo preguntas del usuario; cuenta pobre de u en su: cuestionarios/funcionamiento.
- progreso del usuario del monitor en el aprendizaje, eg.: Palmadita 4812125 de los E.E.U.U.

. Usos de la guía:

- usuario que usa el sistema como forma del su del comportamiento/comprobación/de la otra terapia médica, tgh:

- entrenamiento u para modificar su comportamiento [conseguir los resultados más cercano por a qué u puede el want= según lo determinado uip-adaptan]:

CARÁCTER: Adquiere características para mejorar a usuario de la ayuda. El carácter cambia su imagen al tipo información necesaria de la oferta, mientras que su imagen crea el mood= deseado para sacar mejor respuesta deseada del usuario. Los cambios de la imagen consideran la sinergia de: tema; uip del u; nr; el mandar la cuenta [cantidad debida hasta la fecha en esa transacción; la tarifa de facturación para el carácter del tema está adentro en ese momento].

- El carácter del `puede ser una entidad del juego.

- La imagen de carácter se corrige según el tipo dirección. La diferencia en imagen permite:

- u a los interruptores chascan partes encendido de diferenciación del carácter para: preceptoral; encaminamiento.

- el humor de la imagen de carácter: cabe la tarea [vía su traje, tamaño, partes, colores, ambiente alterados en los cuales su panorama encontrar-que empareja del usuario].

. --eg.: el interruptor educativo para la gente de las ventas demuestra el carácter confidente y ambicioso en juego de negocio; tiene sonrisa visible y cara abierta.

. --eg.: carácter del juego demostrado para ser amistoso, contra hostil al jugador que es dirigido. Por ejemplo vía: traje del carácter de la guía, facial y otras características del cuerpo siendo amistosos, confidentes y similares a los carácteres que están en el lado del jugador del juego. Es decir el carácter es diferente de los carácteres o de otros elementos del enemigo.

- uip: perfil de los u del fósforo de la imagen (comportamiento/comprobación), eg.: colorante del pelo/de la piel, edad. Multiusos.

+ tema u que encuentra en C: u sabe que tipo DB (base de datos del `) u otro campo de interruptor ()/internet= u del software del `adentro está basado en cambio en la imagen de carácter. Valor: una manera más rápida para que u sepa donde (W5) está u sin tener que leer para la información en alguna parte en la pantalla.

--¿explicado ya en imagen en 1996? ¿A saber cursor de la imagen?

+--área grande extensible. eg.: cada tipo de la cuenta/tds o del otro elemento mensurable se puede retratar en la imagen de carácter cambiante.

COMPOSICIÓN (de sonidos): la determinación del uip del usuario de los sonidos que el likes= se da el trato preferente (uip-adaptaron proceso de selección) está dirigiendo a usuario.

. Usos de la guía:

- Da las ideas para la nueva música: cuando pegan al usuario [carece las ideas para que cómo continúe su picadura de sonidos o la música] = guía [que estudia uip-DB y el patrón del usuario para la parte anterior de los

pedazos pasados] da sugerencias en cómo continuar la música: de acuerdo con los u más allá de patrones de la música compuso

--UIP del composer= analizado para dar la dirección: qué se estudia en el usuario más allá de pedazos de la música [de acuerdo con W5 de los pedazos elementales de la música]. Preferencias del u en tipo: llaves; grupos identificables de llaves [ritmo, tempo, golpe]; donde el clímax de canciones se pone...

- Sugiere el tipo sonidos que mejor alcanzar [sicosociológico/humor] el effect= deseado para los oyentes:

--D: u = selecciona del tipo del menú de efecto deseado = K (teclado del `) en la información sobre el público objetivo [uip] = analizador = guía sugiere: las pistas/tipo de sonidos [de la existencia] que sintetiza = el ~ u del oscilador oyen = el usuario k en su respuesta a los sonidos sugeridos [eg.: bueno o malo u otros indicadores para mejorar el tipo sonidos sugeridos] = el analizador configura de nuevo sugerencias más cercano a qué usuario desea = suena creado = almacenado en memoria.

- 'Guides= el simulador del movimiento 2D-040:

Los sonidos aparecen empezar con los altavoces delanteros, y van a la parte posterior.

- Instrumentos musicales de enseñanza 4281579 de la palmadita 4331061 de los E.E.U.U.

HOSPITALIDAD:

. Usos de la guía:

- Sugiere que el tipo hospitalidades para el user= basado en uip-adapte.

EJERCICIO:

. Usos de la guía:

- Sugiere el tipo ejercicios/movimientos del cuerpo: El uip médico estudia la dolencia del usuario antes de que/durante/después de que el exercising= analice el tipo resultados de cada ejercicio posible ['valor de cuentas de cada uno] = sugiera el tipo ejercicio.

--El tipo usuario de los resultados puede desear tener en themselves= y qué él selecciona de menú del interruptor: una energía más física/más mental [capacidad del pensamiento creativo]; mejorar el condition= médico en la consideración con la dolencia del u, eg.: sus dolencias específicas; el guide= de la terapia física considera las limitaciones corporales del usuario y cualquier área del cuerpo que necesiten el foco/el handling= especiales [para la rehabilitación]; la guía compensa daño/limitaciones permanentes en usuarios, eg.: edad avanzada, problemas con las partes del cuerpo particulares o miembros.

---'Sugerencias del analizador: longitud de tiempo y rigor del ejercicio; frecuencia por semana...

- Ver: Dirigir los trabajos con: movimiento NR del cuerpo 1J010: para el síndrome de túnel de carpal; formas entretenidas de movimiento; movimientos del cuerpo atados para componer.

Archivo: La introducción de la característica/obra recíprocamente

INTERACTIVO

CÓMO LA CARACTERÍSTICA INTERCONECTA CON EL USUARIO

- Una de las formas múltiples de activación está sin el tacto de un botón en el dispositivo principal. Resultados de la activación en resultados deseados.

. Para Techies: Inclinar el dispositivo para obrar recíprocamente con él o qué controla; ventilar el cojín; Reino Unido.

- Activa: Las funciones se activan que - [usuario generado] señal activan uno o más de elementos siguientes: hace un sonido o una música ("compositor"); da una declaración verbal ("discurso"); hace luces; (% " del notificador"); movimientos sí mismo y u otro objeto; imagen de los cambios y o palabras en la exhibición ("S"); inicia la función que puede también ser activada alternativo presionando el botón apropiado; transmite la señal a otro dispositivo vía el alambre o la radio; notificador para iniciar la función deseada.

- Otro: micrófono ("mic"); "M"; tipo de señal o de activación alterable vía los pp, o carro (cartucho del software del `) de softwares alternativos; carácter; % del localizador; P.M.; "S"; %distancer; entretener; "C"; %float; md; Reino Unido; ratón; multiusos; oscilador; adaptarse (UIP); los datos desearon por el usuario - > impresora; cuenta; synth; tds; juguete; vc; vr; "corregir".

- Dibujo: usuario (tiene deseos) = k (teclado)/sensores (el sistema detecta (qué, donde, porqué, cuando y cómo) la actividad w5 del usuario) = sistema (responde según: los deseos del u, se adaptan (UIP), w5 (qué, donde, porqué, cuando y cómo) de la situación, etc+).

- Ver el "cerebro": la característica del system (también vista como parte) se adapta según circunstancias. % "de la facturación"

- Lugar de reunión electrónica: Mejora en la patente 5347306 de los E.E.U.U.: El ~ de "C" animó el lugar de reunión electrónica para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" =

TENER ACCESO (necesitado para cada participante (usuario) ensamblar) al nr de // del ANALIZADOR de // ((qué, donde, porqué, cuando y cómo) las funciones de sistema cómo/w5 como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas de u [el usuario]) (notifica) (cuando piden responder o debe notar el usuario ocurrencias señaladas) banda de // del oscilador de // (comunicador sano saliente) (comunicación verbal) (programa informático) (cómo cada usuario "obra recíprocamente" con uno a/sistema) // q (el usuario y o el sistema se hace las preguntas) (contestadas diferentemente según usuario) // r (teledirigido) (dispositivo del control/de comunicación del u) RANURADOR de // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (usuario) el envío/que recibe está/w5 (qué del usuario, donde, porqué, cuando y cómo) de ESTADO de // de la CUENTA de // de la situación) (de cada usuario) (de: cada usuario/sus acciones) // tds (característica) de la estampilla de fecha del tiempo // t (telecomunicaciones) (cómo "obra recíprocamente" cada usuario w: otros usuarios/m) PISTA de // (progreso/cambios de cada usuario) // [SE ADAPTAN ()/"del UIP multiusos" = (cada usuario = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada usuario = "obra recíprocamente" = aprende de o enseña a otro = usuario (de diversa manera = adaptarse (el UIP)) // "carro" // "M".

+ "acceso": El sistema "analiza" para el comportamiento "interactivo" inusual del "usuario". Basado encendido ADAPTARSE (UIP) - DB. Ver los "VAGOS de los accesos".

. A/V interactivo (adaptación): Interactivo permite al analizador controlar el reconocedor audio, y al reconocedor visual [para los juegos]. Adaptación audio/visual para [juegos del `]. Sonar [oscilador del `- comunicador sano saliente] las guías y da el Info relacionado cuenta.

- el oscilador del `adapta a [cambiando] [humor/cuenta del `] de cada [situación del juego del `]; y adaptado a las preferencias sanas UIP-adaptadas del usuario. Es decir: sastres al conocimiento único y a los niveles experimentales del usuario [por analizador del comportamiento]. Cada usuario dado los mismos estímulos/Info tiene experiencias de diferenciación [con o sin la adaptación de sus experiencias].

- Mensajes de A/V: [muy] bajo al medio, [muy] altos niveles de modificación de: tensión, señalada humores, establecimiento del paso, y drama.

- Página leída 53 "de la música elegante del combate" en juego revelador la edición de abril de 2006. GDMag.com en localizaciones del área de San Francisco Bay. Juegos video a estudiar: Mal residente [4], corazones del reino, fabricante de vinos astuto.

- Subpartes: Juegos lineares del juego.

- Ver que la "experiencia" de la cual es que "obra recíprocamente" un subconjunto.

- Una de las formas múltiples de activación está sin el tacto de un botón en el dispositivo principal. Resultados de la activación en resultados deseados. Las interacciones se adaptan.

- Para Techies: Cómo activar el dibujo: Modos de activación. Lo que sigue es uno o más de los modos posibles en los cuales la activación ocurre. Activa una señal vía uno de los métodos siguientes sin el tacto de un botón: el usuario activa vía ("R") el modo alejado ("telecontrol"), eg.: el usuario hace el sonido vocal, chapaleta, activa un distancer), toca un grito de "C" ----%tilt; cojín del aire; Reino Unido. Activa: Las funciones se activan que -

señal activan uno o más de elementos siguientes: hace un sonido o una música ("compositor"); da una declaración verbal ("discurso"); hace luces; (% " del notificador"); movimientos sí mismo y u otro objeto; imagen de los cambios y o palabras en la exhibición ("S"); inicia la función que puede también ser activada alternativo presionando el botón apropiado; transmite la señal a otro dispositivo vía el alambre o la radio; notificador para iniciar la función deseada.

--Otro: micrófono ("mic"); "M"; tipo de señal o de activación alterable vía los pp, o carro (cartucho del software del `) de softwares alternativos; carácter; % del localizador; P.M.; "S"; %distancer; entretener; "C"; %float; md; Reino Unido; ratón; multiusos; oscilador; adaptarse (UIP); los datos desearon por el usuario -> impresora; cuenta; synth; tds; juguete; vc; vr; "corregir".

- Dibujo: Usuario (tiene deseos) = k (teclado)/sensores (el sistema detecta (qué, donde, porqué, cuando y cómo) la actividad w5 del usuario) = sistema (responde según: los deseos del u, se adaptan (UIP), w5 (qué, donde, porqué, cuando y cómo) de la situación, etc+).

- Ver el "cerebro": la característica del system (también vista como parte) se adapta según circunstancias.

% "de la facturación"

. Lugar de reunión electrónica: Mejora en la patente 5347306 de los E.E.U.U.: El ~ de "C" animó el lugar de reunión electrónica para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" =

. TENER ACCESO (necesitado para cada participante (usuario) ensamblar) AL ANALIZADOR de // ((qué, a adonde, porqué, cuando y cómo) funciones de sistema cómo/w5 como (según el uip-tailor/pr/k)) la banda deseada de // del oscilador de // del NOTIFICADOR de // EDIT (acciones/declaraciones/respuestas del usuario) // (cuando piden responder o debe notar el usuario ocurrencias señaladas) (comunicador sano saliente) (comunicación verbal) (programa informático) (cómo cada usuario "obra recíprocamente" con uno a/sistema) // q (el usuario y o el sistema se hace las preguntas) (contestadas diferentemente según usuario) // r (teledirigido) (el dispositivo del control/de comunicación del u) RANURADOR de // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (usuario) el envío/que recibe a usuarios están/w5 (qué, donde, porqué, cuando y cómo) de ESTADO de // de la CUENTA de // de la situación) (de cada usuario) (de: cada usuario/sus acciones) // tds (característica) de la estampilla de fecha del tiempo // t (telecomunicaciones) (cómo "obra recíprocamente" cada usuario w: otros usuarios/m) PISTA de // (progreso/cambios de cada usuario) // [SE ADAPTAN ()/"del UIP multiusos" = (cada usuario = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada usuario = "obra recíprocamente" = aprende de o enseña a otro = usuario (de diversos manera = uip) // "carro" // "M".

- VER: "Experiencia" de la cual también es "obra recíprocamente" un subconjunto.

Archivo: Introducción/K - teclado de las características

FUNCIÓN DE "K ": TECLADO, TELEDIRIGIDO

LLAVES NECESARIAS de las LUCES del SISTEMA de ++ R52-1 SOLAMENTE: Para simplificar uso, solamente las llaves necesarias se demuestran en el teclado según el tipo programa. Mecanografiar el software y las llaves capacidad del usuario disponible del fósforo. Llaves del estándar o de la pantalla táctil. Usos: teclados de la computadora o de la música; sistemas con seguridad limitada, donde está solamente capaz cada usuario de saber sobre la existencia de llaves limitadas; diferenciación hablada o lenguajes de programación requeridos en el mismo hardware.

- ACCESS+: (las llaves se encienden según el visto bueno de seguridad dado al usuario aplicable, por lo tanto limitando sus funciones potenciales tan bien como entendiendo lo que pueden hacer en sistema); CARRO: (banda que las llaves exhiben ("S") w5); "M": (controles exhibición de cada llave); MULTIUSOS: ; OSCILADOR (también ajustar al programa aplicable conectado con la manera que las llaves encienden para arriba w5); Banda: ; IMPRESORA: ; Q: ; R: (llaves en ("R") unidad de control alejada); S: ; Teléfono: (tr); UIP: (las ayudas determinan qué se exhibe en llaves y o qué programas el usuario puede utilizar y cómo se adaptan al usuario).
- mucho en un KN anterior de enero de 94 o anterior, eg.: utilizado para los teclados de la música, donde solamente las llaves necesarias para el programa se encienden para arriba, para el uso/en el punto de venta, interno, simplificando uso. Idea discutida vago (eg.: ningunos diagramas demostrados nunca) con toda la industria musical japonesa importante de enero de 94.
- aplicaciones R53.
- D: u diferenciación (de los usuarios w (con): factors1) = K (teclado del `) (cambiable) = C (computadora) del `(interruptor) = s (k:) interactivo/de la pantalla táctil/oscilador o impresora (el oscilador o imprime la materia seleccionada según cualquier criterio de diferenciación que determina el tipo k o la función del interruptor (software del `) usable).

--1 = capacidad/acceso (visto bueno de seguridad)/tipo función o uso deseado/tipo lengua hablado/uip/m/interruptor (software del `)/uno o más u (multiusos)/cuenta/paladio/q/wa

Palillo teledirigido -5E020 con el interruptor: solamente esas posiciones/interruptores que son aplicables para el tipo uso emitir/no emitirán el tono (oscilador) como confirmación, en la ayuda del palillo/sistema del uso de u.

BOLA del ESPACIO R204: Bola, que se rueda en la plataforma sensible, que también tiene botones adicionales separados. Actúa como "ratón" para la computadora ("C"). El fabricante es Spaceball. El 15 de marzo de 94 "Brutus", p.75, publicó en Japón.

> dial de la música de la crepe R205. Movido a C119.

> la tableta manuscrita de la imagen de la entrada de la computadora R222 saca en tapa el teclado. El 27 de mayo de 93 agudo JT se movió a "k" 6.96

LLAVES MODIFICADAS para requisitos particulares 1R-52: Las llaves de teclado ['iconos] tienen LCD en el cual los cambios según el usuario del programa estén. Solamente la información aplicable sobre llaves necesarias se exhibe en llave. [revelador: Minerva KK, fabricante: Sanko Densan KK, división de Kyushu Sangyo Kotsu KK, NTT es un usuario. Del 12 semanario de sept. 92 "Nikkei"]

- versiones más simples pueden: hacer que la luz vaya con./desc. y o que cambie el color (que señala la importancia/el tipo función para la llave). Esta luz puede estar encendida (con.)/cerca de llave/tiene teclado demostrado en el S.

- OTD:

ACCESO: (las llaves se encienden según el visto bueno de seguridad dado al usuario aplicable, por lo tanto limitando sus funciones potenciales tan bien como entendiendo lo que pueden hacer en sistema); ARTISTA: ; CARRO: (banda que las llaves exhiben w5); M: (controles exhibición de cada llave); MULTIUSOS: ; OSCILADOR (también ajustar al programa aplicable conectado con ellos la manera que las llaves encienden para arriba w5); Banda: ; IMPRESORA: ; Q: ; R: (llaves en unidad teledirigida); S: ; UIP: (las ayudas determinan qué se exhibe en llaves y o qué programas el usuario puede utilizar y cómo se adaptan al usuario).

. - El calor de los dedos (mano, cuerpo) crea señales. La longitud del dedo del tiempo está allí/presión determina códigos de diferenciación.

PANTALLA CILÍNDRICA: el usuario puede ver a partir de 360 grados. Se puede juntar con "multimedias" usar altavoces formados esfera existente.

Ejemplo: el usuario camina sobre sitio y obra recíprocamente con la pantalla sin importar donde están, y los anteojos del vr (realidad virtual del `) no los restringen.

- Opción separada de la compatibilidad del amaestrador de la realidad virtual: aprender cómo utilizar el producto en un sistema de entrenamiento de la realidad virtual. Ése es usted se imagina que usted está utilizando el producto en situaciones de la vida real.

- % de la exhibición se pueden proyectar sobre superficie plana (la pared o la pantalla blanca). Los tactos del usuario, y o vienen cerca de tocar la pieza deseada de la pantalla (imagen) (que retrata un botón). Los sensores determinan el movimiento y el acto del usuario (dedo/mano) como si tal posición respecto a la proyección fuera tocada (como con una pantalla táctil de la CRT). Estos "sensores" pueden funcionar como los sensores existentes de la pantalla táctil de la CRT, el disparar de la luz laser (tales luces pueden ser movidas (P.M. (automáticamente) /pp según una rejilla on/near la proyección (del mueble). La proyección movió el by^: mano, localización del paladio, pp/mp. El sensor puede también ser to^ sensible: calor del cuerpo, vibración. Proyectos en multi-colores. Dibujo: superficie plana space=some del =air del data=c=converter=projector (lente para la proyección).

- o-C45 organizador - Walkietalkie: usando la luz infrarroja, puede comunicar entre dos organizadores hasta 8 metros. "JR estupendo de Denshi Techo". Casio. Las ventas comenzaron el noviembre de 92. Yomiuri edición del 20 de octubre de 93. Ningul□n arte. recortes. Dibujo: C45 = telecontrol del ~ del "teléfono "

- Ratón del o-RATÓN = de la computadora, o pluma de "C" y sistema de la tableta vía el cual registra su movimiento en el dispositivo significando instrucciones la correspondencia.
- D: telecontrol ("R") = tr (alambre o radio) = "C" = función
- OTD: Los modos activados por el ratón están en la exhibición ("S"); diversos softwares que funcionan en sistema interpretarán el ratón diferentemente; cp; transmite con o sin los alambres; %cc.
- o-C99 bola que se rueda en la plataforma sensible, que también tiene, botones adicionales separados. Actúa como "ratón" para "C". El fabricante es bola del espacio. El 15 de marzo de 94 "Brutus", p.75, publicó en Japón. Dibujo: uk/C99/remote/tel = c = controla cualquier otro producto deseado.

NÓDULOS DEL ACCESO DEL `:

El usuario (u) incorpora datos en sistema vía las piezas separadas siguientes explicadas en este archivo: "Reino Unido" (usuario que presiona los botones); Control "alejado"; "Palmada"; "Discurso"; "Acceso".
- D: K (teclado del `) = C (computadora) = S (pantalla)
- ~ "analizador visual" del "acceso" del ~ de "K" = función deseada: necesidad de cambiar el aspecto "señalado" de la imagen. Eg.: la tercera línea de la izquierda del dedo índice derecho necesita ser borrada o "ser corregida de otra manera": para alcanzar la 95.a función deseada. Ver "acceso" para los detalles, a saber su "subconjunto de la contraseña del cambio".

el proceso del "acceso" de ++ es un subconjunto de entrar en señales a la función de control. Ver el "acceso". Cualquier generation= de la señal puede ser control= usado del to= "señalado " = las funciones.

Dispositivo de la PALMADITA 5486122 de los E.E.U.U. y método computacionales usables autónomos de expresión artística usando el "juego": Los dispositivos educativos que usan métodos educativos process-oriented se divulgan para preparar a niños para el teclado. El dispositivo incluye sistemas de guantes y de indicia aplicados a los dedos de guantes para proporcionar las representaciones ilustradas del teclado.

TECLADO de la PANTALLA 6B510: encoger a tablero dominante estándar teniéndolo exhibió en forma miniaturizada en la pantalla, permitiendo el uso de dos plumas (una para cada mano) a la llave en la información deseada sin el problema cuidadosamente de escribir toda en la impresión, que todavía pudo conseguir faltar-interpretada por la computadora ("C")
- las llaves se exhiben en el formato de la rejilla, usuario pueden incluso crear para poseer las llaves ['iconos] con propias funciones deseadas, eg.: el deletreado extranjero fácil, las funciones especializadas, el usuario del etc. pueden organizar el teclado en formato personalizado también, eg.: para las funciones especializadas, los gustos personales, el etc.
- el tablero dominante puede estar de estándar o de estilo miniaturizado; estilos más grandes pueden trabajar con los dedos también

- tener teclados múltiples en la pantalla con los softwares múltiples que funcionan simultáneamente. Es como accionar la palanca entre diversas computadoras sin el apuro del tener más de una máquina.

Las llaves de teclado R52 ['iconos] tienen LCD, en el cual los cambios según el usuario del programa están. Solamente la información aplicable sobre llaves necesarias se exhibe en llave. [revelador: Minerva KK, fabricante: Sanko Densan KK, división de Kyushu Sangyo Kotsu KK, NTT es un usuario. Del 12 semanario de sept. 92 "Nikkei"]

- versiones más simples pueden: hacer que la luz vaya con./desc. y o que cambie el color (que señala la importancia/el tipo función para la llave). Esta luz puede estar encendida (con.)/cerca de llave/tiene teclado demostrado en el S.

Palillo teledirigido -5E020 con el interruptor: solamente esas posiciones/interruptores que son aplicables para el tipo uso emitir/no emitirán el tono (oscilador) como confirmación, en la ayuda del palillo/sistema del uso de u.

DATOS QUE ENTRAN: incorporando datos en el dispositivo electrónico (pequeño teclado) vía métodos posibles numerosos.

- D1: la acción humana (botones de las prensas) = entrada de los botones de los datos (1 a 100) /display = tr = "C" = deseó la función (en atado/separó el producto/el sistema).

- D2: 1uk~2display~ convertidor 3osc = 4c = 5signal = 6tr/6rc (vía la radio/el alambre) = convertidor 7signal = 8c = 9 (el producto sigue comando deseado).

- OTD: El producto/el sistema enteros es impermeables incluyendo Reino Unido (llaves con el tipo botones del diafragma); Si el ambiente es oscuro cuando se activa el sistema, los botones (botones importantes, esos botones que son mp/pp) pueden encenderse para arriba en las maneras diferentes (colores, tamaños, demostrando diverso deletreado) según su tipo función (qué botón representa); los botones mecanografiados y o el modo que activa pueden aparecer en la "exhibición"; botones hechos de (plástico, plástico recubierto de goma o metal, madera esmaltados); pantalla de +interactive (pantalla táctil/tableta de la entrada de la imagen (Newton del Apple Computer)) puede permitir la entrada de datos (Reino Unido); el propósito de cada botón se puede etiquetar en sí mismo, o acercarle: la luz por los botones particulares puede ser encendida cuando el botón está en el modo activo (el botón de "ON"); el interruptor de 5a-460 Touchless es otra forma vía la cual activar cualquie botón o interruptor; ratón; uno o más "exhibiciones posibles" están en iguales, o diverso lado de: cualesquiera, o llaves principales; algunas de las llaves se pueden exhibir en (multicolor); % vía sistema de "C" pueden convertir palabras mecanografiadas en el modo audio, dibujando: uk=c=osc, c (sabe/memoriza a hablar las palabras según las señales apropiadas (vía Reino Unido);

D: uk/remote = M~c (los fósforos reconocieron las palabras w sus sonidos) = oscilador/exhibición. Ver K211-5A-890 para los detalles.

- Dial de la música de la crepe. Cada modulación sana de los controles de disco diversa. Hecho por Sony. Vio en el 15 de marzo de 94 el "Brutus" publicado en Japón. Cada disco puede controlar cualquier otro elemento también, eg.: "exhibición", "C".

- Detalles en "Reino Unido" en el archivo Parts&. Este archivo también demuestra que los ejemplos de cómo una persona puede que también Reino Unido en un dispositivo vía el "telecontrol" se explican en Parts&.

Exhibición interactiva

La exhibición (pantalla táctil) puede retratar en los modos usados en la realidad virtual ("vr"). Efectos de control (PD/UK/"telecontrol") = tr (transmite) = c~display. Ejemplos:

- Las imágenes se presentan dos dimensiones/3D (según el interruptor).
- El acordar a la localización del paladio, presentación (tamaño/ángulo/estilo/color/contenido) de ciertos elementos en la exhibición ("S") puede cambiar. Ejemplo: la persona/el objeto importante agranda como se va el usuario, creando un más interactivo/vive como la sensación; mientras que la persona camina a un lado, él comienza a considerar un diverso ángulo de lo que él está viendo. Cuando está cercano ascendente, solamente el centro de la pantalla se utiliza; mientras que las partes posteriores del paladio (dispositivo de colocación) lejos, de la pantalla se utilizan cada vez más así que el tamaño del cuadro puede aparecer más grande al espectador humano.
- Efectos visuales que controlan. Ejemplos: 1] El usuario del modo está adentro dentro del sistema del producto (resultados del modo de la "hospitalidad" en colores/tamaños/formas más agradables/tipo gráficos usados). 2] UIP (el sistema determina efectos particulares es más probable influenciar a usuario en "humores deseados", comportamiento (hacer una compra; mejorar el funcionamiento de trabajo). 3] Otro: pp; P.M.; controles del usuario vía /uk "alejado"

MODO: El tipo modo de K (teclado del `) se puede seleccionar según ^: quién incorpora los datos; cómo es el más conveniente/eficaz incorporar los datos; de donde los datos pueden desear ser incorporado (el "telecontrol" permite más libertad); el nivel de precisión necesitó en datos que entraban.

- K se puede utilizar para incorporar el ^ de los datos para: +control un producto; poner el Info en la memoria de computadora (para la banda (programación)).
- El modo preferido de entrada de datos es incorporado "adrede" adentro por los usuarios: [Las opciones de #2 encendido abajo, pueden ser tecnológico factibles (por lo menos para los comandos simples/la generación de señal)

1r: botones dominantes atados con alambre al dispositivo

2do: botones dominantes sobre ("R") el dispositivo de control alejado

3ro: el usuario incorpora datos vía uno de los otros medios (pantalla táctil, Newton del Apple Computer, interruptor del laser (otros?))

4to: ambiente de los monitores de sistema (cambios en el ambiente (resultados en la generación de señales)) cuáles son entonces (interpretado por el sistema como mp/pp). Ejemplo: mi (resultado de la alarma de la mañana) en deseado resultado (simple materia por ejemplo dando vuelta dispositivo en (cuando la persona está en)/que apaga del sitio (cuando se van)). Este modo no se puede dedicar necesario "útil" adentro para generar un código (una ocurrencia/una acción puede accionar comando sin el deseo/que lo sabe del partido que acciona (persona/animal) necesario causará tal accionar.

--Esta definición de la parte se aplica a: "Reino Unido", y "telecontrol". [En "telecontrol" sin embargo, las prioridades (la opción de la preferencia/de una prioridad más baja es una ramificación más lejana hacia fuera) para los primeros dos se invierten de "Reino Unido".

- Para hacer el sistema más fácil utilizar, las llaves/los interruptores deseados pueden ser pp/mp a, se encienden para arriba/se activen, según la función deseada (parámetro). Ejemplo: la pantalla táctil o Newton de Apple puede tener el tipo de gráficos para los botones como deseado (pp/mp). [cuando tales botones se accionan/oscilador tocado (hace una señal sonora).

-1R-52: Las llaves de teclado tienen LCD en el cual los cambios según el usuario del programa estén. Solamente la información aplicable sobre llaves necesarias se exhibe en llave.

MÁS ADELANTE LEÍDA "K" OFRECE QUIZÁ:

El usuario (u) incorpora datos en sistema vía las piezas separadas siguientes explicadas en este archivo: "Reino Unido" (usuario que presiona los botones); Control "alejado"; "Palmada"; "Discurso"; "Acceso".

- D: K = C (computadora) = S (pantalla)

- ~ "analizador visual" del "acceso" del ~ de "K" = función deseada: necesidad de cambiar el aspecto "señalado" de la imagen. Eg.: la tercera línea de la izquierda del dedo índice derecho necesita ser borrada o "ser corregida de otra manera": para alcanzar la 95.a función deseada. Ver "acceso" para los detalles, a saber su "subconjunto de la contraseña del cambio".

el proceso del "acceso" de ++ es un subconjunto de entrar en señales a la función de control. Ver el "acceso". Cualquier generation= de la señal puede ser control= usado del to= "señalado " = las funciones.

imágenes "interactivas" de ++: para las computadoras o las pantallas interactivas: Puede crear llaves o iconos "interactivos". Para cualquie KN: sistema de diseño adaptante 1D-010. Ver el "artista" = las "imágenes interactivas". UIP.

Dispositivo de la palmadita 5486122 de los E.E.U.U. y método computacionales usables autónomos de expresión artística usando el "juego": Los dispositivos educativos que usan métodos educativos process-oriented se divulgan para preparar a niños para el teclado. El dispositivo incluye sistemas de guantes y de indicia aplicados a los dedos de guantes para proporcionar las representaciones ilustradas del teclado.

Recordatorio G101 de la tarea

Colocando la invención enseña a niños a hacer sus tareas, preparación y a guardar buen comportamiento. También aprende las necesidades de compra del usuario. Entonces sugiere listo qué comprar donde y cuando, y recuerda a usuario cuál es necesario en la trayectoria del recorrido. En un cierto plazo, la invención llega a ser más de uso fácil, mejor aprendiendo las necesidades del comprador. Por ejemplo, hará pocas preguntas apuntadas basadas en los perfiles característicos de compra del usuario.

Collar G105 de la distancia del GPS

Invenciones mejoradas del collar del animal doméstico del sistema de colocación:

de animar la aplicación positiva del comportamiento. La persona entrena a su animal doméstico para asociar una de muchas señales como guardián del comportamiento positivo.□maneras amistosas La señal se puede emitir después de eso para mantener comportamiento positivo hecho cumplir.

del collar pueden incluir: vibración, frecuencias sanas, voz previa de antemano del dueño, olores favorables, etc.□las señales del animal doméstico

vía teledirigido, amaestrador activa el mismo tipo de señales al recompensar el animal doméstico con el alimento para el buen comportamiento.□ El animal doméstico aprende asociar sensaciones positivas a la señal. El collar puede accionar después de eso automáticamente señales sin la presencia del amaestrador.

determinarán qué comportamientos puede practicar el animal doméstico que sean positivos o negativos.□los analizadores del comportamiento La programación de la información de usuario aprende de, y ajusta al animal doméstico, y a su amaestrador.

como las señales menos atractivas suaves alternativas pasadas puede ser emitido cuando se practica el comportamiento pobre.□ Poco o nada de entrenamiento es necesario para este baja característica.

: permanecer dentro o lejos de ciertas áreas, tales como gatos que caminan en tapas contrarias; o entrando la yarda del vecino.□entrenamiento inmóvil de la localización

ayuda sobre animales domésticos del peso por tiempo de restricción de la consumición, incluso cuando está bien comportada.□

ahora tarda menos tiempo para entrenar a su animal doméstico.□ Mientras que es más eficaz en animales domésticos jovenes, también trabaja con animales más viejos.

ayudan a nuestra policía, y a los portadores de correo.□otras características

Atención Rewarder G106

Recompensar a empleados para ser en el trabajo, y para demostrando ellos están trabajando activamente. Más eficientes que sistemas existentes, y reduce costes de la gerencia. El sistema también puede ayudar a manejar a los supervisores, cuyas oficinas principales están en otras localizaciones. La invención también verifica que los niños hicieran su preparación en su escritorio.

El sistema predice quién comprará lo que y donde G108

La invención compara las características de compra de compradores señalados con pronto para ser productos lanzados. La vecindad, más donde hacen compras y para qué eligen a los compradores. Patrones encendido basados características de la compra de los compradores las' los últimos se comparan a las características del nuevo producto.

- Métodos de la predicción: Las probabilidades matemáticas para las ventas, se dan, o al grupo de individuos. Anotan a los compradores también para que su buena voluntad intente nuevos productos en la categoría general en de la cual el nuevo producto viene.

- Los minoristas importantes pueden controlar los precios altos que practicarán para esta información, y que los no-competidores se pueden autorizar para utilizar. El sistema integrará la información de bases de datos diversas.

- El nuevo software de la localización de almacén puede mejorar las localizaciones ideales de punta, ahorrando millones de dólares.

El GPS basó a intérprete de la lengua para los viajeros G110

La invención interpreta y ajusta su comunicación en el dialecto local. Corrige las palabras y la tonalidad para la ocasión. Los imitadores del sistema con cómo la gente habla naturalmente diferentemente dicen a niños, o a clientes potenciales. Estadístico, los visitantes establecerán un mejor informe dejando el acento de Brooklyn, cuando en un partido en el Greenwich Village de Manhattan. La invención también se adaptará a la personalidad del usuario basada en la programación de la información de usuario. Esto será especialmente útil

en Japón donde están populares las invenciones que ayudan a inducir armonía. Criaron al inventor principal, Steven Kays, en Tokio. También da a niños una perspectiva más global el vida.

La localización basó el selector de modo de la comunicación G103

Selectores del canal de comunicaciones basados en la localización del usuario:

El sistema incita a usuario seleccionar de mejores canales para esa localización. Los usuarios dados la opción, pueden querer los canales selectos con excepción de los que el sistema pueda dar. El usuario de las ayudas predice qué canales pueden ser apretados menos. La información de usuario que programa | adapta sugerencias al usuario

necesidades percibidas.

™ G115 del suplemento del GPS

Conseguir un mejor alcance cuando gama del GPS exterior', por ejemplo en edificios grandes, las barrancas o subterráneo profundas. Tres identificadores de la localización del punto se agregan sobre sistemas del GPS. El GPS localiza el edificio. Mejoramos cómo el suplemento identifica blancos. Nuestras invenciones proporcionan muchos usos únicos para esta información en consumidor y usos comerciales.

Archivo: Océano localizadores/1G104 misceláneo

El océano de G104 GPS dimensiona el regulador

Las relaciones espaciales en ambientes oceánicos son dominaron para alzar productividad. Ejemplos:

- Reducir los costes para las industrias pesqueras, eg.: industrias pesqueras de la supervisión.
- Maneras económicas de coger pescados en el océano y las industrias pesqueras anchos vía: Capacidades de la teledetección.
- Reducir los riesgos de enredos de la red de los pescados con RFIDs.

Más:

- territorios marcados para el equipo, controlando donde y cuando va algo.
- integrar con el analizador de la profundidad de agua cerca:

--localizaciones de las redes de los calibradores' en todas las direcciones: encima de, abajo, y lados.

. --invención de ayuda de la guía a viajar o para considerar superficies no planas del suelo marino. Da un cuadro tridimensional.

- Analizador visual del `: determina lo que y dónde una red se basa encendido: analizador visual; la invención de las señales envía (como los palos vivos') para considerar, donde (levemente) está la red móvil; y donde están sus puntos más sólidos de la base/del ancla/de conexión.

% identifica tipos de pescados vía el va

- los usos subacuáticos se aplican a menudo a los panoramas de tierra antedichos, eg.: la tecnología ambiental subacuática en contenedor se puede alterar y aplicar a los ambientes transportados en contenedores tierra antedicha como: los parques zoológicos, (grandes) cercados en áreas, se secan/análisis y seguimiento zoológicos acuáticos.

-

Usos:

- límites donde la gente/las máquinas puede cosechar. Reduce conflictos territoriales (entre las máquinas segadores de los pescados)
- reduce ocasiones de las redes de destrucción del equipo y de otros dispositivos que contienen.
- para las aplicaciones de tierra antedichas. Versión subacuática del cortacéspedes de césped existente del GPS.
- Las señales del GPS esperanzadamente pasan a través del agua, y si no tienen relayers.

-

Señales de la red:

- (océano/aire) las demostraciones/reciben de las señales de la red el Info, señalando su localización (en las ondas/los vientos cambiantes).
- se notifican los enredos (cuando el sistema picosegundo consigue demasiado cercano).
- luminescencia /opacity: analiza el nivel medio de la opacidad que (se excede) el nivel normal para esa zona y o profundidad de agua, y o distancia de la orilla (donde está más vergonzosa). Compara la ruina/la red del nivel in/outside de la contaminación. Utiliza las características del pescado para el UIP, que las ayudas analizan lo que ata la luminescencia con en qué densidad/tipo de organismos (neto) divide en zonas.
- los barcos pesqueros pueden utilizar esto para las localizaciones (del telecontrol) sin redes, y ahorran el tiempo que sabe donde están los pescados (w5)/los animales.
- el polvo de parásitos/de animales (indeseados), determina sus localizaciones W5.

-

Tamaño de la determinación del retén (de los pescados):

- Sensores del `: movimiento, analizadores de sonidos (coge las frecuencias sanas para deseado/indeseado (los tiburones) asoció los sonidos, analizadores visuales.

. - Contaminación/monitores del sensor de las heces para: mercurio, etc.

-

ALCANCE de EXTENSIÓN de la INVENCIÓN - los ejemplos embarullados siguen %:

[las piezas seccionan #1]: U (usuario de esta invención) = funciones aplicables del ~ C (CPU) de la invención [supervisión y análisis de la industria pesquera] =

[Sección #2 de las piezas]: TENER ACCESO (control de seguridad) [el organismo señalado `lleva RFID (que actúa como organismo de la muestra para la escuela) de pescados)] VAGOS de // (analizador) del comportamiento [menos o mayor movimiento, y patrón seguido del movimiento físico (dentro de zona)] La banda MULTIUSOS EDUCATIVA de // del OSCILADOR de // del NOTIFICADOR de // EDIT [selecciona el tipo de acciones/comportamiento (de los pescados) querido] // [] // [] // del CARRO de // [software para el tipo pescado o función de supervisión] [] [] (programación) [] // PS-ZONE [] // QUE PREGUNTA [] las BÚSQUEDAS de // de la CUENTA // SA (analizador/reconocedor sano) // del RANURADOR de // R (teledirigido) [] // [] de sonidos [] y REACCIONA [] la PISTA de // TDS [] // T (telefonía) [] // del SENSOR de // [] [] // UIP (usuario Info que programa) [] // VA (analizador visual/Reconocedor visual) [] // WA (caminata alrededor) [].

Secciones 1 y 2 interactivos.

Archivo: Localizadores/picosegundo 1

Picosegundo - Invenciones del sistema de colocación

Recordatorio de la tarea del compinche G101-R58-1:

El recordatorio de la tarea del GPS aprende las necesidades de compra del usuario. Entonces sugiere listo qué comprar donde y cuando, y recuerda a usuario para cuál es necesario en la trayectoria del recorrido. En un cierto plazo, la invención se convierte en más de uso fácil que aprende mejor las necesidades de usuario. Por ejemplo, hará pocas preguntas apuntadas basadas en los perfiles característicos de compra del usuario. ¡Muchas más características!

-

Una visión excesiva más amplia: Este ayudante personal se familiariza con las necesidades y las preferencias de usuario, molestia de ahorro y falta de memoria. Aprende lo que las necesidades de usuario, cuando y porqué. Pide o sugiere cuál es necesaria, en el mejor tiempo.

-

Características programadas de la información de usuario. Los interfaces utilizador se adaptan a las necesidades de usuario. Ejemplos:

- el GPS dirige a usuarios a quienes los almacenes en las rutas sugeridas del recorrido tienen mercancía que mejor aproxime las necesidades de usuario.

- Sobre 100 funciones de la automatización casera puede ser adaptado al usuario. Ver los archivos de programación confidenciales de la información de usuario.

- La porción del GPS tiene la opción de ser incluido en la invención amplia total.
- Usos del recordatorio del calendario: tareas de hogar; recordatorio para coger las flores en manera al amigo de muchacha.
-

Los usos separados del GPS y otras notas siguen:

-

El sistema incita a usuario qué hacer cuando (según w5) el usuario ha alcanzado destination.(s) el sistema después los avisos deseados donde el usuario debe ir después. Ejemplos:

1] usuario conduce por el supermercado, y se incita cada lunes para coger cierta verduras frescas, fruta y o leche. O el sistema de la automatización casera dice a usuario lo que (refrigerado (el alimento)) artículos a comprar (basado en tener (una cantidad (estimada) baja (en futuro)). El UIP (con Search Engine de la tela) puede sugerir qué (w5) para comprar (en capacidades relacionadas). ¿El aspecto de la tela existe?

- cada usuario (esposo) (vida/que trabaja junto) puede ser dicho' dirigido en qué comprar/get/do. Las características específicas de cada usuario pueden llevarlos para adquirir las diversas funciones/compras basadas encendido, eg.: su localización (de mudanza) (w5); especialidad (que sabe bastantes sobre artículo/la situación para tomar una decisión, eg.: Maria coge el componente electrónico que falta, y Juan (quién está en el país entonces) despeja nieve de la calzada.

2] Sistema de dirección efectuado: sistema de los programas del usuario para notificarlo siempre que él se acerque a un kilómetro del almacén de la limpieza en seco. Sobre alcanzar limpiadores, el sistema incita automáticamente a usuario coger el fertilizante 400 metros lejos. Existe: el autobús de viaje da la información previa sobre la visión para cada sección de la ruta; la localización de los autobuses descifró vía el GPS.

-

Misceláneo:

- Funciones e interfaces simples o sofisticados: El usuario puede programar el sistema para estar casi según lo adaptado a sus necesidades, según lo deseado basado encendido: producto y disponibilidad Info del almacén; exactitud del sistema de colocación y de materias relacionadas; etc.

-

Más Info en el número R58-1 de la invención. Picosegundo: (notifica a usuario qué hacer (w5) cuando el usuario es el lugar cercano en donde podrían hacer tarea señalada, eg.: coger los huevos);

- esto se relaciona con el sistema de autobuses existente del viaje en Japón cuyo oscilador corresponda a la localización de los autobuses.
- D: el tipo tarea del usuario "k" - > los coordenadas de "k" picosegundo para w5 (a saber donde, cuando, qué) encargan - > cuando usuario (las impulsiones/las caminatas cerca (a 5 metros si en metros de la caminata mode/500 si el usuario está en vehículo) llegan en los coordenadas señalados (w5) sistema "notifica más

adelante" el usuario y las demostraciones (s)/tarea necesaria oscilador - > el usuario "k" cuando la tarea logró el notificador necesario no más para esa/cualquier tarea (para el plazo señalado, mientras que vacation).

--el sistema detecta la velocidad del usuario, por lo tanto sabe si está caminando el usuario o puede no/usuario "k" su modo de movimiento.

- OTD D: Esta N sistema =

ACCESO (); ANALIZADOR (qué a hacer cuando, donde, cuando, porqué, cómo (da la mejor ruta para viajar (considerando hora)); CARRO (tipo que analiza el interruptor, mapas); S (); M (); MULTIUSOS (diversas rutas, necesidades, ciudades); NOTIFICADOR (exhibición del oscilador w (que demuestra la dirección, la tarea necesaria)); OSCILADOR (); Banda (); GPS (); Q (direcciones correctas de la calle); ESTADO (demostraciones qué tareas hechas/no hechas).

- TM: Recordatorio de la tarea del GPS; Recordatorio de la tarea; Recordatorio de la tarea de la proximidad; Guía de la proximidad; Guía del compinche.

-

Ayudante grande de las compras del almacén:

Demuestra a usuario donde se localizan los artículos deseados. El usuario puede introducir (audiblemente/el mecanografiar/que chasca) el producto/servicio deseado. Demostraciones del sistema:

--cuál es ahora disponible/más adelante para la orden

--donde está en relación a comprador. Dirige a comprador al punto. O apenas mapa de las demostraciones de donde está el comprador contra la localización de la blanco (para cualquier cosa).

-

Usos de la seguridad (siendo investigado por M. $cox):

El usuario debe estar en localizaciones señaladas y o mide el tiempo, para recibir o para enviar recordatorios, la dirección, notificadores, y o el entrenamiento educativo.

- el recordatorio trabaja solamente para ésos con privilegios de acceso especial, de que pudo geográficamente ser basado también (véase el sistema de la contraseña de la proximidad 1G11).

- los privilegios de conseguir recordados son todos basados en cualquier uno o más el requisito del acceso. Eg.:

--Puede conseguir el acceso a cinco archivos de la red en Sacramento, pero solamente tres en San Jose, California.

--El visto bueno de seguridad puede cambiar (año tras año), por lo tanto los privilegios de acceso asociados están conectados, junto con los requisitos de la proximidad.

- en lugar de ser "recordó", "se incite" la mente del usuario o las "indirectas dadas" en cuanto a lo que (no) pudo/deben para ser hechas la función de la seguridad (acceder). Ciertas contraseñas se pudieron dar solamente a los usuarios/a los sistemas señalados (robustezas/productos portables) cuando están en zonas apropiadas.

- el usuario puede ser molestia ahorrado de incorporar un sensor del calendario del sistema de la automatización casera de la contraseña' acción relacionada acceso, cuando en zonas señaladas (como en el país) (las horas de oficina del exterior) (y no el vacaciones por').

- los altímetros pueden (de) activan características. (Debe ser 0 - los 500M sobre nivel del mar) efectuando el acceso en los planos y cuando en Denver o Zurich, o los valles debajo del nivel del mar (partes de Egipto) o debajo del agua.

-

Colector del bandido de la proximidad:

- La gente de los retenes que tomó accidentalmente o adrede que algo el exterior permitido (geográfico) limita. (Robado) los dispositivos (del portable)/los sistemas/las contraseñas tomadas/el exterior usado la zona señalada (oficina, fábrica, (policía/seguridad) lugar) pueden cambiar el interfaz dado al usuario (ilegítimo). El usuario puede (no) sabe esto; y la información cambiada/falsa el resultar puede ayudar/daño/retén el usuario/el bandido.

- Maria (accidentalmente) transfiere cinco archivos (del sistema) cuando ella debe haber tomado tres. Esos "dos archivos" pueden:

--atascar a Maria (proporcionando interferencias técnicas) dando bastante tiempo para que la seguridad la localice (basado en el dispositivo on/near del picosegundo la computadora/su coche/teléfono celular.

--dos archivos pueden enviar la señal a sugerir del marco principal (exactamente) donde está it/she (trabajando en el sistema en ese minuto (y qué she/it está haciendo (con él)).

--los dos archivos pueden interferir con los otros tres archivos, etc.

- No las funciones relacionadas picosegundo se aplican, eg.: usando la contraseña incorrecta (dondequiera), o con un sistema/un producto que no fue despejado correctamente (electrónicamente) para ser utilizado antes de ser tomado. Atasco del usuario de un teléfono celular robado, computadora, coche (el motor atasca en el centro de ninguna parte - retarda la velocidad máxima para la seguridad, sobre el 1KM, hasta que golpee KM/hr. cero. ¡Más!

- TM: Outsmart a ladrones; Ninguna misericordia para los bandidos; Aprender ser honesto.

-

Apresurar y o medir el tiempo necesario para conseguir almacenar/destinación demostrada. Conecta con (existe) el sistema que demuestra a usuario donde están de mapa de a GPS (global)/de perspectiva de la imagen.

-

ALCANCE de EXTENSIÓN de la INVENCIÓN - los ejemplos embarullados siguen %:

Sección #1 de las piezas: U (usuario de esta invención) = funciones aplicables del ~ C (CPU) de la invención [] =

Sección #2 de las piezas: TENER ACCESO (control de seguridad) [teniendo correcto: el uip, proximidad (del usuario) al sistema/objeto/persona señalados/reconoció la imagen sana o visual, el tiempo y el tipo acción etc (w5)] ANALIZADOR de // [`uip; compara (proximidad/uip relacionada) bases de datos)] VAGOS de // (analizador) del comportamiento [comportamiento del usuario de los correlativos (que compra preferencias/la habilidad fija/cuenta psicologica para que la impaciencia intente nuevos cosas y paso fuera de moldes del social) con: Info/bases de datos cartográficos (comportamiento de mercado regionalmente limitado),] CARRO de // [el usuario deseado de la base de datos del uip desea utilizar; los múltiple-usuarios pueden compartir el hardware con otros (los amigos/los compañeros de trabajo) teniendo acceso al sistema/al hardware en sitio'

remotamente] // EDIT [los artículos adquiribles se entresacan abajo a los artículos con las cuentas más altas basadas encendido (proximidad, los gustos)] // EDUCATIVO [el usuario aprende sobre productos disponibles/servicios/las opciones que las necesidades (del fósforo (su/receptor del regalo))] // MULTIUSOS [los analizadores del `/los sensores/uip (ayudas) determinan qué usuario está utilizando el sistema (si las contraseñas separadas/acceso) no se utiliza; y acumula el NOTIFICADOR aplicable de // de la base de datos del uip por consiguiente] [localizaciones con las cuentas buenas/medias/malas, eg.: colgar las salidas clasificadas por los libros del recorrido como siendo deseado las características (las señoras calientes del sistema de jet en la ropa escasa)] Banda de // del OSCILADOR de // [dialectos/idiomas regionalizados para la zona] (programación) [el uip sugiere al usuario qué software/características a utilizar] el PREGUNTAR de // PS-ZONE [ver la carpeta de la picosegundo-zona] // [el sistema hace proximidad/las preguntas relacionadas con el producto: desarrollo de la base de datos del uip; un mejor usuario de la guía en circunstancia aplicable; las opciones de la opción múltiple para la CUENTA // SA (analizador/reconocedor sano) // del RANURADOR de // R (teledirigido) [conecta con otros (portable/teléfono celular) dispositivos] // del usuario] [conecta a usuario con la compañía o la persona con las altas (er) cuentas] del uip de sonidos [opinión de la sugerencia dada para el uip] // del usuario BUSCAN y REACCIONAN [compara' analiza bases de datos del uip con cuál está en el ambiente] el SENSOR de // [usado para determinar la deseabilidad de características (en el ambiente externo), eg.: analizador, proximmity visuales] de la zona // TDS [las preferencias de usuario pueden cambiar en un cierto plazo, y las ayudas del tds determinan aumento/la disminución de las preferencias por la ventaja del usuario/de comerciantes] // T (telefonía) [comunicación sin hilos (con las bases de datos aplicables)] PISTA de // [desarrolla el uip] // UIP (usuario Info que programa) [más (proximidad atada) datos, la calidad el mejor del uip] // WA (caminata alrededor) [interfaces portables incluye los modos similares a: teléfonos celulares, communicaters negros de la baya, iPods, (estándar) modelos del GPS, cuadernos miniaturizados de la computadora, pantallas táctiles, teclados y o pantallas que son bendable/flexibles o retratan sobre cualquier superficie plana (vía luz) y (acto como) screans del tacto.]. - Posición: El sistema realza/proporciona la información en y de nuestro prototipo del software de la posición (punto de venta) bajo desarrollo. Secciones 1 y 2 interactivos.

- Puntos del registro del interés: Tener registro (base de datos del `) de donde el usuario desea estar. El dispositivo (necesidades) esté prendido.

- Los puntos del interés relacionados con el interés/las manías/las necesidades de una persona, se proyectan. Sobre (`dirigido/al azar) acercamiento, el sistema dará (oscilador) el Info/sugerencias aplicables. Por ejemplo, usted lee un artículo periodístico (en línea), después mete las alimentaciones en diario Info a su dispositivo del picosegundo, permitiendo que usted compruebe hacia fuera qué sucedió/sucede.

Patente 6.992.619 de Estados Unidos

Harrison 31 de enero de 2006

Uso de satélites de colocación globales (GPS) de descubrir y de seleccionar servicios locales

Extracto

Un método y un aparato para asociar la información de localización que corresponde a una localización geográfica a la información sobre los servicios disponibles en la localización geográfica. La información se puede almacenar en una base de datos para el uso subsecuente.

Patente 6.850.844 de Estados Unidos
Walters, y otros 1 de febrero de 2005

Dispositivo portable de la navegación con capacidades del GPS integrado y del cómputo muerto
Extracto
Los aparatos, los sistemas y los métodos se proporcionan para los dispositivos portables de la navegación varia funcionalidad de colocación integrada. El aparato incluye un dispositivo electrónico portable que tiene un procesador en la comunicación con una memoria. La memoria se adapta a los datos relacionados navegación del almacén. Los datos relacionados navegación incluyen datos cartográficos incluyendo un número de localizaciones y los datos indicativos de carreteras de una pluralidad de tipos que conectan las ciertas de las localizaciones. El dispositivo electrónico portable incluye un receptor del GPS adaptado para comunicar con la memoria y el procesador. Y, el dispositivo electrónico portable incluye un componente del cómputo muerto, incluyendo un girocompás de la tarifa, un podómetro, y/o un acelerómetro adaptado para comunicar a la memoria y al procesador.
Solicitud de patente 20050024264 de Estados Unidos
Código bueno A1
Harrison, Edward R. 3 de febrero de 2005

Uso de satélites de colocación globales (GPS) de descubrir y de seleccionar servicios locales
Extracto:
Un método y un aparato para asociar la información de localización que corresponde a una localización geográfica a la información sobre los servicios disponibles en la localización geográfica. La información se puede almacenar en una base de datos para el uso subsecuente.

G102-3C090 Distancer sano - estudiar más antes de promoverlo:

Dispositivo de sonido del radio: Se inician las funciones interesantes cuando dos o más cruces de los sensores señalaron distancias. Usos para:
- Juguetes y juegos
- Comercialización

Campo abierto enorme; ¿pero también relacionado con muchas patentes débiles? Ver la pieza de la Picosegundo-Zona también.

Repetido: Los sonidos emitieron dentro de cuando dispositivos dos o señalada van o de una distancia programable. Los transmisores más inmóviles se pueden colocar en un punto por base de punto, y o un formato linear.

-

- Alcance amplio: Cuando dos o más objetos (con un RFID/PD) conseguir a una distancia señalada, después el sistema reaccionará automáticamente según lo programado. (véase la "búsqueda del `y reaccionar" la parte). Mientras que esta función puede ser demasiado amplia para la patentabilidad, los modos sanos y relacionados de la comunicación se pueden considerar, eg.: ¡el oscilador (comunicador sano saliente), y el notificador parte, y más!

- los sonidos/el oscilador/las comunicaciones pueden variar no en el momento en que la línea es in/out que viene cruzado, pero también por hasta dónde los radios están siendo cambiados. Eg.: cortinas más profundas del rojo para el cierre que viene, o notificaciones amonestadoras corregidas la salida posterior en el mar (el tablero de agua del niño va).

- el mamífero consiguió más lejos del hogar, más incómoda la pulsera (del tobillo). Ver nuestras invenciones relacionadas (en modos de la comunicación).

- el `notifica siempre que el picosegundo esté (entrando) en una buena/mala zona, y o radio señalado de la base de orígen (unidad.

-

Usos:

Usos de muestra (para qué califica como generador de señal) (y cómo la señal se puede utilizar):

- colocar los transmisores en una línea que funciona a lo largo de un área peligrosa. Los sonidos advierten (cuando el bebé va cerca de área peligrosa). El notificador puede notificar por el sonido/el texto en o lejos de la ocurrencia.

- la naturaleza de la ocurrencia da lugar a diversos tipos de sonidos o de mensajes del oscilador.

- los sonidos específicos a inducir/rechazan gente/los animales (según qué demostración de los estudios es más conducente/económica) se emiten.

Aspectos de la hospitalidad del `:

- Instrumentos musicales que juegan junto el cambio sus sonidos según cómo está cercano o lejano se mueven desde uno a. Puede estar para una sola persona utilizar dos o más porciones; o dos o más personas con sus instrumentos. Uno o más posiciones en una zona, y o los movimientos del cuerpo, o uso del disparador teledirigido de la poder señalaron comandos. Utiliza una lengua basada en combinar uno o más de éstos.

--se aplica siempre que el volumen de sonidos, frecuencia, o tipo sonido deba ser alterado según hasta dónde o cerca dos o más porciones de uno a.

. - los sonidos ocurren al cruzar la línea. ¿Existe? En mercado está el dispositivo para guardar perros detrás del alambre subterráneo, suavemente dando una sacudida eléctrica a través del collar de perro cuando el perro se acerca a la línea (cerca invisible).

- juguetes - cuando un coche policía conduce cerca de un cierto objeto o lugar, sirena, o una declaración audio se enciende, eg.: "tirar sobre"

- cuando la persona o el otro organismo u objeto viene cerca bastante (o va suficientemente lejos), acciona (o desactiva) a: el sonido, la luz, o la otra función electrónica

-

Misceláneo:

- Uso de la seguridad: En vez de sonido, una alarma (notificador del `) (silenciosamente) activada cuando ocurre un acontecimiento señalado de la proximidad.

- la presencia de otros sonidos también reconocidos por búsqueda del analyzer= de los sonidos y reacciona.

- se relaciona con RFID, eg.: la alarma sale cuando etiqueta del almacén no quitada de mercancía que es realizada del almacén (zona del `).

- la emisión de sonidos (del tipo) de otra/del objeto auxiliar puede ser sonido analizado, y reaccionado (búsqueda y reaccionado a) (de maneras como qué tipo de distancia tenía según lo determinado vía el picosegundo).

- La estrategia de búsqueda de la palmadita consiguió las patentes cero: (GPS y (sonido o sonidos) y (disparador o disparadores) y ("va más allá de" o la distancia)).

- Alternativas al paladio múltiple: Quizá uno o más objetos/gente no tienen un PD/RFID se pueden substituir por un detector de movimiento, reconocedor visual.

-

ALCANCE de EXTENSIÓN de la INVENCIÓN - los ejemplos embarullados siguen %:

[las piezas seccionan #1]: U (usuario de esta invención) = funciones aplicables del ~ C (CPU) de la invención [reacciona a los proximities vía sonido] =

[Sección #2 de las piezas]: TENER ACCESO (control de seguridad) [funciones cuando contraseñas activadas] CARRO de // de los VAGOS de // del ANALIZADOR de // del ARTISTA de // [hacer/para componer música vía cambios en proximidad] [la proximidad y otros factores (UIP, acceso) se utilizan para los extremos deseados] (analizador) del comportamiento [estudios cómo los cambios del objeto/del persona/animales él han seguido la trayectoria] [tipo sonido emitido] // EDIT [no hace caso de las señales basadas en puntos señalados de la proximidad] // EDUCATIVO [aprender siguiendo patrones del movimiento de: hurds de animales (cada uno con propia base de datos del uip, eg.: hábitos de acoplamiento, y quién intenta pasar más tiempo con el cual)] La banda MULTIUSOS de // del OSCILADOR de // del NOTIFICADOR de // [cada usuario emite sus propios sonidos/dialectos de la firma] // [cuando los objetos consiguen demasiado lejanos/cercanos - existe] [ver el archivo grande del OSCILADOR] (programación) [cómo el sistema busca y reacciona casi está hasta la imaginación y el software disponible del usuario] // PS-ZONE [solamente funciones en zonas de los lugares señalados las'] // QUE PREGUNTA [pregunta a usuario qué proximities son ser buscado y ser reaccionado] las

BÚSQUEDAS de // de la CUENTA // SA (analizador/reconocedor sano) // del RANURADOR de // R // (teledirigido) [] de sonidos [] y REACCIONA [] el SENSOR de // [] // TDS [] // T (PISTA de // de la telefonía) [] [] // UIP (usuario Info que programa) [] // VA (analizador visual/reconocedor visual) [] // WA (caminata alrededor) [].

Secciones 1 y 2 interactivos.

Patente 6.967.616 de Estados Unidos
Etnyre 22 de noviembre de 2005

Sistemas y métodos para la correlación en un sistema del controlador aéreo de datos posicionales de blanco interrogación-basados y de datos posicionales GPS-basados del intruso
Extracto
Un sistema mejorado y métodos para correlacionar a un intruso interrogación-basado de la vigilancia del tráfico aéreo, tal como un intruso del sistema de evitación de la alarma y de colisión del tráfico (TCAS), y una blanco GPS-basada de la vigilancia del tráfico aéreo, tal como una blanco dependiente automática de la difusión de la vigilancia (ADS-B) para reducir al mínimo o para eliminar la exhibición de dos símbolos para el mismo intruso/blanco en el CDTI de un avión. El método abarca los pasos de recibir datos de ADS-B en una unidad central y los deltas componentes selectos calculadores para los datos de ADS-B contra una entrada en un intruso de TCAS archivan. Los pesos progresivos se asignan a los deltas y los pesos progresivos se suman, dando por resultado una cuenta total de la confianza. Las cuentas totales de la confianza de los pares de la blanco de ADS-B y del intruso de TCAS se comparan para determinar la correlación entre la blanco de ADS-B y los intrusos de TCAS.
(sobre similar a KN: Encargado de la distancia: Desalienta dos o más elementos/usuarios de venir juntos)

Reconocedor actual del agua G102-1:
El sistema puede también detectar/advierte sobre las corrientes del agua (no fácilmente sensibles a la persona cogida en una). El notificador reconoce corrientes vía:
--natación del usuario en una (rápido/despacio), mientras que se mueve en una velocidad (actual) más lisa en una diversa dirección.
--el analizador visual del `reconoce patrones actuales del agua
--cuaesquiera otros elementos que distinguen la corriente de un cuerpo más grande del agua, eg.: temperatura, objetos que flotan sobre la corriente, ondulaciones...

La localización G103-3E-070 basó el selector de modo de la comunicación:

Selectores del canal de comunicaciones basados en la localización del usuario:
El sistema incita a usuario seleccionar de mejores canales para esa localización. Los usuarios dados la opción seleccionarán a menudo los canales con excepción de los que el sistema pueda dar. El usuario de las ayudas predice qué canales pueden ser apretados menos. Sastres programados de la información de usuario sus sugerencias a las necesidades percibidas del usuario.

El sistema de los equipo y programas de computación deja a usuario seleccionar el mejor modo de comunicación según su localización (proximidad al mejor modo de transmisión, al portador más barato). Puede también apenas estar una computadora en la línea servicio informativo.
- Los mejores modos de comunicación: el más de alta calidad (anchura de banda, audibilidad, confiabilidad), coste, seguridad (de snooping; acceso). ¡Etc!
- Elementos considerados efectuando calidad/la seguridad de la transmisión/de la comunicación:
--Ciertas frecuencias pueden estar en una mejor orden, pero no bastante para compensar su generalmente de baja calidad (entender la voz humana).
--tiempo (previsto)
--(proyectado' dirigido) trayectoria, y donde las bajadas pueden ocurrir
- Relacionado con la invención celular del notificador del calabozo: método y sistema del uso 20050070302 de la palmadita de 3E010, de los E.E.U.U. que dirigen a un usuario sin hilos a una localización para la comunicación mejorada - marzo de 2003 archivado. Nuestra invención ordena el sistema para mejorar los canales basados en la localización.
- Tipo de canal opciones: el sistema reconoce qué canales están/eran utilizados en esa zona; cuál es mucho funcionando ahora/futuro previsto del pasado'.

Archivo: Localizadores/picosegundo 2

Invenciones del GPS - misceláneas

Collar de la distancia de G105 GPS:

Invenciones mejoradas del collar del animal doméstico del GPS:
- Maneras amistosas de animar la aplicación positiva del comportamiento. La persona entrena a su animal doméstico para asociar una de muchas señales como guardián del comportamiento positivo. La señal se puede emitir después de eso para mantener comportamiento positivo hecho cumplir.

- Las señales del animal doméstico del collar pueden incluir: vibración, frecuencias sanas, voz del dueño, olores, etc. previos de antemano.
- Vía teledirigido, amaestrador activa el mismo tipo de señales al recompensar el animal doméstico con el alimento para el buen comportamiento. El animal doméstico aprende asociar sensaciones positivas a la señal. El collar puede accionar después de eso automáticamente señales sin la presencia del amaestrador.
- Los analizadores del comportamiento determinarán qué comportamientos puede practicar el animal doméstico que sean positivos o negativos. La programación de la información de usuario aprende de y ajusta al animal doméstico y a su amaestrador.
- Mientras que las señales menos atractivas suaves alternativas pasadas pueden ser emitidas cuando se practica el comportamiento pobre. Poco o nada de entrenamiento es necesario para este baja característica.
- Entrenamiento inmóvil de la localización: permanecer dentro o lejos de ciertas áreas, tales como gatos que caminan en tapas contrarias; o entrando la yarda del vecino.
- Ayudas sobre animales domésticos del peso por tiempo de restricción de la consumición incluso cuando está bien comportada.
- Ahora tarda menos tiempo para entrenar a su animal doméstico. Mientras que es más eficaz en animales domésticos jovenes, también trabaja con animales más viejos.
- Otras características ayudan a nuestra policía, y a los portadores de correo.

¡- Más!

Sobre la visión repetida: La invención puede animar distancias ideales entre uno o más gente, animales y u objetos. Una manera más comprable de dirigir y de educar comportamientos ideales. La forma de recompensa o de desaliento viene vía las pulseras, los collares de perro, el etc.

Estructuras del comportamiento Encouraging:

- Se envían las "señales señaladas `" que se interpretan como recompensa. Eg.: el animal se recompensa a menudo con el alimento y o la alabanza verbal/del tacto mientras que se envía la "señal". Más adelante cuando es menos conveniente dar la valoración completa, la "señal" solamente puede ayudar dejó el animal saberlos está haciendo algo deseable.
- Mecanografiar las "señales": vibraciones del collar o...; luz; sonidos (el calmar); olores (del alimento).
- La señal (automática) se acciona cerca: usuario (del ser humano); uip; sentidos (los animales) del sistema' analizan (vía analizador del comportamiento) qué está ocurriendo el comportamiento, después anotan la acción, después envían la señal rewarding para las cuentas (sobre el 85%).
- El comportamiento ideal Encouraging, puede ser preferred contra desalentar comportamiento señalado; aunque ambos interfaces pueden ser utilizados (simultáneamente). Alternativas únicas a las invenciones existentes que reganan animales domésticos.

-

Collares:

- Bebé de las subsistencias lejos del gato/del perro o del maì□n hermano. Atar el dispositivo al bebé (muñeca) y al perro (collar).
- el distancer del `castiga (acercándose) la entidad cuando consiguen dentro de los metros del sistema del usuario/del dispositivo protegidos.
- Collar: guarda animales domésticos de conseguir en el alimento o ciertas partes de la casa.
- Collar en la persona que recibió un orden de detención (y viven/trabajo cerca de uno a).
- Sistema de justicia penal.
- Subsistencia (animal) lejos de: muebles señalados (gatos).
-

Comunicaciones alternativas al animal/a la persona señalados:

- En lugar de la descarga eléctrica (eléctrica), puede utilizar otros modos que el perro se ha entrenado para responder a: sonidos, olores, vibraciones, luces.
-

Qué puede ser animada:

- comportamientos animales señalados `(que era/se está enseñando), eg.: para sentarse o parar el raspar cuando está ordenado.
- Estudio zoológico si el comportamiento de acoplamiento entre la especie tímida puede ser animado consiguiéndola para abrazar encima más. Asociar esto a otros factores: refrescar la temperatura del área para inducir snuggling para el calor, los lanzamientos sexuales de la feromona, o el acceso de restricción de animales con el comportamiento antipático (vagos del `) en el grupo (polígamo).
- inducir las preferencias del alimento: comer del tazón de fuente o del árbol preferred.
-

Restrictor seleccionado:

- Aplicación de ley: (secreto arropado) las señoras/los hombres de la policía desconocedores con un perro de policía específico, pudieron utilizar esto para reducir la ocasión de ser atacado por un colmillo con el collar que transmitía apropiado del perro, castigando hacen si vienen demasiado cerca (un aliado previamente resuelto). Ahorra época, molestias, y la restricción del movimiento al intentar coger a bandidos, junto con la presencia del tomador de la atención primaria del perro.
- enseña a animales rapaces a permanecer claros de ciertos animales/objetos, eg.: estancia del gato del animal doméstico lejos de patos del animal doméstico (con el transmisor en las piernas).
- dar a los visitantes/a compañeros del sitio que tienen aversión animales domésticos (que) un transmisor para mantener el animal doméstico señalado ausente.
-

Medir el tiempo del restrictor selectivo:

- Restringe los animales domésticos (seres humanos) de la consumición excesiva: Acariciar (demasiado) el alimento dado adentro (tazón de fuente). Pueden consumir solamente tanto como pueden dentro del tiempo

señalado (uip del animal doméstico), así que no consiguen gordos, etc. dejan bastante alimento alrededor para cuando el dueño sale de la ciudad (para las vacaciones).

--Puede ser combinado con los dispensadores existentes del alimento que dan el alimento limitado automáticamente por día. Valores: guarda el animal doméstico de conseguir frustrado y de intentar golpear o destrozar el dispensador; dispensador más alimento que necesitado como precaución prevenir el hambre.

---nivel de sistema del castigo a mantener todo el (pero) cerca de animales muertos de hambre del alimento.

- Relacionado con nuestra invención del GPS "Distancer sano".

- Si el animal doméstico lejos (afuera) durante las horas de la comida, sistema (poder) ajustar (al grado de menor importancia) y permitir/da el alimento en las horas alternativas (hasta que el animal doméstico mejor aprende que la sincronización de sistema completa un ciclo).

-

Aplicaciones del entrenamiento del comportamiento (a menudo no picosegundo relacionado): analizador de sonidos, analizador visual, analizador del comportamiento, sensor de movimiento:

--valor (SID) que raspa en las horas señaladas, eg.: el sensor/el analizador nota (desconocido) a intruso humano

--el animal doméstico es hiperactivo

--los animales domésticos/los perros (ingobernables) pueden ser forzados (por el governement/el seguro) a usar los collares relacionados, para guardar los lejos de policía, los portadores de correo, o cualquier persona que lleve un picosegundo relacionado (locutor).

-

Misceláneo:

- La invención repitió: Anima/desalienta a dos o más personas o animales de venir junto.

- Existe: los gatos oyen el sonido indeseable cuando saltan sobre área indeseada. Los seres humanos no pueden oír. - Las áreas indeseadas pueden ser: la cocina/el baño contradice, deja de lado en sala de estar, el etc.

--La desventaja es gato se desalienta de entrar en el área siempre que un ser humano sea próximo. El gato en sus brazos screeches tranquilamente cuando usted alcanza para un estante.

- Ver la invención sana de G101 Distancer

6.967.616 remotamente relacionados - (desalienta dos o más elementos/usuarios de venir juntos)

Patente 6.124.825 de Estados Unidos
Eschenbach 26 de septiembre de 2000

El GPS basó el sistema de evitación de colisión aumentado de la realidad

Extracto

La actual invención abarca un sistema (GPS) de evitación de colisión aumentado (AR) basado sistema de navegación mundial de los aviones de la realidad. El sistema de la actual invención incluye un receptor del GPS para recibir señales del GPS y determinar una actual posición usando las señales del GPS. El sistema de la

actual invención también incluye un receptor dependiente automático de la vigilancia (ADS-B) para recibir una señal de ADS-B de un avión. El sistema de la actual invención más futura incluye un visera de AR juntado al receptor del GPS y al receptor de ADS-B. El visera de AR recibe la actual posición del receptor del GPS y recibe la señal de ADS-B del receptor de ADS-B. Usando la actual posición y la señal de ADS-B, el visera de AR determina un cojinete tridimensional a los aviones. El visera de AR se adapta para ser llevado por un usuario. El visera de AR se adapta más a fondo a los símbolos de la exhibición que indican el cojinete tridimensional tales que hacen el usuario intuitivo enterado del cojinete tridimensional vía los símbolos exhibidos en el visera de AR.

G106 atención Rewarder:

Recompensar a empleados para ser en el trabajo, y para demostrando ellos están trabajando activamente. Más eficientes que sistemas existentes, y reduce costes de la gerencia. El sistema también puede ayudar a manejar a los supervisores, cuyas oficinas principales están en otras localizaciones.

Los sistemas de colocación de las aplicaciones y el va (reconocimiento facial) para asegurar a usuario es lugar señalado in/near, en las horas señaladas.

- Las demostraciones del GPS (estudiante) estaban en sala de clase en el tiempo señalado.
- Usos para la verificación:

--Clase mirada estudiantes en línea. Cámara en la computadora (tales analizadores visuales existen y siguen a usuarios). Sigue a usuario.

--El asegurar (trabajadores/compradores/clientes/estudiantes/animales) aparecido en (sitios del trabajo) (sin los encargados presentar).

- integra con los relojes de tiempo del empleado.
- para conseguir a gente utilizarlo: darle un dispositivo de la transmisión (teléfono celular) y decir, usted conseguirá pagado/recompensado/evaluado basado en cuando está en la zona señalada.
- corresponde a nuestras invenciones que anoten cómo una persona se está realizando
- el `sigue el movimiento in/near/outside señalado las zonas, demostrando (cuando es aplicable) que están trabajando (en emplazamiento de la obra) y no están siendo demasiado inmóviles/perezosas. Aplicaciones: sensores de movimiento; perseguidores; analizadores visuales; analizadores del comportamiento (para encendido y comportamiento fuera de línea - ver nuestras invenciones relacionadas).

Patente 6.744.403 de Estados Unidos

Milnes, y otros 1 de junio de 2004

Sistema de seguimiento basado GPS

Extracto

Un sistema utiliza receptores del GPS y otros sensores para adquirir datos sobre uno o más objetos en un acontecimiento. Los datos adquiridos por los receptores del GPS y los sensores se utilizan para determinar

varias estadísticas sobre los objetos y/o para realzar una presentación video de los objetos. En una encarnación, los datos adquiridos se utilizan para determinar las posiciones tridimensionales de los objetos, para determinar las posiciones de las imágenes de los objetos en un vídeo y para realzar el vídeo por consiguiente. Un uso del modelo de la actual invención está con un sistema para seguir los automóviles en una raza. El sistema determina estadísticas sobre los automóviles y realza una presentación video de la raza.

(en lo que concierne KN: Verificador de la atención)

Activador de la proximidad G107

Más investigan necesario. Ver la parte: Picosegundo-Zona

Cualquier dispositivo (del portable) se puede activar/desactivar por la proximidad. ¿Existe?

El sistema o la máquina requiere a (esclavo) GPS/RFID para funcionar (según lo programado). El esclavo puede (en parte) ser desarmado siempre que se haya practicado una abertura un protocolo de acceso.

- Los parámetros determinados (localización del usuario) necesitaron acceder/los sistemas del uso.
- El vendedor de la característica intelectual protegió licencias de la invención él de trabajar solamente en zonas señaladas. Puede haber limitado o ningunas funciones en otras zonas. (Las funciones del ahorro de vida pueden trabajar por todas partes, e.g: llamando 911 en el teléfono celular).

El sistema G108 predice quién comprará lo que y donde:

La invención compara las características de compra de compradores señalados con pronto para ser productos lanzados. La vecindad, más donde hacen compras y para qué eligen a los compradores. Patrones encendido basados las características de la compra del comprador los últimos se comparan a las características del nuevo producto.

- Métodos de la predicción: Las probabilidades matemáticas para las ventas, se dan, o al grupo de individuos. Anotan a los compradores también para que su buena voluntad intente nuevos productos en la categoría general en de la cual el nuevo producto viene.
- Los minoristas importantes pueden controlar los precios altos que practicarán para esta información, y que no los competidores pueden utilizarlo. El sistema integrará la información de bases de datos diversas.
- El nuevo software de la localización de almacén puede mejorar localizaciones ideales de punta.

¡- Más!

Pistas del sistema donde los usuarios hacen compras, con lo que compran. Cuando las demostraciones del GPS ellas están haciendo compras en los almacenes (no la parte del sistema de seguimiento (cooperativo)), calibrará cuánto tiempo hicieron compras allí, junto con (qué compraron si el Info está semi-disponible). Por ejemplo, GPS en su dispositivo portable, o en el coche en el estacionamiento - demostraciones donde están compras (fuera (w5 señalado) de la red mercantil).

--Reformulado: (Consumidores que se ofrecen voluntariamente para un descuento) recibe a dispositivo (libre) del GPS/del seguimiento. Hacen todas sus compras/actividades (con las mismas compras o de la tarjeta de crédito); y o exploración en todos los recibos (de papel).

-

Cultivo de la base de datos:

El analizador del `compara' cuentas' integra (UIP relacionado) las bases de datos siguientes:

- preferencias de consumidor: qué dicen que quieren/como/que pueden permitirse (los productos o los servicios) disponible, y lo que compran realmente. ¿Por qué cuenta emparejan?

- nuevos productos (y sus características) (como concordable con las preferencias del UIP por usuarios/consumidores en sistema/base de datos.

-

Analizador de la ruta del recorrido y del comportamiento:

- almacén/negocio/selección de la localización de la oficina (software) - nuevo selector de la localización de almacén: la base de datos del pasado que compraba comportamiento utilizó (para esa zona). La invención puede ahorrar cada nuevo arranque de la localización menos o más que $1M por la localización. ¡Precio tan costoso del software posible!

- la base de datos para las zonas con el Info disponible, se puede extrapolar y emparejar con otras zonas/áreas con menos (UIP relacionado) Info disponible. El sistema entonces predice (para qué Info falta) en nuevas localizaciones (del almacén posible), (y completa por consiguiente/o dirige a usuario para conseguir el Info necesario).

-

Ventajas para el usuario/el consumidor:

Descuentos, cupones (del special) y ofertas.

- el usuario puede (en su opción (w5)) hacer que el sistema sugiera la' guía en cuanto a de lo que pudo tener gusto más el usuario de comprar, hacen, ven, experimentan, etc. hace buscar lo que quiere uno mucho más fácil.

-

Seguimiento de métodos: GPS/PS, formas (electrónicas) de pago (almacén (descuento)

- Diagrama: Los usuarios = siguieron el' comportamiento analizado = analizador comparan las características/Info de (los compradores/los vendedores/los fabricantes/el departamento Info de las estadísticas del gobierno/del crimen/de los patrones de tráfico/del planeamiento de ciudad' predijeron (las tendencias)) = guías (vendedor/abastecedor/gobierno) en cómo a (el mejor (maximizar) beneficio/hace algo.

-

TM: Perseguidor del comprador, perseguidor que hace compras

Patente 7.002.579 de Estados Unidos

Olson 21 de febrero de 2006

Pantalla dividida GPS y tacógrafo electrónico

Extracto

Esta invención enseña a un método inventivo para seguir datos del viaje en lo referente a la posición geográfica para un vehículo. Los primeros pasos en el método implican datos del viaje de la grabación periódico y la posición geográfica de la grabación periódico. Cada grabación de datos del viaje es con impresión horaria. Cada grabación geográfica de la posición es con impresión horaria. El paso siguiente está ahorrando los datos registrados del viaje y la posición geográfica a una base de datos. El paso final en el método inventivo está exhibiendo gráficamente los datos del viaje y la posición geográfica, en función de tiempo, de la base de datos. Esta invención también cubre un aparato y un sistema para realizar el método inventivo

Guía de G109-3E-170 UIP GPS
¿Bastantes aspectos únicos? Sostenerse de la comercialización para ahora:

Se demuestra el usuario de la información quiere. Las patentes existen.
- Trazar demostrar (cuál es a continuación traga la trayectoria/el camino) características/elementos/colores/los estilos que emparejan el UIP del usuario.
. - el usuario pellizca los programas de GPS/UIP para conseguir diversos resultados
- Sistema de la opinión del picosegundo (GPS): La exhibición demuestra más que apenas mapas. Demuestra:
- (3 dimensionales) vistas visuales de exactamente qué el área a continuación mirará como será tan más fácil encontrar el lugar necesario, eg.: almacén en bloque apretado.
- el analizador visual del `entiende se está viendo qué.
Patente 6.502.032 de Estados Unidos
Newman 31 de diciembre de 2002

Sistema de navegación urbano del GPS para las persianas
Extracto
Un sistema de navegación mundial que dirige activamente peatones y fuerzas ocultos de los militares/de policía. Este sistema utiliza el sistema de navegación mundial del DoD (GPS) para proporcionar la posición y la navegación del usuario a la exactitud del centímetro. Las peticiones de la actual posición y de la navegación son digital celulares llamadas por teléfono a una "estación base central" donde los datos se correlacionan con una base de datos automatizada del mapa que lleve a cabo nombres y coordenadas de localizaciones específicas,

tales como calles; intersecciones; semáforos; hospitales; cuartos de baño; teléfonos públicos; y disposiciones internas de edificios y de instalaciones importantes, en regiones seleccionadas, ciudades, y vecindades. El sistema funciona por el usuario que entra en la destinación deseada en unidad de mano vía software del reconocimiento vocal o que usa el teclado de Braille. La unidad de mano entonces transmite señales basadas en los satélites (PP) del GPS de la actual posición y la destinación deseada a una estación base que contenga el sistema informático del GPS de la calidad de la base de datos y del topógrafo del mapa.

G110-7J12 GPS basó a intérprete de la lengua para los viajeros:

La invención interpreta y ajusta su comunicación en el dialecto local. Corrige las palabras y la tonalidad para la ocasión. Los imitadores del sistema con cómo la gente habla naturalmente diferentemente dicen a niños, o a clientes potenciales. Estadístico, los visitantes establecerán un mejor informe dejando el acento de Brooklyn, cuando en un partido en el Greenwich Village de Manhattan. La invención también se adaptará a la personalidad del usuario basada en la programación de la información de usuario. Esto será especialmente útil en Japón donde están populares las invenciones que ayudan a inducir armonía. Criaron al inventor principal, Steven Kays, en Tokio.

Sobre la visión - reescrita: La lengua y o el dialecto usado puede ajustar automáticamente a la localización. Por ejemplo: Si usted habla Yiddish pero poco inglés, después interpretará sus palabras habladas/texto

(mecanografiado) en los dialectos de Brooklyn o de Manhattan, y le ayuda cupo a la derecha adentro con los locals menos viajados. Puede funcionar sin saber dónde y cuándo ocurriría el cambio de los dialectos geográficamente haciéndole el ideal para los turistas. Hace las comunicaciones y la vida más simples, creando más armonía (más importante en culturas asiáticas/japonesas). Grande para el mercado japonés - el inventor principal creció en Japón.

-

El estilo señalado de la comunicación cambia posible para la gente/los grupos en:

Negocio; uno o más gente allí; tipo y nivel de interés/de experiencia en algo; escalas de edades; cómo está ocupado son (conseguir más al punto con ellos), o nunca conseguir a los puntos verdaderos (como algunos Californians tontos ha ha).

- Estilo del negocio: el usuario está en un ajuste del negocio (el usuario de las demostraciones de GPS/PS está en piso del camino, o del Empire State 51.o de la colina de la arena.
- Escuela primaria contra campus universitario: se ajustan el vocabulario y las inflexiones.
- Para hacer que él más natural, el sexo del usuario, el estilo de personalidad (del uip) como inflexiones y el dialecto, o aún y el acento insertado que (normalmente) son incluidos en un nativo no de la lengua señalada (ha ha). Las versiones cómicas también pueden exagerar cualquier voz/lengua humana sabida, estilo/la desviación, la lengua, el dialecto, el etc
- Comunicar con el animal señalado (basado en estudios zoológicos de la comunicación). El usuario escoge de vocabulario de a/de directorio y de sub-directórios (limitados) del mensaje. Basado encendido: UIP del usuario, del animal, del tipo usuario animal o entradas del va de las'. Versiones cómicas también.
- unidad emparejadora del comportamiento: el analizador del comportamiento del discurso/de la persona/del grupo que es hablado a, ayuda a alcanzar la comunicación que puede recibir una cuenta más alta para cómo empareja sus comportamientos/intereses/humores/psicología/nivel de enseñanza.

--relacionado con cualquie producto/nuestras invenciones que emparejan a uno o más gente con la otra gente y o tareas/intereses.

Características ajustadas relacionadas de la guía del GPS: dirige a usuario a la localización señalada con el mapa visual, más instrucciones adicionales.

- Transmitir electrónicamente al dispositivo del GPS del visitante las instrucciones de una tenencia del archivo electrónico.

Las instrucciones (para el usuario) incluyen:

- El mapa cambia el Info visual mientras que el usuario se acerca a la localización señalada.
- El texto que explicaba el Info señaló a la localización y qué usuario necesita hacer en el lugar. Ejemplos: palabras de la precaución; cómo actuar; no no político corregir, solamente partes (no demasiado frescas) cuestionables de la ciudad; qué a pedir de cabina de la estación de tren Info.
- Declaraciones puestas en palabras:

--Cuando el usuario viaja a los países extranjeros: El usuario toca el icono de la pantalla aplicable que entonces pone en palabras el Info en lengua local.

--la conversión de la lengua/las funciones de las características ocurre (automáticamente) apenas estando en la zona aplicable (incluso mientras que vuela en el aeroplano sobre varios países (del europeo).

--Las declaraciones/los usos de la muestra después del usuario dejan aduanas francesas del aeropuerto:

Anuncio---Paso 1:

"Busco una feria del autobús/del tren del viaje de ida y vuelta del aeropuerto de Charles de Gaulle a París con una fecha de vuelta abierta. Busco el tren siguiente. Pagaré por de la tarjeta de crédito."

---Paso 2:

"Anotar amablemente en un papel separado la hora de salida, y número de vía"

---Paso 3:

"Gracias. Señalarme por favor en la dirección de la plataforma". El GPS del usuario debe dirigir a usuario de allí.

---Esta función ayuda a reducir la necesidad de coger a su visitante en el aeropuerto.

----Diagrama: Anfitrión (poder) enviar el file= electrónico vía (Internet) = receives= receptor después transferencias a su GPS portable (vía frecuencia infrarroja).

- La invención se podía prestar por las compañías en la industria de recorrido: agencias de viajes, líneas aéreas, hoteles, compañías del alquiler de coches...

- Cambiar la programación y los datos entrados, y el mismo dispositivo puede funcionar para las diversas localizaciones, culturas e idiomas.

- las ayudas del ajustador del dialecto compensan: audibilidad pobre para los oyentes debido a la calidad del sonido (osc), y o de las distracciones del sonido ambiental.

- reducir al mínimo la interrupción/la distorsión sin hilos, sistema de la señal pudo necesitar una corriente constante de señales relacionadas localización, antes de determinar la localización (del general) ha cambiado.

- el usuario puede seleccionar de los nuevos/corregidos menús, basados en su zona. Eg. ; las opciones relacionadas culinarias pudieron aparecer en Italia, pero no en Dakota del Norte funcionado por licencias del alimento.

-

Características relacionadas:

- conversiones monetarias para ese país. Incluso agrega extraordinariamente a lo que piensa es un precio de compra normal basado en la localización, eg.: centro de la ciudad o suburbio.

- UIP de los usuarios usados (para (no) emparejar.

Sistema de la contraseña de la proximidad G111

Moverse al proyecto de la Picosegundo-Zona. Ahora no poner.

Usos de la seguridad:

Los dispositivos portables pueden abrir una sesión solamente cuando están en el lugar correcto, y o marco de tiempo.

- ()/El acceso (del esclavo del Portable) relacionó los dispositivos, puede comunicar solamente/accede/función cuando están en la zona correcta.

- Cada zona tiene secundario-zonas. Diversas secundario-zonas tienen sus propios privilegios de acceso. El usuario necesita saber el punto dulce para conseguir el acceso/o hacer lo que él quiere. Eg.: pueden tener acceso solamente a ciertos archivos de la red (del ordenador portátil) en 10AM el sábados, y cuando 100 metros de noreste de los sensores del ordenador principal.

- Los productos pueden conseguir solamente on/function dado vuelta cuando en el lugar correcto. ¿Patente existente?

- Ésta es otra forma de una contraseña, basada en el tipo acciones contra apenas tener una contraseña mecanografiada, hablada o biométrica más común. El acceso de la proximidad es a menudo bueno como medida de seguridad adicional, por ejemplo a formatos más tradicionales de la contraseña.

- Los requisitos (w5) deben ser cumplidos.

G112

El tipo de comunicación es determinado por la localización. Se relaciona con el sistema de la contraseña de la proximidad 1G11. Ejemplos:

- La opción de la frecuencia/canal de la telefonía (de la radio) utilizó

- Cuando en la función" de la localización "Y" de "X es posible. "Y" es cualquier acción electrónica que requiera simplemente una señal de activar. Cualquier función de la invención en la solicitud de patente puede ser accionada siempre que un teledirigido/un disparador esté en el punto dulce señalado.

Archivo: Zona de los localizadores/picosegundo

Invención de la proximidad del GPS

(Nombre de parte: Integral de la Picosegundo-Zona a este archivo)

Los sistemas dicen a usuarios qué está sucediendo y donde.

-

Aspecto de la herramienta de comercialización de la proximidad del GPS:

Caminata por el almacén: las difusiones comunican (oscilador) cuál está disponible (UIP que empareja). - informa al usuario sobre lo que él quiere, eg.: Artículos de la venta. Ver la ayuda de las compras de 7J07 UIP.
- dice qué salida de la carretera a tomar
- la base de datos del inventario del almacén (RFID) empareja para arriba.
- poner la lista de compras (de la Navidad) en unidad.
- el usuario controla la invención: se quiere qué; cómo cuando y donde están (comprar) W5 entrados en contacto con.
- el usuario consigue la publicidad basada en donde están. Eg.: el teléfono celular se da libremente o para menos dinero si viene con esta característica.
--El teléfono celular co como compra de la Virgen el tiempo de aire (al por mayor), y la da hacia fuera a sus clientes.
--necesitar de la tarjeta de crédito que empareje el nombre de usuario para conseguir el teléfono.
- TM: Comercialización de la proximidad
-

Las patentes/existen:
+ patente de los E.E.U.U.: Portal terrestre 6993554 del recorrido. Dispositivo del planeamiento del recorrido. Estados donde están los almacenes, pero no qué se almacena en esto. Proporciona un mapa basado en necesidades predeterminadas. El extracto es fácil de leer.
- Información de la reservación del recorrido US5948040 y sistema de planeamiento.
- Existe - el GPS ruso - Glasnoss
--utilizado por los dormilones del toro para calificar la tierra, basada en el nivel/la altura Info GPS da.
- Las compras trazan apretado más con patentes que el usuario que consigue el Info en el estado de qué está sucediendo donde está el usuario en aquel momento.

MÁS:
Un territorio con los límites creativos para ponerlo simplemente. Detalles:
- Dimensiones: Un área señalada con [cañería] límites cambiables/definibles en dos dimensiones. En formas elaboradas hay 3D, e incluso con 4D/5D/6D etc con otras dimensiones incluyendo: W5 (qué, donde, porqué, cuando y cómo) como época (de la ocurrencia). El área también se ocupa según de su distancia del punto de la perspectiva. Uno o más localizaciones señaladas = que tienen concerniente cómo el sistema reacciona/funciona.
- Una zona se puede determinar por [nuestro] sistema de colocación [GPS], siguiendo, W5 (qué, donde, porqué, cuando y cómo) que algo fue alcanzado, %' del analizador del comportamiento (acciones señaladas `(sugerir) una localización/una dimensión asociadas).
- Las restricciones y o las capacidades funcionales y o siguiendo se asocian a menudo a la zona en la cual el elemento [móvil] de a está situado.

- + la zona y sus características conectadas está llegando a ser rápido más importantes en el mundo móvil tecnológico avanzado, y nuestra otra patente pendiente, y las invenciones próximas [atadas a esta solicitud de patente].

OTRO:

. Ver el número de la invención 3E150:

. Mecanografiar las localizaciones y cómo "anotó": ojo de toros: Como los círculos concéntricos, más cercano a la diana que representa la localización señalada, más alta es la cuenta.

- Colmena: diversos puntos esporádicos pudieron ser las mejores localizaciones. --en este caso las células centrales tienen grados más altos, las células vecinas pueden tener 50% del grado de la mejor célula, la grada siguiente hacia fuera que tiene el 25%, y después hacia fuera cero, y siguiente hacia fuera, menos el 10%, y así sucesivamente. Diversas células centrales pueden tener cuentas de diferenciación.

- buñuelo externo del anillo: cuentas más altas para "señalaron" distancia del punto centralmente medido.

- altitud: medido en el milímetro (medios multi) o el kilómetro

- ángulo: eg.: 45 grados del punto centralmente medido. Esto se puede combinar con distancia "señalada".

- profundidad: debe ser below o cubierto por algo (de sustancia señalada/de grueso; o cubrirse y de cierta distancia de la cubierta). Eg.: material enterrado "que busca".

- zonas múltiples: dos o más zonas "señaladas" deben ser activas/activadas/ocupadas: simultáneamente/en "orden y la sincronización señaladas" (el accessor de la trayectoria camina físicamente).

--cada "k" (llave) puede representar una zona. La "orden y la sincronización" de su ser activated= crea un patrón. La "llave" es un área muy amplia de usos. Ver: "componer", "ruta", "pista".

+ Picosegundo-Zona del `: funciones de límites por la localización del system; utiliza la localización para hacer cálculos necesarios, ajusta a las necesidades del u (adaptarse); las capacidades de u (usuario) /sys (sistema) son limitadas/efectuadas por su localización - consideran KN, "ranurador": localiza el then= recupera el data= necesario para esta subparte.

+ Picosegundo-Zona: El movimiento físico del usuario/r (teledirigido) acciona señales adicionales.

Este sistema de diferenciación puede co-función con (con) las funciones de la "inclinación" que crean la mayor diversidad del movimiento (reacciones/acciones). El movimiento hecho por el jugador puede representar (uno o más jugadores en juego) (principalmente para la versión del wa (caminata alrededor) de N, o la Picosegundo-Zona se aplica a la porción (teledirigida) de r de sistema de N (invención); % localización física del jugador: las necesidades de ser cambiado para el usuario más con eficacia al juego del triunfo (que desempeña su papel en juego), jugador pueden girar mientras que guarda su establo de las piernas (en granangular), el usuario se sienta, solamente su posición cambian un poco como tuercen su cintura, o mueven el dispositivo portable (pedazo del juego) con sus manos/brazos; multa - adaptación de la localización provechosa, eg.: vía el GPS no actual)

--La Picosegundo-Zona agrega la dimensión adicional a la inclinación. Eg.: la señal #1 de a] creó cuando el palillo está en la posición del mediodía y en la esquina correcta muy delantera del sitio, la señal #30 de b] creó cuando el palillo en los mismos ajustes de la posición y de la llave del mediodía, es 0.5 metros más alto y 1

metro a la izquierda del centro del sitio, c] el mismo #b del anuncio a menos que el interruptor en una llave cambiara - > causa la señal #120.

--Picosegundo-Zona = "inclinación": funciones como nuestra invención adoptada por Yamaha, en que cualquier movimiento del cuerpo/el movimiento de la inclinación genera señales. +VR.

Aspecto de la guía del recorrido del GPS: existe

- Aprender qué se asocia a cualquier objeto y o a la localización asociada (zona). Usuario (caminatas) en la orden desean entre las localizaciones. En la localización señalada, el sistema. Guía a pedido del recorrido. Comunicar/oscilador/educan sobre cuál está allí, eg.: significación histórica de la casa; Info del árbol viejo.
- Guía del GPS del `
- selecciones del usuario de la enciclopedia del Info: demuestra todo el Info disponible, o seleccionado por el asunto (selecciones del usuario).
- imaginarse el caminar alrededor de Washington, C.C.
- `Educativo/guía: adapta el Info a las capacidades del usuario, intereses, necesidades (aprender).
- . - traductor/intérprete de la lengua.
- servicio del grado: restaurantes, almacenes, hoteles, etc. Algunos establecimientos do/do no tener grados.
- de las ayudas (silla del sitio/de rueda) deteriorado.
- cosechadora con el otro GPS Info: altitud

Dispositivos de los niños:

- (de) son activados por zona, eg.: escuela, o dondequiera después del tiempo de la cama

Música que escucha;

- los sonidos del programa a (no) se oigan basaron en zona. Eg.: oír la música nostálgica al conducir por su escuela primaria vieja; o sonidos del pep al acercarse al trabajo.

Dechado móvil del GPS:

Muestra cuál está disponible basado en zona.

- Usos:

--Qué música is/was jugó en las barras, los clubs de la música dentro de áreas señaladas. TM: Dechado de la venda de la música del GPS.

--Coger/escuchar/ver/proceso cualquier audio/representación visual/otras señales que puedan emanar de localizaciones señaladas.

Material de la Picosegundo-Zona a partir de los mediados de años 90 al presente:

regulador de la zona 3E-150: La localización se correlaciona con funciones aplicables; el punto en el globo señala al analizador del GPS en la ayuda determinar funciones aplicables, esto se puede correlacionar con el "UIP" y "M". Cualquier o función múltiple del sistema puede ser restricta y o extendido basado en las localizaciones para uno o más de los sistemas (múltiples) ("portable") las piezas.

- Acordando a la localización/a la distancia, el sistema puede y o no puede hacer ciertas funciones.
- Usuario de las guías/dispositivo (vehículo, objeto móvil). El usuario/el dispositivo debe permanecer en cierta trayectoria o el picosegundo transmitirá señales así que el usuario/el dispositivo es /system "notificado" corregirá automáticamente a piloto (sistema rector automático).
-

el sistema funciona solamente completamente en Manhattan, y está solamente en modo del receptor mientras que en la isla de Staten.

- utiliza 3E151
- D: localización/"circunstancia" (del cambio) = analizador/gps/sensor/c = c/m

. USOS:

- DB costoso del acceso del can't fuera de áreas particulares, o paga más arriba en tal caso.
- # de las aplicaciones para que esta necesidad de N sea aumentada/disminuyó zonas señaladas w/in.
- Monitor inteligente 2E251

+ notificador móvil de la localización del teléfono 3E010; encargado de registro de 3E020 GPS; otro + KN: usar "distancer", y "picosegundo", y piezas del "GPS".

- Palillo 5E020 de R

+ "ruta":

--Los datos encaminaron a los u la unidad (portable) (parte de un sistema más grande) efectuada por la localización del u. Los datos incluyen: "DB"; "tener acceso" a los sistemas del picosegundo (u puede conocer o dar hacia fuera su localización).

--Interruptor: funciona limitado

- "entretener" y "juego": sus funciones/opciones pueden ser limitadas/extende)

---OTD D: U = este sistema de N (funciones efectuadas (limitado/ampliado) por la zona del sistema/de u w n (parte)) ~ C =

ACCESO (); ANALIZADOR (); CÁMARA (2e251); CARRO (puede ser utilizado/ser insertado solamente en zonas limitadas); EDIT (); EDUC (); K (señalada las llaves ser tan limitado); M (señalado DB ser tan limitado); MIC (expedientes basados en zona de la fuente de emisión sana/sistema/u); MES (); RATÓN (); MULTIUSOS (cierto u puede utilizar solamente el sistema en zonas limitadas); NR (/no función); OSCILADOR (/no función); Banda (la zona es uno de los requisitos para el "acceso" al trabajo: tener acceso para alterar el interruptor del sistema; cortan las opciones para los piratas informáticos de computadora); Q (se no hacen caso/o no se permiten ciertas preguntas subir); R (funciones vía limitable teledirigido); RANURADOR (); CUENTA (las ocurrencias w5 = anotado/usable/visible por u/el sistema); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO ();

ESTÉREO (); SYNTH (); TDS (ocurrencias de los relojes cuando sistema en zona señalada); Restricciones entrantes/salientes de T (de la comunicación; "acceso");

--INCLINACIÓN: Las restricciones se aplican; las señales generadas (por la inclinación) se pueden interpretar diferentemente según la zona,

---eg.: las primeras 10 o 100 señales potenciales (creadas por la inclinación) se interpretan diferentemente. D: El sw/db archiva = asoció w cada differently= "encaminado" manejado are= de la señal según la zona.

TR (las transmisiones pueden no ir a través); PISTA (mayor seguimiento basado en zona); U (cada uno/cierto u puede utilizar el sistema w/in señalado las zonas); UIP (compilación del DB efectuada por zona; el uip consigue la entrada de datos solamente de ocurrencias en zonas del sistema; el uip se permite influenciar/el sistema del control que tiene sus piezas aplicables en zonas del sistema); UQ (algunos o todo el respondible de q basados en zona); ANALIZADOR VISUAL (imágenes de los estudios recibidas de fuentes señaladas. Fuentes definidas como: "CID"; zona; mecanografiar el sistema; mecanografiar el interruptor); VR (cualquie función "portable" limitable); WA (cualquie función "portable" limitable).

--OTD T D: T (U (comunicador)) = "Picosegundo-Zona" (ciertas funciones del sistema son limitadas/extendidas basadas en la localización del ~ de u/(portable) del sistema (unidad) C = ACCESO; CONTESTADOR AUTOMÁTICO; ARTISTA; BALANCE; BVA; CID; CÁMARA (LENTE); CARRO; PALMADA; COMPOSICIÓN; CONFERENCIA; EDUC; FS; JUEGO; ASIMIENTO; DE RECUPERACIÓN DE LA INFORMACIÓN (u/el sistema necesita estar en la zona señalada "a tener acceso"); K^; LOCALIZADOR; M; MIC; RATÓN; P.M.; MULTIMEDIAS; MULTIUSOS; NOTIFICADOR; NOTIFICACIÓN DE LLAMADA; Paladio; PORTABLE; Banda; IMPRESORA; R; RANURADOR; S; CUENTA; ANALIZADOR DE SONIDOS; ESTÉREO; SYNTH; TDS; TELEFONÍA INTERSISTEMA DE TRANSFERENCIA; UIP; Reino Unido; ANALIZADOR VISUAL; CORREO DE VOZ; MODULADOR DE LA VOZ; VR; WA. = [las partes anteriores después del "OTD T D" son parte de este diagrama, con las cuales interconectar/control/comunicación del efecto] = (múltiplo): T (U (comunicador)) /Usuarios/%Sys.

. Misceláneo:

- Esto es una subparte: Zona del "picosegundo" -; ¿o cubre quizá toda la Picosegundo-Zona también?
- Estrategia de búsqueda de la patente: #1] GPS. #2] GPS y (la zona o la división o las zonas o restringen
- OTD general D: U = este ~ del sistema de N (Picosegundo-Zona) C = TENER ACCESO (acceder solamente cuando en zonas (alterables) señaladas); ANALIZADOR (); AP (vr, R); ARTISTA (movimientos del convertido en gráficos: investigación general, forma artística nueva); VAGOS (movimientos del estudio de animales/de la gente = de UIP/"analizador"); CARRO (); COMPOSICIÓN (los movimientos = generan música: KN Yamaha Miburi); MULTIUSOS (cada u tiene zonas de diferenciación); NR (cuando las salidas/entran en de u zonas señaladas); OSCILADOR (); Banda (); Picosegundo (); Q (u pregunta cómo está cercano están en las zonas deseadas (siguientes) de los metros); R (); SENSOR (movimiento); + INCLINACIÓN (); PISTA (donde u is/goes/went y otros elementos w5); U (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); %WA ().

- Estrategia de búsqueda de la patente: GPS o (sistema de navegación mundial)

. OTD D: U = este sistema de N (Picosegundo-Zona: funciones efectuadas por "zonas señaladas"; ~" de 1J010 del " analizador del movimiento NR= del cuerpo) C =

Movimiento NR del cuerpo -1J010: (los ángulos y los modos del movimiento de cuerpo son señales adicionales)

. - 1J080 hielo NR: ()

Movimiento NR 1J010 del alternador -4E010 = del cuerpo: (el "sensor" "anota" la actividad del "ejercicio" de u para: las calorías quemaron; la energía creó (para la batería); movimientos preferred sugeridos del cuerpo que aumentarían el nivel de batería que acciona para arriba, eg.: el tipo #1 (baile popular) del movimiento crea el 153 por ciento más energía que #2 (que camina abajo de las escaleras)). VR, movimiento "sensor".

Sistema del acceso de la entrada de la imagen -4E030: (crear los movimientos señalados para crear las señales deseadas que funcionan con el "acceso", es decir los movimientos del cuerpo, como dibujos y contraseñas son señales (para el acceso))

Palillo teledirigido -5E020: ()

Interruptor de la dislexia -5G061: (las imágenes y el oscilador experimentados son efectuados por cualquier señal creada por U, eg.: 1J010)

Notificadores del PVC -7G050: (el movimiento excesivo del cuerpo causa NR cuando las situaciones requieren menos movimiento del cuerpo, eg.: las sustancias nocivas (los gases) en aire no se deben respirar en gran escala)

-7G052 dobló el notificador llano: ()

progresos adicionales extensos de +-see a la Picosegundo-Zona, eg.: 3E150, 3E151, 3E152. Éstos se programan para la extensión importante a partir de la 10/95.

+ todas estas invenciones son muy relacionadas: notificador móvil de la localización del teléfono 3E010; encargado de registro de 3E020 GPS; 3E150 "Picosegundo-Zona"; correlador y regulador de la circunstancia de 3E151 GPS: ; localizador de 3E180 GPS; sistemas de facturación de 3E190 GPS; suplemento de interior de 3E210 GPS:

---sobre la parte cortada y movió aquí 9/95--

oooooooooo

regulador audio de la zona 3E-160:

- Comunicar (oír o hablar) con las capacidades basadas en la localización del usuario. Usos:

--el usuario oye ciertos sonidos/comunicación basada en su localización y o el acceso de la identidad (RFID). EG.: el usuario recibe señalado/necesitó la comunicación (del intercomunicador) basada en quién y donde están (W5).

--el reconocedor visual del `identifica la persona/el objeto con o sin otros modos de identificación como RFID/el acceso.

- (Auricular sin cuerda) (GPS) sistema: Oír cualquier cosa (voz, música y u otros datos) en su auricular que tenga una cuerda o sea sin cuerda, u oírlo vía altavoz). (Diversas zonas permiten diversas (oscilador/micrófono/comunicación) funciones audios).

sistemas de facturación de 3E-190 picosegundo: pagar uso de cualquier producto o mantener según: donde la pieza atada/conectada de GPS va/viaja; # horas usadas; su uso según w5 (como "P.M."). Ap: alquiler de los productos (cortacéspedes de césped, planos, barcos, vehículos); precios de servicio de entrega (distancia incluyendo y el tiempo del modo que camina - pueden estar en diverso cálculo de la facturación, eg.: más costoso); uso de juegos (al aire libre).

sistema de dieta del comprador/picosegundo de 3E-200 picosegundo:

Estados que los alimentos están disponibles y donde. Si usted va a la diversa provincia o país, el selector del menú y las listas de compras sugeridas cambian por consiguiente.

- Aplicaciones los sistemas de dieta generales de 2E-010.

SECCIÓN de PS-ZONE - quizá menos importante:

Ver el número de la invención 3E150 (movido a IMI& "picosegundo").

. Mecanografiar las localizaciones y cómo "anotó":

- ojo de toros: Como los círculos concéntricos, más cercano a la diana que representa la mejor localización, más alta es la cuenta.

- colmena de la abeja: diversos puntos esporádicos pudieron ser las mejores localizaciones. --en este caso las células centrales tienen grados más altos, las células vecinas pueden tener 50% del grado de la mejor célula, la grada siguiente hacia fuera que tiene el 25%, y después hacia fuera cero, y siguiente hacia fuera, menos el 10%, y así sucesivamente. Diversas células centrales pueden tener cuentas de diferenciación.

- buñuelo externo del anillo: cuentas más altas para "señalaron" distancia del punto centralmente medido.

- altitud: medido en el milímetro o el kilómetro

- ángulo: eg.: 45 grados del punto centralmente medido. Esto se puede combinar con distancia "señalada".

- profundidad: debe ser below o cubierto por algo (de sustancia señalada/de grueso; o cubrirse y de cierta distancia de la cubierta). Eg.: material enterrado "que busca".

- zonas múltiples: dos o más zonas "señaladas" deben ser activas/activadas/ocupadas: simultáneamente/en "orden y la sincronización señaladas" (el accessor de la trayectoria camina físicamente).

--cada "k" (llave) puede representar una zona. La "orden y la sincronización" de su ser activated= crea un patrón. La "llave" es un área muy amplia de usos. Ver: "componer", "ruta", "pista".

Archivo: Localizadores/picosegundo de características
Funciones de sistema de colocación

Picosegundo:
La cubierta cualquier cosa de los sistemas de colocación usada para identificar algo es localización (del mueble). El GPS es un subconjunto en que cubre solamente la colocación de adonde ocurre la conexión basada en los satélites. RFIDs puede proporcionar la colocación de adonde no puede el GPS.

Picosegundo - Zona:
Las funciones de productos son dependientes en su localización actual. Ver el archivo separado.

Collar del GPS:
- choques (perro) cuando superan zonas. Mejor que poniendo los alambres subterráneos (como invención actual hace). Permite que el dueño del usuario/del perro señale zona deseada, incluso cuando cambia localizaciones.
- programa en nuevas fronteras de la zona cerca: perímetro que camina, e instrucción del GPS demarcar cuál es interior/fuera de la zona como siendo una buena/mala área.

Velocidad del GPS/cálculo de la conducción:
- Hacer cumplir los límites de velocidad. Existe.
- Hace que los conductores seguros permanecen en curso.
- fijación cualquier cosa/a cualquier persona: basculadores; caballos (de la raza); pájaros; objetos en el espacio (planos)
- el `notifica/los controles antes de que el vehículo/el objeto pase un borde:
--bebé (fijación al pañal/al perno)

Zonas de la información:
- los datos (convertidos) obtienen (capaz) sobre una zona. EG.: topografía; qué (W5) está sucediendo en una zona. EG.: la invención ordena al vehículo automatizado teledirigido que retrase cuando la tierra es escarpada.
- relacionado con la función audio del "look ahead". El reconocedor sano es parte de la "zona de la información".

Comparación del valor:
- El precio de compra medio pagó, donde, cuando W5. Con el Info del usuario/del abastecedor, la invención puede determinar si el usuario tiende a pagar en promedio más/menos que otros establecimientos. Para: gasolina, leche...

- Calidad del establecimiento. Restaurantes, almacenes...

Base de datos del GPS:

Compila toda la' información seguida disponible sobre qué sucedieron, donde y cuando (W5). Esta base de datos se utiliza en manera desginated.

Seguimiento dual del satélite de la constelación:

- cosechadoras Glosnass (tecnología rusa del GPS) con el otro (los E.E.U.U.) satélite del GPS (tecnología). Utiliza uno o más satélites cuando uno es inasequible.
- satélites alternativos usados para completar y para evitar el tiempo muerto en que los satélites (los E.E.U.U.) no son funcionales.
- Galileo: satélites europeos próximos.

Tipo señales:

- Las señales débiles de los dispositivos, pueden confiar encendido: torres (de la célula) que están más cercanas que los satélites; otros sensores (picosegundo).
- Otras señales: Diente azul; Señales de RFID

Misceláneo:

- Método y sistema de la patente US6995859 para la instrucción de una computadora: da instrucciones el GPS y las computadoras.
- UIP: estudios donde estaba el usuario adentro más allá, cuando, W5.
-Waves.com: software de proceso audio. Co israelí con software costoso.

Archivo: Localizadores/picosegundo de IMIS

SISTEMAS DE COLOCACIÓN - FUNCIONES CENTRALES

Las piezas del picosegundo simplificaron

El "SUPLEMENTO" = sistema del picosegundo puede ser utilizado cuando la azotea obstruye la comunicación basada en los satélites.

El "LOCALIZADOR" = encuentra el objeto, la persona o el animal deseada. Dirige los vehículos.

"PREDECIR que" = predice donde estará el objeto [w5]. Ver la cañería predecir la partición.

La "PISTA" = las pistas a donde el transmisor del objeto se ata va; más qué hace porqué, cuando y cómo.

"ZONA - el ACCESO" = usuario es acceso restricto según su localización. Asusta apagado, o atrae gente o animales fuera, o en de territorios. El subconjunto de "Zona-Función", por lo tanto solamente las invenciones cuya función principal es control de acceso se archiva aquí.

"ZONA - la FUNCIÓN" = las funciones señaladas ocurre en ciertas localizaciones.

"ZONA - el GENERADOR de IMAGEN" = mapa (cuerpo) de movimientos (tridimensionales) crea imagen.
Usos:
- Da instrucciones: cómo mover el cuerpo, por ejemplo en deportes; jugar a juegos (del ajedrez); tocar el instrumento musical; baile; patinaje artístico.
- "Acceso": las imágenes señaladas de movimientos permiten el acceso.

"ZONA - NR" = alarma ocurre cuando el objeto se va o entra en una localización.

Archivo: Localizadores/picosegundo de funciones de IMI

SISTEMAS DE COLOCACIÓN - FUNCIONES CENTRALES

El "SUPLEMENTO" = sistema del picosegundo puede ser utilizado cuando la azotea obstruye la comunicación basada en los satélites.

suplemento de interior de 3E210 GPS: Comparar el directorio I de w 3E210 adentro.
Notas de Q: Necesita más usos. <4, 3.5, 2, 1 - sabe poco de GPS>
=
Compensador basado en los satélites de la obstrucción del GPS. Un sistema de interior del GPS. Conocer la localización cuando la transmisión al satélite se bloquea. Localización entre las piezas de tierra múltiples determinadas vía "distancer". Distancer es el sistema de tres transmisores que determina la localización del transmisor específico bajo obstrucción del GPS, en relación a los tres puntos. La computadora central de este

tres puntos determina la colocación global vía la comunicación basada en los satélites, y la comunicación con las unidades móviles.

Usos: 1] Funciones dentro, puesto que las señales del GPS no viajan a través de las paredes. 2] Las unidades múltiples usadas cerca de los tres transmisores pueden ser manufacturadas sin los receptores basados en los satélites, ahorrando costes de fabricación. El sistema entero se puede mover con la computadora central móvil. 3] Interferencia de la manija de las ayudas de diversos tipos: cubierta de nube, dentro de una montaña. 4] Artículos que falta de la pista. Precios que caen, tamaños del producto de todos los productos que caen, por lo tanto más usos del GPS para seguir. 5] Animales de la pista y del monitor (vía los "sensores"), gente.

Dice a sistema donde está, en golondrina de mar, sistema el usuario responde o encamina señales por consiguiente:

- persona de las páginas (KN) sin la necesidad disturbar el edificio entero.
- Juegos: localizar a jugadores.
- El teléfono suena solamente en sitio o el edificio donde está el usuario. No requiere a la expedición de llamada o a recepcionistas que remiten llamadas. (Véase: KN).

Sistemas de seguimiento localizados. Esta invención combina con uno o más del siguiente:

1] Sensores del calor. 2] Sistema de Loran: cuadruplicar (más) el sistema para el envío. Con todo este sistema es más amplio en alcance. 3] Pseudo luces: los transmisores identifican la localización dentro con el uso del crujido de número. Como un sistema de seguimiento basado en los satélites de interior. 4] "Distancer" que alerta a madre cuando se va el niño. 5] Qué demostraciones de computadora para la localización de la unidad, y o el tipo de la actividad.

Problemas: El GPS es campo apretado. El satélite móvil del GPS es todavía abultado. Si al aire libre, el GPS necesita ser señalado hacia arriba, deteriorando ciertos usos. ¿Piezas costosas, pero disponibles?

Misceláneo:

- dice la unidad de sistema está en qué edificio; entonces donde dentro de ese edificio, eg.: piso; número de habitación; quién lo está utilizando cómo (vía: "tener acceso", uip; w5).

- Navegación de Trimble en el CA: no sabe de cualquier persona capaz de seguir dentro. (408) 481-8000.

- u pudo ir dentro y fuera de varios edificios, por lo tanto de valor en el lazo de w GPS global.

- este sistema se puede utilizar al aire libre. Propósito: mejorar la exactitud de localizar la posición. Aunque muchas compañías están intentando calcular cómo conseguir alrededor del bloque del militar ya.

- cada edificio tiene tipos de transmisores, por lo tanto u sabe qué edificios son en el wo que necesita un GPS.
- patentabilidad: combinando el GPS con los localizadores localizados, puesto que existe cada uno por separado.
- tr en la construcción en el mismo fq que con los satélites. Demostraciones adicionales de una señal en las cuales el edificio u está. El receptor del u hace la triangulación para determinar donde está (en relación al tr del edificio).
--La versión de interior es igual que el sistema del GPS del exterior, por lo tanto este no patentable solo. Sin embargo, cuando dentro, no saber dónde en lo referente al resto del globo. El edificio no se mueve, así que el edificio transmite constantemente su localización al receptor (u) - el edificio no necesita comunicar el satélite de w.
¿- FCC?
- el sistema también transmite donde se localiza u (rc). Rc codifica su localización y tr él.
- MK: sistema de la paginación; el recepcionista sabe a si deben paginar o accionar el beeper.
- LoJack: el localizador del coche, ayudas identifica donde robado. A mediados de los años ochenta quizá construidos.
- el conjeturar existe probablemente: u tr su localización.
. Los retrasos del satélite (artificial) son duplicados por el sistema (vía el tr del edificio) al receptor portable (gps). Rc cree que las transmisiones están viniendo del satélite.

- el uso para conseguir los coches robados mantuvo garages (públicos). El coche de los estados del sistema es in/somewhere en garage. Con todo, la señal del momento era sistema perdido sabe donde está el coche.

- el tipo localizador localizado depende del tipo uso.
- seguimiento de la persona.

- si el edificio no se engancha en este sistema más grande, después cuando los gps entran en el edificio/el área sobre cuando suelta el contacto w satellite/M, los gps saben donde está/era pasado. Entonces, puede comunicar vía uno de los teléfonos en el área/edificio. El CID real del teléfono usado deja a gps saber donde está área de w/in.
- los gps pueden utilizar quizá (cualesquiera) la línea de t para identificar su localización - por simplemente (estrellándose en la línea de teléfono).

- Existe quizá: El laboratorio de la física de Astro de Stanford Univ está investigando creando mayor exactitud de punta (para el aterrizaje de aeroplano).

- Sistema útil especialmente: reducir los costes (cada uno parte separada puede determinar más barato elementos de la distancia que vía los gps); facilita las situaciones donde la azotea o la otra obstrucción puede limitar la comunicación/el acceso con el satélite (gps).
- "Localizador" y "Distancer". Eg.:
- número de los estudios de u/de gente/de animales, para la investigación, ajuste de la HVAC (véase el producto relacionado de Mitsubishi según lo preparado en uno de los periódicos ingleses de Japón cerca de 92- '93).
- Localizaciones de [gente, animales y artículos termógenos (las máquinas, ennegrecen los objetos coloreados que calientan para arriba más que el ambiente en el sol)] identificado por los sensores del calor (cualesquiera hechos nunca por Takenaka Engineering Co, Japón). Las localizaciones exactas se pueden determinar por el análisis de sensores múltiples de modo semejante de: receptores múltiples de la radiofrecuencia que identifican objetos según lo explicado en estos papeles.

"LOCALIZADOR" = objeto, persona o animal deseada hallazgos. Dirige/dirige gente o los vehículos.

localizador del laser 3A480: Puntos del laser al objeto que es buscado.
Una característica principal para los juegos numerosos. El laser señala de vez en cuando en la dirección de la persona que juega al juego con el transmisor, así que usted puede encontrarlos.
- juegos de guerra: buscarse abajo, cuando el receptor en la correa se ha golpeado, que el jugador está temporalmente fuera de juego. Una persona del "golpe" no puede enviar el laser de la "matanza". El equipo que consigue a todos los jugadores del otro equipo mató a cualquier momento triunfos.
- encontrar ciertos objetos que falta
- la luz laser señala en la dirección del objeto que transmite ondas de radio particulares
- OTD: exhibición ("S"); el pp%; P.M.; el interactive%; todos; juguete; juego; hospitalidad; portable; punto de ebullición; el osc%.

Buscador A1-410: Utilizar su linterna regular para encontrar los artículos deseados. O linterna especial del uso (que emite frecuencias ligeras no estándar). Los artículos del hallazgo en obscuridad otra no pudieron encontrar.
- en la noche o el día, enciende solamente el su del artículo programado para ver debido a la química externa del artículo. Funciona encendido algo relacionado distante con el sistema de la película infrarroja de la cámara. BP, E, S, HH

- OTD: la pintura se puede aplicar a los artículos; el usuario puede incluso pintar el número particular, códigos al artículo designado; "inclinación"

6B350 señala la luz en la dirección del objeto deseado. Objeto identificado vía: detector de movimiento; distancer; etc.

localizador del animal doméstico 8B010: Saber donde está su animal doméstico. El transmisor del collar demuestra que el receptor localizan del dueño el cuarto o la parte del animal doméstico del jardín.
+ (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.

- (no electrónico): La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera.
- el collar del animal doméstico tiene transmisor que demuestre si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la pantalla especial;
- + el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala si el dueño está consiguiendo más cerca o más lejos de animal.
- útil para localizar a niños. Animales en parques zoológicos grandes; áreas de la naturaleza; etc.
83
- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral
- el collar del animal doméstico también tiene un altavoz del analizador del receptor..... Esto hace los sonidos diseñados para llamar el perro, eg.: "silbar", o el animal oye su nombre.
- "inclinación" y vibración "sensor": saber si animal doméstico es durmiente o caminando, etc.
- OTD:
Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; localizador; distancer
- Descifración entre los diversos animales/organismos/especie vía: Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por el material (de los reactivo de este N) producto químico de w. NR demuestra qué productos químicos presentan W5. Esta N copiada al agosto de 95 7G050.

$$ 2D-050 localiza la dirección del objeto vía sonido y o cámara. Funciones de sistema como los oídos humanos y los ojos para establecer claramente el objeto, más su distancia, velocidad, velocidad. "Pista", "picosegundo".

Saber la dirección exacta del sonido deseado para:

Caza: programar el tipo sonido buscado, eg.: el pájaro, pato suena...

- micrófonos múltiples tr a c cuando oyeron el sonido. Las fracciones de la diferencia de los segundos en su sincronización de la recepción del sonido determinan la dirección: las funciones tienen gusto de animales con los oídos múltiples.

--la época de recibir el sonido se debe distinguir a partir del tiempo c consigue la señal del mic, puesto que el tiempo de recorrido del mic a c puede variar [pero no por qué mic consiguió el sonido primero]; por lo tanto cada mic tiene un contador de tiempo que tds cada señal de sonido que es tr a la C.

- u o el sistema oye sonidos - > entonces quiere una respuesta de los sonidos y o de los datos sobre la dirección del sonido.

- el sistema juzga las velocidades, velocidades, desaceleraciones de los objetos, objeto de la distancia es de los sistemas "sensores".

- usos: Seguridad: bandidos de cogida (saber en qué direcciones vinieron o salieron (después de que NR demuestra una actividad ilícita posible conducida bandido); "tener acceso" (u debe entrar/salida de ciertas trayectorias/de las direcciones, vía ciertas velocidades)

- D: cámara múltiple del ~ del tds del ~ del mic = analizador de sonidos/analizador visual = c = s/notifier

-2D-080 analiza la distancia de la fuente sana.

- OTD:

ACCESO: (); CÁMARA: (); CARRO: (el tipo sentidos buscó; cómo se procesan los sentidos (vía la banda)); K: (r); MFH: (base de datos de los sentidos para: "analizadores diversos", desarrollo del uip); MULTIUSOS: (el tipo detecta ayudas determina el uip de u o se opone, en golondrina de mar que el sistema ajusta por consiguiente); NOTIFICADOR: (cuando ocurrencia deseada, eg.: w5 sucede); OSCILADOR: (); Banda: (); Picosegundo: (el objeto externo lleva el tr); S: (); CUENTA: (tds); UIP: (); WA: (objeto externo).

- Estrategia de búsqueda de la patente: sonido near9 (dirección o direcciones)

- No. de la patente de los E.E.U.U.: 5333501 +4581727 +4393270 +3976969 +3736553 +3723962 +3723962

- similar a KN en directorio de E o de G

+ indicador constante de la dirección 2D-060: El sistema portable señala continuamente al objeto deseado sin importar donde está el usuario con este indicador portable de la dirección. Piedras de afilar del sistema adentro en el objeto deseado: sonido, o transmisión electrónica.

- La persona puede dar une vuelta con el goniómetro y todavía hacer que señale a la localización deseada (el sistema que busca del sistema se basa en (los tipos de) sonido, las ondas de radio, los estímulos necesarios 2D-

050's, el etc. El goniómetro sabe qué dirección es del norte, por lo tanto el señalar irregular del dispositivo se compensa (el sistema sabe la dirección deseada en términos de su relación con la posición del norte).

- otros usos pueden decir si el investigador está consiguiendo más cerca o más futuro (w5: donde, qué, porqué)
- usos: encontrar el bebé/los objetos que falta/los objetos robados (coches). Colocar a disposición/su automóvil/morral.

. - el sistema memoriza la dirección correcta por el tiempo programado

- D: objeto deseado (paladio ()/el oscilador/el otro fq del distancer) = sensor = c = s/notifier.
- D2: analizador de 2D-060 = de 2D-050/de sonidos
- Estrategia de búsqueda de la patente: (dirección o direccional o direcciones) near9 (localizar o localiza o localizador o hallazgo o encuentra). Kilovatio: afilamiento de los dispositivos.
- No. de la patente de los E.E.U.U.: 5167417 5122960
- Las piedras de afilar adentro como un animal que intenta permanecer centradas en el mismo objeto aunque se está moviendo el animal, o el objeto visto se está moviendo.

$$ 2D-080 analiza la distancia de la cual la fuente sana fue creada, y su nivel de decibelio

- actos como el oído humano, y 2D-050

¿- factible?

- Usos para: cazadores que intentan localizar la presa (picosegundo); bandidos de cogida (del fugitivo).

3E-110 GPS audio:

Da direcciones audios. Más fácil para los conductores y los caminante.

eg.: el sistema dice: "dar vuelta por favor a la derecha en los cincuenta metros de la esquina a continuación".

Puede ser compatible con una unidad posible de la exhibición ("S") demostrar el mapa también

sistema de $ 3E-170 GPS para ver cuál está a continuación:

La exhibición ("S") demuestra más que apenas mapas. Demuestra:

- vistas visuales de exactamente qué el área a continuación mirará como será tan más fácil encontrar el lugar necesario, eg.: almacén en bloque apretado. Demostraciones de la pantalla en la dimensión dos o tres (eg.: como sería visto del asiento de conductor).
- conseguir una 2.a/tridimensional (casi/qué aparece estar en "s") visión.
- destinación próxima que determina el ^ de los elementos: #1] localización k/pr adentro por el sistema del u; #2] u pr/selects según ^: # a continuación/punto de los minutos en el mapa (que viene de su dirección actual, del interno consiguiendo la visión angulosa deseada, si es posible).
- usos del vr.
- usos: el conductor/la 2da persona en vehículo puede utilizar para dirigir (el vehículo)

¡- costoso convertirse, con todo necesario!

- GPS D: sensor de la localización = c (cart/m/k) = impresora del s

-6/95:

<3.5, 3, 2, opiniones de sistema de 2> 3E170 GPS cuál está a continuación en el camino: La exhibición demuestra más que apenas mapas. Demuestra: vistas visuales de exactamente qué el área a continuación mirará como será tan más fácil encontrar el lugar necesario, eg.: almacén en bloque apretado. Demostraciones de la pantalla en la dimensión dos o tres (eg.: como sería visto del asiento de conductor).

- ver cuál es a continuación como su conducción abajo del camino en un juego video.

¿- este patentable está considerando allí es ya mapas? La patentabilidad pudo ser correlador del mapa a la versión tridimensional de considerar de donde está el coche. La correlación tiene que ser activa.

- pudo el tamaño de límite de la base de datos a ciertas señales, áreas particulares.

- Estrategia de búsqueda de la patente: GPS o (sistema de navegación mundial)

localizador de $$ 3E-180 GPS: ¿Ya un KN, archivo de la R-Lista del intento, o un archivo del EL en el directorio de G obvio?

El sistema le ayudará a encontrar el artículo dirigiéndole a él. Eg.: gato perdido que no vendrá en sus el propio.

- vía el sistema del "localizador" sabe cuándo está consiguiendo más cerca o más lejos vía el notificador (luces que destellan: verde, amarillo, rojo).

%-sys busca artículos (sin el tr) y búsquedas por el otro characteristics^ del artículo: peso/velocidad del color de la forma/del tamaño/de la localización de su movimiento.

--el "analizador visual" busca por forma/tamaño/color.

. - sistema (poder) saber w5 sobre objeto. Eg.: por su localización (del general) (donde debe be/was último usado o considerado) el sistema dirigirá u a esa área primero, después utiliza quizá otros medios para localizar el N.

- D: item= solicitado (c=tr) = rc=c=s/osc/n/m

¿- existe?

- OTD D: U = este ~ del sistema de N (GPS-Localizador) C =

ACCESO (); ANALIZADOR (); CARRO (); NOTIFICADOR (cuando elemento solicitado encontrado); OSCILADOR (cuentas si u está consiguiendo cerca/más lejos); Banda (); Picosegundo-Zona (funciones solamente en zonas señaladas); Q (el sistema dice a u qué elemento: es, donde está, %w5); S (); CUENTA (); SENSOR ().

-3E190

- Estrategia de búsqueda de la patente: GPS o (sistema de navegación mundial)

- "Picosegundo-Zona": u sabe que qué área/zona deseó el elemento está en.

sistema de dieta del comprador/GPS de 3E-200 GPS:

Estados que los alimentos están disponibles y donde. Si usted va a la diversa provincia o país, el selector del menú y las listas de compras sugeridas cambian por consiguiente.

- Aplicaciones los sistemas de dieta generales de 2E-010.
- se relaciona con el otro kn
- Estrategia de búsqueda de la patente: GPS o (sistema de navegación mundial)

Compás R15 para la navegación del coche. También útil en encontrar automatizado de la localización. Altitud y ángulos de las medidas para los aviones, construcción.

. - [Laboratorio Co. 3-30-3 Nishi-Ikebukuro, Toshima-ku, teléfono 03 de Chemicalizing de Tokio 171 5992 2241. 18 de enero de 92 NK]

- OTD:

ACCESO: (); CÁMARA: (); CARRO: (); MFH: (); MULTIUSOS: (); NOTIFICADOR: (w5; aviso (minuto 5) antes de la llegada o navegador que necesita tomar la decisión, eg.: hacer una vuelta; notar dado cuando está llegado); OSCILADOR: (); Banda: (); IMPRESORA: (mapa); Picosegundo: (); Q: (); R: (); S: (); CUENTA: (tds); Teléfono: (tr); UIP: (); WA: ().

R50 GPS (para examinar áreas geográficas). [Navegación de Timble [co no japonés?], El ministerio del instituto geográfico de la encuesta sobre la construcción, asociación de Japón sector de la construcción titulado el artículo de los topógrafos 1992 del "descubre los satélites" NK]

- OTD:

ACCESO: (); ARTISTA: (paladio); CÁMARA: (paladio); CARRO: (); COMPOSICIÓN: (paladio; Miburi de Yamaha); ENTRETENER: (); "M": (); MAÑANA: ("notifica" si el usuario no está fuera de la cama basada en la localización de la persona (paladio, calor del cuerpo)); MULTIUSOS: (); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Picosegundo: (); Q: (); R: (); S: (); CUENTA: (tds); SYNTH: (el tipo oscilador diferencia según la localización del paladio); Teléfono: (tr); UIP: (); WA: ().

+ buscador del animal doméstico R111-1:

Saber dónde se localiza el animal doméstico. No necesitar preocuparse si se pierde el animal doméstico. Localización del animal doméstico conocida vía uno o más de modos siguientes: el transmisor del collar del animal doméstico envía señales al receptor dentro de la casa, si su hogar; el receptor de la puerta del animal doméstico sabe si salió el animal doméstico por último adentro o; una versión no electrónica de la puerta del animal doméstico es tal que es la manera que se cierra así que demuestra salió qué animal doméstico de la manera (estes 3ultimo no patentables?).

- (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.
- La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera. Cualquiera sabe vía el sensor mecánico de los medios/EL = c = nr

- el collar del animal doméstico tiene transmisor que demuestre si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la exhibición especial ("S");
- el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala si el dueño está consiguiendo más cerca o más lejos de animal.
- útil para localizar a niños. Animales en parques zoológicos grandes; áreas de la naturaleza; etc.

83

- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral
- el collar del animal doméstico también tiene un altavoz del analizador del receptor..... Esto hace los sonidos diseñados para llamar el perro, eg.: "silbar", o el animal oye su nombre.

Nota al pie de la página:

Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; localizador

- OTD:

ACCESO: ; CARRO: ; PALMADA: (para que animal haga el sonido: maullido, corteza...; Exhibición ("S"): (cuenta en el animal (su localización)); "M": cuenta; "mic": ; Paladio: usado por el animal; PP/MP: ; MQ/UQ: ; MULTIUSOS: (multi-animal (cada uno usa diverso paladio w posee el tipo código que es transmitido); NOTIFICADOR: ; OSCILADOR: ; TELECONTROL ("R"): ; CUENTA: ; TDS: ; UIP: (usuario que es animal, eg.: para el estudio de laboratorio de los movimientos animales/comportamiento); Reino Unido; %WA usado por el animal (hace el sonido si caminan demasiado lejos; hace los sonidos interesantes (animales salvajes para excitar el animal doméstico).

- utilizar el kn: 1] "localizador", conociendo el paradero del portador; 2] "localizador" induce la parte posterior del portador vía: choque de osc/el

R116 GPS (sistemas de navegación mundiales) localiza la posición de carros. Este Info usado para ajustar horario de operación del plan. $10,000/truck. Marzo de 93 X.

- OTD:

ACCESO: para ganar la información; CARRO: ; Exhibición ("S"): ; FS: ; "M": ; Paladio: localizado en vehículos móviles; PP/MP: ; MQ/UQ: ; MULTIUSOS: (diverso paladio de cada carro le hace a diverso usuario (internar el sistema de cada carro lo yuxtapone en relación a otros carros para el análisis/la visión por cada conductor); diversa gente puede obtener la información); NOTIFICADOR: (cuando el carro sale la ruta necesaria, hurto alerta/que remonta); OSCILADOR: ; IMPRESORA: ; %REMOTE: ; CUENTA: (patrones del recorrido); TDS: ; Teléfono: ; UIP: (de cada carro/conductor); Reino Unido.

El navegador de coche de R193 GPS da comandos verbales de dirigir el conductor. 2 de noviembre de 92 NK . - movido al "picosegundo" 6.96

R202 GPS activado por voz. Sanyo 19 de abril de 93 NK
- movido al "picosegundo" 6.96

Localizador - extremo

La "PISTA" = las pistas a donde el transmisor del objeto se ata va; más qué hace porqué, cuando y cómo.

> encargado de registro de $$ 3E-020 GPS: Expedientes automatizados del sistema de custodia de registro donde estaba el usuario cuando y para qué propósitos. GPS y tiempo de registro y lugares del reloj. Llaves del usuario en sus actividades. El sistema es portable, y o conectable al vehículo. Usos: negocio y custodia de registro del IRS. Uso de menor importancia: Hacia fuera en la custodia de registro científica del campo. Ahorrador de tiempo. Ésta es una parte del sistema más grande de PS-ZONE.
- El sistema de navegación mundial (GPS) conjuntamente con D. móvil GPS identifica las d móviles que colocan y o hace un mapa de sus recorridos para: Los cálculos del IRS de millas viajaron.
- era: encargado de registro de 3E-030 GPS: las subsistencias "pista" de trayectorias viajaron:
usos: para la oficina recaudatoria que las necesidades de saber las millas y o encaminan viajaron y cuando y donde parado durante cu3anto tiempo, reduce la necesidad de la custodia de registro manual.
- el usuario pudo afinar en el Info sobre su parada cuando viajó la parada se hace ahorro de afinar millas y de donde y a donde.
- para los taxis, cada vez que el pago es etiquetas de registro recibidas del encargado del GPS la ocurrencia.
- el sistema observa solamente las situaciones que cumplen los requisitos del uip, eg.: solamente las actividades hechas más allá de 10 kilómetros de del este de punto central se registran.
- atadura del dispositivo a los animales: notas del sistema vía los sensores (de la vibración) = cuerpo animal, qué animal está haciendo w5, eg.: durmiendo (pequeño movimiento del cuerpo), comiendo (que mastica sonidos/el sensor de las vibraciones)
- D: u (localización cambiante) = PD/TDS/K = picosegundo (GPS, M, UIP)

-6/95:

Encargado de registro de -3E020 GPS: Expedientes automatizados del sistema de custodia de registro donde estaba el usuario cuando y para qué propósitos. GPS y tiempo de registro y lugares del reloj. Llaves del usuario en sus actividades. El sistema es portable, y o conectable al vehículo. Usos: negocio y custodia de registro del IRS; hacia fuera en la custodia de registro científica del campo. Ahorrador de tiempo.

- necesidad de desarrollar los usos adicionales para este N.

- supervisan al guardabosques o al protector de seguridad para donde y cuando (w5) fueron, ahorra de su apertura de sesión, se cerciora de que están en su golpe. El cartero, se cerciora de que no estén durmiendo en alguna parte. Científicos: recopilación de muestras en las diversos horas y lugares: el científico empareja fácilmente la muestra con w5. Aplicación de ley: el preso no puede ir a 50 metros de la exmujer; o no puede salir de la ciudad (el tr del preso si está fallado, después autorización sale para su detención). Alquiler de coches co: no puede sacar fuera de ciudad.

--el sistema permite/requiere u pasa un plazo señalado (tds) en cada zona (picosegundo-zona), eg.: el hombre no puede ser exmujer cercana más de cinco minutos por 24 períodos de la hora el Wed, Sat y Sun (coger a sus cabritos).

--D: persona = picosegundo-zona = c (del móvil) (el analizador, nr, cuenta, estado, s, k, uip-adapta, uip-DB)

--existe: carro que sigue el sistema - N. relacionado.

--KN: restringe a usuario de seguro divide en zonas, vía, eg.: parte de incapacidad/todo el sistema en tales zonas.

- Los usos adicionales necesitaron.

- Legal: las leyes diferencian por la provincia/el país, por lo tanto las restricciones/los permisos aplicables pueden aplicarse/sean via= hecho cumplir interruptor = para el uso de la n.

- Estrategia de búsqueda de la patente: #1 GPS. #2 GPS y ((encargado de registro near9) o tabulat o cuenta)

- OTD D: U = este ~ del sistema de N (encargado de registro de los gps) C = ACCESO (); ANALIZADOR (); CARRO (); MULTIUSOS (); NOTIFICADOR (cuando se alcanzan los excesos, eg.: u usado encima de la línea de crédito o del nivel del uso permitido); Banda (); Picosegundo-Zona (); Q (); CUENTA (w5 de las actividades del u); SENSOR (); ESTADO (); TDS (); T (); UIP (); WA (); +BILL.

- OTD D: U = este sistema de N (encargado de registro del GPS: tabula "cuentas que"/"analiza" las ocurrencias/las acciones (de piezas/de usos) por u/el sistema basados en zonas del ~ de las ocurrencias) C = ACCESO (w5 (especialmente donde) accedió, especialmente donde); ANALIZADOR (trabajos con el interruptor diferentemente); CARRO ((especialmente donde) el carro w5 fue utilizado); EDIT (); EDUC (); MULTIUSOS (quién utilizó w5 (especialmente donde)); NR (ocurrió qué nr w5 (especialmente donde)); Banda (w5 (especialmente donde) que programaba fue hecho; la banda controla este kn); Q (tabula cada pregunta - > las cuentas/uip-DB); R (cómo fue utilizado); RANURADOR (cuál era w5 encaminado (especialmente donde)); CUENTA (cuál era w5 anotado (especialmente donde); la mayoría de las ocurrencias

se pueden anotar); SENSOR (cuál era w5 detectado (especialmente donde): monitor inteligente 2E251); ANALIZADOR de SONIDOS (qué (tipo) suena fueron escogidos encima de w5 (especialmente donde): cómo el sistema reaccionó: qué cada uno de los sonidos generó (según lo archivado por w5 (especialmente donde) de la ocurrencia, eg.: 2E251)); ESTADO (w5 (especialmente donde) del estado); TDS (w5 (especialmente con donde cuando) de ocurrencias); T ((especialmente donde) comunicación w5 (y tipo de: contenido/avenida de la comunicación) was/is que es hecha); INCLINACIÓN (w5 de la generación de señal (especialmente donde)); PISTA (); U (acciones del u: w5 (especialmente donde)); UIP (); ANALIZADOR VISUAL (cuál era w5 visto (especialmente donde)); VR (cuál era experimentado (cinco sentidos relacionados humanos (especialmente donde)); WA ((cuál era experimentado (cinco sentidos relacionados humanos (especialmente donde)).

. Demandas - adicionales: correlaciona el w5 de ocurrencias especialmente cuando con cualquier otro tipo generó electrónicamente la señal, o de datos almacenados en memoria. Uso para: investigación general, supervisión del objeto/del tema, eg.: 2E251.

. Superación de altos costes programados injustificados del interruptor, eg.: debido a la carencia del mercado para los usos específicos: Las versiones simples pueden ser utilizadas cuando los costes para programar no justifican. Desarrollar (cáscara) los paquetes estándar del interruptor que pueden ser (fácilmente) altered/pr para los usos diversos (por la mayoría de la u).

sistemas de facturación de $$ 3E190 GPS: El software manda la cuenta a usuario según donde, cuando y cómo el sistema alquilado fue utilizado. La invención está en la localización de conexión con cualquier otra entrada electrónica.

- pagar uso de cualquier producto o mantener según: donde la pieza atada/conectada de GPS va/viaja; # horas usadas; su uso según w5 (como "P.M."). Usos: alquiler de los productos (cortacéspedes de césped, planos, barcos, vehículos); precios de servicio de entrega (distancia incluyendo y el tiempo del modo que camina - pueden estar en diverso cálculo de la facturación, eg.: más costoso); uso de juegos (al aire libre).
. - pares con la otra N que acciona una respuesta según la localización del GPS, eg.: advierte a gps de u w no entrar ciertos territorios (vía choque/el oscilador).
- copiado para mejorar el archivo 1.95 de N
- D 1: contador de tiempo (tds; determina cuando localización necesita ser (sobre la carta "cuenta") =pd determinado, ver 3E anterior N.
-6/95:
- < 2.5, (3-pat), sistemas de facturación de 2> 3E190 GPS: El software tabula cargas según donde el sistema fue utilizado. Eg.: Cargas o impuestos basados en el estado en el cual el equipo costoso fue utilizado, facilitando impuesto de estado y procedimientos de facturación. El sistema tabula los minutos usados con cuando, donde y o cómo. Para los aviones, barcos, comunicaciones móviles.

- el can't niega patentabilidad; ¿comercial? Los usos adicionales necesitaron.
- cuando el alquiler de coches tomado más allá del área o del país, precio por milla allí pudo ser más alto. Eg.: los accidentes de tráfico son peores en México. Tarifas más altas del coche por área no pudieron ser constitucionales.
- más usos necesitaron.
- patentabilidad: gamas cambiantes de la acumulación; Metro de taxi del GPS. Pero los usos, eg.: el seguro efectúa patentabilidad. Usando muchas utilizaciones diversas, sacaré a colación un arte más anterior para la solicitud de patente.
- Estrategia de búsqueda de la patente: GPS o (sistema de navegación mundial)

encargado de registro de 3E-020 GPS: Expedientes automatizados del sistema de custodia de registro donde estaba el usuario cuando y para qué propósitos. GPS y tiempo de registro y lugares del reloj. Llaves del usuario en sus actividades. El sistema es portable, y o conectable al vehículo. Usos: negocio y custodia de registro del IRS; hacia fuera en la custodia de registro científica del campo. Ahorrador de tiempo.
- "Analizador": estudios de sistema la "cuenta", "estado" de objetos, en términos de su w5, uip, etc.

D1: ~ del usuario o de la unidad = del analizador del ~ del tr c = gps = M.
D2: determinando si el tr portable está dentro/hacia fuera: portable el tr = transmite la señal (en curso) (si dentro o hacia fuera) = receptor (de interior) recibe = entonces sabe que el objeto que se supervisará es o que no es próximo.
D3: juegos de interior/al aire libre el jugar: los jugadores/sistema saben donde están otros jugadores - > los jugadores/sistema responden por consiguiente.

encargado de registro de 3E-220 GPS: Expedientes automatizados del sistema de custodia de registro donde estaba el usuario cuando y para qué propósitos. GPS y tiempo de registro y lugares del reloj. Llaves del usuario en sus actividades. El sistema es portable, y o conectable al vehículo. Usos: negocio y custodia de registro del IRS; hacia fuera en la custodia de registro científica del campo. Ahorrador de tiempo.

Pista - extremo

Picosegundo - Zona

"ZONA - el ACCESO" = usuario es acceso restricto según su localización. Asusta apagado, o atrae gente o animales fuera, o en de territorios. El subconjunto de "Zona-Función", por lo tanto solamente las invenciones cuya función principal es control de acceso se archiva aquí.

+ regulador del movimiento 1C-121:
Sobre el sistema que identifica el movimiento de la persona y o el animal en zonas indeseadas emite sonidos desagradables adentro y o fuera de la gama del ser humano (este 3ultimo es preferred) de audiencia para disuadir la corriente y o las repeticiones futuras de la entrada (moldeado psicologico también). Picosegundo-Zona.
- animales quizás ciertos del tamaño se quieren para ser guardados fuera de una sección de un parque zoológico abierto (uno sin las paredes)
- animales domésticos de enseñanza donde no ir, qué a no hacer: eg., evitar ciertas secciones de la casa, jardín; no funcionar hacia fuera la puerta principal...
- ap: los terratenientes que quieren guardar a gente incorrecta del territorio, usuario pueden tener ("R") el control alejado u otro dispositivo para desactivar el sistema cuando están en la esta "zona indeseada"; gobiernos, compañías, etc que quieren inhibir sin embargo para no restringir seres indeseados de zonas; mantener la tierra libre de muchos animales o gente del apisonamiento por razones biológicas; conseguir los animales ausentes en vista de las desventajas de cercas
O-Inhibir el comportamiento animal con funciones de 1C-120.

- Ap: el controlar: palomas y otros pájaros indeseados en la ciudad, la granja, el etc; la dirección en la cual se induce a los animales que entren o no entren, permanecer, no permanecer; ratas y otros roedores; hacer que el animal doméstico los pájaros reduce sus sonidos vocales

Notas al pie de la página: alejado ("R"); exhibición (tipo de las demostraciones del sonido por decibelios, el etc); pp; P.M.; Reino Unido; todos; "mic"; portable; punto de ebullición; alerter; oscilador; vc; cuenta; tgh (hace sonidos para ahogar hacia fuera el tipo de maì□n ruido); carro; cp; uq; uip.

"ZONA - la FUNCIÓN" = las funciones señaladas ocurre en ciertas localizaciones.

vagabundo 5A580: las funciones según donde la persona viaja en el planeta, invención son usadas por la persona. El dispositivo recibe transmisiones del satélite, diciendo a dispositivo su localización dentro de un metro o así que (la tecnología existe)

Función #1: expedientes de las subsistencias en cuanto a las localizaciones del recorrido de la persona con las duraciones en cada "zona". Se puede atar a los vehículos o cualquier producto o animal

Función #2: sobre el dispositivo que entra en una mala zona, él: alarmas con una sirena; estalla la tinta por todas partes; envía una transmisión con la esperanza de que un receptor en alguna parte coja en este dispositivo que sea donde no debe estar.

regulador de tierra basado en los satélites del movimiento 5A581:

las funciones según donde la persona viaja en el planeta, invención son usadas por la persona. El dispositivo recibe transmisiones del satélite, diciendo a dispositivo su localización dentro de un metro o así que (la tecnología existe).

Función: sobre el dispositivo que entra en una mala zona, él: alarmas con una sirena; estalla la tinta por todas partes (dinero robado y tomado del banco sin correctamente deprogrammed); envía una transmisión con la esperanza de que un receptor en alguna parte coja en este dispositivo que sea donde no debe estar

- guardar los niños, los presos, el etc dentro de cierta zona

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

- fusiones w KN en directorio de "E" o de "G".

juguete 8B470 para los niños o los adultos:

cuando el juguete ha cruzado cierta línea, o ha entrado en un campo dentro de un transmisor, sonará una vez. Suena solamente otra vez cuando está tomado fuera y entonces nuevamente dentro de la zona. Se cruzan las zonas al disparar una luz laser; accionando un movimiento "sensor"; Distancer: el entrar o el irse dentro de alcance de un transmisor débil; el interfaz del juguete toca el interfaz de otro objeto, eg.: asiento del plano; etc.

- como seguridad del fall, dispositivo puede tener más que una forma de accionarse, él entra con eso el sonido deseado, acción solamente una vez, incluso si consigue otra señal positiva de otra manera
- muñecas y robustezas y osos de peluche y coches del juguete, planos, trenes, relojes, joyería, traje, etc.
- el entrar en diversas zonas puede crear diversos sonidos. Además, el juguete se puede programar accionar la palanca entre el diversos sonido y opciones de la acción al entrar zonas aplicables, eg.: en el modo A, cuando la zona que entra 1 él reirá; cuando en el modo B, la zona que entra 1 dirá "te quiero". El accionar la palanca de modos se hace en el juguete o el transmisor.
- juguete para los animales domésticos: hace sonidos que tienen gusto: descortezamiento, el meowing, chillando como animal de la presa. Puede emitir olores cuando en zona.
- pudo emite olores en zonas
- para ciertos juguetes, dispositivo pudo accionar solamente deseó la reacción un porcentaje del sistema de épocas que entra en zona. El propósito, crea más suspenso; cubrir para arriba por épocas que el dispositivo debe haber reaccionado pero que no lo hizo de manera correcta; etc

Acciones posibles del o, al entrar/tacto:

-. el cuarto de baño o acerca al transmisor del tocador, juguete orinará agua que comienza en cinco segundos.
-. cocina, dirá que "tengo hambre"
-. coche, dirá, "nos dejó conducir" y o conducir el coche, el autobús, el barco, el plano, el etc.
-. el instrumento musical, él o el instrumento comenzarán a jugar y o a cantar o a pedir que el niño juegue y o cante
-. el perro raspa, el gato meows cuando está puesto un correo, y o puesto afuera
-. el doctor viene cerca de otra muñeca, él: los tactos y o hablan como un doctor
-. gritos del bebé al venir cerca de madre
-. el hombre, mujer, muchacho, muchacha hace el sonido del beso, el etc al venir cerca bastante
- poniendo en los vidrios de sol del dispositivo, dice "exitazo"...
- caminatas al metro algunos segundos después de poner: ambos zapatos; capa; bastón; monedero; puerta cerrada de la casa de muñeca; el salir del coche...
- tiene muchas más posibilidades

Activador del Multi-Sonido del juguete B7-121-022001:
La posición de cada juguete genera el sonido único apropiado. Sonidos posicionales del ejemplo para el aeroplano del juguete: ascensión, descendiendo, volando arriba o sonido bajo, alerta cuando el plano enemigo se acerca. También para las muñecas; coches que apresuran, esquinas de torneado del juguete; ciencia. Posibilidades sanas infinitas.

- Para los automóviles del juguete, muñecas, robustezas

Técnico: emisiones de sonidos determinadas cerca: las alturas, y el grado se fue o endereza de transmisor, grado a las cuales abotonan se clava (o efectúa el volumen, o dependiendo de la posición hecha muescas en del botón el tipo real sonido emitido)

83

- El más el uno entra en una dirección, cuanto mayor es el grado de cambio, o después de cierta distancia el sonido o la música puede cambiar totalmente.

- El sonido cambia por el ángulo del dispositivo, eg.: el aeroplano del juguete hace diversos sonidos que sacan y que aterrizan; también para los coches y los carros del juguete; barcos en el agua móvil.

- (no traducir: este producto también incluye descripciones de B7-14)

OTD:

Todos; "R"; "S"; pp; P.M.; Reino Unido (sonidos deseados); interactivo; juguete; juego; hospitalidad; "mic"; ejercicio; portable; sst; punto de ebullición; SP; oscilador; vc; egh; cuenta; md; carro (sonidos); cp; distancer; chapaleta.

% del instructor de 3E-140 GPS:

Dice a usuario qué cómo cuando donde y o porqué (w5) deben mover acto responder y o piensan. Ejemplos:

- Instructor del juego: qué se mueve debe/se podría hacer para jugar a ajedrez, va, Othelo, inspectores, juegos al aire libre... El instructor del juego puede también ser su socio.

los juegos de %-ball, GPS dirigen la bola contra la persona, eg.: para un fútbol de la persona, ping-pong, etc.

- D: este N = uip/m/analizador.

. - esta n vaga, con todo relacionado distante con la otra N, eg.: anterior en el archivo 3E.

P 3E150 regulador de la zona de la "Picosegundo-Zona" -: La localización se correlaciona con funciones aplicables; el punto en el globo señala al analizador del GPS en la ayuda determinar funciones aplicables. Cualquier o función múltiple del sistema puede ser restricta y o extendido basado en las localizaciones para uno o más de los sistemas (múltiples) ("portable") las piezas.

Ejemplos: el sistema funciona solamente completamente en Manhattan, y está solamente en modo del receptor mientras que en la isla de Staten.

- utiliza 3E151

- D: localización/"circunstancia" (del cambio) = analizador/gps/sensor/c = c/m

. USOS:

- DB costoso del acceso del can't fuera de áreas particulares, o paga más arriba en tal caso.

- # de las aplicaciones para que esta necesidad de N sea aumentada/disminuyó zonas señaladas w/in.

- Monitor inteligente 2E251

+ notificador móvil de la localización del teléfono 3E010; encargado de registro de 3E020 GPS; otro + KN: usar "distancer", y "picosegundo", y piezas del "GPS".

- Palillo 5E020 de R

+ "ruta":

--Los datos encaminaron a los u la unidad (portable) (parte de un sistema más grande) efectuada por la localización del u. Los datos incluyen: "DB"; "tener acceso" a los sistemas del picosegundo (u puede conocer o dar hacia fuera su localización).

--Interruptor: funciona limitado

- "entretener" y "juego": sus funciones/opciones pueden ser limitadas/extendidas)

---OTD D: U = este sistema de N (funciones efectuadas (limitado/ampliado) por la zona del sistema/de u w n (parte)) ~ C =

ACCESO (); ANALIZADOR (); CÁMARA (2e251); CARRO (puede ser utilizado/ser insertado solamente en zonas limitadas); EDIT (); EDUC (); K (señalada las llaves ser tan limitado); M (señalado DB ser tan limitado); MIC (expedientes basados en zona de la fuente de emisión sana/sistema/u); MES (); RATÓN (); MULTIUSOS (cierto u puede utilizar solamente el sistema en zonas limitadas); NR (/no función); OSCILADOR (/no función); Banda (la zona es uno de los requisitos para el "acceso" al trabajo: tener acceso para alterar el interruptor del sistema; cortan las opciones para los piratas informáticos de computadora); Q (se no hacen caso/o no se permiten ciertas preguntas subir); R (funciones vía limitable teledirigido); RANURADOR (); CUENTA (las ocurrencias w5 = anotado/usable/visible por u/el sistema); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (ocurrencias de los relojes cuando sistema en zona señalada); Restricciones entrantes/salientes de T (de la comunicación; "acceso");

--INCLINACIÓN: Las restricciones se aplican; las señales generadas (por la inclinación) se pueden interpretar diferentemente según la zona,

---eg.: las primeras 10 o 100 señales potenciales (creadas por la inclinación) se interpretan diferentemente. D: El sw/db archiva = asoció w cada differently= "encaminado" manejado are= de la señal según la zona.

TR (las transmisiones pueden no ir a través); PISTA (mayor seguimiento basado en zona); U (cada uno/cierto u puede utilizar el sistema w/in señalado las zonas); UIP (compilación del DB efectuada por zona; el uip consigue la entrada de datos solamente de ocurrencias en zonas del sistema; el uip se permite influenciar/el sistema del control que tiene sus piezas aplicables en zonas del sistema); UQ (algunos o todo el respondible de q basados en zona); ANALIZADOR VISUAL (imágenes de los estudios recibidas de fuentes señaladas. Fuentes definidas como: "CID"; zona; mecanografiar el sistema; mecanografiar el interruptor); VR (cualquie función "portable" limitable); WA (cualquie función "portable" limitable).

--OTD T D: T (U (comunicador)) = "Picosegundo-Zona" (ciertas funciones del sistema son limitadas/extendidas basadas en la localización del ~ de u/(portable) del sistema (unidad) C =

ACCESO; CONTESTADOR AUTOMÁTICO; ARTISTA; BALANCE; BVA; CID; CÁMARA (LENTE); CARRO; PALMADA; COMPOSICIÓN; CONFERENCIA; EDUC; FS; JUEGO; ASIMIENTO; DE RECUPERACIÓN DE LA INFORMACIÓN (u/el sistema necesita estar en la zona señalada "a tener acceso"); K^; LOCALIZADOR; M; MIC; RATÓN; P.M.; MULTIMEDIAS; MULTIUSOS; NOTIFICADOR; NOTIFICACIÓN DE LLAMADA; Paladio; PORTABLE; Banda; IMPRESORA; R; RANURADOR; S; CUENTA; ANALIZADOR DE SONIDOS; ESTÉREO; SYNTH; TDS; TELEFONÍA INTERSISTEMA DE TRANSFERENCIA; UIP; Reino Unido; ANALIZADOR VISUAL; CORREO DE VOZ; MODULADOR DE LA VOZ; VR; WA. = [las partes anteriores después del "OTD T D" son parte de este diagrama, con las cuales interconectar/control/comunicación del efecto] = (múltiplo): T (U (comunicador)) /Usuarios/%Sys.

. Misceláneo:

- Esto es una subparte: Zona del "picosegundo" -; ¿o cubre quizá toda la Picosegundo-Zona también?
- Estrategia de búsqueda de la patente: #1] GPS. #2] GPS y (la zona o la división o las zonas o restringen
- OTD general D: U = este ~ del sistema de N (Picosegundo-Zona) C = TENER ACCESO (acceder solamente cuando en zonas (alterables) señaladas); ANALIZADOR (); AP (vr, R); ARTISTA (movimientos del convertido en gráficos: investigación general, forma artística nueva); VAGOS (movimientos del estudio de animales/de la gente = de UIP/"analizador"); CARRO (); COMPOSICIÓN (los movimientos = generan música: KN Yamaha Miburi); MULTIUSOS (cada u tiene zonas de diferenciación); NR (cuando las salidas/entran en de u zonas señaladas); OSCILADOR (); Banda (); Picosegundo (); Q (u pregunta cómo está cercano están en las zonas deseadas (siguientes) de los metros); R (); SENSOR (movimiento); + INCLINACIÓN (); PISTA (donde u is/goes/went y otros elementos w5); U (); UIP (); UQ (); ANALIZADOR VISUAL (); VR (); %WA ().

Movimiento NR del cuerpo -1J010: (los ángulos y los modos del movimiento de cuerpo son señales adicionales)
. - 1J080 hielo NR: ()

Movimiento NR 1J010 del alternador -4E010 = del cuerpo: (el "sensor" "anota" la actividad del "ejercicio" de u para: las calorías quemaron; la energía creó (para la batería); movimientos preferred sugeridos del cuerpo que aumentarían el nivel de batería que acciona para arriba, eg.: el tipo #1 (baile popular) del movimiento crea el 153 por ciento más energía que #2 (que camina abajo de las escaleras)). VR, movimiento "sensor".
Sistema del acceso de la entrada de la imagen -4E030: (crear los movimientos señalados para crear las señales deseadas que funcionan con el "acceso", es decir los movimientos del cuerpo, como dibujos y contraseñas son señales (para el acceso))

Palillo teledirigido -5E020: ()

Interruptor de la dislexia -5G061: (las imágenes y el oscilador experimentados son efectuados por cualquier señal creada por U, eg.: 1J010)

Notificadores del PVC -7G050: (el movimiento excesivo del cuerpo causa NR cuando las situaciones requieren menos movimiento del cuerpo, eg.: las sustancias nocivas (los gases) en aire no se deben respirar en gran escala)

-7G052 dobló el notificador llano: ()

progresos adicionales extensos de +-see a la Picosegundo-Zona, eg.: 3E150, 3E151, 3E152. Éstos se programan para la extensión importante a partir de la 10/95.

correlador y regulador de la circunstancia de ++ $$ 3E151 GPS: Las localizaciones y o las circunstancias pueden restringir uso del sistema portable. Ejemplos: códigos de acceso especial requeridos para utilizar ciertas funciones después de cierta fecha o de otras circunstancias. Las circunstancias incluyen: cuando, donde está el sistema, qué está sucediendo.

- Utiliza 3E150.
- las circunstancias se pueden correlacionar w = uip/m/los sensores/los analizadores/acceso/multiusos/localización ("localizador").

Según la localización/la distancia, el sistema puede y o no puede hacer ciertas funciones.

- D: localización/"circunstancia" (del cambio) = analizador/gps/sensor/c = c/m

-6/95:

buenos usos de <3-if, 3, correlador y regulador de la circunstancia de 2> 3E151 GPS: Las localizaciones y o las circunstancias pueden restringir uso del sistema portable. Ejemplos: códigos de acceso especial requeridos para utilizar ciertas funciones después de cierta fecha o de otras circunstancias. Las circunstancias incluyen: cuando, donde está el sistema, qué está sucediendo.

- desactiva después de cierta referencia del tiempo, o de acontecimiento.
- problema: ¿puede poner la nagación de acontecimientos? ¿usos?
- coche del alquiler del can't más allá de la zona. La agencia del coche carga pena.
- semejanza: utiliza las pulseras suaves de los ex-convicts.
- como con 5E020 (secreto), cada posición (zona de la localización del u) de U corresponde a la diferenciación señala = estas señales genera comandos o funciones señalados.
- cada colocación de las partes del cuerpo puede también generar señales (simultáneas) adicionales.

+ "Distancer"

- Estrategia de búsqueda de la patente: GPS o (sistema de navegación mundial)

Recordatorio de la tarea de +++ R58-1 GPS: ALL/PARTLY COPIADO A PARTIR DEL PICOSEGUNDO PARTE LA PÁGINA.

El sistema incita a usuario qué hacer cuando el usuario ha alcanzado la destinación deseada. El sistema entonces incita donde el usuario debe ir después. Ejemplo: 1] usuario conduce por el supermercado, y se incita cada lunes para comprar huevos; sistema de 2] programas del usuario para notificarlo siempre que él se acerque a un kilómetro del almacén de la limpieza en seco. Sobre alcanzar limpiadores, el sistema incita automáticamente a usuario coger el fertilizante 400 metros lejos. Existe: el autobús de viaje da la información previa sobre la visión para cada sección de la ruta; la localización de los autobuses descifró vía el GPS.

- Picosegundo: (notifica a usuario qué hacer (w5) cuando el usuario es el lugar cercano en donde podrían hacer tarea señalada, eg.: coger los huevos);
- esto se relaciona con el sistema de autobuses existente del viaje en Japón cuyo oscilador corresponda a la localización de los autobuses.
- D: el tipo tarea del usuario "k" - > los coordenadas de "k" picosegundo para w5 (a saber donde, cuando, qué) encargan - > cuando usuario (las impulsiones/las caminatas cerca (a 5 metros si en metros de la caminata mode/500 si el usuario está en vehículo) llegan en los coordenadas señalados (w5) sistema "notifica más adelante" el usuario y las demostraciones (s)/tarea necesaria oscilador - > el usuario "k" cuando la tarea logró el notificador necesario no más para esa/cualquier tarea (para el plazo señalado, mientras que vacation).
--el sistema detecta la velocidad del usuario, por lo tanto sabe si está caminando el usuario o puede no/usuario "k" su modo de movimiento.
- OTD D: Esta N sistema =

ACCESO (); ANALIZADOR (qué a hacer cuando, donde, cuando, porqué, cómo (da la mejor ruta para viajar (considerando hora)); CARRO (tipo que analiza el interruptor, mapas); S (); M (); MULTIUSOS (diversas rutas, necesidades, ciudades); NOTIFICADOR (exhibición del oscilador w (que demuestra la dirección, la tarea necesaria)); OSCILADOR (); Banda (); GPS (); Q (direcciones correctas de la calle); ESTADO (demostraciones qué tareas hechas/no hechas).

Extremo de la Zona-Función

"ZONA - el GENERADOR de IMAGEN" = mapa (cuerpo) de movimientos (tridimensionales) crea imagen.

Usos:

- Da instrucciones: cómo mover el cuerpo, por ejemplo en deportes; jugar a juegos (del ajedrez); tocar el instrumento musical; baile; patinaje artístico.
- "Acceso": las imágenes señaladas de movimientos permiten el acceso.

generador de imagen posicional 3E152: Los cambios en la posición de objetos móviles son colocados por el sistema que el interno genera una imagen o una "pista" para los cambios dichos. Es decir su patrón del movimiento vía las zonas/inclinación genera un patrón según lo percibido por el "sensor" -.> las imágenes móviles o inmóviles de la C. son generadas por la localización de elementos en el tema que puede generar señales en "analizador visual".

- posición de cada elemento generado cerca: 1] luz/color/calor generado de la porción/de todo el objeto apuntado. /2] tr objeto apuntado (de los transmisores (en la superficie/los accesorios/adentro). /3] "distancer". /4] localizador: KN encuentra objetos.
- D: señales que vienen (moviéndose/inmóvil) de objetos = "analizador" = generador de imagen/"pista" (cuenta, monitor inteligente 2E251, desarrollo uip-DB).
- esta parte es similar a muchas otras subpartes.

"ZONA - NR" = alarma ocurre cuando el objeto se va o entra en una localización.

sistema de colocación de <3> 4C030: Mejora

El sistema dice a guarda que el niño de la distancia está ausente (no apenas el sistema existente que notifica cuando el niño se va más allá de gama). El sistema también dice a niño volver. También: cuando el animal doméstico oye un sonido doloroso más ruidoso y más ruidoso más lejos transgreden más allá de las vallas de seguridad sin hilos existentes.

- La alarma activa el zumbador o la grabación audio que indicaba a persona ha ido demasiado lejos. Salidas anteriores.
- el sistema dice la dirección/la distancia/la localización, vía: "localizador", de ser.
- oscilador que dice la persona o el animal (volver a casa)
- PICOSEGUNDO D: c (oscilador, dispositivo del choque del EL, s, compás, uip (los estudios qué portador está haciendo (mientras que son w5 ellos no se suponen para hacer lo que están haciendo) = tr/rc (en portador) = tr/rc (con el guarda/el observador/la policía/el amaestrador) = c (s, oscilador, impresora, analizador)
- Viejos códigos del mérito basados probablemente en la visión solamente del sistema existente: <3: códigos <these mejorados del version> para no la versión de la mejora: 1, mejoras 2> reiteró: Se genera la alarma siempre que la persona vaya más allá de cierta distancia.
- Siempre que el colgante del niño vaya más allá de distancia deseada de la otra mitad de "Distancer", le dice volver a casa. (Activa cuando pierde el contacto de radio con el transmisor de su hogar por más de cinco minutos.)

- puede ser tan solamente el guarda diseñado puede sacar el perno

- también tiene alarma del dispositivo que mide el tiempo si el niño está en vecindad próxima:

O relacionado con: 5A-020-0422004 que habla el Pin:

+ dice a niño volver a casa en la hora untada, o dice a la otra persona cualquier declaración programada en el tiempo deseado (esta característica se puede poner por separado por otra persona puesto que su archivada por separado también). Expedientes vía propio micrófono.

- la invención se combina con el concepto del walkman

- puede enviar señales vía las señales sonoras del oscilador, luces, vibraciones (eg.: la invención se mantiene bolsillo).

- presionar el botón o tirar de la secuencia y reirá o hará cualquier sonido/música deseados: moto de la compañía, eg. "vender", "van 100%", "nosotros están intentando ser #1"; sonidos animales; su o propia voz del amigo; etc

- "Distancer" informa al guarda (eg.: madre; guarda del preso; distancia animal del guardián) de la entidad.

- este producto se relaciona con muchos otros productos usando el distancer

- OTD: exhibición; fd-hdd; pp; P.M.; Reino Unido; tds; interactive5; EL EDUC%; el toy%; básico; el game% (eg.: para el juego con las reglas que señalan hasta dónde una persona puede o no puede ser - entrando mala alarma de los sistemas de la zona y o penaliza a jugador deduciendo puntos de "cuenta final"); portable; ch; au; punto de ebullición; SP; oscilador; discurso; vc; cuenta; md (hace que la madre siente más cómoda); carro (deseado distancias, grabaciones audios); "T" (seguridad de las llamadas, etc siempre que la persona haya entrado nunca en mala zona); RPC; uq (eg.: donde está la persona deseada); acceso; el pi%; distancer; receptor acústico del movimiento (eg.: siempre que el movimiento se detecte por la mitad cualquier crucial del transmisor, el monitor y supervisado oye un sonido); localizador; multiusos (eg.: la gente múltiple puede ser supervisada a partir de una unidad central); el remote%; notificador; representación visual el analyzer% (este sistema del guarda que es trabajos descritos conjuntamente con el analizador visual).

La alarma antirrobo del coche R189 memoriza la posición del coche [eg.: conseguir N para el distancer usado para los coches] el 29 de agosto de 92 NK

C84 = "teléfono" = "notifica" a dueño si se mueve el coche (ilegal) (más W5 (vía C84/PS/GPS)

OTD para "el diagrama del GPS de la base"

Unidad de tierra portable del GPS (1 y o 1A y o 3 y o 4 y o 5 y o 6 y o 7), el sistema de tierra se puede integrar con uno o más del siguiente: acceso; cojín del aire; notificador; balance; básico; punto de ebullición; carro; cc; carácter; palmada; %composition; d; fecha; distancer; educ; egh; entretener; ejercicio; "C"; flotador; fs; juego; interactivo; localizador; micrófono; módem; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; oscilador; uip; portable; pp; impresora; RCP; alejado ("R"); cuenta; analizador de %sound; discurso; teléfono del SP; synth; tds; teléfono ("T"); inclinación; juguete; tr; Reino Unido; uq; vc; analizador visual; vr.

unidad de 2 satélites: el sistema se puede integrar con uno o más del siguiente: acceso; básico; punto de ebullición; fecha; distancer; "C"; fs; interactivo; localizador; multiusos; uip; pp; alejado ("R"); cuenta; tds; teléfono ("T"); juguete; tr; Reino Unido; vc; analizador visual.

8 GPS "MFH" se pueden integrar con uno o más del siguiente: acceso; cojín del aire; notificador; balance; básico; punto de ebullición; carro; cc; carácter; palmada; %composition; d; fecha; distancer; educ; egh; entretener; ejercicio; "C"; fs; juego; interactivo; localizador; micrófono; módem; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; oscilador; uip; pp; impresora; RCP; alejado ("R"); cuenta; analizador de %sound; discurso; teléfono del SP; synth; tds; teléfono ("T"); inclinación; juguete; tr; Reino Unido; uq; vc; analizador visual; vr.

El ^ hecho salir 7 consiste en el siguiente: el producto puede exhibir solamente/cierta información transmite/de la difusión/música según el país y las leyes de Derechos de Autor aplicables en vigor; interruptor con./desc. (el sistema funciona solamente completamente/parcialmente/en absoluto según la división); mecanografiar las noticias de los datos; base de datos; música; mapas que están disponibles para el acceso [eg.: el usuario no necesita pedir los mapas necesarios; dependiendo del código de identificación del usuario, serán dados mapas aplicables y o la información {eg.: datos de tierra sobre almacenes...}]; "synth" del sonido, eg.: volumen, bajo, agudo; regionalización del sistema [selecciona la radio, TV y otro difunde aplicable a la localización y a los gustos del usuario, eg.: "Pi"; el acento puede southernized cuando está utilizado en los E.E.U.U. del sur]; el sistema permite la encaminamiento del teléfono entrante y saliente ("T") y de otras transmisiones vía el más barato y o los modos/las líneas/los sistemas más eficientes/más aplicables; velocidad del sistema y o de la salida; permiso especial necesario (eg.: de "MFH" o del supervisor (jefe) antes de las ciertos funciones/datos disponibles en ciertas zonas); capacidad de decir en voz alta y o de recibir transmisiones (eg.: tener acceso con ciertos #s del teléfono)

Función adicional para la parte 7:

Antirrobo: Los programas del usuario donde los artículos pueden estar y si se mueven sin la desactivación correcta del sistema de código responden ^by: alarma del sonido, entrando en contacto con seguridad vía el aire o el alambre, llegando a ser non-operational. ^for útil: coches, bicis, estereofonias, barcos, computadoras...

- tiene todas las funciones del "distancer" según lo utilizado en sus operaciones antirrobo (véase las limaduras anteriores de la oficina de patentes.)
- artículo de la pista después de robado

Distancer:

todas las funciones del distancer en limaduras anteriores pueden ser substituidas usando uno o más sistemas del GPS simultáneamente.

- Dependiendo del uso, el tamaño del GPS necesita ser reducido y los gobiernos necesitan permitir mayor señalar del perno de la exactitud de la localización.
- También ver que mi solicitud de patente del "distancer" archivó tarde 1993 en Moscú.

-3E020 GPS registra a encargado: Incluye la facturación del GPS.

Sección de la "Picosegundo-Zona": Cada uno de los sistemas de control de la zona del GPS es productos seperatable según su tipo usos, de que es cada uno de los usos puede ser vendido por separado aunque sus tecnologías pueden estar grandemente en campo común. La cobertura incluye: 3E010-3E020, 3E150 - 3E220.

- ésta es subparte "Picosegundo-Zona"

??. el sonido 1G090 que cancela el dispositivo selecciona frecuencias indeseadas. Ejemplos de qué no está cancelada: la comunicación verbal, teléfono suena, las campanas de puerta

- esta N copiada a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verlo para las actualizaciones.

- sonidos de las cancelaciones a excepción de (qué deseó a personas está hablando):

- si hay mucho ruido en sitio, el usuario pone el "sensor" cerca de sus acordes vocales. Esas vibraciones emparejan ésos que hablan.... El reconocimiento vocal puede estar con apenas este vibrador y o con el "mic" también. "/"Del sensor de esta vibración "mic" puede ser sin cuerda.

- D: sensor/micrófono = computadora ("C") = sonido que cancela el dispositivo (oscilador vía altavoces y o auriculares)

- utiliza 1G21: El walkman permite capacidad de oír sonidos en el ambiente.

- OTD: ACCESO: (); CARRO: (uip de cada característica deseada de la voz de las personas (entonces el "sensor" al lado de la persona es opcional)); COMPOSICIÓN: (deja el usuario componer música en sitio y cancelar otros sonidos indeseados que no emanan de su composición de música, o el otro sonido que él está generando y quiere oír); ENTRETENER: (); MFH: (uip de sonidos queridos e indeseados); MULTIUSOS: (cada usuario tiene diversos sonidos que prefieren anularse (según uno o más de su UIP seleccionable)); NOTIFICADOR: (cuando una distorsión is/appears inevitable (y usuario puede hacer una cierta alteración (banda)); OSCILADOR: (); Banda: (); IMPRESORA: (gráficos del decibelio); Picosegundo: (el mic ajusta a la localización de la fuente sana (mudanza)); Q: (pedir: qué sonidos son/no se quieren); R: (); S: (); CUENTA: (tds; demuestra eficacia de qué is/is que no es cancelado (y del cómo)); SYNTH: (alteran los sonidos deseados (composición, del discurso...: de modo que baje dentro de la gama de los sonidos que no está

cancelada); Teléfono ("T"): (sonidos indeseados de las cancelaciones en sitio mientras que habla: copiado por AT&T); UIP: (); WA: ().

- el doesn't considera necesidad; mercado limitado; costoso.
- él hizo mucho trabajo en el GPS, tendría dificultad el permanecer delante de mercado puesto que muy apretado ya.

Quitar: R127 [boleto de tren de viajero de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en puerta del boleto. JR (ferrocarril de Japón)]. También copiado al "acceso", "cuenta", "pista".

TERMINAR ESTE ARCHIVO DE LAS FUNCIONES DEL PICOSEGUNDO

Archivo: Localizadores/picosegundo otro

Picosegundo - Invenciones del sistema de colocación - otra

gatos de salto 3C-110-08300Q Distancer: No para la convención del GPS
Distancers entre las piernas o los brazos. Cada vez que la persona ejercita separando sus piernas o brazos más allá de cierta distancia, el distancer sonará.

- el distancer puede también contar el número de épocas que el movimiento fue hecho (si las piernas o los brazos fueron más allá de distancia mínima.)
- otra manera de medición: las distancias viajaron por los animales a pie o por el ala; la cantidad de trabajo conducida por cierta maquinaria, eg.: pistones (la cantidad y el grado a los cuales van hacia arriba y hacia abajo)

restrictor de la caminata 3C-111: (distancer). No para la convención del GPS.
El distancer entre las piernas crea efecto si las dos piernas se dividen nunca más allá de cierta distancia. Substituye las necesidades de cadenas en las piernas de convicts. La invención puede notificar el sistema cuando el usuario se está comportando de manera señalada (y estar sin cualquie restricción del movimiento del cuerpo físico).

- El efecto cuando van las piernas demasiado lejos: sonidos; o crea dolor; o computadora central de las alarmas vía las ondas de radio...
- Una manera civilizada de guardar a presos del funcionamiento lejos
--Los accesorios a las piernas son casi imposibles de sacar legítimo
- Con ninguì□n alojamiento físico completo, un dolor amonestador/suave pudo ser dado a (animal (el accesorio)) vía: sonar, la descarga eléctrica (suave)...
-

Para las activaciones complejas:

La persona puede tener distancers numerosos alrededor de su cuerpo, eg.: muñeca, dedos, tobillos. Según su movimiento (cerca/más lejos; más arriba/más bajo; más a left/or enderezan (sin embargo no no necesario más lejano): envía la señal al receptor; cada tal señal se entiende diferentemente según qué dispositivo está enviando que tipo de mensaje del código Morse (eg.: arriba y abajo de dos veces está el sí; tres veces son espera...)

- el sistema puede tener varios receptores también
- ap: haciendo música según cómo el cuerpo se está moviendo; para los invalids; analyzation, grabaciones de cómo los animales se mueven

+ micrófono sensible de la proximidad 3E-040: Los sonidos de la cocina u otras localizaciones que vienen a cualquier mic (para el teléfono, el etc) se pueden programar para tener menos efecto en el micrófono si está a una distancia seleccionada (como programable por el usuario).

- mayor o menos preferencia dada a los sonidos señalados. Las definiciones señaladas incluyen: la localización, tipo sonido, características conectó con el sonido (por ejemplo si viene del cliente o del prestatario de servicios que habla - cada uno que tiene poseer RFID (paladio).

- Si hay un aspecto físico real del restricter del movimiento, puede tener ediciones de la responsabilidad - como el usuario puede necesitar a veces funcionar, eg.: el retén empapela el vuelo en viento.

generador de sonidos del movimiento del cuerpo 3A-752-042003: No para la convención del GPS.

Pues la persona se mueve sobre sitio que dispara diversas luces laser que generarán el sonido correspondiente, creando una clase de nueva música. Puede tener fuentes de luz múltiples y o utilizar los reflectores ligeros.

Localizador del animal doméstico R111-1:

Conocer el paradero de su animal doméstico con muchos medios, eg.: la dirección en la cual la puerta del animal doméstico fue abierta original; o dispositivos de colocación atados al animal doméstico, al etc.

- (Un electro) legado mecánico puede demostrar qué manera fue empujada la puerta primero. Él mayo o mayo no tener en cuenta para que la puerta haga pivotar luego (tanto como el primer empuje).
- La manera la puerta fue abierta, saliendo adentro o, da lugar a la puerta que cerraba de cierta manera y considerada fácilmente por el dueño si miran la puerta desde adentro o afuera. Cualquiera sabe vía el sensor mecánico de los medios/EL = c = nr
- el collar del animal doméstico tiene transmisor que demuestre si el animal fue en o de la puerta (basada en la dirección en la cual el transmisor del animal doméstico consiguió más débil); el transmisor demuestra en qué parte de la casa o del jardín están, por el dueño que mira en la exhibición especial ("S");

- la manera que la puerta fue abierta también puede accionar la demostración de la señal electrónica si animal más allá en o fuera del umbral

-

Opciones mecánicas más baratas del notificador (no aspecto del GPS):

- interruptores (del dial) entre dos colores, demostrando qué manera fue empujada la puerta.
- El dial/el diente/el adminículo se mueve sobre el empuje inicial de la puerta. Quizás un humidificador del oscilación (reduce oscilaciones subsecuentes) ayuda al adminículo de confundir el primer empuje de la puerta con los oscilaciones subsecuentes o los oscilaciones inducidos viento
. - (ciertos productos de este número de la característica no son electrónicos) el usuario sabe si el animal doméstico está adentro o hacia fuera, basado encendido si ellos más allá a través de su puerta especial o no.
- Lengüeta (plástica) flexible:

De la lengüeta el marco o el umbral flexible de puerta del interior encendido, se empuja y se guarda hacia adentro una dirección, basada en cuya manera la puerta fue abierta. Saber si el animal doméstico es exterior si la lengüeta se considera dentro de la casa.

--Se pega hacia fuera, y es empujada contra por la puerta que es empujada. Una vez que la puerta se empuja completamente, la lengüeta también se empuja hasta el final detrás. Entonces la lengüeta del strongish se encaja a presión detrás más rápidamente que los oscilaciones de la puerta detrás. La lengüeta guarda la puerta del balanceo mucho, o aún más allá de la lengüeta (en la posición de tenencia) contra la puerta que es hecha pivotar detrás. Una lengüeta visible sugiere que saliera el animal doméstico a través y la puerta de la perspectiva de la visión del observador (del ser humano). La fraseología (de la diversión) se pudo imprimir sobre la lengüeta (la declaración del animal doméstico está adentro en un lado, y hacia fuera en el otro).
--(requiere a) la puerta fina.
--TM: Lengüeta del animal doméstico, lengüeta del tirón del animal doméstico

-

Sección menos importante de R111-1: (porciones copiadas de nosotros por otro co)

Saber dónde se localiza el animal doméstico. No necesitar preocuparse si se pierde el animal doméstico. Localización del animal doméstico conocida vía uno o más de modos siguientes: el transmisor del collar del animal doméstico envía señales al receptor dentro de la casa, si su hogar; el receptor de la puerta del animal doméstico sabe si salió el animal doméstico por último adentro o; una versión no electrónica de la puerta del animal doméstico es tal que es la manera que se cierra así que demuestra salió qué animal doméstico de la manera (estes 3ultimo no patentables?).

- el receptor del dueño se puede utilizar para encontrar el transmisor del collar del animal. El receptor señala si el dueño está consiguiendo más cerca o más lejos de animal.
- útil para localizar a niños; animales en parques zoológicos grandes; áreas de la naturaleza; etc.
- el collar del animal doméstico también tiene un altavoz del analizador del receptor..... Esto hace los sonidos diseñados para llamar el perro, eg.: "silbar", o el animal oye su nombre.

Nota al pie de la página:

Este concepto del lugar se aplica a cualquier elemento móvil con excepción de animales domésticos también, eg.: vehículos que van dentro y fuera del emparedado en zona; localizador

- OTD:

ACCESO: ; CARRO: ; PALMADA: (para que animal haga el sonido: maullido, corteza...; Exhibición ("S"): (cuenta en el animal (su localización)); "M": cuenta; "mic": ; Paladio: usado por el animal; PP/MP: ; MQ/UQ: ; MULTIUSOS: (multi-animal (cada uno usa diverso paladio w posee el tipo código que es transmitido); NOTIFICADOR: ; OSCILADOR: ; TELECONTROL ("R"): ; CUENTA: ; TDS: ; UIP: (usuario que es animal, eg.: para el estudio de laboratorio de los movimientos animales/comportamiento); Reino Unido; %WA usado por el animal (hace el sonido si caminan demasiado lejos; hace los sonidos interesantes (animales salvajes para excitar el animal doméstico).

- utilizar el kn: 1] "localizador", conociendo el paradero del portador; 2] "localizador" induce la parte posterior del portador vía: choque de osc/el

- trabajos con nuestra puerta del animal doméstico - invención del perro perdiguero de la suciedad.

Seguimiento del equipaje del aeropuerto:

- RFIDs colocado en el cargo: construido en o vía etiquetas

- RFIDs sigue siendo desactivación hasta la recepción de una señal desginated. RFID no son quisieron difundir señales mientras que en vuelo (navegación, etc que disturban). La difusión de RFID para (el minuto 15) después de recibir "es ACEPTABLE difundir" la señal; y continuará la difusión mientras se reciba la "señal ACEPTABLE".

Otro: Existe: 1] El sistema de navegación activado por voz da instrucciones a través de los altavoces del coche. Eclipsar por Fujitsu diez, 19600 Vermont sistema de pesos americano, Torrance, CA 90502. el modelo de PYX15 de 2] Sony.

. Saber cualesquiera uno o más objetos/pieza [tiene o se predice] se mueven. Los ^determines del análisis: cómo, cuando, donde, porqué, qué se movió.

. Ver muchos archivos del GPS, eg.: 3E para los detalles.

- Ver "C": la característica del system (también vista como parte) se adapta según circunstancias.

- Dibujo: A/A/A/A = tr = computadora (B (paladio)) = tr = A/A/A/A... Notas sobre diagrama: El múltiplo (a) recibe (b) transmisiones de la onda de aire. Si se calibra hay solamente un (a) instalado y o en condiciones operables (capaces de recibir [B] "s señala sin obstáculo) entonces se distancia. Si el múltiplo (a), sistema conoce la localización de uno o más (b). (B) movimientos de s los" pueden ser supervisados, ser analizados y ser convertidos según el fabricante y o la programación de usuario.

. Ver los detalles en "Distancer" para los detalles.

. Para Techies: acceso; % del cojín del aire; básico; % del carro; la exhibición ("S") demuestra la localización y o la distancia [B] de 's; "C"; % [B] del flotador; GPS;

% interactivos; "M"; % de la mañana; pp y P.M. (en qué posiciones [B] adentro debe ser notificar usuarios y u otro dispositivo; cómo [B] "las transmisiones de las posiciones de s" deben ser procesadas y ser analizadas y en golondrina de mar activar y o desactivar posiblemente las funciones en los dispositivos dichos u otros); % multiusos; notificador; oscilador; movimiento de [B] para el uip; diagramas de la impresora: [B] 'posiciones de s en un cierto plazo; % del telecontrol ("R"); cuenta; % de la inclinación; U (el usuario hace preguntas del sistema); analizador visual (sentidos para: cambios en la localización [o cualquie movimiento] vía su ojo de la cámara); vr. Ver "C": la característica del sistema (sistema) se adapta según circunstancias. "Mandando la cuenta".

Más: G.P.S. El sistema analiza siempre que cualesquiera uno o más objetos/pieza se muevan en lo referente a cualesquiera uno o más objetos/piezas. Los ^determines del análisis: cómo, cuando, donde, porqué, qué se movió. Localiza el paladio del '(dispositivo de colocación). Analiza los movimientos del paladio (dispositivo de colocación): en términos de W5 (qué, donde, porqué, cuando y cómo) del movimiento o de la localización. el picosegundo (sistema de colocación como el GPS) reacciona según lo señalado al movimiento o a la localización de objetos señalados. Ver la subparte de la Picosegundo-Zona.

"Diagrama del picosegundo de la base (GPS)"

El 1:1 "Reino Unido" de la pieza del diagrama = la computadora de tierra de 1A (GPS) picosegundo (memoria) = el transmisor de tierra del 1B (GPS) picosegundo = el satélite 2 (receptor = computadora (memoria) = transmisor) de = el receptor de tierra 3 picosegundos = computadora del picosegundo de la tierra 4 (del portable) (memoria) = 5 convertidor de señal del software (permite/selecciona programas/sistemas/funciones) = 6 = 7 hizo salir.

Pieza 1A del diagrama - ésta es una extensión de la parte 4:
Computadora de 4 picosegundos = transmisor 4A/receptor de tierra = 8 "M" = 9 transmisores/receptores = 10 otros "M" = 11 transmisores/receptor

Detalles del diagrama: Tierra picosegundo (GPS) 1 - 1B: tiene "Reino Unido", uno o más "exhiben", "cp"
- el analyzation/el determiner de qué funciones pueden ser controladas puede estar en la parte 2 (en satélite) y o la parte 4 (en la tierra) y o 7 ("M" para ahorrar el espacio en 1 y 2)
- una línea se puede también extraer de 1A a 5
-4A determina qué necesidades de ser transmitido a 7 "M"
-6 hacer salir: ver los usos.
. - 9/10/11: monitores y o controles las acciones del GPS de la tierra; para la capacidad adicional (base de datos, funciones, conexión a otros sistemas de la hospitalidad).

OTD para "el diagrama del picosegundo de la base (GPS)"
Unidad de tierra portable del picosegundo (1 y o 1A y o 3 y o 4 y o 5 y o 6 y o 7), el sistema de tierra se puede integrar con uno o más del siguiente: acceso; cojín del aire; notificador; balance; básico; punto de ebullición; carro; cc; carácter; palmada; %composition; d; fecha; distancer; educ; egh; entretener; ejercicio; fd-hdd; flotador; fs; juego; interactivo; localizador; micrófono; módem; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; oscilador; UIP; portable; pp; impresora; RCP; alejado; cuenta; analizador de %sound; discurso; teléfono del SP; synth; tds; teléfono; inclinación; juguete; tr; Reino Unido; uq; vc; analizador visual; vr. + ver todo el archivo 3E.

unidad de 2 satélites: el sistema se puede integrar con uno o más del siguiente: acceso; básico; punto de ebullición; fecha; distancer; fd-hdd; fs; interactivo; localizador; multiusos; UIP; pp; alejado; cuenta; tds; teléfono; juguete; tr; Reino Unido; vc; analizador visual.

8 picosegundos "de M" se pueden integrar con uno o más del siguiente: acceso; cojín del aire; notificador; balance; básico; punto de ebullición; carro; cc; carácter; palmada; %composition; d; fecha; distancer; educ; egh; entretener; ejercicio; fd-hdd; fs; juego; interactivo; localizador; micrófono; módem; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; oscilador; UIP; pp; impresora; RCP; alejado; cuenta; analizador de %sound; discurso; teléfono del SP; synth; tds; teléfono; inclinación; juguete; tr; Reino Unido; uq; vc; analizador visual; vr.

El ^ hecho salir 7 consiste en el siguiente: el producto puede exhibir solamente/cierta información transmite/de la difusión/música según el país y las leyes de Derechos de Autor aplicables en vigor; interruptor con./desc. (el

sistema funciona solamente completamente/parcialmente/en absoluto según la división); mecanografiar las noticias de los datos; base de datos; música; mapas que están disponibles para el acceso [eg.: el usuario no necesita pedir los mapas necesarios; dependiendo del código de identificación del usuario, serán dados mapas aplicables y o la información {eg.: datos de tierra sobre almacenes...}]; sintetización del sonido, eg.: volumen, bajo, agudo; regionalización del sistema [selecciona la radio, TV y otro difunde aplicable a la localización y a los gustos del usuario, eg.: "Pi"; el acento puede southernized cuando está utilizado en los E.E.U.U. del sur]; el sistema permite la encaminamiento del teléfono entrante y saliente y de otras transmisiones vía el más barato y o los modos/las líneas/los sistemas más eficientes/más aplicables; velocidad del sistema y o de la salida; permiso especial necesario (eg.: de "m" o del supervisor (jefe) antes de las ciertos funciones/datos disponibles en ciertas zonas); capacidad de decir en voz alta y o de recibir transmisiones (eg.: tener acceso con ciertos #s del teléfono)

Función adicional para la parte 7:

Antirrobo: Los programas del usuario donde los artículos pueden estar y si se mueven sin la desactivación correcta del sistema de código responden ^by: alarma del sonido, entrando en contacto con seguridad vía el aire o el alambre, llegando a ser non-operational. ^for útil: coches, bicis, estereofonias, barcos, computadoras...

- tiene todas las funciones del "distancer" según lo utilizado en sus operaciones antirrobo (véase las limaduras anteriores de la oficina de patentes.)
- artículo de la pista después de robado

Picosegundo (GPS) 'Distancer:

todas las funciones del distancer en limaduras anteriores pueden ser substituidas usando uno o más sistemas del GPS simultáneamente.

- Dependiendo del uso, el tamaño del GPS necesita ser reducido y los gobiernos necesitan permitir mayor señalar del perno de la exactitud de la localización.
- También ver que solicitud de patente del "distancer" del kn archivó tarde 1993 en Moscú.

d sin cuerda y celular de 3E-010: la distancia aproximada de las demostraciones del transmisor así que del usuario es menos probable conseguir cortada. Y o da la advertencia vía luz y o audio cuando está acercando a límites externos. Ver el archivo ampliado. MOVIDO AL ARCHIVO AMPLIADO

3E-030 GPS utiliza el Info de la trayectoria viajó:

El GPS identifica las d móviles que colocan y o hace un mapa de sus recorridos. ¿Demasiado obvio para la patentabilidad?

. - Sistema de navegación mundial (GPS) conjuntamente con el teléfono celular.

- Usos:

--Los cálculos del costo de negocio de millas viajaron; la trayectoria del recorrido pudo integrar con el otro Info (DB, calendario de acontecimientos) (automáticamente) conecta que viajan lazo (de los segmentos) con qué propósito.

--El `sigue qué entregas/escoger sube fueron hechos y cuando (W5).

-

Encargado de registro del GPS: no pierde de vista el travele de las trayectorias:

Usos: para la oficina recaudatoria que las necesidades de saber las millas y o encaminan viajaron y cuando y donde parado durante cu3anto tiempo, reduce la necesidad de la custodia de registro manual.

- el usuario pudo afinar en el Info sobre su parada cuando viajó la parada se hace ahorro de afinar millas y de donde y a donde.
- para los taxis, cada vez que el pago es etiquetas de registro recibidas del encargado del GPS la ocurrencia.
- el sa estudia los sonidos hechos w5 - > DB
- esta invención se combinó con 3E-020 viejo
- Búsqueda de palabra clave: "gps o g.p.s." y "trayectoria" ~11 del recorrido y ("base de datos" o pista o pistas o seguimiento)

Todos o la mayor parte de siguiendo existen.

La primera sección de cada invención cubre qué existe. Ha seguido por el Info mezclado con muchas piezas que pueden tener algunas invenciones únicas.

R116 existe: todos o sobre todo. El GPS (sistemas de navegación mundiales) localiza la posición de carros. Este Info usado para ajustar horario de operación del plan. $10,000/truck. Marzo de 93 X.

- OTD: ACCESO: para ganar la información; CARRO: ; Exhibición ("S"): ; FS: ; "M": ; Paladio: localizado en vehículos móviles; PP/MP: ; MQ/UQ: ; MULTIUSOS: (diverso paladio de cada carro le hace a diverso usuario (internar el sistema de cada carro lo yuxtapone en relación a otros carros para el análisis/la visión por cada conductor); diversa gente puede obtener la información); NOTIFICADOR: (cuando el carro sale la ruta necesaria, hurto alerta/que remonta); OSCILADOR: ; IMPRESORA: ; %REMOTE: ; CUENTA: (patrones del recorrido); TDS: ; Teléfono: ; UIP: (de cada carro/conductor); Reino Unido.

R127 [boleto de tren de viajero de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en puerta del boleto. JR (ferrocarril de Japón)]. También copiado al "acceso", "cuenta", "pista".

La alarma antirrobo del coche R89 memoriza la posición del coche [eg.: conseguir N para el distancer usado para los coches] el 29 de agosto de 92 NK

C84 = "teléfono" = "notifica" a dueño si se mueve el coche (ilegal) (más W5 (vía C84/PS/GPS)

- El navegador de coche de R193 GPS da comandos verbales de dirigir el conductor. 2 de noviembre de 92 NK

. - movido al "picosegundo" 6.96

- > R202 GPS activado por voz. Sanyo 19 de abril de 93 NK

- movido al "picosegundo" 6.96

Picosegundo = sistemas de colocación (paladio ("GPS", "Distancer", "localizador"))

oooooooo

reloj de 3E-100 GPS: El reloj tiene funciones del GPS. Exhibición: Tiene tirón hacia fuera el revelar de la pantalla. O puede proyectar el mapa sobre cualquier superficie semi-plana en día o la tarde. O el usuario utiliza un agujero del pío del ojo que demuestre mucho en un poco espacio (eg.: como la lente del microscopio)

ventas de 3E-080 GPS: Salidas

3E-110 cayó. Obvio.

GPS del basculador 3E-120: ¿Existe?

- cantidad de las medidas de metros activaron cada día. Guarda un registro semanal/anual.
- otra forma de nuestra invención de la recompensa del podómetro. Da distancia del punto de destinación (recompensas de ofrecimiento de la cafetería).

instructor del sistema de colocación 3E-140:

Dice a usuario qué cómo cuando donde y o porqué (w5) deben mover acto responder y o piensan. Ejemplos:

- Instructor del juego: qué se mueve debe/se podría hacer para jugar a ajedrez, va, Othelo, inspectores, juegos al aire libre... El instructor del juego puede también ser su socio.

los juegos de %-ball, GPS dirigen la bola contra la persona, e.g.: para un fútbol de la persona, ping-pong, etc.

- otros sensores (sa): la ayuda determina la naturaleza de la situación.
- confía en el uip y la base de datos de movimientos/de acciones/de patrones de flujo para los juegos/las acciones aplicables.

localizador de 3E-180 picosegundo (GPS): el sistema le ayudará a encontrar el artículo dirigiéndole a él. E.g.: gato perdido que no vendrá en sus el propio. ¿Obvio?

- también utiliza otros sensores: olor, sonido; pista, reconocedor visual

3E-210 "localizador" y "Distancer", eg.: Localizaciones de [gente, animales y artículos termógenos (las máquinas, ennegrecen los objetos coloreados que calientan para arriba más que el ambiente en el sol)] identificado por los sensores del calor (cualesquiera hechos nunca por Takenaka Engineering Co, Japón). Las localizaciones exactas se pueden determinar por el análisis de sensors/PS múltiple de modo semejante de: receptores múltiples de la radiofrecuencia que identifican objetos según lo explicado en estos papeles.

+ 3E220: SISTEMAS QUE UTILIZAN ""/"DE LOS SISTEMAS DE COLOCACIÓN TELECONTROL": Diagrama: 1other|2c \ 3tr \ 4rc = 5md \ 6other los = 7M \ 8function \ 9other

Funciones adicionales del picosegundo:

o-GL = localizador del GPS: identifica la localización del "paladio". El sistema más grande puede adaptarse a la localización del paladio. OTD: GPS

programación de la información de usuario del o-GUIP = del GPS: GL puede también ayudar a compilar los datos para el "UIP". OTD: GPS

Programación del localizador del o-GLP = del GPS. Las funciones aplicables se accionan según la localización del MD. OTD: GPS

Tagger de GT = del GPS: El sistema sigue los movimientos de W5 del MD. OTD: GPS

El anotar del GS = del GPS. Puede "anotar" los datos de /compile/calculate para el ^ del UIP: funciones de la tarjeta de crédito/de la tarjeta de débito; características del comportamiento (correlativos con qué ocurrió en tales veces). Cargas para viajar en las carreteras, espacio del aire/del mar, tiempo pasado en ciertas localizaciones (bibliotecas). GMA. Consigue su from^ del Info: cualquier otro GPS relacionó la función, "Reino Unido", "UIP". OTD: GPS

Acceso de o-GA = del GPS: El transmisor del MD se identifica de el de otros MD y objetos. Con el código transmitido aplicable, el MD y o su to^ principal del "acceso" del aumento del usuario: la localización física, entrada en porciones de una computadora, maneja ciertas tareas. OTD: GPS

Analizador del movimiento de o-GMA = del GPS: Compila y analiza los movimientos, eg.: las distancias/las localizaciones viajaron, las velocidades, sincronizaciones (longitud del recorrido, inmóvil pasada tiempo); CROMATOGRAFÍA GASEOSA. OTD: GPS

O-GB = GPS "balanceador". Si la función es generada por el ^ "británico" del "telecontrol" 's: Opción #1: el usuario selecciona que los ajustan están adentro dentro de la rejilla del área. Opción #2: Ajusta automáticamente. Opción #3: Ajusta hasta que el usuario sea feliz (los movimientos del sistema/los ángulos/fluctúan/alteran hasta que el usuario presione el botón para que el modo/la situación/el elemento deseados se congelen mientras que es en ese momento. OTD: GPS, oscilador, notificador, alejado.

relojes de la computadora del o-Casio que actúan como compás y dan la temperatura. Mencionado en "semanario de Nikkei" el 28 de febrero de 94 P. 23.

2D-050 localiza la dirección del objeto vía: Sonido/cámara. indicador constante de la dirección 2D-060: El sistema portable señala continuamente al objeto deseado sin importar a donde el sistema portable de u w se mueve.

. % de OTD esta pieza de N () +

Monitor inteligente -2E251: (hace/no sigue el paladio)

Notificador móvil de la localización del teléfono -3E010: (t = sistema del paladio = de los gps)

cancelador del ruido del teléfono de -3E040 3E041: (hace/no selecciona los sonidos emitidos de las fuentes w o del paladio del wo)

Verificador del contenido -4E020 y de la fecha: (cuando el paladio es por donde (w5) según lo seleccionado c = 4E020 coloca ocurrencias)

Palillo teledirigido -5E020 con el interruptor: (funciones (diferentemente) en ciertas zonas)

El uno mismo del sistema -5E080 analiza la mejor síntesis para la acústica del sitio/del pasillo: (analizador del sistema de los stereo=pd=gps)

Venda sin hilos de la música -5E090: (funciones (diferentemente) en ciertas zonas)

las perforaciones Alerter, 7G052 del PVC de -7G050 7G051 doblaron el notificador llano: (funciones (diferentemente) en ciertas zonas)

El explorador del canal -9G220 salta las estaciones que tienen anuncios publicitarios: (funciones (diferentemente) cuando es portable el sys=scanner está en ciertas zonas, eg.: cuando en diversas ciudades, el sistema coge (automáticamente) los canales de diferenciación y el sistema de diferenciación (pantalla) (las estaciones))

- "Bill"

satélite interactivo 4C070: ¿Obvio?

El satélite obra recíprocamente con el Info que recibe de comunicar unidades auxiliares.

- Los expedientes molieron los movimientos y las funciones del comportamiento de cualquier objeto móvil en la tierra dentro de cualesquiera pocos metros cuadrados. Recibe transmisiones de la gente, animales, coches. Este aspecto funciona como el sistema existente.

- Analiza la función o el comportamiento del objeto (para el UIP). En golondrina de mar el cerebro del satélite puede hacer los comandos de respuesta apropiados basados en lo que él aprende/knows/UIP (su inteligencia o la del satélite en jefe de la computadora o de la persona).

- las funciones según donde la persona viaja en el planeta, invención son usadas por la persona/el animal. El dispositivo recibe transmisiones del satélite, diciendo a dispositivo su localización dentro de un metro o así que (la tecnología existe)

- D: mudanza siendo (persona, animal) = c (sensores, picosegundo) = tr/rc = satélite/M.

Función: expedientes de las subsistencias en cuanto a las localizaciones del recorrido de la persona con las duraciones en cada "zona". Se puede atar a los vehículos o cualquier producto o animal

fijación a cualquie objeto

- Relacionado con 5A-580

+ "pista".

-

Usos:

- el movimiento/el cambio ocurrió - > alarma accionada/movent y o cambio demostrado en la exhibición/otras funciones.

- el GPS incluye tecnologías además de ésas que usan los satélites.

-

Identifica la localización del paladio (vía "GPS", "distancer"). El picosegundo puede entonces "anotar" la localización de /calculate con la ayuda posible de C/del M. del paladio. Para los detalles ver: "distancer"; "GPS"; "localizador".

- el navegador de o-C88 GPS (coche) da comandos verbales de dirigir el conductor. 2 de noviembre de 92 NK.

D: remote=c88

- O-Viaja el monitor: demuestra donde está el usuario; donde no ir.

- Demostraciones de la exhibición: M = el ~ alejado "" del ~PD~ " de "T " del usuario exhibe" /does el siguiente:

- Paladios: altitud, compás y dirección actual del recorrido del paladio, barómetro, temperatura; noticias (flashes de títulos; informes comunes); advertencias a no viajar en ciertas zonas (túnel a continuación, o la otra causa de la recepción pobre para la comunicación; peligro de la contaminación)

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

"Diagrama del GPS de la base"

Diagram el 1:1 "Reino Unido" de la parte = la computadora de tierra de 1A GPS ("C") (memoria) = el transmisor de tierra del 1B GPS = 2 el receptor de tierra del satélite (receptor = computadora ("C") (memoria) = transmisor) = 3 GPS = la computadora del GPS de la tierra 4 (del portable) ("C") (memoria) = 5 convertidor de señal del software (permite/selecciona programas/sistemas/funciones) = 6 = 7 hacen salir.

Diagram la parte 1A - ésta es una extensión de la parte 4:

Computadora de tierra de 4 GPS ("C") = transmisor 4A/receptor = 8 "MFH" = 9 transmisores/receptores = 10 otros "MFH" = 11 transmisores/receptor

Detalles del diagrama: Tierra GPS 1 - 1B: tiene "Reino Unido", uno o más "exhiben", "cp"

- el analyzation/el determiner de qué funciones pueden ser controladas puede estar en la parte 2 (en satélite) y o la parte 4 (en la tierra) y o 7 ("MFH" para ahorrar el espacio en 1 y 2)
- una línea se puede también extraer de 1A a 5
-4A determina qué necesidades de ser transmitido a 7 "MFH"
-6 hacer salir: ver los usos.
. - 9/10/11: monitores y o controles las acciones del GPS de la tierra; para la capacidad adicional (base de datos, funciones, conexión a otros sistemas de la hospitalidad).

OTD para "el diagrama del GPS de la base"

Unidad de tierra portable del GPS (1 y o 1A y o 3 y o 4 y o 5 y o 6 y o 7), el sistema de tierra se puede integrar con uno o más del siguiente: acceso; cojín del aire; notificador; balance; básico; punto de ebullición; carro; cc; carácter; palmada; %composition; d; fecha; distancer; educ; egh; entretener; ejercicio; "C"; flotador; fs; juego; interactivo; localizador; micrófono; módem; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; oscilador; uip; portable; pp; impresora; RCP; alejado ("R"); cuenta; analizador de %sound; discurso; teléfono del SP; synth; tds; teléfono ("T"); inclinación; juguete; tr; Reino Unido; uq; vc; analizador visual; vr.

unidad de 2 satélites: el sistema se puede integrar con uno o más del siguiente: acceso; básico; punto de ebullición; fecha; distancer; "C"; fs; interactivo; localizador; multiusos; uip; pp; alejado ("R"); cuenta; tds; teléfono ("T"); juguete; tr; Reino Unido; vc; analizador visual.

8 GPS "MFH" se pueden integrar con uno o más del siguiente: acceso; cojín del aire; notificador; balance; básico; punto de ebullición; carro; cc; carácter; palmada; %composition; d; fecha; distancer; educ; egh; entretener; ejercicio; "C"; fs; juego; interactivo; localizador; micrófono; módem; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; oscilador; uip; pp; impresora; RCP; alejado ("R"); cuenta; analizador de %sound; discurso; teléfono del SP; synth; tds; teléfono ("T"); inclinación; juguete; tr; Reino Unido; uq; vc; analizador visual; vr.

+ diagrama 1A de " Distancer ": la transmisión 2. del transmisor 1.GPS (sistema de navegación mundial) (memoriza la localización anterior) = al satélite de la vieja/nueva localización = el satélite 3. dice a sistema su nueva/vieja localización = la respuesta 4.

Notas del diagrama 1A de "Distancer":

- parte 1: la memoria es ^in: A - parte movible; "M" físicamente a parte de la parte basada en los satélites y movible, de la transmisión de A o del satélite = "M" = transmisión a A/satellite/other "M".

--Tiene determiner de la transmisión de los "pp": reloj que regula la frecuencia de la transmisión; transmisión también activatable por = usuario que afina en botón/detector = transmisión de movimiento significando el movimiento/cualquie ocurrencia (sistema conseguido mojado, perdido, dañado, robado) = determiner del analizador = de la transmisión. Memoriza la localización anterior con respecto a sus otros puntos (distancers: receptor/transmisores del sistema) de referencia.

- parte 2: los gobiernos más exactos permiten que el GPS establezca claramente localizaciones exactas, más útil este producto será.

- el 3:3 de la parte transmite = 1 receptores = 1 receptores = transmite a 1 computadoras = responde; 3 transmite de = la computadora "M" 3 físicamente a parte la respuesta de 1 y 3 = 4

- parte 4: audio vía los auriculares de los altavoces, corded o sin cuerda

diagrama 2A de +Distancer: 1. el transmisor transmite = 2. que el receptor analiza el cambio en la localización del transmisor debido al análisis de la transmisión de radio de = respuesta 3. disparadores.

Notas del diagrama 2A de Distancer:

- parte 1: tiene determiner de la transmisión de los "pp": reloj que regula la frecuencia de la transmisión; transmisión también activatable por = usuario que afina en botón/detector = transmisión de movimiento significando el movimiento/cualquie ocurrencia (sistema conseguido mojado, perdido, dañado, robado) = determiner del analizador = de la transmisión. Memoriza la localización anterior con respecto a sus otros puntos (distancers: receptor/transmisores del sistema) de referencia.

- el 3:2 de la parte transmite = 1 receptores = 1 receptores = transmite a 1 computadoras = responde; 2 transmite de = la computadora = la respuesta 2

La pieza "GPS" incluye todo el "Distancer". El "GPS" incluye; pero, "Distancer" excluye (salvo especificación de lo contrario) el uso de una exhibición que demuestra los mapas para los consumidores así que pueden encontrar su manera a un punto específico más allá de 1 kilómetro.

- para los detalles ver las nuestras limaduras anteriores con las oficinas de patentes y la otra información en esta limadura. (Este archivo es una consolidación 12.93 de archivos: y \ distancer; y c \ distancer)

Usos:

- siempre que dos o más porciones se separan más allá de cierta distancia programada, la pieza del receptor alarmará.

- Guantes que son separados más allá de distancia deseada.

- Restricter del movimiento: los niños que viajaban más allá de distancia deseada, animales domésticos, animales salvajes, ex-convicts guardaron dentro de cierto radio.

--la respuesta en Distancer Diagrams 1A, 2A es: señal = altavoz = emisión audio (instrucciones verbales y o cuidado, alarma); señal = descarga eléctrica/altavoz que da ^inaudible sano incómodo a los seres humanos.

Hurto: oficina y electrónica casera; los almacenes que demuestran modelos de la exhibición sin los alambres - saber que algo fue levantado antes de que usted descubra a persona que camina hacia fuera la puerta y después que funciona abajo de la calle; descubrir si es su coche se está tomando que (las alarmas no son buenas si usted no puede ver el coche de la ventana) le da hora de entrar en contacto con a policía en un minuto. Alarmas si las ventanas o las puertas parte más allá de cierta distancia (otro adminículo al ladrón de la hoja). /

Hurto misceláneo: trabajar/envía del artículo de las causas no la alarma que se puede coger más adelante por la policía cuando ella tiene más adelante bastantes receptores; si el dueño no allí, receptor entra en contacto con a policía, etc. //

Verborrea: puesto la detrás/entonces "esto se está robando"; la voz del dueño o del padre dice "vuelto a casa", o si entonces van demasiado lejos, da el sonido del "alimento", eg.: ./del abrelatas de poder

Técnico: reducir la batería del tamaño enviando pulsos ocasionales. Puede funcionar encendido una frecuencia de la FCC o del juguete. Relativamente barato producir. El tamaño pequeño permite que sea ocultada dentro de ladrones foiling del equipo - puede también ser construido como pedazo disfrazado de./del equipo

Usos del juego: los pedazos necesitan ser puestos en la distancia correcta de ciertos otros pedazos (resultados en sonidos queridos o indeseados como confirmación). Juego al aire libre: si un amigo está más allá de gama (vida real también). Usted sabe si alguien se está acercando (vida real también). /

Usos misceláneos: envía el aviso si la máquina remota no se está realizando según plan. Parte movible en la cosa o coche usted es siguiente: dice a detective despertar y comenzar a seguir después de una breve pausa.

Monitor auto de la velocidad: señal única de la fijación al vehículo - los receptores de la calle pueden coger electrónicamente los reductores de velocidad, ésos que toman vueltas ilegales (un vandalismo más propenso de la cámara y tiene problema de la visibilidad, etc.). /

Trazalíneas de la gente: insertar el transmisor en el coche de la persona, el monedero, el etc. Siempre que se vayan recibiendo la máquina indica la hora de salida y la vuelta. Ver si la persona es honesta al preguntar cuándo estaban hacia fuera. Para los esposos que se miran, encargados que pasan mucha hora fuera de la oficina

Futuro: Monitor vía la recepción de los satélites - movimiento de observación del mundo.

El transmisor comienza a transmitir sobre la separación, eg.: de la tarjeta de crédito de la carpeta. carpeta del monedero. M indica si el elemento que vaga es semi o muy lejano. TM: Vagabundo. ALETA

- atado al monedero del dinero de una mujer es un transmisor; se ata al bolso receptor. Si el monedero se roba nunca, el receptor del bolso alarmará porque ha parado el recibir de señales del transmisor del monedero.

. Estrategias de búsqueda de la patente:

- palabras claves posibles: distancia--, alarma--, movimientos-- (moviéndose...), separat-- (separarse....), alerta--, receiv--, transmitir--

- estrategia posible de la palabra: (alarma-- o alarma--) + (movimientos-- o distancia-- o separat-- o salir-- o [va más allá]) + (recibir o transmitir)

- si nada aparece de la búsqueda de la palabra clave, después búsqueda por clasificaciones.

- Relacionado con la patente de los E.E.U.U.: 5056106. Mide la distancia entre tres porciones en kilómetros; un dispositivo de radio.

Conocer la localización del transmisor. Un número de diversos receptores identificarán la localización [zona del `].

Separar los productos (relacionados)

reloj de 3E-100 GPS: El reloj tiene funciones del GPS.

- Exhibición: Tiene tirón hacia fuera el revelar de la pantalla. O puede proyectar el mapa sobre cualquier superficie semi-plana en día o la tarde. O el usuario utiliza un agujero del pío del ojo que demuestre mucho en un poco espacio (eg.: como la lente del microscopio)

2E-240 obvio.

2G7-C8 GPS (sistemas de navegación mundiales) localiza la posición de carros. Este Info usado para ajustar horario de operación del plan. $10,000/truck. Marzo de 93 X.

---

el Info compatible/aplicable es tr entre el mfh y el carro vía el "teléfono"

D: c8=tel~remote

Mapa de la base de datos del terreno general:

- el sistema utiliza los mapas basados en los satélites que demuestran la localización de edificios, de caminos y de obstrucciones en la región. Esto juntada con el GPS (o relacionada) que demuestra la localización del usuario.
- el software puede analizar la altura de edificios y otros obstáculos de mejorar el sistema de la guía para corresponder con localización de los usuarios la' y adaptación o instrucción correspondiente necesaria.

. - el mapa existente de Sandbourne demuestra los esquemas de edificios. - cortar y pegó y corrigió esto de 3E-010 en junio de 99.

profesor particular del movimiento 3E061: Dirige a usuarios para mejorar sus movimientos basados en la posición para cada partes del cuerpo. Ver las páginas principales de la descripción.

El sistema analiza siempre que cualesquiera uno o más objetos/pieza se muevan en lo referente a cualesquiera uno o más objetos/piezas. Los ^determines del análisis: cómo, cuando, donde, porqué, qué se movió. Ejemplo: modelo de PYX15 de los ^Sony.

Ver Parts& y archivar 3E para los detalles.

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- Existe: El sistema de navegación activado por voz da instrucciones a través de los altavoces del coche.

Eclipsar por Fujitsu diez, 19600 Vermont sistema de pesos americano, Torrance, CA 90502.

CARACTERÍSTICAS MENOS IMPORTANTES QUIZÁ:

Diagrama: A/A/A/A = tr = computadora (B (paladio)) = tr = A/A/A/A...

Notas sobre D: El múltiplo (a) recibe (b) transmisiones de la onda de aire. Si se calibra hay solamente un (a) instalado y o en condiciones operables (capaces de recibir [B] "s señala sin obstáculo) entonces se distancia. Si el múltiplo (a), sistema conoce la localización de uno o más (b). (B) movimientos de s los" pueden ser supervisados, ser analizados y ser convertidos según el fabricante y o la programación de usuario. Ver los detalles en "Distancer" para los detalles.

- OTD: acceso; % del cojín del aire; básico; % del carro; la exhibición ("S") demuestra la localización y o la distancia [B] de 's; "C"; % [B] del flotador; GPS;

% interactivos; "M"; % de la mañana; pp y P.M. (en qué posiciones [B] adentro debe ser notificar el usuario y u otro dispositivo; cómo [B] "las transmisiones de las posiciones de s" deben ser procesadas y ser analizadas y en golondrina de mar activar y o desactivar posiblemente las funciones en los dispositivos dichos u otros); % multiusos; notificador; oscilador; movimiento de [B] para el uip; diagramas de la impresora: [B] 'posiciones de s en un cierto plazo; % del telecontrol ("R"); cuenta; % de la inclinación; uq; analizador visual (sentidos para: cambios en la localización [o cualquie movimiento] vía su ojo de la cámara); vr.

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- "Facturación.

SECCIÓN del picosegundo - quizá menos importante:

- el picosegundo puede entonces "anotar" la localización de /calculate con la ayuda posible de C/del M. del paladio.

- Para los detalles ver: "distancer"; "GPS"; "localizador".

- el navegador de o-C88 GPS (coche) da comandos verbales de dirigir el conductor. 2 de noviembre de 92 NK.

D: remote=C88

- O-Viaja el monitor: demuestra donde está el usuario; donde no ir.

- Demostraciones de la exhibición: M = el ~ alejado "" del ~PD~ " de "T " del usuario exhibe" /does el siguiente:

- Paladios: altitud, compás y dirección actual del recorrido del paladio, barómetro, temperatura; noticias (flashes de títulos; informes comunes); advertencias a no viajar en ciertas zonas (túnel a continuación, o la otra causa de la recepción pobre para la comunicación; peligro de la contaminación)

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- Subpartes: Picosegundo-Límite: funciones de límites por la localización del sistema; Picosegundo-Localizar: utiliza la localización para hacer cálculos necesarios, ajusta a las necesidades del u (uip); Picosegundo-Zona: las capacidades de u/sys son limitadas/efectuadas por su localización - ver KN, "ranurador": localiza el then= recupera el data= necesario para esta subparte.

+ Picosegundo-Zona: El movimiento físico de U/de R acciona señales adicionales.

Este sistema de diferenciación puede las funciones de la "inclinación" de la co-función w que crean la mayor diversidad del movimiento (reacciones/acciones). El movimiento hecho por el jugador puede representar (uno o más jugadores en juego) (principalmente para la versión de WA de N, o la Picosegundo-Zona se aplica a la porción de R de sistema de N; % localización física del jugador: las necesidades de ser cambiado para u más con eficacia al juego del triunfo (que desempeña su papel en juego), jugador pueden girar mientras que guarda su establo de las piernas (en granangular), u se sienta, solamente su posición cambian un poco como tuercen su cintura, o mueven el dispositivo portable (pedazo del juego) con sus manos/brazos; multa - adaptación de la localización provechosa, eg.: vía el GPS no actual)

--La Picosegundo-Zona agrega la dimensión adicional a la inclinación. Eg.: la señal #1 de a] creó cuando el palillo está en la posición del mediodía y en la esquina correcta muy delantera del sitio, la señal #30 de b] creó cuando el palillo en los mismos ajustes de la posición y de la llave del mediodía, es 0.5 metros más alto y 1 metro a la izquierda del centro del sitio, c] el mismo #b del anuncio a menos que el interruptor en una llave cambiara - > causa la señal #120.

--Picosegundo-Zona = "inclinación": funciones como la invención de KN adoptada por Yamaha, en que cualquier movimiento del cuerpo/el movimiento de la inclinación genera señales. +VR

ADAPTAR la SECCIÓN - quizá menos importante:

Iguales que SE ADAPTAN, MODIFICAN para requisitos particulares, ADAPTAN.

- U o (C/U) el administrador selecciona a que el modo del UIP será utilizado/deseado.

+ ver los VAGOS: Analizador del comportamiento. Nombre para los VAGOS cambiados al UIP.

- ANALIZADOR VISUAL: el "analizador" = asigna el código uip-basado de características a las imágenes señaladas = tales códigos es cerca utilizada (cad) manipular/proceso/corrige las imágenes atadas a los códigos = a los resultados en las imágenes outputted/texto/sugerencias/datos técnicos mientras que u pidió/quiere (uip) = estos datos outputted (poder) tener códigos de características = así que tal salida puede ser alterada (como anterior).

- Interruptor existente relacionado de "TDSW":

Brainmaker 2 - (versión profesional), p.76. [Funciones existentes de N: Da a PC capacidades humanas tales como encontrar golpeteos en sus datos y aprendizaje a partir del pasado.]: UIP-pista.

- Software interactivo que trae a persona muerta más allá del respaldo de la personalidad en la computadora: U pregunta el sistema - > el sistema de c "analiza" todas las preguntas 1000+ y respuestas en su DB en las sensaciones/las opiniones/los comandos/las peticiones/etc de la persona muerta - > U siente un poco más en el

país por la persona muerta de w semi "que obra recíprocamente" más allá de declaraciones/de respuestas (de la opción múltiple).

--utiliza el software de lengua que es autor, y el otro interruptor interactivo del entrenamiento computarizado.

--UIP doble: el sistema es UIP en sastres de ese sistema su respuesta a la situación del u (las sensaciones, parental/dirección necesitan, etc). Éste es un ejemplo del UIP doble o el UIP interactivo, en ese sistema y U ambos se adapta el uno al otro.

- Control remoto de la patente 5357427 de los E.E.U.U. de los pacientes de riesgo elevado que usan la inteligencia artificial: Las preguntas al paciente son = elegido usando AI ("analizador", el "uip") = basado en la respuesta del paciente...

- quitar el archivo/los datos de c basada en su "cuenta baja": crear menos alboroto (para el uip- el "analizador" a funcionar, dejó a programador mejor ver esencial (para la modificación)).

- el UIP antes fue titulado pi (información personal).

"Mandando la cuenta": las cuentas del sistema por tiempo utilizaron/"tenido acceso" para el servicio general/el grado a los cuales el servicio fue adaptado a u - según lo medido cerca: época del total o uso/hora adaptados de fijar a sastre del sistema a U = uip-adapta.

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo + la parte/sistema/programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen". Subpartes:

- Algoritmo de UIP-DB:

--Algoritmo del interruptor: "busca" para qué needed= de los elementos para el compilation= después organiza datos (vía lógica confusa) en el form= usable UIP-Adaptan.

---Notas: Búsquedas: vía los "cuestionarios", "vagos", "pista". Organización de los archivos del DB: la información recogida sobre usuario se puede insertar en uno o los archivos múltiples según los cuales los archivos puedan utilizar la información. Entonces UIP-Adaptar las búsquedas que los archivos ellos necesitan para mejorar a sastre. O más trabajo se puede requerir para que UIP-Adapta encuentre la información necesaria. Ejemplo: "Cuenta de los vagos de los accesos" - el DB compila datos para demostrar cómo el accessor es interno del rated= si el good= cambiante de las estancias del grado del accessor uip-adapta/"el acceso del permiso del regulador del acceso".

- Ver el analizador de la base de datos del analizador contento que traslapa UIP-DB.

- los VAGOS de los accesos también seleccionan lo que quieren los usuarios:
el access=ba puede "buscar"/"corrige" la información para el accessor. Ésta es una forma de UIP-Adapta. Ahorra el tiempo del usuario.

--también utiliza el interruptor del Internet que las "búsquedas" "señalaron" las noticias/el otro material que aparece después WWW.

--Los VAGOS saben que lo que quiere el accessor "experimentar" W5 = uip-adaptan.

--Ver: "artista" "cortado y goma"; "corregir"; "búsqueda"; palabra clave "que busca"; "uip-adaptar". + "predecir que" de que es un subconjunto UIP-Adapta que. "Guía": "Guía" del "juego" que dirige a jugador según UIP-DB del jugador.

- Ver el archivo 2E - generador de la solución/generador de la idea.

- las cuentas del `se hacen y se almacenan en uip-DB

- 'Programar el grado a el cual el sistema altera el itself= por el shift= anotado en el comportamiento del usuario.

- Los sastres/reaccionan del sistema al humor del usuario. Diversos humores del user= (influencia de la ayuda) dan lugar a diversos códigos de comando en sistema que controla. Una forma de UIP-Adapta el ajuste al comportamiento del usuario.

. Analizador del cursivo A2-170: el interruptor estudia lo que escribe o dibuja el usuario.

. Diagrama: el usuario = (los sensores del `) = compila archivos en el then= del comportamiento del usuario compara esos archivos con los archivos pre existentes para juzgar el tipo del comportamiento asignable al usuario por medio de un sistema del then= del sistema de sonorización del software concluye asignando un perfil del comportamiento para el sistema del user= puede continuar encendido reaccionando según lo señalado por el analizador del comportamiento.

- Determina los tipos y los grados del behavior= de la persona según lo que se programa el sistema al seek= y los analiza.

Analizador del riesgo de los VAGOS: determina la ocasión prevista del occurrence= señalado vía cuenta.

. Ejemplos se anota de qué:

- "Tener acceso" al analizador del comportamiento: determina ocasiones que el usuario es un usuario ilegítimo.

- La capacidad de las habilidades del usuario anotó.

- Ocasión del usuario de hacer un error, o de la ejecución hasta la cuenta señalada.

. Cómo las cuentas de usuarios se hacen, ver: uip; uip-DB; analizador; tuvieron acceso a vagos; limadura del usuario (y sus jefes y compañeros de trabajo y sistemas de seguimiento) hacia fuera o entrando en las formas/los cuestionarios interactivos automatizados que desarrollan un perfil de la personalidad del usuario;

- anotan al usuario más allá del funcionamiento (uip-DB) (como en un gráfico)

- el 'analizador calcula la reacción del usuario en cada scenario= típico del caso vía funcionar con el tipo posiblemente existente softwares del panorama del negocio, usada posiblemente por los hombres de negocios que intentan inspirarse estrategias empresariales y o aprender cómo el negocio funciona y los efectos de la toma de decisión del negocio...

. Los comportamientos analizaban: La personalidad/los elementos sicosociológicos, historias, riesgos analizaba. La persona:

- creatividad [ver el artículo sobre el aumento de creatividad]

- valor a la compañía: habilidades; confiabilidad; velocidad del trabajo; su historia del trabajo

- habilidades sociales: capacidad para que ellas consigan junto con amigos; pares; compañeros de trabajo; profesores...

- cualquie otro normal o perfiles psicologicos o sociológicos anormales

. Predecir: Analizando los diversos determinantes/causas para la personalidad o el moods= del usuario [actual/previsto] vía el ba= predecir puede estimaba los probables panoramas futuros/cómo los sistemas se pueden adaptar mejor para el usuario.

- el `anota las ocasiones para diversos comportamientos futuros del usuario.

BVA: "Analizador de la voz del comportamiento". Estudios de sistema las características del comportamiento de humano, de animal, o el organismo que es estudiado.

. GUÍA-VAGOS: La guía ajusta al tipo comportamiento de usuario. Ranuran a la gente/a los usuarios en una de 100 categorías del comportamiento, eg.: cerebral y directivo y atento al detalle;

. - llano o maestría y o tipo lengua en programa de la guía (porción de) uip-se adaptan por consiguiente; el grado de temas/de archivos se ajusta.

. - la 'guía determina el tipo necesidades/prefers= del material/usuario de la educación le enseña.

- 'dirigir el proceso de aprendizaje del usuario de las pistas [predice]/el curve= y se ajusta.

- el sistema determina a usuario del apuro está teniendo: entonces trae las herramientas/ayuda por consiguiente. Apuro determinado vía: pausas en actividad del usuario en el punto en programa del interruptor; número y tipo preguntas del usuario; cuenta pobre de u en su: cuestionarios/funcionamiento.

- progreso del usuario del monitor en el aprendizaje, eg.: Palmadita 4812125 de los E.E.U.U.

. Usos de la guía:

- usuario que usa el sistema como forma del su del comportamiento/comprobación/de la otra terapia médica, tgh:

- entrenamiento u para modificar su comportamiento [conseguir los resultados más cercano por a qué u puede el want= según lo determinado uip-adaptan]:

. Cuenta: Determina los tipos y los grados del comportamiento de la persona, según lo que se programa el sistema buscar y analizar.

. Etnología: El estudio de animales. El comportamiento animal es a menudo similar a el del comportamiento de seres humanos. Eg.: leer pájaros del `del artículo del economista del `los' lo hacen, abejas lo hacen' en la edición del 30 de agosto de 97.

. Diagramas - UIP: u = c = interruptor = DB - > el sistema adaptó a los usuarios.

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo + la parte/sistema/programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado.

CONCLUYE ESTE ARCHIVO: PICOSEGUNDO MISCELÁNEO

ESTO CONCLUYE ESTA CARPETA DEL LOCALIZADOR PARA LAS DESCRIPCIONES CENTRALES

Archivo: Introducción/unidad central de las características

M = ordenador central

Formar del otro ordenador del autopista de la información de la partición de la computadora/central. El producto conecta con la computadora central ("C") vía. Esta parte puede ser sinónima con la pieza "computadora", o el "cerebro", o el "analizador":

. - autopista de la información, alambre, módem, teléfono ("T") (móvil, o por el alambre óptico o de cobre), o tipo de radio frecuencia.

. Opción de la transmisión en circuito del ordenador central ("C") (para tareas más complejas). Eg.: el producto electrónico consigue la información de la cual derivar salida (crear los efectos deseados tales como hospitalidad, instrucciones, datos). Base de datos almacenada en "M" (también). En-Línea-Transacción-Proceso. Pieza de la autopista de la información. En diagramas, "M" se puede substituir por: "C" o "cerebro".

- Ver: 1] "cerebro": la característica del sistema se adapta según circunstancias. 2] Literatura actual y futura en el Internet, el World Wide Web, las redes de ordenadores, y cuaesquiera otros temas relacionados (que pueda tener diversos nombres en el futuro).

DIAGRAMA: el 1m "C" = tr (transmite) = 2computer = 3function/4data para el software de 2

- Descripción central del producto = marco principal "C" de #1. (anfitriones el servicio de M) = #2.

. --#2 tiene (mínimo 500 megabytes) la memoria, softwares más y bases de datos [más complejos que la descripción central = #1 del número del producto] para las funciones de #1.

El DIAGRAMA DETALLA la parte #1: D (este KN) [dispositivo separado - marco no principal]: = exhibición ("S") (demostraciones menú, cuenta); "C"; pp y P.M. (cómo #1 obra recíprocamente con #2 en transmitir/que recibe, cómo #1 y o #2 puede controlarse, cómo crear y o utilizar el pi); Reino Unido (cómo obrar recíprocamente con #2); %educ; %portable con todo puede obrar recíprocamente con #2 dondequiera que sea #1; #2 hizo salir - > receptor de #1 - > "C" - > impresora; se calcula/se tabula % de la cuenta usando #2; carro (permite interacciones alternativas con "M", da bases de datos adicionales, los softwares para otras funciones); el usuario oye "discurso" el resultar de interacciones entre #1 y #2; teléfono ("T"); teléfono del SP; tr; MES; %fs; las interacciones #1 y #2 permiten el uq y o el mq; acceso; carácter; telecontrol ("R") para activar #1 - interacción #2; notificador; %tilt; cojín del aire; multiusos; analizador de %sound; alarma de %morning; "facturación"

El DIAGRAMA DETALLA la parte #2: [ordenador principal]: = %date; %tds; el usuario oye "discurso" el resultar de interacciones entre #1 y #2; teléfono ("T"); teléfono del SP; tr; MES; %fs; cm; + soluciona el problema de #1 que carece bastante memoria, base de datos importante, tiempo de reacción de las velocidades

- Diagrama: % de #1 calcula/tabula datos y los envía a - > #2 (#2 calcula/tabula la cuenta de #1 y o la salida deseada por #1 - > los datos enviados a #1 - > los procesos #1 por consiguiente (activa/desactiva la función, demostrada en la exhibición ("S"), la impresora); "mandando la cuenta".

El DIAGRAMA DETALLA la parte #3: para "M" que obra recíprocamente con el uip: (los softwares de #1 y de #2 y las bases de datos y las funciones, deciden a cómo recoger los datos para la base de datos del uip según los pp y o la P.M.

. --eg.: la actividad del usuario [manera en la cual #1 recibe la información sobre usuario tal como el usuario de las funciones seleccionado y su manera del uso] se analiza según los objetivos, objetivos que son cómo analizar de tal colección el 'de datos puede ser útil para el uip, aunque a veces el objetivo para tales puede ser cuestionable dependiendo del nivel sofisticado de #1 y o de #2, no obstante esperanzadamente tales datos por lo menos estarán disponibles en una cierta forma ser de un cierto uso si necesitan ser dibujados encendido después de la colección - > analizador.

#1 y #2 SE APLICAN A LOS SERVICIOS proporcionados por M de servicios de hospitalidad y o de portadores de las telecomunicaciones eg.: AT&T, KDD, cable y sin hilos, Sprint, MCI, Compuserve, Google.com, Yahoo.com, MyTube.com, MySpace.com, y otros portales de Internet.

--Creativo obrar recíprocamente con otras computadoras (bases de datos, softwares), sus amigos mientras que en la localización inmóvil y o en tránsito.

---eg.: uno o más #1 selectos de los menús de diversas opciones (programas y o softwares y o características y u otros modos). El tipo de interacción está en la golondrina de mar efectuada.

--El UIP de cualquier uno o más del #1 (y o sus usuarios) efectúa el tipo de "opción" puesta en la operación.

. ---Las "opciones" pueden ser seleccionadas recibiendo (incluso si está en conflicto) señales múltiples. Las señales pueden ser de 1ra opción la "opción" seleccionada consciente por los usuarios, 2da opción su UIP. El software del m determinará el mejor "opciones" según: la mejor "opción" que resolverá tanto de los elementos que abarcan la "opción deseada" como sea posible. Los usuarios pueden anular M de usar el UIP y o las "opciones" seleccionadas por el otro #1 y o sus usuarios, en la determinación de "opciones".

- Los datos son via^ también obtenido: "Reino Unido", "carro", "teléfono", "MES", explorador

Notas para M: la separación de leído más adelante en #1 y #2 son más para presentar propósitos, y para ayudar a la visión desde qué perspectiva ocurren las posibilidades mencionadas. Es las interacciones/sinergia entre #1 y #2 que sean normalmente la llave crucial a entender la partición de "M".

MISCELÁNEO:

- la vieja definición de "M" incorporado a 1992 era "máquina". Éstos serán encontrados en solamente números limitados del producto con la letra "A" en la primera a los espacios del número del producto.

-1st m=internet=2nd el m/el otro M.

- Mayo utiliza la tecnología de Echelon Corp, que trabaja en traer una inteligencia común a todas las clases de dispositivos electrónicos. Wall St. Journal, el 19 de junio de 1995, p.R28.

. Ordenador del autopista de la información/central. El producto conecta con la computadora central ("C") vía. Esta parte puede ser sinónima con la pieza "computadora", o el "cerebro", o el "analizador":

. - autopista de la información, alambre, módem, teléfono ("T") (móvil, o por el alambre óptico o de cobre), o tipo de radio frecuencia.

- D: el 1m "C" = tr = 2computer = 3function/4data para el software de 2

- Descripción central del producto = marco principal "C" de #1. (anfitriones el servicio de M) = #2.

. --#2 tiene (mínimo 500 megabytes) la memoria, softwares más y bases de datos [más complejos que la descripción central = #1 del número del producto] para las funciones de #1.

- Pieza #1 de OTD: D (este KN) [dispositivo separado - marco no principal]: = exhibición ("S") (demostraciones menú, cuenta); "C"; pp y P.M. (cómo #1 obra recíprocamente con #2 en transmitir/que recibe, cómo #1 y o #2 puede controlarse, cómo crear y o utilizar el pi); Reino Unido (cómo obrar recíprocamente con #2); %educ; %portable con todo puede obrar recíprocamente con #2 dondequiera que sea #1; #2 hizo salir - > receptor de #1 - > "C" - > impresora; se calcula/se tabula % de la cuenta usando #2; carro (permite interacciones alternativas con "M", da bases de datos adicionales, los softwares para otras funciones); el usuario oye "discurso" el resultar de interacciones entre #1 y #2; teléfono ("T"); teléfono del SP; tr; MES; %fs; las interacciones #1 y #2 permiten el uq y o el mq; acceso; carácter; telecontrol ("R") para activar #1 - interacción #2; notificador; %tilt; cojín del aire; multiusos; analizador de %sound; alarma de %morning; "facturación"

Opción de la transmisión en circuito del ordenador central ("C") (para tareas más complejas). Eg.: el producto electrónico consigue la información de la cual derivar salida (crear los efectos deseados tales como hospitalidad, instrucciones, datos). Base de datos almacenada en "M" (también). En-Línea-Transacción-Proceso (TP). Pieza de la autopista de la información. En diagramas, "M" se puede substituir por: "C" o "cerebro".

- Ver: 1] "cerebro": la pieza del sistema se adapta según circunstancias. 2] Literatura actual y futura en el Internet, el World Wide Web, las redes de ordenadores, y cuaesquiera otros temas relacionados (que pueda tener diversos nombres en el futuro). 3] "facturación".

Archivo: Introducción de las características/programas de Manuf

PROGRAMAS DE LA P.M. = DEL FABRICANTE

El fabricante programa e instala las funciones con programa de gestión del producto antes de venta. El software se puede modificar para requisitos particulares por el fabricante/el usuario.

DIAGRAMA: carro del software - > memoria = C (computadora del `) = función del software (usuario de las ayudas)

- OTD: El fabricante proporciona un menú de posibilidades en la forma de papel del librete o de la exhibición ("S"); % del usuario pueden seleccionar de uno o más sistemas de menú/formatos, cada uno que activa funciones similares o diversas; el usuario comunica con el sistema y consigue la regeneración en formato crudo o sofisticado; mismo o las versiones relacionadas del producto puede ser vendido en diversos precios según la variación de la programación incorporada en el dispositivo por el fabricante, en tales casos incluso simple o los cambios cosméticos se pueden realizar para justificar el precio alto más; puede funcionar con "C"; Reino Unido; carro (personalmente las características programables pueden ser alteradas, ser agregadas a, o ser cambiadas de otra manera insertando diversos cartuchos del software, y la P.M. responde por consiguiente); el usuario puede reprogramar software en el dispositivo y o (otro dispositivo); acceso (solamente ésos con contraseñas pueden alterar los pp o la P.M.); % del uip (el usuario decide cómo recoger, lo recupera, se convierte, lo almacena, lo corrige, y o utiliza de otra manera la base de datos del uip); el usuario puede comunicar con un "carácter" en la "exhibición" [si está utilizado] al programar, eg.: el carácter habla preguntando se quiere qué selección de menú; pp vía la chapaleta, o % del distancer, o % del localizador; multiusos (puede trabar hacia fuera a la otra gente de su programación); pp vía el telecontrol ("R"); interfaces de sistema con el programador vía el "notificador" que informa al programador alrededor: qué pasos fueron programados y acaban de recibens el sistema, que las partes del programa son en un modo dominante en un momento dado, los menús; % de la inclinación; % del cojín del aire pueden los pp; % del color significa estado de cualquier programación, el canal de interconexión entre el programador y el sistema; % del analizador de sonidos (dependiendo de los sonidos externamente generados, el sistema podrá mejor incitar el usuario/a programador sobre cómo el dispositivo pudo ser programado, y o utilizado); % de la mañana. "Corregir".

- Ver el "cerebro".

. - Los programas del fabricante cómo el "ranurador" localiza then= recuperan el data= necesario para el uso señalado.

- "Facturación"

Archivo: Introducción/micrófono de la característica

"MICRÓFONO"

Introducción: Esta pieza está conectada a menudo con el analizador de sonidos.

micrófono direccional de ++ 1C-110-MICROPHONE

El micrófono localiza la dirección de fuentes sanas. Entonces focos en esas áreas para mejorar su capacidad de coger qué está ocurriendo.

- La dirección está situada como cómo los oídos humanos funcionan. La diferencia de tiempo que un sonido alcanza cada oído (micrófono) significa el sonido de la dirección general está viniendo de. Es más duro identificar dirección de los sonidos' cuando un oído se cierra completamente apagado.

. Ideas de la extensión:

- Imaginarse una robusteza amistosa con el ser humano como calidades. ¿Qué ocurrencias pudo su foco del amigo de la invención encendido, entonces pensar alrededor, y responde? ¿Cómo sobre un analizador visual, analizador del olor, analizador de la vibración, analizador de sonidos, o analizador del ambiente? Integrar los aspectos múltiples, creando un efecto sinérgico. Ejemplos:

--La abertura o el closing automática de las ventanas basadas en condiciones atmosféricas.

---También hoy en día, los edificios dejaron adentro el aire fresco en el edificio en las horas ideales. En verano que deja adentro un aire más fresco en la noche cuando las temperaturas son un exterior más fresco, esto ahorra energía y ayuda al ambiente.

--Los sensores populares de la humedad instalan tubos el agua a las plantas potted.

- Nuestro analizador de sonidos determina la naturaleza de un arsenal de sonidos. El analizador de sonidos entonces ayuda al expediente del micrófono apenas los sonidos que caben dentro de los parámetros de qué necesidades de ser oído.

. Usos:

- ™ de los oídos de la madre: La madre sabe donde en casa aquí está el niño. El analizador de sonidos interpreta y señala sonidos felices del griterío (basado en sus patrones de la onda acústica) y la señala en el estado de qué está sucediendo.

- La invención interpreta cualquier tipo de sonido, después notifica el estado de qué está sucediendo. Lo suyo sistema de seguridad automatizado para una forma de vida más segura.

- El analizador de sonidos' determina los tipos de sonidos que necesiten ser registrados, y de piedras de afilar adentro por consiguiente. Puede ser que [parcialmente] bloquee [la O.N.U] frecuencias sanas deseables, permitiendo mayor foco en frecuencias señaladas.

- El transmisor portable es usado por el usuario, después el "mic" intentará dirigir su grabación sobre todo en la dirección de los transmisores y o de las fuentes sanas.

. - útil en circunstancias numerosas, por ejemplo cuando usted no quiere el sonido del rizado del "mic" que frota contra la ropa mientras que en etapa, el etc.

. - este sistema puede substituir a veces el "mic portable" usado por la gente.

. - el usuario puede controlar manualmente qué micrófonos serán activados también

- más de un "mic" puede recibir sonidos, según la localización de la fuente sana, y la programación de usuario

. - Usos: teatro; producción del cine; la herramienta en análisis por ejemplo en comportamiento de la compra al por menor como persona camina sobre almacén y o cuando usted no desea atar el "mic" a la persona. El dispositivo puede difundir los sonidos, de alguna manera relacionados donde está o no está la persona, a e.g.: los sonidos se pueden seguir los pasos de la persona y oír algunos pies detrás del caminante.

- Eco: uso como impedimento del juguete, de la broma o del ladrón registrando y difundiendo los sonidos de una persona como caminan alrededor

. - D: Micrófono: alejado ("R"); pp; P.M.; interactivo; juguete; todos; juego; hospitalidad; synth; portable; la impresora demuestra gráficos de la actividad...; mfh; punto de ebullición; alerter; oscilador; vc; cuenta; carro; cp; uq; acceso; uip [cómo los movimientos/alteran del mic su sonido que coge capacidades]

Archivo: Introducción de la característica/alarma de la mañana

"FUNCIÓN DE LA ALARMA DE LA MAÑANA"

Características comunes (piezas) a los sistemas de alarma diversos de la mañana:

+ el "ACCESO" = cualquier función necesaria para tener acceso a un sistema puede ser la acción requerida para desactivar la alarma de la mañana. Una cierta dificultad se puede requerir de user= para despertar mentalmente/estimularlos en un estado despierto (mientras que "entreteniéndolos" durante el proceso).

El "ARTISTA" = crea "imágenes correctas" para desactivar.

"INTERACTIVO" desactivar = el usuario de las cosas puede hacer:
- Jugar al "juego" correctamente, o ganar.

"NR" = sistema hace todos los tipos de declaraciones wakening hasta desactivado. El usuario puede seleccionar a que las grabaciones del oscilador ellas oirán. Comunica vía: OSCILADOR, S, vibración.
- Si el sistema de alarma está en el sitio diferente del bed= "notificador", por ejemplo sus altavoces se atan con alambre al dormitorio.

PC/computadora: El soporte solamente o los sistemas de la PC se puede también utilizar para despertar a usuarios de maneras únicas. Se diseñan para ser dejadas encendido, al igual que cada vez más la práctica.

despertador del código de la mañana 3A28A: Hacer alerta afinando en la combinación necesaria a la alarma del silencio. Exhibe la nueva combinación cada mañana.

VUELTA CON./DESC.: Para apagar a usuario de la alarma debe afinar en código. El código puede siempre ser igual o diferente. El código pudo aparecer en la pantalla. Tal acción (concentración) puede ayudar a wakefulness.
- la alarma espera cierto plazo antes de alarma del principio otra vez
. Leído más adelante: el remote%; exhibe tiempo, la comunicación escrita, el etc; "C"; pp; P.M.; Reino Unido; fecha; el tds%; el interactive%; educ; juguete; todos; juego (el usuario juega a un juego verbal para despertar); ejercicio - conseguir a gente moverse alrededor para despertar; portable; t; punto de ebullición; alerter; oscilador; vc; egh; el score%; tgh; md; carro (de combinaciones, de declaraciones, de preguntas, y de otros softwares); "T"; SP "T"; uq; mq; el access%; uip (- utilizado para generar preguntas apropiadas de un muestreo grande de preguntas posibles - la información muy importante del uip se empareja con el tipo información, las preguntas que los psicólogos dicen pueden ayudar a despertar a gente)
- Palmadita de los E.E.U.U.: 5189648.
- requiere a usuario mover el "ratón" o "r" en patrones de: complejidad, "interactivo", "hospitalidad", "humor".

ALARMA INTERACTIVA de la UNIDAD CENTRAL 3A281: La "computadora" indica las nuevas ideas interesantes cada mañana que se diseñan para ayudar a la persona a despertar, después hace preguntas. El sistema puede estar en el país, o con tal que como un servicio de gente automáticamente de la llamada por el "teléfono" con una grabación previa de antemano.

- relacionado con 3A-280. En lugar una unidad central llama a suscriptor para despertarlo y obra recíprocamente con ella en diverso formato cada vez.

- hace las preguntas, declaraciones asombrosamente de los estados (puede ser basado en el tipo suscriptor y cualquier Info disponibles sobre ellas, eg.: qué indican voluntariamente o basado en la experiencia de la computadora del comportamiento de los suscriptores con sí mismo en "T".

- OTD: el remote%; exhibe tiempo, la comunicación escrita, el etc; "C"; pp; P.M.; Reino Unido; fecha; el tds%; el interactive%; educ; juguete; todos; juego (el usuario juega a un juego verbal para despertar); "mic"; ejercicio - conseguir a gente moverse alrededor para despertar; portable; t; punto de ebullición; alerter; oscilador; vc; egh; el score%; tgh; md; carro (de declaraciones, de preguntas, y de otros softwares); "T"; SP "T"; uq; mq; el access%; uip (- utilizado para generar preguntas apropiadas de un muestreo grande de preguntas posibles - la información muy importante del uip se empareja con el tipo información, las preguntas que los psicólogos dicen pueden ayudar a despertar a gente)

contenido %-4E020 y fecha Verfier: (cualquie mencionado) de ocurrencias.

- uso con código de área (de 900) o servicio de 976 prefijos - el sistema (sistema) carga automáticamente a llamador en su cuenta de teléfono.

CANALIZACIÓN VERTICAL 3A282: La alarma desactiva solamente cuando la persona se levanta de cama. Funciones vía el uso de "sensores especiales".

Consigue a gente encima y fuera de la cama de TURNING de alarm's de apagado sobre la persona que se levanta de cama.

- la alarma detecta a persona que se levanta vía disparar de la luz laser (señalada en cierta dirección)

- la función del snooze, después de lo cual el levantamiento es solamente manera de desactivar la alarma.

encima del número de snooze-alarma funciona posible antes de que ella deba despertarse.

- El usuario decide antes de la mano, número de épocas que el snooze puede ser activado antes de que tal función no se pueda hacer para trabajar = entonces solamente manera de apagar la alarma esté vía salir de la cama

- OTD: las exhibiciones miden el tiempo, comunicación escrita, etc; "C"; pp; P.M.; Reino Unido; fecha; el tds%; el interactive%; educ; juguete; todos; juego (el usuario juega a un juego verbal para despertar); ejercicio - conseguir a gente moverse alrededor para despertar; punto de ebullición; alerter; oscilador; vc; egh; el score%; tgh; md; carro (de combinaciones, de declaraciones, de preguntas, y de otros softwares); "T"; SP "T"; uq; mq; el access%; el pi%; vagos; access=ba.

RELOJ de TIEMPO NATURAL 3A0300: mientras que viaja la persona, el reloj cambia longitudes en el planeta, sabe automáticamente tiempo apropiado según el sol con o sin ver el sol; (consigue cualquiera: tiempo real y o las zonas horarias artificiales - que son similares con todo diferentes a partir de la hora local verdadera). Si esto puede ser construida, ideal para los usos comerciales en industria aeronáutica, el etc.

- también dice a usuario la longitud, latitud, altitud, lecturas del tiempo
- puede coger señales de los satélites que envían señales a todas las partes del planeta vía el sistema de navegación mundial, que permite actual que el receptor conozca su paradero específico en el planeta dentro de algunos metros.

. - contenido 4E020 y fecha Verfier: (cualquie mencionado) de ocurrencias.

ALARMA del VIAJERO 5A980: según las zonas horarias seleccionadas, se activan los modos correspondientes de la alarma. Por ejemplo: ¿en? país, usted necesita despertar en la hora local del 7:30, y en la hora local del 7:50 en el otro país puesto que la segunda localización está más cercano al trabajo que requiere menos tiempo de recorrido.

- para los relojes, los relojes de recorrido, personal y ordenadores portátiles

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

ALARMA de 1B080 DANGLY: Despertar en la hora untada a los sonidos de una criatura haciendo estallar hacia fuera sobre su cama. Ejemplo: la criatura puede sonar, hablar, caer pedacitos del agua. Ésta es una forma de "notificación". O el ventilador sopla sobre usuario, el etc.

- Las ayudas se levantan por mañana.

Algo viene colgando abajo de arriba. Quizá algo retorcido, borroso, ruidoso, screamy...

Detalles técnicos: las salidas pudieron variar cada mañana. Desactiva cuando el peso de la cama se reduce.

- El venir de techo (quizá vía la cuerda retractable), o de artículo se lanza hacia fuera (con o sin la cuerda) de eyector cerca de la cama. El usuario apunta el eyector a deseado colocado.
- Hace sonidos al hacer estallar hacia fuera y o mientras que cuelga, eg.: vía sonidos mecánicos (campana) o electrónicos.
- Los sonidos pueden venir a partir de dos localizaciones y comienzos un segundo antes de que el dispositivo hace estallar hacia fuera.
- Diseñado para el consumidor creativo adicional
- puede caer un poco líquido en la hora untada; o algo más de la gota (dispositivo de zumbido que comienza a zumbar inmediatamente; o comienzo después de algunos minutos; o después de que toque calor humano [no puede dejar a persona lanzarlo de cama])
- desactivar saliendo de la cama (buena manera de levantarse), o por el panel en cabecera.

. Leer más adelante: PP; P.M.; Reino Unido; fecha; interactivo; juguete; juego; hospitalidad; ejercicio; portable; alerter; carro (diversos dispositivos a hacer estallar hacia fuera, sonidos).

la MAGIA 1B110 ABOTONA la ALARMA de la MAÑANA: Apagar la alarma por la combinación correcta conmovedora de botones en el plazo de 3 segundos. Exhibir combinaciones necesarias de las demostraciones de la "pantalla" las nuevas cada mañana. Las ayudas despiertan la cabeza soñolienta.

- En la hora untada, exhibición del reloj ("S") demuestra las combinaciones necesarias para ser afinado adentro para desactivar el reloj. Las ayudas de proceso hacen la alarma principal soñolienta.

- era 1A-4) despierta el juego:

Hacer las actividades de siguiente u otras unas de los sobre despertar para apagar la alarma. El trabajo requerido despertará a usuario.

- Juegos: perforar los botones en la orden correcta según ciertos comandos o pautas. Puede cambiar o llegar a ser más difícil a tiempo.

- pues los botones se tocan, hay un sano (diferente para cada botón)

- Las instrucciones de las maneras diferentes se transportan al durmiente:

--primero es sano que alerta a usuario - este sonido puede intensificarse en 30 segundos o seguir siendo constante, apaga cuando el juego se juega correctamente o bien bastante (arriba bastante cuenta)

Juego #1:

las demostraciones de la exhibición ("S") que abotona se deben presionar y en qué orden; entonces la exhibición ("S") puede problema de las instrucciones de repetición repetidamente hasta que el usuario solucione (hace se requiere qué). Eg.:

--el usuario tiene 9 [3 filas de 3 llaves cada uno (o más)] llaves en pequeño tablero dominante; las demostraciones de la exhibición ("S") que afina se deben presionar y en qué orden poniendo un número en la caja de cada llave en la exhibición ("S"). El tablero dominante plástico sigue siendo igual diario, con todo los números en las cajas de presentación que representan las llaves del individuo y la orden en las cuales deben ser presionados cambian aleatoriamente cada día.

- todas las características de 1B-111 son mergeable con este producto.

- Cerradura interactiva:

La persona traba o abre el dispositivo usando las características de la desactivación de la alarma de la mañana. Puede utilizar para ganar la entrada, el etc.

- la manera de la cual los botones se deben afinar adentro para desactivar la alarma (pp, P.M.).

- OTD/: alarma de la mañana; exhibición ("S"); pp; P.M.; Reino Unido; fecha; tds; interactivo; básico; juego; entretener; ejercicio; punto de ebullición; oscilador; discurso; carro; UIP.

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

- Ver: despertador del código de la mañana 3A28A

ALARMA de la MAÑANA de la DEMOSTRACIÓN del CONCURSO 1B111: Desactivar la alarma contestando a las preguntas correctamente. El humor de la vigilancia de las causas de las preguntas.

- Alarma interactiva de la pregunta: - el dispositivo pide preguntas del usuario, y respuestas del usuario mecanografiando en la información sobre el tablero dominante. La exhibición ("S") demostrará qué tecla necesita ser pulsada para seleccionar, eg.: sí, no, blanco, azul, rojo, pequeño, grande, los etc en contestación a preguntas tienen gusto: "usted ahora ve 14 coches en esta exhibición ("S")...", o "cuál es su favorito de estas opciones del color" o "usted prefiere perros pequeños o grandes", etc.
- las preguntas se diseñan psicologicamente para hacer que el durmiente piensa en patrón para apresurar su estado el despertar, y consiguen su curiosidad
- las preguntas se almacenan en el microchip por los 2 años próximos (reemplazables comprando cartuchos adicionales con preguntas)
- otras versiones pueden tener características interactivas: la pantalla de la TV pide y responde a las preguntas, eg. dice que "despertar la cabeza soñolienta, la respuesta es incorrecto!". El sistema interactivo utiliza el lector especial y discos del CD-ROM; o aplicaciones otros sistemas automatizados.
- esto y otras alarmas de la mañana se pueden desarrollar cerca o el uso TM: Alarmas de la mañana; Morning Alarm(s), Inc; Alarmas creativas de la mañana

Cada llave no puede ser diverso haber coloreado con todo tener ninguì□n número o ponerlo letras (las razones: deja a tablero dominante del uso del usuario para diversas opciones; mantiene el tamaño del dispositivo pequeño; hace que el usuario piensa), con todo otras versiones tienen uno o más sistemas de llaves con número o ponen letras a las impresiones.

DETALLES ADICIONALES DE LA MAÑANA:

Hay un botón en la parte inferior del dispositivo que puede apagar la alarma si el usuario no puede desactivar el sistema vía el método del juego.

El usuario querrá naturalmente evitar esto y tomar el desafío de dejar la máquina despertarlos. Requerido probablemente por estándares electrónicos del gobierno occidental.

- El tablero dominante es una unidad separada que comunica a la unidad principal vía ("R") control alejado.
- El usuario tiene opciones sobre la manera que las preguntas de los cartuchos se tratan él, eg.: dificultad, número de preguntas cada mañana.
- Códigos: fecha
- Cerradura interactiva:

La persona traba o abre el dispositivo usando las características de la desactivación de la alarma de la mañana. Puede utilizar para ganar la entrada, el etc.

- si el usuario la despierta entonces es innecesario desactivar la alarma jugando al juego. Las desactivaciones unas de los del despertador de la mañana se pueden también utilizar hacia fuera de otros archivos, eg.: la canalización vertical.

. Leído más adelante para 1B111:

El dispositivo puede ser parte de otras características de producto, eg.: radio, opciones de tipo standard de la alarma. El sonido de la alarma pudo variar cada mañana. Desactiva cuando el peso de la cama se reduce. Códigos: básico; exhibición ("S"); pp; P.M.; Reino Unido; interactivo; educ; juguete; juego; hospitalidad; portable; "M"; oscilador; vc; egh; pruebas de la cuenta (como de bien usuario hizo adentro los últimos juegos. ; enseñar al carro (otro); RPC; PC; uq; acceso; UIP; carácter.

ALARMA FELIZ de la MAÑANA 1B050: Los sonidos subconscientes y los mensajes puestos en palabras se emiten en el tiempo de la alarma a energizan y ponen a persona en un marco de la mente positivo. Ésta es una forma de "notificación".

- Alarma personalizada: Expedientes de usuario sus los propios pep encima de la voz para conseguirles uno mismo para arriba por mañana. Las voces y o los cuadros se pudieron proporcionar por el fabricante. Detalles técnicos: las salidas pudieron variar cada mañana. Desactiva cuando el peso de la cama se reduce; o cuando es ua de los se ejecuta la otra desactivación de la alarma de la mañana funciona en nuestros otros archivos, eg.: la canalización vertical.
- Utilizar la voz de los fabricantes, de la madre, del amigo, de los jefes (gran regalo del jefe), o de la otra persona con voz temerosa.
- Puede comenzar a jugar música o tiene una característica de la alarma antes de que se active la característica de voz registrada. Se activa la voz si persona cualquiera: [no sale de la cama (debido al sensor de la cama)], o mejorar - la persona no desactiva el dispositivo.
- Cada día de la semana puede tener una diversa voz saliente - éste está para la variedad
- El dispositivo desactiva automáticamente después de que se acabe la voz, o no más de 60 segundos. Razón: la persona puede despertar y casa de la licencia antes de que la alarma vaya en.... (característica obvia)
- impresora (las impresiones un nuevo mensaje interesante cada mañana - microchip tiene memoria para tales datos por los 10 años próximos, después la información es el comenzar repetido el 11mo año) - usuario de las ayudas de la curiosidad despiertan, los cartuchos para tales diversos tipos de mensajes disponibles - según los gustos del comprador del usuario o del regalo.

. Leído más adelante: Básico; exhibición ("S"); pp; P.M.; Reino Unido (ajuste del tiempo de la alarma, ajuste del tiempo actual); fecha; interactivo; juguete; hospitalidad; el "mic" (para la voz de la grabación), o el dispositivo puede tomar los mini cassettes clasificados estándar para que otros envíen a usuario para la diversión; Cuenta (el número de épocas al mes la "voz" tuvo que adelantarse (el usuario no apagó el dispositivo a tiempo)); el carro (cartucho del software) para la música, tipos de alarma suena (eg.: campana de iglesia, cuerno del tren, etc); RPC; cp; mq; uip; vagos.

NOTIFICADOR QUE EMPAREJA del HUMOR 1B051: Despertar a usuario puesto las ayudas del modo en el tipo humor deseado para el usuario. Las peticiones de usuario, o el sistema predice que el tipo usuario del mood= será entrenado en para ese día.

- Eg: los días del fin de semana tienen notificador menos áspero; la agenda del negocio del día del usuario [conocido vía el sistema que analiza el calendario del usuario en c] correlaciona el tipo de los fósforos del humor del tipo usuario de w del notification= tan de día.
- Eg: el día próximo del usuario está sobre todo sobre la motivación de su personal de ventas, por lo tanto el humor creado está: el elevar, juntado con el oscilador se relacionó con la gente de motivación de las ventas [según lo encontrado en el estilo típico de la motivación de esa cultura para tales ocurrencias].

1B060 CAMA TOSSER: Las ayudas consiguen a usuario para arriba por mañana inclinándolas de la cama o del futon (cama japonesa) en el tiempo de la alarma.

Dispositivo móvil puesto debajo de cama/de futon. Formar de la "notificación".

- el primer usuario oye la alarma (en qué hora pueden apagar este dispositivo, con todo pueden quererlo como su ayuda para levantarse)

Detalles técnicos: las salidas pudieron variar cada mañana. Desactiva cuando el peso de la cama se reduce.

- puede vibrar o inclinar a persona de cama
- puede actuar solamente si la persona no está fuera de cama en 1 - 10 Min.
- Un tablón puede doblar debajo del colchón para sacudir hacia fuera a la persona que intenta despertar
- Las medidas de seguridad están verdad en el lugar. El oeste tiene directrices terminantes sobre salud y seguridad.
- OTD:

Juguete; portable; t; oscilador; vc; cuenta.

6B260 USUARIO DIDN" T DESPIERTO: si la persona no ha despertado (evidenciado por su caminar a través de la puerta del sitio (el disparar de la luz laser); el caminar sobre sitio; el etc.) el padre o el compañero de cuarto entra al sitio de la persona y los despierta.

- si está activado tan: también dice si la persona ha salido del sitio (incluso si puede ser que tengan ya casa izquierda sin ser visto).
- OTD: VAGOS; Movimiento "sensor".

la GRABACIÓN 6B280 De PROPIA VOZ del USUARIO DESPIERTA a UNO MISMO:

anuncia en propia voz, "tiempo del usuario de despertar" el etc. que habla en su "micrófono", usuario puede hablar con sí mismos en usuario de la manera puede saber los sacudirá fuera de cama. Puede también incorporar voz de la otra gente tal como su jefe, madre o padre la griterío en ellos. Formar de la "notificación".

+ <3> 4C050-MOR. PENSAMIENTOS MÁGICOS DE LA MAÑANA

Explorar las maneras agradables e interesantes de despertar. Estimular su mente creativa para despertarse de mejores maneras que las alarmas o las radios que resuenan que le traen en un nuevo día. ¡Cómo sobre la

recepción de una declaración o de una pregunta interesante que le dirijan de su estado el dormir a uno de tener un emocionante acercarse a la vida.! Enarbolar el interés del durmiente es una manera más buena de incorporar el nuevo día. La noción de "despertar en el derecho de la cama" es transformada por el lema de la invención de "despertar en el estado de ánimo adecuado".

- La programación de la información de usuario sabe sobre el usuario basado en su prueba de personalidad en línea de la diversión. Los resultados de la prueba se utilizan para diseñar declaraciones y preguntas probablemente para despertar a la persona de la manera adecuada mejor para su personalidad. El usuario tiene una mejor ocasión de comenzar llenada de la energía creativa que hace uno emocionado para despertar.

--Una ventaja simultánea es cómo la invención es una gimnasia del cerebro que mantiene la mente joven. La elasticidad del cerebro es consolidada por el pensamiento creativo inspirador. Los estudios pudieron probar el pensamiento creativo las alzas de la invención de la persona de cierta manera como una taza de café, o un desafío emocionante.

. Ideas de la extensión:

- Cómo la invención puede procesar las respuestas del usuario. Ejemplo: Una respuesta de voz baja del decibelio puede significar la somnolencia, de que es contestada por a ser pedido hablar para arriba.
- Agregar el componente de despertar a las grabaciones de voces apasionadas. Este solo efecto agregado puede sinergizar con otras ventajas de la invención.
- Las declaraciones o las preguntas seleccionadas se diseñan para consolidar las partes de la mente y del alma para los efectos señalados. Grabaciones del ejemplo: "Alimentar su cuerpo e importar con calidad", "aprender amar otros", "Maria, es hora de salir de su caja", "mencionar un plan emocionante que usted tiene para el hoy".
- Amigo interactivo: Formas imaginativas de una invención o de un "compinche interactiva" para una persona en cualquie aspecto de su vida. Qué ayuda podría una persona recibir: ¿la sensación mejor, llegado a estar más alerta, aumenta productividad, tareas completas el tiempo, el etc?
- Amaestrador del animal doméstico de la mañana: Los sonidos emitidos se diseñan para atraer su animal doméstico en cama. Los animales domésticos aprenden venir al oír este sonido, con el refuerzo de su convite o comida dada después de la notificación agradable.

--Animales domésticos de enseñanza que despiertan a menudo a gente demasiado temprano: Los animales domésticos pueden aprender eventual que despertar a gente para el alimento antes del sonido del animal doméstico, no le traerá el alimento anterior.

. Alarma interactiva de la unidad central: La computadora indica las nuevas ideas interesantes que cada mañana que se diseñan para ayudar a la persona a despertar, pedir a preguntas. El sistema puede ser un sistema de alarma casera. O, con tal que como servicio de la gente automáticamente de la marca con los mensajes previos, adaptados a los intereses del usuario. El usuario incorpora la información sobre sí mismos de las preguntas del sistema, un mejor sistema que permite del interno para hacer o para pedir declaraciones provocativas (vía la programación de la información de usuario: el sistema se adapta al comportamiento del usuario). Formar de la "notificación", "hospitalidad".

Unir dos números del producto 3A. 3A-281-042001
- relacionado con 3A-280. En lugar una unidad central llama a suscriptor para despertarlos y obra recíprocamente con ellos en diverso formato cada vez.
- hace las preguntas, declaraciones asombrosamente de los estados (puede ser basado en el tipo suscriptor y cualquier Info disponibles sobre ellas, eg.: qué indican voluntariamente o basado en la experiencia de la computadora del comportamiento de los suscriptores con sí mismo en "T".
- OTD: el remote%; exhibe tiempo, la comunicación escrita, el etc; fd-hdd; pp; P.M.; Reino Unido; fecha; el tds%; el interactive%; educ; juguete; todos; juego (el usuario juega a un juego verbal para despertar); micrófono; ejercicio - conseguir a gente moverse alrededor para despertar; portable; t; punto de ebullición; alerter; oscilador; vc; egh; el score%; tgh; md; carro (de declaraciones, de preguntas, y de otros softwares); "T"; SP tel.

<3, SORPRESA de la MAÑANA de 2> 4C100: Despertar por la mañana en la hora fijada por la alarma. Cualquier número de diversas cosas puede suceder cada mañana. Tener un cambio en alarma puede ser de mérito, puesto que la gente tiende no oír/para responder a las alarmas comunes.
. - el usuario no sabe ocurrirá qué tipo de alarma
- la estela de la muestra sube: sirenas; gritos para la ayuda (con chillón verdadero); gotas del aterrizaje del agua en la cabeza; descarga eléctrica suave; zumbador suave (eg.: en almohadilla o en el colchón debajo de las hojas); el animal relleno que entra un frenesí (sonidos, movimientos, y o saltos, jiggles, zumba); animal que se arrastra hacia el ser humano (movimientos hacia calor) y zumba a persona, separa la poca agua o la otra sustancia molesta (jalea, grasa) o pica a persona un poco....
- las grabaciones salvajes del VCR jugaron en la pantalla
- formar de la "notificación".

<3, SONIDO de la ALARMA de 2> 4C110: Consigue más ruidosamente y más ruidosamente hasta que se apague. Ambo el nivel de decibelio va encima de a tiempo, más los sonidos del golpeo, del etc que pueden necesario no tener un mayor nivel de decibelio pero suena psicologicamente más ruidosamente - todo el éste guarda el subir hasta que la alarma apagara.
- trabajos con otras funciones de sistema de alarma también.
- ver 4C120
- formar de la "notificación".

Smooch de la mañana de <2> 4C120: En el principio, la alarma es amistosa - para la buena psicología. Solamente si esto no trabaja el volumen u otros elementos comienzan a acosar si la persona no está para arriba a tiempo.
- ver la forma 4C110 de "notificación", "TGH".

¿<3, 1? > ALARMA del "COMPOSITOR 4C-200":

- el usuario debe componer una consonancia particular para desactivar la alarma
- el sonido de la alarma se puede también componer en unidad por el usuario (mejor que la audiencia apenas un zumbador estándar)
- especialmente comercial a los aficionados a los hobbys musicales

IDEAS del PRODUCTO de la COSECHADORA 4C-050-10300Q. Unir dos números del producto 3A. alarma interactiva de la unidad central 3A-281-042001: "C" indica las nuevas ideas interesantes que cada mañana que se diseñan para ayudar a la persona a despertar, pedir a preguntas. El sistema puede estar en el país, o con tal que como servicio de gente automáticamente de la llamada por "T" con la grabación previa de antemano.

- relacionado con 3A-280. En lugar una unidad central llama a suscriptor para despertarlo y obra recíprocamente con ella en diverso formato cada vez.
- hace las preguntas, declaraciones asombrosamente de los estados (puede ser basado en el tipo suscriptor y cualquier Info disponibles sobre ellas, eg.: qué indican voluntariamente o basado en la experiencia de la computadora del comportamiento de los suscriptores con sí mismo en "T".
- OTD: el remote%; exhibe tiempo, la comunicación escrita, el etc; fd-hdd; pp; P.M.; Reino Unido; fecha; el tds%; el interactive%; educ; juguete; todos; juego (el usuario juega a un juego verbal para despertar); micrófono; ejercicio - conseguir a gente moverse alrededor para despertar; portable; t; punto de ebullición; alerter; oscilador; vc; egh; el score%; tgh; md; carro (de declaraciones, de preguntas, y de otros softwares); "T"; teléfono del SP;

SORPRESA de la MAÑANA 4C-100: Despertar por la mañana en la hora fijada por la alarma. Cualquier número de diversas cosas puede suceder cada mañana.

. - el usuario no sabe ocurrirá qué tipo de alarma
- la estela de la muestra sube: sirenas; gritos para la ayuda (con chillón verdadero); gotas del aterrizaje del agua en la cabeza; descarga eléctrica suave; zumbador suave (eg.: en almohadilla o en el colchón debajo de las hojas); el animal relleno que entra un frenesí (sonidos, movimientos, y o saltos, jiggles, zumba); animal que se arrastra hacia el ser humano (movimientos hacia calor) y zumba a persona, separa la poca agua o la otra sustancia molesta (jalea, grasa) o pica a persona un poco....
- las grabaciones salvajes del VCR jugaron en la pantalla
- formar de la "notificación".

ALARMA "INTERACTIVA" de la MAÑANA de $$ 3E-060: El teléfono de la computadora ("T") indica nuevas ideas interesantes cada mañana. La interacción se diseña psicologicamente para ayudar a la persona a despertar. El usuario necesita contestar a preguntas correctamente. Gente de las llamadas de sistema vía el

teléfono en el tiempo deseado cada mañana. El usuario selecciona el tipo de avisos de la mañana de su teléfono casero del botón ("T"). 3A-281.

- Las llamadas de servicio de T U, o U llama el servicio (c).

- el UIP determina el tipo preguntas: ("MQ") preguntar a usuario. El UIP estudia acciones anteriores del usuario (el día/la semana antes) (vía análisis de su tema y o palabras claves de las acciones hechas por el usuario en su "c").

- "Educ": mecanografiar las preguntas diseñadas para educar u; la información recibida por u (en sesiones anteriores) vía el modo de la difusión de la pregunta o de información de el sistema = esperanzadamente recordado por u, así que u puede entonces contestar a la pregunta relacionada más adelante (Forzar u a recordar es también una forma de despertar cerebral.

- Clientes de la facturación para este servicio vía: cuenta del teléfono; 900 números/M=T: (u llama el número 900 = selecciona tiempo que quieren ser despertados = u consiguen llamada más adelante en ésa tiempo untado); venta u (P.C.) el interruptor/el carro (cartucho del `)/el sistema del hardware.

- D: u = T (teléfono del `) = m (tds=when para llamar u; pide u q (uip, "cuenta" para determinar respuesta correcta).

- Estrategia de búsqueda de la patente: (mañana o despierto o interactivo) y alarma.

- No. de la patente de los E.E.U.U.: 4573804+ Olor-despiertan el despertador 4497582 4617525 4180810 3903514 4047377 4059830 4070697

. - U también despierto con el otro sistema (sistema) que sinergiza w (con) este KN:

--Dir N (invención) de A o de B que salpica gotas del agua en u para ayudarles para despertar.

. --otros existentes esa gente de la ayuda de N/kn (novedades) despiertan, eg.: KN para disparar la luz laser como una sale de cama [no trabajar mucho en este 3ultimo KN].

- OTD D: U = este ~ C (computadora del sistema de N (sistema) del `) =

ACCESO (activar características); VAGOS (basados en el funcionamiento/las respuestas del u); CARRO; EDUC; M; MIC (discurso); MULTIUSOS; NR; OSCILADOR; Banda; Q; CUENTA (respuestas del u a las preguntas planteadas por el sistema); ESTADO; TDS (reloj para la alarma); T; UIP; UQ; CUENTA.

- el sistema aumenta la creatividad del u, considera el documento sobre proceso creativo del pensamiento. Funciones planteando las preguntas cuyas características (UIP) se diseñan despertar u (según su uip).

- Ver: despertador del código de la mañana 3A28A; alarma interactiva de la unidad central 4C050

- formar de la "notificación".

El DESPERTADOR R181 MUERDE LA MANO de la cual botón de empujes para darle vuelta. [no necesito N que requiera solamente la combinación apagar, comprobar quizá para saber si hay reloj que "electrocutes" a usuario del etc?] 29 de noviembre 93 NK

- formar de la "notificación".

LOS SIGUIENTES son alarma de la mañana y despiertan elementos de la idea del producto de sistema de IMI&8:

Diagrama: sensor/uk = despertador = oscilador

- OTD #1: D¯(esta parte) =

% de 3A-140 de la alarma del bebé

% de la alarma de 1B-080-200000001 Dangly: Despertar en la hora untada a los sonidos de una criatura haciendo estallar hacia fuera sobre su cama.

% de 1B-110-100000001 de la combinación de la alarma de la mañana: En el reloj untado de la hora la exhibición demuestra las combinaciones necesarias para ser afinado adentro para desactivar el reloj. Las ayudas de proceso hacen la alarma principal soñolienta.

% de 1B-111-200000001 de la alarma interactiva de la pregunta; alarma interactiva de la unidad central 3A-281; despertador del código de la mañana 3A-28A

canalización vertical 3A-282.

"Notificador": todos los elementos diferentes para notificar a una persona dentro del contexto de alertar a persona sobre una alarma.

% de 5A-310 del reloj del mundo

% de A1-240 Windows interactivo y cortinas

interruptor de 5A-460 Touchless para activar o para desactivar características de la alarma o del reloj

% de 4C-200 de la alarma del compositor

% de 4C-210 de la alarma del artista:

- OTD #2: exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; tds; el interactive%; juguete; básico; entretener; los microphone% y los synth% a crear deseado despiertan los sonidos que substituyen el zumbador o la campana estándar; punto de ebullición; oscilador; el speech%; vc; el cart%; cp; uq; el pi%; carácter; cojín del aire (el usuario entra la actividad requerida el suyo, y el cojín del aire transmite al juez de la alarma que decide si la actividad correcta fue entrada para desactivar la alarma; puede también ser utilizado para cambiar tiempo, tiempo de la alarma, y otras características; el mismo cojín del aire se puede utilizar para otras tareas con excepción para del despertador).

- "Facturación"

MISCELÁNEO:

. "Analizador del comportamiento": la función del despertar [alarma] uip-se adapta para despertar al usuario según el perfil del comportamiento del usuario.

+ motivador del trabajo:

"Motivador del trabajo" de la alarma" de la mañana ". Fuerza a usuario a comenzar su trabajo el tiempo por mañana:

El usuario debe ser el utilizar su (normal (el trabajo)) el software en un normal/una falta "señalada" del manner= de hacer esto (durante el minuto 30) acciona la alarma. "Sigue" las acciones de usuario en computer= que "se analizan" para la conveniencia.

- Otros valores: Una forma de empleados de motivación a trabajar más difícilmente por la mañana, o las que trabajan en el país para conseguir los resultados rápidamente wo que esperan alrededor. La carencia de la motivación es telecommuters comunes de la razón necesita la presión de un jefe en el trabajo, a pesar de todas las inconveniencias y pérdida a la libertad. Por lo tanto, una demanda grande de los que son serios sobre el trabajo de hogar.

- "Trampas": los reattempts del usuario para utilizar el interruptor (software del `) pueden stave correctamente temporalmente apagado el alarm= hasta tal hora que la "cuenta" no empeore.

. Ejemplos: El usuario debe: activar (y "interactivo" con) cualquier programa "señalado" o la función del interruptor (sobre cierta duración del tiempo (interrupción del wo)). Eg.:

- tener acceso a su caja del email en las horas "señaladas".

- el acceso "señaló" partes de World Wide Web, eg.: las vistas, utilizan ciertos motores de la búsqueda y o las palabras claves, los informes de noticias diarios leídos e información (recogidos automáticamente por Search Engine anterior).

- hacer calls= "señalado" del teléfono vía el sistema "seguido" del "teléfono".

- someter/"corregir " = los informes/los resultados "señalados" (al supervisor).

. D posterior leída: U = este ~ del sistema de N (motivador/"perseguidor" del trabajo del usuario) C = TENER ACCESO AL ANALIZADOR // EDIT // EDUC // de // del ARTISTA de // que la CUENTA MULTIUSOS // de // del RANURADOR de la banda de // del OSCILADOR de // NR // (programa) // R // BUSCA y que REACCIONA LA PISTA de // TDS // T (teléfono) del `// del SENSOR de // (cómo el usuario "maniobra" a través de sistema) // UIP (qué se requiere de usuario; el tipo de trabajo que lo hacen "se analiza" para uip-DB).

Una reacción similar se puede requerir del usuario en otras circunstancias. Los ejemplos incluyen cuando el analizador determina a usuario puede ser: perezoso [inactivo mientras que en la computadora debido a la carencia de mecanografiar]; punto bajo en [nuevas] ideas que se convierten; el sistema pregunta la autenticidad del usuario [ver la pieza del acceso].

ACARICIAR a la estrategia de búsqueda de la palabra clave:

- alarma y (mañana o (ajuste del wak para arriba))
- alarma y (combinación o contraseña)
- alarma y (psycholog o diversión o juguete o gam o cabrito o niños)

RELOJ del SONIDO 3A290: substituye el reloj del coo del coo haciendo los sonidos interesantes cada hora en la hora. Tipo de "notificador".

- Opciones sanas: pájaros que cantan; risa [por el adulto bastante normal, bebé risueno; monedas que caen en el banco guarro]; "dong del ding"; el sonar verdadero o artificial del pájaro del coo del coo; trueno y lluvia; [perro del grito; sirenas]; el silbar; porción de pedazo musical clásico; etc. Cada hora tiene quizá diverso tipo sonido.
- puede ser programado para hacer los sonidos salientes registrados por el usuario; o el usuario selecciona de selecciones preprogramadas.
- puede comprar los discos para los pedazos adicionales de los sonidos
- puede pedir un tiempo exacto (siempre que el usuario quiere) cerca: ("R") control alejado; presionar el botón en el reloj; las manos que aplauden o el otro sonido; disparar una luz laser; etc.

ROBUSTEZA INTERACTIVA de la ALARMA 3A1080: La robusteza del juguete encuentra y despierta el durmiente. El transmisor atrae la robusteza del "descortezamiento". Gran idea del regalo para los últimos compañeros de trabajo de levantamiento.

- El usuario usa y o duerme con el transmisor de la tenencia de la correa. Jugar las alarmas de la robusteza o despierta a persona - que encuentra que el usuario y "ladra" o que suena. Bueno para la operación del solo sitio (en futuro, la robusteza puede entrar a otros cuartos también. Substituye su animal doméstico, como un gato que despierta a dueño para arriba por la mañana para su desayuno.
- Alarma del oso del peluche: duerme en cama con usted, y hace ruido reservado en el principio, después hace una raqueta de ruido y quizá de movimientos hasta apagado. Tiene opción del snooze.
- OTD: alejado ("R"); pp; P.M.; Reino Unido; fecha; el interactive%; juguete; básico; portable; punto de ebullición; el alerter%; vc; carro (tipo generaciones de los sonidos, cómo actuará la robusteza); cp; acceso; el pi%; palmada.

PATENTES: búsqueda demanda abstracta y principal 1.74-2.97 www.qpat de los E.E.U.U. del kilovatio: str -2.97: ((estela with5 para arriba) o mañana) y alarma

- La palmadita de los E.E.U.U. encontró 2.97: solamente uno y ella aparece una copia de la grabación 6B280 de propio uno mismo de las estelas de la voz del usuario para arriba: Despertador de la patente 5369797-Radio de los E.E.U.U. con el magnetófono/el registrador desprendibles.

Archivo: Introducción de la característica/multiusos

MULTIUSOS

Cada usuario puede ser reconocido diferentemente, y tiene funciones adaptadas a ellas. Esto traslapa las piezas del UIP.

- `Usos interactivos/del juego: tratan diferentemente, y pueden obrar recíprocamente por consiguiente a los usuarios con las invenciones, [en juegos].

- El sistema se diseña especialmente para los usuarios múltiples. Cada usuario puede tener diversas funciones del ^software que se puedan activar para el ^them. el ^ ' principal programador 'necesita ^password especiales al ^program principal y o a las funciones centrales. Cada usuario tiene ^password el identificarse y el accionar de funciones aplicables. Principal programador ^can: limitar el grado del acceso en sistema; y o trabar hacia fuera la gente/otro parcialmente/enteramente de los sistemas; y o monitor y analizar su actividad, y o los resultados. - Patentes de los E.E.U.U.: str: adj9 múltiple (gente o usuario)

- "Acceso": cada accessor tiene procedimientos de acceso de diferenciación [que ayudan distinguir entre los usuarios], y los protocolos de la seguridad, y los "VAGOS de los accesos (analizador del comportamiento)". Dibujo: "acceso" (cada usuario tiene diferente part/pi = "C" (reconoce a usuario (vía su "acceso")) = los permisos que las funciones dentro de cualquier parámetro/alteran a usuario se adaptan = función

- Para Techies: acceso; cojín de %air; carro; carácter; las demostraciones de la exhibición ("S") que el usuario está utilizando el sistema, y pueden demostrar el ^menus diseñado para el usuario particular; "C"; M; P.M.; cada usuario recibe señales personalizadas del notificador que las señala de otras; adaptarse: (cada usuario causa tipos de diferenciación de recuperación, almacenaje, tabulación, análisis de adapta datos; y adaptar los datos se utilizan según pp/mp para cada usuario particular); pp; anotar y o tds (característica de la estampilla de fecha del tiempo) para cada usuario.

- Ver el "cerebro": la característica del system se adapta según circunstancias.

- (Automáticamente) distingue entre diversos usuarios vía: el "acceso" (la contraseña del r=tr, llave - llaves de diferenciación dentro del mismo sistema de la amo-cerradura, carro (cartucho) del software del `de u, tr (transmite) (frecuencia de pulsación) con (con) el usuario), se adapta - el sistema "analiza" quién el usuario es

por su funcionamiento/características del comportamiento, carro (cartucho) del software del `(del usuario), tr (transmite) con (con) el usuario.

. Otro: "Corregir": se adapta a cada usuario. "Ranurador": localiza (vía adaptar-adaptar) el then= recupera el data= necesario de eg.: adaptar-DB (base de datos) para mejorar el sistema del sastre (adaptar-adaptar) a las necesidades del u. Facturación.

- Un código (acceso, "marca de agua electrónica ") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen". Eg.: cada usuario tiene llave de diferenciación (interruptor) para utilizar ciertas características.

DIAGRAMA: "acceso" (cada usuario tiene diferente part/pi = "C" (reconoce a usuario (vía su "acceso")) = las funciones de los permisos dentro de cualquier parámetro/alteran a usuario uip = función

OTD: acceso; cojín de %air; carro; carácter; la exhibición ("S") demuestra qué usuario está utilizando el sistema, y puede demostrar el ^menus diseñado para el usuario particular; "C"; M; P.M.; cada usuario recibe señales personalizadas del notificador que las señala de otras; uip: (cada usuario causa tipos de diferenciación de recuperación, almacenaje, tabulación, análisis de los datos del uip; y los datos del uip se utilizan según pp/mp para cada usuario particular); pp; anotar y o tds (matriz de la fecha del tiempo del `) para cada usuario.

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- (Automáticamente) distingue entre diverso u vía: "acceso" (la contraseña del r=tr, llave - llaves de diferenciación dentro del mismo sistema de la amo-cerradura, carro (cartucho del `) de u, tr (transmite) (fq de pulsación) w (con) u), uip - el sistema (sistema) "analiza" quién u es por su funcionamiento/características del comportamiento, carro (de u), tr w U.
- "Corregir": se adapta a cada U.
. - "Ranurador": localiza (vía uip-adaptar) el then= recupera el data= necesario de eg.: uip-DB para mejorar el sistema del sastre (sistema) (uip-adaptar) a las necesidades del u.
- Un código (acceso, marca de agua del EL (electrónico) "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen". Eg.: cada u tiene llave de diferenciación (interruptor) para utilizar ciertas características.
- "Facturación"
- Adoptar la identidad de a [juego del `] cuando es necesario: Cada entidad puede tener etiquetas de uno o más identidades multiusos las' que pueden/no se pueden reconocer cerca y o los controles de acceso de puente.

FINAL DE MULTIUSOS

Archivo: Introducción/notificador de la característica

NOTIFICADOR

Las búsquedas del sistema y o interpretan los acontecimientos que se deben notificar al usuario.

notificador 2D190-NOTIFIER adaptado a las necesidades de comunicación del usuario:
Notifican a los usuarios sobre acontecimientos importantes de una forma los retenes de ese mejor su atención. Las notificaciones apuntan lo que sea de los sentidos principales del usuario: sonar, avistar, sentir [comunicar vía la vibración], el olor, %taste.

- Las luces aparecen en los lugares señalados [en tablero de la rociada de la pantalla de ordenador/del coche] qué mejor atención del retén.

- Notificador del soplo del cuerno (del coche): Cuando el cuerno de coche [de otra persona] está soplado, programan buscar tales frecuencias sanas, y hacen a los locutores/auricular del coche un notificador ruidoso adicional al usuario.

. Notifican al usuario en el estado de cualquier situación. La otra gente apuntada y o esos próximos puede ser alertada también por las partes de los sonidos, luces; palabras exhibidas; aviso audio del discurso.

- el beeper sin hilos portable se puede llevar/usar cerca: usuario/persona apuntada. D: función/sistema = c = n = tr sin hilos (transmite) = N. portable.

- D: c=tr/rc= " exhibición " /osc/ [tr al otro producto (dispositivo de alarma)]color (que destella/cambiante) de /light.

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- oscilador: El volumen de sonidos ajusta según el nivel (pre) de nivel de sonido existente en el ambiente de la calle/de otros sonidos electrónicamente generados (el sistema de la advertencia de la voz de la palmadita no 3298010 de los E.E.U.U. (nr) cuyo volumen de la salida ajusta según sonido externo existente). (El "analizador de sonidos" determina: el nivel/el tipo volumen/sonido necesitó; cancelación del sonido (cualesquiera) necesaria.). Palmadita verdadera de los E.E.U.U. # muy limitado.

- Subpartes: NR-problema; NR-estado.

- No. de la patente de los E.E.U.U.: 4823245 colores de adición a las luces eléctricas: cambiar en ligero actúa como tipo de NR: el tipo luz del color señala: "estado", "cuenta", eg.: el nivel de peligro o de atención necesitó.

- Patente no 4875432 de los E.E.U.U.: el color en tablero de la "cuenta" cambia cuando la cuenta se ata en (voleibol) "juego". (El nivel "de"/"de la cuenta estado" efectúa el tipo de cambio del color encontrado en S/el nr (notificador) de cualquier producto/sistema; eg.: 7G)

- "Facturación": para el tipo nr (notificador) deseado y cómo se notifica u.

Alarma video -1C-170:

Una representación visual y o de respuesta audible entra efecto cuando el anillo siguiente: la puerta, teléfono, alarma del reloj, contador de tiempo del alimento, partido va encima de la calzada de la vivienda.

+ qué necesita la atención y porqué (W5) demostrado por cómo "se corrigen" las imágenes. Ver el "artista" = el "estado". Ejemplo: el icono para recibir el email llega a ser rojo mientras que recibe el correo, y el verde cuando está listo para ser leído. El valor consiste en crear alboroto menos textual en el S.

- "Cuenta": El grado de urgency= según lo medido por el score= da lugar a diverso tipo de señal generado de notificador.

+ PREDICE cómo u (usuario) se debe "notificar mejor": Diversas circunstancias pueden pedir formas de diferenciación de notificación.

- patentabilidad: ¿otros están utilizando tal sistema en una versión simple, aunque no patentados?
- Ejemplos: Cuando es el usuario: en área ruidosa (el oscilador es más ruidoso); en el camino (el oscilador se acciona contra la pantalla que representa el mensaje de los nr); repartiendo w otro proceso de la emergencia o de la "notificación" en ese entonces (la ocurrencia más bajo anotada notifica u 2 horas más adelante); las situaciones con más arriba las "cuentas " = tienen formas "señaladas" de diferenciación de "notificación"; tiempo/tds: cuando ocurre el problema puede tener "cuenta la diferenciación"; (Qué, donde, cuando, porqué y cómo) el occurred= W5 y cómo "predicen" al usuario "reacciona" a él (según W5 de la ocurrencia/o de la situación del usuario en ese entonces).
- "se anota" cada ocurrencia. Notificaciones anotadas más altas se dan más peso. Vía: ""/oscilador (comunicador de las imágenes del `saliente sano) ese se destaca más (que otros mensajes (del nr); siendo demostrado/colocó antes de otras "notificaciones"/de mensajes cuáles tienen cuentas más bajas. (Los mensajes se pueden anotar para la importancia/la pertinencia).
- u de las "pistas": paradero/las acciones (W5) = entonces "corrigen" sí mismo según lo "señalado".
- ocurrencias anotadas más altas que "no son reaccionadas" por al u= tienen la señal de notificación "encaminada" a otra: u/sistema.

Otro:

- El beeper sin hilos portable se puede llevar/usar cerca: usuarios/persona apuntada. Dibujo: =c de la función/del sistema (computadora) = N (invención) = sin hilos tr = N. portable.
Dibujo: c=tr/rc= " exhibición " /osc/ [tr al otro producto (dispositivo de alarma)]color (que destella/cambiante) de /light.
- Ver el "cerebro": la característica del system se adapta según circunstancias.
- oscilador: El volumen de sonidos ajusta según el nivel (pre) de nivel de sonido existente en el ambiente de la calle/de otros sonidos electrónicamente generados (el sistema de la advertencia de la voz de la palmadita no 3298010 de los E.E.U.U. (notificador) cuyo volumen de la salida ajusta según sonido externo existente). (El "analizador de sonidos" determina: el nivel/el tipo volumen/sonido necesitó; cancelación del sonido (cualesquiera) necesaria.). Palmadita verdadera de los E.E.U.U. # muy limitado.
- Subpartes: notificador-problema; notificador-estado.

- No. de la patente de los E.E.U.U.: 4823245 colores de adición a las luces eléctricas: cambiar en ligero actúa como tipo de notificador: el tipo luz del color señala: "estado", "cuenta", eg.: el nivel de peligro o de atención necesitó.

- Patente no 4875432 de los E.E.U.U.: el color en tablero de la "cuenta" cambia cuando la cuenta se ata en (voleibol) "juego". (Nivel de "cuenta"/"estado" efectúa tipo de color cambio encontrado en s ()/notificador de la pantalla de ordenador de cualquie producto/sistema; eg.: 7G).

- "Facturación": para el tipo notificador deseado y cómo notifican al usuario.

Alarma video -1C-170: Una representación visual y o de respuesta audible entra efecto cuando el anillo siguiente: la puerta, teléfono, alarma del reloj, contador de tiempo del alimento, partido va encima de la calzada de la vivienda.

+ qué necesita la atención y porqué (W5 (qué, donde, porqué, cuando y cómo)) demostrado por cómo "se corrigen" las imágenes. Ver el "artista" = el "estado". Ejemplo: el icono para recibir el email llega a ser rojo mientras que recibe el correo, y el verde cuando está listo para ser leído. El valor consiste en crear alboroto menos textual en el S.

- "Cuenta": El grado de urgency= según lo medido por el score= da lugar a diverso tipo de señal generado de notificador.

+ "predice" cómo los usuarios deben "ser notificados mejor": Diversas circunstancias pueden pedir formas de diferenciación de notificación.

- Patentabilidad: ¿otros están utilizando tal sistema en una versión simple, aunque no patentados?

- Ejemplos: Cuando es el usuario: en área ruidosa (el oscilador es más ruidoso); en el camino (el oscilador se acciona contra la pantalla que representa el mensaje del notificador); el ocuparse (con) de otro proceso de la emergencia o de la "notificación" en ese entonces (la ocurrencia más bajo anotada notifica a usuario 2 horas más adelante); las situaciones con más arriba las "cuentas " = tienen formas "señaladas" de diferenciación de "notificación"; tiempo/tds: cuando ocurre el problema puede tener "cuenta la diferenciación"; (Qué, donde, porqué, cuando y cómo) el occurred= W5 y cómo "predicen" al usuario "reacciona" a él (según W5 (qué, donde, cuando, porqué y cómo) (qué, donde, porqué, cuando y cómo) de la ocurrencia/o de la situación del usuario en ese entonces).

- "Se anota" cada ocurrencia. Notificaciones anotadas más altas se dan más peso. Vía: ""/oscilador (saliente sano comunicador) de las imágenes ese se destaca más (que otros mensajes (del notificador); siendo demostrado/colocó antes de otras "notificaciones"/de mensajes cuáles tienen cuentas más bajas. (Los mensajes se pueden anotar para la importancia/la pertinencia).

- U de las "pistas": paradero/acciones (W5 (qué, donde, porqué, cuando y cómo))= entonces "corrige" sí mismo según lo "señalado".

- Ocurrencias anotadas más altas que "no son reaccionadas" por al u= tienen la señal de notificación "encaminada" a otra: usuario/sistema.

- No. de la patente de los E.E.U.U.: 4823245 colores de adición a las luces eléctricas: cambiar en ligero actúa como tipo de notificador: el tipo luz del color señala: "estado", "cuenta", eg.: el nivel de peligro o de atención necesitó.

el BEEPER 3A200 DEMUESTRA ESTADO: Ahora saber la naturaleza de la materia que le están emitiendo un sonido breve y agudo alrededor.

Si se acciona la alarma o cualquier otra emergencia sube el beeper de la persona se enciende automáticamente. Código/tipo del beeper (eg.: mecanografiar la señal o la luz o la naturaleza de las demostraciones de la exhibición de la palabra ("S") ['estado] del problema, por ejemplo: tres emite un sonido breve y agudo medios que su abuela está pidiendo ayuda)

- Uso: para dificilmente de la gente de la audiencia (sorda), los padres magníficos, saben que es mealtime cuando la persona está en el jardín, o arriba.

. - verificador del contenido 4E020 y de la fecha: (cualquie mencionado) de ocurrencias.

3A600 OÍDO ALERTER: Notifica a persona cuando y porqué se quieren. El sistema reservado guarda la paz para otras. También, los usuarios de audífonos y los auriculares saben que les están llamando; oye "T" y el timbre, alarmas.

- Receptor del auricular del mando a distancia: Alerta a portador de auriculares o de la prótesis de oído que están queridas. Usos: "T" o timbre, más fácil llamar alguien en otra localización, la alarma del reloj, el etc.
- dejar a persona con los auriculares/la prótesis de oído saberlos son queridos presionando su ("R") dispositivo de control alejado que funcione encendido radiofrecuencias.
- quizás usted no sabe donde están en casa, frente, lado o patio trasero. La griterío para ellos es ofensiva, agotadora y quizás ineficaz (puesto que los ancianos oyen generalmente mal con o sin un legado de la audiencia), dificil (especialmente para el marido y la esposa que son ambo viejos, y la persona que es llamada debe gritar de nuevo a aseguran a investigador que pueden parar el mirar alrededor...)
- ahorra de tener que salir de asiento (incluso si la otra persona está en el mismo sitio)
- incorpora No. 3A-620
- OTD: alejado ("R"); exhibición ("S") (qué le están pidiendo); "C", pp; P.M.; Reino Unido; fecha; básico; "mic" (magnifica sonidos exteriores); portable; punto de ebullición; alerter; cp; palmada.

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias

NOTIFICADOR LIGERO SILENCIOSO 3A820: La luz que destella alerta a usuario antes de que el modo sano active. No disturba otros. Usos: "T", timbre, alarma del reloj, detectores de humos sensibles a la cocina de menor importancia o humo de tabaco.

- las señales de alarma para la atención por la luz que destella (esta porción existe), si no desactivado mientras que en modo que destella ligero, el modo sano golpean con el pie adentro

- el modo ligero inicial se diseña para la gente que prefiere la tranquilidad para (teléfono, campana de puerta, alarma (una advertencia momentos antes que el nivel requerido de humo se alcanza (según las disposiciones gubernamentales) en las cuales tiempo la porción audio debe encenderse) - esto es buena para la gente que quema a menudo cosas, fuma muchos cigarrillos en un partido, un etc y quisiera una cierta hora del aviso de una manera apacible.

- encenderse en sitio o algu□n otro bulbo puede destellar

NOTIFICADOR ALEJADO 4A300: Alarmas portables del paginador del usuario cuando ha ocurrido la ocurrencia deseada. Usos: El marido está conduciendo a casa sin perder una llamada del teléfono, diciendo a esposa cuándo tener comida lista. Notifica cuando cualquier máquina ha logrado tarea. Etc.
Patente copiada posterior de los E.E.U.U.: 5444444 Nr de vehículos de entrega de llegada

SOBRE LA TERMINACIÓN DE CUALQUIER PROCESS/TASK, el dispositivo envía el mensaje que indica el hecho vía: las señales sonoras/los códigos al paginador mecanografían el dispositivo; módem al teléfono/al contestador automático que salen de señal sonora/del mensaje verbal.

Usos:

- cocinar el contador de tiempo se está apagando y notificará a usuario dondequiera que puede ser que sean
- el esposo es expulsión de su ranura del estacionamiento de la compañía para el hogar
- el tiempo ha conseguido mejor/peor
- el guarda están llamando los cabritos: ir a casa; ir en alguna parte....
- despertar el servicio
- pares con el beeper/el paginador/el teléfono móvil/el reloj grande para el bolsillo, monedero, muñeca/Walkietalkie/...
- OTD: "R"; "S"; "C"; pp; P.M. Reino Unido; el mouse%; fecha; tds; el interactive%; todos; el toy%; el game%; "mic"; synth; portable; sst; el printer%; el mfh%; punto de ebullición; alerter; oscilador; vc; el score%; el cart%; cp; acceso; el pi%.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

OÍDO de la COCINA 5A380: el audio magnifica (o realza/altera) el sonido de los sonidos de cocinar así que el cocinero sabe está progresando el alimento.

- Esto puede ser un arte, especialmente para ciertos alimentos. El cocinero sabe si es tiempo: calor reducir/del aumento, revuelven adentro el agua/el líquido/la mantequilla/después el ingrediente, el etc. dependiendo de: cómo las burbujas líquidas gruesas están sonando, el alimento es el crackling, friendo sonidos, el etc.

- alarmar los disparadores con incluso la indirecta más leve del humo (retén él a principios de). Esto es un producto separado también.

Marcas registradas posibles: Oyente de la cocina, cocina audio, ayudante de la cocina, nariz de la cocina/olor + "analizador de sonidos" (nr para cualquie tipo de sonido) = verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip).

MISCELÁNEO:

. producto relacionado 2D-180:

- Enviar la señal al portador significando: su tiempo de la comida; teléfono "T"; alguien está abajo para usted...

. Las búsquedas del sistema y o interpretan los acontecimientos que se deben notificar al usuario. Agrupaciones de la palabra clave:

- notificar: alarma de la alarma del notificador [atención del retén]
- analizar: determinar las búsquedas

. Notifican al usuario (alertado) en cuanto a el "estado" de cualquier situación. La otra gente apuntada y o esos próximos puede ser alertada también por códigos de los sonidos, luces; palabras exhibidas; aviso audio del discurso; impreso. Todas las notificaciones se pueden también mantener memoria con la época de la ocurrencia que es hora y fecha estampadas. Notifica (W5 - qué/cómo/porqué/donde/cuando) la acción: (ha sido (por usuario/sistema) /may necesario completed/is ocurre - advirtiendo.

D: tr/sensor = computadora = oscilador/exhibición

. Piezas del notificador: estado: busca ciertos acontecimientos; formas especiales de hacer la notificación; notifica cuando se intenta el acceso incorrecto.

PATENTES: búsqueda demanda abstracta y principal 1.74-2.97 www.qpat de los E.E.U.U. del kilovatio:

. Piezas del notificador:

- estado: busca ciertos acontecimientos
- formas especiales de hacer la notificación

OTD #1: Detalle: Los códigos usados para significar un significado (tal como un código Morse), o el aviso exhibido o audio se pueden cambiar por el usuario. Los códigos pueden ser una combinación de sonidos, de luces, de avisos audios, de etc - cuanto mayor es la mezcla posible de elementos, mayor es el número posible de fácil recordar y entender códigos.

- El usuario en cualquier lengua de las peticiones de las idiomas programadas exhibidas, y puso en palabras avisos audios. Debajo están los ejemplos para la pieza del "notificador" enumerada en el papel principal de las" piezas ".

OTD #2: D: Esta parte =

Notifica cuando: tener acceso permitido o negado (alarmas/alerter); alerter; todos; carro; carácter; %clap al notificador (con./desc.) del control; exhibición; entertain/md (manera de la cual se hacen las notificaciones); fd-hdd (memoriza funciones del notificador); elemento del juego; interactivo; M (M decide a cuando/cómo/donde/porqué una notificación puede/será hecho); MES; %morning; receptor acústico del movimiento; %mouse (notifica la acción W5 se ha terminado); mp/pp (tipo del sastre de la notificación); mq (notifica cuando hay un mq); (estado de) multiusos; oscilador; UIP (el pi adapta el tipo de sistema % de la notificación (w o ayuda del wo de M); impresora (imprime la notificación); alejado (controles cómo funciona el notificador); (el notificador demuestra estado de) analizador de la comunicación del analizador/score/%speech/%sp tel/%synth/%tds/%tel de %sound (W5)/%tgh/%tr/%uk (W5)/%vc/visual; utilizado en un %toy/%vr; (presencia de) uq; "mandando la cuenta".

MODOS DE NOTIFICACIÓN:

- Interruptor intermitente: cada combinación de flashes tiene diverso código significando el significado correspondiente, eg.: Código Morse.

- Notificador audio: El sistema dice a usuario el estado de la situación dando señales sonoras cifradas, y o poniendo en palabras la explicación del estado. El usuario oye del altavoz del sistema, o del paginador. beeper único 3A-200-042006: Ahora saber la naturaleza de la materia que le están emitiendo un sonido breve y agudo alrededor.

- OSCILADOR: el usuario puede programar el tipo de sonidos salientes o de comandos verbales

. - Notificador de la sombra: Las sombras de la luz señalan estado: puede demostrar las formas, puntos, líneas, números, letras, palabras, flechas...

- Encender el notificador del cambio: Los códigos siguientes también significan la información: cambios en colores de la luz (eg.: laser, bulbos estándar, neón, pequeñas luces en el dispositivo, etc)

- Tipo notificador de los sonidos: Tipos de sonidos, eg.: diverso agudo o bajo o volumen; tipo animal (pájaro, perro, maullido del gato, bebé...). Esto necesita normalmente trabajar con otros modos del notificador.

. - Paginador de la joyería: el paginador tiene gusto del dispositivo que puede estar en la forma de joyería notifica a persona. El mismo dispositivo puede ser un dispositivo teledirigido también:

. - Notificador ligero silencioso: La luz que destella alerta a usuario antes de que el modo sano active. No disturba otros. Usos: teléfono, timbre, alarma del reloj, detectores de humos sensibles a la cocina de menor importancia o humo de tabaco.

- Anuncia la información en cualquier lengua. Programas del usuario que lengua. El tiempo se da en militares (eg.: 23:00) o am/pm (11:) tiempo 00pm. 3A-820-042005

. Estado: Alertar a usuario si el sistema no se está utilizando correctamente, o podría llevar a la situación peligrosa, o si el peligro pudo ser actual.

Extremo de la sección principal del NOTIFICADOR

Archivo: Introducción de la característica/nr (notificador) CatchAttention

NOTIFICADOR: EL NOTIFICADOR DE LAS MANERAS PUEDE CONSEGUIR LA ATENCIÓN

3A590 MEJORAN AUDIO: permite que el usuario oiga la alarma cuando walkman que usa:
dispositivo de alarma de la fijación al sistema del auricular o del walkman (las alarmas externamente funcionadas del normal son menos eficaces cuando los auriculares que usan)
- el auricular cualquier recibe códigos del transmisor de la alarma externa; o amplifica todas las o alarma o los sonidos ruidosos o los sonidos ciertas frecuencias
- durante la función especial del sonido/de la alarma la otra programación del funcionamiento se pudo apagar previamente o rechazar más bajo automáticamente.

WALKMAN de ++ 2D-170/NOTIFICADOR de la EMERGENCIA del TELÉFONO MÓVIL:
Cuando el cuerno sopla, el cuerno envía ciertos códigos que sean leídos por el walkman. El interno del walkman alerta inmediatamente a usuario en el acontecimiento el cuerno o el otro sonido importante necesita el transporte. Alerta al usuario siempre que sean enganchados o que obran recíprocamente con algo, o a alguien vía un dispositivo de las telecomunicaciones; y cuando hay una posibilidad del oscilador.
- tr a WA (caminata del `alrededor) vía: sonido, rf, infrarrojo, el wire%
- D: walkman/WA (caminata del `alrededor) = mic (analizador de sonidos) = sonido = oscilador (comunicador sano saliente del `) = analizador (determina el código apropiado para el tipo "notificación" necesitó) < - c = tipo problema/situación/emergencia
- KN: ¿ver 2D-180 y 4E070 y KN (invención) en directorio temprano de G?
- Estrategia de búsqueda de la patente: heaphone+ y (el emergenc o el notif o la alarma o advierten)
- No. de la palmadita de los E.E.U.U.: ¿5205291 5197098 +? 4827458
- utiliza después de KN: 2D-180, 2D-190.
- OTD D: U = este ~ C (computadora del sistema de N (invención) (auriculares) del `) =

TENER ACCESO (nr limitado al acceso de u w (con)); ANALIZADOR (que los sonidos necesitan para dar lugar a nr); AP (tipos de NR: campana del teléfono o de puerta o alarma u otros anillos del elemento; alarmas: fuego, peligros relacionados de la fábrica, escapes químicos); CARRO; M; MIC; MES; RATÓN; MULTIUSOS; NR; oscilador (comunicador sano saliente del `); Banda; Picosegundo (funciones (mejores) en localizaciones señaladas); Q (u pide la naturaleza del sistema (sistema) del nr); R; RANURADOR (el sistema encamina señales del nr a los auriculares del u); CUENTA (que las ocurrencias son más importantes/peligroso que otras = U oyen/ven la cuenta de /gets, o ninguÌ□n nr (notificador) si la cuenta es demasiado baja); SENSOR (peligro, eg.: fuego, detectores de movimiento); ANALIZADOR de SONIDOS (2e251); ESTADO (u notificó cuando la ocurrencia/el peligro es no más una edición grande (entonces u puede volver de nuevo a actividad/a trabajo anteriores en la compañía); U (oídos de u); UIP; UQ; ANALIZADOR VISUAL; VR; WA.

2B120 ALERTER:

Notifica a más vieja gente de emergencias vía señales sonoras. Parte del sistema de la prótesis de oído, o usado alrededor de cuello.

- muy similar a: 3A-590, 3A-600

En tiempos de emergencia, la prótesis de oído oye y envía la alarma ruidosamente bastante para conseguir la atención del usuario. Absolutamente objeto de valor. Puede ahorrar una vida. Apaga cuando es desactivado por el usuario que oye la alarma, o después de 10 segundos. La alarma se encenderá otra vez por diez segundos hasta tres veces a menos que el usuario (quién es esperanzadamente consciente) la apague.

Tipo emergencias: su esposo mayor presiona su botón porque están teniendo una emergencia, teléfono está sonando en otro sitio o interior la casa, campana de puerta, humo en la cocina para tener comida del forgotton en la sartén, etc.

Técnico: el dispositivo se puede también usar alrededor del cuello, muñeca, insertada como parte de mecanismo del reloj... El dispositivo responde solamente a: ciertas frecuencias de la onda; o ciertas transmisiones de radio que actúan como receptor de radio

- existe: el usuario presiona el botón en la joyería y la radio del dispositivo transmite al dispositivo que entonces marca hacia fuera en el teléfono para limpiar

. Notas al pie de la página: pp; P.M.; todos; interactivo; micrófono; portable; au; alerter del punto de ebullición; oscilador; vc; cp.

la IMAGEN 3C410 EXPLICA el SIGNIFICADO De la ALARMA:

Programas del usuario qué las "imágenes" o la información se desea para cada ajuste de alarma, o tipo de "notificación". <3>

+ "corregir" (automáticamente) determina lo que "se utiliza"/tipo oscilador (comunicador sano saliente de las imágenes del `) para representar la notificación señalada.

+--el uip/el ba= da instrucciones corrige en cómo a las imágenes del create=.

--las diferencias sutiles en imagen (subconsiously) son notadas por el usuario que es alertado.

+ la patentabilidad debido a la dimensión agregada de la información se asoció al "notificador". ¿Con todo es esto obvio?

. Exhibición de alarma especial del reloj:

Cambios del reloj "S" electrónicamente según:

el tipo de alarma deseó. Los ejemplos "van a la escuela", a la estación, al tipo día de fiesta, al etc.

- Una diversa imagen se puede hacer a partir de cada hora a diario o a la semana... El sistema memoriza una gran cantidad de representaciones visuales.

. - la exhibición puede demostrar los artículos que necesitan ser recordados, eg.: fechas de nacimiento de la gente; citas; cosas a hacer

--el sistema puede apenas surgir tales artículos sin la petición, o el usuario debe pedir tal información

- [relacionado con 5A-99: cambiar la imagen que aparece en cara del dial. Carácteres ASCENDENTES de diversas razas, de animales, de gráficos, de la selección de color para cualquie pintura seleccionada, de plantas, de políticos, de lemas, del etc.

. - cuadro representado vía: lcd, vga, cambios manuales, final del etc. de 5A-99]

- representa los sonidos conectados con el tipo imagen

. --eg.: si la escuela se cierra en 3pm, el usuario puede todavía tener o cuadro móvil de salir de la escuela con propio "zumbador especial" del reloj que repliega el closing de la campana de escuela...

O se combinó sin. 3C-411:

Ver su personaje de dibujos animados preferido moverse mientras que habla el tiempo.

. - el sistema del botón de la prensa entonces dejará a usuario oír y considerar el tiempo. La característica audio es opcional.

. - el tiempo se puede escribir en las palabras, números, el formato del reloj...

. - el dispositivo puede diseñar su propio personaje de dibujos animados

. - los cartuchos dejan a usuario cambiar el tipo de programación: historietas, cómo se da el tiempo, calendario de cita...

. - D: tds (matriz de la fecha del tiempo del `) = c (reloj, reloj (de la muñeca)) = s (alternatable)

OTD: "R"; "S"; pp; P.M.; Reino Unido; fecha; tds; interactivo; juguete; todos; juego; portable; punto de ebullición; SP; alerter; oscilador; vc; egh; cuenta; tgh; carro; md; cp; uq; uip; carácter.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1977-1.97 www.qpat:

- (reloj o reloj) y alarma y (imagen o cuadro) y (el cambio o el cambio o altera o altera o alterna)

--palabras claves: notificar o notifica son las patentes buenas, pero traídas 1000+. También: representar, los soportes para, significando

+ el ANILLO 2D-241 CONSIGUE MÁS RUIDOSAMENTE CADA ANILLO SUCESIVO: hasta el teléfono se coge. Para los teléfonos normales también.

- D: llamada entrante - > t (contador de anillo (tds)) - > oscilador (increaser del volumen vía medios electrónicos o mecánicos).

- similar a KN anterior (invención) donde la alarma consigue más ruidosamente hasta su apagado. Ver KN en pieza de la "mañana" en un archivo IMI.

+ NR: hasta que u desactive la alarma = el oscilador consigue más ruidosamente y ruidosamente/sonido continúa cambiando de cierta manera = c (banda).

¿- Planear en la mudanza de esto a la pieza del "teléfono"?

El RELOJ R114 VIBRA en vez de alarma audio ruidosa. Para la gente sorda, y de radio de DJ. ACCESO de agosto de 93 X.: el reloj es un receptor del transmisor; BALANCE: de acuerdo con el paladio del reloj; CÁMARA: controla la dirección de la cámara; CARRO: ; Exhibición ("S"): ; "M": ; MAÑANA: ; Paladio: ; PP/MP: ; MQ/UQ: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: ; TELECONTROL ("R"): ; CUENTA: ; ESTEREOFONIA: controla estereofonia; Teléfono: el teléfono de los controles/tiene pequeño reloj del interior del teléfono ("T"); Reino Unido: ; WA.

ORDEN Y SINCRONIZACIÓN/O Y T

Estudios el patrón de las ocurrencias del acontecimiento. Los VAGOS (analizador del comportamiento) pueden a veces también ser provechosos en tener sentido de los patrones. Estudio de sistema de ayudas de la ORDEN y

de la SINCRONIZACIÓN la situación total. A menudo una orden y una sincronización señaladas de ocurrencias ocurre, causando el sistema señalado reacción. El software de la orden y de la sincronización se programa generalmente para reaccionar al patrón de acontecimientos externos.

Los EJEMPLOS siguen:

- los VAGOS del `(analizador del comportamiento) estudian la orden y la sincronización para concluir en la naturaleza del activity= entonces cualquier reacción señalada para acordado a tal tipo de actividad.

--La orden y la sincronización seguidas para un in= de la rotura se empareja contra el DB del comportamiento del analizador para el incidents= relacionado que concluye con (con) una cuenta para la ocasión de ella que es ilegítima, o cabiendo otro patrón del comportamiento.

+ secretario 4E020: registra cada ocurrencia de cualquier acontecimiento asociado (con) a un KN.

CALCULADOR DEL PATRÓN: analiza la pedido y la sincronización del events= dando por resultado la capacidad del sistema: predecir que las ocurrencias futuras/entienden qué se está encendiendo (aplicable para los VAGOS (el analizador del comportamiento), desarrollo del DB)

- Ejemplos: Dirige a usuarios en el aprendizaje de cuando son los más productivos de tareas señaladas. Como: cuando tienen la ráfaga más grande de la escritura (el sistema sigue el número de kilobytes que mecanografían durante la semana). Los usuarios pueden realizar que son más productivos por las tardes en que están libres de las interrupciones del teléfono del negocio. La orden y la sincronización pueden también analizar la proximidad del tiempo (TDS) a las citas y o cualquier otra activities= convertido a digital (y analizable) que reacciona en las conclusiones sobre qué efectos ambientales ayudan a inducir al usuario del comportamiento quiere.

. Funciones señaladas con./desc. de manera señalada, en la reacción a la orden y a la sincronización señaladas de ocurrencias: el acceso permitió; corregir ocurre; multiusos hace el sistema ajustar por consiguiente; notificador; las búsquedas y reaccionan; pista [acontecimientos de los estudios más cuidadosamente].

OSCILADOR - COMUNICADOR SANO SALIENTE

Introducción: El comunicador sano saliente del altavoz señala a usuario cuando una función dentro del dispositivo ocurrió vía: señales sonoras, sonidos, discurso humano previo, y música.

el SONIDO SALIENTE de ++ 6J070 AJUSTA Al TIPO OCURRENCIA: Facilita la manera de la cual los oyentes pueden oír. El proceso sano saliente se altera para maximizar la comprensión. Ver 6J070

El OSCILADOR = los sonidos de UIP-TAILOR se componen en tal way= en cuanto a facilitan comunicaciones más eficaces o más específicas.

VAGOS = BVA: ajusta sonidos a las preferencias del comportamiento del usuario del fósforo [wo u (usuario) que es consciente de la uip-adaptación].

. --BVA: (sistemas más sofisticados (que pueden ser controlados vía el reconocimiento vocal/(simboliza "y o ") tienen uip de U) modularán sus sonidos salientes (declaraciones, señales sonoras verbales) a la frecuencia que puede mejorar (psicologicamente) el fósforo U según el uip).

- los patrones de sonidos se dirigen a gente específica, para no disturbar otras:

. --multiusos (cada usuario [dispositivo de %separate y o su parte] tiene poseer las combinaciones del oscilador de sonidos únicos a ese usuario particular, así que este usuario/dispositivo sabe que tal comunicación a ella está solamente para him/%it y en golondrina de mar que responde a los propósitos particulares separados del analizador del oscilador.

CRIBADOR PRINCIPAL de los SONIDOS del TELÉFONO 4A140/del OSCILADOR: defiende hacia fuera ciertas frecuencias exteriores que sean indeseadas, eg.: alta echada, en grandes cantidades. Dejamos uno mejor oír alarma de los sonidos/NR deseado. Uno puede escuchar o no escuchar la música simultáneamente.

- hace tan (automáticamente) según: uip (del programa/de u) de la "hospitalidad"
- Cribador del programa de la hospitalidad: 9G-220: las pantallas/seleccionan del sistema (sistema electrónico) (tales ocurrencias indeseadas/queridas)

MISCELÁNEO: El "oscilador Uno mismo-que apunta R223" gira automáticamente según la música y el tamaño del sitio. Vencedor 29 de julio de 92 JT

. Los sonidos y el texto vía el oscilador pueden ser alterados: corregir y el synth puede substituirse.

- cuando vía el modo audio, el sintetizador de la pieza y corregir puede inter-ser substituido.

SIMULADOR del MOVIMIENTO 2D-040: Los sonidos siguen las localizaciones cambiantes del usuario. Los sonidos aparecen empezar con los altavoces delanteros, y van a los altavoces traseros en una cierta manera. Hace que el usuario los siente están apresurando adelante (la versión sana del efecto visual real).

. - el efecto puede ser algo suave, para no torcer la música del usuario demasiado

. - este sistema mayo o mayo no ser mencionado en la literatura de las ventas del producto. Cuando el usuario oye realmente, tendrán la sensación del movimiento, y prefieren esto a otros modelos en el piso de las ventas.

- algunas de las maneras que la síntesis funciona:

ciertas partes de la música que son ideales para este efecto sonoro, eg.: los golpes a la música sienten como están pasando cerca.

+ "pista": mientras que camina u (=ps) = movimiento "sensor" = "analizador" = oscilador (ajusta donde/cómo se hacen los sonidos.

. - este KN es subconjunto de balanceador.

AJUSTADOR AUDIO del teléfono C42: Cuando los anillos del teléfono ("T"), los productos de la hospitalidad que son utilizados en ese entonces automáticamente más bajo en volumen. DIBUJO: C42 = tel~c~remote

OSCILADOR GENERAL =

Comunicador sano saliente:

. - D1: c (computadora) del `(fuente sana) = tr (transmite) = señal a la estereofonia del generador de sonidos = del altavoz del tr=

. - D2: estado de tr/sensor/mechanical y o analizador del apuro = señal al generador = al altavoz de los sonidos

. - OTD: Control de volumen (ajustable según los pp, la P.M., la base de datos y o el uip; el usuario pre-seleccion (el volumen de sonidos del altavoz del modo de %standard)); la exhibición explica porqué, cuando, será %where, %how, están siendo qué sound/%speech, y o fue hecha; pp y o tipo sounds/%speech de la P.M. deseado según el tipo señal (relacionada con: función del dispositivo, % acción de usuario, %pi); Reino Unido; %date (significa tiempo, la alarma con el OSCILADOR); %interactive; %entertain; synth; "M" señala el tipo función del oscilador; + c (computadora) del `['analizador] = oscilador indica - > estado/(simboliza "y o ") cuenta.

el oscilador transmite sus señales salientes (sounds/%speech) vía el generador de sonidos - > amplificador - >: altavoz, teléfono ("T"), teléfono del SP, tr, MES, transmisión del alambre -- en golondrina de mar tales señales se pueden convertir a un altavoz en el otro extremo, eg.: los sonidos anuncian en otro sitio 100 metros de ausente).

. --uip-adaptaron el tipo sano sounds/%speech de los controles de la preferencia generado; receptor acústico de %motion;

. --carro (posibilidades de sound/%speech; funciones alternativas en el dispositivo que puede accionar la función del oscilador).

- %notifier; %osc recibe las señales iniciadas por el cojín del aire, el telecontrol ("R"), el artista, el vr y o el analizador de sonidos; auriculares (para uno o dos oídos, para que uno o más gente oiga simultáneamente, %or en diversas horas)

El DISCURSO = habla con el usuario en su lengua a través de altavoz. Los convertidos señalan de usuario y o de sistema a jugar del discurso previo y o suenan. El sonido generado puede estar de los pedazos que se repiten como un pedazo de los sonidos, o encadenado junto por el sistema. Ejemplo: da instrucciones, o los estados "estado".

- D: mic = sonido al convertidor de señal = al analizador del computer~sound = al tr (transmite) = función

. - Ha habido las ocasiones limitadas donde esta pieza del "discurso" fue utilizada obviamente incorrectamente en el desarrollo pre 1996 de la invención, y donde el "reconocedor de la voz" se debe haber utilizado en lugar

de otro. Si el lector es inseguro que la definición aplica, la definición correcta del oscilador se aplica naturalmente.

- o-VC = control de volumen: el usuario pre-seleccion el volumen de sonidos del altavoz. --D: perilla/botón = tr = c (computadora) del `(regulador) = amplificador = oscilador
- los elementos audios del o-the del "balance" son incluidos.
- tipo del ruido o-C59: el sistema activo de la cancelación del ruido reduce ruido indeseado, eg.: tráfico. Aspectos originales - 1: utilizar los auriculares, 2: utilizar mientras que escucha el sistema/el walkman de la música. UIP/PR puede también bloquear/modula sonidos.
- O-Auriculares: (Cuerda retractable del auricular del walkman C98. Sony dibujo del 14 de marzo de 92 NK: telecontrol/tel=C98).
- o-C102 TV transmite audio a las estereofonias sin los alambres. [Sony 7 de diciembre de 92 NK].

ANALIZADOR del UNO MISMO de la ACÚSTICA 5E080: El sistema audio se ajusta a cada situación. La estereofonia emite sonidos diferentemente según las calidades acústicas del cuarto, tales como su tamaño, y tipos de materiales reflexivos sanos. Ver que es poseer el archivo.

OSCILADOR ECTION - Quizá menos importante:

- El volumen de sonidos ajusta según el nivel (pre) de nivel de sonido existente en el ambiente de la calle/de otros sonidos electrónicamente generados (el sistema de la advertencia de la voz de la palmadita no 3298010 de los E.E.U.U. (nr) cuyo volumen de la salida ajusta según sonido externo existente). (El "analizador de sonidos" determina: el nivel/el tipo volumen/sonido necesitó; cancelación del sonido (cualesquiera) necesaria.). Palmadita verdadera de los E.E.U.U. # muy limitado.
- Subpartes: Oscilador-Nr; Oscilador-Info; Oscilador-Sonidos: música.
- "Corregir": cortes/sonidos del synth.
- Dibujo de OTD: u (usuario) = este ~ relacionado c (computadora del sistema del audio N (invención) (sistema electrónico) del `) =

CARRO (sonidos convertidos a digital; interruptor audio); COMPOSICIÓN (); (Relacionado audio) EDUC (); M (DB de sonidos convertidos a digital); MIC (); MES (sonido convertido a digital tr); +OSC (); Banda (funciones del oscilador); Picosegundo-Zona (); Q (); R (palillo teledirigido 5E020); SENSOR (del movimiento) (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL DE %SOUND (); ESTÉREO (); SYNTH (); TDS (cuando ciertos sonidos fueron generados; % de los lazos en cualquie ocurrencia (2E251) w (con) cualquie sonido generado (por el oscilador)); u (usuario) (oyente, compositor audio); UIP (uip-DB (base de datos del `) de sonidos convertidos a digital); UQ (); (Relacionado audio) VR (); WA (tipo audio funciones del walkman).

- "Facturación": para el tipo/la cantidad de sonidos

% existe: Los labios móviles hablan el tiempo. Vendido vía una imagen más aguda 94-95.

. Ayuda para la audiencia - deteriorada: similar a Braille. Se marcan los elementos difíciles señalados de los sonidos (nr, oscilador (señal sonora, un volumen más alto)).

- uso: programa de la "hospitalidad" de los convertidos; discurso vivo = "analizador de sonidos" = oscilador

. Acceso: El OSCILADOR se utiliza para sacar respuestas "señaladas" del "accessor.

OTRO:

Comunica: con la persona. Adapta la forma de comunicación según lo señalado, eg.: estilo, contenido, volumen.

. Usos: da las señales verbales/de la señal sonora que transportan la información al usuario ("cuenta" del producto en algún momento); hospitalidad (música, radio); alarma/cuidado (señales sonoras/aviso puesto en palabras).

- El volumen de sonidos ajusta según el nivel (pre) de nivel de sonido existente en el ambiente de la calle/de otros sonidos electrónicamente generados (el sistema de la advertencia de la voz de la palmadita no 3298010 de los E.E.U.U. (notificador) cuyo volumen de la salida ajusta según sonido externo existente). (El "analizador de sonidos" determina: el nivel/el tipo volumen/sonido necesitó; cancelación del sonido (cualesquiera) necesaria.). Palmadita verdadera de los E.E.U.U. # muy limitado.

- Subpartes: Oscilador-Notificador; Oscilador-Info; Oscilador-Sonidos: música.

- "Corregir": cortes/sonidos del synth.

- Para el dibujo de Techies: usuario = este ~c relacionado del sistema del audio N (invención) (computadora) = CARRO (sonidos convertidos a digital; interruptor audio); COMPOSICIÓN; (Relacionado audio) EDUC; M (ordenador central) (base de datos (DB) de sonidos convertidos a digital); MIC; módem (sonido convertido a digital tr); +OSC; banda (programa informático) (funciones del oscilador); Picosegundo-Zona; Q; R (palillo teledirigido 5E020); SENSOR (del movimiento); ANALIZADOR DE SONIDOS; ANALIZADOR DE LA REPRESENTACIÓN VISUAL DE %SOUND; ESTÉREO; synth (sintetizador de los sonidos); TDS (cuando ciertos sonidos fueron generados; % de los lazos en cualquie ocurrencia (2E251) con (con) cualquie sonido generado (por el oscilador)); usuario (oyente, compositor audio); adaptarse (uip-DB (base de datos) de sonidos convertidos a digital); UQ (el usuario hace preguntas del sistema); (Relacionado audio) VR; wa (caminata alrededor) (el tipo audio walkman funciona).

- "Facturación": para el tipo/la cantidad de sonidos

% existe: Los labios móviles hablan el tiempo. Vendido vía una imagen más aguda 94-95.

. Ayuda para la audiencia - deteriorada: similar a Braille. Se marcan los elementos difíciles señalados de los sonidos (notificador, oscilador (comunicador sano saliente) (señal sonora, un volumen más alto)).

- Uso: programa de la "hospitalidad" de los convertidos; discurso vivo = "analizador de sonidos" = oscilador

. Acceso: el oscilador (comunicador sano saliente) se utiliza para sacar respuestas "señaladas" del "accessor".

. El comunicador sano saliente demuestra ese estado de la situación. Puede también adaptar su forma de comunicación a un mejor juego los usuarios.

- Subpartes principales: Estado; Sastre.

. Palabras claves: sonido: oír, escuchar, los altavoces [omitir a locutor (del ser humano)]

. Otro: Sastre: ajustar, alterar, adaptarse, único (los sonidos). Comunicar: implicar, indicar vía una señal audible. Estado: notificar, alertar, alarmar, anotar, la situación, precisar, atención (de qué necesidades), ocurrencia, hacer enterado.

PIEZA DEL ANIMAL DOMÉSTICO DEL `- INVENCIONES ANIMALES GENERALES

Contenido para las invenciones relacionadas del animal doméstico:

. Introducción

. La puerta del animal doméstico consigue animales domésticos limpiar sus patas: ver las demandas para las características interesantes; más un archivo misceláneo en esta carpeta.

. Piezas

. Subpartes

. Ampliarse

. Patentes

profesor particular del movimiento 3E061: A imientos, eg.: no saltar para arriba en gente o tablas; o cc

6J030-Pet. ™ del calentador de la casa de per erano sobre la entrada del animal. Obvio.

. Misceláneo:

- Mayo tiene una puerta de balanceo para reduc

- La puerta es bastante reservada así que el anir el aviso. La puerta todavía permite un poco de aire (el ai cas) en puerta.

- D: El movimiento "sensores" detecta el movimiento/la respiración/el calor del animal que causa el cambio repentino en temperatura - > activa - > calentador. El "sensor" detecta el movimiento - > sobre la salida del animal - > desactivando la HVAC.

- Fuente de calor de: electricidad/solar.

+ 6J031-Pet. ™ del monitor del collar de perro:

Supervisa las señales del cuerpo de animales. Busca los síntomas físicos que el analizador asocia a la condición del perro.

- ™ del perseguidor de la salud del animal doméstico: Anota la posibilidad del animal que tiene una edición de salud posible. Notifica a dueño cuando la cuenta se acerca a cierto punto.

- El analizador del comportamiento del `utiliza este ™ de la regeneración del animal doméstico para ayudar a determinar el estado de la psique del animal doméstico en aquel momento. La invención también dibuja

asociaciones entre las cuentas del cuerpo, y los comportamientos que se pueden seguir por otros sensores. E.G.: ciertas señales pudieron sugerir que el perro tenga sediento o hambre, haciendo la invención reaccionar dispensando el agua y o el alimento.

. El ™ del monitor de la casa de perro puede ser más práctico cuando se desea una invención abultada del collar, y o los modos de seguimiento de la salud adicional.

2222

. Monitor de los sensores:

- patrones de respiración; temblor [el pequeño animal de la demostración de las vibraciones es frío]; jadeo excesivo [el animal doméstico de las demostraciones del analizador de sonidos del `es demasiado caliente]; golpe de corazón [vía analizador de sonidos].
- los sensores del `se pueden colocar en las paredes y piso/consolador, y o el collar.

7J5-Pet. ™ del monitor del collar de la pulga: Las pulgas son Coaxed™ en un compartimiento claro minúsculo en el collar con medios creativos. Por ejemplo: olores, como los olores sexuales de la pulga que atraen el sexo opuesto. El dueño puede ahora comprobar más fácilmente cuando su animal tiene pulgas, antes de que continúen criando.

- La nota, animales domésticos se pudo haber descontaminado recientemente, y se rasguña de los fleabites anteriores. El rasguño de un animal doméstico puede no significar una presencia de la pulga, como esta invención.
- Los compartimientos de la pulga se substituyen fácilmente, generando el rédito de ventas adicional.

3333

El 'sensor sabe la presencia de pulgas cerca:

. El dispositivo atrae y atrapa pulgas. Ésta es una manera de ver si un animal doméstico/un perro ha cogido pulgas a principios de antes de la infestación importante del animal doméstico y u otros animales domésticos o su hogar. El dispositivo notifica inmediatamente a dueño del animal doméstico sobre la infestación.

- D: la pulga va = sensor = analizador = notificador señalados.

. - las pulgas pueden no necesitar necesario ser atrapado, ellas apenas necesitan tocar un sensor. El sensor sabe su presencia vía: buscar el cualquie producto químico o la otra actividad de la pulga.

- una versión más simple puede simplemente tener una trampa con la ventana clara para que el usuario compruebe visualmente para saber si hay pulgas.
- los dueños pudieron refrenarse de dejar su acercamiento de los perros otros perros sin tales collares. La presencia de tal collar se puede saber automáticamente por el dueño vía distancer que analiza el dispositivo que busca otro collar que emite vía la información sin hilos que identifica su existencia. Especialmente útil en las comunidades cerradas donde tales dispositivos se pueden recomendar o requerir para ganar eficacia.

7J6-Pet. Limpiar el ™ del indicador del animal doméstico:

El collar demuestra cuando el perro fue lavado por último. Puede hacerlo más fácil hacer que alguien del hogar sepa cuándo lavar el perro. Hay menos necesidad de una discusión - las demostraciones del collar que el perro necesita lavar el ™.

. El sensor notifica cuando el perro fue lavado por último con un champú específico. Los collares se pueden incluir gratuitamente con la botella del champú del perro. Solamente un champú se asocia al sensor del collar.

. Las maneras opcionales el dueño pueden ser notificadoas que es el tiempo de la colada:

- El pequeño contador de tiempo electrónico comienza sobre contacto con un ingrediente del champú. Notifica cuando es hora de lavar el ™ del perro vía una pequeña luz roja que destella. La luz se puede situar en el collar, o una notificación se puede enviar a la computadora del dueño.
- Una versión más barata pudo apenas necesitar uno activar el contador de tiempo. Uno necesita quizá introducir un código de la botella del champú que activa el contador de tiempo - después un nuevo collar será necesario y puede ser obtenido solamente consiguiendo la botella y el collar del champú combinados.
- Sensor general del olor de cuerpo.
- Ingredientes específicos del champú que son cambio inodoro o discreto de la fuerza químicamente después de que un plazo del sistema, activando el sensor. Esto puede dar lecturas más exactas al sensor.
- El sensor del olor busca olores de cuerpo.

3333

- Demostraciones cuando animal doméstico bañado por último o cuando el collar consiguió realmente mojado. Cualquier dueño reajusta el collar manualmente; u ocurre automáticamente.

3C-460-083005 que raspa a Warner: Sonidos de los perros del descortezamiento iniciados por el "sensor sano", el timbre, o la alarma de ladrón. Liberar de mantenimiento. La patente similar existe.

Cuando la persona incorpora una premisa la grabación de sonidos de iniciados de descortezamiento, aunque no puede haber perro. Puede ser activado vía: persona que dispara la luz laser al entrar en la tierra fuera del edificio, o al entrar en o cerca de la puerta principal.

. - el sistema es tal que suena como: el perro está viniendo más cerca (hasta un punto), siendo acortado por alguien y después llevado un lugar más distante...

. --hecho cambiando volúmenes y o vía altavoces múltiples

. - cuando el sistema oye perros verdaderos el raspar fuera de las premisas, su sistema raspará consecuentemente. Esta grabación reaccionaria de la corteza puede ser del tipo diseñado para pacificar el perro verdadero (algo que raspa es hostil mientras que otras son apenas dejar otros saber allí son un perro, de una manera amistosa)

. --Esto y otros aspectos crean las características del tener perros de protector verdaderos.

. - la literatura de las ventas dice: tener muchas de las ventajas en tener un perro, sin las inconveniencias

- puede también hacer las grabaciones de sonidos de voces humanas con o sin el perro el descortezamiento, eg.: "quién es él" registrado en la voz del residente. Si el dispositivo de un sensor del ladrón demuestra el ladrón

todavía está intentando acceder, después el sistema dirá más adelante, eg.: "salir o llamaré a policía", y entonces el sistema pudo marcar realmente a la policía.

- OTD: "R" (puede el audio con./desc.); combinado con sistemas de seguridad más complejos; pp; P.M.; Reino Unido; fecha; interactivo; todos; "mic"; punto de ebullición; alerter; oscilador; vc; cuenta; tgh; cp; mq; uip.

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1977-1.97 www.qpat:

- perro y corteza y (sensor o altavoz o timbre)

- patente muy similar: Sistema de alarma simulado perro del descortezamiento de los E.E.U.U. 4571583. Archivo 1984.

Puerta del animal doméstico: Reduce seguido en fango haciendo espera del animal doméstico en la estera matosa antes de que la puerta pueda estar abierta empujado. Ver en "mí" carpeta.
Archivo: Animal doméstico/piezas del animal doméstico

Piezas interesantes del animal doméstico - versión práctica corta

El ANALIZADOR = analiza qué animal doméstico está haciendo y necesita. El analizador dice a sistema cómo reaccionar a la situación.

El ASOCIADO = asociando semejanza nivela entre las situaciones múltiples. Ejemplo: el analizador del comportamiento predice que el animal doméstico quiere venir en cuando el sensor determina el animal está apenas fuera de la puerta.

VAGOS = analizador del comportamiento. Analiza el comportamiento del animal doméstico

El ™ CONTENTO del ANALIZADOR = analiza el contenido cualquier cosa.

El COORDINADOR = coordina diversas partes del sistema en el trabajo junto.

El ™ de DISTANCER = señala siempre que cualquier dos piezas se separen o vengan juntas. Ejemplo: el collar del animal doméstico tiene un transmisor que dé el acceso al animal doméstico cuando está a una yarda (un metro) de la entrada.

EDUCA = sistema educa el animal doméstico. Ahorra el tiempo del dueño.

El ™ = la educación de EGH consigue instrucciones más duras del ™ ajustan al nivel de la habilidad del animal doméstico.

ENTRETENER = animal doméstico que la invención es también una forma de hospitalidad. Se utiliza como forma de hospitalidad.

¡La PROTECCIÓN DEL MEDIO AMBIENTE/el P.E. = ajusta automáticamente la invención del animal doméstico para ser respetuosa del medio ambiente!

EJERCICIO = también utilizado como forma de ejercicio para el animal doméstico y o el dueño.

JUEGO = también utilizado como forma abstracta de un juego del animal doméstico.

El GPS = el sistema de navegación mundial determina la localización del animal doméstico.

El ™ de la GUÍA = dirige animales domésticos así que pueden aprender algo.

INTERACTIVO/INTERACTIVO = el sistema obra recíprocamente automáticamente con los animales domésticos según lo programado.

El ™ = el sistema MULTIUSOS se diseña especialmente para los usuarios múltiples.

El ™ = el dueño del NOTIFICADOR consigue notificados cuando el animal doméstico necesita su atención.

El ™ de la ORDEN y de la SINCRONIZACIÓN = el sistema reacciona a la orden y a la sincronización del comportamiento del animal doméstico.

OSCILADOR = comunicador sano saliente. Los altavoces emiten sonidos.

PREDECIR que el ™ = el sistema predice cómo el animal doméstico se comportará. De acuerdo con cómo el analizador del comportamiento estudió la historia del comportamiento del animal doméstico.

REACCIONAR el sistema del ™= reacciona a la ocurrencia según lo programado.

CUENTA = el estado del funcionamiento del animal doméstico.

SENSOR = sensor. Detecta el comportamiento del animal doméstico vía muchos medios. Los sensores son los ojos y oídos del analizador.

BUSCAR y REACCIONAR el ™ = las búsquedas del sistema señalados los comportamientos del animal doméstico, que internan causas una reacción automática.

El ™ del ANALIZADOR de SONIDOS = analiza el tipo sonido. Distingue entre diversos perros por sus cortezas. Puede anotar un perro raspa basado en los criterios como perros encoleriza o felicidad.

MARCAR el ™ con etiqueta = él marca con etiqueta entonces sigue los movimientos geográficos de los animales domésticos.

El SASTRE = el sistema se adapta a una mejor función para los propósitos señalados.

PISTA = acciones de las pistas o de los monitores del sistema del usuario, o sistema.

TRANSMITIDO = las señales electrónicas envían sin hilos o de otra manera vía centenares de medios posibles.

™ del UIP = ™ programado de la información de usuario. El sistema utiliza la información recogida sobre las necesidades del animal doméstico o de usuario. Entonces mejora servicios ellos mejor adaptándose a la situación.

La VIBRACIÓN = la vibración generada por el dispositivo comunica con el animal doméstico. El animal doméstico puede también ser comunicado con por otros medios como el comunicador sano saliente.

El ™ VISUAL del ANALIZADOR = determina cambios en el comportamiento del animal doméstico vía la cámara.

W5 = cuando/donde/cómo/porqué/qué. Ejemplo: El analizador del comportamiento del animal doméstico determina cuando, donde y porqué raspó.

ZONA = área de A cierta con límites definidos.

Para los detalles ver que las piezas detalladas archivan y sus archivos relacionados

Archivo: Animal doméstico/subpartes

PIEZAS DEL ANIMAL DOMÉSTICO DE LA DIVERSIÓN

Introducción:

Los animales domésticos y los dueños quieren gozar el encontrar de maneras de conseguir adelante y de ser felices juntos. Las invenciones pendientes del animal doméstico de la patente ayudan a enseñar los animales domésticos a un mejor comportamiento. Supervisan y refuerzan su buen comportamiento. Las características automatizadas dan a dueños más hora de perseguir manías personales, el etc.

Los animales domésticos aprenden entender señales de comunicación básica:
. Cada sonido distintivo es inaudible al oído humano, pero los perros pueden distinguir mejor sus sonidos únicos, que las voces humanas que pueden ser más duras para que los animales domésticos descifren.
. Los perros correlacionaron cada sonido por qué sucede cuando él lo oye. Hay millares de ejemplos posibles. Sonar "A" se oye cuando ocurre la acción "#1". Los sonidos señalados se emiten otra vez, cada vez que ocurren las acciones correlacionadas. Acciones del ejemplo:
- Sonar "A" ocurre cuando el perro se hace para sentirse bien, e.g.: alabanza, o conseguir un convite agradable.
- El sonido "B" ocurre cuando el perro aprende traer.
. Los animales domésticos prefieren el recibir de la comunicación por los sonidos, que recibiendo descargas eléctricas suaves como castigo. ¡Utilizar su pensamiento creativo para imaginarse nuevas maneras de crear a animales domésticos y a dueños más felices.!

Más:
. Su creatividad ilimitada pudo ser inspirada mejor imaginándose un perro estupendo que usted desea jugar con. ¡Es un perro que usted tiene todavía encontrarse.!
. Las invenciones pueden trabajar para todos los animales domésticos, pero son mejores para las especies listas del perro que son impacientes aprender.

Las piezas interesantes siguen
¡Montar su imaginación.!

ANALIZADOR/VAGOS DEL COMPORTAMIENTO =

Las invenciones creativo se adaptan al comportamiento único de un animal doméstico. Hace esto primero analizando los patrones de comportamiento del animal doméstico. Después las cuentas del software cómo es bueno o malo el comportamiento de un animal doméstico se basa en lo que quiere el dueño del animal doméstico. El analizador del comportamiento tiene una gama creativa ancha de sensores que observen las acciones del animal doméstico.

3333

Comportamiento de los estudios de los animales/relación entre su w= de los comportamientos su "estado médico". Utiliza análisis del comportamiento como forma de Animal-Educación.

COLLAR del `=

¡Bastante flojo el collar, se puede atar a cualquier surtido ancho de invenciones miniaturizadas del animal doméstico.!

Una invención agarrada ayudará a educar animales domésticos para practicar buenos comportamientos. ™ del implante del control del animal doméstico: El todo o una parte de la invención puede implantar en el cuerpo del animal doméstico [apenas debajo de la piel]. Por lo menos el sensor, recompensando, y o castigando las partes de las invenciones sería implantado. El implante comunica con las otras piezas atadas al exterior de carrocería, o comunica con las piezas localizadas a otra parte afuera [en la casa].

. También ver los usos en subparte del Juego-Collar: con aplicaciones en vida real y juegos video.

COMUNICADOR del `/OSCILADOR (comunicador sano saliente) =

™ del comunicador del animal doméstico. Comunica con los animales domésticos vía señales audios, electrónicas, alimento, olores, el etc. El comunicador da instrucciones generalmente los animales domésticos en qué hacer.

Algunas de las maneras creativas que un collar del animal doméstico comunica con el animal doméstico:

El animal doméstico se entrena para reconocer los sonidos u otras señales, enviados por el dueño o vía métodos automáticos de la reacción.

. Ventajas opcionales:

- Un mejor control del aumento sobre el animal doméstico, e.g. cuando el animal doméstico es gama de audiencia exterior de la voz del dueño.
- El ™ del regulador del animal doméstico ha preestablecido el menú incluyendo: sonidos previos, voces humanas, vibraciones, olores (del alimento, del sexo, o cualquier cosa el animal doméstico se entrena para

responder a). Hay incluso sonidos previos de los perros cargados del programa informático, de que es diseñado ser facilmente comprensible por el animal doméstico.

- El dueño sin hilos transmite sonidos específicos al animal doméstico en cualquier distancia diversa.

- Es un hecho, animales mejores distingue entre los sonidos especializados para el ™ de los animales domésticos, que las palabras comunes habladas en una lengua humana. La invención educa animales domésticos para correlacionar sonidos específicos a diversas cosas que el dueño habitual transporta. Las invenciones son también ideal para el discurso deteriorado. El transmisor audio se ata al collar. El comunicador del collar se activa cerca:

- El analizador del comportamiento del `pudo realizar las necesidades del animal doméstico que eran comunicadas con. ¡Por ejemplo su compañero del animal doméstico acaba de volver a casa, y es hora de jugar.! Esto era analizada por la función del GPS de la invención que sabía los animales domésticos están viniendo más cerca, pero no han venido cerca bastante saber que el otro es próximo. Ha sido dos horas desde que podrían jugar. En la reacción a la llegada del primer perro, la invención transmite una señal al otro perro. Esto da lugar al sonido para "vuelto a casa" al animal doméstico que gozaría el jugar.

. Las formas creativas de comunicación que el collar emite el ™ pudieron incluir: "viene aquí", el "alcance", "consigue el periódico", "alimento está listo", "quiere jugar con un juguete?". ¡Dejar su imaginación tomar vuelo en conjeturar a montones de opciones.! La fuerza teledirigida de cada dueño de la familia tiene una variedad leve en el sonido (como un acento personalizado), así que el perro sabe qué miembro de familia está comunicando con ellas. Ver la invención relacionada 7G020.

. Opción: la voz del dueño previo es emitida por el ™ del collar

. Ideas de la extensión:

¡- Imaginarse que una lista de gente interesante de las tareas podría tener gusto de su perro, gato o aún un cerdo miniatura de la diversión aprende hacer.!

A6-12-Pet-Comm. ™ de acoplamiento del llamador

Ha preprogramado sonidos para tentar el interés del animal. Habla en su lengua que usted es amistoso e impaciente encontrarse. Hacer las llamadas de acoplamiento con los pájaros, ranas, grillos, gatos, perros, otros pequeños animales peludos.

Opción: tipo animal y o propósito del programa

Opción: Aparato de lectura del registrador: Cuando el viajar a la máquina exóticos de las tierras y o si usted no sabe el tipo pájaro, al mono, del etc. registra su voz y la amplifica de nuevo a ellos. El "mic direccional" coge sobre todo los sonidos distantes que vienen de fuente acentuada.

- Versión subacuática para los pescados, y los delfines del mamífero.

- Comunicador del animal doméstico: ¡Obrar recíprocamente con sus animales domésticos caseros a las nuevas alturas!

Animales domésticos quizás ciertos hasta la fecha menos populares en el hogar responderán bien realzando su renombre como animales domésticos.

- Marcas registradas: El llamador animal, animal habla, la charla animal, llamador del pájaro, comunicador del animal doméstico.

"Componer": El OSCILADOR para los animales puede también juntarse como instrumento musical que mezcla diversos sonidos. Los sonidos se pueden incorporar a la máquina con el otro musical que crea sonidos, o sean una opción agregada a una máquina musical.

A1-110-Pet-Comm. ™ animal del comunicador

comunica en los sonidos animales que crean efectos específicamente deseados en animales. Por ejemplo puede hacer un animal de la seguridad parar el raspar o llegar a ser agresivo si el peligro es percibido por la persona que controla la máquina. Enseñar a los pájaros a hablar, cantar. Puede inducir a animales que tengan menos o más hambre, sensación menos sola, agujereado, cansado, tímido, agresivo, rápido y antipático. Utilizar apenas para la diversión. Diversión animal, transmisor animal, hombre de la charla, película hablada de la película hablada. Inducir o reducir el comportamiento sexual.

B7-010-Pet-Comm. ™ electrónico del silbido del perro: solamente los perros pueden oírlo.

- Presionar el botón, y el perro o el otro animal viene del jardín. Ahorrarse el apuro de ir afuera a gritar para, o el silbido del soplo para el perro.
- El dispositivo se puede utilizar para comunicar con otros animales:

--animales enjaulados para los laboratorios que estudian el comportamiento animal, eg.: ciertos sonidos les dicen que es hora de la comida y o que trae el animal a cierto lugar, al etc.

- el receptor con su altavoz se puede también usar por el animal. ¡Llamar el animal donde nunca en la jaula, jardín, o salvaje es!
- puede funcionar con el transmisor que es un dispositivo de control de "R"
- el transmisor tiene opciones para diversos tipos de sonidos: los sonidos se pueden registrar por el fabricante; registrado por el usuario
- "distancer": Las demostraciones de "S" hasta dónde el animal está lejos de transmisor (pueden también demostrar si está viniendo el animal más cerca, más lejos

- Puede utilizar métodos más manuales del dispositivo teledirigido del dueño.
- Más TM: ™ del transmisor de la voz del dueño del animal doméstico
- La comunicación señalada de la invención del collar del `se puede accionar por cualquier acontecimiento, e.g.: registrar el animal doméstico de información que es hora de volver a casa

--El `notifica el animal doméstico para evitar los peligros señalados cogidos por un sensor o un analizador de sonidos. E.G.: el tráfico de coche suena, o las luchas de perro envían señales de peligro de acariciar. La

invención pudo dirigir el animal doméstico a cualquier para calmar abajo un pedacito, un hogar de vuelta, un etc.

- El dueño puede evitar tener que levantar su voz.

. Animal doméstico del entrenamiento: dar las recompensas del alimento cuando el animal doméstico obedece señales de la voz. Los sonidos del OSCILADOR del collar (comunicador sano saliente) pueden difundir mientras que el dueño está en la vecindad. La mayor distancia entre el perro y el dueño se crea con el proceso de aprendizaje del animal doméstico.

- Arriba estaban 7G020-Pet, y 9G160-Pet. Nuestras otras invenciones se amplían sobre esta idea básica de maneras específicas, por lo tanto 7G020 es una introducción a las invenciones relacionadas usando el concepto 7G020.

- `UIP: las búsquedas del sistema y reaccionan según lo señalado.

- Usos: cuando el perro es que falta/no visible, el dueño puede llamar el animal doméstico (perro, gato, etc); cuando el animal es malo, el dueño puede lanzar (perforación/humano inaudible) sonidos dolorosos/comandos verbales - tales sonidos salientes (osc) se cogen de los controles del micrófono/del dueño de (u) del dueño su r para jugar en previo/en de los sonidos el animal doméstico (del oído) (collar)

- el dueño puede enviar otros estímulos a animal/al ser humano vía r: agrado/modos eléctricos/vibratorios desagradables.

--el rc en organismo puede ser cabeza plantada de in/on o cualquier parte del cuerpo.

- unidad de respuesta del EL: retransmite la voz del dueño/la señal del dueño

el sistema del "localizador" de +-via dice a u donde está el organismo.

- D: dueño (u) = r (s, k, mic, banda) = onda de aire tr (ondas de radio) = rc = c = generador de pulso del oscilador/EL - > generación/vibrador - > emisor de la vibración/del olor/ajuste del collar.

Info repetido: invención relacionada 9G160 - transmitir los mensajes verbales al animal doméstico en la localización distante vía teledirigido al collar del animal doméstico. El perro puede ser entrenado para escuchar el altavoz del collar. Las ayudas traen el perro cuando están más allá de llamar distancia, o el dueño elige no gritar. El perro requiere el entrenamiento utilizar el sistema.

9G160. OTD:

- La mayor parte de 9G160 fue movido a 7G020. El número de la invención dememphasized, y se convirtió en parte de la subparte de la Animal-Comunicación en 9/2006.

- El dueño pudo ser supervisión [casa] vía sistema del acceso de la seguridad', y para el perro si no ven un problema. Las ayudas guardan a vecinos más felices de quejarse por la contaminación de ruido.

- La computadora [personal] crea, corrige y almacena los sonidos, junto con saber cuándo y porqué un collar debe emitir un ™ de los sonidos. Trabaja con [universal] los mandos a distancia, de que puede ser programado conectándolo para arriba con la computadora [vía las señales infrarrojas].

- útil con los animales domésticos múltiples, puesto que ambos oyen el mismo silbido y pueden aprender las mismas respuestas. Cada perro pudo incluso tener diverso modo sano el conseguir de ellas para hacer algo.

- Tipo identificación: R232
- Unidad de respuesta del EL: retransmite la voz del dueño/la señal del dueño: R233
- D: humano u = mic/k = tr = rc = oscilador/c (memoria de sonidos)

el CONTROL = el dueño del `controla el animal doméstico vía señales electrónicas. Las señales incluyen: ™ del comunicador, vibraciones, etc. sanos salientes.

Sistemas EDUCATIVOS = electrónicos del `del animal doméstico de entrenamiento. El entrenamiento repetidor apoyado por la regeneración positiva y negativa ahorra el tiempo del dueño del animal doméstico.

B7-060-Pet-Ed. El ™ del moderador del perro guarda fácilmente su perro de la tracción en su correo. El transmisor reduce la agresión del perro. Tener y asustado su abuela, hija o hijo joven no podrán controlarlo deben él ver otro perro femenino, darles el olor del animal doméstico para tomar adelante y girarse cuando es necesario. El olor y o los sonidos se diseña para hacer el perro (o el otro animal) más controlable. Controlarlo: venir oler el dispositivo con el olor (y o sonido) (que los toma lejos de, eg.: el perro femenino en el calor [tiempo cuando está listo para tener sexo con los perros del muchacho])

- estudios científicos de la necesidad que demuestran: un perro masculino puede ser atraído lejos de un perro femenino oliendo algo en la mano del dueño, eg.: olor de la carne (carne no verdadera), sonidos, etc. O por lo menos que esto diferenciará grande en controlar un perro masculino en esta situación.
- puede también disuadir animales con las frecuencias sanas particulares esas los mayo o mayo para no ser audible a los seres humanos.

Notas al pie de la página:

- Hace el sonido y olores para excitar el gato solo, perro, pájaro.
- Opción: modelos más costosos pueden incluso responder por el sonido o el olor al sonido o a la vibración del animal doméstico contra la máquina.
- Técnico: trabajos mejor con los sonidos del gato y del perro y las interacciones del olor.
- Haciendo publicidad: ¿"bajo en las galletas animales? ¿", o "animal doméstico en dieta? ¡", entonces enseñarles a los trucos en lugar de otro ofreciendo olores del animal doméstico! ¡Garantizado para menear la cola de su animal doméstico!
- OTD: Todos; "R"; pp; P.M.; Reino Unido; comportamiento del usuario [vagos]; educ; juguete; juego; hospitalidad; portable; sst; m; punto de ebullición; alerter; oscilador; vc; cuenta; tgh; enseñar; carro (olores, sonidos); cm; uip.
- ver: B7-011

B7-011-Pet-Ed. ™ canino del amaestrador de la agresión: Enseña absolutamente a perros a raspar. Modifica otros comportamientos.

- Alerter del perro: el dispositivo transmite el sonido en la frecuencia audible solamente al perro (no seres humanos) y les induce a que raspen.
- las ayudas entrenan a perros, también consiguen la acción del perro si son o inconscientes de problema (eg.: no detectan que una persona es alguien perro que el dueño no tiene gusto - el dueño puede secretamente botón)
. - activado por control de "R"
. - el altavoz del receptor se coloca en el collar de perro; o alrededor de la vivienda y de áreas próximas afuera
. - otras frecuencias pueden silenciar el perro, gato, pájaro u otros animales (si tales frecuencias son desconocidas por los científicos, después considerar dar a producto un dispositivo de la grabación que deja el expediente de usuario tales sonidos) - sin embargo necesitamos saber el tipo de sonido que induzca el descortezamiento (visitar la biblioteca, hablan con muchos veterinarios, y si usted intenta difícilmente bastante, la información interesante se pudo conseguir).
- el mismo dispositivo puede dar sonidos para hacer el siguiente: inducir al animal que venga; darles el placer
- los sonidos pueden distraer animales
- (no traducir: este producto incluye la descripción de #6B-05).
. Enseña al animal a ser más/menos (por el nivel señalado): agresivo o el contrario, eg.: no raspando; seguir a dueño, eg.: no tirar tanto en el correo; sentarse; espera; ser amistoso (a la persona señalada); si no cooperativa; inducir al animal que venga; dar el placer; los sonidos pueden distraer animales de: comportamiento [destructivo] que hacían anterior; la corteza, juego, sueño, sexual [no] compañero, sea más o menos amistosa.
- El dispositivo del OSCILADOR transmite el sonido [oscilador] en la frecuencia audible solamente al perro (no seres humanos) y los induce: modificar su comportamiento. Objeto de valor en eso esto: no molesta a gente; [cierta] gente no debe saber que un sistema de comportamiento [para los animales] es en funcionamiento.
. - (incluye la descripción de 6B-050, de B7060)
- los estímulos al animal incluyen cualquier estímulo del kn, eg.: la descarga eléctrica, estímulos positivos/negativos de los sobornos del alimento (experimentos de Pavlov), envió al animal (cerebro/oídos).
- los 'vagos determinan al pasado del animal/a interno del comportamiento actual del patterns= sugieren/educan al animal o a usuario. Ejemplos:
--qué (sonidos) había señalado las reacciones del comportamiento en animal
--vago-DB: demuestra qué opciones aparecen trabajar mejor, ésa es las demostraciones del menú qué animal de los comportamientos es más probable tomar encendido después de presionar el K= correcto cuál representa los estímulos correspondientes al animal.
. --otd: DB-adaptar = vago-adaptar; tener acceso [el comportamiento correcto del animal les da cualquier recompensa que los haga felices, eg.: alimento, estímulo positivo del fq; carencia de los resultados del acceso en el contrario (castigo)].

OTD: dispositivo de los programas del usuario para emitir el tipo appearst del perro de las frecuencias del sonido para reaccionar mejor a.

7J4-Pet-Ed (número de la invención). ™ del moderador de la corteza de la comunidad (nombre de la invención).

La invención reduce la contaminación de ruido. Ayuda al bordón que raspa entre los perros sabidos. Los perros en una vecindad, o la comunidad residencial pudieron todo el desgaste la invención agarrada. Los perros del descortezamiento reciben señales del collar, siempre que entren en la misma zona que otro perro del descortezamiento. Las señales suaves ayudan a educar animales domésticos para no raspar en uno a.

. Función: El ™ del distancer sabe automáticamente cuándo collares cuaesquiera dos o más especiales están dentro de gama. El malestar suave se da al perro cuando el A. el ™ del analizador de sonidos del collar oye el descortezamiento, y también cuando B. que el ™ sin hilos del distancer dice está cerca de otro perro del descortezamiento. Un perro próximo del descortezamiento que no usa un collar atado al sistema accionará el ™ del analizador de sonidos, pero nada sucede, pues el ™ del distancer no reconoce el otro perro.

. Misceláneo:

- Puede ayudar a inhibir perros agresivos, pues raspan generalmente al acercarse. El animal doméstico puede ser educado para refrenarse de los perros que raspan en él.

- El perro va absolutamente sin la recepción de una señal. Cuanto mayor es la distancia entre los perros, mayor es la diferencia en decibelios del descortezamiento son necesaria evitar conseguir una señal.

. Ideas de la extensión:

- Lazos de la invención adentro con qué otros tipos de ™ de los moderadores de la corteza. Existe actual: inaudible sano que disturba a los seres humanos se envía siempre que el perro de un su o vecino raspe durante demasiado tiempo.

2222

- Opción: Solamente uno o más perros en cualquier tipo de zona tendrían sus cortezas refrenadas [después de que un número del sistema de segundos], permitiendo que por lo menos un perro raspe [algo libremente] por un plazo señalado.

- Si los perros múltiples están en la misma familia: la invención no se refrenaría de todos los perros del descortezamiento al mismo tiempo. Esto es porque los perros tienen una buena razón para raspar. La invención marca los perros con etiqueta que raspan en uno a.

- En la reacción al comportamiento señalado del animal doméstico, el collar emite el ™: choques eléctricos de menor importancia, buenos o malos olores, o vibraciones.

- Más marcas registradas: ™ del moderador de la corteza de la vecindad. Es más fácil caminar su ™ del perro

3333

- Diagrama: choque dado al animal doméstico (cuando no responde correctamente) = piel del tacto de los alambres del collar del perro (los alambres gruesos doblan abajo a través de la piel - pequeña bola en piel de los tactos del final) = collar (u otros collares existentes que dan a animales domésticos choque). Esto también tenida gusto por el dueño del animal doméstico que consigue frustrado con el animal doméstico.

++ $$ 9G170-Pet-Ed. ™ del amaestrador de la señal del animal doméstico:

La invención entrega automáticamente a las señales positivas o negativas del animal doméstico de reforzar buen comportamiento. El analizador del comportamiento del animal doméstico sabe cuándo el animal doméstico está practicando buen o mal□n comportamiento.

. Tipos de señales:

- El ™ del dispensador del alimento del collar da recompensas.
- El animal doméstico se educa para asociar ciertos sonidos, vibraciones, y u olores como una alabanza o regan o. Las señales se asociaron a bueno o se da el mal□n comportamiento (por el dueño, o por medios automatizados) cuando se recompensa el animal doméstico (por ejemplo con una galleta), o cuando está reganado verbalmente. Esas señales se experimentan más adelante como positivas o negativas, con o sin una galleta o un regan o.
- Opción pasada si el otro ™ de las señales del animal doméstico no trabaja: frecuencias sanas desagradables; o descarga eléctrica suave; u olores desagradables en una cantidad demasiado pequeña que se olerá por los seres humanos.

. Misceláneo:

- La educación del `consigue un ™ más duro: La cantidad o la intensidad de la señal se puede fijar para aumentar hasta que el animal doméstico reaccione por consiguiente.
- El ™ programado de la información de usuario adapta su dirección a lo que sabe el animal doméstico ya, y necesita aprender después. La educación consigue más difícilmente mientras que proceden las lecciones. Animal doméstico que ™ del analizador del comportamiento consigue la entrada de su entrada del ™ y del dueño de los sensores del animal doméstico, después adapta la educación dirigida por consiguiente.
- ™ de Scolder del animal doméstico del mando a distancia: Un regan o directo del dueño, puede dañar la relación importante entre el animal doméstico y su dueño. Puede ser mejor que la regeneración negativa venga de una invención neutral.

. Ideas de la extensión:

- Versiones comprables y costosas con más opciones.
- Amaestrador del animal doméstico para el ™ físicamente deteriorado. Cómo la vista deteriorada, o la gente encuadernada de la silla de rueda puede entrenar y comunicar con sus animales domésticos.
- Maneras a los animales domésticos verdaderos y de la comodidad para los buenos comportamientos.

3333

Enseña al animal a comportarse vía el donante de estímulos positivos y negativos cuando el animal exhibe comportamientos positivos o negativos. Eg.: dar la energía negativa (descarga eléctrica) cuando el perro es demasiado agresivo. Estímulos positivos: sonidos calmantes.

¿Patentable? - interruptor aty.

- existe?: el dueño decide activar choque. Parte de 9G160.

¿. - existe? choque negativo para perseguir cuando no para el raspar de cierto parámetro del tiempo de w/in. Tener probablemente esta N en los archivos de papel.

. - Sensaciones desagradables/agradables dadas al animal según el refuerzo positivo/negativo de Paslov.

- las unidades de tr/rc colocaron atado a través de perro:

. --oídos/cabeza/nariz/cuello/localizaciones superiores de la espina dorsal abajo a e incluyendo la cola/las patas/bajo áreas laterales.

usos del o-ejemplo:

-1] el dueño ordena al perro que se siente, jugar, rodar, traer... de cierta manera - > el dueño k en el tipo acción de r requerida por el animal doméstico - > los rc de r de la posición del tr del animal doméstico de las partes del cuerpo del animal doméstico en relación a sus otras piezas en golondrina de mar que r sabe la acción del animal doméstico (eg.: es que se sienta o que camina) - > si el perro es bueno - > no o sensación positiva de la unidad en animal doméstico/si el malo del perro, sensación del choque al animal doméstico.

--acciones y localización del perro de los jueces del sistema vía el sistema del "distancer" utilizado por cada unidad en animal doméstico y en el R. del dueño.

-2] uso #1 del uso] para analizar comportamiento del animal/del ser humano/del organismo (insecto, organismo micro).

- ventaja: malo para que dueños castiguen los animales domésticos con sus manos, interno que hace animales domésticos mistrust a sus dueños.

- esta invención aparece relacionada a muchas otras invenciones del animal doméstico.

- El `dirige el animal doméstico [vía TGH].

- Para los animales domésticos múltiples en vecindad en iguales/programa de entrenamiento/la invención similares: multiusos sabe automáticamente que más de un animal doméstico es próximo [el `distancer/' picosegundo] y cómo adaptarse a cada animal doméstico. Las señales to/from un animal doméstico, no se confunden con otros animales domésticos, e.g.: los estímulos de la liberación y de los sonidos del olor no se utilizan.

++ 5J041-Pet-Ed. Enseñar a los animales domésticos a no molestarle para el ™ del alimento

El ™ de las señales del animal doméstico se transmite antes de hora de la comida. Los animales domésticos se educan para asociar la presencia de la señal a contar con el alimento. En un cierto plazo, los animales domésticos pueden aprender que eso el engatusamiento del dueño para el alimento es insustancial hasta después

de que las señales comenzaran. Los animales domésticos que todavía engatusan a sus dueños pueden ser menos insistentes. Los animales domésticos pueden aprender no molestar a dueños para el ™ del alimento.

- El ™ de la sincronización de la señal del animal doméstico es accionado por la persona cuando son alimentación posterior. Registrar los controles que el animal doméstico señala cuando se activa el alimentador automatizado del alimento de animal doméstico.

- Orden y sincronización del `: La señal del animal doméstico modela el ™: las señales múltiples del mismo o del diverso tipo, pueden ser más eficaces cuando se transmiten cronológicamente en el mismo patrón cada hora de la comida. Una ventana del tiempo entre la primera señal y la alimentación, deja animales domésticos ir a sus dueños antes de hora de la comida.

- Las horas de la comida adicionales pueden ser adoptadas, así que el animal doméstico es menos probable asociar la hora a hora de la comida.

- TM: Los dueños de las ayudas paran el alimentar de animales domésticos del ™ de la tabla. Conseguir más paz antes del ™ de la hora de la comida del animal doméstico. No dejar el animal doméstico dictar cuando puede comer el ™. Acariciar el ™ del sistema de control de peso

2222

. Las variaciones en el ™ de los patrones de la señal del animal doméstico pueden simbolizar diversos panoramas para el animal doméstico.

- Una hora de la comida de las demostraciones del patrón de sonidos se está acercando, pero no espera que al dueño esté allí, pues el dispensador automatizado del alimento está entrando la operación - dando por resultado la sensación del animal doméstico quitada menos de su dueño.

Los olores se emiten para efectuar comportamientos señalados. Enseña a animales domésticos a no incomodar a dueños para el alimento hasta después de que el olor se emita una vez o dos veces al día.

- diverso ™ de las señales del animal doméstico incluye: ciertas luces que se apagan encendido (o); o cualquier otro cambia en el ambiente que puede ser controlado vía la automatización [casera].

3333

- muy relacionado a un producto en el archivo de "A" que también funciona mientras que un dispositivo que atrae animales haciendo el acoplamiento llama

- OTD: el dispositivo de los programas del usuario para emitir el tipo perro de las frecuencias del sonido aparece reaccionar mejor a.

Todos; "R"; "S"; pp; P.M.; Reino Unido; fecha (ciertos últimos comportamientos de la grabación); interactivo; educ; juguete; juego; hospitalidad; ejercicio (animales de las causas a ejercitar, eg.: para conseguir el alimento); portable; "M"; punto de ebullición; SP; alerter; oscilador; vc; cuenta; enseñar; carro; cp; acceso; uip.

¿. - cansado del gato meowing para el alimento? Al lado del tipo olor, el gato sabe cuándo tiene una ocasión de conseguir el alimento. El dueño entrena al gato no haciendo caso de todos los maullidos excepto en la hora untada.

- Otras maneras de entrenar animales el hora: nivel ligero (lámpara del control); oscilador (de los sonidos "señalados" muy probablemente para efectuar el animal doméstico).

--motivar [no] el comportamiento sexual. Por ejemplo a [de] atraer.

- El tipo y el grado de olor alteraron según: otros olores tales como olores del organismo [según lo determinado por el analizador/el motivador del olor]; grado de cambio deseado del comportamiento; el organismo de la distancia es de fuente del olor.

. Repetido algo:

Enseña a los animales señalados las respuestas o las acciones del comportamiento según hora. Ejemplos: cuando su hora de ser alimentado, mientras que los animales domésticos pueden ser extremadamente agresivos y pueden funcionar desde el comportamiento docto que les da el alimento basado en su agresividad. Si un olor se requiere antes de mano, después el animal doméstico realizará que su agresividad no les da ninguì□n alimento. El amo todavía proporciona el alimento después de que se haya emitido el olor, así que los animales domésticos recuerdan quién está tomando realmente el cuidado de él. El olor puede también recordar el amo que es hora de la comida.

. debe dominar para no ser el hogar, el alimento de las alimentaciones del dispositivo 15 minutos después de la hora untada. Del soporte los dispositivos de alimentación automatizados del alimento solamente existen.

. solamente las pequeñas cantidades de olor son necesarias ser olidas por los animales. Esto permite una pequeña cantidad de fuente del olor a dura por años. Si se emiten los olores del bajo volumen, el dueño puede ser notificado por el sonido [oscilador]. El oscilador puede juntarse con el lanzamiento del olor para entrenar a los animales domésticos vía dos modos que ocurren simultáneamente.

. TM: Oler el ™ accionado del dispositivo de entrenamiento del animal doméstico, ™ interactivo del motivador del comportamiento del olor.

-5J041 y 5J0411 son relacionados

El `ENTRETIENE = hospitalidad electrónicamente conducida para el animal doméstico y o su dueño.

5J0412-Pet-Enter. La hospitalidad llega a ser más realista emitiendo el ™ correspondiente de los olores

. El ™ del emisor del olor del juguete del animal doméstico crea un impacto más grande con el animal doméstico. El olor pudo ser emitido cuando el ™ del sensor de la vibración del juguete lo determina se está jugando con.

- Diversos olores pueden emanar según cuando y con cómo [W5] se juega.

- La invención adapta sus funciones para el usuario, el animal doméstico y o el uso.

3333

. Ver 5J041 relacionado: ™ del emisor del olor de la película: Los olores y otros estímulos se emiten para la gente según cualquier criterio.

PROTECCIÓN DEL MEDIO AMBIENTE/EP DEL `=

El ™ del collar de la protección del medio ambiente supervisa comportamiento del animal doméstico. Analiza el comportamiento del animal doméstico, después las guías él para aprender un mejor comportamiento. Más ideas son necesarias hacer este trabajo.

. Ejemplos del ™ de los controles de comportamiento del animal doméstico:

- Animales domésticos del bordón de las ayudas de la caza o de asustar la vida salvaje en peligro [esa vuela en su patio trasero].

- Cambios en la química de sangre del animal doméstico con cuaesquiera otras funciones asociadas del cuerpo que ocurran cuando practican ambientalmente señalado comportamiento antipático. Se busca la protección de la patente como los veterinarios pueden proporcionar mejores pistas en los mecanismos internos del cuerpo atados a los comportamientos en el futuro.

- Analizadores y sensores del `: analizador de sonidos, analizador visual, analizador del comportamiento.

- Monitores del ™ del implante de la protección del medio ambiente del animal doméstico vía los sensores in/outside el cuerpo del animal doméstico.

`GPS =

El ™ del GPS del animal doméstico sigue sus localizaciones cambiantes, y reacciona por consiguiente.

7J-07-Pet-GPS. ™ de la guía del GPS del animal doméstico

Automáticamente perros de guías adonde caminar.

- Llamar su ™ del hogar del animal doméstico: el animal doméstico consigue la comunicación para volver a casa, cuando el dueño presiona un botón. La invención da positivo y las señales negativas basadas en la dirección el perro están caminando.

- Guía de la trayectoria: permanecer en una trayectoria estrecha para no vagar en área undesignated. El más futuro de la trayectoria, mayor es el choque suave dado al perro.

. El alambre subterráneo puede señalar los límites deseados (existe sin el GPS). Tal cableado usado para el perímetro de una yarda sin una cerca; esto advierte que el perro con una señal suave se acerquen al alambre.

- debe perseguir la trayectoria cruzada cualquier manera [tal como varón que persigue a un perro femenino], el perro puede volver detrás a casa sobre el alambre sin el castigo, puesto que sobre la existencia, se desactiva el modo del castigo hasta que el perro consiga dentro de la zona otra vez.

- ™ del profesor de la trayectoria del animal doméstico: Puede enseñar a un animal doméstico a viajar en varias ocasiones vía una misma ruta enviando señales positivas, quizá cuando están dentro de 5 grados de la dirección correcta. El perro podría ser mensajero de clases, por ejemplo en emplazamientos de la obra grandes, o donde los caminos no se construyen en zonas ambientalmente sensibles.

- Juego del `para la gente basada en idea general. ™ direccional del juego de la señal: da la señal del "verde" cuando una persona está consiguiendo más cerca, y el "rojo" al caminar en una cierta dirección indeseable. El ganador es la persona que consigue a la destinación primero.

- Las trayectorias se pueden dirigir para ir guías las derecho, torcidas, semicirculares, del etc. alrededor de los obstáculos grandes basados en ™ visual basado en los satélites del analizador del GPS'.

2222

- se dan las transmisiones positivas cuando el animal doméstico está caminando dentro de 15 grados de la trayectoria correcta, y se dan las señales negativas si caminan más de 25 grados de la trayectoria señalada.

- Nuestras invenciones relacionadas diverso animal doméstico son ideales para los perros como un Sheppard alemán elegante. La fuerza también trabaja con los gatos, criaturas del agua como: delfines, vacas, cerdos, cordero, cabras, pájaros, reptiles, gusanos, etc.

. Ideas de la extensión:

- Invenciones que se adaptan a las necesidades señaladas.

- Mientras que una lista de tipos de los sonidos, de olores y de otras señales vía el collar podría ser obvia; las situaciones que accionarán reacciones automatizadas pueden ser exploradas. ¿Bajo qué circunstancias pudo un animal doméstico ser pedido tomar una trayectoria, o desviarse de la que están prendido?

. ™ del regulador del movimiento:

- sobre el sistema que identifica el movimiento de la persona y o el animal en zonas indeseadas emite sonidos desagradables adentro y o fuera de la gama del ser humano (este 3ultimo es preferred) de audiencia para disuadir la corriente y o las repeticiones futuras de la entrada (el moldeado psicologico también)

- animales quizás ciertos del tamaño se quieren para ser guardados fuera de una sección de un parque zoológico abierto (uno sin las paredes)

- animales domésticos de enseñanza donde no ir, qué a no hacer: e.g., evitar ciertas secciones de la casa, jardín; no funcionar hacia fuera la puerta principal...

3333

. Animales de la Animal-GPS-Zona = del confinamiento; sigue sus movimientos. Patentes de los E.E.U.U.: Receptor +5460124 para un sistema animal electrónico del confinamiento. [Esto es una interferencia mi KN # 1C-120 y 1C121]. Su patente publicó el 24 de octubre de 1995. Primero presentamos nuestro uso 10/1993 pero caducó. +5408956 método y aparato para los animales que controlan con el cercado electrónico. 4.95 publicados. Viejo número 1C-121. ™ de la guía del GPS del animal doméstico:

- El tds del sistema puede activar automáticamente la notificación al perro [si el dueño no puede llamar el animal doméstico w/in trasero el marco de tiempo señalado].

- El dueño y o el analizador automatizado puede supervisar las localizaciones cambiantes del animal doméstico, y reacciona por consiguiente.

- los terratenientes que quieren guardar a gente incorrecta del territorio, usuario pueden tener ("R") el control alejado u otro dispositivo para desactivar el sistema cuando están en la esta "zona indeseada"; gobiernos, compañías, etc que quieren inhibir sin embargo para no restringir seres indeseados de zonas; mantener la tierra

libre de muchos animales o gente del apisonamiento por razones biológicas; conseguir los animales ausentes en vista de las desventajas de cercas

. Inhibir el comportamiento animal con funciones de 1C-120.

- Ap: el controlar: palomas y otros pájaros indeseados en la ciudad, la granja, el etc; la dirección en la cual se induce a los animales que entren o no entren, permanecer, no permanecer; ratas y otros roedores; hacer que el animal doméstico los pájaros reduce sus sonidos vocales

Notas al pie de la página: alejado ("R"); exhibición (tipo de las demostraciones del sonido por decibelios, el etc); pp; P.M.; Reino Unido; todos; "mic"; portable; punto de ebullición; alerter; oscilador; vc; cuenta; tgh (hace sonidos para ahogar hacia fuera el tipo de maÌ□n ruido); carro; cp; uq; uip.

- Patentes de los E.E.U.U.: Receptor +5460124 para un sistema animal electrónico del confinamiento. [Esto es una interferencia mi KN # 1C-120 y 1C121]. Su patente publicó el 24 de octubre de 1995. KN archivó 10.93.

3C-040 abre la puerta del animal doméstico para el perro o el gato que busca in/out to/from jardín. O el sistema pudo responder simplemente a la corteza del animal o meow o rasguñar o empujar. El sistema no pudo también permitir la operación en ciertas horas...

la GUÍA del `= hace señas animales para hacer algo, para aguantar el aburrimiento de permanecer puesto, o para ir en alguna parte. Ejemplos:

- El analizador del comportamiento estudia el comportamiento del animal doméstico, después le induce a que se comporte de una diversa manera más deseable.

- El ™ del inductor del collar del animal doméstico emite: señales u olores que castigan maÌ□n comportamiento mientras que recompensa buen comportamiento.

- Dar los animales domésticos qué él quiere. E.G.: Alimento; o las señales el animal doméstico que su dueño a que [esperanzadamente] acarician, está disponible o quisieran que el animal doméstico viniera.

- confía grandemente en funciones Animal-Educativas (de otra subparte)

LA BÚSQUEDA DEL `Y REACCIONA =

™ amistoso del encuentro del perro: La señal de la invención dice a perro que la nueva persona es buena quién pudo dar una galleta. Esto ahorra mucha hora y vergulenza. El collar de perro busca una señal positiva. La invención reacciona a una buena señal comunicando un ™ amistoso de la señal al perro.

- Solamente el dueño sabe y puede cambiar qué señala transmitido por el visitante al collar del animal doméstico, comunicará al perro, que el encuentro es amistoso.

3333

El collar busca la emisión de la frecuencia de la gente señalada que usa un transmisor. Dice a perro que tal gente nueva para el perro es amistosa.

- para guardar a gente fraudulenta de abusar del sistema funciones de cada sistema en diversos códigos. Las señales tienen contraseñas del acceso que puedan ser cambiadas [por el dueño].
- D: persona = receptor del transmisor = del collar = notificación [ese collar reconoce a tal portador].

Fondo general Info en invenciones del animal doméstico:

Maneras de modificar el comportamiento de, y o de comunicación con los animales domésticos, animales. Muchos dirigen animales a los comportamientos deseados práctica.

Las invenciones y las piezas del animal doméstico del `se aplican especialmente a los animales domésticos y a los animales que pueden ser domesticados. Tiene usos para la gente, eg.: niños desordenados, o adultos mentalmente deteriorados. También los trabajos con cualquier otro organismo [de mudanza], e incluso las robustezas que tienen sensores/pueden educarse [basado en las señales/regeneración de las invenciones del animal doméstico].

FINAL DE LAS SUBPARTES DEL ANIMAL DOMÉSTICO

Archivo: Notas del animal doméstico/de la puerta del animal doméstico

NOTAS DE LA PUERTA DEL ANIMAL DOMÉSTICO DEL BOSQUEJO MUY ÁSPERO. VER LAS ACTUALIZACIONES EN PUBLICACIONES POSTERIORES. Los códigos y las abreviaturas usados probablemente no se aplican a nuestros glosarios.

El analizador del `/el sensor de movimiento visuales determina if/when un animal doméstico es en la posición correcta para comenzar/continuar y o extremo del proceso de la limpieza.

Opción movible de la limpieza de Astroturf: {un cierto tipo de encabezamiento aquí}. Limpiar el Doormat del animal doméstico de la pata con Astroturf, o una manta cierre-enganchada. El alfombrado se construye sobre los círculos e.g. los 3cm (el 1/2') en diámetro. Los círculos pueden dar vuelta lentamente, limpiar las patas.
. El perro tiene acceso a una rampa. La rampa apunta para arriba hacia la tapa de una aleta del perro.' La rampa bloquea el acceso.
- Cuando el perro consigue más cercano a la casa, su peso puede hacer la rampa levantar en la parte posterior. La rampa llega a ser horizontal, y ahora es una plataforma plana, extendiendo hacia fuera de la tapa de la aleta del perro'.
--O el perro sube simplemente sobre una plataforma plana en el primer lugar. (es decir ninguna rampa).
- El aire se puede lanzar, debido al peso del perro. El aire lanzado hace la plataforma descender lentamente.
- Mientras que la plataforma desciende, el carpeting de la hacer girar-rueda comienza a trabajar.
--El mecanismo de giro funciona en el lanzamiento del aire comprimido, o por la batería.

- Mientras que la plataforma desciende, resbala sobre un cierre en la aleta del perro.' Una vez que la aleta es unlocked el perro puede entrar.

--Alternativo, la aleta sigue abierta y el perro puede entrar, pues pronto la plataforma está bajo bastante, de modo que esté bloqueando no más la puerta.

--La plataforma levanta y llena de aire, sólo cuando el perro camina en él cuando él sale la casa.

. Un Astroturf o una cerradura de combinación alfombrada ("acceso)". La aleta está realmente en la forma de una rueda (vemos la parte del círculo que se pega fuera de la casa, como la rueda de giro en el precio tenemos razón [demostración de la TV en los E.E.U.U.]).

- Hay dos (o tres) círculos alfombrados de lado a lado.
- El animal doméstico tiene que resbalar las ruedas hacia abajo con sus patas. Éste es cómo ella limpia sus pies.

--Hay también una alfombra delante de la aleta del animal doméstico, limpiar los pies traseros.

- Cuando las ruedas se han dado vuelta quizá 180 grados, la puerta está abierta para el acceso.

--La rueda podría también ser non-circular, (como las ruedas de un tanque).

--El torneado de las ruedas podría producir un sano [comunicador sano saliente] del `(música, o maullidos).

. Una alfombra se puede hacer de un Astroturf plástico claro.

- El animal doméstico puede ver la luz debajo de la estera, que se mueve alrededor. [Gato] intenta atacar el movimiento, y por lo tanto limpia sus pies.

. La alfombra puede tener un mound móvil debajo de la superficie.

- Como si un ratón funcionaba debajo de la alfombra, el gato ataca el mound'. móvil.

. El animal doméstico camina sobre una estera circular que tenga una pared redonda, con una segunda pared externa.

- La pared externa sigue siendo inmóvil, pero la pared interna y el piso circular de la estera hacen girar lentamente.
- El animal doméstico guarda el dar vuelta para intentar y para hacer frente a la pared de la casa. Él no puede entrar todavía, porque la pared interna está bloqueando la aleta del animal doméstico.
- La pared externa no bloquea la aleta del animal doméstico.
- El animal doméstico limpia sus pies dándose vuelta en la estera.
- Eventual, tener acceso al animal doméstico usado para incorporar el dispositivo se ha dado vuelta hacia la casa, de modo que el animal doméstico ahora tenga acceso a la aleta del animal doméstico.

--El dispositivo se podía diseñar para parecer un castillo redondo, o alguì□n otro edificio familiar

La misma idea podía tomar la forma de la rueda de giro de un hámster. El animal doméstico tiene que caminar alrededor interior que una rueda alfombrada hasta la entrada se une a la aleta del animal doméstico.

. Whack-uno-Topo del animal doméstico'. Hay una alfombra delante de una aleta del animal doméstico. Hay nueve pequeños agujeros que hacen una formación cuadrada (3x3).

- Hacia fuera a partir del uno de los agujeros, un bocado aparecerá. El animal doméstico no sabrá qué agujero aparecerá el bocado.

--El bocado puede hacer estallar hacia fuera rápidamente de los agujeros, después desaparece, hasta finalmente él todavía miente en la tapa de un agujero, así que el animal doméstico puede tomarla fácilmente.

- El animal doméstico buscará juguetónamente para el bocado y limpiará simultáneamente sus pies.

. Laberinto del animal doméstico. El animal doméstico tiene que maniobrar con vestíbulos finos para conseguir a la aleta del animal doméstico, y esperanzadamente las patas son limpias para entonces.

. Escalera para limpiar las patas: Las escaleras de Astroturf de las subidas del animal doméstico entonces maniobran abajo de una diapositiva alfombrada escarpada hacia la aleta del animal doméstico

. Animal doméstico de la bola de bowling: El animal doméstico camina abajo de un carril minúsculo del bowling, y los golpes sobre los pernos absorbentes en él son manera a través de la aleta.

- Una variación podía ser a

. Piano del animal doméstico. Las llaves del piano se hacen de un material suave (es decir espuma de poliestireno). Las llaves del piano hacen camino a la aleta del animal doméstico.

- El animal doméstico juega una canción, pues ella camina sobre la imitación [las llaves del piano hacia la aleta del animal doméstico, y limpian simultáneamente sus pies debido a los terrones suaves de la llave del piano.

La etiqueta especial en el collar del animal doméstico acciona el contador de tiempo en que el sensor determina soportes del animal doméstico en la estera por la puerta del animal doméstico. El acceso de la puerta requiere la etiqueta.

- El contador de tiempo comienza a emitir un sonido breve y agudo [notificador del '] después de que el comienzo del período y del animal doméstico de la pausa a mezclarse en puerta de la estera y del rasguño antes de puerta abra. La superficie de la estera se podría poner en superficie de la puerta para limpiar las patas delanteras si el animal doméstico rasguña la puerta.

. El dispositivo desprendible de la rueda de ardilla cubierto con la superficie alfombrada se podría poner delante de la puerta, que comienza a moverse cuando el animal doméstico se coloca en ella.

- Funciona por tiempo predeterminado antes de parar y de abrir la puerta.

- El mismo tipo de dispositivo podría ser puesto dentro de puerta y ser accionado cuando el animal doméstico entra en la puerta. La rueda de ardilla funcionaría por tiempo del sistema para limpiar las patas del animal doméstico antes de apagar y de permitir que el animal doméstico entre en el sitio.

. Arandela robótica del piso. En vez de vacío robótico, cómo sobre arandela robótica del piso.

- Podría utilizar tipo limpiador de la fregona y del resplandor el' que no requiere el enjuague.

- Tendría cepillado, fregando la acción.

- Limitar la acción a un sitio con la barrera capaz de la posición, sensor del `, preprogramando. El limpiador volvería a la localización el comenzar o colocaría el sensor capaz del `para parar y para permitir que el piso se seque.

. El perrito sea Ronronear-hecho limpio/de la pata/abajo/Dog-gone de las patas suciedad

El perrito se mueve alrededor en el doormat exterior, puerta del perrito

da el acceso y reacciona por una toalla como la tela que cae sobre el umbral.

- El perrito funciona a través de la puerta del perrito y secado apagado.

- Las patas son limpias y la piel se limpia/se seca [de elementos de la lluvia o del exterior].

- Puede programar reaccionando a la lluvia [activar basado en el colector exterior de la lluvia.]

. La estera encendido dentro de la puerta recoge la suciedad adicional de las patas del perrito y alerta a mama que el perrito está en la casa.

- La mata de interior se puede programar con la voz de la mama, cuando es lluviosa hacia fuera el perrito mate de interior del comando de la voluntad a permanecer así que la mama puede venir comprobar las patas.

- El doormat de moda para emparejar décor nadie sabrá nunca que es un dispositivo de la perrito-limpieza.

- Cuando la mama está hacia fuera mata de interior puede ser programada para decir el perrito limpiar sus patas así como alabanza cuando el perrito frota en la mata.

. Sobre la pata acertada la mata de limpieza elogia el perrito.

. La sensibilidad de matas de interior y al aire libre puede ser cambios basados en condiciones atmosféricas.

- El día asoleado toma solamente uces par de trapos en el día mate, lluvioso dura para que el perrito consiga resultado deseado.

- Puede estar programa-por reaccionar a la condición de la yarda o a la previsión metereológica.

. Cuando la mata al aire libre es activada por el agua del perrito tira hacia fuera para limpiar entre los dedos del pie del perrito.

. La materia de interior tiene hairdryer como affecto y seca las patas del perrito.

. La abertura de la puerta del perrito se puede alinear con la tela absorbente para limpiar el perrito mientras que ella camina a través.

. El secador de pelo tiene gusto del dispositivo en el acceso del perrito.... como los secadores cuando usted saca de una colada de coche... el perrito es perfectamente seco al entrar en el área viva del hogar.

. Acceso Heated de la puerta del perrito para el tiempo frío.

. La puerta del perrito puede también ser cerrada y requerir el perrito sonar la campana para venir adentro.

- Con usar la misma habilidad como sea necesario para sacudir el perrito puede golpear ligeramente el timbre.

- La mama viene dejar el perrito adentro y cerciorarse de el perrito es limpio.

- La mama podría abrir la puerta del perrito por el telecontrol dondequiera adentro de la casa.

En vez de sonido del timbre el mensaje podía parecer a mama de la pantalla de la TV, déjame por favor adentro.'

. La entrada de la puerta tiene sensores para decir si los objetos extranjeros se traen dentro y fuera de la casa.

- Nada de exterior viene adentro y nada interior sale.
- Don' t vuelve a casa encontrar sus zapatos el flotar en la piscina.
- Ningunas criaturas de la sorpresa que viven en su hogar.

ANILLO DEL BAÑO DE .THE

. No querer perseguir Fido (animal doméstico) abajo para un uso del baño el anillo del baño y hacer que el baño mide el tiempo de la diversión y fácil.

- Llenar el tubo cubierto de tela del jabón preferido, engancharlo encima de la manguera y de la llamada Fido.
- Fido es limpio después de funcionar a través del tubo varias veces.

--Ningu□n lío o queja para la mama, Fido (animal doméstico) consigue ejercicio y limpia al mismo tiempo.

--Se siente bien a Fido... como un masaje del perrito....Fido será emocionado para el día del baño.

--Tan fácil los cabritos podrían dar a Fido un baño.

. IMPULSO SCOOPER:

- Ninguna necesidad de tomar el pooper-scooper en caminatas más.
- El ningu□n llevar alrededor de los excrementos del perrito mientras que hacia fuera y alrededor.
- El comedor del impulso rueda junto con usted.
- El perrito toma el cuidado del negocio y el comedor del impulso limpia.
- Usted nunca toca impulso o aún tiene que parar el caminar....el comedor del impulso (heces) alcanzará cuando está hecho.
- Mano teledirigida o determinada en el piloto automático.
- El comando come que el impulso' activará a comedor del impulso.
- Cuando se hacen las caminatas sellaron el bolso se expulsan para la disposición de la basura.
- Cada uno es feliz, el perrito consigue la caminata y la mama no tiene que limpiar.

--Las ciudades están haciendo cumplir retiro de caída... nunca consiguen multadas

. ¡Compinche del telecontrol de FETCHER TV!

. ¡Perder el telecontrol otra vez! Apenas gritar el alcance mi telecontrol'.

- Fetcher y telecontrol programados para obrar recíprocamente junto.
- Fetcher sabe siempre donde está y puede rodar a él y traer el telecontrol detrás.
- Fetcher reacciona basado en las palabras claves habladas.
- Fetcher puede también almacenar los telecontroles mientras que es parado.
- Fetcher recordará sus programas del favorito TV y le recordará cuando están prendido.

--El aspecto de Fetcher puede ser el de una estatua artística.

. La solución blanca de la cerca de piquete

. Poner los sensores suaves de la cerda a lo largo del lado del hogar y crear una trayectoria que conduzca a la puerta con la entrada del animal doméstico. Una cerca muy baja (es decir altura de un gato medio) funcionará con la misma longitud y creará un pasillo con el edificio que actúa como la otra pared.

- El animal doméstico aprenderá que el acceso será concedido solamente si camina el animal doméstico la longitud entera del camino'.

- Para los propósitos del entrenamiento, el dueño podría comenzar con una longitud más corta petway (camino) y después agregar el suelo adicional/el cercado mientras que el animal doméstico aprende.

--Obviamente, esta idea es pesadamente dependiente en el hogar que tiene por lo menos una pequeña cantidad de espacio al lado de la puerta del animal doméstico.

- Podría incluso haber los arcos que el dueño podría ajustar a la altura del animal doméstico que pasa el petway'.

- Las cerdas limpiarán las patas del animal doméstico y los arcos secarán la piel/limpian la ruina como camina el animal doméstico debajo.

. Acariciar la idea una robusteza, algo como aspirador automático del Roomba', pero éste hará los rastros sutiles del olor para que los animales domésticos sigan, bastante débiles esa gente
no puede olerlos. Será como aromatherapy para los animales domésticos, y algo guardar
interesaron cuando dentro los pegan.

. La idea de la pausa una cuchara del termómetro de la taza de café, así que gente sabe para detenerse brevemente antes de beber si la bebida es demasiado caliente.

. Puerta del sonido de la puerta-HOLL del animal doméstico y del animal doméstico de la voz. ¡Una idea multimillonaria del dólar! Apenas para la diversión sería muy cómica si la puerta del animal doméstico haría sonidos tales como limpiar con un chorro de agua de un tocador como el animal doméstico iba exterior o una voz diciendo que estaré detrás' u hola cada uno yo está detrás!'

- Este dispositivo podía ser registrable a la música, a la voz o a los sonidos. El almacén del animal doméstico suministraría los pedacitos adicionales de los sonidos para la venta y los soportes lógico inalterable registrables. Este dispositivo debe darle capacidades para registrar su propio decir de la voz no está hacia fuera de largo' ni no viene a la derecha detrás para un convite' ni no olvida limpiar sus patas' que usted debe poder jugar su música preferida, el artista de la canción o el musical. Ésta podía ser diversión sin fin para cada uno.

--Más para la seguridad agregada usted puede agregar un sonido del carillón de puerta si usted quiso saber si usted es animales domésticos acaba de ir afuera o se volvió adentro.

Puerta única del animal doméstico - removedor de la suciedad de la pata

. El sistema/la unidad consistiría en tres porciones: material de interior de la estera (suave, absorbente con los sensores discretos), puerta del animal doméstico con la exhibición del LCD, y al aire libre estera (cerdas cortas en la superficie para quitar la ruina, bandeja-como parte inferior con el sistema para lanzar la pequeña cantidad de agua para las patas de la limpieza)

- Los' sensores en ambas esteras responderían al peso del animal doméstico, opción para fijar el peso de animales domésticos múltiples

--La necesidad de fijar el peso mínimo para evitar que las ardillas/las mofetas entren en la casa o los sensores reconoce la forma/la estructura de su animal doméstico

-' Salidas y el entrar del control de sensores

--El' sensor sigue si un animal doméstico está al aire libre, cuánto tiempo ha estado hacia fuera y exhibe la información para el dueño.

--El' acceso se puede programar para permitir que el animal doméstico salga a veces solamente, los comandos y/o las canciones se podrían utilizar para señalar al animal doméstico que es hora de salir y cuando es hora de venir adentro

--La puerta puede no dejar el animal doméstico hacia fuera ocasionalmente, pero permitirá siempre que el animal doméstico entre el hogar de nuevo

--La puerta no se abrirá durante los vientos extremos o las lluvias poderosas

- Los' sensores en puerta responden a los niveles de la presión barométrica/de la humedad y lanzan una cantidad uniformemente distribuida de agua bajo superficie del cepillo de la estera al aire libre para la limpieza de la pata cuando es que llueve o que nieva y las patas son probables ser fangosas.

- Puede ser utilizado para los propósitos del entrenamiento

--La voz preprogramada puede publicar una serie de comandos en los intervalos well-timed (sentarse, mentir, estancia) de acariciar; los sensores pueden determinar si el animal doméstico está siguiendo el comando por la distribución del peso corporal

--El dueño tiene opción para registrar comandos/mensajes en su propia voz.

--Usar el sonido con el sistema podría ser el impedimento para las ardillas/las mofetas - voz normal, nada que asustaría el animal doméstico, apenas un animal salvaje que no se utiliza a oír una voz humana. Por ejemplo, el sistema se puede programar para un perro de 15 libras. Si un animal de 5 libras estuviera en la estera al aire libre, el sistema diría en una voz monótona, usted no es Fido.' en varias ocasiones hasta el animal deja la estera Cuanto más de largo el animal doméstico espera frenéticamente, caminan más alrededor y quitan la suciedad de su pata. Al principio no hay tiempo de espera, después aumenta en un cierto plazo.

- Tener cuidado sobre el cambio del tiempo de espera. El animal doméstico puede intentar entrar cuando la puerta es cerrada, golpeó su hocico, y no como usar la puerta

- Mayo quiere tener solamente una forma para que el animal doméstico gane la entrada. Si hace lo que ha supuesto a la puerta se abre cada vez. La consistencia es la fundación del entrenamiento animal.

Excepto la puerta del animal doméstico - removedor de la suciedad de la pata: Considerar las cerdas suaves' que el animal doméstico tendría que aprender patinar sus patas a través para ayudarles en la limpieza. Aquí está un par otras ideas, si el precio no era una consideración (usted dicho al libre flujo la creatividad), para este mercado de un extremo más alto que usted mencionó que la puerta del animal doméstico está dirigida:

. Spritzer variable de la entrada (rociador) - tener puerta del animal doméstico configurada con poco rociadores a lo largo de la circunferencia interna de la puerta del animal doméstico se enganchan que hasta una variedad de cartuchos conectables del spritzer del sistema. - El dueño puede (cartuchos de la compra) fijar el spritzer para rociar la de-pulga, de-piojos, de-hacen tictac mecanografiar la sustancia para los animales domésticos al aire libre que cogen y traen en el hogar a variedad entera de parásitos del parásito. Cuando el animal doméstico pasa a través de la puerta consiguen varias explosiones del aerosol a lo largo de la longitud de su cuerpo.

-- El Spritzer se puede fijar para rociar fragancia en animal doméstico para ayudar con el olor del animal doméstico quizá para cuando las huéspedes están viniendo de visita dirigirse.

. Acariciar la unidad de la combinación del Doormat de la puerta, donde el doormat tiene sensores adentro él para realizar una variedad de funciones. El doormat se puede conectar vía ondas de radio a la puerta del animal doméstico a la cual tiene una exhibición de keypad/LCD comunicar entre los dispositivos combinados por ejemplo:

- El Doormat puede servir como escala no perder de vista el peso del animal doméstico (puede alertar el dueño a cualquier cambio importante en peso, épocas pudo necesitar ver a un veterinario).

-- El dueño puede ajustar la estera para detectar el tamaño particular del animal doméstico del animal que está buscando actual la entrada a través de la puerta del animal doméstico. Así la función de la escala del doormat puede también actuar como rasgo de seguridad, donde es no permite que la puerta del animal doméstico resbale abierto (o abrir), en el caso que el peso es demasiado drástico diferente que programado peso (aceptado) de los animales domésticos del dueño. Para no permitir otro animales domésticos de la vecindad, roedores, y animales más grandes (seres humanos) para tener acceso a la casa del dueño (apenas porque limpiaron sus pies en la puerta).

-- El Doormat puede servir la función según lo mencionado en el ejemplo a la señal sonora el dueño cuando el animal doméstico se coloca en él, de modo que un dueño pueda venir cheque animal doméstico antes de la entrada.

Ideas materiales adicionales de la estera de puerta:

. El doormat del soplador del piso se puede hacer de la estera similar a la cocina industrial esteras, que tienen un manojo de agujeros en la estera de goma (aunque los agujeros en animal doméstico la estera de puerta tendría que ser una poco más pequeña en diámetro) - poder

todavía incorporar el aspecto suave de las cerdas en este diseño.

-- Debajo de la estera tener cierta clase de sistema del soplador del aire poco jet del aire rociadores que libremente se mueven/rodillo (en bolas o tales de pista) debajo del superficie de la estera, y que tienen pequeños sensores que puedan detectar dónde la presión está en la estera (y así donde cada pata está situada en la puerta estera), y de que rodar debajo de cada pata para distribuir una explosión aire concentrado (no demasiado fuerte lastimar el animal doméstico, pero soplado bastante a desalojar la suciedad, fango, agua, la nieve que pudo haber acumulado en las patas) - una vez que se ha soplado cada pata 3 veces, la estera comunica al animal doméstico la puerta para resbalar abierto (o abrir), y el animal doméstico se concede la entrada.

-- Las explosiones del aire debajo de cada pata también ayudarían al animal doméstico a mover las patas alrededor en de la estera de la limpieza.

. Tomándole medida más lejos cuál es el tipo ideal de superficie del doormat que podría la mejor ayuda en la limpieza de cada uno de los muchos tipos de condiciones de la pata . Aero- doormat- de la bandeja del gel por ejemplo, en la NASA utilizaron un tipo de aero- gelificarse, que puede ser la sustancia porosa y fuerte, que ella utilizó como papel matamoscas para coger el stardust- que si la consistencia del gel puede ser ajustada para tener en cuenta los animales (quizás incluso seres humanos) al paso encendido y limpiar sus patas (zapatos). - El gel poroso semipermeable (quizá similar a esas criaturas pegajosas del cabrito, que se hacen fuera de alguno gelatinosas material parecido a la goma, donde pueden ser lanzadas en una ventana y la criatura pegará y trabajará lentamente su manera abajo de la ventana hasta el juguete recoge bastante polvo y suciedad en su sustancia semi pegajosa, y necesita para ser lavado apagado).

-- La aero- estera del gel podía actuar como papel matamoscas a la suciedad, fango, agua, nieve, pero obviamente no tan pegajoso que el animal doméstico conseguiría pegado en él. Si la aero- estera del gel estaba del ness poroso correcto, podría atrapar todos los tipos de suciedad y de agua y permiten que la pata (zapato) tire libremente con a affecto de limpieza.

-- La aero- estera del gel se puede encajonar en una variedad de niveles inferiores, de que ayudar en la función y la reutilidad autolimpiadores de la estera. Para ejemplo:

--La aero- estera del gel puede reclinarse sobre un tipo bandeja del tamiz del metal (como a Tamiz del espagueti, un manojo de pequeños agujeros a los cuales permitir solamente el líquido pasar a través), y debajo de la bandeja del tamiz del metal puede haber un segundo acodar que actúa como una bandeja del cubo de hielo. Que agrega solamente pares avanza a poquitos profundizado a la estera.

-- La bandeja del tamiz del metal tiene componentes de la calefacción construidos dentro de ella que acariciar la pieza de la puerta keypad/LCD de la unidad combinada puede seleccionar y activar.
-- Cuando la aero- estera del piso del gel llega a ser suficientemente llena de suciedad y regar, el componente de la calefacción/las bobinas puede ser activado (la seguridad sabia, puede activarse solamente cuando ninguì□n animal doméstico o persona se está colocando en la estera), y qué necesidad de alcanzar solamente un cambio leve en su calefacción concentrada para derretir la aero- sustancia del gel en su forma líquida, que entonces pasa con debajo el tamiz metal la bandeja, entrando el más futuro por debajo la formación de la capa del tray, donde la aero- poder (heated) del líquido del gel recongeal en ella es la forma del gel cuando el elemento de calefacción automáticamente apagan en minutos del x.
-- La bandeja del tamiz del metal se puede levantar del bastidor de estera de puerta y es rocas del fango de la suciedad que el contenido se puede desechar de la bandeja, y el aero- gel (estera recongealed) se puede levantar de su bandeja de congelación (que debe flotar en el agua que también pasó a través del tamiz bandeja, pero que no congeló en la temperatura ambiente la poder del agua ser dejar hacia fuera vía el enchufe tapado con corcho o de desplazamiento (como exceso del agua del refrigerador del pecho de hielo después de la comida campestre de un día). Este proceso permite iguales aero- gel que se utilizará y reutilizado muchas veces.
-- Los aero- tipos múltiples del gel pudieron necesitar ser creado para extremadamente ambientes calientes/fríos.

Kit fácil de la puerta del animal doméstico de la instalación para coger el polvo y la suciedad
- Pasos del animal doméstico a través de la puerta del animal doméstico y del túnel circular o recto atado del diámetro de 2, 4 o 6 pies
--El túnel evita que el tiempo inclemente alcance adentro
--El animal doméstico camina encendido y puede ser rodeado por la tela permanentemente cargada del polímero que atrae la suciedad, el polvo, la pelusa y otras partículas como un imán.
--La tela coge exceso de polvo y de suciedad de las patas y de la capa del animal doméstico.
--En el extremo del túnel, el animal doméstico camina en su jaula del animal doméstico (la jaula puede coger animales perdidos también)
--Mientras que el animal doméstico camina en su jaula del animal doméstico, los anillos de una campana o los flashes o las estancias de una luz encendido (o hace los tres) para convocar al dueño así que lo pueden examinar el animal doméstico para saber si hay exceso de suciedad.
--La jaula sostiene el animal doméstico hasta que el dueño aparezca en la escena
--La jaula puede ser grande y no debe alarmar el animal doméstico, puesto que puede sostener el agua y el alimento.

CONCLUYE ESTA SECCIÓN DE LAS NOTAS DE LA PUERTA DEL ANIMAL DOMÉSTICO DEL BOSQUEJO ÁSPERO

Extensiones creativas en ideas de la invención del animal doméstico
Entradas de la innovación
IdeaSpringboard.org

Qué acaricia puede conseguir de nuevas invenciones salvajes:
. Los animales domésticos aman el alimento, el amor, el juego, y la exploración. ¿Qué invenciones pudieron dar animales domésticos qué aman? Esta buena inspiración para que maneras creativas entreguen lo que aman.

Qué dueños podrían querer de su invención mágica del animal doméstico de los genios:
. El animal doméstico creativo se ocupa, especialmente si el animal doméstico es solo. ¡Imaginarse los juguetes.!
. Un dueño del animal doméstico que vive en una isla tropical tiene un animal doméstico inusual. ¿Cómo obran recíprocamente?
. Una persona perjudicada ama su perro o gato. Pero la persona puede ser deteriorada físicamente, visualmente o audiblemente. ¿Cómo gozan creativo el evitar de su desventaja? ¡Son así que envuelto para arriba con su animal doméstico, olvidan su inhabilidad.!
. ¿Cómo pueden los animales ayudar a la protección del medio ambiente? ¿Qué puede ser que él haga al vagar alrededor de con./desc. un correo?

Animal doméstico Comings y Goings: ¿Qué diversión pudo el animal doméstico ser hasta?
¿- A o desde dónde?
¿- Cómo viajado?
¿- Cómo el dueño creativo piensa de porqué es el animal doméstico que viene o que va?
¿- Por qué el dueño quiere el animal doméstico en alguna parte?
¿- Qué puede, es o sucederá?
¿- Qué tipo de juguete o de adminículo pudo el animal doméstico tener?
¿- Cuándo el animal doméstico está viniendo o va? Día, noche, cuando el animal doméstico pudo estar en calor.

Maneras nuevas para que animales domésticos y seres humanos comuniquen:

- Una manera de divertirse más.

- Una nueva manera de enseñar su animal doméstico a un truco. ¿Qué podía ser una diversión o un truco educativo del animal doméstico?

Horsing alrededor:

¿- Cómo el animal doméstico quiere jugar, y con qué?

¿- Cómo pudo el juguete electrónico mágico sorprender y excitar positivamente el animal doméstico?

¿- Qué podía el animal doméstico aprender del chisme interesante?

- Puede aparecer un chisme impar a una perspectiva de la persona, pero los animales domésticos son curiosamente razonables si pueden reírse cierto con él.

"Lupulización de la subsistencia. Juego más allá de la zona que usted acaba de pensar adentro.!" de Steven Kays.

Patentes más relacionadas de los E.E.U.U.:

Dispositivo de entrenamiento de 6.799.537 animales domésticos [telecontrol del dueño usado para castigar el perro al raspar]
Con tal que sea un dispositivo de entrenamiento del animal doméstico que abarca una sección de recepción sin hilos usada por un animal doméstico, la sección de recepción sin hilos incluyendo una unidad de voz, una unidad de recepción sin hilos, una unidad de la detección, una segunda unidad microprocesadora, una segunda unidad de exhibición, una unidad de la vibración del motor, una unidad de poca intensidad de alto voltaje de la descarga, y una unidad del decodificador, y una sección sin hilos de la transmisión se sostuvieron por un dueño. En un caso del animal doméstico que raspa continuamente, el dueño puede activar la sección sin hilos de la transmisión para controlar la sección de recepción sin hilos para jugar un mensaje registrado para ordenar el animal doméstico parar el raspar o si arriba haber fallado, incluso activa la unidad de la vibración del motor para generar la vibración en el animal doméstico o la unidad de poca intensidad de alto voltaje de la descarga para generar de poca intensidad de alto voltaje para aplicarse en el animal doméstico para parar el descortezamiento.

Collar electrónico 5.815.077 para los animales de situación y de entrenamiento
Un dispositivo para localizar y entrenar a un animal incluye un transmisor de mano y un montaje de collar electrónico de múltiples funciones que se usarán por el animal. El montaje de collar electrónico incluye un receptor para recibir señales del transmisor. Un microprocesador conectó con los procesos del receptor las señales y está conectado con un receptor acústico, un sensor de los sonidos, un estimulador del electroshock, y un sensor de movimiento montado en el collar. El transmisor puede programar el montaje de collar y ordenarlo en una de varios modos o funciones para localizar y entrenar al animal. En la situación o el modo más sano, el receptor acústico emite sonidos humano audibles para indicar la localización del animal. En un modo de

entrenamiento, el sensor de los sonidos detecta cuando el animal está haciendo ruidos indeseables, tales como descortezamiento, y el microprocesador hace que el estimulador entregue un choque al animal para el control del descortezamiento. En otro modo del entrenamiento, el sensor de movimiento detecta si el animal está en una posición punteaguda y el microprocesador, el receptor acústico, y la recompensa del estimulador el animal con un tono o aplica un choque por consiguiente. Hasta ahora, tal combinación de hardware y las funciones no se han proporcionado en un solo montaje de collar.

Monitor del collar de la pulga - collar 4.350.122 de la interceptación del insecto de la patente de los E.E.U.U.: A no [la invención es básicamente apenas este extracto - está sin atracciones del olor, o recepticals visibles y reemplazables]. Extracto: el collar venenoso de la interceptación de la pulga para los perros y los gatos está bajo la forma de miembro del collar o del accesorio del collar que tiene hendiduras oscuras en él. Las hendiduras están cubiertas con o contienen una sustancia pegajosa que atrape y sostenga cualquier pulga que la inscribe. Las pulgas de tal modo se atrapan y se matan sin poner en peligro los animales domésticos en los cuales se utiliza el collar, y sin las personas que sujetan que entran en contacto con el animal doméstico a los venenos dañosos.

TERMINA ESTA SECCIÓN RELACIONADA ANIMAL DOMÉSTICO DE LAS INVENCIONES

SUBPARTES DE S DE LA FUNCIÓN DE LA PREDICCIÓN'

¡Utilizar nuestra solicitud de patente Masterminded de mejorar sus ideas de la invención! Aprender cómo es más rápido y más fácil autorizar que intentando evitar esta solicitud de patente. Llamar (+1) 707-428-5000 www.LicenseItToday.com

Info misceláneo:

. - mejor desarrollar cómo "mandar la cuenta" el customers= después de jugar al "juego " = usuario (jugador) = sube con nuevas ideas.

. Tipos de predicciones. Cómo el sistema se adapta a los deseos previstos del usuario:

- hacer las "imágenes" que predice que el usuario quiere. "Artista": cómo el artista generará "imágenes" y cualquier obstáculo.
- movimientos sí mismo según lo predicho: "distancer", "picosegundo", "picosegundo-zona"
- "corregir"/querer el material "corregido"
+ cómo el usuario quiere "ser entretenido"; o jugarse con (kn) los "juegos"
- Predice donde los objetos perdidos pudieron estar. Localizador: búsqueda para encontrar objetos (perdidos). Uso con el "localizador".

+ cómo el usuario quiere despertar por mañana: alarma de la "mañana". Eg.: las alarmas de la mañana del día laborable diferencian a partir de mañanas del día de fiesta.

- utilizar (iguales) producto (del kn) diferentemente: "multiusos".

+ cómo notificarse mejor: "notificador". Diversas circunstancias pueden pedir formas de diferenciación de notificación.

- El diseño mejorado incluye a usuario mejorado que interconecta, eg.: inclusión de características deseadas, facilidad de empleo, retiro de las trampas de software (donde el usuario no puede volver fácilmente al menú principal, o no entiende cómo proceder al punto deseado). Éste es también un tipo de interruptor del cad [diseño automatizado]; y "adaptarse".

Otro:

- querer sus preguntas contestadas; y prediciendo qué preguntas harán.

- cómo cualquier cosa bien puede ser w5 "encaminado"

- querer el siguiente ejecutado en el diseño de producto (del kn) para un mejor uso: "estado"; "cuenta"; "nr"; y el resto de partes IMI y de las subpartes; y todo el KN.

- Ver la "guía": instructor del juego 2J02: cuál "predice" el tipo movimientos que será: apreciado por el jugador; jugado por el jugador opuesto. De acuerdo con UIP-DB (que fue compilado sobre cada juego jugado).

- 'Juego: u (usuario) asigna perfiles del comportamiento a los "carácteres" del juego....explicación necesaria; saber cuándo/donde (w5) necesidad del "nr" de ser colocado; el uip (ayudas) desarrolla el "perfil del comportamiento" del "carácter".

. Dibujo de OTD: U = "predice" (qué u quiere, o qué ocurrirá (en el ambiente; uip-adaptar) el ~ C = TENER ACCESO (cómo el pirata informático se comportará, ba=access) A LOS VAGOS de // del ANALIZADOR de // del ARTISTA de // (qué imágenes u tiene gusto) () (cómo el acto del usuario/"reaccionará"; un sistema psíquico o del taro automatizado del interruptor (software del `) que considera el comportamiento del u; ver el interruptor del taro de KN (invención) probablemente en CUENTA del directorio A) // (cómo presentar la información/el material de la manera por el que el usuario incurra en mayores cargas, eg.: da a más del cliente de la información puede querer) el OSCILADOR MULTIUSOS de // EDIT (predice quién quiere u el material corregido) // EDUC (predice que qué prueba pedir/cómo u se realizará en el session= "educativo" del interruptor y se adapta por consiguiente) // (predice diferentemente según el usuario) // o NR (la mejor manera NR debe alertar u) las BÚSQUEDAS de // de la CUENTA de // del RANURADOR de // Q () // R (`teledirigido) () // de la Picosegundo-Zona de la banda de // () // () () () y REACCIONA () la PISTA de // TDS () // T () // del ANALIZADOR de SONIDOS de // del SENSOR de // () () () // el UIP () ANALIZADOR VISUAL DE // () // VR () // WA ().

- Str de la búsqueda de la patente: predecir y (software o computadora o programa).

--Patentes de los E.E.U.U.: 4141548 aparatos del juego para el uso conjuntamente con la visión de un deporte de espectador.

. Predice algoritmos:

- dibujo de la descripción: el usuario [con sus necesidades sabidas por el sistema] = k/sensor/las funciones adaptó para el usuario = el analizador [vagos, sastre, uip-DB].

- paso 1 - recogida del Info: Uip-DB (base de datos del `) = analizador recoge/estudia los datos aplicables [según lo medido por la cuenta] = a la predicción señalada señalada.

- paso 2 - prediciendo: las características [vagos] de los usuarios y del sistema/de la situación en los cuales el usuario interconectará son compared= con las conclusiones analizadas [cuentas correspondientes de w] para: panoramas típicos del caso del múltiplo que pueden ocurrir [al sistema/al usuario]; qué puede ocurrir incluso después se ha adaptado el sistema/(simboliza "y o ") usuario dirigido correctamente. - > esto lleva al sistema que predice mejor el scenarios= probable así que el sistema puede incluso mejorar 'sastre/guía.

- paso 3A - adaptación del sistema al usuario: las funciones de sistema ['programas/interfaz/forma de obrar recíprocamente] se corrigen/se alteran [mejor] para emparejar el perfil de usuario.

- Y o paso 3B - características particulares usuario-sistema de educación/rectoras: esas características que necesitan el ajuste [según lo dictado cerca predijo el analizador] se alteran. Ver la guía, educarla.

- el paso 4 - analiza cómo [con eficacia] el usuario está obrando recíprocamente con el sistema: capacidad del usuario de la cuenta de utilizar el sistema [vía: cuestionario; errores hechos por el usuario; vagos; con cómo el usuario de los resultados está consiguiendo de cerca el fósforo [uip-DB (base de datos del `) de u y o de sus necesidades; qué u pidió; qué u consigue o quiere normalmente (históricamente (en otros sistemas))] = el sistema re-se adapta [tantas veces cuanto sea necesario].

- paso el 5% - mejora en curso de la adaptación - algoritmo de la lógica confusa: las necesidades del u cambian de vez en cuando = analizador necesitan: la actualización predice y adapta.

. --es decir: mientras que el sistema mejora la respuesta del u del itself= puede ser mejor, pero aún no ideal= en este caso el analyzes= adicional del sistema después re-se adapta. Si las necesidades de usuario y todas las circunstancias nunca cambiadas, sistema pudieron haber desarrollado eventual las fórmulas para la mejor manera puede adaptarse. Sin embargo, puesto que el mundo está sobre cambio perpetuo, las nuevas predicciones y la adaptación están en curso. Para reducir las dificultades para el usuario haciendo frente a un sistema constantemente cambiante, que puede requerir [algunos] volver a aprender del sistema, el usuario puede limitar la adaptación cambiante al grado deseado [por u].

- D: El sistema se adapta to= cómo predice que puede el usuario:

- Las funciones/las ventajas de predicen: anticipar; concluir; conjetura; pronóstico; conjetura; deducir; juez; presumir; psych hacia fuera; conjetura; pensar; prever [el futuro]; asimiento

ACCESO =

- predice el "acceso frustrado": vía cortar; dificultades encontradas por los accessors legítimos.

- Acceso: la fabricación del acceso más fácil/harder= según el acceso de la cuenta asigna a accessor.

VAGOS = peligro o dificultades en usuario de w que obra recíprocamente. Es decir las ocasiones para cualquier tipo usuario del daño pueden incurrir en y o recibir. Los tailorings usuario/sistema se dirigen lejos de áreas problemáticas potenciales [al grado de predijeron que la cuenta una ocurrencia tan negativa es probable]:

- producto alquilado: qué daños el usuario puede hacer:

. –por lo tanto el sistema sugiere un modelo que sea menos probable ser dañado, porque su menos valioso, o más robusto, o más capaz de adaptar al usuario.

- corporación se emplean cerca: questionnares de los estudios del empleado; patrones anteriores; compañeros de trabajo; clientes [quién interconectaron a empleado de w (con)].

- las compañías subcontrataron para hacer el trabajo señalado:

La CÁMARA = predice que cámara del interno de las acciones/del movements= del objeto de la blanco sigue más rápidamente los cambios del objeto. Eg.: enfocan o las cacerolas donde predicen a la persona [w5] para moverse.

- especialmente útil si hay lentes limitadas disponibles, y sistema (sistema electrónico) debe dar prioridad a qué necesidades de ser seguido/analizaba visualmente.

BASE DE DATOS - qué predicen aplicaciones de prever el futuro:

en la edición está no sólo la exactitud de la información usada para predecir, pero [los sistemas/el usuario] la opción de cuál a utilizar en el proceso de la predicción; la propensión estimada del usuario de actuar/reacciona debido a las circunstancias:

- Astroglogy: usuario de los estudios/fecha de nacimiento del sistema, o fabricación [del final]; qué planetas/constelaciones son o gobernarán [cuando el sistema debe ser utilizado].

. Medios de comunicación: sabido para influenciar el comportamiento del usuario.

- Propaganda, eg.: McDonald's que hace publicidad de la publicidad excesiva de hamburguesas descontadas, puede inducir más al usuario que piense en hamburguesas o el alimento relacionado, material tan corregido con las hamburguesas [cerca de tiempo de la comida], puede conseguir una mejor respuesta de usuario durante tales campañas publicitarias.

- Acontecimientos de noticias: Ejemplos: cambios en indicadores económicos, precios de las acciones, o tarifas de interés general; guerras.

. Misceláneo:

- VAGOS de: usuario; acontecimientos. Analizando los diversos determinantes/causas para la personalidad o el moods= del usuario [actual/previsto] vía el ba= predecir puede estimaba los probables panoramas futuros/cómo los sistemas se pueden adaptar mejor para el usuario.

- Ver el UIP: El sastre necesita la información; su proceso de analizar cómo adaptar es muy relacionado.

- Qué la otra gente [compañeros de trabajo] siente alrededor: el usuario; sucesos actuales [que pueden efectuar el humor del otro usuario o agenda o las necesidades]. Predecir también analiza los questionnares de la gente.

- Patrones de tiempo.

. --temperatura; humedad; percipitation; presión atmosférica; vientos; iones; etc.

. --patrones actuales/típicos por épocas aplicables del año/de predicciones del meterologist.

. --influencias del ejemplo en usuarios: mecanografiar el tiempo y su influencia encendido si los usuarios son más probables permanecer adentro o al aire libre; efecto sobre la nerviosismo o el nivel de energía [menos del usuario en caliente y humedad].

. - música/sonidos oídos por los usuarios en: fondo [de donde están obrando recíprocamente con usar del sistema predecir]; antes qué usuario oído, u oirá más adelante; frustración causada por los sonidos unliked [de la construcción], o música.

EDIT =

- 'Imágenes de los sastres [texto] para el usuario.
- Predice qué contenido puede necesitar más probablemente el usuario: información anotada.

La EDUCACIÓN = el sistema del predicted= de la curva de aprendizaje del usuario entonces reacciona cerca: guía por consiguiente; progresivamente haciendo el material más desafiádor o el complejo [tgh].

Juego del ~ de la experiencia del ~ del ejercicio del ~ de la HOSPITALIDAD =
predice qué satisfará el humor del usuario en los sastres futuros señalados del times= por consiguiente.

La GUÍA = predice faltas potenciales o apuros [del usuario].

INTERACTIVO = forma de adaptación interactiva basada en se predice qué.

El MIC = predice qué necesidades de ser w5 registrado.

La MAÑANA = predice el tipo de day= próximo con el tipo el emparejar de la alarma. Eg.: si el usuario despierta siempre en 8am cada jueves, con todo olvidó fijar la alarma el pasado miércoles, notificará último miércoles o Thur que una alarma no fue fijada.

MULTIUSOS =

- predice [delante de tiempo] qué usuario puede utilizar el system= w5
- acordando al patrón quién está utilizando del sistema del sistema w5= predice cómo adaptar el sistema.

NOTIFICADOR/ALARMA DE LA MAÑANA =

- predice el tipo de notificación que conseguirá los mejores resultados: la mayoría de la atención, crea el humor deseado en usuario.
- predice si la notificación es necesaria, vía: estado o cuenta de ocurrencias y o usuario y su situación.

+ ORDEN Y SINCRONIZACIÓN =
- basado en la orden y la sincronización del sistema del occurrences= predice resultado de: el qué usuario o el otro sistema puede hacer.
- la orden y la sincronización de los efectos de sistema/functions= se adaptan a un mejor fósforo qué predicción sugiere.

El OSCILADOR (comunicador sano saliente) = predice cómo adaptar su sonido a: humor del usuario del fósforo [deseado]

El paladio (dispositivo de colocación, GPS) = predice que la persona w5 u objeto se moverá, y donde puede terminar para arriba

. Cómo predice: estudiando la combinación del objeto:

- vagos: porqué se movió/hizo lo que hizo w5= por lo tanto cuando predecir reconoce el repeated= [similar] de los patrones que predice w5 del movimiento del objeto.

. Reacciones basadas en cambios previstos en el movimiento/la función: - 'siguiendo: esas formas de seguimiento más aplicables a las acciones de w5 del objeto pueden ser iniciadas. Eg.: cámaras aplicables, micrófonos, sensores, notificación de los protectores de seguridad humanos.

Q = los VAGOS (analizador del comportamiento del `) pueden predeterminar una lista de preguntas potenciales planteadas por [usuario] = acelerando el tiempo que toma para conseguir respuesta al usuario.

R = el menú [en la pequeña pantalla portable] = demuestra más fácilmente que ésos el usuario del predicts= del sistema de las opciones puede ser en mayor necesidad de.

El RANURADOR = predice donde el usuario puede tener gusto de tenerlo los uno mismo encaminados en sistema.

La PANTALLA = predice que el tipo de color y o de usuario de la tipografía puede preferir.

BUSCAR y REACCIONAR = predice qué necesidades de ser buscado, y o cómo reaccionar

El SASTRE = las predicciones hicieron basado en las necesidades del usuario [`previsto].

Piezas/términos similares: Necesidades de usuario; Predecir; Sastre; Guía; UIP-Emerger.

EL FINAL DE PREDICE

FUNCIÓN DE LA BANDA (PROGRAMACIÓN)

PROGRAMACIÓN DEL INTERRUPTOR:

- Sistemas de la generación de la idea:

- los interruptores (se programa parcialmente) alcanzan metas deseadas.

Software usado en las fórmulas el convertirse/el analizar/evaluación para el alimento, la química, - indicadores, etc.

- el uip de la función deseada es el matched= w (con) uip de elementos/de ingredientes/de productos químicos/de elementos de diferenciación del alimento = dando por resultado fórmulas de los ingredientes que pueden (mejor) alcanzan meta deseada.

--las características de la meta son tied= vía uip = a las características de ingredientes disponibles/sabidos o (KN) sistema.

+ partes importantes: UIP-Adaptar, 7G050, banda, Pista-Analizar (analiza para cuál es el mejor de seguir = DB), inspirándose el interruptor, 2E010 20 30 40 50 softwares de la receta.

EJEMPLOS:

1] desarrolla un nr (notificador del `) = alertando la presencia de sales/(simboliza "y o ") los ácidos/los elementos peligrosos = in/for: líquidos/polvos/contacto de la superficie.

2] El otro 7G050.

3] El sistema del interruptor (sistema electrónico) puede ayudar simplemente a u ofreciendo posibilidades sugeridas: fórmula/equipo/fuente de información (material de referencia,) en línea/tipo de las fuentes experimenta.

4] UIP-Adaptar = UIP-DB: ajusta a las necesidades del u.

5] La constitución necesitó en resinas plásticas/metales/la cubierta del producto ("cm", el "cp") o piezas, porque = tolerando niveles señalados de: el estirar, doblez, tirando = dentro de ambientes señalados de la variación (extremo): temperaturas, luz, abuso, desgaste excesivo, plazo del uso del elemento (edad de N).

6] Estrategia de búsqueda de la patente: software y (fórmulas o receta o ingrediente)

7] Farmacéutico: ingredientes que se convierten para las drogas; ideas para la investigación.

8] El software diseñó simultáneamente ayudar a investigadores aumenta su (relacionado sociológico, psicologicamente) creatividad: KN

DIAGRAMA: "Banda": el interruptor (con referencia a) se programa = según lo controlado por el UIP; el programador puede ayudar a dirigir/interruptor del control.

- OTD: El fabricante proporciona un menú de posibilidades en la forma de papel del librete o de la exhibición ("S"); % del usuario pueden seleccionar de uno o más sistemas de menú/formatos, cada uno que activa funciones similares o diversas; el usuario comunica con el sistema y consigue la regeneración en formato crudo o sofisticado; mismo o las versiones relacionadas del producto puede ser vendido en diversos precios según la variación de la programación incorporada en el dispositivo por el fabricante, en tales casos incluso simple o los cambios cosméticos se pueden realizar para justificar el precio alto más; puede funcionar con "C"; Reino Unido; carro (personalmente las características programables pueden ser alteradas, ser agregadas a, o ser cambiadas de otra manera insertando diversos cartuchos del software, y la P.M. responde por consiguiente); el usuario puede reprogramar software en el dispositivo y o (otro dispositivo); acceso (solamente ésos con contraseñas pueden alterar los pp o la P.M.); % del uip (el usuario decide cómo recoger, lo recupera, se convierte, lo almacena, lo corrige, y o utiliza de otra manera la base de datos del uip); el usuario puede comunicar con un "carácter" en la "exhibición" [si está utilizado] al programar, eg.: el carácter habla preguntando se quiere qué selección de menú; pp vía la chapaleta, o % del distancer, o % del localizador; multiusos (puede trabar hacia fuera a la otra gente de su programación); pp vía el telecontrol ("R"); interfaces de sistema con el programador vía el "notificador" que informa al programador alrededor: qué pasos fueron programados y acaban de recibens el sistema, que las partes del programa son en un modo dominante en un momento dado, los menús; % de la inclinación; % del cojín del aire pueden los pp; % del color significa estado de cualquier programación, el canal de interconexión entre el programador y el sistema; % del analizador de sonidos (dependiendo de los sonidos externamente generados, el sistema podrá mejor incitar el usuario/a programador sobre cómo el dispositivo pudo ser programado, y o utilizado); % de la mañana. "Corregir".

- Ver: "Cerebro", "facturación".

. - Los programas del fabricante cómo el "ranurador" localiza then= recuperan el data= necesario para el uso señalado.

Final del programa

Archivo: Introducción de la característica/el preguntar

PREGUNTAS:

Usuario que hace preguntas de la invención. El sistema que hace preguntas del usuario así que ella pueden adaptarse mejor a las necesidades de la persona.

- Ver el "cerebro": la característica del system se adapta según circunstancias.
- Cuestionario: utilizado por el tem del sistema para entender mejor a usuario para: adaptar-DB (base de datos), adaptar-adapta, access=BA (analizador del comportamiento). Esto es algo una diversa parte de los otros aspectos de las otras partes de esta partición general.

Dibujo: =c del usuario (computadora) (mq); usuario (U (el usuario hace preguntas del sistema)) = C.

- "Corregir": los controles mecanografían respuestas/preguntas permitidas.
- "Facturación": paga por la pregunta

. Patente de los E.E.U.U. [disco 12.95]. Str: (pedir o investigan o buscan o deseo) y pregunta.

- Patentes de los E.E.U.U.: 5473367 5420926 5369566 5363433 5361200 5341499 5299121.

. Respuestas correctas del fraude/funcionamiento apropiado:

- Preguntas de contestación para las cuales el sistema/el ser humano [programador] no está seguros es poco éticos, y posiblemente conforme a la revocación privilegios de acceso de la licencia' [a la invención], y pérdida posible de [derechos del `al revendedor (del nuestro derechos de propiedad intelectual)]. Se relaciona con: los éticas, honradez, validez, confianza, castigo, multas, cargos criminales, y/o encarcelamiento.

--La característica del contrato de licencia del `tiene desacuerdos entre los partidos relacionados con esta invención manejada en la manera estándar por la asociación americana del arbitraje en la provincia del licenciador/las jefaturas del condado.

- Sugerir las respuestas que pudieron estar [algo] correctas puede ayudar: el licenciador de la ruta asoció y/o adaptó características; confusión de la causa (pérdida de simplificación); llevar a usuario faltar-a entender una respuesta posible "inspirada" con una respuesta efectiva. Las precauciones [en corregir respuestas/reacciones] necesitaron.
- Responsabilidad del límite de la educación (instrucciones escritas)/del contrato de licencia del `[debe] al concesionario cuando las respuestas o cualquier otra característica trabaja incorrectamente [excepto según lo causado por el fraude de el cual apenas el instigador fraudulento que pudo ser afiliado con el concesionario, es responsable].
- El control de calidad [relacionado] de seguimiento del `publica [no puede ser la prueba completa/confiado encendido] y no es probablemente la responsabilidad del concesionario primario/original. Todos los usuarios deben tener muy cuidados siempre, a pesar de aseguramientos [verbales] que todos estarán bien. Gracias.

SECCIÓN de Q - quizá menos importante:

Ver U (el usuario hace preguntas del sistema) y las funciones del mq (el fabricante hace preguntas del usuario para adaptarlo) para los detalles.

- Ver el "cerebro": la característica del system se adapta según circunstancias.

- Cuestionario: utilizado por el sistema para entender mejor a usuario para: adaptar-DB (base de datos), adaptar-adapta, access=BA (analizador del comportamiento). Esto es algo una diversa parte de los otros aspectos de las otras partes de esta partición general.

Dibujo: =c del usuario (computadora) (mq); usuario (U (el usuario hace preguntas del sistema)) = C.

- "Corregir": los controles mecanografían respuestas/preguntas permitidas.
- "Facturación": paga por la pregunta

. Patente de los E.E.U.U. [disco 12.95]. Str: (pedir o investigan o buscan o deseo) y pregunta.

- Patentes de los E.E.U.U.: 5473367 5420926 5369566 5363433 5361200 5341499 5299121.

PIEZAS TELEDIRIGIDAS DE "R "-

(Este archivo que no se confundirá con la R-carpeta para las mejoras en invenciones existentes.)

COJÍN 3A580 [AIRE]: ("R") tableta alejada de la entrada de la imagen. Proyecta las imágenes de los usuarios sobre cualquier uso blanco de la pared, de la pantalla de película, de "C", del etc.: agrupar las presentaciones, jugando van o ajedrez, etc.

- Proyectar las imágenes sobre la pared para las presentaciones, jugando ajedrez, el etc. escriben sobre el pequeño cojín portable que agranda la proyección sobre cualquier superficie plana blanca. El cojín transmite al proyector inmóvil que exhibe sobre casi cualquier superficie plana blanca.
- Más versátiles que los proyectores viejos.

. Escribir sobre la tableta movible portable que internan exhibiciones en una forma mucho más grande sobre la pantalla. Para las clases, los conciertos, el etc. da a escritor más flexibilidad.

- Quizá: puede también reflejar mensajes contra la cubierta de nube para: publicidad, encontrando la persona perdida, el etc.
- técnico: tiene los alambres o ("R") control alejado para encender el dispositivo de dispensación
- funciones bien con 3A-57
- juegos del juego en la pared con; puede demarcar líneas en piso
- OTD: alejado ("R"); exhibición ("S"); pp; P.M.; Reino Unido; ratón; el date%; el interactive%; todos; hospitalidad; portable; impresora; "M"; punto de ebullición; cuenta; carro (softwares [gráficos, modos de transmisión, etc], colores); cp; carácter.
- otros participantes (eg.: los estudiantes) pueden escribir (las preguntas, los comentarios, participación).

TECLADO del LASER 3A751: cada luz laser interrumpida por el dedo, el etc crea el mismo sonido como si la llave fuera golpeada por el dedo.

- el "palillo del laser" (un laser dirigido por el usuario) señalado en el laser "cuerdas" puede interceptar en una cierta frecuencia de tal modo que substituye la necesidad de disparar los 3ultimos lasers con el artículo no translúcido.

PLUMA MÁGICA del AIRE 3A790: Los movimientos ("R") de la pluma alejada se transmiten a "C". Hacer los movimientos en el aire o en cualquier superficie plana.

- Todos los movimientos se almacenan en "C" que dibuje según su movimiento.
- el sistema analiza cada movimiento, que puede también señalar comandos al dispositivo, eg.: girar, apagado, el volumen del aumento, "hacen esta función", el etc
- expedientes las formas que dibuja en memoria. Una imagen se pudo crear sobre el papel, la otra se almacena en el dispositivo separado que supervisa los movimientos de la pluma en lo referente a su estación principal, y sabe qué movimientos están en el modo de escritura y cuáles son no-escritura que se mueve en aire al nuevo punto en el papel
- hace música/el sonido mientras que la pluma se mueve (tiene interruptor con./desc.)
- funciona vía la utilización del dispositivo del distancer
- OTD: alejado ("R"); exhibición ("S"); "C"; pp; P.M.; el interactive%; educ; juguete; básico; juego; hospitalidad; "M"; punto de ebullición; oscilador; cuenta; md; carro (cómo cada movimiento será interpretado en color o gráficos; sonido sintetizado); cp; carácter.

5A460 El INTERRUPTOR de TOUCHLESS: Activar cualquier función solamente bloqueando la luz laser del interruptor con su dedo. Ideal para los cocineros con las manos mojadas que funcionan los hornos microondas o que contestan a los teléfonos del altavoz; equipo sanitario del hospital; etc.

Utilizado en las máquinas por los doctores que necesitan mantener sus manos esterilizadas durante operaciones. Las amas de casa con sus manos sucias y mojadas en la cocina pueden ahora utilizar su "T" y otros adminículos con mayor facilidad.

. Disparando la mano a través de las luces laser, su acto dominante correspondiente como si esté presionado en telclado numérico normal. Para la gente que no puede tocar llaves:

- científicos, doctores: no puede desensibilizar las manos
- artistas, gente de cerámica, gente que cocina en la cocina y otras con las manos sucias
- activar el sistema accionando el interruptor con el pie o el codo
- cuando se activa la llave, el usuario oye que un sonido o una luz que se coloca ese interruptor fue activado {como conseguir un tecleo cuando la tecla se pulsa suficientemente lejos adentro}
- cada llave pudo emitir el diversos sonido/luz como un telclado numérico de "T"

O combinado con el número 3A-753 del producto interrumpiendo a usuario apropiado del laser puede generar cualquier señal electrónica deseada. El mismo laser que es interrumpido en códigos puede: utilizarse para generar comandos más específicos, eg.: dar vuelta a la luz específica con./desc., girar la TV después seleccionar los canales

- en esta idea, cada laser se podía substituir por un botón

ARTISTA del LASER 5A490: este dispositivo del arte del laser registrará los movimientos de la pluma (cuando en modo activo) en "C", que es entonces tranferible sobre el papel, la lona, los plásticos, el etc vía la impresora o el segundo laser que transfiere las imágenes creó ya sobre centenares de tipos superficiales.

Técnico:

- método #1: pluma que emite los golpes del laser que reciben la pantalla, que registra los lasers recibidos. Estas grabaciones se pudieron demostrar sobre otra pantalla, impresión constantemente activa hacia fuera (las demostraciones cada movimiento como se están haciendo, eg.: con el trazador).
- método #2: según el movimiento de los expedientes de mano del dispositivo "C" (vía: tipo dispositivo del ratón con el rodillo en piso, el alambre, los detectores de movimiento) donde va el dispositivo de mano cuando active.
- diversos modos activos pueden generar diversas intensidades, colores, las anchuras del movimiento, el etc

DISPOSITIVO TELEDIRIGIDO de la COMPUTADORA A9-03:

Girar y hacer las funciones básicas ausentes. Puede optar hacer que las letras aparezcan mucho más grandes también. Grande mientras que come el desayuno con la familia, haciendo el algo más, queriendo reducir tiempo lejos de la pantalla de ordenador peligrosa, el etc.

GUANTE del LASER 6B970: Cada dedo emite la luz laser. Las señales de cada laser accionan música al tocar el "sensor". Cada uno "sensor portable separado" crea para poseer sonidos, eg.: tambores, otras pistas previas de sonidos. Guante también usado para las funciones que activan de otros productos usados en una distancia.

MISCELÁNEO:

- Cada "sensor" crea diversos efectos sonoros encontrados en los teclados musicales electrónicos.
- Laser de los dedos cuando el objeto llamativo (receptores) crea sonidos señalados. El usuario puede sintetizar y o alterar el tipo de sonido creado cuando el laser golpea el receptor. El dispositivo vía el cual conseguir diversos sonidos del mismo dedo y del mismo receptor puede estar: dispositivo separado; dispositivo en la parte superior externa del guante; otro receptor de el cual recibe código del dedo del laser en el cual el código pudo ser luces con./desc. en ciertas combinaciones, eg.: tres flashes de la luz son crear campanas
- el dispositivo del laser puede ser una extensión de los dedos
- el laser de cada dedo puede tener diverso efecto en el mismo receptor

- ciertos modos del receptor pueden generar pedazos musicales enteros (eg.: para el respaldo)
- comercialización: decir, "crear un grupo musical entero todo en la aislamiento de su sitio ([quizá] sin el tacto de un botón)"
- capacidades del producto simplificadas: el tipo dispositivo del guante envía los lasers de cada dedo. Cada dedo crea un diverso sonido cuando alcanza el receptor. En modelos más avanzados, cada dedo puede crear más de un sonido transmitiendo en más que una forma.
- en lugar de ser un guante, dispositivo podía ser una caja. Cuando sale la luz, transmite la mayoría/todo el sitio, así que el receptor puede fácilmente recibir señales.
- también utiliza el número 6B-971-500000001 del diseño
- para activar el laser en dedos de la versión del guante: el dedo toca el pulgar, la otra superficie dura, o trasero de la mano o de la palma extensamente abierta.
- usos: es un dispositivo de control de "R" (véase "telecontrol") a activar y o para controlar la música, composición de música, la comunicación de "C", cosas abiertas, eg. puertas
- OTD: "S"; "C"; pp; P.M.; Reino Unido; tds; el interactive%; juguete; básico; el game%; entretener; "mic" (para el sintetizador); synth; portable; el printer%; ch; au; "M"; punto de ebullición; oscilador; "balanceador"; vc; el score%; md; carro; sintonizador del teléfono; teléfono del SP; tr; MES; cp; cc; carácter; distancer (las transmisiones del laser de la persona se interpretan diferentemente según su distancia de la otra mitad de distancer; receptor acústico del movimiento; localizador; "telecontrol"; notificador; inclinación; composición; cojín del aire (el usuario señala luces al sensor del cojín del aire).
. - "Inclinación": controla las funciones del sistema
- copiado a 5E020 en 8.95.

RETRANSMISOR TELEDIRIGIDO 6B971:

Para tener más libertad movimiento y sentarse alrededor de un cuarto, el control de "R" envía mensajes al receptor y también al retransmisor. El retransmisor está en una diversa posición del cuarto, así que si la distancia del transmisor del control de "R" al receptor se bloquea, el retransmisor en otra localización del sitio puede recibir y después en golondrina de mar transmite al receptor principal.
- OTD: "telecontrol"; básico; punto de ebullición; oscilador; "T"; tr; MES; cp.

teléfono del ALTAVOZ del CONTROL 1G06 vía teledirigido. Dial vía el reloj.

- El usuario habla hacia fuera palabra especial (o "palmadas") para activar el "teléfono del altavoz" (para las llamadas que van de in/out). Llamadas de salida: después de que se gire el teléfono ("T") (iguales como si el receptor se escoja encima de), el usuario presiona los botones en su dispositivo de control "alejado" que haga las ondas necesarias señale (el sonido, se enciende...) para marcar hacia fuera el número deseado.

¿- patentable?

- D1: k = t = reloj (muñeca Controller/GPS/Watch/R/alejado [k=access] /osc de Casio

- D2: Reino Unido = c~t = oscilador

Producto de R121 ACTIVATE/CONTROL ("estereofonia") disparando uno o más luces laser. ¿[Sony? , Agosto de 93 yarda, agosto de 93 frecuencia intermedia]

- OTD: ACCESO: (); ARTISTA: (); BALANCE: (); CÁMARA: (); CARRO: (); PALMADA: (); COMPOSICIÓN: (); Exhibición ("S"): (); ENTRETENER: (); FS: (); "M": (); MAÑANA: (); Paladio: (); PP/MP: (); MQ/UQ: (); MULTIUSOS: (); NOTIFICADOR: (); OSCILADOR: (); IMPRESORA: (); TELECONTROL ("R"): (); CUENTA: (); ESTEREOFONIA: (); SYNTH: (); TDS: (); Teléfono: (); UIP: (); Reino Unido: (); WA: ().

La CÁMARA R123 DETECTA los movimientos de ojo del usuario, marco del visor es donde el globo del ojo está mirando. [Canon, 17 de enero de 93 yarda]

los movimientos de +-eye controlan productos. Las posiciones del ojo representan diversas señales.

- OTD: ACCESO: (los movimientos de ojo activan el acceso); ARTISTA: (movimientos de ojo hechos arte); CÁMARA: (); CARRO: (); PALMADA: (también controla el producto/puede ser hecho conjuntamente con los movimientos de ojo (la mayor palmada múltiple y o los códigos del movimiento de ojo crea un mayor "teclado" de los comandos (letras/llaves) vía el aire); Exhibición ("S"): (véase qué fue entrada en c); "M": (); %PD: (la posición también influencia el significado de cada código); PP/MP: (); MQ/UQ: (); MULTIUSOS: (el sistema distingue entre los diversos globos del ojo/vocals de diversa gente); NOTIFICADOR: (); OSCILADOR: (); IMPRESORA: (); TELECONTROL ("R"): (estos otros ("R") controles ALEJADOS pueden también controlar todas las o algunas características de sistema); CUENTA: (); Teléfono: (comunicar vía el teléfono); UIP: (el sistema mejor entiende cómo el usuario se mueve los ojos); Reino Unido: ().
- D: los puntos donde el ojo mira < - movimiento de ojo = sensor (cámara - > eye la bola) = analizador = c
- útil en realidad virtual

TECLADO CONTROLADO del OJO TOUCHLESS de ++ R123-1: La cámara detecta los movimientos mientras que el ojo mira cada letra a bordo. Sobre el ojo que para en cada cuadrado (representa dominante), se crea la señal como si la tecla fuera pulsada manualmente. Poner la cabeza en anteojos o apoyarla dentro de la vista del sensor del movimiento de ojo. Usos: deteriorado físicamente; higiene (control de Touchless); carencia del espacio; realidad virtual. Controla todas las llaves de teclados estándar.

- las llaves adicionales se pueden agregar para, eg.: el señalar que las dos llaves siguientes paradas en deben ser consideradas presionado simultáneamente (mirada en la llave simultánea #1 - > la llave de alt #2 - > F3 la llave #3).
- dependiendo de control (constante) del ojo de los requisitos técnicos/u, el plazo para que el ojo pare en cada llave se fija (vía la banda de la frecuencia intermedia o del u).

- las ayudas si la posición del zócalo de ojo es estable de cierta manera, así que el movimiento de ojo tiene punto de la referencia así que el sensor sabe se mueve el ojo.
--una versión más sofisticada del "analizador visual": el sistema (sistema electrónico) busca la cara de u (vía el reconocimiento de la imagen de cualquie u humano o particular, eg.: vía características faciales - > sabe donde están los ojos. En golondrina de mar, cuando la cabeza se mueve, el sistema acomoda. El sistema sabe el cambio en el ángulo de los efectos principales cómo el ojo necesita moverse para ver los cuadrados (cualquier punto de la visión).
- D: qué ojo ve (el tr da su localización a c) = el sensor de los ojos = del movimiento = analizador = C. visuales.

"ACCESO" = "R": Cualquier método de la generación de señal electrónica se puede utilizar como requisitos para las contraseñas. Eg.: cualquier "R" o "K" KN (invención) también se utiliza para generar (en único una manera) las señales, que se interpretan posteriormente como contraseñas.

RESTRICTOR del RATÓN 4J050: La facilidad en ratón de mudanza se restringe como sistema de dirección. Los movimientos del ratón son más duros de maniobrar cuando entra en área indeseable. Movido para encaminar la sección de la parte en 5.06.

MOVIMIENTO del CUERPO 5E050 = "R": La manera de la cual el usuario toca/se mueve en asiento/sofá/muebles/el chisme = esization del "synth " del sonido = de la memoria/del altavoz/del juego detrás.
- grado a el cual el elemento/la parte se exprime el grado a el cual el volumen/base/triple... va hacia arriba o hacia abajo.

5E070 VÍA el oscilador del MODO del u VERBAL del CONTROL: Aplaudir o hacer los comandos verbales de alterar/sintetizar los sonidos que son detrás jugado/compuesto/generado/sintetizado. Puede funcionar durante la difusión del sonido también.
. - 1 "mic" de = analizador 2 sonidos = registrador 3. 2 coge solamente en los sonidos vocalized o de la "palmada" y no lo deja ser registrado.

1G140 5A-710 "ARTISTA" = TELCLADO NUMÉRICO del LASER: Sintonizador del laser: disparar la luz para el número específico querido. La invención tiene 100 o más lasers (para 0 a 9, encendido, de...). Ver las últimas limaduras de la patente.
- esta N copió a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verla para las actualizaciones.
- Usos: hay diversos canales 10+ en cuál puede funcionar a través (sus dedos), y de tal modo pega códigos del laser. Cada código pegado que generaba la señal (como pp/mp) al efecto deseó imagen (en c la "exhibición")

- se mueve la manera (objeto/mano /finger) (dentro del campo del laser) determina la salida gráfica. Puede dibujar; seleccionar los símbolos gráficos y arrastrarlos incorporando la otra señal (el pedal/la prensa del pie otro botón/mantiene el ratón/tiene dedo localizó dentro de cierta posición dentro del campo del laser).
- D: laser tr (transmite) = rc del laser = "sensor" (trayectoria ligera de los sentidos if/when/where fue interrumpido (por el dedo) = c (analizador; carro; banda) = s/printer/osc (hace música según las señales hechas (c lleva a cabo la memoria del audio)

la profundidad de +-the en la cual el objeto (dedo) penetra en el campo (luces laser) tiene uno o más de los efectos siguientes: se interpreta la anchura del objeto como siendo más ancho más profundamente va adentro; el color altera por grados de cortinas; para el arte de 3 dimensiones, la profundidad se transporta en el pedazo final (arte) (surcos más grandes/cortaron áreas, eg.: haciendo el modelo de la topografía de la montaña).

+--sin embargo la profundidad del dedo se puede substituir por el nivel de sensores piezosensibles.

--tener muchos lasers cerca de uno a, y en: una colocación más alta y más baja, permite características agregadas.

+-placing que un objeto en el campo (laser) determina: (códigos para) el edificio de su réplica, en: plásticos, arcilla, metal, madera...

--ver que el dispositivo de proyección de imagen tridimensional N que desarrollé probablemente en los directorios anteriores de A o de B. Este dispositivo hizo el objeto tridimensional también.

--puede tomar cuadros de la "cámara" del objeto, conseguir los códigos para su reproducción.

--D: sensores (cámara; laser tr (transmite) = rc = sensor) = c (computadora) del `(uk/s/printer) = máquina que hace salida deseada

- puede alterar el by^ del resultado el corregir, teniendo banda estándar.
- también útil para la gente físicamente deteriorada (control pobre del movimiento de la mano de w)

NUEVA IDEA a partir de 1998: Las partes del cuerpo (del ser humano) - controlar R (`teledirigido) según cómo él se toca/%moved. Ejemplos:

- lóbulos o lengüeta de oído: (VR) = el analizador = interpreta las ondas cerebrales humanas para cómo mueven a tales partes del cuerpo (consciente por el usuario)

+ PROFESOR PARTICULAR del MOVIMIENTO 3E061: Dirige a usuarios para mejorar sus movimientos, eg.: Enseña los usuarios a cómo controlar remotamente los dispositivos electrónicos.

- El dispositivo es también una forma [vr] de teledirigido.
- Adentro localizado dir de I en fecha el julio de 2000.

PARAPLEGIC TELEDIRIGIDO. Usando los movimientos del cuerpo como medios por los cuales de controlar otros objetos:

- Cada diversa posición de las piezas de la invención se puede interpretar como señal de diferenciación del comando. Esto es similar a la invención de Miburi de Yamaha o al guante existente de la música por el que las

posiciones de cuerpo de diferenciación accionen sonidos de diferenciación. Algo que teniendo un uso para la generación de los sonidos, el usuario de a [semi paraplegic] puede hacer algo como lengua de muestra. Por ejemplo:

--cada solo movimiento se interpreta como letras para mecanografiar en texto en una computadora; o marcando un número de teléfono; o sistema de torneado de a [función específica de] con./desc.

--otros movimientos pueden ser palabras de uso general como, "y", "sí", "en [activar el dispositivo]", "OFF", "más ruidosos", etc.

- relacionado con las piezas: +R, + " inclinación ", K, "ratón".

el NOTIFICADOR MÓVIL de la LOCALIZACIÓN 3E010 la invención informa al usuario cuando su dispositivo es alrededor acercarse a un bolsillo de la transmisión pobre. Los sistemas actuales demuestran a veces el nivel de receptividad que sale del usuario que tiene que conjeturar qué dirección necesita el usuario para moverse para recuperar buena receptividad. La invención proporciona esta dirección.

FINAL DE TELEDIRIGIDO

R/TELECONTROL - archivo: R&

Controlar las funciones electrónicas [sin hilos].

General:

. Es decir sistema de controles del usuario remotamente o en el sistema. Activar o desactivar todos o las funciones señaladas. Muchas maneras creativas de funciones que controlan.

. Teledirigido: activar, desactivar cualquier dispositivo y sus operaciones sin el tacto de la unidad principal. Hecho sobre todo vía el telclado numérico portable, dibujando: =tr= del k=c (exhibición) [producto que es controlado].

Otros modos de control opcionales:

Interruptor del laser, chapaleta, exhibición proyectada interactiva, ratón teledirigido, etc. Ver el archivo separado para los detalles, eg.: Parts&.

Palillo teledirigido -5E020 con el interruptor: ampliado en el archivo REG20.

Los terminales sin hilos -5E090 conectan con el sistema central.

% "corrigen": funciones del r de los límites. "Inclinación"

- Cada apretón genera señales al dispositivo de control. Eg.: 4G010

- Existe: Ratón sin hilos y pluma del aero- dúo del laboratorio creativo; el sensor infrarrojo sigue los movimientos del ratón o de la pluma en tridimensional.

- Ver 3C-290 animoso: Cómo el objeto se juega con las señales correspondientes de los disparadores. Los "sensores múltiples" se pueden activar [simultáneamente] según el grado de la presión y o las áreas del objeto fueron manipuladas.
- Existe: El guerrero del hombre de ala, deja a usuario k (teclado) (el carácter del "juego" "). Ver: "Ciencia popular", edición de sept. del 1996, P. 6.

DIAGRAMA: 1uk~2display~ convertidor 3osc = 4c = 5signal = 6tr/6rc (vía la radio/el alambre) = convertidor 7signal = 8c = 9 (el producto sigue comando deseado).
Notas de D - OTD: asimiento 48 en sus datos de la memoria para el acceso; carro 4; carro 8; cp; tableta de la entrada de +1 imágenes; pantalla táctil del 1/2; paladio del +4% el +8% (el resto del sistema del picosegundo está situado fuera de la unidad de control " alejada " 12345 (restringida no no necesario a 89); el "telecontrol" "flota"; 4 /5 fs; el game%; 48 M; el 4% mic + (control de la activación de la voz); 48 MESes; mañana 4; ratón 4; 48 pp/mp/mq/uq; 48 multiusos; notificador 48; oscilador 48 + (señales sonoras cuando: se presionan/se activan los interruptores; los sistemas deseados activan/desactivan; cada tipo ocurrencia puede tener sonidos/melodías únicos), "notifica" vía el oscilador encajona del malfuncionamiento; portable 12345; cuenta 2; teléfono de 4 tel/sp; 48 tds; el 48% uip; 48 vc; El 12345% WA.

OTD 1: Las distancias de transmisión para las transmisiones de la radiofrecuencia redujeron según las regulaciones locales del uso (retransmisores del uso). Puede estar en cualquier forma/función dual/atado como ^ de la combinación: collar, reloj, reloj, pulsera, correa (hebilla de correa), anillo dominante, paginador del bolsillo, "cojín del aire", vidrios de %eye, anillos de %ear, %hat, venda de %head, %shoes, accesorio del bolso de la carpeta/del monedero (o insertado en esto), %umbrella (manija; barra para el "tr"), coche, bicicleta, %ring, computadora (cuaderno, organizador), instrumento del teléfono, atado a (puerta, pared, muebles (silla, sofá, tabla, cama). Es impermeable y puede incluso ser sumergido en el agua sin descarga eléctrica posible.
D: ~c (británico) alejado = tr/rc = función

OTD 2: Algo del below se puede diseñar solamente para los controles limitados (activación/desactivación) si hay una gama limitada de accionar posible de las señales de control deseadas en el diseño final. En este caso controls/pp simples/complejos se dirigen vía otros medios (botones/teclado/+ el regulador alejado del sistema del sistema de pesos americano del Co del vencedor que trabaja w (con) 13 tipos de unidad audiovisual).

CHAPALETA: aplaudiendo o silbando, el usuario activa el sistema. Para operaciones más complejas, las palmadas y o los silbidos o cualquier otra combinación del sonido acciona la función correspondiente. Sistema de la activación de la voz también. Ver el ^: Piezas, archivo de la "chapaleta" para los detalles.

MISCELÁNEO:

. % de la exhibición proyectada interactiva: La exhibición se proyecta sobre cualquier superficie plana. El usuario obra recíprocamente con la exhibición bloqueando la luz que va del dispositivo a la superficie plana. Esto genera códigos por cómo se efectúa el reflejo de luz. 3C-660-000000

. % de la cerradura interactiva: El diálogo correcto activa la cerradura. Usos: los estudiantes pasan la prueba antes de poder activar sistemas deseados como las TV y las estereofonias; información diversa y cambiante se puede requerir del acceso que busca de la gente especial en premisas. 3A-891-042005

. % de la pluma mágica del aire: Los movimientos de la pluma alejada se transmiten a la computadora. Hacer los movimientos en el aire o en cualquier superficie plana. Cada diverso movimiento crea una diversa señal. (Paladio) 3A-790-042004

Activador del collar: Exprimir cualquier acoplamiento para activar la función correspondiente. Presionando dos o más acoplamientos aumenta simultáneamente el número de códigos de transmisión posibles. A6-010-022001

. Ratón teledirigido: Un ratón sin hilos con todas las funciones estándar de otros ratones de la computadora. 3C-670-000000

. % del activador del teléfono: Puede ser activado por la línea del teléfono. El llamador hace uno del siguiente:
- mecanografía adentro el código ("acceso") en su cojín estándar del teléfono para activar/desactiva el dispositivo y o sus funciones
- la computadora del mando a distancia envía señales más complejas
- puede también conseguir retroactúan de sistema, eg.: estado. El regulador (persona o dispositivo) decide cuál si cualquier acción para tomar.

. % del sensor infrarrojo: Detecta calor del cuerpo. Si la luz del sol o el cambio de la temperatura ambiente gradualmente, entonces sistema puede no hacer caso normalmente de tales frecuencias infrarrojas buscando solamente cambios rápidamente generados y o trabajando conjuntamente con otros tipos de sensores que juzgan el movimiento.

. % del sensor de la cámara: Compara las imágenes en pantalla anterior con la nueva pantalla para cualquier cambio en cada pequeña parte de la imagen. Los cambios causan una activación de la señal significando el tipo de cambio, eg.: el por ciento del grito que cambió; el nuevo color o forma del cambio; velocidad en la cual el objeto se movió dentro del campo visual de la cámara.

. % del sensor de la imagen: Activar cuando ciertas imágenes se demuestran a la cámara o al explorador. Ejemplos: símbolo impreso eg. clave de barras; bola única del ojo de cada persona (el centelleo en cierto patrón se puede también utilizar como una característica separada para comunicar en código Morse, el etc).

. % del sensor ligero: Los cambios de los sentidos en luz midieron cerca: presencia o carencia de la luz, o más exacto la cantidad de luz; frecuencia de la luz, eg.: color; duración y o tiempo en los cuales la luz fue generada.

Activador magnético: La presencia de un imán que toca, o no tocando dentro de algunos milímetros o del cm, activa y o desactiva. El tipo de diferenciación imanes u otros dispositivos que emiten otras fuerzas eléctricas da diversos comandos según el este activador. Un activador puede tener la capacidad de transmitir uno o más diverso tipo señales.

. % del sensor de la vibración: Detecta la vibración, eg.: si la persona es que camina o que se sienta en el sensor; o señales de la vibración de los sentidos que vienen de a otra parte.

. % del sensor del olor: Detecta diversos elementos según su olor, eg.: plástico, gente particular, animales, alimentos, bacterias, hongos, productos químicos, suciedad, contaminación, humo, perfume.

. Sensor de la combinación: Se activa la función deseada cuando cualquier uno o más de los sensores en esta parte "alejada" se activan.

. % del sensor de la respiración: Soplar su respiración en el sensor en combinaciones del deseo. Trabajos con el sensor del olor, no permitiendo eg.: respiraciones del ajo o del alcohol; o puede ser activado solamente si el sistema puede distinguir entre diversa gente, eg.: masticación de cierto tipo de goma o de alimento. Jueces también para la presión de la boca y o de la velocidad del viento.

. % del sistema teledirigido del peligro para el medio ambiente: Para los artículos que necesitan ser activados en el frío extremo y o los ambientes calientes, y o ésos donde hay el alto polvo y o la arena y o la humedad u otros artículos que pueden interferir con un mecanismo normal del interruptor, eg.: en sauna, regiones de la tormenta de desierto, Siberia. 1C-100-083003

TECLADO/INTERRUPTOR DEL LASER: Activar cualquier función solamente bloqueando la luz laser del interruptor con su dedo. 3A-751-042003 5A-460-042004 5A-710

Disparar la luz que genera códigos para controlar casi cualquier producto electrónico. Los lasers pueden ser acentuados hacia usuario según lo controlado por el ^: remote~pd (lasers de los pp del usuario a ser 10 cm sobre la localización del paladio; el usuario ve las luces en la pared y sabe dónde pegar el laser deseado (llave).

- D: D1: diodo láser = c (computadora del `) = exhibición/oscilador. D2: la distancia del transmisor = del aire del laser = el receptor = el sensor = c = los controles del laser desearon el producto según el código generado por el usuario. D3: igual que D2 excepto allí no es ninguna "distancia del aire" entre el transmisor del laser y el receptor del laser. La huelga de la necesidad de usuario solamente la luz y el sensor cerca del transmisor del laser sabe que fue pegado en alguna parte (vía detrás a mano reflejado luz/el objeto)

Las luces laser se pueden también dirigir hacia fuera en espacio abierto (se dirigen los lasers (los pp) así que el usuario puede las funciones de control de cualquier producto de su asiento preferido wo (fuera) que necesita cualquier aparato (alejado). Dibujo: Transmisores del laser = (la persona puede disparar cualquier luz aquí w el "código deseado ") = receptores = sensor = c = control del laser del producto deseado.

+ "oscilador" (señal sonora: mismo o diverso sonido según el código/laser) se hace cada vez usuario: el laser de las huelgas/(simboliza "y o ") genera código reconocible.

+-User puede controlar (Reino Unido) la colocación de los lasers vía ^: =pd "alejado " (tan los lasers pueden ser cerca donde él se sienta). Elimina la necesidad de llevan el dispositivo de control "alejado" físico.

- ejemplo: el "teléfono" es uno del ^ de los usos: grande para la gente rica en cocina que quiere hacer llamada saliente del teléfono de altavoz con las manos sucias; artistas y escultores de la arcilla; científicos y doctores que no deben de-esterilizar sus manos

Lista parcial de otros productos que un "telecontrol" puede controlar:

Contestadores automáticos; Contadores de tiempo audios; Lectores de clave de barras - escritores; Máquinas de facturación; Prismáticos; Accesorios del equipo de la difusión; Calculadoras: productos más que también actúan como calculadoras; Videocámaras; Cámaras; Sistemas de tarjeta; Estereofonias del coche; CD; Alarmas del reloj; Fabricantes de café; Cocinas; Dictáfonos; Goniómetros; Carillones de puerta; Teléfonos de la puerta con o sin la TV; Máquinas de elaboración; Contadores electrónicos; Tambores electrónicos; Hospitalidad electrónica; Joyería electrónica (sonidos según el tipo señal del teclado del laser); Instrumentoes de viento electrónicos; Memorizers electrónicos; Traductores electrónicos; Equipo de la aguafuerte; Facsímil; Reflectores; Dispensadores del alimento; Juegos; Calibrar-tensión o presión; Guitarras eléctricas; Tabletas escritas mano de la entrada de la imagen; Auriculares; Audífonos; Productos interactivos: televisión, dispositivos de entrenamiento de computadora, realidad virtual; Intercomunicadores; Regulador de la palanca de mando; Máquinas tocadiscos; Laboratorios del aprendizaje de idiomas (eg.: registradores de cinta para la lengua; Laser: aplicado equipar, medición, ajustando; Iluminación: los reguladores, equipo del estudio, accesorios se dirigen y uso de la oficina; Plumas ligeras; Relojes más ligeros (relojes de tabla con los alumbradores de cigarrillo); El marcado equipa; Máquinas del masaje; Micrófonos; Microscopios; Módems;

Máquinas de moldear; Ratón - dispositivo punteagudo de la computadora; Sistemas musicales del acompañamiento - Karaoke; Centros de música; Computadoras de la música - sintetizadores; Metros de ruido; Sistemas de la llamada de la enfermera; Mobiliario de oficinas; Combinadores ópticos de los divisores; Sistemas de radiobúsqueda: personal/público; Sacapuntas de lápiz; Proyectores; Sistemas de direcciones públicos: general/móvil/portable; Teléfonos públicos; Radios - novedad; Equipo de la comuncación por radio; Refrigeradores; Teledirigido; Robustezas (para los juguetes, entusiastas de la manía; excluye el trabajo de asamblea); Scissors eléctrico; Solar; Nivel de sonido y instrumentos llanos de la vibración; Sistemas de entrada de discurso; Locutor - megafonía; Altavoces; Luces de calle; Parar los relojes; El estudio equipa; Máquinas de cinta: microcassette, detección de la voz; Telecomunicaciones; Televisiones; Termómetros; Máquinas expendedoras de billetes; Dispositivos que miden el tiempo: relojes, relojes principales, relojes de tabla, relojes de recorrido, relojes, relojes del juego; Cepillos de dientes - eléctricos; Tacto que detecta los paneles; Juguetes; Sistemas de la traducción electrónicos; Trípodes; TV - Interactivo: sistemas de conferencia; sistemas de teléfono; Máquinas de escribir; Máquinas expendedoras; Juegos video; Vídeo: accesorios de la cámara, corrigiendo las máquinas, generadores video del efecto; Correo de voz; La voz que sintetiza equipa; Walkietalkie.

OTD para el interruptor/el teclado (usos del laser del teléfono...): ACCESO; BALANCE; CARRO; PALMADA; "Composición" = teclado del laser (5a-710) = teléfono; EXHIBICIÓN (demostraciones W5 de qué está sucediendo); EDUC (puede reprogramar (los pp) qué cada laser representa (para la generación de señal; EGH); ENTRETENER; EJERCITAR (dial cuando es mojado: en sauna, cuando sea mojado, mientras que en la máquina que activa); FS; MD (oscilador); M; MAÑANA; PP/MP; MQ/UQ; MULTIUSOS; NOTIFICADOR; OSCILADOR; IMPRESORA; ALEJADO; CUENTA (longitud/coste de la llamada; tabulación del UIP); TELÉFONO DEL SP; sintonizador del laser (5a-710) = ESTEREOFONIA; SYNTH; TDS; Teléfono; JUGUETE; UIP; Reino Unido; WA; ["Código": cada laser se puede pegar como el "código Morse" que genera 100 el tipo posible señales de cada laser; la combinación de códigos de cada laser puede ser (para tres luces laser 100 por 100 el tiempo 100). El código total (hecho a partir de 1 o más laser) hace tan el control deseado, eg.: los modos con./desc./del cambio/etc. "acceso" son también activatable vía código.]
- Para la historia de este desarrollo de producto ver: 5A-710, la otra N (invención) en otras limaduras, solicitud de patente archivó en Ucrania (el noviembre de 1992).

+ JOYERÍA TELEDIRIGIDA 3A-1070: Producido por Casio (reloj teledirigido: ¡modelo CMD10) después de mi limadura inicial de esta idea! Reloj con funciones teledirigidas. Controla sistemas de la hospitalidad, trabajos del etc. con la mayoría de los sistemas teledirigidos de la hospitalidad. Tiene más botones teniendo en cuenta más comandos.
- ahorra de tener que encontrar y o llevar un dispositivo alejado
- preservar el espacio, dispositivo pudo tener solamente algunos de los interruptores importantes
¡- desgaste alrededor de la opción del cuello!

- diseñado para los sistemas diversos, o vendido con los sistemas
joyería del o 4A-230: funciones como teledirigidas.
- anillo de oído, anillo, pedazo del collar, hebilla de correa, reloj, venda principal. Insertar las opciones teledirigidas estándar del dispositivo dentro para: televisión, radio, Cd, cinta, expediente, vcr.
- nota: preguntar a agente de patente si estos productos son obvios.
. joyería teledirigida 4A-235: controlar la robusteza (casera/el anuncio publicitario)

% DEL CUERPO DEL REGULADOR DEL MOVIMIENTO: ¡Incorpora el "Miburi" lanzado por Yamaha después de mi limadura de esta idea! Juguete del bailarín: Crear las señales como usted baila. Los movimientos del bailarín pueden ser convertidos en un arsenal infinito de diversas señales (como pp/mp). Ejemplo: La mudanza de la pierna izquierda puede generar sonidos de campanas o de tambores. Cada zona del cuarto en el cual el usuario mueve la pierna izquierda, crea una diversa señal, según el área (picosegundo). La historia considera: B7-120-022001
- Otros productos de la realidad virtual que crean señales según los movimientos del cuerpo (guantes).
- "Picosegundo": Según cerca qué dispositivos se están moviendo (baile). Eg.: si están cerca de un bloque (que transmite o que recibe señales) entonces los zapatos o el bloque hará un diverso sonido. Eso se pone los bloques donde usted quiere, estos bloques crea "zonas sanas".
OTD: Todos; alejado; exhibición; pp; P.M.; Reino Unido (sonidos deseados); interactivo; juguete; juego; hospitalidad; micrófono; ejercicio; portable; sst; punto de ebullición; SP; oscilador; vc; egh; cuenta; md; carro (sonidos); cp. Para el uso de interior o al aire libre

% del ACTIVADOR B7-121 de MULTI-SOUND: La posición de cada objeto (palillo/juguete) genera la señal única apropiada (en la golondrina de mar que hace el sonido). Sonidos posicionales del ejemplo para el aeroplano del juguete: ascensión, descendiendo, volando arriba o sonido bajo, alerta cuando el plano enemigo se acerca. También para las muñecas; coches que apresuran, esquinas de torneado del juguete; ciencia. Posibilidades sanas infinitas.
- Para los automóviles del juguete, muñecas, robustezas
Técnico: señales (emisiones de sonidos determinadas cerca): las alturas, y el grado se fue o endereza de transmisor, grado a las cuales abotonan se clava (o efectúa el volumen, o dependiendo de la posición hecha muescas en del botón el tipo real sonido emitido)
83
- El más el uno entra en una dirección, cuanto mayor es el grado de cambio, o después de cierta distancia la señal (el sonido o la música puede cambiar totalmente).
- La señal (sonido) cambia por el ángulo del dispositivo, eg.: el aeroplano del juguete hace diversos sonidos que sacan y que aterrizan; también para los coches y los carros del juguete; barcos en el agua móvil.
el mayor arsenal de +-for de la generación de señal posible por la "posición", usuario puede Reino Unido (simultáneamente; botones deseados).

OTD: Todos; alejado; exhibición; pp; P.M.; Reino Unido (sonidos deseados); interactivo; juguete; juego; hospitalidad; micrófono; ejercicio; portable; sst; punto de ebullición; SP; oscilador; vc; egh; cuenta; md; carro (sonidos); cp; distancer; chapaleta.

% de C16. La CÁMARA DETECTA los movimientos de ojo del usuario, marco del buscador de visión es donde el globo del ojo está mirando. [Canon, 17 de enero de 93 yarda]

los movimientos de +-eye controlan productos. Las posiciones del ojo representan diversas señales.

- OTD:

ACCESO: (los movimientos de ojo activan el acceso); ARTISTA: (movimientos de ojo hechos arte); CÁMARA: (); CARRO: (); PALMADA: (también controla el producto/puede ser hecho conjuntamente con los movimientos de ojo (la mayor palmada múltiple y o los códigos del movimiento de ojo crea un mayor "teclado" de los comandos (letras/llaves) vía el aire); EXHIBICIÓN: (véase qué fue entrada en c); M: (); %PD: (la posición también influencia el significado de cada código); PP/MP: (); MQ/UQ: (); MULTIUSOS: (el sistema distingue entre los diversos globos del ojo/vocals de diversa gente); NOTIFICADOR: (); OSCILADOR: (); IMPRESORA: (); TELECONTROL: (estos otros mandos a distancia pueden también controlar todas las o algunas características de sistema); CUENTA: (); Teléfono: (comunicar vía el teléfono); UIP: (el sistema mejor entiende cómo el usuario se mueve los ojos); Reino Unido: ().

. - este N# estaba en el dir del RR retitulado al dir de R en 8.94, pero desarrollado anterior.

CONTROL de AIRE 1G01 (LER): Teledirigido.

- Generador de señal: posición de la mano (objeto (llevado a cabo a mano)) en lo referente al sensor determina la señal. Esta señal se puede entonces interpretar de cualquier manera deseada.

--puede tener posiciones 100+ reconocibles.

--applications^: torneado con./desc.; alteración del ángulo de la pantalla (CRT); ajuste del sonido (balance; "balanceador"; triple; bajo...); estaciones cambiantes de tv/cable; actúa como control "alejado".

- más de un mano/objeto puede ser utilizada. Diversos objetos pueden reflejar las señales (luz) del tr diferentemente al receptor, por lo tanto creando diversas señales resultantes.

--algunas señales se pudieron crear solamente usando dos o más manos/objetos.

- Ajustar llano (de salida deseada) según la posición de la mano en lo referente al sensor.

- Usos: niveles de producción de la luz (el brillo de la luz cambia mientras que la mano mueve su distancia), del sonido (decibelios), del etc.

--el jugar de la música (tambores/%key (tablero) s del juego en aire sin el tacto cualquier cosa)

- para determinar en qué punto debe accionar la mano/el objeto que alcanza el sensor, el sensor, las opciones incluyen: las respuestas del sensor a la mano/al objeto del punto del armario vienen; otra señal simultánea (pedal del pie) determina en qué punto y cómo la mano/el objeto (de mudanza) debe accionar la señal.

- D: mano/object=sensor=c=output (luz)

- marcas: Control del deseo.

TELEDIRIGIDO MINÚSCULO:

. - tiene uno o más botones

. - puede ser usado como joyería, eg.: anillos de oído

. - puede ser pegado sobre: tarjetas de la identificación, libros, puertas, escritorios, sillas del brazo...

. - mayores partes están quizá en un microchip

TELEDIRIGIDO MINÚSCULO ACTIVADA CHAPALETA:

- el mando a distancia pudo conseguir presionado/aplastado. El tal presionar de botones no será reconocido a menos que las 1ras palmadas del usuario, silbidos, etc en una combinación sola o compleja.

. --después de eso 5 - 30 segundos se dan un plazo para entrar sobre los botones

JEFE TELEDIRIGIDO:

- puede desactivar otro teledirigido diseñado para el mismo sistema.

- también parte de un juego de guerra

el SISTEMA 5E-04 RESPONDE A CIERTOS SONIDOS: cuando está oído, el sistema:

1] expediente/sintetiza según lo programado.

2] "notifican" (las emergencias)

] función 3 (si no) según lo programado

4] misceláneos: dar vuelta a las luces con./desc.; cerradura/puertas abiertas/sistema de las puertas safes/el

+5] %: activa las funciones unas de los enumeradas en cualquiera del N. archivado de Kays. Mecanografían las funciones activadas dependiendo del tipo de sonido.

- D1: (Paso 1: monedas de la sacudida en bolsillos; Paso 2: memorizado; 3: usuario "pp" cómo #1 debe "ser sintetizado"; 4: el usuario sacude monedas de casi cualquier manera dentro de la gama del mic; 5: expedientes del "mic"; 6: aparato de lectura.

- D2: sonido externamente generado - > analizador del mic = de sonidos = c (cart/m) = notificador/mic (sistema de grabación/synth).

. - el "analizador de sonidos" es "pp" para buscar solamente los sonidos similares a la entrada original del sonido deseado que se seleccionará. El sistema debe no hacer caso de otros sonidos.

Sonido = "mic" = analizador = memoria = función de los sonidos

- incorpora funciones del sistema de "Hanauta" de Rolando (el ritmo del tarareo crea el tempo para la guitarra u otros sonidos)

- Reloj de la transmisión de datos de Timex: conseguir Info (citas) de "c" vía (infrarrojo). Picosegundo 95.

MISCELÁNEO:

. Distancer teledirigido: solamente zona funcional cuando está dentro, o del exterior del detalle

. - Los productos enumeraron en la edición de la "ciencia popular" 4.94, de la página 66.

DIAGRAMA: Telecontrol ("R") = cosas a dar vuelta con./desc./control vía el "telecontrol":

. Regulador alejado del 1:1 del DIAGRAMA ("R") = 2 transmisión de "Reino Unido" = 3 = receptor 4 = función 5 = 6 transmisión de la computadora ("C") = 7 = 8 "M" = 1A "telecontrol"

. DIAGRAMA 2 (mergeable con el diagrama 1): 1 = 2 = 3 = 8 "M" = 1A/7 = 5 = 6. Nota: 1A no se puede conectar con 5 o 6.

. LAS NOTAS DEL DIAGRAMA 1&2 SIGUEN:

1: General: Las funciones "alejadas" pueden aplicarse. Puede incluir"/el "de la exhibición de la computadora/del analizador/de la memoria "notificador".

- OTD: acceso; el telecontrol ("R") es un tipo de cojín del aire; alerter; todos; balance; carro; cc; carácter; cm; color; cp; cr; fecha; exhibición ("S"); distancer; "C"; flotador; "mic"; %mo; mañana; receptor acústico del movimiento; ratón; P.M.; mq; multiusos; notificador; oscilador; portable; pp; impresora; RCP; cuenta; teléfono del SP; synth; tds; teléfono ("T"); inclinación; juguete; tr; Reino Unido; uq; vc; vr; activación/control posibles con o sin el "telecontrol" vía: 1 - pedal del alimento con uno o más palancas/botones, 2 - expresar la activación (la "chapaleta")

el o "telecontrol" se puede atar físicamente/construir-sobre uno o más del siguiente: mirar para la muñeca, collar, tobillo, correa del brazo; teléfono ("T") con ("R") el regulador alejado (el teléfono está con la cuerda/sin cuerda [radio, celulares]); sombrero/venda principal; zapatos; bolso; carpeta grande; paginadores comunes; pluma; collar; anillo; pulsera; linterna; panel de control del coche; panel de control de sistema de la hospitalidad (estereofonia, VCR, TV, cable, juego video); cadena dominante; trabar el sistema (en o cerca de una cerradura, facilita el control con./desc./otro de artículos necesarios al entrar o saliendo)

. --(se puede también construir como solamente estando ("R") un dispositivo de control alejado):

o-2: "Reino Unido": ^via de las funciones de controles del usuario: llaves

o-3/7: transmisión vía: "tr"; "MES"; luz infrarroja; frecuencia celular del teléfono ("T"); otras radiofrecuencias; %distancer: cada zona tiene poseer la función posible/real; la "palmada" = controla la función 5: ésta puede ser una manera adicional de la cual al control

- la transmisión puede estar a cualquier receptor, este receptor en golondrina de mar transmite a cualquier localización cercana o distante (el "telecontrol" del usuario en #A del sitio = transmite = receptor = retransmisión = función; las ayudas solucionan problemas en las gamas limitadas para infrarrojo).

o-5: Uno o más de las funciones posibles que pueden funcionar adentro por separado y o junto en cualquier combinación. Funciones:

- Radio/TV/VCR/VTR/karaoke/stereo (CD, MIDI, expedientes, cintas): seleccionando la estación, "vc", synth, viendo los canales múltiples simultáneamente, cambiando cómo se oye el audio (vía los auriculares/los altavoces).

--Horno: microonda, eléctrica, gas; Automóvil que cocina el contador de tiempo 3C-141

- Sistema de alarma de ladrón (eg.: activación/desactivación; volumen de ajuste del sonido de la alarma; otras características). Para el coche; hogar; oficina; fábrica; etc.

- Teléfono: · Puede también marcar hacia fuera en el teléfono del altavoz: en este caso si hay posibilidad técnica del error, el sistema indica el número marcado y pregunta si éste está el correcto #, entonces el usuario señala sí/no.

--tiene un cojín separado (""/"del telecontrol cojín del aire") con el cojín del dial para hacer llamadas del teléfono ("T"), "mic", el altavoz (puede también oír a través de los auriculares)

--contestador automático del teléfono: oír los mensajes entrantes, hacerlos/cambio el mensaje de salida (de cualquie localización por supuesto)

- Abrelatas de la puerta/más cerca: desplazamiento; elevador; fijación/abrir puertas; refrigerador; armarios; la pequeña puerta diseñó para dejar en animales domésticos (no querer los animales domésticos perdidos que vienen adentro también); puertas/tapas para la disposición de basura. Saber quién está en la puerta w (con) "wa"

- El tocador rasante, gira el golpecito de agua, el calor/el agua fresca o cualquier otro líquido/producto químico/sólido (metal, la piedra)

- Vuelta de las luces con./desc./cantidad del cambio de la luz (luces para: sitio, escritorio, garage, jardín, seguridad, luces del punto/de inundación); cambiar la luz del color; programa cuando es con./desc./cambio.

- Calentador/aire acondicionado

- Computadora: ahorra tiempo de tener que sentarse al lado de la computadora ("C") que lo espera para estar listo al girarse; olvidó apagarlo y ya no sentándose - ningu□n problema; controla la impresora: # de copias quiso, activando el alimentador de la hoja/del sobre; el fotocopiar

- Paginador: transmite al sistema que en páginas/llamadas de la golondrina de mar "notifica" a personas. Cada código consigue diverso partido. La recepción de la persona puede conseguir mensaje simple o complejo ("Vladimir le quiere") recibido solamente por el partido señalado/otros partidos también.

- Sistema de la identificación: la transmisión del código del usuario señala su ^in resultante de la identidad: "acceso"; fijación/abrir cualquier cosa; "tds" (el sistema del sacador del tiempo que señalaba # las horas trabajó, cuando el comenzar "alejado"/acabamiento de las señales del trabajo = de la computadora ("C") memoriza = tabula los cheques = las impresiones (cheques, informes de la paga sobre su tipo actividad).

- juegos interactivos (juegos video)

- Selector interactivo de la estación (para la "estereofonia") 1C-180

alarma audio-visual del "sensor" de %-Remote: 1c-250. parte posterior del juego cuaesquiera ocurrencias extrañas.

- Ratón 6B-920 del mando a distancia

guante 6B-970 de %-Laser

- "Cojín del aire"

- Oído Alerter 3A-600: Notifica a persona sin disturbar otros

- Activador ligero 3A-730: las luces se giran donde-nunca se toma el "telecontrol" (entonces puede apagar automáticamente cuando las áreas de salida)
- Notificador alejado (usuario siempre que la ocurrencia deseada haya ocurrido en ("R") la localización alejada) 4A-300 de las alarmas

o-5 OTD: teniendo el "acceso" en algo (puerta, uso del normal/de la línea interurbana del teléfono); alerter; todos; %artist; balance; carro; cc; composición; fecha; exhibición ("S") (datos: noticias, TV, arte); educ; entretener; "C"; flotador; fs; juego; interactivo; el sistema se puede también controlar por el uso estándar de sus botones para mismo y o las llaves adicionales ("Reino Unido") = las funciones; md; 5 pueden sí mismo ser un "M"; micrófono; MES; mañana; receptor acústico del movimiento; ratón; P.M.; multiusos (cada ("R") control alejado tiene diversa identificación el señalarse del otro /users "alejado"; notificador; oscilador; recoge/analiza/memoriza disemina (exhibición) la información del UIP, la aconseja (eg.: horóscopo, terapia (TGH)); portable; pp; impresora; RCP; cuenta; sonido el analyzer%; el speech%; teléfono del SP; synth; tds; teléfono ("T"); juguete; uq; vc; vr.

o-6: Computadora ("C"): analiza/memoriza/controla la función 5. También consigue controlado/datos de "M"

o-8: "M": puede mejorar la función de la ayuda 5 (eg.: el "M"' "pi" adapta la función 5 para los usuarios)

- la parte opcional 1A de 1: Information/PI/commands alimentado en el "telecontrol" (el tipo de respuesta de "M" ^may: ser necesario; influencia; obrar recíprocamente con el "telecontrol".

RETRANSMISOR ("R") DEL CONTROL ALEJADO:

- la transmisión puede estar a cualquier receptor, este receptor en golondrina de mar transmite a cualquier localización cercana o distante (el "telecontrol" del usuario en #A del sitio = transmite = receptor = retransmisión = función; las ayudas solucionan problemas en las gamas limitadas para infrarrojo).

("R") REGULADOR ALEJADO - BALANCEADOR DEL ALTAVOZ:

Sistema de equilibrio 8B-110 y 1C-290 del altavoz automático: el "telecontrol" dice el sistema de sonido vía su transmisión (tr), la localización del "telecontrol", en golondrina de mar que los altavoces balancean su sonido así que la persona con el "telecontrol" oye sonidos de todas las direcciones en cercano-balance.

O-Misceláneo: teledirigido puede también estar en su reloj o cualquier ("R") control alejado. Para la "estereofonia". Técnico: el "telecontrol" puede ser incluido/omitido de sistema. El transmisor puede estar en infrarrojo (en este caso los cambios en frecuencia ligera significan distancia), radiofrecuencia, distancer. [Extremo de la sección movido desde 2E 3.95]

OTD: El telecontrol contiene poca luz que identifique su localización (puede ser automatically/pp activado cuando su obscuridad).

- Bola que se rueda en la plataforma sensible que también tiene botones adicionales separados. Actúa como "ratón" para la computadora ("C"). El fabricante es Spaceball. Vio en el 15 de marzo de 94 el "Brutus" publicado en Japón.

- Dispositivos tales como el producto de "Miburi" que desarrollé y que lancé más adelante por Yamaha; más otros mecanismos de control relacionados (guantes) usados en realidad virtual.

- Mecanismo de control según lo utilizado en el walkman WMWX88 de Sony.

. VENTILAR EL COJÍN = ("R") tableta alejada portable de la entrada de la imagen. Datos o comandos de entradas del usuario en el cojín portable. El cojín entonces transmite señales a la unidad baja que en golondrina de mar hace la función ordenada. 3A-580-042004

- D: 1 k = telecontrol 2 ("R") = 3 tr (transmite) = 4 ("C") 5 bajos tr = 6 "S/8 distancer"/7 funcionan de "M"/%9

- OTD: 246 "S"; artista del 7% (las imágenes del diseño para la proyección de la pared, creando el arte temporal que puede permanecer proyectaron en la pared por minutos o años, tales imágenes se pueden también girar alrededor como los proyectores de película circulares de la diapositiva, tales imágenes pueden ser: direcciones, advertencias, reloj de tiempo, arte móvil); 124568 básicos; carro 48; 245 cc; ch; carácter 6; el 7% [composición (el cojín del aire tiene funciones de un sintetizador electrónico del teclado y del sonido; opción en la estereofonia separada - sistema del aparato de lectura 7 de altavoz); y esto se puede hacer conjuntamente con artista, el usuario crea y o controla las generaciones de sonido con efectos visuales]; cp; distancer del 9% (el distancer activará, desactiva, y o hace señales según su "localización" en lo referente a otras piezas del distancer y o a la unidad principal); cojín portable 4 y almacén de la unidad principal, proceso (corregir), y mantener sus memorias; 7 impresión, proyecciones sobre la superficie externa (pared, grito) vía luces; para las presentaciones del grupo, jugando van o el ajedrez, los etc; 7 altavoces.

- "R" y "Reino Unido" y "K" se pueden substituir por el otro R (`teledirigido) puede ser w substituido (con) Reino Unido, y viceversa (dependiendo del uso). Ver "K" para los detalles.

. C16. La cámara detecta los movimientos de ojo del usuario, marco del buscador de visión es donde el globo del ojo está mirando. El enero de 93 X. u (usuario) "tiene acceso" de su c = "M". Dibujo: C16=tel~remote

. C21. El beeper puede enviar mensajes escritos vía la radio; terminal portable sin hilos. 29 de diciembre de 93. Dibujo: c (computadora) del `(C21) = tel~remote

. Palabras habladas convertidos del sistema C79 en palabras legibles en la computadora ("C"). Tales palabras habladas pueden también K (sistema de control). 14 de marzo de 92 NK. Dibujo: C79 = tr = C.

. Productor "sano" de Seiko relacionado con mis limaduras anteriores. Este ("R") cronómetro alejado del control tiene funciones de edición para el VCR y los sistemas de la música (CD). Las ventas comenzaron 3.94 (la publicidad comenzó 2.94).

Juego teledirigido -2D-150: Las unidades del jugador "obran recíprocamente" w (con) las unidades del otro jugador vía el "cojín sin hilos del aire". No usos del juego también.

- "Facturación"

+-R (modo del "acceso") = C = controla funciones deseadas:

La mayor parte de las funciones usadas para acceder según lo descrito en esto o cualquier otra N, pueden también ser una forma de control de R. La idea que es que la generación de señales es el factor inventivo = una vez esas señales está en el sistema = el sistema los interpreta según lo programado.

Ejemplos: cada imagen creada corresponde a diversa función, tal como dibujo de un círculo gira el sistema, y vueltas de una rociada él apagado, y una flecha delantera larga --> lleva u la pantalla o archivo o función o interruptor siguiente, o una flecha delantera corta - > mueve el cursor a la izquierda - como con las llaves de flecha en los teclados estándar.

- Existe: la imagen entró las tabletas, los cojines de rasguño de la computadora (que ahora substituyen ratones de c (computadora del `)).

- Estudiar todo el KN (invención) y las partes con las piezas del "acceso", eg.: 4E030

% de las patentes de los E.E.U.U.: estrategia de búsqueda: control alejado del ajuste [tiene vario mil patentes]

DISPOSITIVO DE CONTROL ALEJADO DE LA MUÑECA ("R"): Usos (controles vía "R"):

. computadora 7K-010 ("C") (PC)

- dar vuelta a la computadora con./desc. ("C") /printer/other periférica

--seleccionar deseó el interruptor (software del `) deseado, y o el archivo específico. Puede programar el reloj mientras que va para arriba elevador a la oficina.

--pedir cierto Info ser hablado/ser impreso mientras que el usuario está lejos de sistema

. teléfono 7K-020 ("T"):

- activar el teléfono del altavoz ("T"); contestar a la llamada/al dial cualquier dial del número/de la velocidad (la memoria)

- marcar con etiqueta adelante: el sistema vuelve a dirigir llamadas al teléfono ("T") que usted es el más cercano, el anillo real identifica con eso para quién es la llamada (véase N relacionada (la invención) con diferente #)

. paginador 7K-030:

- recibe/envía los mensajes - > que se pueden ver en la exhibición y o - > retransmitido a C (por el alambre/la radio) - > "exhibido"/impreso/almacenado en memoria de (R/separate C).

. 7K-040 médico:

- C=R tiene sensores que supervisen a paciente. Los síntomas se almacenan y se analizan en el ~ c (computadora de R (`teledirigido) del `) (físicamente a parte de R). Los análisis compilados se envían al sistema (c) para la supervisión. Alarmas de C si el paciente aparece tener apuro.

. laboratorio 7K-050:

- controlar los dispositivos electrónicos

. aplicaciones misceláneas 7K-060:

- dar vuelta a las luces con./desc. (al entrar/que deja a casa/la oficina)

- sistemas de control de aire de los controles, ajustando a: 1] presencia de cualquier persona;] el múltiplo 2 mira el trabajo adicional de los medios necesario (eg.: aire acondicionado)

- la estereofonia, TV, vcr, horno (microonda), estufa, prepara el baño, consigue la agua caliente comenzada.

- expresar la activación, presionando los botones, modo de la activación de la voz comienza

. seguridad 7K-070:

- trabar/abrir la puerta: sitio, coche

- identifica quién está saliendo adentro y por el código de transmisión. Una forma de "perforación en el reloj" --saber donde está el portador del reloj dentro de las premisas (PS)

- sistema de intercomunicación: oír quién sonar en la puerta (vía el teléfono del altavoz ("T")), entonces presionar R (`teledirigido) para abrir/puerta abierta que deja en/hacia fuera de la persona.

. diseño de empaquetado 7K-080:

- hay botones con símbolos y números. Eg.: teléfono ("T"); bombilla; puerta.

- puede ser el as^ gastado: reloj, collar, pulsera de tobillo/reloj, correa alrededor de cualquie accesorio del cuerpo o parte, eg.: cuello, brazo, pecho, cintura, pierna, dedos, dedos del pie; desgaste en pelo vía: perno o correa; anillo de oído; % del pegamento a pelar

Versión de la pantalla táctil [ahorrar el espacio y permitir las funciones numerosas, demostrando solamente los botones necesarios.]

OTD PARA el ARCHIVO 7K:

. La batería puede ser 1 o más año.

. El término "control" en esta sección del producto puede incluir uno o más del siguiente:

- dar vuelta con./desc.;

- ajustar la función según el UIP del R lo más cerca posible al dispositivo (para R próximo múltiple: el sistema aproxima un modo de operación probablemente para ser conveniente a todos/la mayor parte de la gente con su R). El R lleva un código que se identifica del otro Rs.

- hacer la función deseada realizar por el producto (electrónicamente controlado) aplicable tal como uno o más del following^: % de aumento/disminución la intensidad (volumen, la frecuencia), tienen uno o más de las funciones posibles controladas...

. Diagrama: el usuario = (R ([tr/rc] = ("R") dispositivo de control alejado = C)) = producto electrónicamente controlado = deseó la función.

SECCIÓN de "R" - quizá menos importante:

Chapaleta, etc. Ver el archivo separado para los detalles, eg.: Parts&.

Dispositivo único de -5E020 R: ampliado en el archivo REG20.

Los terminales sin hilos -5E090 conectan con el sistema central.

% "corrigen": funciones del r de los límites.

- "Inclinación"

- Cada apretón genera señales al dispositivo de control. Eg.: 4G010

- Existe: Ratón y pluma sin hilos de AeroDuet del laboratorio creativo; el sensor infrarrojo sigue los movimientos del ratón o de la pluma en tridimensional.

- Ver 3C-290 animoso: Cómo el objeto se juega con las señales correspondientes de los disparadores. Los "sensores múltiples" son activatable simultáneamente según el grado de la presión y o las áreas del objeto fueron manipuladas.

- Existe: El guerrero del hombre de ala, deja u k (el carácter del "juego" "). Ver: "Ciencia popular", edición de sept. del 1996, P. 6.

Final de la descripción alejada de la parte

RUTA/RANURADOR

El sistema analiza las necesidades de usuario y las encamina a los puntos señalados en sistema o donde ha ligado.

7J11 FÁCILES VUELVEN A CONECTAR:

Los llamadores consiguen a menudo disconnected al ser transferido o después estando en asimiento. O durante tiempos de asimiento largos, el llamador puede necesitar tomar otra llamada o dejar el teléfono. El sistema en estas circunstancias pone la derecha del llamador detrás donde estaban cuando el llamador con la identificación de llamador presiona su botón para volver a marcar.

- Si la persona consigue disconnected y marca de neuvo detrás, el sistema (vía la identificación de llamador) encaminará llamada al mismo número de extensión dentro del sistema de teléfono grande si la línea de extensión está libre. El llamador consiguió encaminado alrededor vía recepcionistas, después no sabe la extensión que consiguieron conectados con. Entonces conseguido disconnected, pueden marcar de neuvo. Para cualquie suscriptor o dentro de organizaciones gigantescas, eg.: gobiernos, sistemas micro de Sun.

Detalles: el llamador y el recipiente pueden [intento] seguir [abajo] el otro partidos anteriores para volver a conectar, y para terminar llamada.

- Categorías de la telefonía a volver a conectar [canales/segmentos/frecuencias específicos/software]: satélite; gps; Internet; computadoras conectadas [internas]; comunicaciones sin hilos [sistemas de seguridad].

- Telecomunicación TM: Estancia conectada; Volver a conectar; Fácil volver a conectar; La extensión vuelve a conectar.

ALCANCE de EXTENSIÓN de la INVENCIÓN - los ejemplos embarullados siguen %:

[las piezas seccionan #1]: U (usuario de esta invención) = funciones aplicables [de la telefonía] del ~ C (CPU) de la invención [] =

[Sección #2 de las piezas]: TENER ACCESO (al control de seguridad) [prevenir el acceso ilegal, trabajos con los usuarios autorizados, identificación de la reconexión solamente de llamador marcó llamadas con etiqueta] el NOTIFICADOR MULTIUSOS de // [diversa reconexión ofrece disponible] // [todos los números del teléfono en la llamada notificada (de una desconexión) y cualquie otro Info disponible sobre la llamada o el llamador)] la banda de // del OSCILADOR de // [] (programación) [] // PS-ZONE [de la llamada códigos de área del teléfono detrás solamente, prefijos, códigos postales señalados] // BUSCA y REACCIONA [las búsquedas vía las cuales consiguió disconnected lo que significa posible, eg.: siguiendo] // T (telefonía) [] // SEGUIR [] // UIP (usuario Info que programa); WA (caminata alrededor) [para los teléfonos móviles y la telefonía].

Secciones 1 y 2 interactivos.

MISCELÁNEO: Esta sección de la pieza del ranurador era previamente número del producto: ranurador de 3G050 (t).

. - la calidad cifra <3.5, 3, usos de 2>-the "T" en un sistema importante de t.

El sistema también reencamina u (usuario que originó la llamada/la investigación/el uso) dentro de usos siguientes:

1] Autopista de la información (Internet): u puede volver a poner de donde se fueron apagado. Ayuda a la resaca de u (canales, programas, canales, DB, m). Ver puntos más bajos.

2] Señal: Software/disco compacto: (dentro c) de la carretera o del u de información del propio.

3] Buscador material relacionado:

- (sobre la reconexión) el sistema permitirá que considerar/consiga de u relacionado (uip del material anterior experimentado/el uip de u (para ese uso)) material/datos. Los puentes/los hallazgos del "analizador" relacionaron el material para u vía: uip del material anterior y subsecuente, eg.: palabras claves, categorías sujetas, (geográficas/localizaciones sujetas).

- s de los #s de las extensiones/teléfono del teléfono de la demostración del t/c o de los localizadores relacionados del material de los datos.

- el sistema no pierde de vista los u más allá de la investigación/de la actividad (referente al material/al uso particulares, o todo el material estudiado por U (dentro de ciertos marcos de tiempo).

- la "cuenta" se utiliza en la determinación de validez del material relacionado. Si hay un anuncio publicitario o line/pr está ocupado, tal conseguirá una cuenta más baja de a correspondientemente (levemente), según la longitud anticipada de la interrupción (determinada vía: uip del abastecedor del servicio/Info; cómo es u ocupado; época del plazo para el proyecto del u).

- el "analizador" clasifica y organiza archivos del material vía: palabras claves; códigos que etiquetan (archivados) el material; uip; cuenta; estado; tds; acceso; fuente de material (que el DB/m/u/cliente/interruptor o material del directorio o del archivo del interruptor originado de o se apunta).

- la tecnología de las aplicaciones tiene gusto del Search Engine de la tela de yahoo que encuentra otros sitios similares a esos usuario encontrado.

4] Continuar de donde otro u se fue apagado. (Compañero de trabajo) puede permitir que u subsecuente continúe actividad como si 2do u: sabe ya que todo el 1r u sabe, o 2do u consigue historia del material del 1r u, después continúa de donde 2do u se fue apagado.

] el sistema 5 recuerda el tipo modo/canal de tr anterior, eg. tipo: portador interurbano (t), línea de t, fq de radio. Las ventajas incluyen: ahorra el dinero y el tiempo que vuelven a poner que el teléfono # es el más barato marcar de neuvo vía qué portador interurbano, eg.: Plan de llamada del círculo del MCI que da mayores descuentos a particular teléfono # ' s.

6] La sincronización de vuelve a conectar:

- Cuando el sistema/k de la blanco tiene más/pocos anuncios publicitarios (9G220); más o menos de interruptor/de banda/de los clientes deseados/empleados (deseados).

- La hora más barata. El sistema "analiza" el modo más barato/mejor del tr (para la inicial/todo el tr). Retransmite/vuelve a conectar en otro la más barato/mejor modos, eg.: la hora más barata según cargas de t o del m; cuando la blanco sys/m/t se equipa mejor para manejar la interacción (eg.: 9am a 5pm - zonas horarias de la blanco, debido a la presencia de sus personales).

el 7%] Identifica las ocurrencias siguientes - un mejor u que ata con el Info/el sistema.

- cuáles son los vehículos de salida siguientes (si después de u faltó su conexión): aeroplanos, autobuses, trenes... "Analiza" el tiempo de espera para las conexiones y los balances con tiempo de recorrido, eg.: si el viajar mañana toma el medio sistema del tiempo de recorrido sugiere que u pasa noche en el hotel, y (con referencia a) - comenzar día del recorrido.

- cable/programas en línea (películas, conciertos) (uip/petición del u que empareja).

el 8+%] Si no puede volver a conectar al punto anterior (t #/programa/datos) el sistema compensará cuál es después el mejor o mejor. Eg.: conseguir reencaminado al supervisor de la persona (vía t); el movie/db después mejor (según lo determinado por el uip de u/movies/db).

9] El transmisor se identifica y se permite que consiga marcado con etiqueta, así que el receptor puede seguir el transmisor a pesar de: cambios en canales, problemas, interrupciones, el etc.

- Cambio de canales por el transmisor: El sistema sigue a proveedores de servicios/t de las extensiones, que cambian su localización en un cierto plazo. Eg.: VOA (voz de América) intentado para combatir el equipo de atasco de radio comunista de la onda corta cambiando sus canales de la difusión, enseguida después de decir a oyentes cambiar su dial/canal (de radio). W esta N, el sistema del receptor cogerá (inaudible/no -) código visible del transmisor (prestatario de servicios) y (automáticamente) el cambio acanala (en el código del tiempo dice) = u puede experimentar poco o nada de interrupción.

- también se aplica a: salida móvil del teléfono de la gama, o conseguir a la recepción pobre; programas que son vendidos a los proveedores de servicios alternativos (según lo programado para el futuro); organizaciones que cambian sus números del teléfono o números de extensión, eg.: el co se mueve a la nueva provincia, o la persona consigue promovida al trabajo/a la función de diferenciación.

10] Pista - sigue/reencamina a cualquier transmisión/dato de la telecomunicación.

11] conexiones/encaminamientos de la frecuencia de las tarifas de la "cuenta" se hacen a partir de un punto al siguiente.

- Valores: en t - las compañías pudieron alterar sus directorios de negocio que daban la mayor mención a tales departamentos. El "anotar" hecho vía: cuentas de la llamada/de la conexión; longitud del tiempo por la conexión; rédito del dólar por llamada o para todas las llamadas (reencaminadas). Empleados que encaminan las llamadas que se reencaminan demasiado a menudo otra vez (vía cuenta), se enseñan para dar mejor conexiones correctas en futuro, o aprender el directorio de negocio del co mejor.

12] "que siguen" de las encaminamientos usadas para convertirse: UIP; mejorar (interruptor, libro) los manuales/los directorios educacionales;

- ACCESO (procedimientos); Banda (interruptor); Q ().

13] El sistema "sigue" mientras que continúa (con referencia a) encaminando transferencia de la comunicación/de datos tantas veces tan solamente cerca necesarias pero limitadas: c extensible (memoria, interruptor, otras circunstancias).

- El sistema desarrolla la historia/el registro/uip para cada comunicación y o combina la registración con la comunicación anterior del investigador/u (las tentativas en). Valores: convertirse uip = una mejor comunicación de la ruta.

- Las partes del cuerpo (del ser humano) - controlar R según cómo él se toca/%moved. Ejemplos: cursor de la computadora de control de los movimientos de ojo.

REEMPLAZABLE: Uno o más de piezas siguientes son generalmente w reemplazable para los propósitos de la extensión de la solicitud de patente de N:

1] La blanco señala - la información/la comunicación queridas: milímetro de banda del interruptor (conectable vía telecomunicaciones); cada número o extensión de teléfono (con el hardware/interruptor de ese lado); DB (conectable vía telecomunicaciones).

2] Usos del modo de la comunicación: ruta; reencaminar; conectar; proceso de tener el "acceso", eg.: el conseguir en el sistema (vía contraseña); llamada (señalar teléfono # o extensión); el sw%; el pr%; t; r el 3%] Para los usos que anotan - decidiendo lo que (el w5%) necesita ser encaminado (el w5%): "cuenta"; "estado"; uip; analizador; cerebro; multi-user%; tds; representación visual el analyzer%; DB; "sigue".

OTD D1: U = este ~ del ~ C del sistema de N (ranurador) T =

ACCESO (punto de acceso señalado de /routes u function/sw/additional de las "pistas"); ANALIZADOR (se hace la encaminamiento w5); FACTURACIÓN; CARRO (encaminamiento de los controles; el carro tiene datos a los cuales la encaminamiento se pueda hacer); M (); MES (); MULTIUSOS ("pistas" cada u); Picosegundo ("pistas": u, portable N); ANALIZADOR de SONIDOS ("pistas" similares/el mismo sonido en diversos épocas o lugares); ESTADO (); TDS (); T (); TR (sin hilos); U (persona que intenta comunicar o conseguir la información o utilizar el sistema); WA ().

+ RETARDO del TELÉFONO 3G010: la comunicación entrante de la carretera de calls/t/information (con referencia a) se encamina cuando u/sys no responde (apropiadamente) o no contesta (coger t cerca: dar o contestador automático).

- Esta invención bien desarrollada en el archivo ii \ 3g010

¿? MONITOR INTELIGENTE 2E251: Aspectos de diferenciación de las rutas del sistema de 2E251 (que el "sensor" /analyzer debe compartir la información w que: c/sw/guard. O, "pistas" que se mueven/bandido que camina durante minutos/meses (cuando el bandido hace estallar dentro y fuera de gama del sensor 2E251's.)

PASOS EN (CON REFERENCIA A) LA ENCAMINAMIENTO:

-1. - Señal para marcar - > lugares/diales de U: llamada/(tentativas) c a comunicación de c.

-2. - el contacto hizo

-3. - los códigos del uip/de la identidad de ambos lados de la comunicación son tr y rc al lado de ambos lados. Permisión: "siguiendo", CID.

-4. - de este punto ramifica en dos direcciones posibles:

4T (telefonía). - el llamador consigue disconnected, o desea marcar de neuvo de nuevo a la misma extensión. Acción del llamador: botón para volver a marcar especial de las prensas de a]. O, b] si la llamada no era sistema de la llamada pasada hecho, registro de los cheques del llamador de su t=c a identificar teléfono # marcó/tds/código de la llamada hecho. El sistema entonces (automáticamente) marca mismo teléfono # marcado antes reencamina a la extensión señalada, o el sistema marca simplemente directo a la extensión específica, puenteando, teléfono points/# del intermediario.

4C (comunicación de computador a computador no verbal). - C del u encuentra donde estaban w/in: carretera de m/Info antes (en cualquie ocurrencia anterior señalada) vía la señal del software (cuya memoria está en los u/c) del prestatario de servicios.

- de los aspectos pasados o la mayoría de uso general de: interruptor (en c) del telecontrol/el u es lo que surge primero/más fácilmente en el menú de computadora del u, al igual que ya común en softwares, el tiempo del u de ahorro.

OTD D: U (T = C) = este ~ del sistema de N () C =

CONTESTADOR AUTOMÁTICO (puede ser una extensión de t #); BALANCE (); FACTURACIÓN; BVA (cuenta - > uip - > tag~route = t); CID (); CONFERENCIA (ruta a una o toda la conferencia anterior; el sistema fijó automáticamente las audioconferencias para el mismo u en las horas predesignadas (que en memoria de c)); FS (puede la extensión de t #); JUEGO (m = milímetro "hospitalidad"); DE RECUPERACIÓN DE LA INFORMACIÓN (); K (); M (); P.M. (); MULTIMEDIAS (); MULTIUSOS (cada u tiene diferenciación: CID/uip/acceso); NOTIFICADOR (causa de una desconexión de t, eg.: el otro partido colgó para arriba, o sistema desconectado accidentalmente); NOTIFICACIÓN DE LA LLAMADA () %; PORTABLE (t); Banda (); +ROUTER (); S (); CUENTA (); ANALIZADOR DE SONIDOS (); ESTÉREO (); SYNTH (); TDS (); TELEFONÍA INTERSISTEMA DE TRANSFERENCIA (); UIP (); CORREO DE VOZ (); MODULADOR DE LA VOZ (); VR % (); WA % ().

USOS DE LA TELEFONÍA - MISCELÁNEOS:

- El sistema marcará cualquier comunicación con etiqueta telecommunicated electrónica/data/mm, y da posiblemente métodos/las estrategias adicionales para el receptor para volver a conectar/el transmisor del hallazgo.
- No usos de la telefonía, eg.: encaminamiento dentro del sistema de la computadora.
- Problemas: Ver el anillo Delayer del teléfono 3G010. ¿La cooperación con el teléfono co puede permitir mejor el seguir entre la mayoría de los tipos de sistemas del teléfono?

¿Puede ser hecho?

Existe: Los recipientes pueden volver llamadas a los números que faltaron; identificación de llamador

- Misceláneo: El recipiente pudo mantener su línea libre de llamadas entrantes afinando en la computadora que sienten que eran disconnected.
- ventaja incremental minúscula; hay 700 # ' s, email.
- cómo hace el sistema conocen al llamador consiguieron desconectado: el llamador o el receptor tiene que presionar algunos botones, eg.: "consiguió cortado". Puede ser puesto desde provechoso ya estar en el negocio del teléfono.

--si el receptor presiona el botón, éste (mejor) permite que el llamador vuelva.

- Tipo función del PBX de memoria. Cómo saber quién es si llamador no vía el PBX - integrar con la identificación de llamador (CID).
- el llamador inicia la llamada de vuelta.
- el teléfono del receptor envía la señal (a m) del llamador/teléfono co indicando su número de extensión.

--pudo necesitar controlar todo el sistema de los sistemas w/in del teléfono del PBX.

--no necesitaría (todo el esto) la red de teléfono de w/in uno, eg.: cada llamada está a un número de extensión.

- redial: incluso si no está desconectado.
- ejecutado fácilmente. Los expedientes del hardware cómo el remendar fue hecho, después éste pueden replegado.

OTD D2: T/C =

ACCESO (); ANALIZADOR (identificación de llamador; el sistema sabe cómo la llamada entrante fue reencaminada, por lo tanto marcar de neuvo hecho posible (vía memoria también)); FACTURACIÓN; CARRO (localización, extensión del receptor); M (encaminamiento de la llamada); MIC (); MULTIUSOS (distingue entre diversas extensiones, teléfono # ' s de recipientes); NOTIFICADOR (anillos de t); OSCILADOR (); Banda (encaminamiento); Q (permite al usuario o a programador: reencaminar la llamada; estudiar las organizaciones de los patrones de la llamada (dentro)); S (); ANALIZADOR de SONIDOS (sonidos de los convertidos vía el synth para hacer más apelar); ESTADO (); SYNTH (); TDS (w5 de llamadas); T (); UIP (comportamiento de la encaminamiento de la llamada para cada llamador, cada recipiente); WA (t).

- D1: llamador = t/c= compañía telefónica = (centralita telefónica de t en)/c = T. del co del recipiente.

Estrategia de BÚSQUEDA de la PATENTE para KN: ranurador de la llamada 3G050:

- str CD del babero 8.94: rerout de la llamada

--kilovatio misceláneo: desconexión, redial

- Str APS 69 ' - 78 ': (teléfono o llamada) y (el rerout o vuelve a conectar o reallocat). Palabras claves: programa informático

- No. de la palmadita de los E.E.U.U.:

-- 3479464; 3553373; 5255315

--de + dispositivo 5239571 radioteléfonos capaz automáticamente de volver a conectar una línea de comunicación anormalmente terminada: sin embargo extensiones no mencionadas en extracto.

PATENTES de los E.E.U.U. [disco de 12.95 baberos] para la "ruta":

- kilovatio: ruta, encaminamiento, señalada punto/lugar, interactivo, software, programa, computadora

El SISTEMA ENCAMINA u/otros sistemas/programas a los datos/ (db)al programa señalado/al otro punto de contacto (número del teléfono). La "ruta" está a un cierto grado que un subconjunto de "corrige". "Corregir" es un subconjunto de UIP. Sin embargo, algunos aspectos de la "ruta" son alcance del UIP exterior. "Buscar y substituir" 5G061 (interruptor, etc de la dislexia) se está traslapando a veces con el alcance de la "ruta", eg.: la "ruta" proporciona los datos necesarios para la búsqueda y substituye la función del interruptor. "Buscar y substituir" es un tipo de "corrigen" la partición.

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

El interruptor corrige hacia fuera [sexual - las imágenes explícitas]. (Bloquea TCPIP fluye). Sus empleados supervisan la tela de la autopista de la información, actualizaciones se envían al usuario que entonces no puede "tener acceso" a ciertas vistas.

--Software de Surfwatch, de Surfwatch Software, Inc., avenida de 105 Fremont., #F, altos del Los, CA 94022. Tel. 800 458-6600.

- "Facturación": cuentas para qué/cómo "se encamina" u

ENCAMINAMIENTO DEL PROGRAMA DE LA HOSPITALIDAD +-3G050 (CON REFERENCIA A): El sistema encaminará a usuario a otros (relacionado/mejor) programas, eg.: de acuerdo con el UIP de u/programs.

- detalles en la partición del corregir.

PIEZAS TELEDIRIGIDAS:

. Ver el aire 3A580 rellenar: ("R") la imagen alejada entró la tableta. Proyecta las imágenes de los usuarios sobre cualquier pared blanca, pantalla de película,

. Ver el teclado del laser 3A751.

. Ver el aire mágico 3A790 encerrar: Los movimientos ("R") de la pluma alejada se transmiten a "C".

. 5A460 el interruptor de Touchless.

. artista del laser 5A490: este dispositivo del arte del laser registrará los movimientos de la pluma (cuando en modo activo) en "C".

. guante del laser 6B970:

. Teclado controlado de Touchless del ojo de ++ R123-1:

. "Acceso" = "R": Cualquier método de la generación de señal electrónica se puede utilizar como requisitos para las contraseñas. Eg.: cualquier "R" o "K" KN también se utiliza para generar (en único una manera) las señales que se interpretan posteriormente como contraseñas.

. La cámara R123 detecta los movimientos de ojo del usuario, marco del visor es donde el globo del ojo está mirando.

. restrictor del ratón 4J050: La facilidad en ratón de mudanza se restringe como sistema de dirección.

movimiento del cuerpo 5E050 = "R":

DISPOSITIVO TELEDIRIGIDO de la COMPUTADORA A9-03:

Girar y hacer las funciones básicas ausentes. Puede optar hacer que las letras aparezcan mucho más grandes también. Grande mientras que come el desayuno con la familia, haciendo el algo más, queriendo reducir tiempo lejos de la pantalla de ordenador peligrosa, el etc.

RETRANSMISOR TELEDIRIGIDO 6B971:

Para tener más libertad movimiento y sentarse alrededor de un cuarto, el control de "R" envía mensajes al receptor y también al retransmisor. El retransmisor está en una diversa posición del cuarto, así que si la distancia del transmisor del control de "R" al receptor se bloquea, el retransmisor en otra localización del sitio puede recibir y después en golondrina de mar transmite al receptor principal.

- Existe: reflector del espejo permitiendo a transmisiones circundar las paredes.
- OTD: "telecontrol"; básico; punto de ebullición; oscilador; "T"; tr; MES; cp.

teléfono del CONTROL 1G06 [ALTAVOZ] vía teledirigido. Dial vía el reloj.

- El usuario habla hacia fuera palabra especial (o "palmadas") para activar el "teléfono del altavoz" (para las llamadas que van de in/out). Llamadas de salida: después de que se gire el teléfono ("T") (iguales como si el receptor se escoja encima de), el usuario presiona los botones en su dispositivo de control "alejado" que haga las ondas necesarias señale (el sonido, se enciende...) para marcar hacia fuera el número deseado.

CARRO: responde según el tipo carro usado

PALMADA: R (`teledirigido) - > respuesta deseada

DANZA: mamíferos que se mueven en patrones indeseables.

DISTANCER: patrón específico del movimiento: según lo medido por el analizador o vagos visuales.

EDIT: cómo algo fue alterado

EDUC: como de bien learned= del estudiante según lo determinado por su "cuenta"; a qué sistema (electrónico)/estudiante del sistema eligió enseñar/aprender.

EGH: algoritmo para cómo se levanta el estudiante

EJERCICIO:

JUEGO %: algoritmo para el comportamiento del jugador

MD/HUMOR: humor de u

MAÑANA: reacciona si u (usuario) no se despierta/sale de cama/lo hace "alarma señalada" de la acción (pronto después)

RECEPTOR ACÚSTICO DEL MOVIMIENTO: cómo movimientos del organismo [w5], según lo analizado cerca: "sa"/analizador visual/analizador de la vibración. Ejemplos:

- el 'organismo entra en/sale zona o la puerta del way= de la entrada se abre/se cierra
- la ausencia del presence= del organismo hace el sistema cerrar o entrar un modo de las energías bajas.
- el 'analizador de la vibración busca las vibraciones que: ser indeseable, sugerir la actividad ilegítima [rotura adentro, dirección indeseada del sensor del dispositivo w].

MULTIUSOS: quién está utilizando el sistema (sistema electrónico) w5

MILÍMETRO/MULTIMEDIAS: cómo "obra recíprocamente" u w milímetro

NOTIFICADOR: el tipo de sistema de la alarma/del notificador recibe

OSCILADOR: qué sistema oye w5

PREDECIR: Predice qué necesidades de ser buscado, y o cómo reaccionar.

PS-ZONE:

Q: mecanografiar la pregunta

R: cómo r fue utilizado; qué funciona w5 activado

RANURADOR: cómo u eligió ser o fue encaminado

S: VA (analizador visual del `) < - qué persona era visión/petición/W. "que obraba recíprocamente".

CUENTA:

SENSOR: sa; olor; movimiento (infrarrojo, vibración); va

ANALIZADOR DE SONIDOS:

ESTADO:

SYNTH: cómo los sonidos fueron sintetizados cerca: el comandante de u/del sistema/de la fuerza/uip-adapta

T: sa

TDS: w5

TGH:

INCLINACIÓN: cómo el sistema fue utilizado o controlado

JUGUETE: con cómo está jugado

PISTA: acciones w5 de la persona vista

UIP: El UIP-Acceso, UIP-BA, UIP-Corrige, UIP-DB, UIP-Ranurador, UIP- Tailor+, UIP-Pista: mecanografiar u; cómo el sistema fue adaptado

ANALIZADOR de +VISUAL: qué ocurrió

EL VR% Y WA: cómo "obró recíprocamente" u

LAS REACCIONES DEL `INCLUYEN:

. función señalada modificada para requisitos particulares a la situación.

. A1-240 Windows interactivo y cortinas: Programas del usuario

- str de la palmadita: (ventana o cortina) y (near5 automáticos se abren) y sensor

. ¿Copiado? Patentes de los E.E.U.U.: regulador oculto automático fotosensible 5532560: sus cambios del nivel ligero de detección de las cubiertas de la demanda fuera del cuarto, eg.: no hace caso de la iluminación interior en la noche.

- Más viejas patentes de los E.E.U.U.: Ventana responsiva de 4506137 temperaturas

- patentes relacionadas de los E.E.U.U.: Exposición de 5170418 radiografías

. Cosas que se abren/(parcialmente) cercano según la "designación": gabinetes; puerta (calzadas); cajones; obturadores (ventanas de protección, otros objetos del viento y tiempo inclemente); (animal/organismo) jaulas/envases

- se abre/cierra cualquier cosa que el "detector de la ocurrencia" detecta y necesita respuesta correcta: ver el "sa", "nr", eg.: peligros químicos (escapes) - > cierre de las puertas.

- (vehículo (azotea)) ventanas (cuando está parqueado/conducido)

- entrada: presencia de accessor: "tener acceso"

JUGUETE del ACTIVADOR de los SONIDOS 3C481: El accionar del sonido en un objeto acciona sonidos en otros objetos. Puede crear reacciones en cadena multi. El sonido musical de un dispositivo puede accionar otros pedazos para seguir; dependiendo de cómo se activa el pedazo inicial. Detalles en el archivo 3C481.

DIAGRAMA DE OTD:

U = este ~ del sistema de N (invención) (sistema electrónico) (las "búsquedas y reaccionan") C = TENER ACCESO (las búsquedas si se ha resuelto el procedimiento de acceso correcto - > dan el acceso/el nr), (los piratas informáticos de las búsquedas - > "reacciona") ARTISTA de // (el tipo de las búsquedas de la "imagen" u desea (vía el uip, qué u (usuario) k, el va) al "drenaje" - > "dirige el CARRO de // de la CUENTA de // del ANALIZADOR" de u por consiguiente) // (analiza que de cualquier ocurrencia ha ocurrido - > "reacciona" según lo "señalado" por tipo la ocurrencia (w5)) (las búsquedas qué pueden ser/deben "ser mandadas la cuenta" - > el cliente de las facturas) (contiene el interruptor/el DB útiles para las "búsquedas y reacciona") Picosegundo-Zona MULTIUSOS de la banda de // del OSCILADOR de // EDIT (las búsquedas las "imágenes" - > reacciona vía imagen alterada) // EDUC (las búsquedas qué estudiante puede/debe aprender = las búsquedas/"analizan" el tipo (uip) de banda del interruptor para enseñarle que = da instrucciones a estudiante) // (las búsquedas qué deseos correctos/de u está utilizando sistema = uip-adaptan el sistema para ese usuario) // NR (búsquedas ocurrencias "señaladas" - > "reaccionan" vía modo/% del "nr" el otro modo) // (las búsquedas cuando el oscilador se debe decretar - > oscilador emiten el sonido) () // (localización del u de las búsquedas - > "reacciona") // Q (búsquedas qué información u puede querer para saber; búsquedas cómo contestar a las preguntas del u. EXTREMO S&R
""/"DE LOS ANALIZADORES DE SONIDOS RECONOCEDORES SANOS"

Contenido para los archivos del analizador de sonidos:
. Info general
. Coordinador del analizador de sonidos
. El analizador de sonidos ofrece la lista

Sistemas de reconocimiento sanos. Ver + ' partición del sintetizador.

2A-18 SABEN CUÁNDO ALGUIEN SE ESTÁ ACERCANDO, aunque no pueden saber que se están midiendo. Medir las comprobaciones para sonidos familiares eg.: mecanografiar o cualquier conducción de automóviles en la calzada. Repetidor ¿información?
- mecanografiar o cualquier acercamiento del patrón del paso (salida) [los estudios demostración incluso que el oído humano puede descifrar entre la gente según sus patrones de la caminata]; hacer los perfiles psicologicos en patrones de la caminata correlacionado con otros datos para importante o relacionado con la seguridad posiciones
- si alguien ha despertado y caminando alrededor (en sitio, conveniente, casa); provechoso para vivo en las enfermeras que cuidan para los ancianos sin tuvieron que despertarlos .....
. Usos: cuando está viniendo el jefe o cualquier cliente; seguridad (notifica de approacher; puede registrar pasos con poca memoria el almacenaje y las ayudas guardan el expediente de quién vino adentro y salieron cuando la gente piensa su caja fuerte puesto que no hay cámara cuya cinta requiere el cambio y almacenes grandes).
- Ver las patentes de los E.E.U.U. en la identificación de la localización/del tipo de fuente sana.

ANALIZADOR de SONIDOS 3A630: ¿Información repetidor? Identifica tipo y dirección del sonido. Si oye un tipo particular de sonido, actuará por consiguiente. Eg.: oye el fuego (sin embargo

la alarma de humo funcionó incorrectamente) y marca a policía con previo mensaje; oye el gato meow y abre la puerta del gato/del perro.

¿Información repetidor?

- Para la audiencia - deteriorada y ciencia, etc.
- Analizador de sonidos: Dice el tipo de sonido y de donde estaba generado. Usos: las ayudas que oían - deterioró tales entienden gente del timbre que llama sus nombres, etc; ciencia.
- el dispositivo separado tiene exhibición ("S") de la cual demuestre el tipo/el volumen el sonido creó si no puede ser discernido por el usuario, eg.: Anillo de "T", fuego motor, alarma de humo. Los audífonos no ayudan normalmente adentro identificando la dirección del sonido, por lo tanto el dispositivo puede señalar a dirección de la fuente sana
- analizador de sonidos: puede ser la unidad totalmente separada de la audiencia la ayuda, y o usado alrededor de cuello, muñeca, mantuvo el bolsillo, monedero...

ANALIZADOR de la VOZ 5A880: dice a usuario que era el altavoz del comportamiento del modo en mientras que habla, o deja el mensaje en el contestador automático.

- el usuario puede optar tener análisis en el comando de botones
- relacionado con 5A-940
- . - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (la mejora del DB), monitor inteligente 2E251)
- el "bva", los "vagos", uip-DB de u apuntó.
- Ver: analizador de la voz 6B830

5A910 que EL NIVEL ADICIONAL DE INFLEXIÓN de la VOZ necesitó alcanzar puntería. El nivel adicional necesario puede ser basado en lo que sintetizando equipar las necesidades de hacer, o cómo el cantante con solamente su necesidades naturales de los medios de hacer alteraciones

- bueno para la educación de la música

ANALIZADOR de la VOZ 6B830: analiza un comportamiento de la persona o del animal, personalidad vía su voz

- el sistema de reconocimiento vocal del sistema identifica el tipo de pronunciación para las palabras particulares, eg.: "amor", "felicidad", "esmero", "mi esposa"... Esto permite al sistema ayudar a juzgar psicología del altavoz referente a tales.

- el sistema pudo comparar los tonos totales y el otro sonido del usuario
frecuencias, usando esto como base, entonces viendo cómo el importante
las palabras comparan con la línea baja.
- trabajos en diversas idiomas
- reconocimiento vocal que es absolutamente complejo, quizá con el bloque
los diagramas para la tecnología existente satisfarían la oficina de patentes,
entonces esa sección de la tecnología mejora más adelante después nuestro
el producto podía ser comercial.
- si una mejor información es necesaria, la persona que es estudiada puede contestar
las preguntas sobre sí mismos, y toman el otro estándar psicologico
pruebas. Estos datos se utilizan con el antedicho para mayores resultados.
- algunos usos adicionales: solucionar las causas penales usando "T"
las grabaciones, la tensión y el tipo de tensión para las palabras claves pudieron
ayuda; etc.

OTD:
"S"; "C"; pp; P.M.; Reino Unido; fecha (cuando ocurrieron las conversaciones); usuario
beh; educ; todos; "mic"; portable; índice de inteligencia; impresora; au; t; "M"; punto de ebullición;
alerter; oscilador; vc; cuenta; carro (para las palabras claves deseadas según
mecanografiar el estudio); cp; uq; mq; acceso; uip.

"MIC APUNTADO 6B850": los expedientes suenan solamente deseados. La salida
los sonidos pasan a través de un convertidor que en golondrina de mar transmita adentro
frecuencia diferente la mayor parte de de sonidos de alrededor, de tal modo
reducción de sonidos externamente indeseados
- ésos sin una frecuencia sana pueden crear aislamiento
convertidor que no puede oír
- hablar sobre el megáfono o el otro dispositivo en las frecuencias que no pueden
ser oído por los seres humanos, como los Walkietalkie excepto las aplicaciones normales
sonidos, eg.: los que se pueden oír solamente por los perros... y con
radiofrecuencias

6B870 CUANDO EL SEMÁFORO OYE los neumáticos y la luz screeching para todos
el otro tráfico dirigido está actual en: verde, cambiará
color al amarillo; rojo, permanecerá en rojo.
O sobre la policía o las sirenas de la ambulancia, de la audiencia por consiguiente
tráfico directo de la ayuda para el conductor de la emergencia. El sistema identifica
localización de la sirena inminente

83

Problema: algunos conductores aceleran en las luces ámbar; sobre qué
el destellar luces amarillas o rojas; o un cuarto color.

¿? GRITO 6B890 PARA la "policía", "fuego", "doctor" sobre seguro
los decibelios y el sistema marcarán automáticamente el número del teléfono para la ayuda
83
¿- existe? hablar hacia fuera conocido de la persona o de la compañía deseada, o verbalmente
hablar hacia fuera el número del teléfono querido, y el dispositivo marcará para usted

+ <3, 3, 3, IDENTIFICADOR de 3 SONIDOS de $> 1C251:
Reconoce e identifica el tipo sonido hecho en el ambiente.
Para la seguridad, el etc. se relacionó con los sistemas de reconocimiento vocal, excepto
analizan sonidos más allá de patrones de discurso. Este general
lazos de la invención a muchas otras invenciones del subconjunto.
- Identifica (analizador de sonidos) - > las señales cuando hay cualquiera
sonidos particulares que son de interés vía su identificación
sistema.
- El método del sistema de la identificación incluye:
--reconociendo sonidos familiares y etiquetándolos tales, eg.: abertura
de puertas (puede el TDS), reconocer en eran qué pasos de la dirección
oído (yendo o viniendo de puerta y del TDS por consiguiente).
Reconoce aberturas vía 1C250's el movimiento "sensores" también.
--- identifica a persona por los productos uces de los de nuestros archivos
A, B, C.
--ciertos sonidos pueden accionar reacciones como si fuera un crimen
confiada, o una emergencia ocurrió - eg.: sonidos del vidrio
fractura/corte; fuego (sistema de detección de reserva); golpeo de la puerta;
fuego; metal del corte...
---se notifica la seguridad
- sobre el reconocimiento de ciertos sonidos las acciones siguientes de la máquina
puede ocurrir: sonido de los resultados biológicos de la ocurrencia del elemento adentro
máquina que hace algo, eg.: donante del producto químico, cambiando
temperatura...; confusión excesiva de un animal enjaulada o descortezamiento,
resultados en una cierta acción que pacifica, eg.: dando música, alimento...
+-See 1C250 para la extensión en este uso del N. de este sistema

incluye: sistema de seguridad que analiza alejado 1C250. sonido 1C250's
el analizar/que identifica modos se aplica a esta N, eg.: cómo su
"analizador" (para el sonido funciona).
- Nota al pie de la página: exhibición ("S"); "C"; pp (eg.: para los tipos de sonidos a
buscar y responder a apropiadamente); P.M.; fecha; tds; interactivo;
todos; "mic"; synth; impresora; "M"; punto de ebullición; alerter; vc; cuenta; carro;
teléfono ("T"); tr; MES; fs; RPC; uq; mq; acceso; uip (de individuos
o las funciones de la organización).
- D: sonidos - > mic = analyzer~c (base de datos de los sonidos) = m/nr (del `del notificador)/
respuesta (oscilador/video/tv/s).

ANALIZADOR de la VOZ 1C300:
El software analiza la voz de una persona para
características más psicologicas que el detector de mentira de la voz.
Versiones más simples pueden detectar a gente relaxed y tensa, eg.:
estes 3ultimo pueden hablar con una echada más alta o una rapidez. Llamadas entrantes
se marcan con etiqueta para las características del llamador. Llaves del receptor de la llamada
en cualquie información adicional sobre llamador, eg.: voz, gama de edad
(cuando es legal). Existe: llamadas encaminadas dentro de Canadá por código de área
(Las llamadas de Quebec van a los altavoces franceses). Ventaja: ventas para grande
las operaciones de la televenta pudieron aumentar el 2% cuando son psicologicas
las características del llamador y del vendedor se emparejan. Sin embargo, esto
el sistema puede aparecer extraño a ésos con excepción de psicólogos.
- "Analiza" características psicologicas. Usos del ejemplo:
las investigaciones del teléfono del cliente ("T") se encaminan a la persona de las ventas que
las mejores características de los fósforos del tomador disponible de la llamada.
- Acordando a las frecuencias de la voz de la persona, sistema analiza
el tipo de comportamiento que pueden tener. Este sistema se puede utilizar adentro
conjunción con la intuición de una persona también, para: la policía trabaja
cuando el llamador llama (eg.: policía para la emergencia; cuando el co recibe
llamadas - su sistema de correo de voz (contestación elaborada del teléfono ("T")
la máquina, los etc) dan prioridad a los llamadores según cómo los "ricos ellas
sonido "
- las cortes no escuchan a menudo las opiniones que la gente tenía alrededor a
voz de la persona, al menos un sistema más objetivo (sin embargo no
perfecto) puede ser provechoso
. - utiliza los productos 6B-830, 1C-301

- D: La sección de siguiente en < [] > copió de 1C-301 en 2.95:
< [sonido "analizador": 1C-300; sonido - > "mic" - > sonido a la señal
convertidor - > las señales de sonido se pelan (emparejado) contra una base de datos
para determinar encima qué tipo suena fueron escogidos - > cogido suena
ser (predeterminado/"analizado", por el interruptor para) cómo son ser
processed^: los sonidos u deben hacer mientras que cantan a
canción particular (cada nota de la canción que requiere diverso sonido);
mecanografiar u (uip de las características de la voz del u (la capacidad de la gama de los sonidos));
sonidos externos (instrumentals, fuera del tráfico el sonido
el "analizador" (pudo" no hacer caso) - > cogidos los sonidos es marcado con etiqueta por el interruptor
(consecuentemente) ^: si el sonido hace o no empareja; hasta dónde
el sonido diferencia de sonido (deseado); las señales de sonido correctas] >
- > ""/"" del notificador/mfh/(desarrollo de) uip/etc del oscilador
- las altas versiones templadas podían ser fabricación costosa, así que primera
versión barata. Eg.: u (usuario) = llama vía la línea = el mfh (la base de datos del teléfono de los sonidos, "analizador")
identificador/analizador de los sonidos de +-See 1C251, y 1C250 para la extensión encendido
este N.

y (behav o persona o gente o psycholog)
- Patentes de los E.E.U.U.: dirección del comportamiento interactiva 5377258; 5285685
Actitud percibida...

+ <3, 3, 3, 4> 1C-301
GUÍA DE LA VOZ DE LA DIVERSIÓN: ¡Gozar el aprender cantar, o mejorar la pronunciación de nuevas idiomas.! El analizador único de la voz de la idea sugiere qué aspectos de la necesidad de la voz del estudiante ayudan. Pasos en una forma que puede trabajar:
1. Primero la invención lista aprende que cuál está en la gama posible de la voz de la persona después del individuo hace su mejor en vocalizing una lista de palabras.
2. La invención crea un perfil de la gama vocal de la persona. El Info se almacena en su base de datos.
3. En las lecciones, toma las palabras que almacenó, después las sintetiza, modificado para requisitos particulares al potencial de la voz del usuario.
4. La persona hace su mejor para emular a los sonidos sintetizados.

5. El sistema entonces re-sintetiza los sonidos aumentando el volumen en esos aspectos del sonido que necesiten la especial atención.

6. ¡A tiempo mejoran a la persona que canta y o que habla sin tener que pagar a profesores particulares costosos!

Identifica que expresan la corrección de la necesidad de los elementos - > dando ejemplos audios. El dispositivo se adapta listo al usuario produciendo sonidos dentro de las características físicas únicas de la voz del usuario. Es más barato y más eficaz que instructores humanos.

Instructor de la voz: Aprender cantar, o mejorar la pronunciación de nuevas idiomas. Identifica que expresan la corrección de la necesidad de los elementos - > dando ejemplos audios. El dispositivo se adapta listo al usuario produciendo sonidos dentro de las características físicas únicas de la voz del usuario. Es más barato y más eficaz que instructores humanos.

Guía vocal: analiza a persona que canta y da sugerencias. Puede también ser "la hace en el país usted mismo" = "se enseña a cantar!"

--o el sistema puede ajustar automáticamente los sonidos que necesitan alteraciones según la programación de la máquina o de usuario (UIP).

- un sintetizador ("synth") que entra operaciones sobre base automática o semiautomática. El sistema identifica qué sonidos están fuera de frecuencias deseadas (vía (=) ^: el uip, base de datos, mfh, c (interruptor), carro) y sintetiza por consiguiente.

- se aplica siempre una persona habla, vivir vía el amplificador, o sobre el dispositivo de la grabación, eg. para: contestador automático del teléfono ("T"), haciendo discursos, la producción del audio-vídeo y o corregir registrada (eg.: puesto sobre las videocámaras)

+Keep en mente, cuando un profesor demuestra a estudiante cómo cantar, la voz del profesor será siempre diferente del estudiante. Este sistema puede crear sonidos más cercano a lo que pueden crear las cuerdas vocales del estudiante - por lo tanto un instructor más útil.

- appl: enseñar a la gente con problemas del discurso

Lo que sigue era número del producto: 5A-91. El nivel adicional de inflexión de la voz necesitó alcanzar puntería. El nivel adicional necesario puede ser basado en lo que equipa la sintetización necesidades de hacer, o cómo el cantante con solamente sus necesidades naturales de los medios de hacer alteraciones

- bueno para la educación de la música

LO QUE SIGUE ERA el NÚMERO 1C-150 del PRODUCTO.

Las deficiencias en el discurso de una persona se corrigen. Muestras de problemas solucionados: difícil entender acentos regionales al viajar en una diversa zona del dialecto; tardamudeo; debilitación de discurso causada siendo sordo; etc.

- las alteraciones pudieron abordar el todo o una parte de la deficiencia. Por ejemplo quizás un cambio en el tono o el solo bajo puede realzar el sonido saliente

- el usuario habla en un dispositivo en una voz baja, después el amplificador eliminará parcialmente la voz viva

- el sistema es aplicable en el teléfono ("T") y funciones portables
- el sistema pudo también actuar como prótesis de oído (recordar: se realza la patentabilidad cuando la suma iguala más que sus piezas)

OTD: "C"; tds (dejamos persona "cuenta" su progreso); entretener; au; "M" (para muchas otras idiomas); las alarmas cuando el sonido consigue también malo, o el usuario pueden hacer una comprobación para cualquier serie de sonidos (algo como encanto llega software, el sistema puede comprobar siempre todo hecha (hablado), o comprobar por la página (período de 5 minutos), o la palabra (un sonido)); exhibición del sistema ("S"); pp; P.M.; Reino Unido; todos; "mic"; synth; portable; mfh; oscilador; vc; cuenta; tgh; carro; cp; uq; uip; carácter; vr; palmada.

D #1: USUARIO = cuerdas vocales (sonido humano) 1 = "mic " 2/"sensores " 3 = sonido ~ " C" del "analizador " 4 (1C-300) (carro) - > sugerencia para u 5 - > u recibe sonidos 6/el "notificador " 7 en cuanto a their^: "estado " 8 (calidad de su sonido (según lo considerado en "s")); osc8 (c->speakers) da sonidos correctos; "impresora".

NOTAS DE D #1:

1: características/potenciales de la cuerda vocal del usuario de los estudios del sistema (sistema electrónico) vía: analizador de mic/k = de sonidos = uip/sw (carro); u=c=uip. La base de datos más allá de 1.000 estudiantes y de su progreso en el aprendizaje es utilizada por uip/"analizador" en la determinación de la mejor manera de la cual el estudiante puede aprender/progreso. Profesor/tipo cuerdas vocales (tipo físico del doctor/del estudiante k: la forma, tamaño, tipo suena (según lo determinado por el ser humano y k = c (computadora del ') = la base de datos/el uip)

2: el tipo "mic" pudo emparejar el tipo uso (tipo cuerdas vocales del estudiante) para mejorar el tipo choque del fósforo del hardware/interruptor y la prueba "mic" del agua.

3: "Sensor": (colocado en piel por la nuez de Adán, Detectando - > analizando vibraciones/el fieltro de la vibración por el sistema (puesto cerca de u).

4: Sonido "analizador": 1C-300; el sonido - > "mic" - > sonido al convertidor de señal - > las señales de sonido se pelan (emparejado) contra una base de datos de determinar encima qué tipo sonidos fue escogido - > cogidos los sonidos es (predeterminado/"analizado", por el interruptor para) cómo son ser processed^: los sonidos u deben hacer mientras que cantan una canción particular (cada nota de la canción que requiere diverso sonido); mecanografiar u (uip de las características de la voz del usuario (la capacidad de la gama de los sonidos)); sonidos externos (los instrumentals, fuera del tráfico el "analizador sano" (pudo" no hacer caso) - > cogidos los sonidos son marcados con etiqueta por el ^ del interruptor (consecuentemente): si el sonido hace o no empareja; hasta dónde el sonido diferencia de sonido (deseado); las señales de sonido correctas - >

5: las sugerencias se pueden dar a u cerca: explicación en la exhibición ("S"); tomando la voz de la persona y ajustándola por el sintetizador a la forma desean algo al estudiante para hacer su propia voz: cogido el sonido

marcó con etiqueta por su calidad + cómo podría ser mejorado + la gama potencial de u (uip) + efecto psicologico deseado vía el oscilador/el "notificador": Uno-relaja o B-eleva sonidos que calman/que elevan de u w (con) si el analizador de sonidos determina u para ser energía baja Uno-tensa o B-desmotivada/de sad/w - > el sonido del oscilador.

- los sonidos a fomentar desearon los efectos sonoros utilizados mezclándose en tales características dentro de los ejemplos mejorados para cómo el sonido correcto debe ser hablado (eg.: la nota musical D se puede dar de una manera triste o feliz sin comprimising el sonido correcto (la echada...); efectúa el sonido y o el contenido de la palabra durante modo/avisos educacionales vía el oscilador/S.

6: el usuario de los avisos del sistema a corregir/responde. Cuando u revisa el sonido para el tipo particular aviso/en secuencia del sistema = el sistema sabe al sonido particular de las búsquedas a las señales en cronológico/consecutivo ordenan.

7: u continúa haciendo el sonido con o sin la "notificación" (como banda (por u)). El sistema hace/no para (incitar a usuario). Modos del "notificador": luz que destella (el tipo de diferenciación luz significa diverso significado, eg.: el tono debe ser más alto/más bajo. La voz" de las demostraciones de "S (gráfico) debe ser modulada. U se da la opción para la audiencia/considerar modulaciones sugeridas.

- Misceláneo: todo el sistema de los sonidos w/in (puede ser) convirtió a las señales de "c". U/el instructor puede alterar el sistema para mejorar las necesidades de usuario del fósforo, eg.: determinación de la gama vocal del usuario; volumen; mecanografiar los programas educativos.

PATENTES de los E.E.U.U. - disco de 12.95 baberos:

- str: (voz o discurso o charla) y (analy o estudio o estudios) y (la música o canta).
- Patentes de los E.E.U.U.: 5287789 aparatos del entrenamiento de la música.

+ SONIDO 3C-650-000007 QUE RECONOCE el sistema para la audiencia - deteriorada (sordo):

El sistema dice a usuario qué tipo de sonido se genera. Dice a usuario esta información.

- Si el sistema no está seguro sobre el tipo ocurrencia, puede anotar las ocasiones los sonidos son de tipo ocurrencia #1, o #2, o #3, permitir que el usuario mejore el tipo sonido de la conjetura. Esto se puede juntar con otros' sensores para mejorar la comprensión.

++ <3 o 4> 4C150 MEJORÓ EL ANALIZADOR DEFECTUOSO de SONIDOS:

Analizar las máquinas del coche para el tipo defecto existe. Esta mejora cubiertas: análisis por el ordenador central vía la línea telefónica; analizar condiciones del cuerpo humano, eg.: respiración (existe: tentativas para convertir los sonidos del cuerpo a digital humano para el análisis, aunque quizá después de que nosotros desarrolló esta invención cerca de 1993).

- hacer vía t, analizan condiciones del cuerpo humano, eg.: respiración. Existe para muchas máquinas. Pero es tal existencia médica de los usos, eg.: como se muestra en mitad del canal de descubrimiento de la televisión la primera de Marzo de 1995.

- D1: u->k->1c (llaves en: mecanografiar la máquina/el problema (características) =2 (sonido) "analizador".

--notas: el interruptor 1=Sys (software del `) tiene opciones del menú) - >s/printer->u lee/oye mecanografiar el problema. sonidos 2=compares de los sonidos entrantes (búsquedas sonidos particulares para el análisis según qué u pide el sistema para ayudar a trabajar encendido solucionar) los sonidos preexistentes de w (con) de: comúnmente el funcionar incorrectamente suena (para el tipo parte/problema/situación (u o sistema (analizador de sonidos)) el aparecer ser problema (potencial)/publica (para la investigación).

- existe: muchos productos que analizan para el sonido de la máquina; utilizado para comprobar problemas en motor de coche.

- D: Este sistema de N (invención) (sistema electrónico) = ACCESO ()/+ANALYZER ()/C ()/CÁMARA ()/CARRO ()/PALMADA ()/ COMPOSICIÓN ()/S ()/EDUC (aprender w5 el fall de los productos y w5 ellos son reparado/rectificado)/M ()/MIC de la base de datos (utilizar diferente tipos dependiendo del)/MQ de las tareas (ganar datos para mejorar analizar)/MULTIUSOS (para u de diferenciación (usuario) y o los productos que son estudiado, eg.: cada u puede estar de diverso experto técnico (especialistas, principiantes))/NOTIFICADOR (w5 salió mal)/OSCILADOR ()/banda (cómo analizar,)/Q de la base de datos (al "educ" o determinar mejor el tipo problema)/R ()/CUENTA (para que "analizador" o u vea "estado" de situación)/SENSOR ()/+SOUND ANALIZADOR ()/TDS ()/T ()/UIP ()/ ANALIZADOR VISUAL (vía principal similar, el sistema (sistema electrónico) mira problema vía la "cámara" = analiza problema).

- Movido desde: analizador de la reparación 1G13:

escucha los sonidos que entonces se analizan. Los usos son ilimitado e incluir:

el funcionar incorrectamente del equipo por ejemplo: vehículos en un telecontrol localización (la diagnosis de w, usuario puede entonces ser dada instrucciones qué ellos pudo intentar reparar en la localización, después de hablar con persona en el código de explicación manual alejado del final/de la lectura del sonido exhibición/impreso del analizador, o usuario en la computadora de la vista ("C") puede dar instrucciones con explicaciones gráficas)

- animales; la respiración/cuerpo señala (golpe de corazón/sangre
las señales eléctricas de la presión/del cuerpo) y o el otro cuerpo inducido
sonidos (para la diagnosis médica).
- D: sensor/analizador de sonidos = c (computadora del `) = tr/tel = c/mfh/speaker (oído cerca oyente)
--la computadora del analizador de sonidos ("C") puede alterar
los sonidos/el análisis así que ellos del sonido pueden ser comprimidos/transmisibles
en vía TR/TEL que ha limitado gamas de sonido/de otro
posibilidades de la transmisión.
- esto es probablemente una vieja N
3J160 reparación Alerter: El "analizador" busca sonidos indeseables y
otras ocurrencias en then= del sistema "notifican" cuando/de que la reparación puede ser
necesario (en futuro).
- Utiliza: seguridad alejada 1C250 que analiza el sistema: Búsquedas del sistema
entonces "analiza" uno o más ocurrencias (sonido, los cambios de la representación visual)
entonces "notifica".
- Utiliza KN anterior (invención) (el dir de B, de C, de E?) cuyo "analizador de sonidos"
determina la naturaleza del problema.

MICRÓFONO del MICROSCOPIO 2D-280:
Identificar los pequeños sonidos que son hechos.
- los expedientes, analizan y los expedientes de las subsistencias de sonidos
- el "mic" (s) se puede colocar en los puntos deseados vía ratón de la computadora "C",
etc
- los pequeños sonidos pueden ser hechos que la causa minúscula de los organismos,
cambios químicos, etc. Estos datos más grabaciones de otra
los cambios pueden ayudar para la diagnosis
--comprobaciones para: cambios en la visión y todo el otro de tipo standard
comprobación
- D: sonido = analizador del mic = de sonidos [vagos [de organismos]] = sonido
lupa/registrador sano/memoria sana/oscilador = respuesta sana

SELECTOR de los SONIDOS de ++ 2D-281: El sistema selecciona hacia fuera el sonido particular
las frecuencias así que el usuario pueden magnificar los sonidos deseados para el análisis.
Usos: detectives que llevan hacia fuera sonidos indeseados del fondo
mejor oír la voz o las acciones del bandido; etc.
. (borrando hacia fuera el otro tipo sounds/fq) el usuario puede mejorar tan el foco encendido

sonido deseado (para el estudio).

-2D-280; analizador de sonidos

. Usos:

+ reduce el alboroto en la computadora: analizando sonidos mejor mirando solamente el gráfico de los patrones deseados de sonidos.

. --seguridad - bandidos de cogida; el sistema responde (automáticamente) sobre ciertos sonidos de la audiencia (analizador de sonidos).

. Existe: dispositivos de cancelación sanos, que funcionan de alguna manera adentro conjunción con el tipo dispositivo del walkman.

. Dibujo: frecuencias sanas = analizador del mic = de sonidos - > rutas solamente sonidos deseados (por el uip del sonido característico/la frecuencia sana)

- datos múltiples de las búsquedas a llegar la conclusión sobre la situación, vía: analizador de sonidos/código visual/uip/bva del analizador/del "acceso" - > respuestas del notificador/sistema a la situación.

. - corte y movido desde: 2D-320 - Molde sano externo:

Los sonidos indeseados en el teléfono "T" son bloqueados por el transmisor.

--Los sonidos generados en una distancia se bloquean tanto cuanto sea posible.

--¿existe? uso para otros tipos de micrófonos.

. --el usuario puede pedir que esta opción entre efecto (especialmente si es seguro las distorsiones sanas ocurren en modelos anteriores cuando esto activan al molde)

. Aislamiento de cada tipo de los sonidos: el interruptor representa hacia fuera todo el diferente gráficamente sonidos. Las maneras se aíslan:

- misceláneo: orden y sincronización; estudios del analizador del comportamiento sonidos.

- picosegundo-zona: localización de la fuente sana. Eg.: micrófonos múltiples demostración cuál fue pegado con el first= de los sonidos y comparado con tiempo diferencia otros micrófonos escogidos encima de sonidos. Resultados adentro identificando la localización del sound= esta zona es atada por el interruptor a tipo de los sonidos como forma de distinguirla del otro sonido fuentes.

- múltiplo que aísla funciones: la ayuda múltiple de los sensores aclara cuaesquiera discrepancias o messiness en señalar una fuente sana o tipo de otro sonido.

.- representando gráficamente: las características de un tipo de los sonidos pueden diferenciar de otros sonidos, por ejemplo por orden y la sincronización, echada, volumen, bajo, triple...

- comienzo y conclusión: cada fuente puede tener un diverso comienzo y tiempo de parada.

. - correlaciones con el no-sonido que aísla funciones: 1] múltiplo colores en las transparencias que se traslapan, cuando son todas junto el aislamiento no es como fácilmente descifrable [a desnudo sentidos del ser humano] hasta separado.] el ángulo 2 de la cámara considera diversas cosas según a lo que ha señalado; se relaciona con micrófonos direccionales de los cuales coger predominante el sonido qué ha señalado y en la distancia deseada. 3] diferentes el patrón de sonidos puede ser descifrable por el ear= humano sin embargo las computadoras necesitan entrenar del suplemento; eg.: el jugar de diversas consonancias adentro la misma canción, o diversa gente que habla simultáneamente de radio.

SONIDOS INDESEADOS DEL AMBIENTE DEL BLOQUE DE LA AYUDA RG210 VÍA:

- iguales que 3E040, 3E041.

Cancelación del ruido (sonidos externos constantes del sistema uip (no voces) y las bloquea de "t" 's mic; broche de presión en embudos baratos al mic - señalado al altavoz, este embudo se puede girar hacia la mudanza altavoz.

- D: dispositivo electrónico (voz del SP t) = del mic = del embudo = del altavoz

+ el RECONOCEDOR de la VOZ R54-1 DISTINGUE entre el múltiplo Altavoces: El espectrograma de la voz de cada persona se trata diverso cerca sistema. Solamente ésos con las impresiones particulares de la voz pueden tener acceso o controlar las funciones particulares. Usos: entrada de puerta; uso de sistema electrónico (todos o ciertas funciones pueden ser restricto).

- MULTIUSOS: (el sistema reconoce diversos altavoces, y función diferentemente incluso si las mismas palabras son habladas por diferente gente, eg.: coge en sus acentos regionales/varón/hembra voces); NOTIFICADOR: (); OSCILADOR: (); Banda: (); R: (); S: (); CUENTA: (tds); SYNTH: (); Teléfono: (tr); UIP: ().

- aplicaciones R52, eg.: R52-1. Ejemplo: solamente cierto entrante las voces/los sonidos son reconocibles en términos de tipo sistema;

+--una de ventajas incluye: el enangostar abajo es de qué usuario

de 'parámetros acceso de los estrechos interno SA (analizador del system= de sonidos del `) de sonidos necesarios
asociado a cada palabra. Si no más de par en par parámetros para cada uno
la función de control sería necesaria para la gente con discurso de diferenciación
patrones.
. ---Es decir: limitando sonidos potenciales para ser reconocible
interno que reduce errores potenciales incorrectamente reconociendo dos
sonidos similares/signals+ como uno del otro.
---diversas regiones de un país pueden tener parameters= de diferenciación
el tener en cuenta acentos regionales.
- hermana del cabrito de las subsistencias de usar su dispositivo del EL.
- impresiones de la voz determinadas vía los u: opción de discurso de la velocidad/de la palabra/
% de palabras del tiempo están en ciertas zonas/el general % del fq del tiempo
cierto fq se habla en relación al otro fq - hay algo
consistencia entre los valles y las montañas (del gráfico del fq) por
altavoz (u).

TIPOS Y "REACCIONES" DE LOS SONIDOS:

+ sonidos/acontecimientos que accionan reacciones

Necesidad: invenciones creativas de la búsqueda de la patente insertadas aquí. Búsqueda
todos los tipos de acontecimientos se supervisan que. Un extensible muy grande
¡área!
. Agua/líquidos:
- Derramándose: agua/productos químicos (líquidos) de: fregadero; bañera;
envase químico del laboratorio [7G]
- agua corriente oída de: (metálico/pvc) instalación de tubos; grifos;
corrientes; ríos; líneas de la playa: de los océanos o de los lagos; fuente también
identificado como teniendo un desbordamiento.
- Salpicar el agua: significar indeseado posible: nadador o
ahogamiento (por el joven); intruso; animal salvaje (zorro, estimado, felino
cazador (gato, tigre de la sacudida); agua que fluye adonde no debe, eg.:
en el sótano, abajo pasillo o piso (del laboratorio); quizá algo de agua
hacia fuera salpicado envase; excesivamente - alto (océano) agita (oye
acercamiento de elevación/que se estrella de las ondas).
- Precipitación: lluvia, nieve, el granizo, (niveles inusuales de) contaminación
- Goteo o el escaparse de: techo, envase, pipas, otra
inundación.

- levantamiento/que cae del agua más allá de llano "señalada". Eg.: relleno: tina (del baño); los tanques. Oye cambios en sonidos del eco. Trabaja w otro (presencia de la humedad) "sensores".
- Contenido líquido instalado tubos: "detecta" cambios en la constitución de líquido transportado, eg.: cómo es el líquido grueso (espeso), o si los objetos (arena) están viajando dentro.

. Peligros naturales:

- Vientos: trueno; tornados (útiles para la localización ellos en telecontrol áreas; también utilizar el "va").

--Las respuestas dan advertencias para proteger contra: El soplar del viento a través de ventana en el edificio que pudo estropear. Al aire libre vistas de la construcción (especialmente durante la construcción "señalada" fases). Cuándo mover objetos importantes (del arte en museo).

- Misceláneo: fuego; termitas (que comen el edificio); terremotos (sensor de la vibración - existe).

. Producto químico de los peligros: archivo 7G

sonidos (inusuales) de la quema/que reacciona de los productos químicos (más allá de parámetros sanos "señalados"). Peligro químico indeseable

sonidos: quema; el hacer estallar; el burbujear; el agrietarse de los productos químicos (que están endureciendo al punto de desempate).

- también acciona los sensores para: olor [humo de señalado productos químicos]; vibración [equipo que golpea fuera de control/que cae de estante].

. Analizador de las acciones = del comportamiento de la gente:

cualquier acción [inusual] cogió por la pista; sensor; inusual 'tener acceso al proceso; acontecimiento inusual anotado por vagos. Eg.:

- pasos: el caminar o funcionamiento cerca o "picosegundo-zonas señaladas"; busca los patrones que caminan que caen en/de sonido señalado perfiles. Ejemplos: pasos desconocedores de las búsquedas (puede ser un miembro del no-personal cuyos patrones de la caminata no se colocan). Diferente la gente tiene patrones únicos de sonidos de la caminata.
- abertura de: sobres, cajas (de la cartulina)
- Voces: (persona humana, particular) voces indeseables, eg.: griterío; (bebé) griterío; el hablar ruidosamente; el pedir ayuda
- rompiéndose e introduciendo (véase un KN más viejo)
- necesidad de importar la lista completa de imi aquí.
- para la extensión ver: vagos

+ grita para la ayuda. Eg.: alta echada de la voz de la mujer arriba
'decibelio señalado, y o en el de alta frecuencia asociado comúnmente
con no-broma grita para la ayuda. Especialmente útil en vestíbulos y
lejos de fuentes posibles de otros sonidos y bromas ruidosos, como
estacionamientos del coche. Hace que el personal de seguridad siente más cómodo
patrullando alrededor, puesto que él puede no tener tiempo para conseguir a su
arma o notificador sin hilos a pedir ayuda.
. Sonidos animales: rasguño (por el animal: gato, perro) de la alfombra/
muebles; vocalizaciones animales: descortezamiento, el meowing, gojeando,
grito.
. El Clanking o tacto de cuaesquiera materiales sólidos: metal, pvc, madera,
piedra, cartulina
- abertura o envase/puerta/caja fuerte/ventana cerrados.
- tapas: cajas; asientos de tocador (ambos tacto, encolerizando a esposa)
- pedazos que se enclavijan: pedazos duros que se traban en uno a (donde
se diseñan para caber), eg.: guarnición masculina del pedazo en hembra
pedazos/zócalos
+ cerraduras: inserción/eliminación de llaves; marca/k (correcta)
combinaciones. Las cerraduras y las llaves se pueden diseñar para accionar único
sonidos [de cómo del metal tintineos comúnmente]. Substituye la necesidad de alambres
para trabarse o puerta (que se puede cortar).
--'Seguir las funciones mientras la persona esté en sitio: a partir de tiempo ellas
abrir el tiempo del to-> de la puerta que cierran la puerta o cerrar con llave [la puerta pudo
cerrar con llave automáticamente cuando se cierra automáticamente sobre entrada].
- Puertas: el golpear de la persona/campana de puerta; ins de la rotura; puertas que se abren o
cierre (cerrándose de golpe).
--Respuestas: Enseñar a la gente (niños) a no cerrar de golpe las puertas cerradas.
- El Screeching/rasguño de sustancias duras: bisagras; sólidos
resbalando a través de otro sólido (piso, tapa contraria, pared); mudanza
punto de conexión (que necesita la grasa); fricción.
- Nuevos productos o edificios (bajo construcción): El SA (analizador de sonidos del `) busca cualesquiera
suena indicativo de apuro, eg.: construcción o estabilidad pobre.
Eg.: equipo industrial o rascacielos grandes.
. Funciones del instrumento electrónico:
- "teléfono": señal para marcar (oída a través de sitio); señal de comunicando
- "K": el mecanografiar en llaves de: "c"; "kn"; el otro EL (electrónico) "n"; "señalado"
patrones de mecanografiar (véase un KN más viejo)

- Tipos señalados de: música; altavoces difundidos (eg.: Gualterio Cronkite); parásitos atmosféricos (de: radio, pobres del canal de la difusión de TV conexión, o no siendo conectado con una cualquie manera); ciertos tipos del tarareo. Ver el "OSCILADOR" de cualquier KN: siempre que uno de ellos genere sonido - > sa - > nr.

--los padres pueden seguir siempre que sus niños jueguen electrónico 'hospitalidad, eg.: estereofonia, televisión, VCR.

- alarmas: el tocar la bocina del coche del automóvil; alarmas del hurto de coche; (edificio) alarmas; otras alarmas del hurto.

- Los "notificadores" de otros productos se oyen

. Dibujo de OTD: U/personal de seguridad = nr/osc = ~ c (computadora del "SA" (KN) del `) = Por causado sonido/""/"" del sensor/"del oscilador nr" (cuando ocurre el problema) = ACCESO (acceso negado); CARRO (carro insertado/quitado); nr (notificador del `) (); Picosegundo-Zona (entidad (no hizo) entrar en zona); R (`teledirigido) (si (no) utilizado (correctamente)); RANURADOR (manera de la encaminamiento - > sonidos "señalados"); CUENTA (fue excedido/o no encontrado); SENSOR ((no) activado); ANALIZADOR de SONIDOS (sistema del respaldo si el otro (tipo de) SA (analizador de sonidos del `) no funcionamiento); ESTADO (algo es incorrecto o undesirable); TDS (asignación excedida del parámetro/del plazo/del uso del tiempo); T (anillos).

. Accidentes misceláneos:

- Sonidos que hacen estallar. De: el hacer estallar del globo; ebullición líquida (gruesa) (demasiado rápido; o ebulliciones encima y quemaduras que accionan el olor "sensor"); el soplar del neumático auto; explosiones (de la bomba); cambios en la presión de aire el causar haciendo estallar o explosiones; latas de estallido u otra (metálico /envases sólidos del plástico).

- Objetos que caen: basura, material de la vista de la construcción, material de almacenaje (en estante).

--valor: advierte contra peligros adicionales, después de que la primera caída tenga observado.

+ topando o inclinando sobre objetos. Peligros/problemas de la causa si caen abajo/consiguen empujados: Artículos que son calientes o con la llama; o reacciones químicas peligrosas de la causa (el derramarse de los productos químicos (también mucho) sobre uno a); trastorna el proyecto o la diagnosis de investigación. (Calefacción, fundición, producto químico (incineración)) hornos; agua caliente calentadores; calefacción de gas. Radiactivo nuclear u otro (tenencia) productos. Los organismos de vida (peligrosos) se escapan o consiguen atrapados adentro (sobre dado vuelta) jaula/envase, eg.: dañoso bioengineered

microorganismos.

- Incidentes relacionados misceláneos: el dispositivo (electrónico) del EL consigue desenchufado de zócalo de la fuente de la corriente eléctrica. Roturas del vidrio. Caída de los objetos a la tierra el que él bajó de pudo no haber caído sin embargo.

Causado por terremoto (pero no el rumbling causado cerca: carros, cerrando de golpe la puerta). Alguien dispara en algo.

. Vehículos: movimiento: tren inminente [el notificador de reserva encajona la existencia La puerta de la pista camino-RR no baja vía medios tradicionales], coches, (screeching) roturas; sonidos del apuro mecánico (véase kn anterior); cuerno que sopla (el sonido de otro cuerno magnificado, considera kn anterior). Objetos/envases que necesitan la atención inmediata después de que se hayan empujado durante el transporte, eg.: vivo organismos, derramamientos). Aceite de goteo (de la transmisión) (después de él ha ido debajo de nivel deseado).

REACCIONES DEL `CUANDO OCURREN LOS SONIDOS SEÑALADOS:

Notificador: "nr" activado. Alarmas: usuario próximo; seguridad personales; supervisor (del empleado); iniciados/events= de las "cuentas" para el "perseguidor".

. Reacciones:

. - Alivia problema. El sistema responde automáticamente a: evitar/reducir al mínimo el peligro/el apuro; para el apuro. Qué responde es cualquier el sistema (sistema electrónico) que generó el apuro, o el sistema eso está presente aliviar el apuro; en el 3ultimo caso dos sistemas más pueden (no) estén conectados el uno al otro así como al "sa" = sistema de la respuesta.

- Reacciones comunes:

. --el sistema relacionado reacciona al problema señalado según lo señalado.

D: problema - > sonido - > sa - > el sistema (sistema electrónico) responde.

. --apaga el sistema/la función que causan ruido. O corta corriente fuente.

. --gira el sistema/la función para solucionar la causa del ruido.

. --"oscilador" = "nr": tan la gente o la seguridad cerca puede responder (en persona; activando o desactivando el esto/el otro sistema relacionado)

. --activa la canceladora de los sonidos: reducción de ruido audible. El "SA" es un mejor capaz de camuflar sonidos cuando sabe qué necesita ser cubierto; el sistema se aplicó mejor a las situaciones donde "señaló"

los sonidos indeseables ocurren con frecuencia.

--cierra/abre la ventana, en acontecimiento de: cambios en el tiempo (lluvia),

fuego, accidente químico (véase el archivo 7G). Ver: A1-240.

--ver la parte imi: buscar y reaccionar

. Ocurrencias que accionan el OSCILADOR:

. - en otras palabras: Sonidos y reacciones buscados del oscilador de los nark:

- persona de imposición - > el nr acciona sonidos de: perro del descortezamiento [temprano

el kn, y ahora existe también]; sirena.

- vecinos ruidosos - > nr: oscilador que les dice ser reservado

. Ver el GPS.

-3C090 Distancer sano:

Instrumentos musicales que juegan junto el cambio sus sonidos

según cómo está cercano o lejano se mueven desde uno a.

D sin cuerda y celular de -3E-010: las demostraciones aproximan distancia

. Sonidos del fondo que efectúan cómo funciona el altavoz: OSCILADOR

compensa fondos ruidosos cerca: impulso de su volumen;

compensando esas frecuencias sanas del oscilador que se traslapan

ruido ambiental cerca: cambio de tales sonidos traslapados en

diversas frecuencias (similares), o aumento de su volumen.

- ver KN relacionado (invención) en el speakerphone.

MISCELÁNEO:

+ el tipo sonido depende de cómo responderá el sistema. Búsquedas de cada sistema (sistema electrónico)

uno o más sonidos "señalados".

+ el "analizador" estudia/"anota" cómo los sonidos/los acontecimientos múltiples

ocurrir (en la manera señalada: orden, echada, longitud de tiempo, de

cierta dirección o picosegundo-zona), cambios en la imagen percibida (va).

Esto se junta con cómo uno o más otro (kn) "de los sensores"/

los "analizadores" determinan las naturalezas (del múltiplo) del

ocurrencias.

. --El notificador " o el sistema de la respuesta entra siempre que/si del efecto

los sonidos "señalados" no ocurren (en la orden/la frecuencia correctas/

el patrón/la duración/o la otra forma).

. Ver el amaestrador de la lengua 7J02 y el analizador de la voz: Enseña a principiantes de lengua a pronunciar

nuevas palabras. Está en propio archivo.

. TheShotSpotter: identifica la localización de tiros dentro de un radio de la milla, y abajo a un área del pie 20-30. Crimen reducido en Los Ángeles. Ver San Francisco Chronicle. 13 de abril, página B5. [Relacionarse esto con la identificación de localizaciones de cualquier sonido señalado.]

+ PROFESOR de la NOTA MUSICAL 7J09: (este número combinado con número sobre 1C301):
Los estudiantes enseñaron a cómo distinguir bueno de malas notas de los sonidos.
- El sistema demuestra que (en gráfico que) hasta dónde su (instrumental/vocal) sonido es del nivel ideal. Ven el cambio mientras que alteran el sonido/la voz.
- El examen/el juego' prueba a estudiantes, anotando' sus resultados.
- Cuanto mejor es el sistema de reconocimiento sano (VA), mejores son los resultados.
- (Otro) amaestrador sano: Enseña usuario como a qué cosas suena, eg.: estudiantes de medicina que necesitan interpretar los sonidos del cuerpo [respiración]. Los sonidos únicos a un estudiante/a un paciente particulares se escuchan, y después se sintetizan para demostrar como qué diversas dolencias sonaría.
--Si el doctor es incierto en cuanto a cómo deben interpretar un sonido particular, puede ser que almacenen los patrones de sonidos de la persona cuando son sanos. El sistema siguiente alteraría los sonidos bajos normales para representar enfermedades señaladas.
- Los sonidos para las máquinas [vehículos] se alteran para demostrar el tipo enfermedad.
- Las ventajas sobre simplemente almacenar toda la enfermedad diversa suenan sin la alteración:
- el usuario puede entrar sonidos normales y ver cómo puede ser que cambien.
- el número de sonidos de la fuente y cada uno de sus formas posibles de alteración pueden ser demasiado grandes.
- el nivel de imprecisión de una síntesis puede ser tal que el fabricante que advierte sin embargo al cliente, puede ser menos impaciente sintetizar cuidadosamente sonidos diversos. Si el sonido se sintetiza sobre el terreno, puede haber una mayor tolerancia a falta de exactitud, mientras haya una cierta semejanza vaga del sonido correcto.
- 'Educa a gente en el aprendizaje de cómo interpretar sonidos.
- Piezas: egh, educ, uip, oscilador, sensor

SINTONIZADOR 7J10: El sonido del sistema analiza las máquinas o el normal/el sonido bajo del instrumento [del musical]; entonces demuestra cómo suena cuando en el estado calumniado correcto o en señalado. Eg.: Cuando un sintonizador profesional ha templado su piano; el usuario almacena los sonidos para cada llave en sistema [como los ideales]. El sistema puede no sólo repetir los derechos sino analizarlos para hasta dónde de sonidos mal de un instrumento del sonido. El sistema puede sugerir lo que y o en qué dirección se pueden alterar cualesquiera palancas o adminículo para alcanzar señaló los sonidos. El sistema siguiente anotará el sonido nuevamente llegado. Esto es un poco como jugar al juego de encontrar algo, y las pistas que el usuario

consigue son verde, amarillo o rojo dependiendo de si el usuario está haciendo las correcciones en el modo/la dirección correctos.

- Piezas: analizador de sonidos, egh, educ, oscilador, synth

Extremo del archivo del analizador de sonidos

SECCIÓN DEL ANALIZADOR DE SONIDOS =

Los siguientes son elementos sanos del reconocimiento:

D: mic/sensor = computadora = función/exhibición/oscilador

- OTD #1:

alarma audio-visual alejada del sensor 1C-250-4000000002: Si el usuario oyó un sonido extraño en otra parte de la vivienda, el sistema jugará ocurrencia trasera. Micrófono y o foco de la cámara en la dirección de la fuente sana. Un trabajo más simple de los modelos sobre modo audio solamente.

identificador de los sonidos 1C-251-500000002:

Señales cuando hay cualquier sonido particular que sea de interés vía su sistema de identificación.

- El método del sistema de la identificación incluye:

--reconociendo sonidos familiares y etiquetándolos tales, eg.: la abertura de puertas (puede el TDS), reconoce en qué pasos de la dirección fueron oídos (yendo o viniendo de puerta y del TDS por consiguiente)

analizador de sonidos 3A-630

"Representación visual sana": puede ser que sea hecho técnico factible para que los sonidos sean convertidos en las imágenes para los propósitos de la ayuda identificar mejor los sonidos.

UIP: el sistema memoriza últimos sonidos y su importancia correspondiente

5A-460 "telecontrol" (esos elementos en esto que no generan el sonido, eg.: el presionar del botón): funcionar las funciones sin la generación de sonidos para disturbar el proceso que analiza sano

- OTD #2: exhibición; fd-hdd; pp; P.M.; Reino Unido; fecha; tds; básico; micrófono; el synth%; el portable%; el printer%; M%; punto de ebullición; oscilador; balanceador; discurso; vc; el score%; carro; cp; uq; mq (en la ayuda determinar el tipo sonido, eg.: la información de usuario según lo seleccionado del menú proporcionado por el sistema según las mejores posibilidades que determina comparando el último sonido con la base de datos para el análisis sano, puede ayudar a diagnosis); UIP; carácter; localizador (el sistema puede combinar el análisis del sonido con la localización del artículo de generación sano o del otro artículo) %; notificador.

- Analizador de la voz K210-5A-880: dice a usuario que el altavoz del comportamiento del modo estaba adentro mientras que dejaba el mensaje.

- Ver KN, eg.: lo que sigue pudo ser N duplicado (invención) de arriba, identificador de los sonidos 1CE251, analizador de la voz 1CE300, instructor de la voz %1CE301, analizador defectuoso de sonidos 4C150, "BVA".

- Si el analizador de sonidos es la selección up/handle [del proceso (fácilmente)] el sonido particular incapaz ("fq") - > los convierte al fq particular (según tipo general (onda de aire) de fq original - > el sistema del interno tiene cierta idea general "análisis" del sonido entrante fq/signal y de procesos por consiguiente.
-2D-050 localiza la dirección del objeto vía: Sonido/cámara.
Selector de los sonidos -2D-281: El sistema selecciona hacia fuera frecuencias sanas particulares
- "Facturación"
- D: mic/sensor = "C" = función/exhibición/oscilador. Ver Parts& para los detalles.
- Ver el "cerebro".

Otro: Los analizadores de sonidos (término según lo utilizado popular por otros) miden el sonido. El sonido de Meyer en Berkeley tiene sistema de Sim. Sr. K una característica "SA de las' invenciones' de y s - el analizador de sonidos" no distingue necesario entre los reconocedores y los analizadores sanos.
- Reconocedores sanos: dice cuáles es el sonido, eg.: reconocimiento de discurso.
. - Prótesis de oído de la patente 4689820 de los E.E.U.U. responsiva al interior de la señal y al exterior de la gama de frecuencia audio = [acción asociada (con) al sonido - > sa (analizador de sonidos) = reacción ['usuario del notificador]].

STR DE LA BÚSQUEDA DE LA PALMADITA: Muchas patentes relacionadas valiosas. Palabras claves:
+-set 1: el sonido, acústico, interventor, oye u oye, escucha, Microphon
+-set 2: el analyz, perno prisionero (estudio), compar, compar, investigat, scrutiniz, determina, cuenta o las cuentas o el anotar, monitor, intervención

- seguridad, protector; patrulla
- alertar, notificar
- extraño, inusual, peligro, crim, advertir, fuera de lo común
- actividad, movimiento, movimiento, cambio, caminata, extranjero, rotura

palabras de +-key para el "analizador de sonidos": (sonido o audio) y (sensor o analyz)
- números de clase de la palmadita?:
+ patentes de los E.E.U.U. (más recientes solamente) a partir del disco de 12.95 baberos:
la rotura de cristal acústica de Dirección-detección 5471195 que detectaba el sistema = "pista" = los acontecimientos (ilícitos) w5 del nr del sistema (sistema del ') (notificador del ') ocurrió; Simulador de ambiente de 5467401 sonidos usando una simulación de computadora y un método de analizar un espacio de los

sonidos; La muñeca 5458105 usada anti-ronca aparato para detectar roncar...; 5452364 sistema y método para supervisar fauna: tiene tres micrófonos para ("analizador de sonidos"); El sistema de 5450524 verificaciones de la contraseña basado en una diferencia de (audio) "anota": compara sonidos hablados....; Detector de movimiento 5450060; Fuente sana 5444443 que determina el sistema; Sistema de medida de 5418758 distancias = "distancer"; El sistema de alarma 5414409 para detectar una señal audio cuando ocurre la fractura de cristal [era esta patente archivada después de la limadura anterior de la patente de KN?); Sistema 5395123 para marcar una voz de canto y exhibición de un resultado marcado para una máquina del Karaoke: compara la voz de canto con los datos de voz estándar de canto.... [era esta patente archivada después de la limadura anterior de la patente de KN?]; Detector acústico pasivo del tornado 5355350 y método de detección; 5381485 sistemas sanos activos de los sistemas de control y de reproducción de sonidos; 5448221 aparatos duales de la alarma para la supervisión de la persona bajo arresto domiciliario: suena audible fuera de alarma amonestadora de la gama si la persona excede"/"" de las "zonas" = "del distancer/"de los gps pista". 5400011 método y aparato para realzar el audiocontrol alejado en sistemas de seguridad; Punto de la colisión de 5478077 objetos que detecta el aparato = ""/"del distancer localizador"; Sistema de reconocimiento de discurso 5471557 que utiliza una red de los nervios.

EXTREMO DE ESTA SECCIÓN DE SOUND-ANALYZER.
ANALIZADOR DE SONIDOS - COORDINADOR

+ ver a coordinador del sensor: analiza el tipo múltiple sensores, eg.: sa con el analizador visual para saber mejor la naturaleza de la situación.
- Ver a coordinador del sensor para mayores detalles.

. Localización de la fuente sana: GPS. Zona de la fuente sana considerada.
- eg: el distance= cuanto posterior es cuanto más bajo el sonido se espera, por el que el analizador calcule el nivel de decibelio real emitido.
- eg: los sonidos que funcionan incorrectamente se analizan que acuerdan su distancia del micrófono.

. Fuentes sanas múltiples:
- 'zona también usada para calcular las fuentes sanas múltiples [que emiten sonidos simultáneamente]. El SA puede también distinguir fuentes sanas buscando los patrones de diferenciación de sonidos [esperados de fuentes de diferenciación, eg.: incluso el tipo sonido del zone= del wo (fuera) puede señalar la zona de la fuente sana].
- eg: los sonidos similares se interpretan diferentemente según su zona:
--los sonidos de romper el vidrio de áreas de ventana, o el equipment= cercano de la prueba se interpretan diferentemente.

--el caminar suena la entrada cercana, o ventana, o laboratorio, o cámara acorazada de la seguridad.

COORDINADOR DEL ANALIZADOR DE SONIDOS DEL FINAL
SA/ANALIZADOR Y SUBPARTES DE LOS SONIDOS =

Éste es archivo: SA-IMI

ACCESO =
- D: (el sounds->analyzer-> requerido accede).

BALANCEADOR =
- D: ('las capacidades de la grabación del micrófono según la posición del usuario se ajustan vía: sonido [el 'localizador determina (cambiando) la localización de creaciones sanas] - > mic - > el analizador de sonidos - > memoria - > se puede repetir vía el oscilador.

BVA =
- (voz - >)/C (base de datos del bva de los sonidos; interruptor; analizador).

CÁMARA =
- (lens->database de las imágenes (caras; productos) - analizador del >sound (tipo sonido de la imagen w de los fósforos (con) (esperado, necesitado))).

CARRO
- (base de datos; acceso).

COMPOSICIÓN =
- (KN voz instructor N) FECHA ()/S (tipo de exhibiciones sonido; resultado del análisis, de la cuenta, del estado)

DISTANCER = el sistema (sistema electrónico) compensa la distancia de la cual la fuente sana emana; el sistema funciona solamente cuando el sonido viene dentro de cierta distancia o zona.

LOCALIZADOR =

el tipo sonido analizaba ayudas determina la localización de u o se opone, eg.: si hay cinco (diferente) los objetos (EL), el tipo sonido; ayudas (distinguir entre ellos)

M = los asimientos/"analiza" la base de datos de sonidos

MULTIUSOS =
el sistema distingue entre diversos u o sonidos - > acceso o dando por resultado la función asociada (las opciones)

NOTIFICADOR () =

ORDEN Y SINCRONIZACIÓN DE ++ =
El 'analizador de sonidos = el analyzer= del comportamiento sigue la pedido y la sincronización del sounds= para analizar si los sonidos están de comportamiento/de ocurrencia señalados.
. - Una versión extendida de las palabras de la multi-sílaba cogió por la voz que reconocía sistemas. Esto no compromete probablemente la patentabilidad para este aspecto del analizador de sonidos, puesto que la invención aquí es más multidimensional.
. Ejemplos:
- eg: ningul□n grito anterior o de siguiente de la risa o del discurso no-serio para la ayuda.
- eg: el sonido del carro siguió golpeando o el caer de objetos peligrosos, puesto que es probable están siendo movidos por la humanidad. Aunque tales podrían ayudar a acciones posibles designadas del hurto si estuvieron confiada después de horas del trabajo.
- patrones misceláneos de cualquie tipo: patrón que camina; zonas en las cuales los sonidos ocurren consecutivamente; para los objetos de caída [un sonido de la explosión entonces una gota, contra una explosión suave del equipo de laboratorio entonces un sonido de la gota].
- eg: los sonidos similares repetidos pueden implicar los movimientos repetidores, eg.: embalando o desempaquetando las cajas/las latas similares.
. - eg: el animal en comienzo de la jaula [siendo transportado, o después de trauma] con el howling= ruidoso siguió por características de los sonidos serios de la dolencia.
- patrones del sonido w/in la secuencia sana sí mismo: duraciones o pausas de cada aspecto; echada; bajo; triple; volumen; inclinación de las curvas del sonido, jaggedness/desigualdad; cómo los patrones de diverso aspecto se relacionan el uno al otro.
. Dibujo de OTD: u (usuario) = este sistema de N [patrones: pedido y sincronización de los sonidos = del ~ c (computadora del sa] del `) =
TENER ACCESO () AL CARRO de // de los VAGOS de // () () // EDIT () // EDUC (enseña a la naturaleza de u del sonido basada en su patrón) // MULTIUSOS (las "búsquedas y reaccionan a diversos sonidos para cada u)

Picosegundo-Zona de la banda de // NR () // (cómo el sistema responde a los patrones de sonidos) // (patrón las fuentes sanas de diversas localizaciones", eg.: la fuente sana se mueve a la izquierda en sitio, o el sa sigue la CUENTA inminente de // Q () // de los pasos) (cómo es similar un sonido está a un patrón sabido de sonidos (para el tipo de actividad potencial del hurto)) // BUSCA y REACCIONA (según el patrón del sonido) los SENSORES de // (los sensores múltiples determinan mejor el tipo de patrones del sonido y de otras perspectivas) // TDS (posibilidades de la duración, comienzo, parada, pausas sanos) // +TRACK (el 'seeks= entonces sigue patrones señalados) // UIP (adaptación de: buscar y reaccionar. Uip-DB (base de datos del `) = vagos;) ANALIZADOR VISUAL multiusos de // () // VR (u con la audiencia pobre puede determinar mejor 'entretiene la naturaleza (alterada) del sonido) // WA (usado por el protector de seguridad).

OSCILADOR =

- analizador del osc->sound del u; notificador

PP =

- qué sistema (sistema del `) debe buscar y cómo procesar resultar (los datos/las conclusiones)

Q =

- (u pide w5 acerca de los sonidos/de las ocurrencias (atados a los sonidos), eg.: quién hizo qué, porqué y cómo cuando ocurrió el sonido #55)

CUENTA = ocurrencias de las medidas w5.

SENSOR =

- (detectando para las ayudas de los elementos adicionales "analizar" la situación; tipos del sensor: calor; vibración; producto químico; del "sensor")/

El SP teléfono = mic coge sonidos vía ondas de aire = el sistema de la vigilancia

La PISTA = analiza el occurrences= de los sonidos entonces "reacciona" según lo programado.

UIP =

- más sonidos recogieron o sobre de una base de datos (sana) más grande del u-> en u; el sistema (sistema del `) sabe responder basado en uip del u (la base de datos de sonidos)

ANALIZADOR VISUAL =

- analizador de sonidos (de los trabajos w (con) en la determinación: "análisis"; cuenta; estado; w5)

PIEZAS DEL ANALIZADOR DE SONIDOS DEL FINAL.

CUENTA

Diagrama: entrada de datos/sensor = "C" = hecho salir (tr, "S", oscilador)

- La diferenciación "anota" y las secundario-cuentas son labelable por el "artista" = (color) "designador". Facilita la comprensión del espectador de la cuenta, reduciendo alboroto en la pantalla.
% "del acceso": Ver: "Tuvieron acceso a los VAGOS (analizador del comportamiento)" = "cuenta": Cada uno de los archivos accesibles tiene un grado de la cuenta.
- el sistema de sonorización también se anota para: capacidad de guardar hacia fuera a piratas informáticos; facilidad de manejo; cómo es bueno adaptar-está adaptando; felicidad del usuario. recompensa 1G22 generada por el nivel anotado del uso.

Pieza #1 de OTD: ^via demostrado estado "S", luces, sonidos, impresión hacia fuera, notificador. Peticiones de usuario que tipo cuenta que desean y que pueden tipo sistema de los pp de sonorización deseado. ^includes del estado que determinan si es el sistema: en, que la función es en funcionamiento, hasta dónde en la operación está apagado, cualquier problema, y o los resultados (éxito, falta; mecanografiar, eg.: cantidad, calidad, manera); el número de épocas un acontecimiento particular ocurrió (algo dentro del sistema y o algo afuera en el ambiente (tal como sonidos, o algo o alguien que da un comando al dispositivo).
- OTD: el carro determina el tipo cuenta y cómo está presentado; el tipo cuenta determina el tipo carácter, y qué, cómo, porqué funciona el carácter; aplaudir para conseguir estado dado por más ^notifier; fecha; anotar demostrado en la exhibición ("S"), vía notificador, el etc; confía en "C" y su memoria, y %M; % del micrófono ("mic") - > analizador - > generador de señal - > función (notificador); P.M.; multiusos (cada usuario consigue diversa cuenta); Los datos son via^ también obtenido: "Reino Unido", "carro", "teléfono", "MES", explorador. Tablero de la cuenta (del juego) (sistema).
- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- Subparte: Función Cuenta-Alt: cambio de las causas que anota en la función del sistema (sistema del `); CUENTA-UIP: desarrolla el DB del UIP; Cuenta-Apuro: determina si algo está fuera de parámetros deseados, para: tener acceso (mientras que u utiliza el sistema), nr.

Característica importante - solamente esta sección quizá menos importante:

- D: entrada de datos/sensor = "C" = hecho salir (tr, "S", oscilador)

- Pieza #1 de OTD: ^via demostrado estado "S", luces, sonidos, impresión hacia fuera, notificador. Peticiones de usuario que tipo cuenta que desean y que pueden tipo sistema de los pp de sonorización deseado. ^includes del estado que determinan si es el sistema: en, que la función es en funcionamiento, hasta dónde en la operación está apagado, cualquier problema, y o los resultados (éxito, falta; mecanografiar, eg.: cantidad, calidad, manera); el número de épocas un acontecimiento particular ocurrió (algo dentro del sistema y o algo afuera en el ambiente (tal como sonidos, o algo o alguien que da un comando al dispositivo).
- OTD: el carro determina el tipo cuenta y cómo está presentado; el tipo cuenta determina el tipo carácter, y qué, cómo, porqué funciona el carácter; aplaudir para conseguir estado dado por más ^notifier; fecha; anotar demostrado en la exhibición ("S"), vía notificador, el etc; confía en "C" y su memoria, y %M; % del micrófono ("mic") - > analizador - > generador de señal - > función (notificador); P.M.; multiusos (cada usuario consigue diversa cuenta); Los datos son via^ también obtenido: "Reino Unido", "carro", "teléfono", "MES", explorador. - Subparte: Función Cuenta-Alt: cambio de las causas que anota en la función del sistema; CUENTA-UIP: desarrolla el DB del UIP; Cuenta-Apuro: determina si algo está fuera de parámetros deseados, para: tener acceso (mientras que u utiliza el sistema), nr.
- No. de la palmadita de los E.E.U.U. Str de la búsqueda - cuenta (electrónica o programa) - disco 9.94 del babero. Aparato de enseñanza electrónico 5122062. Correspondencia del método y de los medios 4038525 (interruptor).
- "Corregir": determina cómo la "cuenta" debe ser compilada = ser interpretada = ser utilizada (por el sys/U%)

No. de la palmadita de los E.E.U.U. Str de la búsqueda - cuenta (electrónica o programa) - disco 9.94 del babero. Aparato de enseñanza electrónico 5122062. Correspondencia del método y de los medios 4038525 (interruptor).
- "Corregir": determina cómo la "cuenta" debe ser compilada = ser interpretada = ser utilizada (por el sys/U%)
- Patente no 4875432 de los E.E.U.U.: el color en tablero de la "cuenta" cambia cuando la cuenta se ata en (voleibol) "juego". (Nivel de "cuenta"/"estado" efectúa tipo de color cambio encontrado en S () del `/nr (notificador de la pantalla del `) de cualquie producto/sistema; eg.: 7G)
- "Facturación": cuentas para qué/cómo u consigue "cuentas pedidas".
- R127 [boleto de tren de viajero de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en puerta del boleto. JR (ferrocarril de Japón)].
--También copiado al "acceso", "Bill", "picosegundo", "cuenta", "pista".
- Patente no 4875432 de los E.E.U.U.: el color en tablero de la "cuenta" cambia cuando la cuenta se ata en (voleibol) "juego". (Nivel de "cuenta"/"estado" efectúa tipo de color cambio encontrado en S ()/Nr de la pantalla del `de cualquie producto/sistema; eg.: 7G)
- "Facturación": cuentas para qué/cómo u consigue "cuentas pedidas".

- R127 [boleto de tren de viajero de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en puerta del boleto. JR (ferrocarril de Japón)].

--También copiado al "acceso", "Bill", "picosegundo", "cuenta", "pista".

- La diferenciación "anota" y las secundario-cuentas son labelable por el "artista" = (color) "designador". Facilita la comprensión del espectador de la cuenta, reduciendo alboroto en la pantalla.

% "del acceso": Ver: "Tuvieron acceso a VAGOS" = a la "cuenta": Cada uno de los archivos accesibles tiene un grado de la cuenta.

- el sistema de sonorización también se anota para: capacidad de guardar hacia fuera a piratas informáticos; facilidad de manejo; cómo es bueno uip-está adaptando; felicidad del usuario.

Recompensa -1G22 generada por el nivel anotado del uso.

SISTEMAS DE SEGURIDAD - IMPEDIMENTOS DEL CRIMEN

El DETECTOR del LADRÓN EMITE SONIDOS del DESCORTEZAMIENTO sobre intruso de la audiencia: sistema de alarma de la paranoia 3A-180: envía la risa cínica de un "payaso listo" sobre entrada ilegal. Otros mensajes: las sirenas entonces "salen con sus manos en la cabeza"; fractura del vidrio como si haya otra tuerca en premisas; perros; "hey usted viene aquí", las "manos encima de usted está bajo detención"; sonidos no verbales extraños; perros cósmicos extraños; cualquier cosa (sonidos, etc) engranó especialmente psicologicamente a asustar el semi-paranoico y o ésos en las drogas durante el robo con allanamiento de morada; etc. Efectos audios/visuales demostrados disuadir a ladrones: exhibiciones del laser, declaraciones en la luz que aparece en las paredes, televisiones que se giran con una película/un vídeo.

- la exhibición puede seleccionar para demostrar al ladrón: el sistema de información ha cogido el Info en ladrón eg.: su altura, peso, raza, cuadro de la cara, el ladrón del etc. dijo la información se almacena en distante, irrecuperable, o fuente secreta, o policía "C". Ladrón mayo o mayo no ver su propia cara. Quizá cámara/sensores ocultados en cualquie número de maneras. La salida a audio selecto/a la representación visual del ladrón demostrados asustar a menudo psicologicamente/disuade o reduce a ladrón del tiempo vaga en premisas.

el SISTEMA de ALTAVOZ 3A-210 TIENE SONIDOS el venir de direcciones cambiantes: el ladrón oye: dueño que camina alrededor de premisa, de condenaciones verbales [suena como el dispositivo o la persona de la grabación un pedacito lejos apagado], de la policía que rompe la ventana para acceder y otros sonidos para hacer a ladrón por lo menos sentir más nervioso.

SONIDO 3A-370 DEL PERRO del DESCORTEZAMIENTO sobre el sonido o de la persona que camina encima de la calzada (cuando se cruza la línea del laser). El sonido realista consigue en los segundos que significan el perro está más ruidosamente más cercano a puerta principal.

- mientras que la persona camina alrededor fuera de la estancia el perro que el descortezamiento los sigue por los sonidos que emiten de diversos altavoces.
- tipo de cambios del descortezamiento del perro (eg.: consigue más enojado, con o sin el volumen de sonidos consiguiendo más ruidosamente)
- grande para la gente que quiere la protección de hogares, pero sin los problemas de cuidar para el animal.
- el usuario puede tener pequeña caseta de perro vacía adentro detrás de la yarda americana grande, al lateral (tan posiblemente visible de puerta de entrada lateral del jardín)

-3C-460-083005 que raspa a Warner: Sonidos de los perros del descortezamiento iniciados cerca sensor de los sonidos, timbre, o alarma de ladrón. Estar libre de mantenimiento vivo del perro.

RECEPTOR ACÚSTICO del RELOJ 3A-520: fabricación de todos los tipos de sonidos: risa, sirenas, alarmas, avisos verbales (registrados por el fabricante o el usuario), etc

- control del H-volumen
- H-radio, TV, jugador del CD tamaño pequeño futuro

REFLECTOR de los SONIDOS 5A-220: cada uno de los sonidos del intruso (eg.: pasos, apertura de armarios, fractura del vidrio...) se registran y se juegan de nuevo a espectro y ayudan a disuadir a ladrón.

- tener el convertido de la opción del Karaoke sus sonidos en otros

6B-38 SOBRE ÁREA QUE ENTRA cerca de la puerta principal (el detector de movimiento detecta a persona), o, el carillón de puerta de sonido, sistema anuncia algo en palabras, o sonidos (eg.: música). Pueden indicar, el nombre de la familia, la compañía, hola, el fabricante del etc. o el usuario puede registrar el aviso saliente.

+ puede registrar el mensaje del timbre el sonido de la persona

EXTREMO DEL ARCHIVO DE LA SEGURIDAD

Archivo: Introducción/sensores de la característica

SENSORES

Sentidos para las señales. Sentidos para uno o más estímulos diversos (simultáneamente, vía diversos sensores). Eg., búsquedas: ¡vibraciones o movimientos de la gente, del calor, del contacto químico, del etc!

. Las notas "notifican" la continuidad de la situación (señales) y o de cambios. Sentidos para uno o más simultáneamente diverso/por lo tanto de los estímulos (si un tipo de "sensor" se acciona otros se comprueba para (verificar si el "sensor inicial" era válido; para la mayor profundidad del análisis). Los sensores incluyen:

- Calor: Sentidos para los cambios en el calor causado por la gente que entra en áreas/que cambia localizaciones dentro de áreas.

- Vibración/presión: Jueces cuando un objeto de la persona es próximo vía las vibraciones y o la presión aplicada a los sensores piezosensibles (puertas de abertura de las esteras). Los paneles de piso: observa la presión cuando está caminado encendido, localiza la colocación de la persona.

- Sonido - > "Mic" - > "analizador" /sound "sensor" de sonidos (de cualquie tipo, eg.: sonido del cierto decibelio o gama de frecuencia) - > "C".

. Otro: picosegundo (el sistema de colocación tiene gusto del GPS) que detecta para el paladio (dispositivo de colocación). El disparar de las luces laser. "Analizador visual". Dibujo: "sensor" (se reciben diversas señales (buscado para)) > tr > >c del receptor (computadora) > respuesta analizada > deseada (impresora fs de /s/ del "notificador"). Magnético: el dispositivo que es detectado tiene un imán que sea posición se siga en sitio. Sensor de movimiento: la cámara memoriza los pixeles en área y las notas si los cambios se realizan más allá de cierto nivel. Programa (pp, P.M.) para que sistema busque cambios limitados. "Distancer".

- General: el tipo de señales recibidas puede identificar las características de "U" /subject/subject que es analizado. Actuar como sensores que buscan demostrar de las señales: movimiento; cambios en la química, temperatura, cantidad, tamaño, frecuencia (de la ocurrencia; de las ondas (magnéticas)); etc. Ciertos patrones pueden señalar "U particular" (gente), y por lo tanto actúan como tipo de "acceso" (cuando los patrones particulares de señales se reciben, las funciones de sistema según cualesquiera "se adaptan").

- Para Techies 1: acceso; básico; carro (cartucho del software del `) (diversas señales se buscan para el >c (computadora) > respuesta analizada > deseada ("notificador"); todos según el tipo programa (accionado cerca) en el carro); >c del "sensor" (computadora) > s; investigación científica/educ: aprender las características para USER/subjects apuntado; el "sensor" puede "flotar"; "interactivo": según el tipo señales, el sistema responde por consiguiente; mañana; mp/pp: cómo el sistema con el "sensor" reaccionará; multi-user^: adaptarse; cada ocurrencia de señales (entrantes) es "tds"; t: llaman por teléfono al usuario (las emergencias) cuando las características del fósforo de las señales de la ocurrencia deseada (adaptarse); Reino Unido: cómo el sistema debe responder a las señales; U (el usuario hace preguntas del sistema); vc (del notificador).

- Para el dibujo de Techies: usuario = ~c del "sensor" (computadora) =
ACCESO; ANALIZADOR; CEREBRO; carro (cartucho del software del `); MULTIUSOS; notificador; oscilador (comunicador sano saliente); banda (programa informático); picosegundo (el sistema de colocación tiene gusto del GPS); q (el usuario y o el sistema se hace preguntas); r (teledirigido); CUENTA (tarifas las señales del sensor recibidas); SENSOR (el "analizador" compara las señales recibidas de otros "sensores"); ANALIZADOR DE SONIDOS; ESTADO; tds (característica) de la estampilla de fecha del tiempo (registros cuando (w5 (qué, donde, porqué, cuando y cómo)) ocurrir); PISTA (el sensor de movimiento sigue/las pistas); EL VR%.

. - matriz contenta de la fecha 4E020: Los registros y organizan ocurrencias anteriores.

- Ver el "cerebro": la característica del system se adapta según circunstancias.

- Subparte: Sensor-Movimiento: "analiza" el movimiento del cuerpo (del ser humano), funciones puede ser limitado/efectuado (para el USUARIO) según donde está el cuerpo.

- No de la palmadita de los E.E.U.U. referente a los sensores de movimiento humanos: Cámaras de seguridad de 5327233 muebles; Alarma audible 5271416 para la detección del movimiento usando el transductor bimodal; Dispositivo 5143086 para medir y analizar los movimientos del cuerpo humano; porción Pie-actuada 5139261 del regulador del juego de ordenador como palanca de mando.

--estrategia de búsqueda: [kilovatio 9.94 del babero (localización o posición o paradero) y sensor y (cuerpo o persona o humano o animal). Localización 5307277 que detecta el aparato; Animal ultrasónico que rechaza el aparato el 5214411%; Sensor para detectar el paso de una persona o de un animal en un campo visual 5196826; Método y aparato para estimar una posición de una blanco 5130934; Tipo sensor de 5166533 triangulaciones de la distancia para los objetos móviles con (con) la ventana que forma medios; Localizador para un cuerpo móvil [considera el movimiento angular] 5122960.

- Sensores químicos: la reacción química (entre cuaesquiera dos señalados/productos químicos solicitados) - > reacción causa los nuevos productos químicos solicitados - > reacción química de los disparadores con (con) el sensor químico - > envía la señal al sistema = al analizador/al notificador. (Sensores químicos usados adentro) campo 7G050 de invenciones.

. - Un código (acceso, "marca de agua electrónica ") codificado en límites de sw/data cómo el sistema/el programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

. - "Facturación": cuentas para qué/cómo el system coge.

. Los E.E.U.U. patentan el disco de 12.95 baberos: % del str: sensor y (ser humano o persona)

. Coordinador: + combinación de los analizadores que detectan el cambio/la presencia de ocurrencias. Como un cerebro humano con sentidos múltiples, los analizadores múltiples del sensor del sistema pueden analizar mejor cuál es W5 de suceso (qué, donde, porqué, cuando y cómo). La combinación de sensores múltiples da más ángulos para una mejor perspectiva.

. El GPS/el sa (analizador de sonidos)/los otros analizadores de la ocurrencia = C:

- Qué ocurre W5 (qué, donde, porqué, cuando y cómo). Los cambios relacionados con el movimiento se entienden mejor. Eg.: qué usuario/elemento que es observado está haciendo W5 (qué, donde, porqué, cuando y cómo), como caminar o hablar o mecanografiar en una zona particular.

. Analizador = SA visuales: cualquiera cambia sensible vía analizador visual [y sonidos asociados]. Para la extensión ver: va.

. PARA el diagrama de TECHIES: Usuario = este ~c del sistema de la invención [sensores múltiples] (computadora) =

Las BÚSQUEDAS MULTIUSOS de // de la CUENTA de // del RANURADOR de // de la Picosegundo-Zona de la banda de // del oscilador de // del notificador de // // del CARRO de // de los VAGOS de // del

ANALIZADOR de // del ACCESO (W5 (qué, donde, porqué, cuando y cómo) de las funciones del accessor) (sensores múltiples que son analizados) (ANALIZADOR del COMPORTAMIENTO) (cartucho del software del `) (comunicador sano saliente) [el 'micrófono coge en sus sonidos] (programa informático) // ((qué, donde, porqué, cuando y cómo) se encamina el elemento W5/la información [el flujo]) (diversos sensores/las ocurrencias son pesados diferentemente por el analyzer-> que determina diversas conclusiones sobre la naturaleza de la situación) y REACCIONAN (las ocurrencias [alteradas]) SENSOR de // (sonido, visión, olor, vibración, temperatura (calor del cuerpo)) la PISTA // de // tds (característica) de la estampilla de fecha del tiempo ('orden y sincronización = cuenta) // del ANALIZADOR de SONIDOS de // adaptan (que los sensores se anotan y cómo) el ANALIZADOR de la REPRESENTACIÓN VISUAL de //.

- Sensor-Movimiento: "analiza" el movimiento del cuerpo (del ser humano), funciones puede ser limitado/efectuado (para el USUARIO) según donde está el cuerpo.

. Ejemplos del sensor de movimiento: Magnético: el dispositivo que es detectado tiene un imán cuya posición se siga en sitio. La cámara memoriza los pixeles en área y las notas si los cambios se realizan más allá de cierto nivel. Puede buscar cambios limitados, eg.:

- Los paneles de piso: observa la presión cuando está caminado encendido, localiza la colocación de la persona

. Otro: Luz laser que dispara. "GPS", "PICOSEGUNDO", "PISTA". Sensores del calor (del cuerpo). Nuestra pata de la puerta del animal doméstico. Una invención más limpia permite el acceso después de que el animal doméstico moviera las patas en la estera suave de la cerda para el plazo del sistema basado en el contador de tiempo del sensor de movimiento.

. El sensor nano de la tecnología = funciona con el analizador contento: Nanomaterials incluye: los materiales microscópicos y supereficientes que pudieron plantear riesgos para la salud deben ellos entrar en los pulmones o la piel. Se utilizan en suplementos dietéticos, la protección solar, topes del coche, la ropa y las luces del estadio de Jumbotron; hacen materiales de construcción más fuertes y pueden luchar el cáncer.

- El acceso del `se puede dar/negar basado en el analizador contento = la reacción. Ver la ciudad de Berkeley en las regulaciones de California y del gobierno de los E.E.U.U. [propuestos] - nuestra invención también marca con etiqueta (con otras moléculas/RIFIDS/etc = para seguir. Las reacciones basadas en la presencia de moléculas nanas se pueden identificar vía el sensor/los VAGOS (analizador del comportamiento) (del elemento efectuado, eg.: sienten o actúan diferentemente en el patrón asociado a tal exposición). Uso de proteger vida y tierra contra los agentes contaminadores - formar "de la protección del medio ambiente.

Archivo: Introducción/software de la característica

Softwares. Algunos/todo el función son interruptor (software) controlado () con./desc./alterado de la vuelta (función/efecto deseados cambio) vía = usuario (banda/k) funciones del sistema (vía su interruptor). =c de k (teclado) (computadora) = interruptor (software) (carro). Las mejoras del interruptor (software) pueden ser hechas disponibles (por el fabricante).

- Ver el "cerebro".

- Un código (acceso, "marca de agua electrónica ") codificado en límites de sw/data cómo el interruptor (software) puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

. - Para el dibujo de Techies: c (computadora) (interruptor) = ACCESO; ANALIZADOR; CEREBRO; CARRO (cartucho del software del `); EDIT; k (teclado); M (ordenador central); MULTIUSOS; +PR; q (el usuario y o el sistema se hace preguntas); r (teledirigido); RANURADOR; tds (característica de la estampilla de fecha del tiempo); PISTA. Superación de altos costes programados injustificados del interruptor (software), eg.: debido a la carencia del mercado para los usos específicos: Las versiones simples pueden ser utilizadas cuando los costes para programar no justifican. Desarrollar (cáscara) los paquetes estándar del interruptor (software) que pueden ser (fácilmente) altered/pr para los usos diversos (por la mayoría de la u).

- "Facturación": cuentas para qué/cómo el usuario utiliza el "interruptor".

. - el interruptor requiere HW (hardware) encontrado en "c" (computadora).

SECCIÓN del interruptor (software) - quizá menos importante:

Algunos/todo el función son interruptor (software) controlado () con./desc./alterado de la vuelta (función/efecto deseados cambio) vía = usuario (banda/k) funciones del sistema (vía su interruptor). =c de K (teclado) (computadora) = interruptor (software) (carro). Las mejoras del interruptor (software) pueden ser hechas disponibles (por el fabricante). Ver el "cerebro".

- Un código (acceso, "marca de agua electrónica ") codificado en límites de sw/data cómo el interruptor (software) puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

Superación de altos costes programados injustificados del interruptor (software), eg.: debido a la carencia del mercado para los usos específicos: Las versiones simples pueden ser utilizadas cuando los costes para programar no justifican. Desarrollar (cáscara) los paquetes estándar del interruptor (software) que pueden ser (fácilmente) altered/pr para los usos diversos (por la mayoría de la u).

- "Facturación": cuentas para qué/cómo el usuario utiliza el "interruptor".

. - el interruptor requiere HW (hardware) encontrado en "c" (computadora).

FUNCIÓN VISUAL SANA

Las funciones inventivas convierten el sonido a los efectos visuales, y a la representación visual a los efectos sonoros. Una forma de efecto.

D1: convertidor de la cámara = de señal = "C" = generador = oscilador de los sonidos
D2: convertidor del mic/del sensor = de señal = "C" ("cerebro" ("analizador")) = texto/códigos/exhibición/printer/tr.
- No. de la palmadita de los E.E.U.U.: 4260229 imágenes visuales que crean de los movimientos del labio; Síntesis 4278838 del discurso del texto impreso; estetoscopio de la representación visual 5213108. juguete y método de ++ 5314336 que proporcionan el representante de la salida audio del mensaje óptico detectado por el juguete. La palmadita publicó 5.94 al individuo. ¿Esta pieza visual sana del analizador archivó la invención primero?

CALEIDOSCOPIO MUSICAL 3A762: según las luces y o las formas consideradas, se crean ciertos sonidos. Las luces/las formas se pueden generar vía medios electrónicos puros o los más viejos métodos. Éste es un efecto que es una reacción a a [la acción de la entidad del juego del `.]
- relacionado con 3A-760: música basada en la entrada visual. Diversos colores vistos crean diversos sonidos/música.
- las porciones audios y visuales tienen interruptores con./desc.

JUGUETE del CONVERTIDOR del SONIDO de la REPRESENTACIÓN VISUAL A1-140:
Hacer la música moviendo a lector óptico sobre las representaciones visuales en el papel, CRT, el arte que se puede diseñar para accionar ciertos sonidos para el lector. La persona elige velocidades del movimiento y dirección de al revés y o los movimientos laterales. Puede utilizar en cualquier otro objeto tal como piel del animal, escritorios, alfombras, hojas, secciones especiales de periódicos quisiera que la gente oyera la música para la diversión de él o como promoción (estes 3ultimo se pueden hacer en cualquier otra superficie, plana o de otra manera).
- "analizador visual de sonidos"

ARTE SANO 2B090: Convertir los sonidos en formas y colores (de dos dimensiones) interesantes. Programa cómo un sonido se convierte en un arsenal infinito de gráficos posibles. [Las imágenes del `del juego del `] también bailan vivo a la consonancia del usuario del sonido generada.

+ imágenes de w que obran recíprocamente (con): La manera de la cual el usuario obra recíprocamente audially image= de w da lugar (vivir) a corregir de la imagen. Formas de interacción. La imagen baila según los u:
--movimientos del cuerpo [ver el analizador del movimiento del cuerpo de KN (invención) en directorio de "J"].
--uso del ratón [palillo de alegría de los kn]
--sonidos [puestos en palabras] creados por el u= en analizador de sonidos.
--ba= que acciona cualesquiera sensores/comando del associated=.

--'imágenes creadas por resultados del u= en imágenes adicionales = vía:
'Artista; Corregir; OSCILADOR.

Usuarios múltiples que hacen sonidos en unísono: cada usuario puede ayudar al orchistrate que las imágenes totales crearon. El sistema pudo también seguir las calidades únicas de la voz de cada usuario (sa) así que cada multiusos tiene sus sonidos tratados como fuentes únicas, eg.: imágenes múltiples que sobreponen las imágenes del otro usuario.

. ¡- Finalmente la combinación electrónica del consumidor del sonido con la creación de los artes visuales! ¡Convertir los sonidos en arte! Según echada, volumen.... la pantalla desarrolla los colores y las líneas que entran en direcciones correspondientes. Desarrollar el arte que se desarrolla cronológicamente durante minutos en uno o más cuadros, o el arte que es inmediato como en cámara inmóvil de la vida. Imprime sobre impresiones negras/del blanco o de color. ¡Modelos anteriores requieren discos ser llevados los distribuidores autorizados/las tiendas especiales para procesar!

. - las 'imágenes pueden ser impresas.
Opciones: El fabricante proporciona los instrumentos especiales fácilmente identificables por la máquina para guardar abajo de costes.
- requiere software fantástico colorido interesante también
- producto portable interesante para los cabritos cuando caminan alrededor de exterior.
- el usuario puede seleccionar en qué modos visuales quieren los sonidos convertidos, eg.: colores, tipos de formas (2.o o 3D, cuadrados, cubos, burbujas, etc)
- cartuchos
- este producto también incluye descripciones del producto 1B-88
Generador del holograma del audio:
- acordando al sonido/a la música hecha y al tipo el programa dentro del software usado, de los gráficos y de otras imágenes ológráficas se crean según el sano (como el sistema de sonido que efectúa la despedida de un rayo laser - en la golondrina de mar que hace gráficos interesantes en una pantalla de dos dimensiones)
- el usuario puede programar a su independiente de los efectos visuales del sonido también
- sonidos y música y voces en arte abstracto, representaciones visuales de los convertidos. Alterar, sintetizar los sonidos en gráficos deseados. Efecto: colores; el tamaño, selecciona si usted quiere muchas pequeñas piezas o pocas piezas; contraste; brillo; tamaño total; número de copias múltiples (elegir si son interpretaciones idénticas, similares o extensamente diversas de la misma fuente audio); mecanografiar las tintas, métodos de impresiones de la fabricación
- ser además popular cuando la realidad virtual llega a ser más popular. Grande para los músicos que quieren las interpretaciones gráficas de sus trabajos - pueden demostrar ambos de lado a lado.

ACCESO:

- acceso móvil correcto del image=: u (usuario) puede considerar cómo sus sonidos están generando requerido (las 'imágenes), permitiendo un mejor control sano. La representación visual de sonidos es más fácil para que u calibre y haga cualquier corrección necesaria. Copiado al acceso en 1.97]
- el "seguimiento" de cambios en sonido/imágenes = crea señales con los usos para: 1] que usaba la misma pista juntó el nuevo editing= de w (con) que creaba nuevos imágenes/sonidos.] almacenaje 2 en cartucho: una llave usada para el acceso.

MECANISMO de CONTROL VISUAL del AUDIO 5E03: El analizador Sonido-Visual básico solamente.

- En otras palabras: Cambiando el elemento visible, el sonido es alterado/sintetizado por consiguiente.

- Cada color o completada caja genera diversos sonidos/música.

- Mientras que escucha la música/el múltiplo 2.o del sonido o los objetos (tridimensionales) 3D se efectúan por consiguiente (pulsar o vibrar al ritmo, al color del cambio, al tamaño, a la posición, al ángulo según el volumen/triple/bajo).

. --Eg., cada uno del siguiente es representada por diverso objeto: volumen, triple, base, echada, cada uno del diverso ritmo que crea los elementos, voz del cantante (puede también ser analizado en sus elementos).

- El usuario entonces puede tocar el objeto (2.o o 3D) para alterar los resultados del sonido. Eg.: hay vocals del hombre y de las mujeres, y el usuario toca (en una de las maneras posibles múltiples) el objeto púrpura redondo que representa la voz = el resultado de la mujer: la voz de la mujer cambia según cómo fue tocada.

D: tipo 1sound = 2computer = 3display/4 [objeto alterado según el tipo de los sonidos hecho salir/deseado]

Notas de D: 1: estereofonia/oscilador/altavoz; sonido real creado. 2: analizador de uk/remote/mic/sound. 3 "" "interactivos"/"de la exhibición exhibición".

- OTD: cada objeto se puede numerar o titular según su uso/función.

- las maneras en las cuales el objeto representativo se puede programar/controlar para realizar los cambios deseados: longitud del tiempo tocada; dirección del tacto; velocidad del tacto; intensidad del tacto (luz o tacto duro); tipo de tacto del objeto (dedo, palillo, "telecontrol", pedal del pie, cambios en "danza".

- TM: Música plana (hoja). Sonidos del drenaje.

CONCLUYE ESTE ARCHIVO DE SOUND-VISUAL PARA ESTE USO DE LA PALMADITA

SOUND-VISUAL =

Convierte señales de sonido a los efectos visuales; y efectos visuales a las señales de sonido.

D1: convertidor de la cámara = de señal = computadora = generador = oscilador de los sonidos

D2: mic/sensor = convertidor = computadora = exhibición/printer/tr de señal

- OTD #1:

Los siguientes son visuales sonar la conversión, y el sonido a los elementos de sistema visuales de conversión; esta categoría se pudo también de vez en cuando también escribir "sonido visual" o el "visual sano".

ARTE SANO 2B-090: ¡Convertir los sonidos en formas y colores interesantes! Programa cómo un sonido se convierte en un arsenal infinito de gráficos posibles.

caleidoscopio de los sonidos 2B-091-200000001: Los cambios de la visión según sonidos en el ambiente.

analizador de sonidos 3A-630

O "composición": todos los elementos diferentes para: crear los sonidos que están en golondrina de mar convirtió a los gráficos; o versa de la visa que toma sonidos y que los convierte en imágenes gráficamente corregidas según los sonidos sintetizados.

O-Nuevo elemento: Convertir las imágenes en sonidos, eg.: jugador de registro, jugador CD del laser, transmisiones de fax. Los sonidos creados se pueden procesar a través del sintetizador de los sonidos y programar para crear los sonidos deseados según las imágenes entradas por la cámara, el explorador, o el otro sensor, etc.

Nuevo elemento: el sonido recibido por el micrófono y o el otro sensor puede también coger cualquier frecuencia de la onda y convertir a otros sonidos audibles a los oídos humanos, o en las imágenes.

O "artista": los sonidos se han convertido ya en imágenes correspondientes como explicado en la "Sonido-Visión", estas señales se pueden entonces controlar por el usuario (eg.: vía el ratón, la llave en puesto, programando) para crear las imágenes deseadas. Inversamente, las visiones creadas vía "artista" se pueden utilizar por la "Sonido-Visión" y la "composición" para generar sonidos.

- OTD #2: exhibición; fd-hdd; pp; P.M.; Reino Unido; el toy%; básico; entretener; micrófono; synth; punto de ebullición; oscilador; balance; discurso; vc; el md%; carro; cp; movimiento el sounder%; alejado; notificador; cojín del aire (las transmisiones son audios que en golondrina de mar se convierten en la representación visual; o las transmisiones son visuales que están en la golondrina de mar convertida en audio); representación visual el analyzer% (útil no como generador de la alarma salvo especificación de lo contrario, sino en el sistema de ayuda que se dirige).

Es "analizador visual" y el "Mic" interpreta imágenes en datos: redacta la descripción de lo que ve/oye; el otro sistema de códigos ("cerebro") puede utilizar para procesar ("cerebro") imágenes/sonidos. La manera de

interpretar transferencias entre la representación visual (imágenes) y sano (oscilador) controlado cerca: software (banda), analizador.

SECCIÓN VISUAL SANA del ANALIZADOR - quizá menos importante:

D1: convertidor de la cámara = de señal = "C" = generador = oscilador de los sonidos

D2: convertidor del mic/del sensor = de señal = "C" ("cerebro" ("analizador")) = texto/códigos/exhibición/printer/tr.

- No. de la palmadita de los E.E.U.U.: 4260229 imágenes visuales que crean de los movimientos del labio; Síntesis 4278838 del discurso del texto impreso; estetoscopio de la representación visual 5213108.

juguete y método de ++ 5314336 que proporcionan el representante de la salida audio del mensaje óptico detectado por el juguete. La palmadita publicó 5.94 al individuo. ¿Esta pieza visual sana del analizador archivó la invención primero?

-6B580 (movido desde allí): Convierte voz al texto; o texto a la voz.

Opción del jugador de registro: Las claves de barras de la lectura u otros códigos relacionados a generar desearon sonidos, música, el etc. Esta faceta se anima para la solicitud de patente, con todo los porcentajes del beneficio para esta faceta son ya reservados para otro partido.

. --Incluso un nuevo tipo de jugador de registro de la diversión con el alimentador de la rueda o de hoja pudo ser utilizado. Propósito: controlar la velocidad en la cual se reciben los datos

. --El sistema pudo poder leer códigos en muchas velocidades, con todo sondea solamente los datos en el sonido deseado. En este caso, el lector debe ser diseñado para ciertos códigos.

. - Las palabras de las exploraciones, entonces los hablan del oscilador. También, las palabras puestas en palabras se convierten en forma digital y se corrigen de cualquier manera deseada, eg.: la búsqueda del interruptor y substituye.

. - También: u (usuario) habla - > mic - > oyó las palabras convertidas en el texto - > "analizador" = las palabras convertidas a digital las exploraciones del texto del sistema (sistema del `) vía (la búsqueda de la palabra del interruptor - que trae el texto/cerca oraciones o párrafos para arriba correspondientes; uip-DB; "analizador" capaz de determinar los niveles de aplicabilidad/de importancia de palabras/de situaciones próximas (según lo ocurrido en el ambiente, eg.: los sonidos, los acontecimientos "seguidos") = sistema hacen salir el texto y la otra información (similares) a qué operador humano de las búsquedas/de las necesidades del sistema (pero no puede haber sabido anterior, debido al uip). 83

. - (este solo producto es una combinación de los diseños 1B-58 y 1B-60)

Grande para: los cabritos, las persianas, las que estén demasiado ocupados leer pueden apenas dejan el explorador leer (incluso por el alimentador de hoja de papel) y hacer lo que hacen sin sentarse, eg. conducción, etc.

OTD 83

. - Los actos algo tienen gusto de un jugador de registro a partir de las 2.a superficies.

Aprender que es más rápido y más fácil autorizar que intentando evitar esta solicitud de patente. Llamar (+1) 707-428-5000 www.LicenseItToday.com

LUPA del SONIDO de la CALLE 5A270: El sistema del coche magnifica sonidos exteriores mientras que la estereofonia es funcionando. Reduce accidentes posibles.

- Sistema de los programas de usuario que se activará mientras que juega o no juega la música, radio. La lupa puede/puede no cortar música en el sonido del tiempo se amplifica según sistema, volumen de sonidos o la programación de usuario. - aplicable especialmente para: oyendo - deterioró, los como quienes jugar música ruidosamente pero debe bajarla para oír el exterior

- "analizador de sonidos": magnificar/estudio cualquier efecto del sonido/del oscilador

. --verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

(necesidades más trabajo) VOCES del CONVERTIDO 5A900 en los de las cuales crear las sensaciones: la pasión, la amistad, la energía, la inteligencia, la impaciencia y la expectativa que el oyente realiza su pozo del trabajo (los estudios demuestran que el discurso a la gente en ciertos tonos de la voz tiende a crear mejores resultados del trabajo de ellos)

REFORZADOR de la VOZ A1-430: "mejor sano". M realza su voz cuando en "T", usando las características previamente registradas de la voz de los p que las transportan cuando su voz debido a las emociones pobres es menos deseable, o más fácilmente, selecciona de opciones del cambio de imagen de la voz de "C" afinando o poniendo en palabras la petición. Oír para poseer la voz en otras veces usted mismo de alzar moraleja. Mezclar la máquina de la terapia. E, S, yo, TT, HH, BP, ató a "T", "C".

- La demostración de los estudios su voz es más agradable cuando los sonidos anteriores oídos son agradables. Tener llamadas que sean importantes o difíciles hacer: las ventas, hablan con el jefe, padres, enfermo/pariente terminal enfermo (eg.: ¿tiene el SIDA) y el miembro de familia conservador algo no hablar con pero necesitan su animar para arriba? Escuchar los sonidos, o las voces (con o sin música). BP, E, S, TT, HH, contra, autobús, LL, W2. Mezcla con la máquina de la terapia. Compañero de la voz.
- cierto oscilador (palabras, "humores", el "entertainment% - defendido: "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (sistema del `) (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

8B330 SEGÚN EL TIPO USO, VOZ de la PERSONA SE CAMBIA por consiguiente, eg.: su voz para anunciar el plano está lista para el embarque, el plano es atrasado (la frustración, o la cólera en la voz del locutor que tiene miedo de ser atacado con cólera de pasajeros y que en golondrina de mar es semi hostil en voz como protección - ésta es malas), etc.

El SISTEMA R57-2 SINTETIZA EN NUEVOS HUMORES para expresar grabaciones: De menú, seleccionar qué sensaciones usted quiere expresado. La pista existente de sonidos de la voz de la persona se sintetiza por consiguiente.

SYNTH (altera la voz de la persona según el tipo situación del comportamiento que pueden estar adentro, eg.: tensionado, impaciente comprar la mercancía, engañosa); Esta función del synth trabaja como los modos del "artista" de esta N general, eg.: vía menú seleccionar cómo usted quiere datos existentes sobre la persona alterada, sobre k en uno o más opciones. - D: k (u selecciona del menú de opciones, eg.: la persona será: enojado/astuto/se relajó/apasionado)/pista de sonidos de la persona (la copia de las estimaciones verdaderas de la voz/c (computadora del `) mecanografía voz vía (el analizador visual/uip/bva (aunque ningu□n rec ocurrió de voz real si fue restringido por la ley) = analizador = genera la voz (estimada) de la persona).

- TDS ()/T ()/UIP ()/VISUAL ANALIZADOR ()/VR%/WA ().
- utiliza 57-1: intenciones/funciones similares, aunque se substituyen los modos audios y visuales.

Los sistemas automatizados con bastante memoria pudieron almacenar todos los sonidos en el synthesization predeterminado por el tipo ocurrencia. Sin embargo, los productos con una gran variedad de sonidos, o de fuentes sanas fuera del sistema se beneficiarán del synthesization.

- Las fuentes exteriores de sonidos incluyen: Internet; cartuchos; el sistema de sonidos coge [vía el micrófono] y sintetiza.

Para ésos con el problems= auditivo según el tipo del u el sistema del problem= altera los sonidos del oscilador:
- las palabras/frases problemáticas/ciertas se alteran (para el oyente) vía su que es señalado diferenciando: frecuencias sanas ("synth"); altavoces: estados del altavoz del sexo opuesto señalados porción de texto; luces que destellan u otros sonidos (c=osc) cuando se están oyendo las palabras señaladas (oscilador).
- los sonidos de los convertidos de la manera similar a (KN) cuál oye entonces traducen palabras al otro oscilador del then= del languages= = oído por los oyentes.
- D: U (altavoz) - > analizador del mic = de sonidos = c (DB para cómo las palabras pueden sonar) = oscilador - > U (oyente).
- Ver" el texto el "del "artista corregir" (para los disl3exicos).

Ver: conjetura 2D-220 el juego de los sonidos: en la partición del "juego".

Ver el ANALIZADOR del UNO MISMO de la ACÚSTICA 5E080: Los productos relacionados existen probablemente - pero su grado de traslapo en esta invención es confuso. El uno mismo del sistema analiza la mejor síntesis para la acústica del sitio/del pasillo.

POSICIONADOR del ALTAVOZ 5E010:

Los principiantes u otros de las ayudas de la invención determinan la mejor colocación de sus altavoces sanos. Esto es una invención similar pero diversa. Utiliza ""/"del distancer GPS" para cuando el sistema analiza donde los altavoces deben ser colocados.

Provechoso para:
- determinación de las vendas con frecuencia nueva en las nuevas localizaciones
- distancia de altavoces de uno a en lo referente a tamaño/a dimensiones del tipo del sitio de construcción de la superficie del sitio (acústica (el despedir de sonidos)) es el via^ resuelto: medidas manuales/que afinan adentro del Info; electrónicamente determinado via^: "distancer", herramientas de medición de la distancia electrónica (comúnmente disponibles en almacenes de hardware al por menor).
. - gente como quien para hacer a menudo ajustes a la acústica de su sitio (siente como usted tiene un nuevo sistema estéreo, y o nuevo sitio, para la mayor variedad).

Diagrama: 1tr = 2frequency despide de la pared = de 3receiver = de 4computer = de 5display/6printer/7speaker y o de balance/8 otro.

DIAGRAMA: Este N sistema () de sonidos de sitio/c (computadora del analizador del `) = ANALIZADOR (); CARRO (); M (); MIC (); MULTIUSOS (); OSCILADOR (); Banda (); ANALIZADOR DE SONIDOS (); SYNTH (); UIP ().

DIAGRAMA #2 DE OTD: Este ~ del sistema de N (invención) (sistema del `) () C = ACCESO (); ANALIZADOR (donde colocar altavoces, cómo fijar los ajustes (electrónicos) del EL del oscilador (según lo determinado por el analizador)); AP (estéreo); BALANCE (); CÁMARA (); CARRO (); COMPOSICIÓN (manera de: 1] grabó de antemano el fabricante registrado música (CD, cinta,)/2] u de la memoria usando su sistema que compone, = determina cómo el sistema sano del ajuste del oscilador se debe analizar); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (los altavoces del oscilador = el analizador del mic = de sonidos = el sistema ajusta cómo el oscilador puede hacer mejor ir saliente); MQ (para los gustos del usuario (más o menos bajo, uip)); MULTIUSOS (cada u tiene poseer ajustes preferred); nr (notificador del `) (cuando el sonido se puede mejorar más lejos); OSCILADOR (); Banda (); Q (); R (); CUENTA (estudios del analizador de sonidos cómo el buen sonido está vía diversas circunstancias: w5); SENSOR (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (analizador); DISCURSO (); ESTADO (analizador); ESTÉREO (); SYNTH (); UIP (); UQ (); VR (); WA ().

$$P CORRELADOR 5E090: En dir de I en fecha el julio de 2000.

Ejemplo: Venda sin hilos de la música: El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades portables múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. Mayor portabilidad, libertad, sonido que hace la experimentación, una grabación más barata.

- Música del grupo: Hay una unidad principal que obra recíprocamente con las unidades "alejadas" llevadas a cabo por los participantes, creando (jazz del grupo, el foro educativo)
- D: r (compositor) = tr/rc = analizador (carro, compositor, m) = oscilador

Los sonidos y el texto vía el oscilador pueden ser alterados: corregir y el synth puede substituirse.
- cuando vía el modo audio, el sintetizador de la pieza y corregir puede inter-ser substituido.
--es decir todas las funciones en la pieza del corregir, pueden tener un modo audio correspondiente vía el oscilador, que en golondrina de mar pueden no sólo ser corregidas [por ejemplo para el texto o la imagen] pero también tal contenido se puede alterar vía el sintetizador.

Factores que pueden accionar y o influenciar el synthesization:
- el humor del usuario, según lo determinado por vagos. Los sonidos se señalan para crear la sensación deseada en usuario.

PIEZAS DEL SINTETIZADOR:

. ACCESO: el usuario debe [manualmente] altera el sonido que oyen para acceder. El acceso tiene un parámetro general en el cual permitan el acceso. Éste es algo difícil poner en el suelo como contraseña, o dar instrucciones otras.
. ANALIZADOR: El sistema determina cómo al mejor sintetizar los sonidos, según: vagos, uip, limitaciones de los sonidos que intenta alterar, limitaciones de las capacidades del sintetizador.
. ARTISTA: Hace sonidos para emparejar el tipo arte. Ver el analizador sonido-visual.
. VAGOS (analizador del comportamiento): Fósforo del sonido qué usuario tiene gusto.
. CUENTA: Derechos de la paga a esos artistas cuyos se utilizan sonidos.
. CARRO para: sonidos; sintetización de los programas informáticos. El usuario es honorarios de derechos mandados la cuenta para usar software de sintetización.
. COMPOSICIÓN: El sistema sintetiza la música para el tipo señalado de composición.
. ANALIZADOR CONTENTO: Analiza el contenido de los sonidos convertidos a digital - > este Info usado para determinar mejor cómo los sonidos pueden ser sintetizados.

. COORDINADOR: Tareas/funciones/metas múltiples coordinadas. Ejemplos:

- diversos elementos se anotan para su valor en señalar cómo algo debe ser sintetizado. Los elementos incluyen: vagos; formar de la educación deseada; cómo mejor dirigir a usuario; la sintetización suena para los multi-usuarios que escuchan el sistema simultáneamente.

. BASE DE DATOS de: sonidos almacenados; métodos de synthesization; características del usuario para los vagos.

. EDIT: Como la sintetización, se alteran los sonidos. La sintetización es una forma de corregir o de alterar el contenido [sano] para los resultados señalados. Ver para corregir para los detalles.

. EDUCATIVO: El sintetizador intenta educar a usuario. % de los ejemplos:

7J09: Amaestrador sano:

- Enseña usuario como a qué cosas suena, eg.: estudiantes de medicina que necesitan interpretar los sonidos del cuerpo [respiración]. Los sonidos únicos a un estudiante/a un paciente particulares se escuchan, y después se sintetizan para demostrar como qué diversas dolencias sonaría.

--Si el doctor es incierto en cuanto a cómo deben interpretar un sonido particular, puede ser que almacenen los patrones de sonidos de la persona cuando son sanos. El sistema siguiente alteraría los sonidos bajos normales para representar enfermedades señaladas.

- Los sonidos para las máquinas [vehículos] se alteran para demostrar el tipo enfermedad.
- Las ventajas sobre simplemente almacenar toda la enfermedad diversa suenan sin la alteración:
- el usuario puede entrar sonidos normales y ver cómo puede ser que cambien.
- el número de sonidos de la fuente y cada uno de sus formas posibles de alteración pueden ser demasiado grandes.
- el nivel de imprecisión de una síntesis puede ser tal que el fabricante que advierte sin embargo al cliente, puede ser menos impaciente sintetizar cuidadosamente sonidos diversos. Si el sonido se sintetiza sobre el terreno, puede haber una mayor tolerancia a falta de exactitud, mientras haya una cierta semejanza vaga del sonido correcto.
- 'Educa a gente en el aprendizaje de cómo interpretar sonidos.

. EGH (la educación consigue más difícilmente): Las formas de sonido consiguen cada vez más difíciles para que el oyente reconozca [como parte de proceso educativo].

. ENTRETENER: Jugar los sonidos agradables. Humor señalado del usuario de la blanco [para elevar, o la motivación].

. JUEGO electrónico: Los sonidos de cada jugador se sintetizan para el tipo situación.

. GUÍA: Eg.:

- El sistema identifica que el tipo usuario de los sonidos es más débil [en la identificación para (los 'propósitos educativos)].

- Las aplicaciones se anotan en su capacidad [semi-manually] sintetizan los sonidos para los resultados señalados.

- Enseña usuario a cómo cantar mejor vía analizador de sonidos. Sintetiza la voz baja normal del usuario para demostrar los ejemplos para de cerca cómo puede ser que suene. Esta invención se prepara a otra parte.

Sintonizador -7J10: El sonido del sistema analiza las máquinas o el normal/el sonido bajo del instrumento [del musical]; entonces demuestra cómo suena cuando en el estado calumniado correcto o en señalado. Eg.: Cuando un sintonizador profesional ha templado su piano; el usuario almacena los sonidos para cada llave en sistema [como los ideales]. El sistema puede no sólo repetir los derechos sino analizarlos para hasta dónde de sonidos mal de un instrumento del sonido. El sistema puede sugerir lo que y o en qué dirección se pueden alterar cualesquiera palancas o adminículo para alcanzar señaló los sonidos. El sistema siguiente anotará el sonido nuevamente llegado. Esto es un poco como jugar al juego de encontrar algo, y las pistas que el usuario consigue son verde, amarillo o rojo dependiendo de si el usuario está haciendo las correcciones en el modo/la dirección correctos.

. INTERACTIVO: Durante la interacción, los sonidos se sintetizan según lo señalado. La manera de los efectos de la interacción del usuario cómo se sintetizan los sonidos [por ejemplo vía vagos].

. MEDIOS MULTI: Cada oyente consigue sus sonidos sintetizados diferentemente, aunque son quizá uno de millares de clientes. Los medios incluyen: Internet.

. MULTIUSOS: El perfil del comportamiento de cada usuario, da lugar a sus diversos sonidos de la audiencia [por vagos].

. NOTIFICADOR: El tipo de notificación da lugar a diversa síntesis de sonidos. Eg.: las emergencias tienen un sonido más ruidoso y echada más alta.

. ORDEN Y SINCRONIZACIÓN:

- Diversos elementos del pedazo de los sonidos se cortan y pegar para alcanzar resultado señalado. Eg.: los primeros 5 segundos de la 3ro pista (las pistas múltiples se juegan que crean simultáneamente sonidos orquestrados totales) se juegan en el medio de la pista de sonidos para el uso particular.

. - Decide cuando, si y en qué orden [cualquiera] suena se juegan.

. OSCILADOR (altavoces): Los sonidos se sintetizan para considerar la dinámica acústica [límites] de los altavoces para maximizar los sonidos señalados. Eg.: El bajo se baja para los altavoces baratos; y si los mismos sonidos se desean para ser oídos por diversa gente pero con diversos altavoces de la calidad o los ambientes que escuchan; sintetizador tomarán en cuenta esto.

. PREDECIR: El analizador de sonidos predice cómo el sonido del sistema/de la máquina/del dispositivo/del organismo orgánico sonará. Tal sonido previsto representaría una ocurrencia señalada que el sistema se diseña para buscar. Sobre tal ocurrencia el sistema responde según lo programado, eg.: notificando a usuario o haciendo una cierta [reparación relacionada] función.

. Picosegundo-Zona: Síntesis basada en la localización [del oyente].

. PREGUNTA: Respuestas usadas para determinar mejor cómo sintetizar.

. REACCIONAR: El sistema reacciona a las ocurrencias según lo programado. Una de las reacciones puede ser el sonido sintetizado, eg.: tipo de notificación.

. CUENTA: La síntesis es influenciada por la cuenta de ocurrencias señaladas.

. LAS BÚSQUEDAS Y REACCIONAN: El sistema busca sonidos señalados, y reacciona con los sonidos [sintetizados] correspondientes. Ejemplos:

- Sistema de seguridad. Sobre el analizador de sonidos que determina ocurrencias señaladas tener gusto de la persona que camina alrededor durante horas cerradas, o el sonido de la fractura de cristal, sistema generará sonidos [asustar lejos o confundir al ladrón potencial]. Esta invención escrita antes de 1998.

- Estudio del comportamiento del organismo: el analizador de sonidos sobre la audiencia señalada suena como llamadas de acoplamiento generará sonidos correspondientes para determinar cómo el organismo reaccionará [por su creación de los sonidos].

. ANALIZADOR DE SONIDOS: ver la partición.

. INCLINACIÓN: controles del usuario cómo el sintetizador funciona por la inclinación. Permite mayor flexibilidad. Tiene un valor de la hospitalidad, puesto que es diversión a utilizar. Uso para componer música.

. UIP-Adaptar: estudiar a usuario; y sintetiza sonidos para cubrir sus necesidades.

. W5: Diversos acontecimientos determinan cómo se sintetizan los sonidos. Eg.: - Cuando: los sonidos para la notificación durante una situación marcada con etiqueta como emergencia son un triple más ruidoso y más alto. - Cómo: si un dispositivo se utiliza incorrectamente, se crea un efecto levemente irritante [como notificación].

Otros detalles de Techie:

Diagrama: fuente sana (mic/tr) = convertidor de señal = "C" (Reino Unido, P.M., pp, carro) = memoria/amplificador/parte posterior = oscilador del juego

- /OTD: Los sonidos originales y sintetizados almacenados en memoria y se pueden repetir; el sintetizador induce al oyente y o a usuario en el estado de ánimo deseado, ayudándoles generalmente a sentirse bien sobre lo que oyen (el pi selecciona sonidos para hacer la sensación del usuario feliz, soñolienta, o relajado); "C" (memoria, base de datos de sonidos y softwares de la sintetización); los efectos de Reino Unido, y de %mouse cómo se sintetizan los sonidos (usuario seleccionan del menú que permite que el usuario oiga los esloganes de cómo cada elemento de los sonidos puede sonar, y después seleccionan las preferencias para la composición y o el pi); %interactive (según cómo y o qué usuario activa en sistema, las señales de sonido sintetizadas responden por consiguiente, eg.: el tipo #9 o #10 de la acción de usuario causa el tipo de los sonidos #8); M para el mayor sonido que sintetiza posibilidades (el usuario puede hacer compras para los sonidos deseados para la memoria de sistema); balance; discurso (los sonidos vocalized alterados según el sintetizador, sintetizador son ordenados por las señales en respuesta a las acciones de usuario/a los comandos); vc (pueden ser los pp o la P.M. alterados; ciertos tipos de los sonidos pueden automáticamente ser más ruidosos o más suaves que otros sonidos para ese ajuste del volumen); %score; md; carro para cómo los sonidos pueden ser sintetizados; los sonidos de %synthesized se pueden enviar sobre el teléfono ("T"), teléfono del SP, tr, MES; los controles de %pi cómo los sonidos pueden ser sintetizados (pi determinan a usuario prefieren la base baja, por lo tanto utilizan una base

más profunda en la sintetización); % de los modos de sintetización controlados por el "telecontrol"; la manera de la cual se sintetizan los sonidos se demuestra vía notificador; % de los efectos de la inclinación cómo se sintetizan los sonidos; %product conecta con un dispositivo separado que sintetice los sonidos para su usuario; composición

- relacionado con otros números del producto: pluma mágica del aire 3a-790-042004 (synth de los controles de dispositivo); viajero de la realidad virtual %6b-630; instructor de la voz %1c-301; pluma multicolora de la aventura 1c-310 (en vez de dar hacia fuera la tinta, el synth decide sobre sus el propio vía los pp y o la P.M. cuando y cómo alterar los sonidos del locutor)
- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- Subparte: Synth-Adaptarse: el synth se adapta a la banda, eg.: uip/carro para conseguir una mejor respuesta en u, como tener más sonidos twanging para las audiencias meridionales de los E.E.U.U., y sonidos nasales para Massachusetts, o sonidos brevemente acortados para NY o las aplicaciones empresariales, y sonidos infantiles para el U. joven.
- "Corregir": Determina cómo synth de los sonidos.
. - Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo la parte/sistema/programa puede ser: utilizado (funcionar)/"de los dispositivos (otro)" corregido/copiado. Ver: "Tener acceso", "corrigen".
- "Facturación": cuentas para qué/cómo el synth del sistema se pide para funcionar.

CONCLUYE ESTE ARCHIVO DEL SINTETIZADOR PARA ESTE USO DE LA PALMADITA

Archivo del SINTETIZADOR: Synth&

sintetizador del sonido del juguete 3C401:

. el sistema funciona como un sintetizador de los sonidos: detecta los sonidos creados por el agua y hace sonidos relacionados por consiguiente.

--un método posible está para que el dispositivo escuche en cierta frecuencia y emitir en otra frecuencia, de tal modo sus propias generaciones de los sonidos no internarán crean los sonidos que son interno sintetizado; es decir, su "mic" estará atentos solamente sonidos del agua, no de los sonidos de sus altavoces
- posibilidades sanas de la salida: los ecos del agua, tal eco pueden ser como si estuviera en una barranca pequeña o grande, botella grande, playa...; o, el sonido se puede magnificar simplemente más ruidosamente con o sin los cambios por ejemplo al triple, base...; no los sonidos del agua se pueden también generar...; el recharacterization de cogido suena: la alteración del pájaro común suena al comportamiento exótico del pájaro (canto), tomando la tensión (alta echada) del perro que raspa así que suena como el descortezamiento amistoso.

. - uso de amplificar sonidos del vapor que es hecho en una sauna

. - tiene "mic" que lo haga/no sintetice el sonido

- OTD: "S"; "C"; pp; P.M.; Reino Unido; fecha; interactivo; juguete; todos; hospitalidad; "mic"; synth; punto de ebullición; alerter; cuenta; md; uip; carácter.

SECCIÓN de SYNTH - quizá menos importante:

Los "PP" y o la "P.M." selecciona el programa de sintetización y cómo procesa sonidos; micrófono ("mic").

- D: fuente sana (mic/tr) = convertidor de señal = "C" (Reino Unido, P.M., pp, carro) = memoria/amplificador/parte posterior = oscilador del juego

- /OTD: Los sonidos originales y sintetizados almacenados en memoria y se pueden repetir; el sintetizador induce al oyente y o a usuario en el estado de ánimo deseado, ayudándoles generalmente a sentirse bien sobre lo que oyen (el pi selecciona sonidos para hacer la sensación del usuario feliz, soñolienta, o relajado); "C" (memoria, base de datos de sonidos y softwares de la sintetización); los efectos de Reino Unido, y de %mouse cómo se sintetizan los sonidos (usuario seleccionan del menú que permite que el usuario oiga los esloganes de cómo cada elemento de los sonidos puede sonar, y después seleccionan las preferencias para la composición y o el pi); %interactive (según cómo y o qué usuario activa en sistema, las señales de sonido sintetizadas responden por consiguiente, eg.: el tipo #9 o #10 de la acción de usuario causa el tipo de los sonidos #8); M para el mayor sonido que sintetiza posibilidades (el usuario puede hacer compras para los sonidos deseados para la memoria de sistema); balance; discurso (los sonidos vocalized alterados según el sintetizador, sintetizador son ordenados por las señales en respuesta a las acciones de usuario/a los comandos); vc (pueden ser los pp o la P.M. alterados; ciertos tipos de los sonidos pueden automáticamente ser más ruidosos o más suaves que otros sonidos para ese ajuste del volumen); %score; md; carro para cómo los sonidos pueden ser sintetizados; los sonidos de %synthesized se pueden enviar sobre el teléfono ("T"), teléfono del SP, tr, MES; los controles de %pi cómo los sonidos pueden ser sintetizados (pi determinan a usuario prefieren la base baja, por lo tanto utilizan una base más profunda en la sintetización); % de los modos de sintetización controlados por el "telecontrol"; la manera de la cual se sintetizan los sonidos se demuestra vía notificador; % de los efectos de la inclinación cómo se sintetizan los sonidos; %product conecta con un dispositivo separado que sintetice los sonidos para su usuario; composición

- Patente 5368308 de los E.E.U.U.: Corriente de los sonidos registrados rotos en los segmentos entonces reordenados = "Synth": sonidos reordenados (según: k/uip) = alcanzar efecto sano/psicologico deseado.

- Patentes de los E.E.U.U.: str: synthez y sonido

COORDINADOR del GRUPO de la MÚSICA de S del NIÑO 5E090'

Extracto

La invención mejora unísono entre jugadores y cantantes. Es el componente y el sintetizador centrales para los jugadores múltiples de juguetes musicales. Sintetizan cada instrumento musical y o al cantante individualmente para ayudar a crear mejor todo alrededor de música. Tiene usos para la música adulta del principiante y del profesional que juega el mercado también. Muchas otras características.

Una variación del Karaoke.

Detalles

Las calidades de diversas versiones de la invención dependen del precio.

El mercado de blanco incluye:

- Padres con difícil controlar a los niños, que necesitan la hospitalidad dentro durante el tiempo lluvioso. Más para los niños que necesitan ser entretenidos mientras que siendo controlados, y menos para los cabritos que aprenden seriamente la música seria (el pequeño por ciento del mercado para los instrumentos electrónicos baratos).

- Jugadores más en la experimentación con diversos instrumentos que aprendiendo jugar cualquie muy bien. La gente está demasiado ocupada actualmente dominar apenas un instrumento, cuando hay tan muchas opciones interesantes alrededor.

- Compradores costosos del sintetizador: Esta característica es construida en el aspecto del uso a las que:

1] quiere ahorrar en costes laborales de emplear un sintetizador vivo para trabajar los controles

2] quieren demostrar a miembros del grupo qué jugador necesita mejorar [puesto que sistema demostrarían cuáles son los problemas con jugar sin ser críticos o la selección en un jugador. En este caso el producto sería más ideal para "quiere ser profesionales" en regiones de donde no hay muchos otros músicos a escoger para hacer una venda.

Comercialización:

- Enseña a niños a trabajar en grupos.
- Fomenta creatividad
- Los padres mejoremos el control los niveles de sonido de todos o de instrumentos del ruido (subsistencias los cabritos más camorristas en control)
- El jazz profesional y otros músicos pudieron incorporar simplemente esta característica opcional en sus sintetizadores.

El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. Corrige averías de jugadores vía:

1] usuario delinea a cierto jugador cuyo se reduzca sonido [porque necesitan jugar pero el grupo no los quiere]; eg.: su sonido o estilo es demasiado preocupante para otros jugadores.

] el sistema 2 (sistema del `) "analiza" (analizador de sonidos) cómo cada jugador juega entonces = ajusta el oscilador [altavoz] por consiguiente, eg.: sonidos de los cortes que exceden parámetros sanos de la frecuencia.

El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades (portables) múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. Mayor portabilidad, libertad, sonido que hace la experimentación, una grabación más barata.

- Mercado limitado: apunta a jóvenes - el mercado grande, "quiere ser ejecutantes", los profesionales no necesitan ni utilizan a personal sano profesional.
- el sistema puede también ser un acompañamiento (necesitar a pocos jugadores); no limitado a la fijación/a alterar su música pobre.
- la pieza del tratamiento de señales es qué haría esto patentable
- puede reducir al volumen de jugadores particulares.
- "cojín del aire"

Otros usos: cualquier N/parte portables del sistema de N.

- "juego": cada jugador conectó vía (radio) el tr con la C. central.
- "c portable": cuadernos
- t = sistema principal de t (sistema del `) recepcionista (automático) (de w, KN relacionado)

Terminología:

- unidades externas: las unidades móviles/portables que están conectadas con el sistema central (c=brain) vía (radio) el tr.

Estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U. para 5E090. Venda de la música: ()

- No. de la palmadita de los E.E.U.U.: Stringless piano-toca eléctrico... %636035; aparato de control Movimiento-controlado de tono musical [Miburi de Yamaha?] 636035.

. - sir APS 69 ' a 8.92: :

--No. de la palmadita de los E.E.U.U.: palmadita del diseño: D245,197 1977 portable, instrumento musical del teclado electrónico, teledirigido, sin hilos

. ---esta palmadita encontrada vía mala estrategia de búsqueda: (sin cuerda o sin hilos) y (música o venda)

- S: esta N es una versión sin hilos de 5E080.

- Str APS 79 ' a 82.': (sonido o música) y (analyz o analys)

- kilovatio: el perno prisionero del audi [estudio] corrige

- No. de la palmadita de los E.E.U.U.: ¿+? Instrumento musical electrónico 5063820 que ajusta automáticamente un funcionamiento dependiendo del tipo de jugador.

Usos adicionales: El sistema ajusta al funcionamiento de la mal calidad (según lo medido vía: "cuenta", uip, vagos) cerca: degradación/cortando elementos/modos menos deseables, o "encaminándolos", o "corrigiéndolos".

LUPA del SONIDO de la CALLE 5A270: El sistema del coche magnifica sonidos exteriores mientras que la estereofonia es funcionando. Reduce accidentes posibles.

- Sistema de los programas de usuario que se activará mientras que juega o no juega la música, radio. La lupa puede/puede no cortar música en el sonido del tiempo se amplifica según sistema, volumen de sonidos o la programación de usuario. - aplicable especialmente para: oyendo - deterioró, los como quienes jugar música ruidosamente pero debe bajarla para oír el exterior

- "analizador de sonidos": magnificar/estudio cualquier efecto del sonido/del oscilador

. --verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

(necesidades más trabajo) VOCES del CONVERTIDO 5A900 en los de las cuales crear las sensaciones: la pasión, la amistad, la energía, la inteligencia, la impaciencia y la expectativa que el oyente realiza su pozo del trabajo (los estudios demuestran que el discurso a la gente en ciertos tonos de la voz tiende a crear mejores resultados del trabajo de ellos)

REFORZADOR de la VOZ A1-430: "mejor sano". M realza su voz cuando en "T", usando las características previamente registradas de la voz de los p que las transportan cuando su voz debido a las emociones pobres es menos deseable, o más fácilmente, selecciona de opciones del cambio de imagen de la voz de "C" afinando o poniendo en palabras la petición. Oír para poseer la voz en otras veces usted mismo de alzar moraleja. Mezclar la máquina de la terapia. E, S, yo, TT, HH, BP, ató a "T", "C".

- La demostración de los estudios su voz es más agradable cuando los sonidos anteriores oídos son agradables. Tener llamadas que sean importantes o difíciles hacer: las ventas, hablan con el jefe, padres, enfermo/pariente terminal enfermo (eg.: ¿tiene el SIDA) y el miembro de familia conservador algo no hablar con pero necesitan su animar para arriba? Escuchar los sonidos, o las voces (con o sin música). BP, E, S, TT, HH, contra, autobús, LL, W2. Mezcla con la máquina de la terapia. Compañero de la voz.

- cierto oscilador (palabras, "humores", el "entertainment% - defendido: "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (sistema del `) (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

8B330 SEGÚN EL TIPO USO, VOZ de la PERSONA SE CAMBIA por consiguiente, eg.: su voz para anunciar el plano está lista para el embarque, el plano es atrasado (la frustración, o la cólera en la voz del locutor que tiene miedo de ser atacado con cólera de pasajeros y que en golondrina de mar es semi hostil en voz como protección - ésta es malas), etc.

El SISTEMA R57-2 SINTETIZA EN NUEVOS HUMORES para expresar grabaciones: De menú, seleccionar qué sensaciones usted quiere expresado. La pista existente de sonidos de la voz de la persona se sintetiza por consiguiente.

SYNTH (altera la voz de la persona según el tipo situación del comportamiento que pueden estar adentro, eg.: tensionado, impaciente comprar la mercancía, engañosa); Esta función del synth trabaja como los modos del "artista" de esta N general, eg.: vía menú seleccionar cómo usted quiere datos existentes sobre la persona alterada, sobre k en uno o más opciones. - D: k (u selecciona del menú de opciones, eg.: la persona será: enojado/astuto/se relajó/apasionado)/pista de sonidos de la persona (la copia de las estimaciones verdaderas de la voz/c (computadora del `) mecanografía voz vía (el analizador visual/uip/bva (aunque ningu□n rec ocurrió de voz real si fue restringido por la ley) = analizador = genera la voz (estimada) de la persona).

- TDS ()/T ()/UIP ()/VISUAL ANALIZADOR ()/VR%/WA ().

- utiliza 57-1: intenciones/funciones similares, aunque se substituyen los modos audios y visuales.

Los sistemas automatizados con bastante memoria pudieron almacenar todos los sonidos en el synthesization predeterminado por el tipo ocurrencia. Sin embargo, los productos con una gran variedad de sonidos, o de fuentes sanas fuera del sistema se beneficiarán del synthesization.

- Las fuentes exteriores de sonidos incluyen: Internet; cartuchos; el sistema de sonidos coge [vía el micrófono] y sintetiza.

Para ésos con el problems= auditivo según el tipo del u el sistema del problem= altera los sonidos del oscilador:
- las palabras/frases problemáticas/ciertas se alteran (para el oyente) vía su que es señalado diferenciando: frecuencias sanas ("synth"); altavoces: estados del altavoz del sexo opuesto señalados porción de texto; luces que destellan u otros sonidos (c=osc) cuando se están oyendo las palabras señaladas (oscilador).
- los sonidos de los convertidos de la manera similar a (KN) cuál oye entonces traducen palabras al otro oscilador del then= del languages= = oído por los oyentes.
- D: U (altavoz) - > analizador del mic = de sonidos = c (DB para cómo las palabras pueden sonar) = oscilador - > U (oyente).
- Ver" el texto el "del "artista corregir" (para los disl3exicos).

Ver: conjetura 2D-220 el juego de los sonidos: en la partición del "juego".

Ver el ANALIZADOR del UNO MISMO de la ACÚSTICA 5E080: Los productos relacionados existen probablemente - pero su grado de traslapo en esta invención es confuso. El uno mismo del sistema analiza la mejor síntesis para la acústica del sitio/del pasillo.

POSICIONADOR del ALTAVOZ 5E010:

Los principiantes u otros de las ayudas de la invención determinan la mejor colocación de sus altavoces sanos. Esto es una invención similar pero diversa. Utiliza ""/"del distancer GPS" para cuando el sistema analiza donde los altavoces deben ser colocados.

Provechoso para:
- determinación de las vendas con frecuencia nueva en las nuevas localizaciones
- distancia de altavoces de uno a en lo referente a tamaño/a dimensiones del tipo del sitio de construcción de la superficie del sitio (acústica (el despedir de sonidos)) es el via^ resuelto: medidas manuales/que afinan adentro del Info; electrónicamente determinado via^: "distancer", herramientas de medición de la distancia electrónica (comúnmente disponibles en almacenes de hardware al por menor).
. - gente como quien para hacer a menudo ajustes a la acústica de su sitio (siente como usted tiene un nuevo sistema estéreo, y o nuevo sitio, para la mayor variedad).

Diagrama: 1tr = 2frequency despide de la pared = de 3receiver = de 4computer = de 5display/6printer/7speaker y o de balance/8 otro.

OTD para D:

3access; cojín 2air; %artist 4/5/6/8; basic4567; cart4; clap4; composition4; date4; 1distancer (las unidades separadas del "tr" del lugar en ubicaciones claves del sitio/de la localización (esquinas) del sitio - ésta demuestran perímetros deseados/importantes, después el otro 1 " tr" medios = 4 " computadora", junto determina la distancia real); %interactive; locator1; 4mfh; %4mic; 4multi-user; 4notifier; 4osc; 4pi; portable; 4pp; 4remote; sonido analyzer%4; 4stereo; 4synth=analyzer (efectos de los synth alterables según la acústica del sitio (causada por el tamaño, la estructura, el tipo música); 4uk; 4uq; 4vc; el 4vr%; %4wa.

Estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U.:

Ninguna N relacionada (invención) encontrada, con todo bajo impresión puede ser que exista.

$$P CORRELADOR 5E090: En dir de I en fecha el julio de 2000.

Ejemplo: Venda sin hilos de la música: El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades portables múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. Mayor portabilidad, libertad, sonido que hace la experimentación, una grabación más barata.

- Música del grupo: Hay una unidad principal que obra recíprocamente con las unidades "alejadas" llevadas a cabo por los participantes, creando (jazz del grupo, el foro educativo)
- D: r (compositor) = tr/rc = analizador (carro, compositor, m) = oscilador

Los sonidos y el texto vía el oscilador pueden ser alterados: corregir y el synth puede substituirse.
- cuando vía el modo audio, el sintetizador de la pieza y corregir puede inter-ser substituido.
--es decir todas las funciones en la pieza del corregir, pueden tener un modo audio correspondiente vía el oscilador, que en golondrina de mar pueden no sólo ser corregidas [por ejemplo para el texto o la imagen] pero también tal contenido se puede alterar vía el sintetizador.

Factores que pueden accionar y o influenciar el synthesization:
- el humor del usuario, según lo determinado por vagos. Los sonidos se señalan para crear la sensación deseada en usuario.

PIEZAS DEL SINTETIZADOR:

. ACCESO: el usuario debe [manualmente] altera el sonido que oyen para acceder. El acceso tiene un parámetro general en el cual permitan el acceso. Éste es algo difícil poner en el suelo como contraseña, o dar instrucciones otras.
. ANALIZADOR: El sistema determina cómo al mejor sintetizar los sonidos, según: vagos, uip, limitaciones de los sonidos que intenta alterar, limitaciones de las capacidades del sintetizador.
. ARTISTA: Hace sonidos para emparejar el tipo arte. Ver el analizador sonido-visual.
. VAGOS (analizador del comportamiento): Fósforo del sonido qué usuario tiene gusto.
. CUENTA: Derechos de la paga a esos artistas cuyos se utilizan sonidos.
. CARRO para: sonidos; sintetización de los programas informáticos. El usuario es honorarios de derechos mandados la cuenta para usar software de sintetización.
. COMPOSICIÓN: El sistema sintetiza la música para el tipo señalado de composición.
. ANALIZADOR CONTENTO: Analiza el contenido de los sonidos convertidos a digital - > este Info usado para determinar mejor cómo los sonidos pueden ser sintetizados.

. COORDINADOR: Tareas/funciones/metas múltiples coordinadas. Ejemplos:

- diversos elementos se anotan para su valor en señalar cómo algo debe ser sintetizado. Los elementos incluyen: vagos; formar de la educación deseada; cómo mejor dirigir a usuario; la sintetización suena para los multi-usuarios que escuchan el sistema simultáneamente.

. BASE DE DATOS de: sonidos almacenados; métodos de synthesization; características del usuario para los vagos.

. EDIT: Como la sintetización, se alteran los sonidos. La sintetización es una forma de corregir o de alterar el contenido [sano] para los resultados señalados. Ver para corregir para los detalles.

. EDUCATIVO: El sintetizador intenta educar a usuario. % de los ejemplos:

7J09: Amaestrador sano:

- Enseña usuario como a qué cosas suena, eg.: estudiantes de medicina que necesitan interpretar los sonidos del cuerpo [respiración]. Los sonidos únicos a un estudiante/a un paciente particulares se escuchan, y después se sintetizan para demostrar como qué diversas dolencias sonaría.

--Si el doctor es incierto en cuanto a cómo deben interpretar un sonido particular, puede ser que almacenen los patrones de sonidos de la persona cuando son sanos. El sistema siguiente alteraría los sonidos bajos normales para representar enfermedades señaladas.

- Los sonidos para las máquinas [vehículos] se alteran para demostrar el tipo enfermedad.
- Las ventajas sobre simplemente almacenar toda la enfermedad diversa suenan sin la alteración:
- el usuario puede entrar sonidos normales y ver cómo puede ser que cambien.
- el número de sonidos de la fuente y cada uno de sus formas posibles de alteración pueden ser demasiado grandes.
- el nivel de imprecisión de una síntesis puede ser tal que el fabricante que advierte sin embargo al cliente, puede ser menos impaciente sintetizar cuidadosamente sonidos diversos. Si el sonido se sintetiza sobre el terreno, puede haber una mayor tolerancia a falta de exactitud, mientras haya una cierta semejanza vaga del sonido correcto.
- 'Educa a gente en el aprendizaje de cómo interpretar sonidos.

. EGH (la educación consigue más difícilmente): Las formas de sonido consiguen cada vez más difíciles para que el oyente reconozca [como parte de proceso educativo].

. ENTRETENER: Jugar los sonidos agradables. Humor señalado del usuario de la blanco [para elevar, o la motivación].

. JUEGO electrónico: Los sonidos de cada jugador se sintetizan para el tipo situación.

. GUÍA: Eg.:

- El sistema identifica que el tipo usuario de los sonidos es más débil [en la identificación para (los 'propósitos educativos)].

- Las aplicaciones se anotan en su capacidad [semi-manually] sintetizan los sonidos para los resultados señalados.

- Enseña usuario a cómo cantar mejor vía analizador de sonidos. Sintetiza la voz baja normal del usuario para demostrar los ejemplos para de cerca cómo puede ser que suene. Esta invención se prepara a otra parte.

Sintonizador -7J10: El sonido del sistema analiza las máquinas o el normal/el sonido bajo del instrumento [del musical]; entonces demuestra cómo suena cuando en el estado calumniado correcto o en señalado. Eg.: Cuando un sintonizador profesional ha templado su piano; el usuario almacena los sonidos para cada llave en sistema [como los ideales]. El sistema puede no sólo repetir los derechos sino analizarlos para hasta dónde de sonidos mal de un instrumento del sonido. El sistema puede sugerir lo que y o en qué dirección se pueden alterar cualesquiera palancas o adminículo para alcanzar señaló los sonidos. El sistema siguiente anotará el sonido nuevamente llegado. Esto es un poco como jugar al juego de encontrar algo, y las pistas que el usuario consigue son verde, amarillo o rojo dependiendo de si el usuario está haciendo las correcciones en el modo/la dirección correctos.

. INTERACTIVO: Durante la interacción, los sonidos se sintetizan según lo señalado. La manera de los efectos de la interacción del usuario cómo se sintetizan los sonidos [por ejemplo vía vagos].

. MEDIOS MULTI: Cada oyente consigue sus sonidos sintetizados diferentemente, aunque son quizá uno de millares de clientes. Los medios incluyen: Internet.

. MULTIUSOS: El perfil del comportamiento de cada usuario, da lugar a sus diversos sonidos de la audiencia [por vagos].

. NOTIFICADOR: El tipo de notificación da lugar a diversa síntesis de sonidos. Eg.: las emergencias tienen un sonido más ruidoso y echada más alta.

. ORDEN Y SINCRONIZACIÓN:

- Diversos elementos del pedazo de los sonidos se cortan y pegar para alcanzar resultado señalado. Eg.: los primeros 5 segundos de la 3ro pista (las pistas múltiples se juegan que crean simultáneamente sonidos orquestrados totales) se juegan en el medio de la pista de sonidos para el uso particular.

. - Decide cuando, si y en qué orden [cualquiera] suena se juegan.

. OSCILADOR (altavoces): Los sonidos se sintetizan para considerar la dinámica acústica [límites] de los altavoces para maximizar los sonidos señalados. Eg.: El bajo se baja para los altavoces baratos; y si los mismos sonidos se desean para ser oídos por diversa gente pero con diversos altavoces de la calidad o los ambientes que escuchan; sintetizador tomarán en cuenta esto.

. PREDECIR: El analizador de sonidos predice cómo el sonido del sistema/de la máquina/del dispositivo/del organismo orgánico sonará. Tal sonido previsto representaría una ocurrencia señalada que el sistema se diseña para buscar. Sobre tal ocurrencia el sistema responde según lo programado, eg.: notificando a usuario o haciendo una cierta [reparación relacionada] función.

. Picosegundo-Zona: Síntesis basada en la localización [del oyente].

. PREGUNTA: Respuestas usadas para determinar mejor cómo sintetizar.

. REACCIONAR: El sistema reacciona a las ocurrencias según lo programado. Una de las reacciones puede ser el sonido sintetizado, eg.: tipo de notificación.

. CUENTA: La síntesis es influenciada por la cuenta de ocurrencias señaladas.

. LAS BÚSQUEDAS Y REACCIONAN: El sistema busca sonidos señalados, y reacciona con los sonidos [sintetizados] correspondientes. Ejemplos:

- Sistema de seguridad. Sobre el analizador de sonidos que determina ocurrencias señaladas tener gusto de la persona que camina alrededor durante horas cerradas, o el sonido de la fractura de cristal, sistema generará sonidos [asustar lejos o confundir al ladrón potencial]. Esta invención escrita antes de 1998.

- Estudio del comportamiento del organismo: el analizador de sonidos sobre la audiencia señalada suena como llamadas de acoplamiento generará sonidos correspondientes para determinar cómo el organismo reaccionará [por su creación de los sonidos].

. ANALIZADOR DE SONIDOS: ver la partición.

. INCLINACIÓN: controles del usuario cómo el sintetizador funciona por la inclinación. Permite mayor flexibilidad. Tiene un valor de la hospitalidad, puesto que es diversión a utilizar. Uso para componer música.

. UIP-Adaptar: estudiar a usuario; y sintetiza sonidos para cubrir sus necesidades.

. W5: Diversos acontecimientos determinan cómo se sintetizan los sonidos. Eg.: - Cuando: los sonidos para la notificación durante una situación marcada con etiqueta como emergencia son un triple más ruidoso y más alto. - Cómo: si un dispositivo se utiliza incorrectamente, se crea un efecto levemente irritante [como notificación].

Otros detalles de Techie:

Diagrama: fuente sana (mic/tr) = convertidor de señal = "C" (Reino Unido, P.M., pp, carro) = memoria/amplificador/parte posterior = oscilador del juego

- /OTD: Los sonidos originales y sintetizados almacenados en memoria y se pueden repetir; el sintetizador induce al oyente y o a usuario en el estado de ánimo deseado, ayudándoles generalmente a sentirse bien sobre lo que oyen (el pi selecciona sonidos para hacer la sensación del usuario feliz, soñolienta, o relajado); "C" (memoria, base de datos de sonidos y softwares de la sintetización); los efectos de Reino Unido, y de %mouse cómo se sintetizan los sonidos (usuario seleccionan del menú que permite que el usuario oiga los esloganes de cómo cada elemento de los sonidos puede sonar, y después seleccionan las preferencias para la composición y o el pi); %interactive (según cómo y o qué usuario activa en sistema, las señales de sonido sintetizadas responden por consiguiente, eg.: el tipo #9 o #10 de la acción de usuario causa el tipo de los sonidos #8); M para el mayor sonido que sintetiza posibilidades (el usuario puede hacer compras para los sonidos deseados para la memoria de sistema); balance; discurso (los sonidos vocalized alterados según el sintetizador, sintetizador son ordenados por las señales en respuesta a las acciones de usuario/a los comandos); vc (pueden ser los pp o la P.M. alterados; ciertos tipos de los sonidos pueden automáticamente ser más ruidosos o más suaves que otros sonidos para ese ajuste del volumen); %score; md; carro para cómo los sonidos pueden ser sintetizados; los sonidos de %synthesized se pueden enviar sobre el teléfono ("T"), teléfono del SP, tr, MES; los controles de %pi cómo los sonidos pueden ser sintetizados (pi determinan a usuario prefieren la base baja, por lo tanto utilizan una base

más profunda en la sintetización); % de los modos de sintetización controlados por el "telecontrol"; la manera de la cual se sintetizan los sonidos se demuestra vía notificador; % de los efectos de la inclinación cómo se sintetizan los sonidos; %product conecta con un dispositivo separado que sintetice los sonidos para su usuario; composición

COORDINADOR del GRUPO de la MÚSICA de S del NIÑO 5E090'

Extracto

La invención mejora unísono entre jugadores y cantantes. Es el componente y el sintetizador centrales para los jugadores múltiples de juguetes musicales. Sintetizan cada instrumento musical y o al cantante individualmente para ayudar a crear mejor todo alrededor de música. Tiene usos para la música adulta del principiante y del profesional que juega el mercado también. Muchas otras características.

Una variación del Karaoke.

Detalles

Las calidades de diversas versiones de la invención dependen del precio.

El mercado de blanco incluye:

- Padres con difícil controlar a los niños, que necesitan la hospitalidad dentro durante el tiempo lluvioso. Más para los niños que necesitan ser entretenidos mientras que siendo controlados, y menos para los cabritos que aprenden seriamente la música seria (el pequeño por ciento del mercado para los instrumentos electrónicos baratos).

- Jugadores más en la experimentación con diversos instrumentos que aprendiendo jugar cualquie muy bien. La gente está demasiado ocupada actualmente dominar apenas un instrumento, cuando hay tan muchas opciones interesantes alrededor.

- Compradores costosos del sintetizador: Esta característica es construida en el aspecto del uso a las que:

1] quiere ahorrar en costes laborales de emplear un sintetizador vivo para trabajar los controles

2] quieren demostrar a miembros del grupo qué jugador necesita mejorar [puesto que sistema demostrarían cuáles son los problemas con jugar sin ser críticos o la selección en un jugador. En este caso el producto sería más ideal para "quiere ser profesionales" en regiones de donde no hay muchos otros músicos a escoger para hacer una venda.

Comercialización:

- Enseña a niños a trabajar en grupos.
- Fomenta creatividad
- Los padres mejoremos el control los niveles de sonido de todos o de instrumentos del ruido (subsistencias los cabritos más camorristas en control)
- El jazz profesional y otros músicos pudieron incorporar simplemente esta característica opcional en sus sintetizadores.

El dispositivo de cada usuario entra música en sistema central. En golondrina de mar el sistema central sintetiza sonidos según lo programado. Corrige averías de jugadores vía:

1] usuario delinea a cierto jugador cuyo se reduzca sonido [porque necesitan jugar pero el grupo no los quiere]; eg.: su sonido o estilo es demasiado preocupante para otros jugadores.

] el sistema 2 (sistema del `) "analiza" (analizador de sonidos) cómo cada jugador juega entonces = ajusta el oscilador [altavoz] por consiguiente, eg.: sonidos de los cortes que exceden parámetros sanos de la frecuencia.

El sistema da señales a los jugadores. Usuarios menos experimentados de las blancos durante vida de la patente. Ventajas: Reduce los costes para las unidades (portables) múltiples que confían en solo sistema. Ayuda a calidad de la música, y a los nervios raídos del grupo. Mayor portabilidad, libertad, sonido que hace la experimentación, una grabación más barata.

- Mercado limitado: apunta a jóvenes - el mercado grande, "quiere ser ejecutantes", los profesionales no necesitan ni utilizan a personal sano profesional.
- el sistema puede también ser un acompañamiento (necesitar a pocos jugadores); no limitado a la fijación/a alterar su música pobre.
- la pieza del tratamiento de señales es qué haría esto patentable
- puede reducir al volumen de jugadores particulares.
- "cojín del aire"

Otros usos: cualquier N/parte portables del sistema de N.

- "juego": cada jugador conectó vía (radio) el tr con la C. central.
- "c portable": cuadernos
- t = sistema principal de t (sistema del `) recepcionista (automático) (de w, KN relacionado)

Terminología:

- unidades externas: las unidades móviles/portables que están conectadas con el sistema central (c=brain) vía (radio) el tr.

Estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U. para 5E090. Venda de la música: ()

- No. de la palmadita de los E.E.U.U.: Stringless piano-toca eléctrico... %636035; aparato de control Movimiento-controlado de tono musical [Miburi de Yamaha?] 636035.

FUNCIONES DE LAS TELECOMUNICACIONES

Este archivo: T. También ver el archivo IMIT. Página de siguiente movida desde 2G.
("T") SISTEMAS de las VENTAS 2G24

Sistemas vía los cuales para aumentar ventas (vía la telefonía):

^ del ACCESO: dan los clientes selectos los códigos de acceso que los encaminan (vía t) por consiguiente (a los puntos/a la gente/al correo de la base de datos/de voz/a la música preferred/osc/mm. Esto se encuentra en la C (computadora y analizador del `) y quizá el otro directorio.

MACHINE^ DE CONTESTACIÓN: llamadas entrantes manejadas según: uip/bva

^ del ARTISTA: imágenes gráficas hechas por el remitente (vendedor) para emparejar el comportamiento/uip/cid del llamador

^ del BALANCE:

BVA^: u (el usuario tiene gusto de un cliente) selects/pr qué oyente oye mientras que están en asimiento
CID^: Las ventas history/UIP del llamador hacen estallar en s (la pantalla interactiva del `con el menú adaptado) (según lo deseado)
^ DE LA CÁMARA (LENTE): el vendedor puede señalar la cámara a los artículos/a la gente/a otra que se desean para ser vendida, así que la otra persona en línea puede ver/oye
CART^:
- Adaptación del sistema a cada u (el usuario tiene gusto de un cliente) (uip): cada empleado/agente, (vendedor,)/cliente (llamador) del empleado del servicio de atención al cliente, consigue el carro que los efectos/los controles cómo el T/milímetro/sistema de las ventas obra recíprocamente con ellos.
--los similares se pueden también hacer vía: u (el usuario tiene gusto de un cliente) = k en el acceso = c (base de datos del uip)
--usos: los viajantes de algunas ventas necesitan más o menos energizándose de su sistema; algunos necesitan un programa informático más amistoso (pr)

CONFERENCE^: comunicaciones interactivas de la pantalla táctil,

2G24-1 interactivo en funciones del asimiento: Mientras que el oyente está en asimiento de la telefonía, pueden seleccionar para oír uno o más del siguiente: mecanografiar la música, información (sobre productos/servicios), ajustar el volumen de sonidos o las funciones de la sintetización.
- HOLD^: mientras que en asimiento el usuario puede seleccionar (de menú) al hear^ (/interact con): música, Info sobre productos particulares/servicios (para la venta), noticias, o aire muerto (silencio).
--controles hechos vía k actual/adicional (telclado numérico de t)

VOZ MAIL^:
- el uip/el cid de las ayudas del llamador determina con quién necesitan para hablar (pudo reducir al mínimo el tiempo necesario para estar pasado en correo de voz para encaminar proceso su llamada)

Usos para este 2G24 general N:
- ventas de la telefonía (milímetro)
- adaptando el sistema a u (usuario) que abre una sesión/llama, for^: información, servicios (contrato interactivo tal como juegos), películas, programas educativos.
- servicio de atención al cliente (en el ")^ de Japón "Ogyakusama Gosoudan Sentaa: adaptando la ayuda dada a los usuarios para la reparación, mantenimiento, vueltas, cómo funcionar el equipo.

Debajo de movido desde K \ 2K - teléfono

archivo 2K: Telecomunicaciones especiales. La mayoría de la N (pedazos del producto) fue movida encima a "IMIT2". Ésta es la lista de mis ideas del teléfono ("T") desarrolladas hasta 1.94 no movida a IMIT2.
¿Limitado a las mejores ideas de N (invención)?
-6.96: Ko desarrolló otro archivo que incluyó toda la N relacionada teléfono, por lo tanto más grande que este archivo. ¿Aunque las ideas del teléfono de KN fueron copiadas quizá (no movido) al archivo de IMIT, después ampliado allí?

Introducción: Mejoras comenzadas a partir del 23 de febrero de 94:
Este archivo también se aplica al ^: todos los tipos de instrumentos del teléfono ("T") (caseros, oficina, profesional), multimedias (vídeo, cable, teléfono video), audio interactivo/representación visual/datos (correo de voz, juguetes, hospitalidad), comunicación sin hilos (picosegundo (GPS), Walkietalkie, paginadores).

Para sobretodo el teléfono viejo ("T") N (invención) ver el archivo Y \ D. No leí con la descripción entera de cada N en el archivo de Y \ de D para hacer este archivo de T-E. Este archivo fue cambiado del 19 de febrero de 94 Y \ D a KN \ K2, después aumentado sobre eso. Toda la N (invención) comienza w (con) "2", después dos dígitos es N # archivo de w/in K2. Para la historia mirar para arriba el producto por los dígitos siguientes en N #, aunque nueva N semi-relacionada puede no tener una historia, eg.: K2-5A-700 existió mucho antes, yo agregó K2-5A-701 (véase el dígito pasado "1")
- El archivo 5G tiene nuevo teléfono N

Encontrar la mayoría del teléfono ("T") N (invención) en: Y \ D. Algunos en GG \ 1G (archivo combinado de la "categoría-todo-copia" del teléfono ("T") w (con)).

2K1-4A-310 impermeabilizan el teléfono ("T") ("T"): caja fuerte para el uso en ducha/baño, u otros lugares mojados (incluso si está sumergido totalmente en el agua).
D (DIBUJO): tel~remote = c/tv/vcr/stereo/radio

palabras mecanografiadas convertido 2K2-5A-890 al audio:
Eg.: Discurso sordo a las persianas: como llaves de la persona sorda en las palabras sobre el tablero dominante del dispositivo, el altavoz emite los sonidos de las palabras. Usos para otras situaciones también.
D (DIBUJO): uk/remote = mfh~c (los fósforos reconocieron las palabras w (con) sus sonidos) = oscilador/exhibición
- Reino Unido y deja otros escuchar. TR vía ^: Teléfono ("T"); radio. Almacén en contestador automático del teléfono ("T"); C; sistema de las "multimedias".

- D (DIBUJO): contestador automático de uk/mic=C (synth (dechado) /cart) =tr=tel/tel/Walkietalkie/correo de voz/multimedias/otra

- usos: software (para los programadores; deja a usuarios oír datos deseados; los usuarios pueden Reino Unido para hacer sonidos también) para de todas las clases (teléfono, JUEGOS, JUGUETES, ARTISTA (presentación de multimedias; SYNTH de la c da diversos voces/sonidos a cada objeto de CHARACTER/sounding); COMPOSICIÓN (cuando el usuario quiere la voz de otra de base de datos de los sonidos, ellos Reino Unido para las palabras/el tipo deseados altavoz/modulación); TDS: los sonidos (voces, sonidos) van al OSCILADOR en el tiempo de desired/pp; EXHIBICIÓN: presionar la palabra en la pantalla y oír el sonido (que aprende nuevas idiomas); UIP: el synth es utilizado por el programador/el mfh para crear los sonidos para efectuar la persona/a audiencia apuntadas de la manera deseada según el perfil del comportamiento del oyente/deseó objetivo (el producto particular de la compra, consigue a usuario hacer algo más)

- OTD: la manera "ratón" se mueve sobre effects^: modulación sana, menú; P.M.; pp; vc; Voz K212-5A-900 sintetizada para los propósitos apuntados

2K3-4A-1 tiempo Info: el mensaje de salida de la máquina también indica la temperatura actual y u otras condiciones atmosféricas en voz de la computadora ("C"). Mantiene la sensación de la máquina que es más viva como y operacional. La máquina se puede atar con alambre al termómetro al aire libre. Eg.: "hola, éste es Juan, deja por favor su mensaje, tiene un día agradable, la temperatura actual es 61 grados aquí es la señal sonora"

Técnico: el usuario presiona el botón especial que indica donde quieren el tiempo dado para su mensaje de salida.

anillo Alerter del teléfono del coche 2K4-4A-35: ¡Si usted está fuera de coche y el teléfono ("T") no es expedición de llamada, coger la llamada! El teléfono ("T") transmite en señal de radio a su receptor (joyería/paginador) que suena/las alarmas/las señales sonoras, permitiendo que usted consiga al coche. La radiofrecuencia pasa a través de las paredes, y trabaja hasta una distancia determinada por la fuerza del transmisor.

- El receptor puede tener función que transmite que diga a llamador a través de su teléfono ("T"): 1) "se sostiene por favor, yo está viniendo coger el teléfono", 2) para llamarle en el número del teléfono que usted es el más cercano a la hora de la llamada, 3) contestador automático/servicio tomar un mensaje.

- Ver el teléfono LISTO 3G010 SONAR DELAYER. En I& (en fecha el julio de 2000).

discurso sordo 2K5-5A-89 a las persianas: como llaves de la persona sorda en las palabras sobre el tablero dominante del dispositivo, el altavoz emite los sonidos de las palabras. Usos para otras situaciones también.

BALANCEADOR de la VOZ del teléfono 2K6-A2-140 ("T"): mezclar el corrector de la mente de w (con), selector de la música, CD personalizado. Demasiado o demasiado poco de cierta terapia del sonido de la necesidad del fq. M escucha voz entrante y la su saliente. Conseguir la terapia mientras que ur en asimiento o cuando usted pide él o golpea con el pie adentro (quizá - si usted quiere) cuando es necesario basado en su voz saliente, o cuando el encargado del co juzga apropiado. Entrar el Info personal para activar. Puede también aumentar sensaciones de la seriedad, control de calidad, éxito...

INVERSOR de la VOZ 2K7-A4-72B: la voz de la persona de registro, entonces adminículo se repetirá en revés. ¡Los sonidos apenas tienen gusto del altavoz con todo de las palabras no identificables! Como broma, decir a persona que usted los registró que hablaban en su sueño, incluso anuncio, "esto es su voz". Si la persona no es su amante se preguntarán cómo usted los oyó el hablar en su sueño, y puede ser que incluso pierdan el sueño que intenta imaginar los asuntos.

funciones de control del teléfono 2K8-1C-102-083009 ("T"): el activar: teléfono de altavoz, control de volumen para la voz entrante o saliente, botón del asimiento
Se aplica a las versiones existentes de este producto:
- Direcciones del desarrollo de la patente: encontrar las patentes existentes para los productos básicos y atar ("R") la característica alejada del control. Entonces demostrar cómo este ("R") mecanismo de control alejado se pudo considerar patentable.
Esta ("R") adición alejada del control hace el siguiente: da vuelta con./desc.; efectúa el nivel de operaciones como (la intensidad [tal como volumen, brillo...])
- Notas al pie de la página: alejado ("R"); exhibición; computadora ("C"); pp; P.M.; Reino Unido; fecha; todos; punto de ebullición; alerter; oscilador.

el volumen de controles del oyente 2K9-4C-080-000000 de registrado o vive información (que es el usuario que afina adentro dice a remitente en línea del teléfono alzar automáticamente su volumen - no requiere el equipo complicado del oyente, apenas cierta llave del sacador en el cojín dominante del teléfono ("T")

proceso de la identificación de llamador 2K (desconocido anterior de N):

PROGRAMACIÓN DE LA INFORMACIÓN DE USUARIO DE LA TELEFONÍA

Las llamadas entrantes en redes importantes se marcan con etiqueta según la identificación de llamador. El programa encamina llamadas según la información tabulada en el llamador. Los usos diversos, cuando están utilizados correctamente, se demuestran alzar beneficios de la compañía.

Telefonía de las ventas

Los números nacionalmente des divulgación de las ventas del teléfono encaminan automáticamente llamadas más valiosas a la gente apropiada de las ventas.

La programación de muchas opciones dejó llamadas entrantes ser marcada con etiqueta según lo necesitado. Ejemplos:

Encaminan a los llamadores de códigos de área más ricos del teléfono, y los prefijos tridigitales siguientes del número de teléfono a mejores viajantes de las ventas. También, el número de teléfono del llamador es emparejado contra números de teléfono de últimos llamadores, o bases de datos que describen la mayoría de los números de teléfono por toda la nación por ejemplo por tamaño de compañía. Encaminan a los llamadores preferidos al personal con mejores habilidades de las ventas, que se pueden también entrenar mejor en el tipo necesidades del llamador.

La telecomunicación norteña encamina ya llamadas en Canadá a los bilingües según la región del llamador. En los E.E.U.U. podemos emparejar las llamadas que vienen de regiones particulares tales como California o el sur, con el personal entendido en los dialectos y la perspectiva mental del llamador. Esto se demuestra facilitar informe.

Telefonía de la ayuda de la tecnología

Las llamadas de clientes con las mejoras de una compra de la historia del software se encaminan a un mejor personal entrenado. Las llamadas de clientes difíciles, o las regiones como Nueva York se encaminan al personal con "habilidades duras del teléfono". Verbal y de comunicación de datos puede también ser encaminado según el número de registro de usuario, afinado en el principio. Los llamadores difíciles pueden también ser guardados en el extremo del que que espera más de largo.

R&D Multi-Media futuro de la telefonía

La información de usuario que programa las rutas llama para proveer de personal quién mejor fósforo las presentaciones visuales y del comportamiento del cliente, eg.: código de vestimenta. Los estudios también demuestran a gente con características físicas particulares como mensurable por la computadora ("C"), se atraen más a ciertos tipos físicos.

Los resultados de la investigación extensa sobre la programación de la información de usuario de la telefonía están disponibles. Otros sistemas desarrollados por S t e v e n K una y s están siendo utilizados por Baby Bells y el NTT.

Sobre movido desde K \ 2K - teléfono 1.97:

3A360 que suena "T": ¡presionando los botones crean los sonidos que agregan a la diversión creativa de la llamada del hogar/de la oficina "T"! Grande para los adolescentes y los adultos creativos.
- El uso para preparar para arriba, los compañeros de trabajo de activación, los artistas, los inventores, los viajantes de las ventas, la gente triste, enferma o aburrida con aclamaciones en fondo, los etc. consiguen fluir creativo sano de los jugos.
- Dispositivos para desarrollar excusas para conseguir del teléfono. Sonidos: campana de puerta (excusa para, "oh tengo que ahora ir"); sonido de otra llamada de "T" que suena en la segunda línea; sonido del tecleo en esperar de llamada; registrar sus propios sonidos sobre microprocesador, [eg.: la mamá que dice "viene por favor abajo y me ayuda"; el perro/el gato que raspaba para para ser caminado o para ser alimentado o dejó hacia fuera; sonidos falsos del apuro de "T" en la línea .....]
- los expedientes de usuario poseen efectos sonoros
- puede iniciar en el principio de la conversación para ganar comienzo interesante a la conversación, esté alguien con excepción de se
- Sonidos de la naturaleza del h: monos juguetones; pájaros; sonidos de la selva; lluvia;
- Sonidos de la broma del h: bebés tontos; bebés risueños; bebés gritadores; oraciones extrañas cortas de la risa, del etc; ¡la voz de la señora gorda salvaje "bien conseguí ahora conseguir del teléfono, hablo con usted más adelante! " 'etc.

anunciador del anillo de 3A361 "T": sonidos únicos: música, campanas de iglesia, sonidos del pájaro, monos que juegan, bebé que grita, sonido verbal del mayordomo que indica el "teléfono" o .....
Palabras claves: "T", adorna = (decorativo y o decoración), juguete, diversión, novedad

acelerador del volumen del anillo de 3A362 "T": cada anillo sucesivo consigue más ruidosamente. Alerta a los que no pudieron oír el anillo. ENCIMA de la característica en la activación y selecciona volúmenes. La aceleración sana pudo estar en el solamente un o cada anillo sucesivo.
- el usuario puede seleccionar los sonidos alternativos que substituyen el anillo

- la continuación del sonido relacionado de sonido pudo continuar después de cualquier contestador automático escogido encima de llamada

anunciador de 3A1181 "T": Pone en palabras o exhibe el nombre del llamador, usando tecnología de la identificación de llamador. Utiliza las bases de datos del usuario o de la compañía de "T".

"T" anuncia verbalmente el número del nombre o de "T" del llamador. Hay los modelos actuales que el número de "T" del llamador "T" # y nombre (el teléfono se debe programar para convertir de llamador a su nombre correspondiente). "T" (dependiendo de área) puede saber ya el número de "T" de llamador.

- OTD: exhibición ("S"); "C"; puede almacenar 1000's de los números de "T" y de los nombres usted o "T" co da para cada número de "T" (una forma del nombre de conexión con número es cómo "T" co enumera el nombre de ese co con el libro de "T"; los modelos futuros pueden decirle mucho más sobre el llamador: mecanografiar el negocio, el grado de solvencia, # los empleados...); alerter; vc; el score%; md (evitar a gente que usted no quiere, eg.: Los abogados de "T" pudieron ser requeridos llamar solamente de ciertos números identificables de "T"); el sistema dice si ésta es la 1ra vez tal número llamado nunca antes.

- OTD: exhibición ("S"); "C"; pp; P.M.; Reino Unido; el mouse%; fecha; el tds y analiza últimas características/tendencias de llamadas entrantes/salientes anteriores; básico; "mic"; el synth%; impresora; "M"; alerter (eg.: nuevo llamador); oscilador; vc; cuenta (el usuario puede clasificar cuánto tienen gusto de tales y de tal número); carro; "T"; SP "T"; tr; MES; fs; cp; uq; mq; "tener acceso" en base de datos; uip; carácter; palmada.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias

localizador del Walkietalkie 3A1280: conocer la localización del otro partido en su exhibición ("S").

Demostración: distancia y punto a la dirección.

- OTD: alejado ("R"); exhibición ("S"); "C"; pp; P.M.; Reino Unido; el date%; el tds%; juguete; básico; el game%; hospitalidad; "mic"; synth; ejercicio; portable; el printer%; "M"; punto de ebullición; SP; alerter; oscilador; vc; el egh%; el score%; carro (las capacidades del software solamente - qué tipos de usuario de la información quieren saber sobre el otro usuario, basado en posibilidades tecnológicas actuales - la diferencia aquí son que tales funciones están vendidas por separado como cartuchos insertables del software); "T"; SP "T"; tr; MES; el fs%; RPC; uq; mq; acceso; el pi%; carácter.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias

4A010 tiempo Info: el mensaje de salida de la máquina también indica la temperatura actual y u otras condiciones atmosféricas en voz de "C". Mantiene la sensación de la máquina que es más viva como y

operacional. La máquina se puede atar con alambre al termómetro al aire libre. Eg.: "hola, éste es Juan, deja por favor su mensaje, tiene un día agradable, la temperatura actual es 61 grados aquí es la señal sonora" Técnico: el usuario presiona el botón especial que indica donde quieren el tiempo dado para su mensaje de salida.

4A310 cuarto de baño sin cuerda "T": regar la prueba, flotadores y es seguro de descarga eléctrica.
- caja fuerte para el uso en ducha/baño.
83
Descarga eléctrica no posible; prueba del agua; puede ser sumergido en el agua
- OTD: el remote%; el display%; fd-hdd%; pp; P.M.; fecha; el interactive%; todos; "mic"; portable; punto de ebullición; SP; alerter; el osc%; vc; el score%; tr; MES; fs; RPC; "T"; SP "T"; flotador; cc; notificador cuando el teléfono suena (puesto que el agua de la ducha puede ser demasiado ruidosa).

anillo Alerter del teléfono de la joyería 4A330: Donde usted está nunca en su vivienda, el "T" que suena activará su joyería/aparato que le notifican del sonido.

Técnico: "T" transmite en una frecuencia (eg.: frecuencia del juguete). El receptor (que usted lleva) sonar/alarma sobre la recepción de la señal que viaja a través de las paredes hasta cierta distancia. Distancia determinada por la fuerza del transmisor.
- "T" puede también sonar normalmente, simultáneamente
- Receptor en: Anillo, pulsera, collar, paginador que mira el aparato, prótesis de oído, y o vidrios.

anillo Alerter del teléfono del coche 4A350: ¡Si usted está fuera de coche y "T" no es expedición de llamada, coger la llamada! "T" transmite en señal de radio a su receptor (joyería/paginador) que suena/las alarmas/las señales sonoras, permitiendo que usted consiga al coche. La radiofrecuencia pasa a través de las paredes, y trabaja hasta una distancia determinada por la fuerza del transmisor.
- El receptor puede tener función que transmite que diga a llamador con su "T": 1) "se sostiene por favor, yo está viniendo coger el teléfono", 2) para llamarle en el número del teléfono que usted es el más cercano a la hora de la llamada, 3) contestador automático/servicio tomar un mensaje.

llamada automática 5A050 detrás: si el llamador deja su mensaje, la máquina puede llamar detrás número y dejar el mensaje en la voz del dueño del contestador automático indicando que desean que salieron de un

mensaje. Esto es diferente del modelo actual que requiere a usuario ser hogar para llamar detrás inmediatamente.

- Números del almacén de mayo de cada uno que llamaron y hung-up (éste está ya en existencia)
- dice a persona que ha llamado en último plazo seleccionado, "usted ha llamado otra vez y usted no está dejando su número, cómo puedo hacer el contacto, deja por favor su mensaje"

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

sintonizador del laser 5A710: disparar la luz para el número específico querido. La invención tiene diez lasers (para 0 a 9)

- gran novedad
- grande para la gente rica en cocina que quiere hacer llamada saliente del teléfono de altavoz con las manos sucias; artistas y escultores de la arcilla; científicos y doctores que no deben de-esterilizar sus manos

Ver el producto 5A460. (Nota al traductor: la oración anterior se debe traducir al texto)

5A720 supervisa el número de llamadas y longitudes de la conversación entre ciertos departamentos. Una base de datos de "C" puede demostrar todos los tipos de gráficos para los propósitos diversos, eg.: qué departamentos pudieron necesitar moverse más cercano a otros (durante o sin cualquie reestructuración corporativa), los planes futuros, viendo los valores y los flujos de departamentos, el etc.

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

- Cribador del programa de T/hospitalidad: 9G-220: las pantallas/seleccionan del sistema (sistema electrónico) (sistema electrónico) (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)
- copiado a 9G220 en 8/95

> dispositivo del teléfono 7A040 que está también con un teledirigido. - movido a T 1.97

Teléfono del espacio A1-040: El microteléfono flota en aire sobre base de "T", vía fuerzas magnéticas.

- OTD: básico; punto de ebullición (energía en microteléfono); transmite vía ondas de aire entre el microteléfono y la base de "T"; vc; alarmas si el microteléfono va también lejos de base de "T"; "T"; teléfono del SP; tr; el mo%; el fs%; cp.

Mensaje de salida personalizado A1-500: Dejar un mensaje especial para la gente particular, tal como decir a amigo que usted está llegando tarde. Ejemplos: puerta principal, contestadores automáticos de "T". La otra gente consigue su mensaje estándar.

- el contestador automático del teléfono da el mensaje personalizado según el número de teléfono del llamador. El usuario preprograma la máquina antes de dejar "T". Para la investigación de la llamada, ve número del teléfono de llamador actual y lo selecciona a partir del dos a veinte diversos mensajes de salida. Preprogramar la máquina apenas para darle el nombre de la persona cuando su número del hogar o del trabajo surge. Personalidad múltiple, las muchas usted, que es hogar. TT, E, S, contra, autobús.

- diversos llamadores también identificables por su afinar en los códigos especiales que se identifican. La máquina puede no incitar para tales códigos - el llamador debe interrumpir el mensaje de salida con sus códigos.

Teléfono A2-310 ("T") REGIONALIZER: el llamador oye el acento y la música populares para su región de país, según código de área del teléfono mientras que pasa a través de correo de voz o en asimiento. Si el empleado disponible w (con) ese acento toma llamada (quizás el número central transfiere llamadas a la misma región de país en donde el empleado allí toma llamada).

. - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (sistema electrónico) (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

cribador de la llamada 6B020:

Las llamadas de cierta gente son tomadas automáticamente por el contestador automático de "T". El sistema reconoce a llamadores por su número del teléfono usando tecnología de la identificación de llamador. Las llamadas de la otra gente suenan de manera normal en "T".

- El sistema de identificación del llamador da a ciertas llamadas entrantes del teléfono (basadas en su teléfono ninguì□n) la grabación del contestador automático de "T". Identificación de llamador: el sistema responderá al número del teléfono del llamador como el usuario programó:

- el teléfono nunca suena cuando usted recibe llamadas de gente indeseada (da siempre un mensaje a ésos que usted desea no hablar con, de modo que usted no tenga que incomodar el coger de "T" o el comprobar para ver el número del teléfono de llamador en "S". deja a usuario coger "T" en otras veces con menos riesgo de discurso a la persona que ella desea evitar)

- da diversos mensajes a ciertos números del teléfono que llaman adentro

83

- tiene opción por el que el usuario incluso no tenga que oír el mensaje del llamador si el usuario desea al dispositivo de programa tales. Eg.: el llamador piensa que se está registrando su discurso; o el dispositivo registra con todo el oyente necesita utilizar llaves adicionales para recuperar estos mensajes menos deseables (deseados y mensajes indeseados se almacena en diversos lugares)

- Al recibir otra llamada en "T", la onda de radio, el etc la primera, o en segundo lugar entrante llamada exhibe su número del teléfono, la identificación del llamador, el etc. permitiendo que el receptor elija contestar a la llamada.
- Debe llamar sea indeseado, el receptor puede optar tener comunicación entrante manejada por un contestador automático de "T" o un dispositivo relacionado. O para mantener cosas simples, cualquier llamada por contestar va automáticamente al contestador automático.
- OTD:

Los mensajes indeseables se pudieron borrar automáticamente después de una hora o después de usuario cogieron "T", que sucede nunca más adelante; Códigos: todos; "S"; pp; P.M.; Reino Unido; fecha; interactivo; "mic"; synth; "M"; oscilador; vc; carro; acceso.

identificación avanzada del teléfono 8B170: Saber más sobre con quién usted está hablando. Ejemplo: su dirección y a quién el número del teléfono es mencionado, etc.
- se aplica si el otro partido le llamó, o usted los llamó. Conseguir más Info sobre partido que usted llamó sin incluso la necesidad activar la campana de su teléfono; apenas entrando base de datos usando su número del teléfono
- Identificación del receptor: saber si "T" que usted está marcando es un celular/"T móvil" y o si está siendo llamada remitida y o el número o el tipo línea del teléfono del teléfono a los cuales la llamada está siendo llamada remitida.
- los recipientes pueden optar por tal información que no se dará hacia fuera
- H [las disposiciones gubernamentales pueden no permitir todos los aspectos de la idea, dependen del país]
- también aprender arriba y el número siguiente sobre el número del teléfono que usted marcó, o del teléfono que le marcó: el nombre en el cual "T" es mencionado, su dirección, cuando el servicio de "T" comenzó, cuaesquiera quejas importantes contra la compañía, estado de la compañía - por ejemplo si ha archivado para la bancarrota.
- también aprender: cuántas llamadas hicieron de ese número que día
- OTD: "S"; "C"; pp; P.M.; Reino Unido; tds; básico; au; "M"; discurso; vc; cuenta; carro; teléfono del SP; (también identifica los números del teléfono para los módems, y los faxes); uq del cp; mq; acceso; uip; multiusos; notificador

Teléfono de la libertad B7-020: Hablar con sus amigos dondequiera que usted sea. Estar libre de tener que llevar o tocar cualquier cosa.

Todas las operaciones de "T" ordenaron por el sistema de reconocimiento verbal simplificado.
- Activar y desactivar "T", eg.: señal para marcar, y dial usando nuestra tecnología de la "chapaleta".
- "T" con controles sin cuerda de "R":

El número del dial de su dispositivo a disposición sin tener que coger "T". La persona que usted alcanza sonará en sus altavoces que substituyen el sonido del sistema de la hospitalidad, guardando cualquier representación visual en la pantalla. El receptor de los sonidos está en el regulador de "R".

83

- rechaza automáticamente el nivel audio de la televisión, o apaga audio totalmente (este aspecto puede ser obvio)
- actúa como intercomunicador con otros cuartos también
- el dispositivo también suena al conseguir una llamada de "T"

OTD:

Todos; "R"; "S"; pp; P.M.; Reino Unido; interactivo; educ; juguete; juego; hospitalidad; "mic"; synth; portable; sst; punto de ebullición; alerter; oscilador; vc; tgh; carro (para: opciones de sintetización sanas, eg.: un cartucho puede cambiar el género de su voz para reírse con los amigos); "T"; teléfono del SP; fs; RPC; cp; uq; acceso; chapaleta.

localizador de la llamada 1C-291: <3, 1, 1, 4> para la gente que pasa mucha hora en diversas partes de la oficina. Anillos del teléfono ("T") en ciertos patrones, señalando para quién es y cómo es urgente. Las llamadas para el anillo de la persona solamente en el teléfono ("T") están los más cercanos a.

- Seguidor del teléfono: El teléfono ("T") suena para el usuario en el teléfono ("T") lo más cerca posible a la localización de la persona.

. - Relacionado con el producto 1C-290.

- el sistema se simplifica para el uso fácil. Por ejemplo: las transferencias del teléfono ("T") se limitan a los teléfonos particulares dentro de la oficina/del lugar; cuando llega la llamada entrante, puede indicar en nombre de la exhibición ("S") o la llamada de la persona está para

- Usos: este sistema se limita en uso a ciertos tipos de oficinas donde está la gente a menudo lejos de sus escritorios dentro de un área general. Cabe estilos particulares del trabajo de oficina, no se significa para cada uno.

el tiempo de +-saves de tener que tener algún otro conseguir su teléfono ("T")

identifican a la persona de +-needed vía:

--diversos anillos del teléfono ("T") pueden también aplicarse en cuanto a para quién está la llamada, o diversas melodías cortas

--la importancia de la llamada puede dar lugar al anillo más ruidoso o al otro significar

--los locutores pudieron anunciar para quién es la llamada....

--luces que destellan particulares

--la exhibición en la pared o la otra localización cerca del teléfono ("T")

- el sistema puede después de substituir el uso de los beeperes, sistemas de radiobúsqueda

Usos:

- dicen el recepcionista para quién la llamada está, después transfieren la llamada poniendo en código correcto qué transferencias llaman automáticamente a la sección del co donde la persona trabaja; en golondrina de mar el sonido, el etc señalados se emana señalando para quién es la llamada. La persona aplicable o cualquier persona puede tomar la llamada (pero la interrumpe a pocas personas si la gente acaba de conseguir las llamadas ellos mismos), si la llamada no se contesta, después el correo de voz registra el mensaje del llamador (el sistema de contestación automatizado existente del teléfono ("T"))

oficina u hogar de +-for: el teléfono ("T") suena solamente en el sitio donde está la persona, no disturbando otros. El sistema reconoce la presencia de la persona por su transmisor. Este transmisor puede tener muchas otras funciones para los sistemas que identifican donde están dentro de una vivienda, según otras características en producto archiva A, B, y la C.

+-improvements en el anillo de diferenciación de llamadas entrantes pudo ser patentable puesto que fue dicho que verbalmente existe el anterior. Eg. quizá patentable: el aviso verbal de la llamada entrante/del recepcionista dijo de llamada entrante.

- Notas al pie de la página: alejado ("R"); exhibición ("S"); "C"; pp; P.M.; Reino Unido; fecha; todos; "mic"; synth; "M"; alerter; oscilador; vc; cuenta; teléfono ("T"); teléfono del SP ("T"); tr; MES; fs; RPC; uq; acceso; uip; carácter; chapaleta; distancer.
- Str de la palmadita: teléfono y (anillo near9 (seguir o locat o identificación o único)).
- Patentes de los E.E.U.U.: 5491746

amplificador de la transmisión del teléfono 3C510 ("T"): se amplifica <3.5, 4, voz del altavoz 2>, así que él no necesita hablar ruidosamente, disturbando otros.

- Provechoso para hablar sobre materias confidenciales también.
- El sintetizador puede ajustar voces de discurso del punto bajo que suenan tan normales en el nivel de decibelio normal.
- ninguì□n tal producto existente parece alrededor
- D: Este sistema de N (invención) (sistema electrónico) =

. PATENTES: la búsqueda de la palabra clave de los E.E.U.U. abstrae 1977-1.97 www.qpat:

- (telephon o teléfono) y (control del volumen near/5) y micrófono
- esto es una búsqueda difícil en títulos de esa patente es demasiado amplia en este campo.

Ranurador de la llamada: + <3, 3> 4C090

De acuerdo con los sonidos del comportamiento de la persona en "T", eg.: el tono, sistema dirige a llamador a la persona aplicable (eg.: psicología del llamador de los fósforos con voz de los representantes de las ventas (vive o la máquina) y el patrón del comportamiento. Alza ventas. También defiende hacia fuera llamadas indeseadas en la trampa del correo de voz, el etc.

. - La eficacia del sistema es marginal, con todo las ventajas marginales pueden tener beneficios totales para las operaciones grandes del teléfono, eg.: empresas de venta por correo. Este sistema (sistema electrónico) no es perfectamente eficiente, con todo más eficiente que ninguì□n sistema relacionado.

- Relacionado con: 5A-880-04200A voz "analizador": dice el usuario que el altavoz del comportamiento del modo estaba adentro mientras que hablaba, o dejar el mensaje en el contestador automático.
- el usuario puede optar tener análisis en el comando de botones
- relacionado con 5A-940

+ para versiones más baratas de N: el sistema identifica simplemente a gente cerca si ella tiene echada alta-baja (que representa la tensión/personalidades tolerantes). el sistema (sistema electrónico) puede considerar si el llamador es masculino/hembra. Los llamadores relaxed que emparejan que w (con) relajó a recepcionistas pueden ayudar a clientes verdaderos.

- T D: llamador - > el oscilador da a voz el usuario que pide pronto para indicar verbalmente número de extensión (u podría puentear el sistema (sistema automatizado del `) por k en la extensión #) - > analizador de la voz (uip que marca con etiqueta) - > llamada encaminada al tomador de la llamada que empareja (uip marcado con etiqueta en cada tomador de la llamada) - > la comunicación de voz comienza.
- el sistema empareja a llamadores de los códigos de área de diferenciación del teléfono también (oído existe en Quebec). Las llamadas de códigos de área tales como ésos de los E.E.U.U. meridionales profundos son mejores emparejadas con relaxed y o los altavoces meridionales de los E.E.U.U. Las llamadas de Nueva York mejoran quizá para los tomadores aprisa de pensamiento de la llamada.
- T D: ranurador de la llamada 4C090 = ["=" conecta con cada uno de todas las piezas capitalizadas abajo] TENER ACCESO (al sistema de la banda; el sistema (sistema electrónico) trabaja solamente para las llamadas de ciertos códigos de área); CONTESTADOR AUTOMÁTICO (); BVA (); CID (encendido última identificación de llamador desarrollada uip teléfono # una mejor llamada de las rutas iguales # otra vez - ver KN anterior); CARRO (); CONFERENCIA (); MIC (); MULTIMEDIAS (); MULTIUSOS (); NOTIFICADOR (); NOTIFICACIÓN DE LLAMADA (); PORTABLE (); Banda (); R (`teledirigido vía la interacción

accesible) (); +ROUTER (); S (); CUENTA (); ANALIZADOR DE SONIDOS (); SYNTH (adapta la llamada del tomador de la llamada al tipo del comportamiento del llamador (bva, el uip)); UIP (); K (); CORREO DE VOZ (); MODULADOR DE LA VOZ.

+ <3or4, 3 o retardo de respuesta del teléfono de 4> 4C160:
Si la persona no puede conseguir fácilmente al teléfono a tiempo, pueden enviar la señal que dice a llamador "espera por favor, yo está viniendo al teléfono".
- la señal se puede generar cerca: sistema de reconocimientos vocales; el presionar del botón que está conectado vía el alambre, o teledirigido; uso de la palmada; o todas las llamadas se manejan con tal aviso cuando el sistema sabe que el usuario está en el país
- el llamador oye la voz o la grabación viva
- el mismo principal se aplica a la otra N cuando una del u (usuario) no puede responder/contestación/reacciona rápidamente bastante, eg.: campanas de puerta, paginadores.
- el reconocimiento vocal, usuario que indica al sistema de t (sistema automatizado del `) para satisfacer se sostiene
- D: llamada entrante = t [c, oscilador, anillos del teléfono] = r (controles de u cuando no puede conseguir al teléfono)

campanero del teléfono de la aislamiento de +++ 2D-240: El usuario notificó reservado al recibir una llamada entrante en la noche. El usuario lleva a cabo la unidad portable que vibra o emite el sonido del bajo volumen. El sonido o la vibración consigue más intenso cada anillo hasta que responda el usuario.

Para no disturbar otros, cuando el receptor de los anillos del teléfono "T" solamente se notifica vía: vibrador del bolsillo que vibra mientras que el teléfono "T" suena; dispositivo portable de sonido que no es demasiado ruidoso; beeper en el reloj.
. - el usuario tiene poseer número del teléfono, o es identificado por el llamador (que afina los códigos para el partido de recepción deseado) o por el recepcionista si está utilizado en oficina; o el usuario tiene poseer número del teléfono; etc
- Ap: capaz de recibir llamadas de última hora sin disturbar otros que duermen; puede conseguir las llamadas/los mensajes mientras que investiga qué bandidos incumbir, sin el bandido sabiendo que se están mirando; beeperes; cuando el fax (del detalle) recibió - (código del remitente k/identificación de llamador del llamador) - > los avisos del sistema (sistema electrónico) - > el nr (notifica cuando está señalado) U.
- luces que destellan (existe en industria musical?)/nr u del vibrador
- D: llamador = t = línea del teléfono = t (caja particular de la voz o código k del "acceso" del llamador) = tr (transmisor) = rc (del portable) (llevado a cabo por u) = nr.
El anillo -2D-241 consigue más ruidosamente cada anillo sucesivo

+ el anillo 2D-241 consigue más ruidosamente cada anillo sucesivo: hasta el teléfono se coge. Para los teléfonos normales también.

- D: llamada entrante - > t (contador de anillo (tds)) - > oscilador (increaser del volumen vía medios electrónicos o mecánicos).

- similar a KN anterior (invención) donde la alarma consigue más ruidosamente hasta su apagado. Ver KN en pieza de la "mañana" en un archivo IMI.

+ NR: hasta que u (usuario) desactive la alarma = el oscilador consigue más ruidosamente y ruidosamente/sonido continúa cambiando de cierta manera = C (la computadora y el analizador) (banda) del `.

- copiado a "NR" 6.96. Planear en la mudanza de esto a la partición del "teléfono".

mecanismo de caída anti 3D-020:

Ejemplo #1: cuando el usuario toma el receptor también lejos del teléfono accidentalmente, dos cosas suceden:

1] un sonido y o señales ligeras. D: t = tr (transmisor) = rc (sentidos que debilitan la señal) = nr.

2] porciones de la cuerda se hieren para arriba dentro del dispositivo, lanzándola lentamente (eg.: la cuerda eléctrica común enrolla para arriba en máquinas del vacío).

Ejemplo #2: cuando un dispositivo va también lejos del enchufe eléctrico debido a la longitud limitada de la cuerda eléctrica, eg.: para los aspiradores, los cortacéspedes de césped eléctricos, los secadores de pelo y otros artículos portables.

Archivo 3G:

[N tiene no usos de T también]. Primeros cuatro N (invención) fueron cambiados de 2G al dir 3G en 8.94. En este archivo, todo el uso de las palabras: el teléfono, teléfono, taxi de la telefonía se substituya por "T".

Movido: anillo Delayer de 3G-010 T: Para las situaciones donde puede tardar el tiempo para que uno conteste al teléfono, el llamador puede no oír el sonido durante algún tiempo (durante cuál comenzará el teléfono del receptor a alertar el receptor de la llamada entrante).

- esta N copiada a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verlo para las actualizaciones.

- esta invención amplió 6.95, considera Reg10

- copiado para mejorar el archivo 1.95 de N (invención)

contadores de tiempo audios 3G-020: el sistema se puede programar vía TR/TEL, y puede enviar la alarma y otros datos vía TR/TEL.

D: contador de tiempo = tr/tel = tel/c/mfh del usuario

centros de música 3G-030/computadoras de la música - sintetizadores/"estereofonia": incluir un "teléfono". Puede hablar vía mic del sistema y el oscilador. "Synth" su/otras voces/sonidos/música.

robustezas 3G-040 (para los juguetes, entusiastas de la manía; excluye el trabajo de asamblea): el mayordomo de la robusteza trae a usuario el when^ del teléfono ("T"): suena; comandos del usuario (vía su ""/"del telecontrol palmada").
- D: R (`teledirigido vía la interacción accesible) = dispositivo del rc = del uno mismo = t móviles

> 3G050 llamada Rerouter: Ésta adentro ampliados 6.95, entonces se convirtió en pieza de IMI& en 8.95. Si la persona consigue disconnected y marca de neuvo detrás, el sistema (vía la identificación de llamador) encaminará llamada al mismo número de extensión dentro de la operación grande del teléfono si la extensión está disponible. El recipiente pudo mantener su línea libre de llamadas entrantes afinando en la computadora que sienten que eran disconnected.
- Sobre todo para las ventas y las operaciones del servicio de atención al cliente con la gente numerosa todo capaz de manejar la llamada entrante. Llamada reencaminada vía CID. Si el sistema (sistema electrónico) no puede determinar una desconexión [llamar sin embargo el receptor pudo k el hecho], el sistema (sistema automatizado del `) intentará reencaminar cuando la llamada se revisa plazo determinado de w/in, eg. 1 a 100 minutos. O el sistema intentará siempre reencaminar a la misma persona (para los propósitos con excepción de ser disconnected, eg.: familiaridad de ambas partes con uno a).
- T D: llamador (CID) - > reconocedor de CID - > la encaminamiento del analizador = de la llamada = la llamada conectaron (llamador = recipiente)
- Esta invención se amplió en REG10, REG20, REG30.

Extremo de este archivo: este N (invención) fue seleccionada para las mejores y transferida a los archivos GE y GG, y que eran interno movido a otros archivos.
Archivo 3G (3G-T) del extremo

respuesta inmediata del teléfono 4E-050 ("T"): El dueño del contestador automático, que consigue sus mensajes, ahorró de tener que anotar el número del teléfono de llamador que dejó el mensaje. Otras características confusas explicadas como mínimo en este N.
Sistemas del contestador automático del correo de voz/teléfono. Después de oír el mensaje cogido por el usuario, el usuario puede hablar inmediatamente su respuesta (vuelve la llamada del llamador original) y el sistema dirigirá su grabación al llamador.

- teléfono # de la persona que dejó el 1r mensaje: el sistema puede facilitar saber el teléfono del llamador ("T") # vía, #1 usando la identificación de llamador, marca de neuvo simplemente al # que llamó a usuario él/#2 de este sistema ha almacenado teléfono # de llamadores importantes, y el usuario "Reino Unido" deseó simplemente código para encaminar el mensaje de respuesta detrás
- hacer sure a persona que usted quiso consiguió el mensaje, sistema pedirá que la persona que oye este mensaje, reclame características interactivas adicionales, vía decir (oscilador): #1 "después de que oigan este mensaje por favor presionan/dial (el número 7) en su teléfono ("T") para confirmarle recibió el mensaje" (el remitente del mensaje recibirá su mensaje si no podría ser entregado correctamente para cualquier razón); #2 "si usted quisiera oír este mensaje otra vez, presionan por favor (8)"; #3 "si usted quisiera registrar una respuesta presiona por favor (9)"...
- En otras palabras, ahorra tiempo/molestia: ahorra de tener que anotar notas sobre la llamada, consiguiendo su teléfono #, intentando alcanzar haciendo otra llamada, etc.

--el usuario del sistema de contestación puede elegir repetir el mensaje hecho por el 1r llamador para familiarizar el receptor de la etapa siguiente en la comunicación sobre cuál la respuesta está - ahorre de tener que tener que explicar la respuesta (similar a la correspondencia de negocio de contestación simplemente escribiendo en la letra que usted recibió y enviando los asuntos detrás)

3E-070 el sistema de los equipo y programas de computación deja a usuario seleccionar el más barato y o el mejor modo de comunicación según su localización (proximidad al mejor modo de transmisión, al portador más barato). Puede también apenas estar una computadora ("C") en la línea servicio informativo. Existe en Japón para la opción del portador interurbano del teléfono.

producto del teléfono 1G02 ("T"): el llamador entrante habla con el recepcionista/el correo de voz = "mic" = analizador de la voz = la computadora ("C") = llamada se dirige a la persona que puede la mejor ayuda el llamador según el llamador (uip, necesidades) = el synthesization del receptor se cambia levemente al uip del llamador del fósforo.

- b previamente archivado, eg.: Directorio de C.
- ejemplo: los sonidos agudos de llamadores se emparejan a esos mejores capaces de u (tomadores de la llamada) de trabajar con la gente encadenada tensionada/alta. Los sonidos graves de los llamadores entrantes emparejados con más emocional/sometieron/relajaron a tomadores de la llamada.

arpa del laser 1G03: Cerca de la reproducción del teléfono anterior N del laser de KN

- Adelanto en el sintetizador del primer sonido del mundo desarrollado por Thermin (SP) en los años 30. Poner la mano entre dos barras para determinar las dos piezas que abarcan el sonido (eg.: tono y bajo). Su problema no sabía exactamente dónde poner el dedo. Solución: utilizar las luces laser coloreadas según lo utilizado en teléfonos del laser.

- D: tr (transmisor) = rc = "sensor" = C (computadora y analizador del ') = osc/s (exhibición) /c (generación = memoria = aparato de lectura/estereofonia de la música)
- OTD:
ACCESO: (); CARRO: (); COMPOSICIÓN: (); ENTRETENER: (); MFH: (); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Q: (); R: (); S: (); CUENTA: (tds); SYNTH: (); UIP: ().

¿$$? 1G23 ESPECIALMENTE (plataforma de la ayuda del ingeniero): Usar la identificación de llamador: Las llamadas entrantes se procesan según quién está llamando. Señalan y se procesan a los llamadores según muchos criterios. + movido, entonces ampliado, entonces archivado debajo de la lista APLUS40, entonces para ser ampliado y para ser rearchivado más a fondo.

2G8-C18. Teléfono ("T") y contestador automático: llamadas de los relais a los paginadores; o, dice "espera al momento para ésos que toman baños". Antes de 92 frecuencia intermedia. D: c18 = c~tel~remote

2G9-C19. Atonta/da una sacudida eléctrica a gente que le hace llamadas de acoso. Enero de 93 frecuencia intermedia y X.
D: c19 = remote~tel

2G10-C22. Respuestas del teléfono del altavoz cuando el recipiente dice "hola". 1 de noviembre de 93 FRECUENCIA INTERMEDIA.
D: c22 = c~remote~tel

sintonizador retrasado extensión del teléfono 4J040: El sistema marca número de extensión del teléfono después de que el receptor coja. Ahorra de tener que esperar el sistema para coger entonces marcan en la extensión. Usos: Internet, bases de datos lentas de acceso o interruptor.
Al marcar un teléfono u otras llaves numéricas del número o de la llave del punto (en Internet, etc) en gran número después para de retraso de tiempo señalada cuando la extensión u otros movimientos dominantes adicionales u otras ocurrencias se desean para ser enviados/suceder simplemente, de su (alcanzando hacia fuera) sistema
- Ventajas: ahorra tiempo, permitiendo que u haga una cierta otra tarea mientras que sys/sw se consigue a los deseos del punto u (usuario).
- Puntos deseados: internet address particular, vista de WWW, extensión del teléfono, consiguiendo el sistema para hacer algo (donde u piensa más rápidamente que el sistema hace en términos de saber las instrucciones de k necesarias).
- D: u (usuario) = k = t/c = tr/rc = t/c/m (interruptor, DB, Internet) = gente/clientes publicitarios/otros/"gps".
- D: u = k = t/c = tr/rc = cualquiera de below:

ACCESO (); ANALIZADOR (); CUENTA (); CARRO (); EDIT (); EDUC (); MULTIUSOS (); Banda (); Picosegundo-Zona (); Q (); R (`teledirigido vía la interacción accesible) (); RANURADOR (); ANALIZADOR DE SONIDOS (); ESTADO (); TDS (); T (); PISTA (); U; UIP (); ANALIZADOR VISUAL (); VR (); WA ().

CONTESTADOR AUTOMÁTICO PERSONALIZADO 1B-010-032003: el receptor programa el contestador automático de teléfono para dar hacia fuera diversos mensajes, según el número de identificación del teléfono del llamador,

- producto muy relacionado en el archivo A6.
- (Los dispositivos especiales existen que permiten que el receptor sepa el número del teléfono del llamador.)

El receptor puede entrar tan el hogar del llamador y trabajar números del teléfono, y da apenas llamadas del trato especial de esos números.

Posibilidades del trato especial: diversos mensajes de salida (más agradables o más negocio tener gusto, etc); cuando una llamada viene del número deseado del teléfono que el beeper del contestador automático puede entrar en contacto con a dueño del contestador automático o el dueño pudo conseguir una llamada del contestador automático con haber registrado o voz cifrada/sonido que indicaba que un mensaje del número deseado del teléfono fue recibido, después el receptor puede llamar la máquina y conseguir el mensaje, o la máquina puede dar el mensaje al dueño; las llamadas de números deseados son llamada remitida a la localización del dueño (el teléfono #1 llama llamada de las transferencias del teléfono #2, después del teléfono #2 automáticamente al teléfono #3 puesto que ésta es una llamada tan importante).

- para el dispositivo estadístico de los propósitos guarda los expedientes de todas las llamadas entrantes para las oficinas.

Notas al pie de la página:

- diversa longitud del dispositivo del tiempo puede registrar mensajes entrantes.

CÓDIGOS: todos; número del teléfono de las exhibiciones que viene adentro o siendo marcado; pp; P.M.; Reino Unido; fecha; interactivo; micrófono; synth; portable; mfh; vc; cuenta; arat; teléfono del SP; RPC; cp; uq; pi; carácter.

RECEPCIONISTA del teléfono A6-14: Para el hogar: cuando usted coge el teléfono, dice automáticamente hola, en de voces posibles. También tiene sobre la opción del paseo donde el usuario puede optar utilizar su voz verdadera.

Para las pequeñas empresas: Dejarnos las empresas pequeñas excepto en diez de millares de dólares para una secretaria si hay poco más que hacen que el teléfono permitiendo para el objeto de valor grande de la imagen del co en negocio. El teléfono dice nombre de compañías y entonces cualquier mensaje suplemental según la declaración del llamador, eg.: "un momento por favor, le conectaré", "él apenas estoy bajando del teléfono, yo

conectaré a le", a usuario del etc. tengo su voz por horas de la secretaria o del amigo en declaraciones, después 2325
botón derecho de las prensas del hombre de negocios según voz deseada. También útil cuando la secretaria está el vacaciones, enfermo o hacia fuera en diligencia o almuerzo - no necesitar aparecer como oficina para dos personas.

EXTREMO DEL ARCHIVO DE LA PIEZA DEL TELÉFONO (CARACTERÍSTICAS)
RUIDO QUE CANCELA LA SECCIÓN II

CANCELADORA del RUIDO del TELÉFONO 3E041 - versión seleccionada del ambiente: Muchas patentes relacionadas existen. Cancela los sonidos indeseados que caen fuera de frecuencias vocales humanas vía el filtro.

El oyente en el otro extremo no oye sonidos inusualmente altos o graves, eg.: sonidos piercing del piso de la fábrica. El sistema identifica las características únicas de la voz del usuario para evitar conflicto con los sonidos similares de fuentes secundarias.

EL SONIDO MECANOGRAFÍA ANULABLE: crujir el papel; automóvil o tráfico peatonal (de cierta dirección); máquinas (fábrica, impresora); conversaciones de otros teléfonos (el micrófono en la primera boquilla dice otras boquillas activas no hacer caso de los sonidos entrados de la primera boquilla, eg.: por decibelio); sonidos que emanan fuera del cuarto (hay micrófonos colocados afuera). Sonido de otros teléfonos (hechos por el mismo fabricante).

REDUCCIÓN DE LA INHABILIDAD DEL TELÉFONO DEL ALTAVOZ DE PERMITIR EL DISCURSO SIMULTÁNEO Y ESCUCHAR: Conversaciones múltiples del teléfono del altavoz que suceden simultáneamente: difusiones del locutor en ciertas frecuencias extrañas diferentes de la voz viva cogida por el micrófono. Ninguna prueba de la viabilidad.

RECONOCIMIENTO VOCAL - versión avanzada de esta invención: Cuaesquiera sonidos que no se programen para la voz que reconoce software, eg.: tiene vocabulario enorme, y si hay una pausa o una dificultad o haber hablado sano irreconocible, notifican al usuario. ¿Ahora presentar el uso, licencia más adelante cuando los costes de fabricación caen?

USOS: Walkietalkie; intercomunicadores (en las entradas ruidosas de la calle); teléfonos de la paga; trabajo en mismo el ambiente de ruido, donde estaría dispuesto el usuario a tomar medidas inusuales, eg.: máscara del

desgaste; sonidos de registro en memoria: llamadas del pájaro, conferencia; gritos del bebé (monitor de la madre); teléfono del altavoz; teléfono estándar; teléfono sin cuerda y celular (tráfico de los bloques, viento, motor de coche). Comunicación (verbal) todo de dos vías. Grabación/comunicación unidireccionales, eg.: reconocimiento vocal, grabación audio.

REDUCCIÓN SANA DEL CONFLICTO: Evitando la cancelación de los sonidos deseados debido a la inhabilidad del sistema de distinguir entre los sonidos deseables e indeseables: Colocan sensor encendido o cercano garganta ()/boca de la vibración; hablar en la taza, la taza es una máscara sobre cara, o rodea el micrófono; reconocen a las frecuencias sanas del altavoz (tiene memoria para los "multi-usuarios") vía: programación del usuario o del fabricante; el "analizador de sonidos" del sistema ayuda al usuario mejor a identificar qué tipo de sonidos indeseables es similar a las frecuencias que son habladas; altavoz enseñado a evitar hablar en frecuencias sanas potencialmente en conflicto; un cierto conflicto de sonidos se permite, sistema bloquea simplemente los sonidos que son disímiles más allá de cierta gama, tal como cerca: gamas o distancia de frecuencia del micrófono o del volumen; el sistema busca comúnmente la repetición de sonidos, eg.: refrigerador ruidoso; tecnología existente para los dispositivos de la cancelación del ruido, eg.: compañía en Chicago que ayudó a Tokio para copiar nuestro ruido del tipo del ruido que cancelaba el sistema de teléfono principal. Registrar en sistema los ruidos indeseados.

- El usuario puede saber si su venda del sonido de la voz no se está bloqueando unknowingly parcialmente: para comprobar si el sistema trabaja, el usuario sabe hablar, después juega la grabación trasera para oír para cualquier sonido que falta. Si los sonidos faltan, el sistema demuestra a usuario (vía Q) qué modos de la obstrucción necesitan la re-alteración.

MISCELÁNEO:

- D: para los diagramas también ver 3E040.
- U k en cómo el sistema (sistema electrónico) selecciona el fq querido. Con todo toda la gente habla en áspero la misma anchura de banda. ¿40 Hertz a 10 kilociclos - es lo que el teléfono co admiten a altavoces?
- El Mic colocó la ventana exterior, ésta sabe qué sonidos golpearon el sistema (sistema automatizado del `) primero.

. 1G21: Los permisos del walkman seleccionaron sonidos ser oídos por el usuario. Cualquier sistema se diseña para que al portador oiga todos los sonidos ambientales más música sin disturbar otros. O, el sistema vía el ruido que cancela tecnología permite que las frecuencias sanas seleccionadas sean oídas por el portador. También, la forma particular del paso de aire frecuencia de mejores permisos del oído a cierta suena con los métodos sabidos, el factor único que es la combinación con el walkman. Existe: Canceladora del ruido conectada con el walkman.

. El walkman permite capacidad de oír sonidos en el ambiente. El mic del sistema permite que el usuario oiga otros (su discurso, sonidos generales, sonidos importantes: el sonido del teléfono, la campana de puerta, los desplomes, los etc.) esto permiten al usuario oír música sin disturbar otros.

. - Esta N (invención) se pudo haber archivado anterior por Kays, quizá una ramificación de un N.

- D1: analizador de sonidos (selecciona sonidos señalados como banda por u (usuario) (el ruido que cancela tecnología/la forma acústica del paso de aire al oído permite mejor ciertos sonidos de la frecuencia), eg.: teléfono que suena) - > C (computadora y analizador del `) = oscilador/wa/"estereofonia" (portable).

- relacionado con 1G09: Los sonidos seleccionados están cancelados.

. iguales que arriba, si existe tal micrófono, después éste no serían patentables. El paso inventivo está en el mic.

. La canceladora de los sonidos de Lexus bloquea sonidos constantes.

- problema: cómo hace frecuencias indeseadas cambiantes de este bloque del sistema. Causa de retraso de tiempo: milisegundos probablemente. Con todo si usa el filtro, no hay de retraso de tiempo.

+-exists: el teléfono mic bloquea ya ciertas frecuencias. Todo el mics por el bloque fq de la naturaleza. Para la patentabilidad, necesidad de solucionar este problema, eg.: en la localización del ruido indeseado de la combinación w (con) (cogida vía el 3ro mic).

- si el sonido indeseado es constante: el retraso de tiempo no será tal edición.

+ también ver el archivo: Parte-Telecomunicaciones para códigos más futuros de las piezas de las explicaciones usados.

CONCLUYE ESTE RUIDO QUE CANCELA EL ARCHIVO, PARA ESTE USO DE LA PALMADITA CANCELADORA del RUIDO del TELÉFONO 3E040 - VERSIÓN SELECCIONADA de la GAMA:

[Teléfono] Las canceladoras del ruido existen en mercado en diversas formas.

LLAMAR POR TELÉFONO CON EL RUIDO SELECCIONADO CANCELADO cuando más allá de distancia señalada. Resultados en menos interferencia sana; reduce al mínimo el sonido externo en conflicto cogido por el teléfono del altavoz, y sistemas que controlan de la voz humana. Cómo trabajos: Micrófono parabólico; o, los micrófonos múltiples determinan fuente sana, eg.: el mic exterior apunta el ruido de la calle, retraso de tiempo de la causa de los cálculos.

Distinción cerca de sonidos distantes: diferencia de tiempo entre tres-más los micrófonos, como cómo un par de oídos juzga la dirección y la distancia sanas.

MISCELÁNEO: puede apagar la función si los altavoces necesitan ser más futuros de tel. Mic cogen vía fuerza de señal también. También construir las paredes o las tazas acústicas obvias alrededor del micrófono. "Se notifica" el altavoz cuando comienzan a acercarse a límites de la distancia del micrófono. El sistema pudo "notificar" al usuario de la presencia de sonidos externos, especialmente si no están cancelados. Demuestra el

nivel de decibelio de todas las fuentes sanas identificadas por su distancia del micrófono, tipo sonido (analizador de sonidos).

PROBLEMAS: no saber "cómo" de éstos divulgar las ideas de la canceladora. Campo apretado: divulgar la cancelación en los coches, planos, el tipo sano. Las compañías del teléfono son grandes y agresivas. Es fácil pensar encima de esta invención. Con un micrófono parabólico torpe, así que considerar otras opciones también. Ecos de las paredes del sitio. Esto no intenta solucionar la inhabilidad para que los teléfonos del altavoz oigan y hablen simultáneamente, pero reduce tales sonidos externos que causan este conflicto.

Estos dos teléfono general N (invención) 3#'s: ayuda en la mejora:
- "analizador de sonidos"
- ""/"del discurso voz": las ayudas del sistema (sistema electrónico) mejores entienden qué locutores humanos están diciendo, borrando hacia fuera los sonidos indeseados/interferencia.

MISCELÁNEO:

Micrófono portable: acortado sobre la cabeza; el usuario puede todavía oír vía altavoz algo que el auricular que puede ser como insecto en oído.

Advertencia: estas canceladoras del ruido pueden tener uso militar indeseable para los dispositivos de fastidio. No estamos interesados en militares.

DIAGRAMA #2 DE OTD: Este ~ C del sistema de N (invención) (sistema electrónico) (canceladoras 3E040 y 3E041 del ruido de T) (computadora y analizador del `) =
CEREBRO (el sistema sabe dónde localizan al oyente del altavoz (los sensores, picosegundo, mics múltiple)); C (); CÁMARA (monitor inteligente 2E251: focos del mic en actividades/sonidos señalados); CARRO (interruptor: cómo sistema del control); COMPOSICIÓN (expedientes más de sonidos señalados (en conciertos, discursos); EDUC (aprender disecar sonidos); M (la base de datos de los sonidos para el "cerebro" = sistema sabe procesar sonidos (ambientales) emparejándolos DB de w (con)); MES (comunicación verbal convertida a digital); RATÓN (control: mic (que son más activos), cómo sonidos procesados); MQ (); MULTIUSOS (el discurso trata cada u (usuario o concesionario) diferentemente); Banda (cada sitio en la vivienda tendría sonidos indeseados de diferenciación, por lo tanto la banda de cada sitio es diferente (multiusos para las localizaciones de diferenciación (contra para u) de diferenciación)); CUENTA (las notas cuando los sonidos deseados fueron cancelados demasiadas veces = posteriormente sistema serán menos probables cancelar tales frecuencias, en golondrina de mar sonidos que más indeseados se pudieron permitir = hacer vía "cerebro"); SENSOR (cualquie movimiento del cuerpo = localización del u); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (sonidos = cerebro cifrados = (con referencia a) el transmitir de los sonidos señalados (banda))); DISCURSO (el sistema reconoce voces de u particular (usuario o concesionario) =

hace/no afila con piedra más en su discurso. "bva"); ESTÉREO (u oye altavoces en estereofonia); SYNTH (); TDS (el sistema hace todo posible apresurar tiempo de la palabra hablada a la transmisión al oyente (reducir en caulquier momento el retraso)); T (); tr (transmisión) (); u (usuario o concesionario) (locutor, oyente); UIP (todo el ajuste deseado diferencia por el usuario. Los ajustes son determinados por el UIP, eg. El UIP busca los ajustes para: gama de frecuencia de discurso normal del u, sonidos ambientales indeseados); UQ (); VR (sonidos (ambientales) entrantes de las búsquedas del sistema del vr ciertos solamente para el sistema del vr al proceso/alteran); WA (el sistema de t (teléfono del SP, sistema del receptor de cabeza de t) ajusta según la localización móvil del u).

MISCELÁNEO:

- los límites puestos en señales entradas (más allá de sonido) incluyen: infrarrojo; radiofrecuencias; t móvil; el sistema del etc. (sistema electrónico) juzga la distancia de la cual se envían tales señales (vía el aire, el alambre (CID, "acceso")).
- ambo canceladora Ns de t.
- utilizar la tecnología del filtro del provecho, en este caso es no patentable. La patente tendría que estar en el micrófono, no el tel.
- existe, si mucho ruido de fondo, teléfono del SP es menos probable cortarme.
- Mic parabólico: excluye área deseada exterior del ruido. ¿Difícil tener cierta distancia radial, contra el mic que es acentuado en un punto? Éste es el modo pasivo. Esto rechaza sonidos desde (el sonido no consigue en el mic).
- tiene experiencia w (con) tel.
- Modo activo: combinar el teléfono existente del mic w (con) podría ser patentable.
- cabina del teléfono: necesitar hablar solamente 1m m a el 10cm del mic. Distanciarse las ayudas del analizador en que los sonidos ambientales (indeseados) pueden ser difíciles de distinguir.
- mucho trabajo hecho en electrónicamente el tratamiento de ruido de w (con): el analizar, cancelando, etc.
- la porción del tratamiento de señales de estos el teléfono N (invención) no es necesario difícil ser inventiva.
- teléfono celular: eliminar el ruido del camino del fondo. Podía ser sonidos constantes o no-constantes.
- la combinación de mics especial existente del teléfono w lo y otros no incomodan (con) que puede existir.
- existe. Sistema del localizador que utilizan el análisis triangular para la posición de determinación. Utilizan el EL tr (electrónico), luz (las vigas tiraron hacia fuera y cogieron en diversas localizaciones), o sonido. Por lo tanto el modo sano es aplicable para determinar la localización de la fuente sana y compra este localizador de sonidos disponible.

% de 4E070: Walkman con el micrófono al ambiente exterior: El usuario oye qué se está encendiendo alrededor de él, mientras que en la misma hora, no disturbando a otras que no pueden oír la música del usuario.

- Uso: tener un walkman sin los problemas asociados a no poder oír qué se enciende alrededor de usuario, eg.: campana de puerta, anillo del teléfono, alarma. Sistema para u que quieren oír la música/los sonidos/news/tv demuestra/etc wo (fuera) que disturba otros.
- esto es probablemente un NK antes de 95 (y antes de 4E070) en diferente N #.
- sonar en sitio - > mic ("analizador de sonidos"; canceladora existente del ruido (tipo sano)) - > wa (estereofonia, walkman, m (oscilador), TV o radio o VCR u otro difusión) ~c.

CASCO de la MOTOCICLETA R40 con la cancelación del ruido y la estereofonia de la música. [J&M Corp, 1415 cereza de S sistema de pesos americano, Tucson AZ 85713 los E.E.U.U. picosegundo 4.94]

- vr; con el picosegundo el oscilador altera por la localización; el sistema está con o sin el casco (solamente tipo aparato/del walkman sistema audio como en las arcadas de juego, el vr, el hogar la "estereofonia")
- las réplicas/alteran los sonidos que son necesitados por el usuario (sonidos del danger^ eminente: neumáticos screeching, desplomes, alarmas (notificador, policía).
- D: externo sonido = sonido analizador = ruido canceladora = synth = oscilador notificador (vía oscilador luz (que destella)/s)
- OTD:

ACCESO: (); CÁMARA: (analizador visual ("notificador" para las emergencias)); CARRO: (); COMPOSICIÓN: (consonancia en sonidos/frecuencias seleccionados para (smorgasbord de sonidos)); ENTRETENER: (); K: (r); MFH: (); MAÑANA: (anula sonidos indeseados, pero el not^: alarmas, teléfono o campana de puerta, perro del dueño raspando); MULTIUSOS: (); NOTIFICADOR: (); OSCILADOR: (); Banda: (); Picosegundo: (sonidos de las cancelaciones/juegos/sonidos del synth según la localización); Q: (uip: el usuario del estado emocional quiere, después basado en la respuesta y el uip del usuario del usuario/de la situación deseada (qué elementos (los sonidos) ayudaría para llegar el efecto deseado)); S: (); CUENTA: (el tipo suena (su cuenta del comportamiento del analizador de sonidos; tds); SYNTH: (); Teléfono: (tr); UIP: (véase "q"); WA: (sistema portable en: walkman; casco; maleta/bolso).

LASER T: Los sonidos de la cocina u otras localizaciones que vienen a cualquier altavoz D se pueden programar para tener menos efecto en el micrófono si está a una distancia seleccionada (como programable por el usuario).

--Los teléfonos del altavoz son pobres en tener ambos altavoces hablan simultáneamente, por lo tanto la reducción de los sonidos ambientales externos ambos reduce tales conflictos, y permite que el oyente en el otro extremo oiga más de la voz del altavoz.

canceladora del ruido del teléfono 3E040

Productos sabidos en esta área:

Herman Miller (los muebles y equipo de la oficina conceptora - alto - mirados) ha hecho un dispositivo para permitir aislamiento del teléfono. El dispositivo registra muestras escogidas al azar de su conversación telefónica y juega de nuevo una mezcla continua de charla al azar. El resultado es una charla que camufla su conversación de un cotilla. Este producto es único en que no incorpora el ruido que cancela tecnología, en lugar con la voz de los usuarios para enmascararse. al por menor sugeridos $395

(http://www.hermanmiller.com/CDA/SSA/News/Story/0,1585,a4-c407-n350,00.html)

El ruido acústico de Bose que cancela los auriculares - trabajos usando un micrófono para examinar el sonido indeseado y genera un sonido de la misma amplitud pero de la fase opuesta que anulará el sonido indeseado.

El ruido que cancela tecnología está actual en el desarrollo activo para muchos usos. Aparece que el proceso para cancelar el ruido no está patentado, pero los usos algo varios de él son. Los usos actuales se extienden de los auriculares, zonas audios (la música ruidosa en sala de baile no se oye en la barra tres pies lejos) y como una manera de reducir ruido de los motores grandes y más.

http://en.wikipedia.org/wiki/Noise_cancellation

Hay también usos defensivos y militares posibles. Ruidosamente y o los sonidos molestos se pueden centrar en una blanco que crea malestar. Esto fue utilizada recientemente para proteger un barco de cruceros que fue atacado por los piratas de la costa de Somalia. Otras extensiones de esta tecnología están pudiendo ordenar sonidos o ruidos para seleccionar a individuos. Esto se podría utilizar para crear la confusión (las cosas de la audiencia del IE que no están allí, o música o charla de la audiencia de una dirección donde hay nadie). Un buen ejemplo no militar podría ser una barra donde cada barstool puede tener su propia opción de la música sin tener que usar los auriculares y puede todavía conversar con otros.

Ver la comodidad reservada de Boise y los productos relacionados; y www.HermanMiller.com.

TELECOMUNICACIÓN DE "T "- RELACIONADA

¿$$? 1G23 ESPECIALMENTE (plataforma de la ayuda del ingeniero): Usar la identificación de llamador las llamadas entrantes del teléfono se procesan según quién está llamando. Señalan (`encaminado) y se procesan a los llamadores según muchos' criterios anotados adaptados. Ejemplos:
- Valor del cliente (la frecuencia en la cual han comprado aumenta)
- Región del llamador (ésas con llamadas duras de la respuesta de las habilidades del teléfono de NY).
--los llamadores del estado sureño van al empleado meridional si su línea está libre
- El recepcionista analiza el tipo llamador por sus estilos del comportamiento. El recepcionista los empareja con la gente que conseguirá más probablemente junto con eachother. El recepcionista incluso no tiene que tener razón, ella pudo apenas conjeturar (algo conjeturará mejor que otros también). Eg.: distinguen a la gente cerca si ella es: espontáneo, núcleo duro, inteligente, tener actitud...
- Los fabricantes de apuro consiguen: 1] puesto en el extremo del que, de 2] personales peor pagados de la ayuda de tecnología,] persona 3 con habilidades duras del teléfono
- Existe en por lo menos algunas formas bien más allá de la identificación de llamador simple

Secuenciador de la llamada: Los E.E.U.U. Telephonics, Irvine.
Sistema de teléfono de Panasonic. Combinar ambos productos. 714 373-7796 Charlene.
- Pasos: llamada entrante - > después de que la banda # de anillos = remita a la grabación ("por favor permanecer en la línea"/"si usted quiere permanecer en la línea, yo estará con usted pronto, o presionar #1 para dejar un mensaje") = más recevier de llamada coja.

- se sostendrá automáticamente (para 40 segundos, después las rutas al correo de voz).

Ver:

- notificador móvil 3e010 de la localización del teléfono en "mí" carpeta

- delayer listo 3g010 del anillo del teléfono en "mí" carpeta.

Telefonía (teléfonos). Todos los tipos incluyendo: hogar/oficina estándar, sin cuerda, celular, teléfono del altavoz, PCS (servicio de comunicación personal como siendo convertido por el MCI).

D1 (dibujo #1): tr (transmisión) = receptor = mic = central unit/c = (llaves del usuario adentro) (~osc británico del cojín del dial). Las funciones del teléfono ("T") como parte de un sistema más grande. Cuando se utiliza el término "línea del teléfono" refiere al ^: alambre, líneas sin hilos.

. - Opción: Teléfono de las multimedias ("milímetro") ("T") (teléfono video): oír, y %see: usuario (la otra gente que usted está comunicando con)/[exhibición transmitida por el sistema] durante la comunicación.

. - La interacción telefónica ocurre también por datos BRITÁNICOS sobre iguales y o el paralelo dice la línea. =c de uk/remote (computadora) = teléfono ("T") = línea del teléfono ("T").

. - "D" era vieja característica para "T". No debe ser un problema en accidentalmente la confusión de él con la definición de la d también para el "diagrama". los detalles de +-For consideran el archivo grande de las "partes T" (las piezas para la telefonía).

- Ver el "cerebro": la característica del system se adapta según circunstancias.

- "Corregir": Determina cómo funciona "T" restricto/%altered.

. - Un código (acceso, "marca de agua electrónica ") codificado en sw/data de los límites de sistema de t (telecomunicaciones) cómo + la característica/el sistema/el programa pueden ser: utilizado (funcionar)/"de los dispositivos (otro)" corregido/copiado. Ver: "Tener acceso", "corrigen".

- "Facturación": cuentas para qué/cómo el sistema usado "tuvo acceso".

- esta característica de T se puede también referir por el término "comunicación" cuando está utilizada en el contexto electrónico.

SECCIÓN del teléfono - leída quizá más adelante:

Telefonía (teléfonos). Todos los tipos incluyendo: hogar/oficina estándar, sin cuerda, celular, teléfono del altavoz, PCS (servicio de comunicación personal como siendo convertido por el MCI).

D1: tr (transmisor) = rc = mic = central unit/c = (~osc británico del cojín del dial). Las funciones del teléfono ("T") como parte de un sistema más grande. Cuando se utiliza el término "línea del teléfono" refiere al ^: alambre, líneas sin hilos.

. - Opción: Teléfono de las multimedias ("milímetro") ("T") (teléfono video): oír, y %see: usuario (la otra gente que usted está comunicando con)/[exhibición transmitida por el sistema] durante la comunicación.

. - La interacción telefónica ocurre también por datos BRITÁNICOS sobre iguales y o el paralelo dice la línea. uk/remote = C (computadora y analizador del `) = teléfono ("T") = línea del teléfono ("T").

. - "D" era vieja pieza para "T". No debe ser un problema en accidentalmente la confusión de él con la definición de la d también para el "diagrama". los detalles de +-For consideran el archivo grande de las "partes T" (las piezas para la telefonía).

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

- "Corregir": Determina cómo funciona "T" restricto/%altered.

. - Un código (acceso, marca de agua del EL (electrónico) "") codificado en sw/data de los límites del sistema de T cómo + la parte/sistema/programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corregido"/copió. Ver: "Tener acceso", "corrigen".

- "Facturación": cuentas para qué/cómo el sistema usado "tuvo acceso".

- esta pieza de T se puede también referir por el término "comunicación" cuando está utilizada en el contexto electrónico.

CONCLUYE ESTA SECCIÓN DE LA TELECOMUNICACIÓN

TGH - LA TERAPIA CONSIGUE MÁS DIFÍCILMENTE

COMPUTADORA de la TERAPIA del ARTE 5A090:

Dependiendo del pronóstico, el paciente trabaja en tareas de ayudarse.

. Tareas - formas: colorearlas, moverlas en o de lugares/de formas, las cambian, tamaño aumentan/de la disminución/cantidad, alteran formas (rebanando, agregando las características, conectando con otras formas), dibujan formas, reciben los comandos escritos/verbales para hacer cualquier función relacionada adjunto descrita. Hacer esto: acceder [en una función/un aspecto del juego]; o aprender cómo adaptar [efectos del juego del `].

. Tareas - [argumentos del juego del `]: dan el usuario los carácteres animated, con los cuales puede ser hecho para moverse desde escena a la escena o a las declaraciones escritas/habladas del wo (fuera). El usuario altera/crea historia de manera que desean/que sensación son terapéuticas para los carácteres/ellos mismos. La mayoría de los usuarios pueden no tener cualquiera o mucho de un argumento, por lo tanto les dan una historia completa, o una estructura/un esquema de una historia de la cual tengan más que bastantes ideas de crear la historia final.

- Las tareas - solucionar el problema/encontrar a bandido/que lo hacen: Los argumentos con o el wo (fuera) animaron carácteres.

Promoción: Para la diversión solamente y o la terapia.

- Técnico: viene en hardware especial. Puede también ser hecho en el software para los modelos estándar.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

. - "Inclinación": controla las funciones del sistema

MÁQUINA de la TERAPIA 5A820: Analiza su bienestar físico y mental [por cómo el usuario juega a juegos, y los aumentos de sistema UIP-Info a ayudar a curar].

- detectar su vitals y otras emociones del cuerpo, incluso hace preguntas, después da terapia vía:
- sonido
- vibración sobre el todo o una parte del cuerpo
- consejo psicologico puesto en palabras
- para la investigación médica/el doctor "que siguen" de u: verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

TERAPIA del SONIDO del SUEÑO A1-460 (máquina): la llave en qué le aflige y M produce los sonidos apropiados mecanografiar la cura necesaria. Mezcla con la máquina de la terapia. Terapia de música del sueño (máquina)

MÁQUINA de la TERAPIA A1-10: Interruptor programado (programas informáticos del `[el `analiza]) (programas informáticos del `) COMUNIDAD EUROPEA a trabajar con la persona, psicología del grupo, sociología, dolencia. Responde a la gente por su afinar adentro, o a la voz. Puede ser preprogramada por la persona o el otro terapeuta para actuar en las horas señaladas según estímulos del reloj o del comportamiento o del external del paciente. La máquina hace uno feliz, triste, soñoliento. Las características adicionales son descritas por otros productos con la "mezcla con la máquina de la terapia", cada uno de esos productos se mezclan con uno a también. Máquina de la mente, terapia de la mente, terapia, terapia del juego. Para los nombres de producto, substituir M y jugar con el interruptor, E, juguete; substituir la terapia por ayuda, fijarla, mejorar (ment), realce.
la máquina de la terapia de la respuesta 10A, discute con ella, responde en frecuencias y o las palabras diseñadas para alcanzar desearon efectos de la calma, o cólera creciente para disolver más lejos cólera dentro. Máquina principal de la terapia.

MEDICINA A1-38 USANDO SOBRE las DROGAS CONTRARIAS. Una persona tiene dificultad el trabajar o el vivir con alguien y no puede sentir nunca cierre o a la una con ellas. De acuerdo con preguntas y respuestas en software, la computadora prescribe las uno o dos dosificaciones del tiempo de la droga que mezcla o da el número de la píldora que viene de una acción grande vendida con el sistema.
Las drogas sanas legales incluyen el cafeína, la manzanilla, la raíz del valerium, el etc.
Los estudios demuestran después de que un cierto nivel de conexión entre la gente tenga ocurrida debido a las circunstancias externas, conexión subsecuente son más fáciles.

COMPAÑERO de la BUENA INSPIRACIÓN A1-47 [ER]: El interruptor (programas informáticos del `[el `analiza]) (programas informáticos del `) envía oraciones para alzar su creatividad si usted está en el teclado (M detecta tacto suave) con todo no afinar adentro. Mezcla con la máquina de la terapia. Ver a Peter; Invenciones del juego de la reunión de reflexión los nuestros.

- D: u (usuario o concesionario) = carencia de mecanografiar/"sensor" detecta la presencia del u (están en cojín del asiento/de muñeca de los brazos c) = analizador = oscilador.

A2-03Z: MÁQUINA PROGRAMADA POSITIVA DE LA TERAPIA. Pedir el cabrito/el adulto haga algo [en un juego] y máquina sigue o trabaja a máquina a cabrito de las demostraciones cómo [las guías del `] hacer algo y pide que el cabrito copie.

M apunta las alturas de la gente. Eg.: lanzamientos bajos para los cabritos. Incluso la plétora de tal m, ea m de w (con) comienza a representar a la gente diverso de tal modo que crea interés en la parte del cliente de considerar cómo ella mira este vez. M pregunta qué debe jugar el producto el carácter del m con (diversos productos de las demostraciones qué cabrito puede tocar). el carácter puede demostrar cómo se juega el juego.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

CORRECTOR de la MENTE A2-070: cuando la mente entra el fq patológico, los modos, envía la alarma (elegir la suavidad, MED, ruidosos) que dice a persona corregir sus ondas de la mente. La gente mandila y puede a menudo ser ayudada cuando u es dicho por la máquina cuál comprueba para saber si hay beta, alfa, la theta y otras. Usar como collar, reloj, pulsera, mantener el bolsillo, bolso. Llaman la policía cuando la persona está a punto de entrar las frecuencias peligrosas (asesinato, suicidio). Si usted siente loco/malo/necesitando pep, confianza puede enviar los sonidos curativos/música/voces - declaraciones/comandos/ayuda. Calma la cólera, celos, tristeza, comportamiento maníaco. TM: Importar de alerta, loco/mente/cabeza/la frecuencia - Zapper/Alterator/Alarm/Corrector. El MED W1-2 del SP VB S (pantalla interactiva de HH E BP del `con el menú adaptado) Cons la hombro-correa adulta aca v del mem de la P.M. pp vc d del cp del RPC de la DD de la P.M. del humor LL D de la diversión de los cabritos

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue"/"analiza" ocurrencias (para uip (mejora) del DB, monitor inteligente 2E251)

. - "Hospitalidad"/cribador del programa (interruptor): 9G220: las pantallas/seleccionan del sistema (sistema electrónico) (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

- el `dirige [juego/software del `] a la entidad/a usuario para corregir su pensamiento de proceso/qué él ve es realidad/sistemas pobres de la habilidad.

BALANCEADOR de la VOZ del teléfono A3-R14 ("T"): (Llevar a cabo esta oración para ahora: mezclarse con el corrector de la mente, el selector de la música, el CD personalizado.) Demasiado o demasiado poco de cierta terapia del sonido de la necesidad del fq. M escucha voz entrante y la su saliente. Conseguir la terapia mientras que ur en asimiento o cuando usted pide él o golpea con el pie adentro (quizá - si usted quiere) cuando es necesario basado en su voz saliente, o cuando el encargado del co juzga apropiado. Los sonidos que ayudan positivamente al usuario mientras que escuchan y hablan se pueden oír solamente por el usuario. Entrar el Info del comportamiento personal del usuario para activar el primer día. Puede también aumentar sensaciones de la seriedad, control de calidad, éxito... Tener sonido de menor importancia en fondo cuando usted escucha (si es provechoso).

. - Palillo 5E020 de la inclinación: Controla las funciones de esta n.

. También para los operadores del teléfono ("T"): reciben entradas según el tipo llamador: asentar las vibraciones, imágenes en la CRT, sonidos solamente que oyen, su voz saliente también alterada. Durante roturas entre las llamadas entrantes pueden recibir cantidades más altas de entradas positivas.

DISPOSITIVO del REALCE de la CREATIVIDAD 1B120 (llamado antes, cerebro 1A-6 ligero)):
Trabajar a máquina las ondas cerebrales creativas de la persona de las medidas y retroactúa la información para su desarrollo de capacidades creativas. Un barómetro claro de sus niveles de la frecuencia permite que los usuarios ganen mayor claridad para el control. Ver a Peter.

- Técnico: la creatividad se pudo medir por uno del siguiente: presión arterial, medidas neurológicas de la frecuencia vía los casquillos del cerebro, receptores grabados sobre ciertas regiones de cuerpo, movimientos de ojo, u otros medios eficaces.

- Requerido ser simplemente un proyecto de investigación que correlaciona todos los millares de señales del cuerpo con los niveles de creatividad - el antedichos son solamente algunos de ellos demostrados ser relacionado. Una síntesis grande de señales divergentes puede ayudar a validar resultados.

- Muy difícil verdad hacer operacional. Hay bastantes estudios para demostrar que ciertas ondas cerebrales están relacionadas con el pensamiento creativo, otras medidas posibles (dilatación frecuente de pupilas, del golpe de corazón rápido mientras que está asentado). Todavía las características físicas a comprobar para son probablemente limitadas. Realizar esto antes de tomar esta idea interesante del producto.

- Propósito principal: Creatividad cada vez mayor identificando cuando usted es creativo. Alcanzan en el momento y olvida a la gente a menudo saber qué se está encendiendo dentro de sí mismos... Por ejemplo, una luz verde pudo ir en cuando está actuando la persona creativo. Realizándole es creativa, será probablemente más fácil para la gente más consciente a puesto nuevamente dentro de este estado de ánimo. Controlar su pensamiento de proceso y la guía de ella en el modo creativo pueden algo subconsciente ser dirigidas, y teniendo la luz decirle cuando usted ha cruzado la línea o no, hace quizá más fácil cruzar la línea con frecuencia.

- Otros propósitos: para los científicos que estudian el proceso del pensamiento creativo; la gente de ayuda corrige desordenes mentales del pensamiento.

- OTD: Exhibición ("S"); c; pp; P.M.; Reino Unido; fecha; beh del usuario; interactivo; educ; juguete; juego; hospitalidad; ejercicio; portable; impresora; mfh; alerter; oscilador; vc; egh; cuenta; tgh; enseñar; md; carro; RPC; PC; uq; mq; pi.
- (Esperanzadamente el antedicho fue traducido ya a ruso en 8.93 tempranos)

MOTIVADOR de la IMAGEN VISUAL 6B340: demuestra a cuadros cuáles representan el tipo de sensación que usted desea tener más de [en un juego], eg.: usted necesita la ambición así que ver los cuadros de la gente que trabaja su manera encima de la escala; usted `con referencia a triste ve tan a gente que está consiguiendo sobre su tristeza; etc.
- utilizar en el país, en oficina de la terapia...

TERAPIA INTERACTIVA 8B140: Su terapeuta personal. El usuario selecciona del menú que la sensación él está experimentando. El usuario también deja hacia fuera sus sensaciones en el "mic", sistema en golondrina de mar analiza la voz para determinar mejor la mejor terapia. El sistema ellas genera sonidos científico probados cuál crea la respuesta terapéutica deseada, eg.: condolencia, librándose de cólera, confianza constructiva. Su terapeuta es siempre allí cuando usted la necesita.
- la exhibición puede también indicar artículos para ayudar, eg. ; consejo
- conseguir la condolencia, se libran de su cólera, del etc. hablando con "C" en el otro final de "T". Primera llave en el tipo modo que usted desea obrar recíprocamente adentro. Entonces hablar con o sin un aviso. Entonces el sistema responderá de manera para ayudar a la persona a alcanzar la sensación deseada.
- El sistema incita a usuario para una selección bien escogida amplia. Primero hay tipo general categorías, eg.: felicidad; amor; tristeza; trastorno; etc. Entonces cuando se selecciona el área, eg.: el trastorno, usuario puede mejorar área de punta que buscan, eg.: los padres, mal□n tráfico, alguien robaron su idea, etc....
- El sistema puede también ser un solo dispositivo usado en el país, por el sicoterapeuta para sus clientes, etc.
- terapia principal: salir de sus frustraciones gritando es muy popular en "el mercado norteamericano de la psicología del estallido"
- también, la gente siente a menudo mejor cuando ella oye a otra persona el expresar de las emociones similares las suyas, sea canciones de amor, canciones tristes, el etc. en vez de conseguir expedientes, este producto puede establecer claramente ciertas sensaciones quizá en menos tiempo y más directo. Aunque el sistema pudo también utilizar música como forma de terapia también.
--mucha gente no sabe concreto porqué una canción satisface una necesidad emocional particular, la máquina será más científica sobre ella. Más pocas personas tener toda la música registrada para cada situación emocional, ni quieren quizá escuchar todas las muchas canciones cada sensación. Con este producto pueden incluso experimentar varias diversas sensaciones todas en cuestión de minutos.
- usos adicionales: la persona muy interesada en psicología, y una quién ha comprado ya otros productos psicologicamente relacionados, eg.: libros, cintas educacionales, máquinas de la onda cerebral (disponibles para unas centenas dólares); puesto en un walkman tener gusto del modelo; grande para la gente de las ventas que

hace muchas llamadas de ventas, después de frustrar llamadas, pueden presionar el botón deseado; poner el dispositivo cualquier lugar en donde la gente puede a menudo tener frustraciones, o incluirlo en los productos que son gente cercana durante frustraciones, como los teléfonos.

--modelo del teléfono: solamente el usuario pudo oír los sonidos, no altavoz. El dispositivo sondeará en teléfono del oído o teléfono de altavoz mientras que el altavoz está hablando. Actual los teléfonos y los micrófonos de altavoz no funcionan simultáneamente - así que usted no puede hablar y oír al mismo tiempo como con los teléfonos regulares.

- combinado con las fuentes del usuario de la información sobre sí mismo (pi), más cómo el usuario pudo sentir en cualquier día dado, momento según cómo él sensaciones de la corriente de entradas en el dispositivo - el sistema generará efectos deseados. El dispositivo también incita a usuario para la información necesaria: éste puede ser cuando el usuario primero comienza a usar el dispositivo, y más adelante como las cosas cambian también.

- OTD: "S"; "C"; pp; P.M.; Reino Unido; interactivo; juguete; todos; hospitalidad; "mic"; opción del ejercicio (usuario de los avisos a las exactitudes más difícilmente dando el estímulo vía altavoz); portable; sst; i; impresora; "M"; punto de ebullición; alerter; oscilador; vc; egh; cuenta; tgh; cartuchos (sonido, opciones registrados salientes de la declaración); RPC; cp; uq; mq; uip; carácter (cambios según el tipo efecto deseado). usos de +-other: aprender cómo actuar en diversas situaciones; forma cruda de realidad virtual; este sistema con una cámara adicional del alambique o del movimiento permite que los usuarios hagan películas interesantes; juguete; hospitalidad

- OTD: "S"; "C"; pp; P.M.; Reino Unido; ratón; fecha; tds; interactivo; juguete; básico; el game%; entretener; "mic"; sintetizador; impresora; ch; au; "M"; oscilador; balance; discurso; vc; egh; cuenta; tgh; md; carro; "T" (que usa "C" de la posición remota, teniendo acceso vía la línea de "T"; usando apenas el cojín dominante de "T", y o "C próxima" del usuario también); teléfono del SP; tr; MES; fs; RPC; cp; cc; uq; mq; acceso; uip; carácter; multiusos; cc; "R"; notificador; composición; cojín del aire.

el SISTEMA 1G05 HACE LAS PREGUNTAS ("mq") al usuario comprobar los sonidos y otros elementos necesarios para alzar su creatividad, funcionamiento de trabajo (mentalidad del control de calidad - ver el artículo sobre creatividad cada vez mayor, eg.: es I.C.E. (sección intercultural de la ingeniería).

- D: usuario = "" británico/"del analizador de sonidos BVA" = C (computadora y software del `) = s/printer
- OTD: uip; carro; también un producto de software

+ SISTEMA de la ALTERACIÓN del COMPORTAMIENTO R03-1: Da las drogas del organismo en las horas señaladas de reforzar comportamientos deseados. Herramienta de la investigación. Usos:

1] El producto químico de DHA (sabido para alzar memoria) dado en las horas cruciales, así que mejor animal recuerda ocurrencia.

2] El sistema da las drogas al comportamiento deseable adoptivo vía la inyección, píldora, alimento.

3] La administración teledirigida de la droga a cualquie forma de vida en laboratorios de investigación.

4] Automáticamente sentidos cuando el organismo debe ser droga administrada, vía los sensores estándar. El ejemplo, organismo dado inyectó los tranquilizantes al ir en espasmos. Ahorra el trabajo.
el agente de 5] juegos tiene droga [como calidades], que se puede dar/inyectar' tenido acceso en entidades o el software señaladas de invenciones.

. Sistema de la eficacia de la memoria:
- administrar este [droga/producto químico] y otro (memoria que efectúa las sustancias (positivas/la negativa [reduce memoria])) a la vez cerca de las ocurrencias deseadas, eg.: los animales del entrenamiento a memorizar/recuerdan los elementos importantes (tareas, comandos, comportamientos).
--administrado vía I.V., la forma de la píldora, se mezcló con la ingestión dietética sólida/líquida, administrador y la sustancia se coloca quirúrgico en cuerpo (apenas debajo de piel). Eg.: dar (alimento) como recompensa.
--dar los productos químicos que se demuestran reducir memoria en la época de tales ocurrencias.
. El otro comportamiento que hace cumplir usos: dar los productos químicos w5 para los cuales efectuar/alterar el organismo (de maneras relacionadas): el hacer cumplir/comportamientos deseados/indeseables el de-hacer cumplir. Los comportamientos incluyen:
--excesivo/carencia de la energía para el movimiento del ejercicio/del cuerpo;
--comportamiento creativo/uncreative
--capacidad a o no: sueño; estudio; sentarse; relajarse; estar alerta; acto en situaciones de emergencia (huir); utilizar el cerebro eficazmente (corregir/los cálculos rápidos (matemáticas, gramática, deletreo, análisis (no "analizador").
- D: organismo = sensor/inyector o aplicador de (droga) = c (uip, m) = el otro equipamiento médico.
- OTD:
ACCESO: (); ARTISTA: (creatividad del aumento); CÁMARA: (estudio uip; determina cuando administrar la droga/el producto químico); CARRO: (); COMPOSICIÓN: (creatividad del aumento); ENTRETENER: (dar la droga cuando es el usuario (feliz)); MFH: (); MAÑANA: (administrar en despiertan el tiempo (cafeína)); MULTIUSOS: (diverso uip); NOTIFICADOR: (cuando droga necesaria/no tomada (cuando es necesario)); OSCILADOR: (); Banda: (); Picosegundo: (administrarlo que (iv) cuando la entidad lo hace/no va a las zonas aplicables/a los territorios/a las fronteras); R: (); S: (); CUENTA: (tds cuando está administrado); UIP: (el analizador determina cuando a: alterar la personalidad, dar las drogas, el determinador de la dosificación de la droga); WA: ().

La COMPUTADORA R115 ("C") PRONUNCIAR el DISCURSO QUE ENTRENA a HEARING-IMPAIRED. Una computadora-semejanza de labios y una lengüeta mímico los movimientos correspondientes de los labios y de la lengüeta de un aprendiz. Para practicar cantar, las notas musicales de la canción anotan, se forman como pájaros. Si la echada vocal de un aprendiz está correcta, el pájaro abre su boca. $400. Marzo de 93 X.
- OTD: ACCESO: ; ARTISTA: ; BALANCE: ; CÁMARA: ; CARRO: ; C: ; PALMADA: ; COMPOSICIÓN: ; Exhibición ("S"): ; ENTRETENER: ; FS: ; JUEGO: ; MD: ; "M": ; MAÑANA: ; Paladio: ; PP/MP: ; MQ/UQ: ; MULTIUSOS: ; NOTIFICADOR: ; OSCILADOR: ; IMPRESORA: ;

TELECONTROL ("R"): ; CUENTA: ; ESTEREOFONIA: ; SYNTH: ; TDS: ; Teléfono: ; TGH: ; JUGUETE: ; UIP: ; Reino Unido: ; WA:

MISCELLAENOUS:

. R165 los olores/incienso dijeron alterar la tensión/el comportamiento. 17 de mayo de 93 NK

. instructor del juego 2J-02: Enseña los jugadores a qué movimientos puede ser que hagan (para una mejor ocasión en juego que gana).

- ver los detalles de este KN bajo "juego".

. profesor particular del movimiento 3E061: Dirige a usuarios para mejorar sus [movimientos del juego del `], eg.: la dirección consigue más resistente [tgh del `] en un cierto plazo [orden y sincronización del `].

. Ver el amaestrador de la lengua 7J02 y el analizador de la voz: Enseña a principiantes de lengua a pronunciar nuevas palabras. Está en propio archivo.

. FLASH A2-190 MÁS ALLÁ del ÉXITO: para realzar su creatividad si están careciendo confianza, a través de la CRT, enviar las postales al uno mismo/a ótros, en máquina de la terapia. Atado a nuestros juegos en tiempo real dinámicos 2G120 y 2G130.

. TRANSMISOR PÚBLICO A2-660: e m que habla para el efecto sociopsychological deseado, eg.: en el R&D u otros lugares creativos, sonar excesivamente serio reducir el malo helado de la sensación para el alcohol creativo del grupo; juega música/sonidos; etc

Donde: en elevadores, vestíbulos (cuando detecta p está caminando abajo), entradas a los cuartos, pisos, garages de interior/al aire libre de los edificios. Practicar el discurso/que juega adentro [modo del juego del `] y conseguir anotado.

. MÁQUINA IDEAL A4-81: cuando la máquina sabe la persona está soñando, ella envía señales al cuerpo y el cerebro que se diseñan para ayudar positivamente a gente. La persona recibe estímulos vía: alambres al cuerpo; sonidos en aire; vibraciones de la cama; olores. Programado por el terapeuta y o el usuario.

REFORZADOR de la CREATIVIDAD 2J-03 VÍA el UIP: El sistema da los programas a U que se diseñan para alterar/inducen desearon humor en U según criterios (cambiantes) señalados, eg.: qué texto u (usuario o concesionario) mecanografió en la computadora a que día.

- Este sistema general puede conectar con el OSCILADOR/TV/KN (invención) - selector = interno de canal crea efectos deseados.

- D: el texto previamente entrado mecanografió/insertado (recientemente) por U = [el interruptor "analiza" (vía búsqueda de la palabra clave) = el perfil del uip del usuario] = UIP - analizador = VAGOS - analizador del comportamiento = selecciona las cotizaciones/los programas/oscilador (efectos sonoros) para que U experimente (leído/oír) = U

- esto se cubre probablemente en muchos KN. Ver a Peter.

- Ver vieja N para los detalles: ideas del producto de la cosechadora 4C-050-10300Q.

Unir dos números del producto 3A. alarma interactiva de la unidad central 3A-281-042001: La computadora indica las nuevas ideas interesantes que cada mañana que se diseñan para ayudar a la persona a despertar, pedir a preguntas. El sistema puede estar en el país, o con tal que como servicio de gente automáticamente de la llamada por el teléfono con la grabación previa de antemano.

o-relacionado a 3A-280. En lugar una unidad central llama a suscriptor para despertarlo y obra recíprocamente con ella en diverso formato cada vez.

- hace las preguntas, declaraciones asombrosamente de los estados (puede ser basado en el tipo suscriptor y cualquier Info disponibles sobre ellas, eg.: qué indican voluntariamente o basado en la experiencia de la computadora del comportamiento de los suscriptores con sí mismo en el teléfono.
- OTD: el remote%; exhibe tiempo, la comunicación escrita, el etc; fd-hdd; pp; P.M.; Reino Unido; fecha; el tds%; el interactive%; educ; juguete; todos; juego (el usuario juega a un juego verbal para despertar); micrófono; ejercicio - conseguir a gente moverse alrededor para despertar; portable; t; punto de ebullición; alerter; oscilador; vc; egh; el score%; tgh; md; carro (de declaraciones, de preguntas, y de otros softwares); teléfono; SP tel.

Las aplicaciones "anotan" y, (cuaesquiera otros datos disponibles).

- Ver el "cerebro": la característica del system se adapta según circunstancias.
- "Corregir": Determina lo que utilizaron los criterios adentro para determinar las funciones de la "cuenta" (del funcionamiento del u).
- "Facturación": las cuentas por tiempo utilizaron/"tenido acceso"/llano de influencias de la dificultad el sistema de tasación.

CONCLUYE ESTE ARCHIVO DE TGH, PARA ESTE USO DE LA PALMADITA
INCLINACIÓN (palillo de alegría)

Introducción: Mucho del texto fue copiado de otras piezas después modificado para la inclinación.

<3, 4 acarician, 3, 4>

5E020 La VARITA MÁGICA: Palillo teledirigido con el interruptor. Esta N (invención) era antes 3A-790. Controlar cualquier dispositivo vía la posición del dispositivo en aire. Las señales innovadoras del comando creadas por los ajustes de interruptor simples combinaron con posiciones de diferenciación en el aire (determinado por el sensor de la inclinación). Puede controlar: los juguetes móviles, juego funcionan, realidad virtual, ajustando posiciones de la ventana, el etc. Esto es especialmente útil al controlar cualquier dispositivo que requiere grados de alteración. Permite la mayor libertad que mandos a distancia y las palancas de mando. Construcción del dispositivo es decir: Cada posición de interruptor permite diverso efecto de la función. Eg.: el palillo se puede sostener en 5 diversas posiciones reconocibles, y hay tres interruptores, en golondrina de mar

allí es 5 x 3 es 15, tan 15 diversos tipos de las señales que pueden ser creadas, por lo tanto 15 funciones. El dispositivo teledirigido es sin hilos o atado con alambre.

- esto tiene 20 páginas en archivo: c:\i\5e020

MISCELÁNEO:

. Ver la zona del "picosegundo" -.

. Mecánicos: diversa pieza del palillo (w cada propia k) puede controlar diversos productos/porciones de productos, eg.: la tapa controla el aterrizaje/las alas, velocidad inferior de los controles.

. El palillo también viene en formas de diferenciación/texturas del color de las formas/superficiales: Buñuelo (("juego") volante); (despidiendo/enrollable/posición en relación a la tierra/al cojín sensibles) bola; disco; de alambre espeso flexible; muñeca.

- Cualquie objeto, por el que cómo se altera/se mueve genere una señal que se interprete de manera programada, eg.: siempre que se encienda la vuelta de las ruedas de coche del juguete las luces del coche automáticamente - 5E021.

. Dependiendo del ángulo del palillo en el aire, controles cualquie producto electrónico. Puede haber sobre 20 posiciones tridimensionales del aire, juntadas con tres o más ajustes de interruptor, teniendo en cuenta (20 por 3 60 diverso tipo de igualación señales).

- la virtualmente misma N es 5E020.

+ MULTIDIMENSIONAL: Cada posición, juntada con la colocación de los interruptores ("k") aumenta el número de señales potenciales de cada posición (su sostenido en el aire).

- 2.o, tridimensional, 4-D, dimensiones 5+-D.

Funciones en dos-dimensiones, eg.: horas de reloj; o tridimensional: eg.: las tres más 45 grados de del norte/a la izquierda; 4-D: iguales que tridimensional a menos que el interruptor esté en uno de 10 diversos ajustes, este ejemplo tridimensional crea diez veces tantas señales del potencial de la posición tridimensional (en el aire); 5-D (o mayor): eg.: un segundo lugar de los interruptores que pueden tener 10 interruptores, así que la posición 4-D se pueden dividir hacia fuera en diez (más estrecho/más específico) funciones de diferenciación; 5-D: el palillo también dobla, "r múltiple" (usado simultáneamente); etc.

DIAGRAMA #2 DE OTD: u (usuario o concesionario) = este sistema de N (invención) (palillo, r) ~ C (computadora y software del `) =

ACCESO (); ANALIZADOR (); ARTISTA (pintura electrónicamente vía el movimiento de aire); vagos (analizador del comportamiento del `[para adaptarse]) (); CARRO (interruptor); COMPOSICIÓN (similar al palillo existente del conductor de orquesta, con todo con funciones (electrónicas) diversas del EL, componer la música por cómo el palillo se mueve, Miburi de Yamaha); DISTANCER (); EDUC (); GPS (); K (); M (); MIC (); MES (); RATÓN (); MQ (); MULTIUSOS (); NR (); OSCILADOR (); Banda (); Picosegundo (); Q (); R (`teledirigido vía la interacción accesible) (); CUENTA (); SENSOR (); ANALIZADOR DE

+"/PICOSEGUNDO DEL SENSOR DEL MOVIMIENTO ": los sensores de movimiento son una manera relacionada de identificar la posición de device's/r.

- posición de los controles de device/r/de las funciones del sistema del efecto: Dibujo vía programa del interruptor (programas informáticos del `[el `analiza]) (programas informáticos del `); Picosegundo-Zona (más eficaz cuando el GPS esperanzadamente en futuro permitirá más exactitud de punta)

FUNCIONES AUDIOS: OTD D: U = este ~ relacionado C del sistema del audio N (invención) (sistema electrónico) () (computadora y software del `) =

ACCESO (funciones de límites); ANALIZADOR (los u/los movimientos/las posiciones del r se interpretan = función procesada = deseada controlada); AP (enumerado); CARRO (sonidos convertidos a digital; interruptor audio; cómo interruptor "analizado" de los movimientos de la varita mágica -); COMPOSICIÓN (la varita controla la función del synth/del oscilador); (Relacionado audio) EDUC (aprender/experiencia qué su gusto: ser compositor (cierto famoso)), jugador de cualquier instrumento musical cuya posición sea el "r"; K (); M (DB de sonidos convertidos a digital); MIC (); MES (sonido convertido a digital tr); MULTIUSOS (); NR (); +OSC (); Banda (funciones del oscilador); Picosegundo-Zona (); Q (); R (palillo teledirigido 5E020); BASE (); SENSOR (del movimiento) (); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (); DISCURSO (); ESTADO (); ESTÉREO (); SYNTH (); TDS (); T (); tr (transmisor) (); U (oyente, compositor audio); UIP (UIP-DB de sonidos convertidos a digital); UQ (); (Relacionado audio) VR (); WA (tipo audio funciones del walkman).

+ <3, DISPOSITIVO de CONTROL de ALAMBRE de 3> 3C291: Dar vuelta y torcer a los alambres que crean imágenes artísticas en la pantalla del dispositivo automatizado. Cada alambre representa un diverso color y permite que el usuario coloque donde está ser creado la imagen.

. - la imagen creada puede replegar las figuras del alambre en cualquier color; o puede ser totalmente no representativo, donde cada movimiento del alambre realiza cualquier cambio sin relación en la pantalla, eg.: una vuelta puede hacer el cielo de negro al azul, o cambiar los círculos inmóviles reservados a los cubos rotatorios que generan sonidos...

. - solos modelos simples cortos del alambre; o alambres múltiples complicados

modelos

- los alambres en una base pueden transmitir sus configuraciones por ondas a "C"

. - el alambre se encajona en material recubierto de goma; o es material sólido con los empalmes móviles

- las señales del alambre se pueden alterar interpretaron de cualquier manera como banda.

la o-antena se ajusta según cómo puede conseguir a la mejor recepción (aérea) (sucede automáticamente).

OTD: "R"; "S"; "C"; P.M.; ratón; interactivo; juguete; todos; juego; portable; punto de ebullición; oscilador; cuenta; egh; tgh; md; carro; carácter.

- D: dispositivo de control de alambre 3C291 =
ACCESO ()/ARTISTA (imágenes creadas/alteradas según cómo alambre/mouse/k movido/presionado)/C (computadora y software del `) ()/CARRO (interruptor del arte)/S ()/EDUC ()/K/RATÓN (el alambre tiene todas las funciones del ratón también: cada sección del ratón tiene controles de diferenciación, eg.: alambre dividido en diez unidades (lo más bajo posible el 10% representa el botón derecho del ratón))/MQ ()/MULTIUSOS ()/OSCILADOR ()/banda ()/Q ()/R (`teledirigido vía la interacción accesible) ()/UIP.
- D: mano del u - > alambre (sensores) 1 = C (computadora y software del `) = notas de sw/s/printer/m.: 1 = función de los sensores según cómo/when/w5 dobló o tocó. Los sensores pueden ser muy sensibles, así que cada sensor puede detectar 10 o más posiciones de diferenciación de sí mismo - > diversas señales del tr (transmisor) - > diversos efectos respecto a la C.
--Hay los interruptores (k) atados al alambre (grueso).

ANTENA TELEDIRIGIDA 1G16: movido a 3C291, marzo de 95
¿Controlar su satélite de la antena (existe? para el plato del satélite) (para TV, radio...) vía el dispositivo teledirigido.

- piedras de afilar en el mejor ángulo en términos de conseguir una mejor recepción debido a: localización del satélite del transmisor, interferencia (tiempo, físico (montañas))
D: teledirigido (Reino Unido) = C (computadora y software del `) = la televisión/la radio/el otro dispositivo (con el transmisor y o el receptor) = función (sonido, visión)

La VARITA MÁGICA R79 CREA MENSAJES EN AIRE FINO: En el bastón está una fila de diodos electroluminosos y de un sensor de velocidad que controle la tarifa en la cual los LED se cambian por intervalos cuando la luz se agita de izquierda a derecha. La retina conserva las imágenes diferidas. El cambio de la memoria sólo para leer puede cambiar mensajes. [Avix, firma de la empresa de Yokohama trabaja con Mitsubishi corp para la comercialización. NK 25 de abril de 94]

+ PROFESOR PARTICULAR del MOVIMIENTO 3E061: Dirige a usuarios para mejorar sus movimientos. Muy importante. Movido al otro archivo en la solicitud de patente.

5E100 TODO PALILLO del MOVIMIENTO: éste es KN, eg.: + palillo: 5E020.

- Aguja "compositor": La música se genera según cómo el palillo se mueve en un cojín o en el aire. Utiliza 5E110.

Utilizar la aguja (palillo, pluma, dedo) = la exhibición interactiva sensitiva al contacto ("S") = "cojín del aire" = oscilador/memoria/synth

- la exhibición puede configurar las llaves (cualquie "imagen" para representar la fuente sana creada sobre el tacto de ella con la aguja.
- puede cambiar fácilmente estas imágenes/fuentes sanas correlacionadas/tipo de modo del "synth", según ""/"" de los pp/"de la P.M. pi"
- la aguja es opcional
- el tamaño de la exhibición puede ser un 1cm2 a 100 M2
- relacionado con Miburi de Yamaha
- utilizado en la N ampliada: palillo teledirigido 5E020

5E110 TODO PALILLO del TACTO: Similar a 1G010

El palillo toca la tabla o cualquier otra superficie y hace el sonido correspondiente. La manera de la cual el palillo (buñuelo/bola/cubo/muñeca) toca/obra recíprocamente con otro objeto tocando el cojín "interactivo" del "sensor" de /sensitive - el tr (transmisor) determina la función/el sonido. El palillo puede tocar la tabla, mano, incluso agua (la manera de la cual frota/los chasquidos alrededor determina el sonido)

- alambre o radio a la estereofonia/al oscilador/al synth
- substituye la necesidad del cojín abultado del tambor que limita donde el jugador puede jugar
- movimiento "sensor": según cómo se mueve, el rc de los sensores señala (incluso si no se toca nada y no hay vibración). --un tal método es uso de los niveladores usados por los carpinteros: el movimiento es determinado por los cambios en grados de una posición inmóvil (horizontal).
- D: "sensor" (en el extremo del palillo) /uk (1-50 botones) = computadora ("C") = tr (transmisor) = oscilador/estereofonia/synth. Palillo = R+.
- copiado para mejorar el archivo 1.95 de N (invención).
- ver 5E100 que sea KN, éste es otro KN (invención) en dir: E, o G, o C, o archivo: r-lista.
- utilizado en la N ampliada: palillo teledirigido 5E020

El SENSOR del ÁNGULO EN EL CLUB DE GOLF "analiza" ángulos correctos que el club era/que no era adentro a partir del tiempo el oscilación comienza hasta la conclusión del oscilación. 1] activa el sensor vía: k (al principio del día/del oscilación del golf); k - > "sensor" comienza cuando señal sonoro ()/nr del oscilador; el "sensor" comienza (después de eso) cuando el club se sostuvo a cierto ángulo (por cierto tiempo), eg.: sobre los hombros de la persona.] el sistema 2 "sigue" cómo los cambios en el ángulo del club (juntado con tiempo en cada punto del ángulo) cambian - > analizador: gráfico para cómo los ángulos cambiaron en un cierto plazo. 3] u (usuario o concesionario) consigue la "cuenta" para como de bien hicieron pivotar a club. El anotar considera: mecanografiar a club; altura del usuario; % de la estructura de cuerpo/tipo.

- "sensor" incorporado a la barra/conectable a la barra (en los puntos señalados).

- Otros usos: bate de béisbol %; estudiando cómo cualquier cosa cambia ángulos (para las aplicaciones científicas/de la investigación, eg.: la ingeniería, supervisión animal, "detecta" si ha salido mal el elemento mecánico o si algo (barra/alambre) consiguió doblado/movido/alterado más allá de parámetro deseado); eran las medidas si cualquier cosa ha cambiado su ángulo (si está deseado o no) = y cuánto el ángulo cambiado, y qué con caña la corriente y el pasado pesca (durante en caulquier momento el período ("pista")). Comprueba si los compartimientos del tren pescan demasiado con caña mientras que en el movimiento.
%-angle de las bisagras (de la puerta) "analizaba"
- saber si está durmiendo el animal (horizontal) o despertarse.

DIAGRAMA: 1sensor = 2computer = 3transmitter = 4receiver =5function/6other
Notas sobre diagrama: 1: para/vía de los sentidos: a] el ángulo a el cual se lleva a cabo el artículo; "/"del distancer de b] "GPS". 2: memoria. 3: transmite vía la radio, luz, las frecuencias del etc (la parte #1 puede ser saltada por el que la luz (laser) u otras ayudas de la transmisión identifique la localización/la posición/el modo del palillo. 4: recibe la luz, radio, señales del audio.... 5: estereofonia/sistema del "sintetizador" del tablero del mic/del record=playback /key (estéreo). 6: computadora "mfh" /connected a 5 "pi".

MISCELÁNEO: -5E020A: Cualquier cosa acciona cualquier cosa: Cualquier acción acciona el "sensor aplicable" que en respuesta deseada de los disparadores de la golondrina de mar. En este caso, cualquier acción es una acción teledirigida (r). Las acciones incluyen: discurso, eg.: aplaudiendo (chapaleta, "voz"); diodos de la luz laser de la travesía; puertas del cierre/de abertura; el sentarse en la golondrina de mar que acciona la presión "sensor".
-5E020B: Luces del coche del juguete cuando las ruedas dan vuelta.
siempre que se encienda la vuelta de las ruedas de coche del juguete las luces del coche automáticamente.
- OTD D: Este N)/C [línea (de la invención) (palillo dibujada a cada uno debajo de N#] = monitor inteligente
2E251: cualquier acción 5E020A puede accionar el monitor; 7G052 dobló el notificador llano.
- OTD D: Cualquie acción: hablando, caminando, moviéndose (parte del cuerpo), "voz"/este N (invención) sistema (electrónico)/C del sistema =
ACCESO (); ANALIZADOR (); CARRO (); EDUC (); M (); MIC (); MULTIUSOS (); NOTIFICADOR (); OSCILADOR (); Banda (); Picosegundo (); Q (); S (); CUENTA (); SENSOR (); ANALIZADOR DE SONIDOS (); ESTADO (); SYNTH (); TDS (); T (); UIP (); ANALIZADOR VISUAL (); WA ().

Estrategia de BÚSQUEDA de la PATENTE y algunos números de patente relacionados de los E.E.U.U.:
palillo teledirigido 5E020 con el interruptor: ()
- Str APS 69 ' a 6.92 ':
1] (sin cuerda o radio o inclinar o (aire de la localización near5) o (aire de la posición near5)) y (palillo u oblongo o pluma).

2] (club del golf near3) e inclinan

- palabras claves: (palillo de la alegría adj3) o (control alejado adj2)); ángulo - trae a muchos n; movimiento

- No. de la palmadita de los E.E.U.U.: 4931965; Pluma ultrasónica de la entrada de datos de la computadora: la posición de la pluma es resuelta en relación a la tableta 5308936; de + sistema de entrada 5227622 radios para la computadora usando la detección de la posición de la pluma: tiene detección de dos ángulos, 1993, código del cesionario: 693483; de + pluma-tipo dispositivo 5166668 radios de entrada para el uso con una computadora: detección del ángulo; Sistema de la entrada de 5296838 radios para la computadora; 5222414; Inclinación de 4939318 plumas; Digitizador para determinar la inclinación 5198623 de la pluma +?.

Extensión de N:

- Amaestrador del oscilación del club de golf - "analiza" inclinaciones de la acción del oscilación. Mejora sobre profesor particular mecánico del golf: Palmadita no 4949974 1989 de los E.E.U.U.; 4815743 1989; 4852881 1989; 5348304.

--D: el club de los oscilaciones de u (usuario o concesionario) = pistas" oscilación del sistema las "del club = "analiza"/"anota" = osc/s

MISCELÁNEO:

. Este R (`teledirigido vía la interacción accesible) (este sistema de N (invención)) controla:

- abre puertas apenas en el grado necesario (por la gente incapacitada).
- ajusta la luz al grado deseado

. + "juego "interactivo"": cada R (`teledirigido vía la interacción accesible) puede ser un pedazo en juegos (electrónicos) del EL, los juegos de "VR", juegos video.

+ la exhibición 5E120 demuestra cómo el dispositivo o la palanca de mando teledirigido es dispositivo que controla.

Ejemplo: cómo se está moviendo el palillo del aire y en qué modo, y en funciones de la golondrina de mar él está controlando. Utiliza 5E020.

- Martin: "parece como el interruptor estándar (programas informáticos del `[el `analiza]) (función de los programas informáticos del `)".

. 5E090 sin hilos terminal conectan con central sistema = S (pantalla interactiva del `con) adaptado/cerebro/perseguidor/banda/cuenta/estado/UIP/wa del menú.

. Existe: Tipo non- diverso dispositivos teledirigidos del telclado numérico de la "inclinación"; ratón sin hilos de la computadora; dispositivos teledirigidos de Sega y de Nintendo de Japón.

MECANOGRAFIAR EL JUEGO PIECES~PLAYERS:

- controles (del general)

- cada jugador tiene (las funciones de diferenciación de R (`teledirigido vía la interacción accesible)). Las funciones de diferenciación representan el tipo jugador que son, eg.: el juego del ajedrez, cada jugador es un diverso funcionamiento del carácter bajo parámetros de diferenciación, eg.: un caballero o una reina.
- cada R (`teledirigido vía la interacción accesible) tiene funciones de diferenciación según el tipo modo (época, etapa del juego, si el jugador es que gana o perdidoso u otro, posición (de la comprobación) del jugador en relación a otros jugadores/(más) los objetos/los jugadores inmóviles/las zonas (territoriales) de los elementos.
- cumplimiento de otros jugadores: cada R (`teledirigido vía la interacción accesible) puede efectuar/control otros jugadores (su r) vía: rf, infrarrojo, tr (transmisor) = C principal (computadora y software del `) = R (`teledirigido vía la interacción accesible) (de otros jugadores).
- cada R (`teledirigido vía la interacción accesible) efectuado (limitado/realzado cerca) por la zona (GPS-Zona) están en/estaban adentro.
- términos: los jugadores y el palillo teledirigido son permutables, especialmente en funciones de este "juego" de las n.
- "se sigue" cada pedazo: para crear la "cuenta", "estado", "UIP " %.
- r puede combinar la localización del u de w (con) (picosegundo). La localización determinó/procesado vía:
--u se coloca en la estera sensible (movimiento "sensores" de w). Cada localización (del pie) permite/efectúa diversas características usables en el R.
--picosegundo-zona (esteras del wo)
--una estera se puede utilizar solamente
- formas/funciones de r: volante auto (poste de conexión del wo al automóvil); varita mágica; mano auto del manejo; triángulo/cuadrado/rectángulo/pentágono/polígono: sumergir cualquier una esquina o el lado = activa señales. "Inclinación".
- u que usa ciertos anteojos/cascos de "VR": u (usuario o concesionario) tiene funciones de diferenciación de R (`teledirigido vía la interacción accesible).
- el tipo efectúa causable de cada señal creada por R (`teledirigido vía la interacción accesible) (posición de r): velocidad; parada; vuelta; encima de; abajo; movimiento anguloso; ataque; defender; llamar (t); recibir la llamada (t); "analizar" el UIP de (el otro jugador, elementos del juego otros (reglas, pronóstico de acontecimientos)).
- "Juego"
- "R"
- OTD D: U = este ~ C del sistema de N (sistema electrónico) (r) (computadora y software del `) = funciones de "R":

ACCESO (nuevas características activatable sobre el acceso); ARTISTA (); C (); CÁMARA (); CARRO (); COMPOSICIÓN (palillo del conductor); K (); %M (); MIC (); RATÓN (); OSCILADOR (); Banda (); Picosegundo (); T (R (`teledirigido vía la interacción accesible) = mano fijada = t); TR (); +VR (); +WA ().

- vuelta r (como la botella en la tierra) para conseguir señales de diferenciación basadas en cómo está hecho girar: la velocidad, w5 paró el hacer girar (en qué termina destacar).

- hacer juegos malabares r
- impermeabilizar: regar el "juego" (en piscina)
- en la forma de la bola (exterior amortiguado), ver KN

INDICAR LAS LETRAS EN AIRE: 1] = sensor = analizador = interpreta = s/printer. 2] ayudas inhabilitaron. 3] letras/palabras aparecen en la pared. 4] Alimenta los textos en c/sw/tr=c/m
- u k para tener ciertos letras/palabras/códigos utilizó así que se interpretan para controlar cualquier EL N. (electrónico) D: u tiene interruptor del deseo = de los tecleos para: convertir la escritura en un comando de control de R (`teledirigido vía la interacción accesible) = indica letras/formas/palabras (en el aire) = sensor = analizador = tr (transmisor) = función deseada (en kn).

Las LLAVES/las funciones/los modos ACCIONADOS POR CONTROL REMOTO en efecto se exhiben en el S. teledirigido vía (kn): 5E100 y 5E110 - palillos teledirigidos; sistemas del sensor vía los cuales el movimiento de ojo genera las señales (movimiento dominante compatible); Yamaha Miburi; Arpa del laser; teléfono del laser; discurso (sistema del comando de la voz); palillo de alegría; Funciones de control de VR.
- OTD D: Esta N (invención) sistema =
CARRO (el interruptor altera la manera de la cual las imágenes de exhibiciones de S (pantalla interactiva del `con el menú adaptado)/los sonidos); S (pantalla interactiva del `con el menú adaptado que liga a las características asociadas) (); MULTIUSOS (altera la manera de la cual las imágenes de exhibiciones de s/los sonidos); NOTIFICADOR (aparece en s); OSCILADOR (); Banda (cómo el sistema altera la manera de la cual las imágenes de exhibiciones de s/los sonidos); Q (); ESTADO (las demostraciones/analizan cómo el sistema altera la manera de la cual las imágenes de exhibiciones de s/los sonidos); WA (w r).

OTRAS COMPAÑÍAS TIENEN PIEZAS DE "R". Esta N (invención) es una mejora en su N, eg.: sus "R" son sensores" de la "inclinación" del wo (fuera) "o palancas de mando. Eg.:
- Sega. Teléfono 800 872-7342 #3
--Cojín alejado /sistema de la arcada: Modelos 1628, modelo 1629. Utiliza infrarrojo, con todo el cojín estándar del control. Tiene los botones de B una C para lanzar, botones direccionales del etc. - flechas.
--Un botón de B C funciona, permite u adicional juego de las funciones (w/in "): tiro algo; sacador; retroceso; coger las cosas; coger algo; ganar o perder la altitud, la longitud, u otras posiciones; las "cabezas para arriba exhiben" la función; elegir nadar contra el otro modo del recorrido (a la dirección deseada); mosca; alas de la aleta o aletas del agua; oscilación (palillo de hockey, manos, palo, oscilación a golpear); regate (baloncesto); comer algo (mientras que siendo un dinosaurio); competir con el juego: los botones representan los pedales para el gas (el aumento/pierde velocidad) o las roturas; si hay otros carácteres un botón curarían o realizarían encanto mágico; juegos del simulador - ciudad de Sim, eg.: poniendo en las secciones residenciales de la ciudad, determinando el tipo arquitectura; tomar decisiones económicas: ir a la decisión de la ciudad, u ordeñar una vaca, un etc; "juego" con jugar del papel; decidir donde/cuando/cómo ir; decidir si escuchar o confiar en a una

persona; elegir entrar almacenes comprar y seleccionar el equipo, y cuánto a comprar como fuentes y o para aumentar las herramientas.

--cada posición de la "inclinación" funciona como de los tres botones de a/de b/de c en el sistema alejado de la arcada de Sega; o botones del A. /b/x/y de Nintendo. Puesto que hay muchas posiciones de la inclinación posibles, las funciones de diferenciación asignadas actual a cada tipo botón para los "juegos particulares" se pueden dividir abajo, eg.: las posiciones #1 de la "inclinación" con #10 dividirán todas las funciones para uno de sus botones existentes con diez funciones potenciales.

--las funciones del "juego" mencionadas en esta subdivisión no se limitan al "juego".

- Nintendo 800 255-3700: Producto NES001 que fue continuado.

- Aclamación Co: su producto teledirigido llamó: "sistema alejado sin hilos dual de turbo": tiene flechas; botones - funcionamientos, saltos, gente golpeada. Teléfono 516-656-5000 9a-7p EST de la aclamación. Compatible con Nintendo y quizá otros fabricantes.

CÓMO "R" CONTROLA FUNCIONES SEÑALADAS:

- cerca: donde/cómo el palillo es held/w5

- la manera de la cual este R (`teledirigido vía la interacción accesible) está doblado - > acciona señales de control asociadas. Pegarse en forma de alambre/de palillo/de antena (gruesos) como el dispositivo que se pega fuera de = la base (c=tr/rc)

. Versión de la marioneta: cómo la marioneta que controla es controlada - > función deseada en los elementos controlados (piezas).

--control electrónico de la marioneta; el palillo podría estar en la forma de la marioneta (mano del movimiento en teledirigido, en juguete del control de la golondrina de mar).

. --D: accesorios (movibles)/piezas = mitad de cada marioneta que controla del "distancer" = marioneta que se controlará - sus piezas alterables = "distancer". D2: el distancer = C (computadora y software del `) = k/causes desearon la función (oscilador, movimientos (vía modo mecánico)).

. --la marioneta se puede substituir por cualquier objeto tridimensional las piezas (movibles) múltiples (de w).

La posición de la mano de %+ es juzgada por el sistema = el interno que esta posición crea las señales de diferenciación comparadas a la otra posición de la mano/del palillo. Una matriz (luz/laser/otro) de la presencia/del tamaño/de la posición/de la forma de los jueces del sensor del objeto/de la mano = dentro del campo de la matriz. Esto es un KN.

- Generador de señal: posición de la mano (objeto (llevado a cabo a mano)) en lo referente al "sensor" determina la señal. Esta señal se puede entonces interpretar de cualquier manera deseada.

. - esta N (invención) copiada a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verlo para las actualizaciones.

. --puede tener posiciones 100+ reconocibles.

- más de un mano/objeto puede ser utilizada. Diversos objetos pueden reflejar las señales (luz) de tr (transmisor) diferentemente al receptor, por lo tanto creando diversas señales resultantes.

--algunas señales se pudieron crear solamente usando dos o más palillos de las manos/objects/el.

- Ajustar/alterar/control el el tipo/llano (de salida deseada) según la posición de la mano en lo referente al "sensor".

- para determinar en qué punto debe accionar la mano/el objeto que alcanza el "sensor", el "sensor", las opciones incluyen: las respuestas del "sensor" a la mano/al objeto del punto del armario vienen; otra señal simultánea (pedal del pie) determina en qué punto y cómo la mano/el objeto (de mudanza) debe accionar la señal.

- activar/desactivar las funciones alejadas de este sistema vía: cambiar (k)/la función teledirigida, eg.: sacudir tres veces en 45 grados por los ángulos de 45 grados (mano de hora del reloj en el 2:30 P.M.), 30 cm lejos.

- osc/nr deja u (usuario o concesionario anticipado) sabe que (que comando) el sistema reconoció la entrada de (y en golondrina de mar realizará) (sobre cuaesquiera comandos adicionales necesarios del usuario/de pasos/de procesos)

- el palillo/el otro objeto se puede atar con alambre/radio

- D: la mano/el objeto = "sensor" = c (analizador) = hizo salir (la luz)

. - marcas: Control del deseo.

. - incluido en IMI& (r)

- copiado para mejorar el archivo 1.95 de N (invención)

- OTD D1: u (usuario o concesionario anticipado) = este ~ C del sistema de N (invención) (sistema electrónico) (palillo) (computadora y software del `) =

ACCESO: (); ARTISTA: (movimientos que dibujan la función (cursor de la computadora; cepillo)); CARRO: (); COMPOSICIÓN: (); ENTRETENER: (); MFH: (); MAÑANA: (desactivar la alarma); MULTIUSOS: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Q: (); R: (este producto es también un tipo de unidad teledirigida conectable a los productos); S: (); CUENTA: (tds); Teléfono: (tr); TR: el sistema puede ser sin hilos/tiene alambre a c; UIP: ().

- similar a 5E110 y a 5E120.

Usos:

- interruptor del control: páginas de torneado; funciones del ratón de la computadora ("C"); selección de menús del interruptor (programas informáticos del `[el `analiza]) (programas informáticos del `); cursor móvil.

- función del erase: cierto erase de las posiciones qué fue escrita o hecha previamente (función/petición anteriores de las cancelaciones). Eg.: como el borrador de un lápiz, la parte posterior del palillo puede tener el esto/otra función.

- generación de los sonidos (oscilador)

- cuaesquiera comandos "alejados" de n/kn.

- accesorios de la marioneta

- El palillo controla la música (el componer) eg.: Miburi de Yamaha.
- Aeroplanos (del juguete), barcos, muñecas, robustezas. El volar, caminando. Como los juguetes cercanos de la vida.
+ uso de los juegos video: el jugador representa el suyo/las posiciones/el functions% del opositor/del otro jugador vía el palillo (s).
- el control de cualquie dispositivo (EL) como pudo ser generado vía (algo simple) señales electrónicas/controles, por ejemplo vía los interruptores/los teclados/etc. Eg.:
- salida - niveles (color/brillo/dirección) de la luz (del punto) (el brillo de los cambios de la luz mientras que la mano mueve su distancia), de sonido (decibelios), de etc.
+ cualquie función usada/asociada a una palanca de mando.
- el jugar de la música (tambores/%key (tablero) s del juego en aire sin el tacto cualquier cosa). (KN?)
- temperatura del agua (del grifo) - mover la posición "sensor" del dispositivo/del hand=hand a la derecha para un agua más fresca
- de volumen del control (de la unidad de T, audios/visuales, de la "estereofonia").
- dando vuelta cualquier cosa con./desc.
- alteración del ángulo de la exhibición (CRT) ("S") (en relación a la posición cambiante de u/viewer/de u). sonido de +-adjusting (balance; "balanceador"; triple; bajo...)
- estaciones cambiantes de tv/cable; actúa como control "alejado".
- modificador de la ampliación: 1] porción de "S" al grado quiso por U; 2] proyectores; nivel de decibelio/"synth" - hacia arriba o hacia abajo u otro.
- Indicador: el palillo actúa como el compás, su posición es interno transmitido/reflejado sobre: tablero/reloj (tiempo del reajuste, tiempo de la alarma).
- abertura/cierre/aumento de: ventanas, cortinas, puertas, alzamientos, otras bisagras.

+ el movimiento de la inclinación A2-170 analizaba/"seguido".
- Cursivo "analizador": El interruptor (programas informáticos del `[el `analiza]) (programas informáticos del `) estudia lo que escribe p sobre la exhibición especial ("S") o el papel (entonces leído vía lector óptico). Disponible en 28 idiomas. La máquina busca los carácteres y sus desviaciones que puede identificar, más otras tendencias generales si los carácteres son o no son identificables. Encerrar la escritura preferred (el mejor es plumas) para la versión de papel. El fabricante programa la máquina para buscar los estilos clásicos aceptados comúnmente para sus implicaciones.
- u pidió escribir algo con la "inclinación " =pen qué is= "analizaba"
- cómo r=tilt agitó/movido es analizado ()/"de los vagos seguido" (amaestrador del oscilación del club de golf).

+ "Distancers múltiple":
atado/colocó en las distancias señaladas de uno a. El sistema "analiza" cómo sus posiciones cambian por lo que se refiere a uno a (KN?):

- "Analizar" el tipo movimientos de gente, de animales, de máquinas, de etc.

- deportes/rehabilitación física: movimiento = distancer = "analizan" movimiento = "cuenta" = nr (notifica cuando) señalado/EDUC (el sistema sugiere que qué movimientos se hacen/que puede mal ser mejorado/qué movimientos son indicativos de la enfermedad (vagos)).

--movimientos del cuerpo: el nadar, caminando, subiendo, el activar, trabajando (construcción, elevación, otros trabajos del riesgo), gimnasia, bailando (%Yamaha Miburi que utiliza KN).

--donde Distancers colocó: brazo (cerca +wrists/+ codo/+ lleva a hombros (especialmente útil para punto de referencia para más móvil parte del cuerpo marcado w (con) "+")/pecho (especialmente útil para el punto de la referencia)/cadera (especialmente útil para el punto de la referencia)/+ rodilla/+ tobillo/pie (dedo del pie)/mano ()/cuello del dedo.

---eg.: ángulo w (con) w5 del cuello del juez de brazos y de los movimientos de las piernas en lo referente a el resto de las partes del cuerpo y de la relación a la parte inmóvil de distancer (este 3ultimo calibra velocidad, el punto de la referencia estable).

--términos que pueden ser w substituido (con): distancer/inclinación "sensor" (no no necesario r).

- gráficos de las curvas que representan los movimientos "analizados" (vía: % " del analizador visual", vagos, UIP-DB, acceso-vagos).

ratón multidimensional "inclinación" de la computadora 6B-920: Ratón teledirigido: Ratón sin hilos de "C".

- También funciones como el dispositivo de control de "R" para los aparatos electrodomésticos.

- como ratón de "C" excepto, 1. ningunos alambres necesarios, 2. puede trabajar en el aire.

- funciones como control estándar de "R" también, para eg.: TV; sistemas de la hospitalidad; juegos electrónicos.

- OTD: Todos; "C"; pp; m; Reino Unido; ratón; portable; "M"; punto de ebullición; alerter; carro; cp.

+ Distancers múltiple = "inclinación": funciones como ratón de C (computadora y software del `). Permite u (usuario o concesionario anticipado) al drenaje/manipula imágenes multidimensionales.

Uso de dos dimensiones de -2-D: la inclinación del punto en la dirección/el movimiento deseados a lo largo de la superficie plana (mesa) = mueve el cursor como ratón.

Uso tridimensional de -3-D y 4+-D: trabajo sobre los objetos tridimensionales demostrados en S; va al revés o el frontward cerca: 1] inclinación posición en relación a inmóvil parte de "distancer" y otro Distancers respecto otro pieza de tilt=mouse 2] ángulos de inclinación (de r palillo)/.

- las llaves de diferenciación en mouse/k pueden tener efectos similares como usar una inclinación.

Términos: cada término o concepto dentro de su grupo es normalmente reemplazable por otros términos w/in el grupo.

- Dimensión: Posición; llave; %setting; %location; %ps-zone; % " del distancer "; % de la dimensión: 2.o, tridimensional, 4-D, 5+-D.
- Uso: controles de la función "R"; la conexión entre la dimensión w del r (con) correlacionó la señal = el efecto sobre el sistema de la señal = de la función (electrónica) del EL deseadas; cualquie EL (interruptor relacionado) función que puede estar dictado por teledirigido () del palillo de alegría/telclado numérico (k) actual en el mercado; uso.
- "R": Teledirigido (dispositivo); Palillo de alegría; palillo; R; r; aguja (EL); otras formas.
- Llaves: interruptores; este término es un subconjunto de dimensión o de posición; movimientos dominantes

Programando qué coloca medio. u (usuario o) anticipado/frecuencia intermedia del concesionario señala qué posiciones representan movimientos dominantes particulares vía uno o más de siguiente (las funciones reemplazables):
- Interruptor: u = crean ~ visión = imagen de R ("teledirigido vía la interacción accesible) (en espacio) = u señala (vía ratón ()/k del tecleo y de la fricción (de Windows) (tirar hacia abajo los menús (DOS))) qué represent= de las funciones/de las llaves que posición del R. U siguiente pone sus peticiones en memoria de c del sistema". U siguiente puede utilizar r mientras que él programó (pr).
modo audio de %-Complicated (oscilador): U consigue la regeneración vía el oscilador mientras que u progresa en (con referencia a) la programación de su R. La regeneración substituye las funciones/las imágenes demostradas (y seleccionables vía s). Esta función complicada para utilizar, por lo tanto mejor para las alteraciones simples del uso de la c. Eg.: cuando uno de los interruptores de la perilla está en la posición = los movimientos r de "ON" de u en la posición deseada = entonces chasca el segundo interruptor de la perilla - señalar eso es posición deseada = entonces chasca otras llaves para atar en tales señales a tal posición en el aire como fue hecho por el U.
- otros modos: insertar el "carro" que ha señalado las funciones (ya) atadas a la posición de cada c.
- cada archivo del interruptor (programas informáticos del `[el `analiza]) (los programas informáticos del `[el `analiza]) puede almacenar el tipo de diferenciación funciones del control: 1] ese archivo cuando es funcionando = automáticamente = asigna ciertos movimientos/funciones dominantes por tipo la posición de la c; cuando el archivo de diferenciación del interruptor (programas informáticos del `[el `analiza]) (los programas informáticos del `[el `analiza]) está reinando, la misma posición será interpretada en cualquier otra manera. 2] U puede seleccionar de opciones de funciones deseadas = entonces las ata en cada posición.

"Artista" - ver esta partición.

¡- mover el siguiente al artista!

Cepillo = palillo de pintura: los movimientos del palillo se traducen a imágenes en la C.
- funciones como pluma o cepillo.
- el palillo se puede dar cierta área de dos dimensiones (tipo área de la ventana (w o las líneas visibles del wo (fuera)) en la cual a escribir. Los "sensores" en esta 2.a área confían en los modos relacionados laser que

accionan señales cuando son disparados por R (`teledirigido vía la interacción accesible)/el objeto opaco. KN (invención) describe esto detalladamente.

- Cómo se crean los efectos de diferenciación:

1] distancia de R (`teledirigido vía la interacción accesible) del sensor el 2.o campo mencionado en la esta sección/el otro R.

2] Nivel de tinta aplicado (anchura/color) controlado cerca (llaves/posición).

3] Diferencias de tiempo del comienzo al final de la operación, eg.: las líneas consiguen más densamente/más fino a tiempo.

4] UIP

5] cuál "r" utilizó; ángulo del R.

6] OTD D: u (usuario o concesionario anticipado) = este ~ del sistema de N (invención) (sistema electrónico) () C =

ACCESO (); CARRO (); EDIT (); MULTIUSOS (); INCLINACIÓN (); U (cómo mueven r).

] presión 7 aplicada a: "sensor" de la tabla/del cojín, eg.: más presión, el el más ancho o más oscuro la tinta.

A1-030 plumas (r) que hablan: para la hospitalidad y o hace a gente creativa dando hacia fuera las palabras solas o múltiples que, una persona pueden dibujar dando la parte o todo el cuadro. Si la persona sostiene la pluma pero no escribe, la pluma incitará a escritor con un buena sonido, vibración, luz y u olor, la palabra que ayuda a la persona haciendo les la sensación mejor, peor o más creativa.

- "Hospitalidad"/cribador del programa (interruptor): 9G-220: las pantallas/seleccionan del sistema (tales/las ocurrencias indeseadas/queridas señaladas/los modes%/programs%)

Carro de bebé A1-120-121003 con la voz de la madre cuando la mamá está allí o no allí. Utilizar la cinta de cassette o el microchip. Puede dar a bebé deseó efectos pues he escrito sobre un de los otros productos. La voz de la mamá se puede convertir en términos de sus frecuencias para alcanzar efecto deseado. O padre del uso, hermano u otra voz. Mezclarse con A1-10, 11, 8 (el satélite del bolsillo localiza a niño perdido, dice le volver a casa, a etc.)

8.95

- "Inclinación": El cabrito utiliza el dispositivo para controlar objetos/funciones deseados.

cuando en la posición señalada, la madre es nr. El r naturalmente mejor está para levemente más viejos niños que necesiten tiempo de entrenamiento para utilizar el sistema correctamente.

Lector de la bola A1-141-000003: La manera de la cual la bola rueda alrededor es ""/señal de la posición para "el sensor" de la "inclinación", es decir de cada punto en las señales correspondientes de los disparadores de la bola/del cojín/del tazón de fuente de la bola.

- Funciones: cualquier cosa, eg.: ajustando el volumen, el "balance", o aún % que crean la música según la cual las señales están siendo w5 generados.
- Comprar la bola y dejarla despedir alrededor de la taza que crea música. Elegir a los cubos, a las pirámides, a las prismas rectangulares, a las formas del buñuelo, a lector del etc. puede también leer elementos adentro (los elementos internos están de sustancia no uniforme). Utilizar también para la prueba. m en vez de crear sonidos, crea frecuencias, calienta, las vibraciones, comandos verbales. Sostenido a mano y o atado a cualquie dispositivo o a una versión tablero.

La música de Opti, música óptica, sonidos de la visión, considera sonidos, considera la música, cruce giratorio de la música, hombre de la música

- opción: hacer el arte sobre cualquier computadora/pantalla electrónica. Después la máquina lo leerá y hará los sonidos correspondientes/música.

+ "inclinación": controla las funciones del sistema

A1-240-121004 Windows interactivo y cortinas: Programas del usuario que se abren y horas de límite. Ejemplos: se cierra automáticamente durante la lluvia, se abre cuando se levanta el sol o cuando las alarmas del reloj de la mañana.

- Cuando llueve, o el viento sopla demasiado difícilmente, las ventanas se cierra automáticamente. La gente puede ahora con seguridad dejar ventanas abiertas para el aire fresco sin el miedo del daño de la lluvia.
- reacciona a los cambios en temperatura exterior también
- se abre en la luz del día y cerca de oscuridad exterior, por los sensores o el pedazo ligeros del tiempo programado ya para las transferencias y posiblemente las latitudes del tiempo del ahorro de la luz del día - las ayudas evitan el cierre prematuramente o en absoluto en épocas nubladas. Bueno para la salud del cuerpo, despertando naturalmente, prevención del hurto. Puede ser un aviso para la hora (alarma), romper-tiempo (café), está en armonía con golpe de la música, da el nivel correcto de cortina para las plantas. Mezcla con la máquina de la terapia. Persianas del cambio por el botón o el control de "R" (usted puede permanecer tan en cama, en el escritorio, TV, silla). Este "R" es característica estándar en TV "R", y o teléfono; o es un tipo chisme del interruptor ligero que hace múltiplo o todas las ventanas en la vivienda.
- OTD: también activatable es la abertura/el cierre de las persianas, ventanas, puertas, calentando sistemas de aire acondicionado.
- "Inclinación": controla las funciones del sistema, eg.: posiciones de las ventanas.

Eco del tambor A1-370-121003: el golpe en el escritorio y el dispositivo replegará música del patrón. Usted o la máquina puede ser que elija la opción del sonido adicional del fondo compatible al ritmo dado. Bueno para la gente sola, y las que como la sensación del control. Apagan después de breve tiempo (puede ser fijado por el usuario). Teclear a socio. Mezcla: máquina de la terapia. Humor, BP, HH, TT, S, yo

- "Inclinación": la manera de la cual se mueve R (`teledirigido vía la interacción accesible) genera música correspondiente.

Buscador A1-410-121006: Utilizar su linterna regular para encontrar los artículos deseados. "Inclinación" = linterna. O linterna especial del uso (que emite frecuencias ligeras no estándar). Los artículos del hallazgo en obscuridad otra no pudieron encontrar.

- en la noche o el día, enciende solamente el su del artículo programado para ver debido a la química externa del artículo. Funciona encendido algo relacionado distante con el sistema de la película infrarroja de la cámara. BP, E, S, HH

- OTD: la pintura se puede aplicar a los artículos; el usuario puede incluso pintar el número particular, códigos al artículo designado

- "Inclinación": que la posición de la inclinación determina el tipo de luz (por color, intensidad, y la anchura de la luz (iluminación del laser o de inundación).

--la posición determina lo que se diseña la "inclinación" para encontrar, eg.: la posición #2 encuentra el objeto #2, y la posición #30 encuentra objetos del tipo #30.

Regulador de la posición del ASIENTO de A2-04A: los movimientos de la manera u (usuario o concesionario anticipado) en el asiento/los movimientos "inclinación" crean la función/la música deseadas. Cada parte del asiento tiene la diversas función/música que hacen posibilidades. Eg.: cada área dentro de los restos del brazo, piernas, silla más baja media superior, lados, debajo y detrás (hasta hasta dónde estiramiento normal de los brazos) tiene botones o calibradores de espesor ahuecados de la respuesta del tacto. Los sonidos oyeron vía los auriculares los altavoces de un o, almacenando sobre disco.

- KN utilizado por Miburi de Yamaha.

. Alterar la forma y o los ángulos del asiento vía la "inclinación".

COMPOSITOR DEL AMBIENTE DE A2-04B//: mezcla con el regulador A2-04A de la posición del asiento. Tiene cojines de la respuesta de 2 - 12 pies; poner los lasers (función permutable con alternativa del signaler del fq) en la cabeza, la muñeca, el pecho, la correa, hombros, rodillas, los tobillos, el etc y dejarlos accionar sano al golpear los receptores en sitio. Co-componer con el amigo/el socio. Realizarse en el país o en etapa (los receptores de la banda para activar luces, o luces pueden ser banda a responder automáticamente). Cada laser/la señal de light/fq y el sistema de la respuesta podían elegir entre los receptores múltiples, eg.: cada laser tiene sus propios 1-5 receptores, cada fabricación posee el sonido. Los receptores de cada laser agrupados por el tipo suenan categoría. O cada laser/signaler puede pegar cualquier objeto y C (computadora y software del ') hace el sonido particular basado en el fq único reflejado (basado en el material). Para la diversión/el juego, contenido de la conjetura del doblez de las persianas (de w o wo (fuera)) del material distante basado en sonido.

. - Palillo 5E020 de la inclinación: Controla las funciones de esta n: inclinar los controles que lights/fq se dirigen hacia los cuales los "sensores". Eg.: cambiar en el emisor ligero #10 de los controles de la posición #10, y el ángulo de los controles de la inclinación que el emisor de los "sensores" resuelve.

--emiter1 puede también ser un rc2, y el "sensor " 3 podría ser tr4. Eg.: u (usuario o concesionario anticipado) mueve el ángulo de 2 del pickup= tr4= desde sensor3, interno 2 se efectúa de cierta manera, eg.: 2 recibe datos.

- KN utilizado por Miburi de Yamaha

% DE A2-04C DEL COMPOSITOR DEL UNO MISMO: atar el micrófono (registrador de w atado físicamente o remotamente) a cualquier objeto de mudanza o vibrante: cola del animal, cuello, pie; zapato; reloj; puerta del lugar ocupado; cuerpo o cama mientras que teniendo sexo, roncando; etc. Dependiendo del fq recibido diversas conversiones del sonido se hacen en algo interesante oír. O el parte movible registró pedacitos en cualquiera de mis sistemas y juego que componían alrededor con él cerca: cambio de él; el usar como sonido del fondo/del primero plano; etc. También actúa como al revés para el número de movimientos (eg.: mide el tiempo de la puerta de los flapes del pájaro o del refrigerador abierta por la persona en dieta)

TD: P.M. adulta exc de los pp del ll del truco de la diversión de los cabritos del contra del vp del ep del punto de ebullición del tt del hh del interruptor (programas informáticos del `[el `analiza]) (programas informáticos del `[el `analiza]) C (computadora y software del `) e (registrador bajo)

. - Palillo 5E020 de la inclinación: Controla las funciones de esta n.

- asimismo, las posiciones de cada "inclinación" generan los sonidos de diferenciación (oscilador)/los sonidos del synth generados por otras fuentes (animal) por consiguiente. Eg.: la inclinación en la posición #8 sintetiza el meneo de la cola en el estilo #20-8, inclinación en la posición #10 sintetiza el meneo de la cola en el estilo #20-10.

MISCELÁNEO:

. Controlar las funciones de la "hospitalidad": cambiar los canales de el tv/cable/VR%

. % U = este ("artista") N (invención) sistema (sistema electrónico) () ~ C (computadora y software del `) = ACCESO (límite función, cada movimiento de R (`teledirigido vía el palillo accesible 5E020) de la interacción/r se interpreta ("analizado") según contraseña).

. Acceso: u requerido para utilizar r en cierta manera (posiciones señaladas creadas (golpes de teclado).

Razones: actúa como contraseña/anti-bebido conduciendo la prueba de la sobriedad/las capacidades de la coordinación del u de las medidas para: trabajar, sistema de las prácticas w de la actuación/u (usuario o concesionario anticipado) (con) para ganar una mejor coordinación.

. Usos: torcedura abierta: tapas de la botella; perillas de la manija de puerta;

- % de los controles cómo el juicer exprime hacia fuera el jugo de las frutas (naranjas)/de otros alimentos; mezclador.

. + A2-23C cada uno de los movimientos = de la función de los doll=tilt. Funciones de la muñeca: habla, grita, moja los pantalones, caminatas (cuando brazo movido de manera deseada).

. - "VOO DOO": dispositivo w (con) mouse/uk del EL otra persona. Visualizar en dd/crt/po. w (con) mouse/uk altera/ataque/destruye a víctima. La víctima puede cambiar el color, sonido en dolor: gritar, gritar, pedir la misericordia, charla detrás...; intentar funcionar lejos, corrimiento, partes del cuerpo flojas, hacer otra criatura.

. ANILLO DEL LASER DE A2-24A: sh. joyería, dedo del guante que envía los lasers.

- joyería = inclinación

. la magia 1B-110-032002 abotona la alarma de la mañana: Apagar la alarma por la combinación correcta conmovedora de botones en el plazo de 3 segundos. La exhibición ("S") demuestra a nuevas combinaciones necesarias cada mañana. Las ayudas despiertan la cabeza soñolienta.

- "Inclinación"

. + todas estas invenciones son muy relacionadas:

Varita mágica -5E020:

Movimiento NR del cuerpo -1J010:

Instructor del movimiento del cuerpo -3E061:

-3E150 "Picosegundo-Zona":

. 1G010 todo palillo: Palillo teledirigido. Cuando están activadas, las señales son creadas por cada palillo de la posición admiten el aire. Los detalles de este KN (invención) encontraron en el dir REG20.

. Telefonía: Números del teléfono del dial (t) (cada posición representa el diversos dígito/función, eg.: cogiendo el receptor/colgando encima de llamada).

JUEGO ELECTRÓNICO del PATIO A2-470: la disposición de los pp del hogar, la escuela, el patio trasero, el bosque, los juegos insertables preprogramados etc. del disco se adaptan a esto (eg.: las criaturas que se persiguen), haciendo más vida tienen gusto. O m da nuevos juegos alterados o para jugar en vida real lejos de m, pone las reglas en escrito, objetivos sobre el papel, CRT. Mezclar la máquina de la terapia de w (con) (los juegos diseñaron alterar la agresión del u, el cálculo, el estilo del pensamiento, sensaciones, y letargo.... Enviar los juegos a los amigos después de los pp su disposición. El incluir de las interacciones w (con) m (palabras/tipo sonidos representativos de la señal sonora de o): juego/acción/escena de la parada de comienzo de la señalización; donante de advertencias; siendo un carácter (bueno o chico malo o suplentes dentro o del juego al juego, o parte de la construcción ambiental sí mismo; donante de instrucciones; preguntas de contestación (para la progresión del juego, aclarando reglas)

TD: El MED w1 del ep del punto de ebullición del tt del hh del interruptor (programas informáticos del `[el `analiza]) (programas informáticos del `[el `analiza]) C (computadora y software del `) e cons P.M. exc D. - r= " inclinación "

+ GUÍA del ESPACIO de ESTACIONAMIENTO 6B-210: Parquea automáticamente el coche. Los jueces del sistema para la distancia y dan instrucciones el coche para mover las ruedas correctamente.

- medidas el espacio disponible para el paralelo o el estacionamiento del estacionamiento. Las dimensiones aparecen en la pantalla.

- conductor de las guías en cuanto a hasta dónde y cómo deben conducir y dar vuelta a la rueda; ¡o mejores parques para usted! El sistema mide distancias, sabe tan no tocar todo lo demás.

- algunos encintados de la calle pudieron ser difíciles para que el sistema calibre, por lo tanto: 1. el sistema entra mientras que el encintado cercano lejano como otros coches (en frente y detrás) se parquea; 2. el conductor puede entrar si estos otros coches

- es probable este producto puede existir ya (el foco especialmente en invenciones recientes de enero de 1990, habla con los expertos autos si este producto existe con todo no es patentable)

¿83?

- se aplica al estacionamiento de: barcos, naves; carros; autobuses

OTD:

"R"; "S"; pp; P.M.

- (Radio) la "inclinación" controla el movimiento de (juguete): coche/robusteza/aviones/barco/tren/muñeca. Puede ser más fácil parquear/las cosas del movimiento cuando u está afuera de él (coche), y usar la "inclinación".

VIAJERO de la REALIDAD VIRTUAL 6B-630: El niño experimenta sus movimientos de nuevas maneras. Los movimientos del cuerpo se convierten en efectos audio-visuales creativos. Ejemplo: el movimiento de cada pierna suena como los pasos hechos en el bosque, mientras que el paisaje en la pantalla cambia según cómo él camina. PS-Zone= " inclinación ".

- Cosa de la caminata: amplificar y alterar los sonidos creados por su dar une vuelta.

+-sound como usted están caminando: en una playa; a través de bosque; en la pila de latas de lata (para el humor); a través del agua; etc.

- usted puede caminar alrededor del cuarto, con todo suena como usted puede ser que camine encendido: arena, nieve, hojas de otoño, chapoteando en agua poco profunda por la costa o el lago...

- cada movimiento de la pierna acciona el mecanismo de fabricación sano

- los altavoces pueden estar para el aire, o vía los auriculares estéreos portables

- hace caminar a trabajar, el etc más interesante

- el usuario puede crear diversos efectos sonoros de muchas de las opciones enumeradas adjunto

- aplicaciones la tecnología existente del podómetro como parte del sistema (el podómetro cuenta el número de pasos que una persona hace al caminar), más tecnología adicional

- éste es un de tipo precoz del producto de la "realidad virtual"

- otros títulos para el producto: Caminata de la realidad virtual, caminata del cielo, sonidos que caminan, fabricante de la caminata, compañero del basculador

- aplicaciones adicionales: para activar (lo hace más interesante)
- aplicaciones el caleidoscopio electrónico (explicado en otro de nuestro No. del producto)
. - los movimientos para cualquier otra parte del cuerpo pueden hacer sonidos correspondientes del "synth", eg. de los movimientos de: brazos (manos, dedos, antebrazo, bíceps, cabeza, parte superior y o piernas más bajas, etc.)
- OTD:
- diversos cartuchos permiten diversas opciones de fabricación sanas; todos; "C"; pp (tipo de efecto sonoro deseado); P.M.; Reino Unido; interactivo; juguete; juego; hospitalidad; "mic" (determina el tipo sonido hecho por el usuario, después sintetiza el sonido por consiguiente); ejercicio; portable; sst; correa inútil; punto de ebullición; oscilador; vc; cuenta; actúa como podómetro también; carro; RPC; cp.

TAPA INTERACTIVA 6B-710: La tapa advierte cuándo expiró el contenido del alimento o del producto químico, es peligrosa de abrirse, y o si la tapa necesita ser sujetada mejor. Mover la tapa vía la "inclinación", eg.: abrir, aflojar - beneficioso si contiene el material peligroso.
+-communications, las advertencias y o las alarmas pueden estar vía: aviso verbal, sonido de la alarma, luz roja que destella, mensaje de "S"
. - Analizador químico 7G050 del contacto: "Analiza" el ~ "anota" el tipo contacto del "estado" del ~ hecho por material (de los reactivo químicos de este N) w (con). el nr (notifica cuando está señalado) demuestra qué productos químicos presentan W5. Esta N (invención) copió al agosto de 95 7G050.

JUEGO del ARMA del LASER 6B-740: Gun= " inclinación ". Objetos del vuelo del golpe con el arma del laser. Controlar el arma vía la "inclinación". El arma sí mismo es el arma de =gun/toy de la "inclinación ". Guarda la cuenta.
- puede ver donde el arma golpeará antes de tirar disparador, vía punto rojo del laser el tacto del objeto deseado. el arma de u = de los movimientos = el "sensor" de la inclinación = de la inclinación = el "analizador" determina donde tirar/punto/blanco = emite el elemento (la luz)

GUANTE del LASER 6B-970: Cada dedo emite la luz laser. Las señales de cada laser accionan música al tocar el "sensor". Cada uno "sensor portable separado" crea para poseer sonidos, eg.: tambores, otras pistas previas de sonidos. Guante también usado para las funciones que activan de otros productos usados en una distancia.
- guante (dedo) = inclinación.
- Cada "sensor" crea diversos efectos sonoros encontrados en los teclados musicales electrónicos.
- Laser de los dedos cuando el objeto llamativo (receptores) crea sonidos señalados. El usuario puede sintetizar y o alterar el tipo de sonido creó cuando el laser golpea el receptor. El dispositivo vía el cual conseguir diversos sonidos del mismo dedo y del mismo receptor puede estar: dispositivo separado; dispositivo en la parte superior externa del guante; otro receptor de el cual recibe código del dedo del laser en el cual el código pudo ser luces con./desc. en ciertas combinaciones, eg.: tres flashes de la luz son crear campanas

- el dispositivo del laser puede ser una extensión de los dedos
- el laser de cada dedo puede tener diverso efecto en el mismo receptor
- ciertos modos del receptor pueden generar pedazos musicales enteros (eg.: para el respaldo)
- comercialización: decir, "crear un grupo musical entero todo en la aislamiento de su sitio ([quizá] sin el tacto de un botón)"
- las capacidades del producto simplificaron: el tipo dispositivo del guante envía los lasers de cada dedo. Cada dedo crea un diverso sonido cuando alcanza el receptor. En modelos más avanzados, cada dedo puede crear más de un sonido transmitiendo en más que una forma.
- en lugar de ser un guante, dispositivo podía ser una caja. Cuando sale la luz, transmite la mayoría/todo el sitio, así que el receptor puede fácilmente recibir señales.
- también utiliza el número 6B-971-500000001 del diseño
- para activar el laser en dedos de la versión del guante: el dedo toca el pulgar, la otra superficie dura, o trasero de la mano o de la palma extensamente abierta.
- usos: es un dispositivo de control de "R" (véase "telecontrol") a activar y o para controlar la música, composición de música, la comunicación de "C", cosas abiertas, eg. puertas
- OTD: "S"; "C"; pp; P.M.; Reino Unido; tds; el interactive%; juguete; básico; el game%; entretener; "mic" (para el sintetizador); synth; portable; el printer%; ch; au; "M"; punto de ebullición; oscilador; "balanceador"; vc; el score%; md; carro; sintonizador del teléfono; teléfono del SP; tr; MES; cp; cc; carácter; distancer (las transmisiones del laser de la persona se interpretan diferentemente según su distancia de la otra mitad de distancer; receptor acústico del movimiento; localizador; "telecontrol"; notificador; inclinación; composición; cojín del aire (el usuario señala luces al sensor del cojín del aire).

INTERRUPTOR DISTANTE de 6B-750 TOUCHLESS: Gente en un cortocircuito o una distancia lejana del dispositivo, unidad de control bloqueando uno o más rayos laser. Llaves adicionales generadas vía posiciones de diferenciación de la inclinación - estas posiciones aumentan geométrico el número de señales potenciales combinando el tipo 6B-750's llave de w (con) como señales.
- mandar los lasers en distancia grande (o muy corta) el público y los miembros del grupo pueden disparar el sonido que crea ligero y o la música.
- cada secuencia (de rayo láser) tiene diverso sonido
- algunos botones o secuencias pueden también accionar sonidos del fondo, eg.: orquesta del fondo
- los modelos pueden trabajar en la luz y o la obscuridad
- modelos para uno o más jugadores: la distancia entre el transmisor y el receptor pudo ser ajustable
- cada secuencia pudo estar de diverso color: si la visibilidad de la luz es un problema para algunos usuarios, después una línea se pudo pintar sobre el fondo que demostraba la localización de rayo láser.
- puede ser diseñado como instrumento especial con opciones de 100 de sonidos, o ser diseñado representar a: la arpa, va (arpa japonesa como el instrumento que es tocado desplumando cada secuencia), etc.

- los lasers se pueden programar por el usuario: hacer un solo sonido en la viga del tiempo está quebrado por el dedo, el etc sin importar cuánto tiempo la luz fue interrumpida; o, el sonido continúa durante la duración entera de la interrupción ligera

- OTD: Los jugadores adicionales pueden jugar utilizando sus instrumentos controlados de "R" transmitidos en el receptor del dispositivo que se pudo colocar lejos de la unidad principal bloqueada por el jugador. Códigos: "S"; "C"; pp (salidas sanas deseadas, etc); P.M.; Reino Unido; interactivo; juguete; todos; hospitalidad; "mic"; synth; portable; Índice de inteligencia; "M"; punto de ebullición; alerter; oscilador; vc; cuenta; carro (tipo sonido que hace opciones); RPC; UQ.

LUZ MÓVIL 6B-780: El movimiento "sensor" ordena la luz para seguir a persona mientras que se mueven.

- el movimiento "sensor" puede utilizar disparar del sistema del laser

- los agentes usan los transmisores que identifican su lugar o son identificados por otros medios; reduce la necesidad de un hombre de la cámara y de los controles complicados que necesiten ser aprendidos y puede estar roto

- sin embargo no puede estar para el ballet más sofisticado en Bolshoi de Moscú, hará para los juegos de la High School secundaria, el etc

- el sistema es muy básico y económico: las luces vienen en uno de varios las medias cajas abiertas (que hacen instalaciones fáciles), cada caja pudieron tener uno o más luces por agente, dependiendo utilizan a cuántos agentes

OTD: Activar el movimiento de luces por la persona ligera que utiliza controles de "R" (ahorra de necesitar los alambres); "C"; pp; P.M.; controlar las luces vía ratón o el palillo de alegría; hospitalidad; juguete; todos (excepto: #6); juego; ejercicio; portable; Índice de inteligencia; "M"; punto de ebullición; alerter (en el momento de la instalación, antes de sistema el comenzar [para el juego, el etc]), oscilador; vc; cuenta; enseña a actuación; md; carro (software y o soporte físico para la generación del efecto); cp; acceso.

- la "inclinación" = control de la luz (dirección/intensidad/color) = las bombillas = emitió la luz

ABRELATAS UNIVERSAL de la PUERTA del GARAGE 6B-860:

Número indispensable del bocinazo de épocas de abrirse: puerta del garage - buena para los embarcaderos públicos en invierno en donde diversos conductores no tienen transmisor especial para abrir garages

. - bocinazos también a: [del cambio del semáforo áreas viajadas adentro no pesadamente -]

- el exterior de la muestra dice en letras claras grandes cómo conseguir la puerta del garage abierta. Ahorra en el coste de trabajo muy alto en el oeste también. Aplicable para los aspectos de la seguridad no alta. Un protector pudo ser interior sin embargo (mientras que éste los ahorra el apuro de abrir la puerta)

. - "Inclinación": controla las funciones del sistema

- copiado a 5E020 en 8.95.

AMIGO del ANIMAL DOMÉSTICO 6B-990: juegos con el perro, el gato, el pájaro, los pescados, los bebés, los cabritos, el etc. vía: consiguiendo el animal tirar en algo la invención es tenencia y el tirar en mientras que el animal está intentando separarlo; haciendo sonidos de interés de mecanografiar el animal que es jugado con.

- emite olores, eg.: la hierba del catnip (que excita gatos); productos químicos que se asemejan al olor de los animales, carne cruda; etc.

- la información investigada o publicada de la necesidad en la cual suena y las emisiones del olor excitarán gatos y perros - hacer esto quizá hacia el final del proceso de la solicitud de patente cuando aparece que la idea puede ser patentable.

OTD:

"C"; pp; P.M.; Reino Unido; beh del usuario (qué movimientos u olores aparecían interesar el animal más); interactivo; educativo para los animales (especialmente perritos y gatitos); juguete; todos; hospitalidad para el dueño animal y humano; "mic" (los expedientes y los juegos mueven hacia atrás la voz del animal doméstico); ejercicio para el animal doméstico; portable (quizá versión para el uso del jardín a, el movimiento del sitio al sitio); punto de ebullición; oscilador; vc; tgh para el animal doméstico; carro (olores, sonidos).

- control de la "inclinación" cómo movimientos/curvas/sonidos del juguete.

Especificaciones ADICIONALES de la inclinación B7-150:

Los tipos diversos de señales se crean según el below. El ejemplo de la función/hecho salir es tipo sonido, no obstante los sonidos particulares generados se podrían substituir simplemente por otras funciones, eg.: cualquie función dominante de c tal como encender una luz, o ratón de c que controla.

el presionar de o de botones (como una flauta con los botones)

el instrumento de +o transmite vía transmisor de 360 grados (uno secciona del palillo) al receptor que amplifica el sonido - muy posible. Transmisión vía el alambre incómodo innecesario.

o que se mueve a de izquierda a derecha upside-down produce el sonido

la sacudida de +o produce el sonido también

Viene en las formas siguientes:

- Bola: Botones produciendo música. Puede torcer las capas de la crepe dentro de la bola para los efectos sonoros. La mudanza al etc izquierda-derecha produce el sonido.

- Palillo: Cada posición de la muesca es diverso sonido. Puede girar el reloj o el contador a la derecha. +-Sounds según cómo se está girando

- Puede poner el objeto sobre la pantalla del software y el juego vía el teclado del ratón o del tipo o de la música de la máquina de escribir. Pueden tener dos o más pedazos que juegan con uno a. Incluso adminículos en los principios similares para los pies, cuello (collares gruesos efectuados por tipo el cuello que pone).

- Otras formas: buñuelo, formas de la fruta, gente, edificios, animales, plantas con las frutas o vehículos, ejércitos con cada hombre un diverso sonido, instrumento de "T" (cada botón un diverso sonido, otros botones es memorias de secuencias sanas, incluso tiene diverso tipo voces del operador...), zapatos (posiblemente incluso para caminar también), cuerpo atractivo (IES). CÓDIGOS: Todos; "S"; pp; P.M.; Reino Unido

(opciones sanas); interactivo; EDUC; juguete; hospitalidad; "mic"; synth; portable; t; "M"; punto de ebullición; alerter; oscilador; vc; md; carro (opciones sanas); cp.

DIAGRAMA: O=====K======O

O-----O

I K I

O-----O

El `O en los diagramas antedichos representa: la partición del "distancer". "K" representa las llaves (véase la pieza de "k").

USOS. Palillo también (poder) controlar:

- "Balanceador" = R (`teledirigido vía la interacción accesible) (palillo)
- ventana (persianas (venecianas)): ángulo de la ventana/de persianas; aumento/que baja.
- enseña al movimiento del oscilación (relacionado con el club de golf n): bates de béisbol; tenis, calabaza y raquetas relacionadas; ping-pong
- Movimiento robótico/humano: ((ser humano/robusteza) el lanzar del brazo: cada sección [separada por los empalmes: el hombro, el codo, la muñeca, el dedo, el etc] tiene poseer el palillo. Cada palillo se correlaciona (5e090) el uno al otro y objeto que es lanzado/cogido, y la localización del sistema en relación al objeto, piso, otros elementos importantes (según lo determinado por u/UIP/"analizador").

--cogida/el conseguir/que trae: objetos lanzados; líquidos, polvos, gránulos (laboratorios de investigación, elementos peligrosos)

--el sistema enseña "analiza" el sistema de u/mobile (sistema electrónico) todas las posiciones (robóticas) del movimiento posibles para los propósitos señalados.

--enseña/aumenta a la coordinación del movimiento

--para el sistema "portable": robustezas

--sobre/bajo tierra/agua del sistema; objetos en aeronáutica: cerca/lejos tierra.

--movimientos misceláneos de u/sys: bailando (ballet, africano, disco, roca); el caminar; funcionamiento; natación; el subir/que desciende (escaleras, escalas, árboles, colinas (el inclinarse desigual)); evitar los obstáculos (guijarros, basura, postes, muebles, cosas a sobre/alrededor del paso); el resto de los tipos (humano/robótico) de movimiento.

---también utiliza el movimiento (robótico) existente: guías, amaestradores, (movimiento) "sensores", "analizadores".

--o controla los movimientos de la robusteza/sistema/el otro functions% vía el palillo

--D (pierna que sube): "Cerebro" (sistema de las señales a entrar en la dirección señalada; "analizador visual"; sensor-movimiento; picosegundo) = las piernas levantaron mientras que estaba movida adelante = la pierna cayó mientras que se mueve adelante = el cerebro hace nuevos cálculos (donde está, cómo su posición ha

cambiado, resolviendo cualquier problema; el correlador estudia cómo diversas piezas de la pierna en el empalme se están moviendo en armonía).

. - dispositivos del corte: francotiradores, tijeras, láminas; árboles del corte, la otra madera; tornos.

2G17-C48 OPEN/CLOSE: Controlar la abertura y el closing de ventanas vía: ordenador teledirigido, o del módem, o central. Aparece existir: La ventana abre/cierra automáticamente (vía el sensor) debido resistir a cambios (eg.: guardando hacia fuera la lluvia, cambios repentinos indeseados en temperatura).

- (hay 2 N (invención) w (con) esta función, quizá C46 o C-47) X NK mayo de 93

---C48 = "teléfono" /tr = control de la otra localización

OTRAS FORMAS: El palillo puede también estar en formas/diseños de:

- palillos múltiples, por el que puedan trabajar simultáneamente.

. --Eg.: el efecto del acoplador de la señal de cada palillo crea muchas más señales posibles - si cada palillo tenía solamente tres posiciones entonces 3 por 3 permite 9 señales totales usando ambos palillos.

- manivelas: gira la manija

- doblando: cómo está doblado crea señales

DIAGRAMA DE OTD: u (usuario o concesionario anticipado) = este sistema de N (invención) (sistema electrónico) (5E020: controla cualesquiera de funciones siguientes; 5E020 puede también controlar la otra N (invención) en la coordinación w (con) el otro tipo que controla ~ de (r) N) C =

Archivo: Introducción de la característica/estampilla de fecha del tiempo

ESTAMPILLA DE FECHA DEL TIEMPO - TDS

Actúa como secretario en probar qué material (texto, señales electrónicas, ocurrencias de a/v, etc) ocurrió cuando.

- Dibujo: contador de tiempo = tr = c

- Para Techies: la exhibición ("S") demuestra el tds (característica de la estampilla de fecha del tiempo) asignado al elemento aplicable. - o-FECHA = reloj interno, calendario, notificador de la alarma del reloj.

- Dibujo: 1 = 2 tr = 3c (computadora) (reloj) = 4tr = 5memory/6function

- Para Techies: También tiene la función opcional que se puede activar solamente entre ciertas épocas (el tiempo se puede cambiar vía 1 " acceso "); cojín 1air (puede actuar como notificador (de la "fecha", del tiempo, de la alarma)); integrado con la programación de sistemas; fecha demostrada en 3display; fecha de los pp; básico; 3cart; 3cc; 1clap; 3fd-hdd; 1%GPS; interactivo; el 1M; alarma de la mañana (1-activating/deactivating alarma, alarma 6 = altavoz); 3mp; 3mq; 6notifier; 6OSC; 3%pi; pp; impresora 6; RCP; 1remote; 3score; 6speech; 3tds; juguete; 1uk; 3U (el usuario hace preguntas del sistema); 3vc; 3clock decide vía la entrada/analysis/M/pi/interactive of/for/about/in-terms-of w5 (qué, donde, porqué, cuando y cómo), cómo los sistemas de reloj si 6respond (alarma/notifier/tr hasta los 6M).

- El reloj C37/el reloj consigue su tiempo comprobado vía la transmisión de radio. La radio tiene tiempo perfecto y fija el tiempo del reloj si es incorrecto. Dibujo: C37 = tr/rc = "teléfono" = "M"

- el reloj o-C109 exhibe la hora local para las ciudades importantes en mundo. Seiko. 10 de diciembre de 92 YARDA. Dibujo: C109=tel. Applications^: [M = SE ADAPTA] puede mejor interconectar/el sistema del sastre a los usuarios en otras zonas horarias; conseguir la época deseada para la localización deseada.

. - Software existente relacionado de "TDSW":

--Planificador micro: SOFTWARE de Int'l de planificación micro, avenida de 3801 E la Florida, Denver, CO 80210. Teléfono 303 757-2047. p.75. Instaplan el ccsme, P. 75: "pista".

+ matriz contenta de la fecha 4E020: Registros y ocurrencias de %organizes. Secretario.

. - Ver el "cerebro".

- No. de la palmadita de los E.E.U.U.: 570160 sistema y método para authenticar la transmisión y el recibo de la información electrónica: el extracto no cubre atar adentro de contenido [como en verificador del contenido 4E020 y de la fecha]; el 5339361%; el 5333316%; el 5311423%; el 5182543%.

. - Un código (acceso, "marca de agua electrónica ") codificado en límites de sw/data cómo + la característica/el sistema/el programa pueden ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

PIEZA DE LA PISTA

Contenido para los archivos de la pista:

. Info general

. Sección a leer más adelante

. Ladrones de cogida y criminales no manuales

Aprender que es más rápido y más fácil autorizar que intentando evitar esta solicitud de patente. Porqué descubrir la manera dura después de que los sistemas de esta solicitud de patente hayan rastreado a alguien infracción de este uso. Llamar (+1) 707-428-5000 www.LicenseItToday.com.

ALARMA del BEBÉ 3A140: Saber cuando está durmiendo el bebé o despertarse. El receptor de la madre analiza la vibración en el dispositivo usado por el bebé.

- Saber cuándo está durmiendo el bebé y cuándo es despierto, dependiendo del nivel de vibración en el dispositivo usado por el bebé.

Señala el receptor de la madre.

REGISTRADOR del BEBÉ 5A180: expedientes cuando el bebé ha estado durmiendo y en estado despierto, vía los detectores que detectan el movimiento. Puede almacenar esta información [al revés hasta un año]; pero de la mayoría del uso que va detrás menos de 24 horas, especialmente para trabajar parents.

¿-? El sistema pudo también recibir el Info en cuando alimentaron el bebé (el alimentador afina el Info adentro)

- almacenes qué fue alimentada
- recomienda qué más se necesita en dieta

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip); ver sobre el N.

LOCALIZADOR del PRODUCTO 5A190: El sistema de la clave de barras se coloca fácilmente quién pide prestado o las aplicaciones que los artículos. Reduce papeleo y hurto. Característica opcional: la clave de barras de la tarjeta de la identificación del empleado es concordable con la clave de barras del producto. o negocios con la salida de muchos productos de la oficina.

- todos los productos que eran pedidos prestados o usados los empleados, el etc y dejando y entrando cualquier área de nuevo pudieron necesitar ser funcionar con el último lector de clave de barras que la clave de barras de la identificación del producto y de la persona del registro.

- custodia de registro de computadora: edad del dispositivo; frecuencia del uso, cantidad de uso (si el 3ultimo Info se da manualmente); si hay más adelante los problemas mecánicos - lazos en: quién dispositivo pasado del uso y cómo (si el dispositivo es alquilado por el fabricante, ellos puede conseguir una mejor idea en qué causas necesita para la reparación, que es responsable, etc. La gente tomará un mejor cuidado del producto)

- la historia de cada producto se pudo demostrar fácilmente en "S" al usuario, al encargado, al etc.

Verificador del contenido -4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

LOCALIZADOR ALEJADO 5A201: Conocer la localización de la gente necesaria en el edificio.

- clave de barras de la persona del registro en id/badge como ella viaja las áreas de in/out/between.

- también un localizador del paradero de la persona; más fácil para la gente de la paginación desde el dispositivo que pagina será oído solamente en la zona en la cual la persona está situada, ahorrando a la otra gente de tener que ser bombardeado con exceso de ruido.

- substituir a lector de clave de barras por el radiotransmisor (cada transmisor de la persona o del artículo que tiene poseer código de difusión.

- OTD: "S"; "C"; pp; P.M.; Reino Unido; fecha; tds; el interactive%; el educ% (comportamiento animal del estudio); básico; el game%; impresora; au; t; "M"; oscilador; discurso (da instrucciones; etc); vc; cuenta; carro; teléfono (policía de las llamadas); tr; MES; fs; RCP; cp; uq (eg.: la persona que intenta conseguir el dispositivo hacia fuera pide "puede yo hacer tales y tales y solucionar el problema que "la C" tiene conmigo"; mq, eg.: "porqué le hizo...."; acceso; uip; carácter; ap: reprendiendo a gente, recogiendo las multas, diciendo a gente las se quieren en alguna parte, o en "T", el etc; el distancer% (permite que el producto suba solamente a cierta distancia); localizador; multiusos; notificador; "R"; aire el pad%; representación visual el analyzer%.

. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip)

interventor del trabajo 5A640: determinar si los empleados trabajaban el volumen de tiempo y los tiempos que dijeron que eran. Sentidos incorporados, conectables, o separados del dispositivo para la vibración y o el sonido significando actividad humana en la máquina (eg.: computadora, teléfono, máquina de escribir, etc.), dispositivo (eg.: escritorio, puerta)

- sentidos para los golpes de teclado en la computadora. El sistema puede los períodos del comienzo de registro y de la parada también (con la fecha/los grupos fecha/hora). ENCIMA de la cantidad de boquetes de tiempo cuando había no se hizo y deben ser señalados por medio de una bandera ningunos golpes de teclado.

Frecuencia de la licencia A1-45: llaman la policía que las computadoras tabulan los coches de la frecuencia adentro para actividad semi o muy sospechosa con todo sin evidencia sólida. Los altos coches de la cuenta de la llamada llamaron adentro son entonces más probables ser preguntados.

- D: ~pd~c [del rc=tr] = transferencia de datos sin hilos = ~ps~track~c [del rc=tr] = persona de la policía o de la supervisión.

perseguidor del uso del vehículo 6B200:

Saber su coche alquiló o prestó o utilizó por el empleado fue utilizado. El número de paradas; vueltas, número de vueltas dentro del kilómetro dado, y grado de vueltas (eg.: vueltas de 90 grados menos probablemente en la carretera que conduce); cambios en velocidades dentro de una distancia corta (y del grado de cambios); millas

conducidas (no pudo ser borrable por el conductor al igual que común con los coches actuales); la época y o # del kilómetro conducido sobre cuando el gas fue bombeado adentro. Horas de movimiento, y tarifa/hora.
- conductor mayo o mayo no saber sobre estas medidas. Dispositivo provechoso en la determinación del empleado, comportamiento del arrendatario. Si la parte de su "historia" de lo que él lo hizo no empareja, después usted sabe que está poniendo. Los conductores se pudieron pedir tomar de vez en cuando el coche, autobús, motocicleta con tal dispositivo si todos los coches de compañía no están con este dispositivo.
- vía la recepción del satélite, expedientes adonde en el planeta viajó dentro de algunos metros (si tal precisión es necesaria). Esta tecnología existe (quizás para el uso del no-coche) - desconocido del número de patente, no todavía buscado.
- esto es un mercado limitado, con todo provechoso.
- el dispositivo de la datación determina cuando ocurrieron tales acontecimientos
- "Perseguidor"

el interruptor 6B390 (programas informáticos del `[el `analiza]) (los programas informáticos del `[el `analiza]) MIDE EL NIVEL de SALIDA del EMPLEADO: Comprueba si su salida ha caído que necesita alocución por el patrón que paga sueldo, eg.: el empleado es quizá perezoso; necesita el asesoramiento psicologico; diverso tipo trabajo de las necesidades para el cual se adaptan mejor. Las medidas del sistema según el número de páginas producidas y o el número de proyectos comenzaron y o acabaron y o trabajaron en (hizo a empleado no hace caso algo - este sí mismo pudo necesitar ser alertado al empleado y o al patrón)
- "perseguidor", "uip-DB"

RECONOCEDOR de la CLAVE de BARRAS 3C-550:

Según la clave de barras en un producto, la máquina por la cual es colocado sabe y puede por consiguiente hacer el siguiente:
- si el alimento es más allá de fecha de vencimiento, hace alarma y no cocina (en microonda, el etc); no dejar el artículo pasar el lector de clave de barras del cajero u otros puntos de control en cadena de distribución
. - la fecha tiene claves de barras separadas

MONITOR INTELIGENTE 2E251:

Las funciones de la cámara se controlan según lo dictado por el sistema de vigilancia de la computadora. Expedientes de computadora según lo que está buscando su "analizador" /uip/ "acceso": qué, cuando, cómo, porqué, donde (w5). Intentos del sistema para substituir todas las características de un monitor humano.
- "analizador" /uip/ "acceso": la base de datos demuestra el sistema qué actividades humanas están de menos interés, tal como los que: usar los juegos, trabajar las horas normales, caminar en patrones normales (no parar

en zonas aventuradas), tener visto bueno de seguridad más alta, cualquier otra seguridad de los criterios/uso de los investigadores de identificar patrones aventurados/inusuales/otros del comportamiento.

- No hace caso de señales según software del "acceso" de /uip/ del "analizador": sonidos de frecuencias particulares - vía "analizador de sonidos"; movimiento por otras cámaras (dentro de su opinión); sombras móviles vía fuente de luz de la ventana, vía: sol, luna, coche o calle u otras luces exteriores. Obra recíprocamente con otros (seguridad o supervisión) sistemas; gente no suspicaz debido a su uip.

- Adaptación. El sistema se adapta a las necesidades cambiantes vía el "analizador" /uip/ "acceso" cerca: el minuto, día, ciclo de negocio, estado de la emergencia, alertas de protector o de otro sistema de seguridad.

- Sentidos adicionales: El sistema recoge entonces analiza sistemas de datos múltiples. Olor "analizadores", eg.: detectores para el fuego, lanzamientos químicos (peligrosos), olor de cuerpo, humedad. Intuición: ¿UIP? Vibración: distingue entre el tipo vibraciones por ejemplo del carro que levanta en la noche del acondicionador de aire. Analizador del diafragma de la huella digital o del ojo: para acceder, saber quién está entrando o se está yendo.

. Base de datos:

- Base de datos enorme de las circunstancias diversas, imágenes, datos usados por el sistema para decidir vía su computadora "analizador" /uip/ "acceso" si un objeto debe ser: seguido, etiquetado, capturado.

- El edificio para arriba de la base de datos lleva al desarrollo del uip para tal tipo (futuro) de circunstancias (semejantemente de la repetición posible).

- Perfil de los estudios/de los fósforos de sistema del objeto mirado. Aplicaciones "analizador" /uip/ "acceso".

. Tener acceso "a"/uip del analizador =: Personales autorizados que acceden en el edificio/el sistema (de la computadora): código del paso de las aplicaciones que acciona la manera de la cual el sistema la supervisará; el sistema puede hacer preguntas autorizadas de los personales (automatizados) en cuanto a porqué están haciendo lo que están haciendo (w5); el sistema sabe distinguir entre diversa gente y por lo que están haciendo.

. Fabricación: "analizador" /uip para porqué y cuando los productos (w5) fallan. Búsquedas del análisis de la falta: en qué defectos visibles de la etapa son más probables ocurrir vía sistema de seguimiento; identifica que la unidad de producción está poniendo hacia fuera las piezas defectuosas o el trabajo; mira los cambios en el aspecto de objetos después de que se hayan alterado de cierta manera por ejemplo color o texture el cambio después de soldar con autógena, haciendo estallar fuera del molde, estampando; cambios en vida o materia del alimento en un cierto plazo para el color, textura, olor (analizador del olor); piezas que caen de planta de fabricación.

% de los usos adicionales: Uso de los analistas de comercialización de estudiar patrones del comprador de ésos que cumplen sus criterios automatizados de búsqueda, eg.: qué clientes de la tarjeta de crédito del oro hacen después de/antes de comprar artículos particulares, o qué señoras rubias altas buy/do en Macy/almacén del expediente tres días en la campaña publicitaria de Madonna; seguridad en: aeropuertos, alamedas de compras, edificios de oficinas, bancos, siguiendo a la misma persona que salta entre los diversos edificios o aeropuertos conectados con el mismo sistema de vigilancia; supervisión de chimpancés agresivos en cautiverio; límites

cómo un sistema de la realidad (VR) virtual puede ser utilizado, eg.: bloqueando los de caminar más allá de cierta distancia, o cambios el software de VR según qué o donde (w5) de la situación del usuario.

. Quizá patentable: el sistema identifica a persona (del detalle) vía el "analizador" /uip/ "acceso", eg.: el color, altura, entonces cámara sigue. Entonces el sistema (sistema electrónico) va automáticamente a rematar a la 3ro parte de la persona. El sistema sabe para ir a la tapa de la imagen.

. Misceláneo:

. Este monitor inteligente N (invención) (cerebro, 2E251) =

"analizador" /uip/ "acceso": (hace/no mira objects/u la mudanza según el tipo transmisión de su código u (el usuario o concesionario anticipado) k del tr (transmisor)/de acceso sobre entrada. Desarrolla el perfil del objeto que es estudiado = uip = sistema reacciona por consiguiente); CARRO (el acceso "analizador" /uip (tarjeta) de incorporar u tiene/acciona: el interruptor, tipo banda, uip w (con) asoció funciones); EDUC (aprender el w5 de la gente/de bandidos potenciales; aprender coger actividad ilegal repetida iguales/de gente similar en iguales/diversas localizaciones/situaciones vía el uip); M (DB, uip); MIC (sonido para =: "analizador" /uip/ "acceso"); MULTIUSOS ("analizador" /uip/ "acceso", siguiendo); NOTIFICADOR (policía, seguridad); OSCILADOR (alarmas); Banda (); Picosegundo (tr usado por u); Q (la gente en la seguridad/ésas que son observadas (si ella tiene problema) puede ayudar a solucionarlo (eg.: tener acceso fue negado (por razón tonta)); S (la seguridad/la gente que es observada puede considerarse); CUENTA ((prevista) chance tal u puede confiar crimen = vía el "analizador" /uip/ "acceso"); SENSOR (movimiento: el calor, vibración, analizador visual = hace el sistema prestar una atención más cercana); ANALIZADOR DE SONIDOS (); ESTADO (monitor qué se está encendiendo, interno de la seguridad de las ayudas que presta la mayor atención donde está debido); SYNTH (el oscilador se altera a más bandidos del susto, el tipo sonido es analizador "del comportamiento" de la voz del "analizador" /uip/ "acceso" para y en la golondrina de mar seleccionada por el "analizador" basado en el uip del objeto observado, y del objeto, y comportamiento "analizador", y software del crimen); TDS (w5 de ocurrencias, para el uip, el DB); UIP (); ANALIZADOR VISUAL (); WA (usado por el objeto o la seguridad observado; picosegundo; tr (transmisor) su código de acceso).

- D1: objetos móviles o inmóviles: tiran/"tr a la gente/los animales/los organismos/los meteoritos/los productos o las piezas = las imágenes de los controles w5 registrado" = vía"/"/satélite/m/R (`del uip del analizador visual/"del analizador/"del acceso teledirigido vía la interacción accesible) de (c)/el detector de movimiento/tds/analizador del olor/analizador de la vibración.

- D2 - UIP: [datos usados para desarrollar el uip: visto objeto = camera=visual analizador/DB (base de datos Info del `a ayudar a adaptarse al) asociado/m/k (qué protector de las necesidades entra)] = analizador de la c (interruptor: archivos de los fósforos)

- D3 - Reaccionando a la situación solicitada aislada, o al bandido: el sistema de vigilancia piensa que hay alta ocasión de este ser el caso = entonces los estudios de sistema que otros datos recibieron de la situación actual, eg.: emparejándolo con su DB (base de datos Info del `a ayudar a adaptarse a las necesidades asociadas) = si las ocasiones de la situación buscada (cada vez más) probablemente = sistema reaccionan: cogida/seguimiento de la detención/bloqueo/privación de capacidad objeto o bandido/de ellas (más de cerca).

- Esta invención "obra recíprocamente" con:

Cualquie KN (invención) %; Cualquie sistema de la supervisión de seguridad del existing%, eg.: gana el Info adicional (vía la supervisión, el uip (colección de datos = para los datos que emparejan)/la policía de las ayudas/las ayudas determinan la naturaleza de la actividad inusual.

- El sistema sabe a lo que su no hacer caso/no paga mucha atención, (debido a los sistemas c=memory (uip de tal tipo ocurrencias)).

MICRÓFONO 1G040 Y CÁMARA TELEDIRIGIDOS AUTOMÁTICOS:

El sensor sigue a individuos señalados vía: sus pixeles visuales, y o, suenan creados, y o, dispositivo teledirigido llevado a cabo por el director o el agente, y o transmisor usado por el agente. Más barato y menos obvio que el sistema de vigilancia vivo.

-"/Cámara del mic del mando a distancia "permite que el usuario coja más en los elementos deseados.

¿- habló quizá alrededor vago en la convención (con Shure)?

- D para la opción del "mic": sonido = "sensor" = C (computadora y software del `) = "mic" = proceso de la grabación = c~memory = oscilador

- D para la cámara: (Localización cambiante de) la persona o el objeto que se fotografiarán notó vía su ""/del tr % creados sonido/su imagen (forma del cuerpo, tamaño, peso, color (de la ropa, del pelo, de los ojos...) = "sensor" = c (controles: qué lanzamientos de la cámara/ángulos cambiantes de cámaras 1 o más aplicable para seguir a persona) = grabación = cinta/c (memoria) = aparato de lectura/s

- el sistema sigue el elemento (de mudanza) taggable

--otros modos que marcan con etiqueta: el alambre conectado con el objeto del interés da su localización (por cómo el alambre es doblado = "sensor" = c (analizador).

- OTD:

ACCESO: (); ARTISTA: (utilizar el sonido/los efectos visuales almacenados para la demostración audio/visual el crear); CÁMARA: (); CARRO: (marcando con etiqueta (el sistema sigue características particulares: color, sonidos de voces femeninas o persona particular...); COMPOSICIÓN: (); ENTRETENER: (); MFH: (); MULTIUSOS: (); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Picosegundo: (localiza a usuario); Q: (); R: (); S: (); CUENTA: (tds, demostraciones donde está la persona/el objeto que es seguido/marcado con etiqueta, cómo están cambiando (localización, tipo sonido o movimiento); SYNTH: (); UIP: (marcando con etiqueta (sistema preparado mejor para seguir el objeto basado en su sabido/probablemente características del movimiento); WA: (la persona puede escuchar la persona que es subtitulada (mientras que el oyente está en otro sitio)).

. - Historia de este G Dir N: este N (invención) combinado con 3E-220 SISTEMA UTILIZANDO "COLOCANDO SISTEMA" (pero no podría localizar allí)/"TELECONTROL" en 1.95, y copiado para mejorar

el archivo de N (invención) entonces. Este G Dir N (invención) copiado a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verlo para las actualizaciones.

ANALIZADOR del BAGAJE de la COMBINACIÓN de la FORMA de +++ R41-1:

El bagaje (radiografía) que comprueba el sistema selecciona a bandidos probables vía no sólo los solos objetos llevados pero también las combinaciones de eso, donde no ninguì□n de ellos puede estar bastante en sus los propios notifican seguridad. Eg.: busca uno o más de siguiente: la munición parte, parafernalia de la droga, tipo joyería popular entre los portadores de la droga. Antecedentes penales, o tipo del comportamiento de persona, eg.: su tipo de aspecto sospechoso usado por el software para enangostar mejor abajo opciones posibles para mejorar ocasiones de hacer un fósforo. Eg.: escudriñarán a una más vieja mujer condenada por defraudar el IRS más cuidadosamente para las materias de la droga, pero menos cuidadosamente que un criminal condenado de la droga de Colombia. Un sistema más barato: el analista mecanografía adentro el tipo objetos encontrados en la computadora. Existe: objetos de la localización del sistema por forma.

- estudios todos los elementos referente a las características [de la comprobación única] de objetos buscados: tamaño, cocientes dimensionales del objeto [provechoso si el tamaño no coge el elemento, eg.: un arma puede estar en muchas proporciones algo de diferenciación de los tamaños w (con)], la densidad, donde se pone el objeto [dentro del envase] [puesto que uno que está más cercano a donde la gente oculta históricamente objetos de agentes de aduanas es más de un problema, de cocientes del colmo a la baja densidad dentro de mismo o de objetos próximos.

. - las ayudas determinan tendencias del comportamiento del populations^ entero o parcial: cuenta, "analizador del comportamiento", uip.

- Ejemplo: de acuerdo con estudiado (uip), cualquie combinación de formas diversas (incluso si ningunas de ellas representan el objeto deseado (armas, envases para los elementos restrictos (productos químicos, explosivos, drogas)). Es decir mecanografiar la personalidad A que es más probable ser peligrosa/contrabandista, etc es los 30% probablemente para llevar el 40% de uno 18 del tipo objetos (basados en forma/tamaño/color/contenido), mientras que el resto de la sociedad que viaja puede tener solamente una ocasión del 8% del tener 40% estos 18 del tipo objetos.

- UIP: (basado en la persona (su: número del pasaporte, número de la Seguridad Social, estudios de sistema del nombre) uip (cuenta; "analizador del beh"); El UIP del interruptor individual de las ayudas (programas informáticos del `[el `analiza]) (los programas informáticos del `[el `analiza]) = sistema, mejor sabe qué buscar/"analiza", eg.: si sospechan de o se condenan a la persona para las drogas; - D: Radiografía - > analizador visual (para las formas) = c (uip para las formas (sus combinaciones) con perfil de la personalidad de la persona) = analizador = nr.

- OTD:

ACCESO: (cierta gente (la gente en seguridad puede llevar los artículos restrictos (armas) a través de los "sensores" (los detectores) y no ser parada (necesario)); ARTISTA: (analiza el comportamiento de la persona vía sus imágenes del arte creadas/firma, etc (las ayudas determinan perfil del comportamiento, eg.:

criminalidad); CÁMARA: (analizador visual); CARRO: (interruptor; detector del olor (productos químicos...)); ENTRETENER: (los sospechosos de las subsistencias entretuvieron mientras que esperan (durante la inspección) vía "estereofonia", "oscilador" (TV, radio, música previa)); K: (r); MFH: (uip (base de datos: analizadores del comportamiento (criminalidad), cheque de la identidad del individuo (nombre de la persona, identificación #, número del pasaporte). Esta base de datos del uip se puede converger con uip Info obtenido en la escena: (analizador visual (facial de los fósforos/lista de las descripciones w del cuerpo (con) de criminales conocidos en grande)); MAÑANA: (); MULTIUSOS: (); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Picosegundo: (); Q: (); S: (); CUENTA: (tds); SYNTH: (); Teléfono: (tr); WA: (detector portable (cualquie detector portable existente).

Monitor inteligente -2E251; "Cerebro"

MISCELÁNEO:

. cantidad de expedientes 6B730 de tiempo y cuando el estudiante, persona utilizó el sistema.

- se aplica al uso de computadoras; otras herramientas; otros artículos

. el progreso 8B-320 de tareas es continuamente actualizado. Otros y el uno mismo pueden comprobar progreso. El `analiza cualesquiera y todos los archivos o funciones eléctricamente generadas creados por la persona que es seguida.

. identificación 3C-030: cada persona que camina compra hace su código verbal y el sistema de "C" registra quién era. Aplicaciones: localiza donde la gente pudo estar...

. Inspector del bagaje R41: el sistema mancha objetos por forma y cómo refleja rayos. Protector de las alarmas. [Picosegundo 4.94]

. Expedientes del VCR de la vigilancia R101 durante 24 horas: tomando pocos tiros por minuto. [Sanyo, teléfono 06-991-1181. De sept. de NK el 5 94].

Boleto de tren de viajero R127 de la tarjeta de crédito: el circuito emite la frecuencia leída por el dispositivo en la puerta del boleto. [Enero de 93 X (véase impreso antes de también, desconocido de la fecha). El JR (ferrocarril de Japón) indicó la investigación comenzada algunos años detrás. Enero de 94 yardas]

- muchos relacionaron N (invención) de antedicho encontrado en directorios de A/B/C. "Tener acceso", "picosegundo", "pista"...

- D: Persona ticket/pd = [tr/rc] lector de /ticket = c (oscilador printer/ps/s/tel de pr/q/uip/multi-user/mfh/score/notifier/).

- calcula ("cuenta") en usos diversos:

--sacador del tiempo del empleado para calcular (sueldos).

--tarjeta de débito/de la tarjeta de crédito

- OTD:

ACCESO: (card/pd); CARRO: (carro = c) del sistema de pd/card/main; ENTRETENER: (); K: (r); MFH: (); MULTIUSOS: (diverso card/pd por usuario); NOTIFICADOR: (seguridad de los contactos cuando usuario (las

roturas acuerdo, línea de crédito extendida demasiado, infringieron ley); OSCILADOR: (comandos/declaraciones verbales); Banda: (vía el sistema principal/paladio/tarjeta (tarjeta de la ranura en funciones del changes->card del system->card de la nueva manera deseada); IMPRESORA: (); Picosegundo: (); Q: (); S: (); CUENTA: (tds); SYNTH: (); Teléfono: (tr); UIP: (funciones del sistema/card/pd según el uip: cargas (más costosas para los usuarios basados en su código del uip/de acceso (un tiempo más largo pasado por la sesión consigue más barato por minuto); el viajar (por transporte público) más barato para los viajes subsecuentes dentro de la duración del sistema;); WA: ().

- Extracto R127 de N existente (invención) copiado al "acceso", "Bill", "picosegundo", "cuenta", "pista" en 6.96

GALLETAS: El marcar con etiqueta también utiliza tecnología de la "galleta" de la computadora. Esto implica el poner del Info en la computadora de otra persona, tal como ésos que le tienen acceso vía la tela. La actividad futura por la computadora que recibe la etiqueta [unknowingly por el receptor] se sigue [siempre que el partido marcado con etiqueta tiene acceso repetido al partido que marca con etiqueta [tal como el Web site del partido que colocó la etiqueta sobre la galleta del accessor].

. Las etiquetas rastreables (hiddnely) colocaron on/above/below/sides/inside casi cualquier cosa: [también: relojes, equipaje, zapatos, joyería, bicicletas, plumas, etc.]

. Patentes de los E.E.U.U.:

- Estrategia de búsqueda de la patente: micrófono y expediente.
- No. de la patente de los E.E.U.U.: discurso que reconoce sistemas, eg.: 5251283 y 5182765; mejora sobre el dispositivo de registración 5239587 para los cazadores - que recoge muestras de los sonidos; 5197490; (el sistema puede también engañar organismos (vía sounds=osc) después de que esté señalado (los sonidos animales oídos por el mic) y trae el animal (más cercano al mic o atrapar o cazador o alimento o la otra destinación (para los propósitos de la investigación) así que el mic puede mejorar captura = "sonido analiza"), eg.: 4896305 - Patente de atracción animal; 4898179; (investiga = "naturaleza del analizador de sonidos" de situaciones eg.: patente 5012820; 5014039+; 4644330 - el dispositivo anti-que ronca, ejemplo de cómo KN (invención) puede responder a los sonidos (se aplica a 2e251 también), vende bien en mercado; 4160386 +4340915 (expedientes de KN con mayor sensibilidad (vía el mic más cercano al as= de la fuente sana determinado vía "analizador de sonidos") cuando: los sonidos señalados ocurren/como banda).
- Arrancador voice-operated remotamente controlable +4342106 para el registrador de cinta hecho por Olympus - N (invención) es activada por voz.

¿- +? Los expedientes suenan sobre niveles predeterminados especificados durante los intervalos de tiempo dados 4003264 (este KN). Título de esta patente: Dispositivo para medir y colocarse del sonido.

- Ocurrencias que inician la grabación: Llamadas entrantes de "CID" - de números de teléfono señalados, o número del teléfono/extensiones señalados; sonidos animales particulares (para los laboratorios de biología); sirenas de policía; fractura o el cortar del vidrio o el metal o la madera o el otro (edificio o protector) material.

Ver 2E251. "Discurso": sonidos de la gente particular, identificados cerca: (acento regional/extranjero), echada (hombre o mujer), palabras particulares (más probablemente ser hablado por la persona particular (del tipo) (eg.: bandidos contra personales del mantenimiento).

- La investigación necesitó: identificación de las frecuencias sanas para las ocurrencias señaladas que accionan la grabación, y entonces cómo esas frecuencias no se pueden confundir desde otras frecuencias por el "analizador de sonidos".

-"/"De los sensores del breakage= de cristal "nr": 5510767 5471195 5450061 5438317 5428345 5414409 5389911 5376919 5323141 4134109.

. Sigue ocurrencias en tiempos de [apuro]. El analizador determina la presencia de apuro cerca:

- vagos del `y sa y nr: sus cuentas para el acontecimiento, con cuentas más altas sugiriendo peligros potenciales.
- orden del `y sincronización de acontecimientos
- tipo de acceso
- Supervisión del uso del arma de la palmadita 5479149 de los E.E.U.U. y sistema de grabación. OTD: pista, uip, analizador: para qué supervisión de las necesidades.
- Patentes de los E.E.U.U.: Usuario de 4999613 pistas del sistema, eg.: su índice de alcohol y si son donde deben estar, fecha de la prioridad del cesionario en 1987.

. Ver las patentes y los productos diversos que utilizan "marcadores" y "etiquetas", por ejemplo ésos colocados en los objetos o los organismos que son seguidos. Muchas patentes de la prevención del ladrón en esta área, como ven en el ladrón de la pieza.

EXTREMO DE ESTA PISTA, PARA ESTE USO DE LA PALMADITA

PERSEGUIDOR

Este archivo es: Track&. Las pistas del sistema de seguimiento señalaron: persona, archivo, tipo actividad. Puede desarrollar la UIP-Base de datos en lo que se diseña para estudiar mientras que el elemento estudiado cambia o se mueve.

"MONITOR INTELIGENTE": Los monitores de sistema todos señalaron las ocurrencias que venían del sistema, eg.: qué U está haciendo (en lo referente a la capacidad del sistema de determinar la actividad del u); quién está haciendo qué y cuando. "Pista", "cuenta". 2E251+

% de la "pista" de las pistas del sistema cómo el "ranurador" localiza then= recupera datos necesarios.

- Un código (acceso, marca de agua del EL "") codificado en límites de sw/data cómo + la parte/sistema/programa puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

- "Facturación": las cuentas por tiempo utilizaron/"tenido acceso".

. - ver el artículo sobre el seguimiento de los carros en las noticias y el informe del mundo, de sept. el 18 de 1995 de los E.E.U.U., alrededor de la página 83.

CARACTERÍSTICA DE LA ETIQUETA:

Etiquetan al usuario, o el archivo, o la otra característica de cierta manera. Los valores incluyen:

- "Siguiendo". El sistema mejor sabe lo que al monitor= W5 (qué, donde, porqué, cuando y cómo).

- Donante menos o una dirección más preferencial: 1] la presencia de cierto disparador del can= de la invención de WA (caminata alrededor) el "notificador". 2] en ciertas circunstancias del development= adaptar-DB (base de datos) se pueden pesar según lo "señalado" por el tipo "etiqueta". 3] "etiqueta" = tipo "cuenta" para se marca con etiqueta qué.

- La etiqueta se pudo encubrir (de usuario), especialmente para ("access') "que sigue" propósitos.

. Construcción (interruptor) de la "etiqueta":

- puede incluir uno o variables múltiples/cuentas/las instrucciones del software para a cómo el sistema si "reaccionar" a la etiqueta/qué etiqueta se ata.

- La etiqueta hace que la "búsqueda" y "reaccione" piezas: Una porción está en el material que es marcado con etiqueta, el otro que "reacciona" a la "etiqueta". Eg.: las funciones también tienen gusto de un presente humano de la "etiqueta" del triggering= las "del anti-body= reacciones" según el tipo.

. Para el dibujo de Techies: usuario = "marcando con etiqueta" (W5 (qué, donde, porqué, cuando y cómo)) ~c (computadora) = ARTISTA de // del ACCESO (posibles piratas informáticos) ("imágenes " = "marcado con etiqueta" para cómo ellas are= W5 "corregido" (qué, donde, porqué, cuando y cómo)) VAGOS de // del ANALIZADOR de // (analiza elementos según lo "señalado" por la etiqueta del their=) (ANALIZADOR) del COMPORTAMIENTO (access=BA (analizador del comportamiento): la interpretación del comportamiento "se marca con etiqueta " = entonces sistema "reacciona" por consiguiente) el CARRO de // de la CUENTA de // (diverso tags= se manda la cuenta según lo "señalado") (recibe/coloca etiquetas) // EDUC (adaptar-adaptar el decides= W5 (qué, donde, porqué, cuando y cómo) necesita "marcar con etiqueta " = maximizar el proceso "educativo") disparador "marcado con etiqueta" MULTIUSOS de las ocurrencias de // ("marcan con etiqueta" a cada usuario diferentemente) //: notificador/oscilador (comunicador sano saliente)/synth (banda) de los sonidos/etc // del sintetizador (programa informático) ("se marca con etiqueta" los controles W5 (qué, donde, porqué, cuando y cómo); interpreta etiquetas; "correlaciona" estados señalados de la "etiqueta" de ese movimiento dominante" del w= "de la "etiqueta" Picosegundo-Zona de // de las "reacciones") (paladio = "etiqueta") // q (el usuario y o el sistema se hace preguntas) (q se plantea/answered= según "etiqueta") // r (teledirigido) (el resultado de cada stroke= dominante interpretó según cómo debe ser interpretado) el RANURADOR de // (los elementos" de los efectos de la "etiqueta W5 (qué, donde, porqué, cuando y cómo) se encaminan/manera de la "encaminamiento " = tipo el marcar con etiqueta de los efectos (se encamina de qué)) la CUENTA de // (un tipo de "etiqueta") // BUSCA y REACCIONA el tags= "señalado" (de las búsquedas después reacciona a la "etiqueta" según: tipo de etiqueta es/el tipo (w5 (qué, donde, porqué, cuando y cómo))

del ANALIZADOR de SONIDOS de // del SENSOR de // de la ocurrencia) (""/"de las búsquedas reacciona" "marca con etiqueta") (la "etiqueta" puede estar en forma (adicional agregar-en) de sonidos) ("reacciona" al sounds= "señalado" según cómo tal are= de los sonidos "marcado con etiqueta") // tds (característica de la estampilla de fecha del tiempo) (se marca con etiqueta el tiempo particular (duraciones/puntos) = (notificador/acceso) PISTA de // t (telecomunicaciones) (a CID = al material atado "señalados" del to= de la etiqueta/de la "etiqueta" transmitido sobre el teléfono) // (la "etiqueta" controla W5 (qué, donde, porqué, cuando y cómo) algo es) // "marcado con etiqueta" SE ADAPTA/analizador visual/analizador de sonidos = el development= adaptar-DB (base de datos) que ciertas circunstancias pueden ser pesadas como "señalado" por el tipo "etiqueta" // VR (ocurrencia - > el "analizador" interpreta el occurrence= después empareja contra DB (base de datos) de "etiquetas potenciales " = "reacciona " = (creando "experiencia "señalada"")).
Concluye esta sección de la etiqueta en el archivo del perseguidor.

Secretario -4E020. Determina el tipo de ocurrencia (vía "analizador de sonidos"/el interventor humano que escucha en la posición remota (vía la transmisión sin hilos del tipo ocurrencias/o relais real de la codificación de señales de sonidos verdaderos).
. Software existente relacionado de "TDSW":
Brainmaker 2 - (versión profesional), p.76. [Funciones existentes de la invención: Da a PC capacidades humanas tales como encontrar golpeteos en sus datos y aprendizaje a partir del pasado.]: adaptar-pista.
% existe: Llamadas de las vueltas de la identificación de llamador con un tacto. Vendido vía una imagen más aguda el febrero de 95, #SO600.
- Sistema de vigilancia de la patente 5402167 de los E.E.U.U. - registrador de los interruptores del "sensor" del sonido o del movimiento de lento a la velocidad normal de la grabación.
. Ver: + "acceso = VAGOS (VAGOS (analizador del comportamiento))": información usada para supervisar y para determinar quién es el usuario y W5 (qué, donde, porqué, cuando y cómo) que están haciendo.
- Artículo en "economista". "Hermano mayor - el ojo todo-que ve", P. 52, edición de los 11-17 de enero de 1997.
+See se relacionó: Clase de USPTO/subclase recientes 348/169 TV: Seguimiento de objeto. Secretario.
. identificador 5A080: Coger en gente con historias criminales: la gente condenada por la conducción borracha, y la fractura de otras leyes pudo ser pedida/ser requerida tener transmisores el identificarse. La policía, el etc escuchando con los receptores especiales serán más rápidos notarlos y o pararlos mientras que apresura incluso un poco sobre el límite, el etc.
- transmisor atado al coche.

El TIPO del PROGRAMA QUE SEGUÍA el sistema deseó vía ['modificando para requisitos particulares]: archivos 1] w5 [definidos normalmente como material (registrado)] era /registered "analizado" (y entonces visto posteriormente); acceso; uip; analizador; quién tiene copias; donde las copias fueron enviadas; quién está

haciendo qué (w5) w que archive; cómo se están alterando los archivos [material registrado] (los piratas informáticos del retén). Antivirus interruptor = limpiar diseñada/pista/todos los archivos incluso después eran tr fuera de la central/de la fuente la C.)

2] piratas informáticos de las pistas c

3] correlaciona semejanzas entre los archivos materiales de diferenciación, eg.: vía la palabra clave/el analizador visual. Ap: compila fácilmente los archivos relacionados necesarios, reduciendo horas de la mano de obra; análisis de la solicitud de patente; encontrar datos necesarios (para la aprobación del FDA).

4] Esta subdivisión demuestra sobre todo qué ayuda a determinar lo que necesita seguir.

OTD D: Elementos que son seguidos (interruptor, material en disco de la memoria de c (CD, duro), (móvil) u o animales) = este sistema de N (que sigue (interruptor)) ~ C =

ACCESO (las ayudas determinan qué necesita seguir); ANALIZADOR (); AP (cómo el material fue utilizado, porqué fue colocado, uip (tipo cliente, palabras claves del contenido material - todas las ayudas determinan qué necesita seguir)); VAGOS (de ayudas materiales determinar qué necesita seguir); FACTURACIÓN; CEREBRO (); C (); CARRO (el tipo carro utilizó ayudas determina qué necesita seguir); M (el tipo ayudas de la interacción (DB, interruptor de w) determina qué necesita seguir); NR (a cómo último NR señala informes del "estado" fue dirigido/respondido; cómo adentro fuera de línea el material está a los parámetros (de las necesidades del interruptor/del u) las ayudas determinan qué necesita seguir); Banda (el tipo interruptor/las ayudas de las modificaciones del interruptor determina qué necesita seguir); Picosegundo (las ayudas de las localizaciones determinan qué necesita seguir); Q (Q de ayudas del sistema determina qué necesita seguir); + CUENTA (demostraciones del grado que el material es más importante para seguir; guarda la cuenta de ocurrencias anteriores cerca: u/sys para uno o situaciones/usos múltiples); ANALIZADOR de SONIDOS (las ayudas determinan qué necesita seguir); ANALIZADOR VISUAL SANO (las ayudas determinan qué necesita seguir); ESTADO (el estado del programa de seguimiento, w5 está siendo en aquel momento seguido/anterior/puede necesitar seguir más adelante (basado en cerebro)); TDS (la sincronización del cerebro de las ayudas de los acontecimientos determina qué necesita seguir); T (las ayudas de CID determinan qué necesita seguir); TR (el modo de ayudas del tr determina qué necesita seguir); U (el tipo ayudas de u determina qué necesita seguir); UIP (las ayudas determinan qué necesita seguir); UQ (pasado q (de u/de otros ayuda a determinar qué necesita seguir); ANALIZADOR VISUAL (las ayudas determinan qué necesita seguir); VR (); WA (la unidad portable w5 era ayudas usadas determina qué necesita seguir). EDIT (determina w5 que "se sigue" algo).

5] Monitor inteligente 2E251.

. No. de la palmadita de los E.E.U.U. Str de la búsqueda - etiquetas y electrónico en sistema de vigilancia electrónico del artículo del 6.94:5285194 del babero con la etiqueta % de la zona de la transición; el 5266925%; el 5245534%; el 5214409%; 5006856; 5299026

- str: vigilancia de la etiqueta: mucho N, no leyó.

. ranurador 3G050: una mejor N w muchas páginas. Las etiquetas del sistema entonces continúan marcando con etiqueta mientras que file/u se encaminan a cualquier canal/teléfono # (extensión) (después de la desconexión) o (para la reconexión en el tiempo deseó por u).

Las FUNCIONES de la CÁMARA Y del MICRÓFONO se controlan según lo dictado por el sistema de vigilancia de la computadora. Expedientes del sistema según lo que está buscando su analizador: qué, cuando, cómo, donde, que y porqué. Intentos del sistema para substituir características de un monitor humano. Formas más simples son las más rentables para el mercado de hoy.

USOS: 1] El analizador visual busca el movimiento vía cambios en las horas de oficina del exterior de los pixeles de la cámara (no hace caso de sombras del sol). 2] Supervisar el crecimiento bacteriano en los platos de Petri del laboratorio. 3] Sigue el aeropuerto de los bandidos al aeropuerto. Eg.: el protector dice el sistema etiquetar, después sigue a bandido hasta que el bandido deje área de supervisión. 4] ¡Etc!

+ GRABACIÓN ACCIONADA POR UN SISTEMA de DETECCIÓN [la cámara busca (inusual/cambiando) actividad]. Ejemplos:

+-cells en la divisoria del plato de Petri que crece hasta mitad del espacio, o color del cambio

- hay cualquier tipo de amenaza o de desastre (según lo determinado vía un poco de computadora "analizador");

- el sistema considera/oye sonidos particulares: perros que raspan, rompiendo el vidrio, patrones que caminan inusuales.

la gente de +-particular entra o salida (el sistema determina la presencia de la persona (bandido potencial) vía su transmisor u otros medios). Eg.: No. de la gente w de las búsquedas o contraseña de la seguridad de nivel inferior (acceso).

detector de +-Motion: (vieja N, KN), sensores del calor, cambios en los pixeles visuales [imágenes anteriores y posteriores comparadas vía cómo los pixeles (muchos puntos minúsculos que abarcan imagen electrónica) pueden cambiar], el disparar de las luces laser, sensores de la vibración.

actividad de +-villain, eg.: "analizadores de sonidos" quizá para la fractura de cristal, cambios en la luz (conmutación en el interruptor ligero (el sistema no hace caso (vía c) las luces/las reflexiones cambiantes/las sombras de la luz de calle del sol/de la luna)), etc.

- UIP - Programación de la información de usuario: la base de datos demuestra el sistema qué actividades humanas están de menos interés, tal como los que: usar los juegos, trabajar las horas normales, caminar en patrones normales (no parar en (área con los productos propensos de la información valiosa o del hurto) zonas aventuradas), tener visto bueno de seguridad más alta, cualquier otra seguridad de los criterios/uso de los investigadores de identificar patrones aventurados/inusuales/otros del comportamiento.

CONCENTRADOS DEL SISTEMA EN SEÑALES PARTICULARES:

Busca ciertas señales, y una importancia más alta de los lugares en alguno sobre otros. En cada caso, algunos tipos de la señal pueden ser comparativamente menos/de más importancia según: mecanografiar el bandido/""/uip del acceso de la situación (naturaleza de la situación - según lo emparejado por la experiencia anterior del sistema (qué DB dice que sería el "estado probable" para tales acontecimientos).

- sonidos de frecuencias particulares - vía "analizador de sonidos", eg.: los sonidos de las búsquedas o el vidrio de la fractura que caminan, pero no hace caso de tráfico de coche o el movimiento por otras cámaras (dentro de su opinión), también no hace caso: sombras móviles vía fuente de luz de la ventana, vía: sol, luna, coche o calle u otras luces exteriores.

- no hace caso: gente no suspicaz debido a su uip - tal gente tiene perfil del comportamiento ("VAGOS") cuya "cuenta" los coloque más bajo que otros bandidos potenciales. El sistema actúa similar en esta capacidad a quién o qué (w5) un oficial de policía vivo sigue sobre dado los plomos consiguen.

- Sentidos adicionales: El sistema recoge entonces analiza sistemas de datos múltiples. Olor "analizadores", eg.: detectores para el fuego, lanzamientos químicos (peligrosos), olor de cuerpo, humedad. Intuición: ¿UIP? Vibración: distingue entre el tipo vibraciones por ejemplo del carro que levanta en la noche del acondicionador de aire. Analizador del diafragma de la huella digital o del ojo: para acceder, saber quién está entrando o se está yendo.

MISCELÁNEO:

- este sistema obra recíprocamente con otros (seguridad o supervisión) sistemas;
- Adaptación. El sistema se adapta a las necesidades cambiantes cerca: el minuto, día, ciclo de negocio, estado de la emergencia, alertas de protector o de otro sistema de seguridad.
- Esta invención se relaciona grandemente con las invenciones numerosas a través de KN, incluyendo piezas: "Cerebro", "sensor", "cámara", "Mic".

EL REACCIONAR AL BANDIDO: cuando el sistema primero identifica deseó actividad o la determina allí es (probable) un bandido, él puede: policía (de la llamada); seguridad interna; alarmas de los sonidos (oscilador); automáticamente puertas o acceso de la cerradura en sistemas informáticos o terreno físico; destraillar los perros de protector; activar otros sistemas de la seguridad (supervisión); rociar coloreado mueren (por todas partes o sobre objetos móviles); rociar el gas o (insecto, rata, o hierba) los venenos del tranquilizante, eg.: parar la extensión de gérmenes nuevamente dirigidos; cualquie otro sistema de respuesta automática sabido en situaciones de la seguridad/el monitoring%.

- Necesidad de considerar ediciones de la responsabilidad legal en reaccionar a los bandidos.
- Procesos legales. verificador de la comunicación 4E020: las ayudas prueban que las ocurrencias fueron registradas en los datos del tiempo fueron transmitidas y la fecha del tiempo estampada en la fuente secundaria, eg.: computadora alejada.

BASE DE DATOS:

- Base de datos enorme de las circunstancias diversas, imágenes, datos usados por el sistema para decidir vía su computadora "analizador" si un objeto debe ser: seguido, etiquetado, capturado.
- El edificio para arriba de la base de datos lleva al desarrollo del uip para tal tipo (futuro) de circunstancias (semejantemente de la repetición posible).
- Seguimiento de objetos durante periodo de tiempo. Base de datos usada para ayudar a identificar la repetición de vuelta/de acciones iguales/de objetos similares. Las aplicaciones/desarrollan el uip.
- Perfil de los estudios/de los fósforos de sistema del objeto mirado. Aplicaciones UIP.

ACCESO. Personales autorizados que acceden en el edificio/el sistema (de la computadora): las aplicaciones pasan el código que acciona la manera de la cual el sistema la supervisará; el sistema puede hacer preguntas autorizadas de los personales (automatizados) en cuanto a porqué están haciendo lo que están haciendo (w5); el sistema sabe distinguir entre diversa gente y por lo que están haciendo.

FABRICACIÓN: analiza para porqué y cuando los productos (w5) fallan. Búsquedas del análisis de la falta: en qué defectos visibles de la etapa son más probables ocurrir vía sistema de seguimiento; identifica que la unidad de producción está poniendo hacia fuera las piezas defectuosas o el trabajo; mira los cambios en el aspecto de objetos después de que se hayan alterado de cierta manera por ejemplo color o texture el cambio después de soldar con autógena, haciendo estallar fuera del molde, estampando; cambios en vida o materia del alimento en un cierto plazo para el color, textura, olor (analizador del olor); piezas que caen de planta de fabricación.

USOS ADICIONALES: Uso de los analistas de comercialización de estudiar patrones del comprador de ésos que cumplen sus criterios automatizados de búsqueda, eg.: qué clientes de la tarjeta de crédito del oro hacen después de/antes de comprar artículos particulares, o qué señoras rubias altas buy/do en Macy/almacén del expediente tres días en la campaña publicitaria de Madonna; seguridad en: aeropuertos, alamedas de compras, edificios de oficinas, bancos, siguiendo a la misma persona que salta entre los diversos edificios o aeropuertos conectados con el mismo sistema de vigilancia; supervisión de chimpancés agresivos en cautiverio; límites cómo un sistema de la realidad (VR) virtual puede ser utilizado, eg.: bloqueando los de caminar más allá de cierta distancia, o cambios el software de VR según qué o donde (w5) de la situación del usuario. "Mandando la cuenta".

Existe: cámara de los controles de computadora, eg. cuando: cada 30 segundos, o cuando la palanca de mando se mueve. Cuando no hay piezas que vienen abajo planta de fabricación, el sistema se para. C mueve la cámara bajo manera preprogramada, eg.: filtrado de vez en cuando - probablemente no adaptándose a los cambios ambientales. Cámaras accionadas por control remoto vía: palanca de mando.

- Las piedras de afilar del sistema sobre el paso de los números de matrícula del automóvil (si están apresurando) entonces procesan los números según lo necesitado, eg.: números de licencia particulares que buscan, dando citaciones que apresuran.

- Existe quizá:

Los pixeles probablemente de menor importancia cambian en marco al marco debido a los parásitos atmosféricos eléctricos. Pero este sistema pudo no hacer caso de tales. Busca para los cambios grandes. Entonces el sistema sigue el movimiento del cambio grande. Pero no pudo haber mejorado arriba. Mucha de la partición de la "facturación".

Quizá patentable: el sistema identifica a persona (del detalle) vía uip (información de usuario que programa), eg.: el color, altura, entonces cámara sigue. Entonces el sistema va automáticamente a rematar a la 3ro parte de la persona. El sistema sabe para ir a la tapa de la imagen.

- nr cuando la parte inferior del plato de Petri se llena.

- la cámara del punto en la central nuclear, punto en el área inusual (caliente), cámara (infrarroja) entonces mueve su cabeza a otras partes importantes (después de eso, que pudieron internar efectuarse).

Problemas: Los analizadores visuales requieren quizá la programación costosa, aunque tenemos programadores extranjeros baratos disponibles. Cada usuario querrá adaptar el sistema a sus necesidades, aumentando costes programados. Los analizadores no visuales pueden malinterpretar señales, eg.: analizador de sonidos. Necesidades de este número del producto que enangostan abajo a una o poca solicitudes de patente.

- mucho los sistemas del detector y del viaje existen, en la golondrina de mar que lastima las ocasiones para la patentabilidad y la comerciabilidad.

Misceláneo:

- Interactivo. Lanzamientos de la cámara en ciertos casos cuando: el "analizador visual" se acciona de cualquier manera como un movimiento que es detectado; el tipo de imagen hecho se encamina/se corrige automáticamente según cómo el "analizador visual" analizaba imagen.

Investigador de la imagen -2E210: la cámara busca las imágenes particulares, interno tira, sigue, las cacerolas, etc por consiguiente según lo programado.

- si hay circunstancias inusuales/solicitadas múltiples, el sistema puede (rápidamente) filtrar entre los dos, dando tiempo igual a cada uno, o proporcional más a el que está por cómo es inusual es (con un 65% máximo de tiempo a cualquier un punto).

--si uno de los puntos llega a ser menos inusual (el bandido dejó su bolso en piso y caminó más lejos), el sistema presta menos atención (desde su mudanza (mucho) más)

--el sistema funciona con uno o más cámaras que (parcialmente) las traslape el área de la visión.

- la cámara enfoca en la actividad deseada, persona, objeto, (como cambios ocurrir).

DIAGRAMA DE OTD: Esta N sistema = ACCESO (hace/no mira objects/u la mudanza según el tipo transmisión de su código u k del tr/de acceso sobre entrada); ANALIZADOR (desarrolla el perfil del objeto que es estudiado = uip = sistema reacciona por consiguiente); CARRO (el acceso (tarjeta) de incorporar u tiene/acciona: interruptor, tipo banda, funciones asociadas del uip w); EDUC (aprender el w5 de la gente/de bandidos potenciales; aprender coger actividad ilegal repetida iguales/de gente similar en iguales/diversas localizaciones/situaciones vía el uip); M (DB, uip); MIC (analizador de sonidos); MULTIUSOS (uip, siguiendo); NOTIFICADOR (policía, seguridad); OSCILADOR (alarmas); Banda (); Picosegundo (tr usado por u); Q (la gente en la seguridad/ésas que son observadas (si ella tiene problema) puede ayudar a solucionarlo (eg.: tener acceso fue negado (por razón tonta)); S (la seguridad/la gente que es observada puede considerarse); CUENTA (chance tal u puede confiar crimen = vía el uip, el DB); SENSOR (movimiento: el calor, vibración, analizador visual = hace el sistema prestar una atención más cercana); ANALIZADOR DE SONIDOS (); ESTADO (monitor qué se está encendiendo, interno de la seguridad de las ayudas que presta la mayor atención donde está debido); SYNTH (el oscilador se altera a más bandidos del susto, el tipo sonido "se analiza" para y en analizador "del comportamiento" de la voz de la golondrina de mar seleccionada por el "analizador" basado en el uip del objeto observado, y del objeto, y comportamiento "analizador", y software del crimen); TDS (w5 de ocurrencias, para el uip, el DB); UIP (); ANALIZADOR VISUAL (); WA (usado por el objeto o la seguridad observado; picosegundo; tr su código de acceso).

DIAGRAMA #1: objetos móviles o inmóviles: tiran/"tr a la gente/los animales/los organismos/los meteoritos/los productos o las piezas = las imágenes de los controles w5 registrado" = vía el analizador visual/uip/satélite/m/r de (c)/detector de movimiento/tds/analizador del olor/analizador de la vibración.

- D2 - UIP: [datos usados para desarrollar el uip: objeto visto = analizador camera=visual/DB/m/k (qué protector entra)] = analizador de la c (interruptor: archivos de los fósforos)
- D3 - Reaccionando a la situación solicitada aislada, o al bandido: el sistema de vigilancia piensa que hay alta ocasión de este ser el caso = entonces los estudios de sistema que otros datos recibieron de la situación actual, eg.: emparejándolo con su DB = si las ocasiones de la situación buscada (cada vez más) probablemente = sistema reaccionan: cogida/seguimiento de la detención/bloqueo/privación de capacidad objeto o bandido/de ellas (más de cerca).

MISCELÁNEO:

- relacionado con el 1G040 anterior.
- El sistema identifica el usuario/el potencial villains/u vía: (su acceso), w5.
- Esta invención "obra recíprocamente" con:

Cualquie KN %; Cualquie sistema de la supervisión de seguridad del existing%, eg.: gana el Info adicional (vía la supervisión, el uip (colección de datos = para los datos que emparejan)/la policía de las ayudas/las ayudas determinan la naturaleza de la actividad inusual.

- El sistema sabe a lo que su no hacer caso/no paga mucha atención, (debido a los sistemas c=memory (uip de tal tipo ocurrencias)).

- Organizando y procesando los datos D:

OTD D: Este sistema de N (C=SW para organizar y procesar datos. /4E020 monitor inteligente C/2E251 del verificador del contenido y de la fecha/=

DIAGRAMA #2 DE OTD: Este ~ del sistema de N (2E251) C =

BALANCE (mic controlado para conseguir la grabación exacta en pistas audios múltiples); VAGOS/BVA (cierto comportamiento is/is no supervisado); EDUC (para los usos de la investigación); GPS (monitor controlado por cualquiera/la carencia del paladio); RATÓN (controles de u/guard (la toma panorámica, el otro movimiento): cámara, mic); MQ ("cerebro"); MULTIUSOS (diferencia en medio: paladio, u (sus características: bva, "cerebro")); Q ("cerebro"); ANALIZADOR DE SONIDOS (); ANALIZADOR VISUAL SANO (interpreta ocurrencias en los códigos/texto); DISCURSO (u (en zona cerca del sistema del control de los sensores del monitor (pudo tener "acceso" /R/ "cerebro" a) 2E251, soluciona el problema del sistema que diagnostica a protectores de seguridad como bandidos potenciales); ESTEREOFONIA (los sensores cogen la información y la juegan de nuevo en estereofonia/Synth; TDS (); UQ (); + VR (permite u (portador del sistema del vr) a la caminata sobre el sistema de w VR que interpreta el ambiente para u (como banda). Ejemplo: la caminata alrededor de Palo Alto y de U experimenta la caminata como no cae una caminata en París, u abajo, sistema intenta la información necesaria para asistir a u mientras que las peticiones de u (vía su interruptor de VR). Sistema en las robustezas similares de las guías de la manera para hacer cualesquiera tareas se quieren para hacer. "Cerebro" para la robusteza o VR); WA (VR; Security/U controla el sistema vía R).

MICRÓFONO 1G040 Y CÁMARA TELEDIRIGIDOS AUTOMÁTICOS: El sensor sigue a individuos señalados vía: sus pixeles visuales, y o, suenan creados, y o, dispositivo teledirigido llevado a cabo por el director o el agente, y o transmisor usado por el agente. Más barato y menos obvio que el sistema de vigilancia vivo.

-"/Cámara del mic del mando a distancia "permite que el usuario coja más en los elementos deseados.

- esta N copiada a G \ a GE (G excelente) o G \ GG (G bueno) 8.94. Verlo para las actualizaciones.

¿- habló quizá alrededor vago en la convención (con Shure)?

- D para la opción del "mic": sonido = "sensor" = c = "mic" = proceso de la grabación = c~memory = oscilador
- D para la cámara: (Localización cambiante de) la persona o el objeto que se fotografiarán notó vía su ""/del tr % creados sonido/su imagen (forma del cuerpo, tamaño, peso, color (de la ropa, del pelo, de los ojos...) = "sensor" = c (controles: qué lanzamientos de la cámara/ángulos cambiantes de cámaras 1 o más aplicable para seguir a persona) = grabación = cinta/c (memoria) = aparato de lectura/s
- el sistema sigue el elemento (de mudanza) taggable

--otros modos que marcan con etiqueta: el alambre conectado con el objeto del interés da su localización (por cómo el alambre es doblado = "sensor" = c (analizador).

- OTD:

ACCESO: (); ARTISTA: (utilizar el sonido/los efectos visuales almacenados para la demostración audio/visual el crear); CÁMARA: (); CARRO: (marcando con etiqueta (el sistema sigue características particulares: color,

sonidos de voces femeninas o persona particular...); COMPOSICIÓN: (); ENTRETENER: (); M: (); MULTIUSOS: (); NOTIFICADOR: (); OSCILADOR: (); Banda: (); IMPRESORA: (); Picosegundo: (localiza a usuario); Q: (); R: (); S: (); CUENTA: (tds, demostraciones donde está la persona/el objeto que es seguido/marcado con etiqueta, cómo están cambiando (localización, tipo sonido o movimiento); SYNTH: (); UIP: (marcando con etiqueta (sistema preparado mejor para seguir el objeto basado en su sabido/probablemente características del movimiento); WA: (la persona puede escuchar la persona que es subtitulada (mientras que el oyente está en otro sitio)).

- esta N combinada con los SISTEMAS 3E-220 QUE UTILIZAN ""/"de los SISTEMAS de COLOCACIÓN TELECONTROL" en 1.95, y copiada entonces para mejorar el archivo de N.

la GRABACIÓN 5E040 INCITÓ SOBRE la PRESENCIA De CIERTOS SONIDOS: El micrófono y la cámara activaron cuando estaba deseado. Ahorra tiempo, permitiendo menos tiempo de la revisión más adelante por el empleado. Usos: Supervisión de seguridad, eg.: sobre la fractura del vidrio, las voces fuera de horas normales, persiguen el descortezamiento. Investigación - sobre ocurrencias programadas, eg. cuando organismos: grito, juguetes del sonido metálico de golpe o choque alrededor. Misceláneo: la grabación puede estar en curso, aunque las porciones señaladas se marcan con etiqueta según el tipo ocurrencia, para la parte posterior fácil del juego.

- En otras palabras: El sistema responde a ciertos sonidos: Programar el sistema para buscar ciertos sonidos, después cuando son oídos por el sistema, sistema:

1] expediente/sintetiza según lo programado.

2] "notifican" (las emergencias)

- D1: (Paso 1: monedas de la sacudida en bolsillos; Paso 2: memorizado; 3: usuario "pp" cómo #1 debe "ser sintetizado"; 4: el usuario sacude monedas de casi cualquier manera dentro de la gama del mic; 5: expedientes del "mic"; 6: aparato de lectura.

- D2: sonido externamente generado - > analizador del mic = de sonidos = c (cart/m) = notificador/mic (sistema de grabación/synth).

. - el "analizador de sonidos" es "pp" para buscar solamente los sonidos similares a la entrada original del sonido deseado que se seleccionará. El sistema debe no hacer caso de otros sonidos.

Sonido = "mic" = analizador = memoria = función de los sonidos

- incorpora funciones del sistema de "Hanauta" de Rolando (el ritmo del tarareo crea el tempo para la guitarra u otros sonidos)

- OTD: acceso; usos de la seguridad (que rompen el descortezamiento/desplome del vidrio/el perro suena - > mic - > 5E-04 ("") del analizador del "sonido "=c=notifier/r (el usuario puede ^: escuchar adentro en la acción/el control (EL) en la posición remota (escena del crimen percibido)/la seguridad del contacto (protectores). Los sonidos solicitados pueden también ser de ^: el carro/m, de esta manera la anchura de espectros sanos pudo ser más amplio/seleccionado más cuidadosamente para evitar la interpretación con otros sonidos.

MONITOR INTELIGENTE. ¿Pero puede ser hecho?

- más difícilmente explicar en el mk: necesidad de demostrar a p los lo necesitan.
- mucha hora: para hacer búsqueda del mercado, y la solicitud de patente.
- Reducir los costes de la frecuencia intermedia: la función limitada "sensores" [para el monitor rector] cortó costes, eg.: sensor = analizador de sonidos (que busca cualquie sonido). Las compañías grandes del int'l que intentan reducir costos de la nómina de pago pueden utilizar este sistema, y pagan monitores más crudos contra estar fuera.
- protector mirando múltiple cámara tener difícil tiempo oyendo múltiple sonido (simultáneamente)/que identifica qué sonido viene de qué localización.
- esta N data del "analizador visual" también
- para las ideas ver el archivo: E \ 3E.

MISCELÁNEO:

- cámara nunca vista controlada. ¿Tipo geográfico cuadros de Nat'l de crecimiento de flores, algo accionó la cámara en sus etapas?
- la visión por ordenador es un área grande: eg. detecta las grietas en botellas. El transductor es lo que este concepto.
- vibración "analizador": ciertos tipos de las búsquedas de modos de la vibración (similares "al analizador sano o visual" en modo). Los carros tienen una característica particular de la vibración (carros del monitor con excepción los nuestros).
- características de la gente para coger/aviso del sistema: altura - fácil hacer; características faciales - difícilmente hacer - mismo complejo para no humano.

. Búsqueda de la palmadita: sistemas de reconocimiento visual.

- patentabilidad: Existe quizá, un poco de sensor entonces disparado activa la cámara, mic. Existe: mic activado por el sonido sobre cierto umbral. El centrarse en "el sistema que activa del analizador de sonidos" - lo hace que esto sería más probablemente patentable.

--Obvio?: el disparar ligero activar el monitor pudo.

--No obvio?: calentar el sensor, sensor de la vibración, analizador del olor, porque menos campo común, menos disponible. Analizador visual.

--Existe: señalar la cámara en el compartimiento de piezas, dirigiendo la mano de la robusteza para el tipo parte, eg.: tuerca o perno. Quizá un sistema más complejo.

- Nota: el término "monitor inteligente" 2E251 es básicamente reemplazable con el "perseguidor". El anterior era wo usado el perseguidor del término en ocasiones diversas.

CÁMARA del VCR 2E250: Una mejora de la cámara miniaturizada de Sony.

1 cámara = registrador 2 base/3 = 4 parte posterior del juego de tr/5 editing/6 7 otra.

OTD: convertidor de imagen 2; cojín del aire 2tr (cámara del espectador/del control); artista (corregir las imágenes registradas, eg.: agregar los gráficos); básico; carro 2 (el corregir); cc; 2clap; 2composition (efectos visuales corregidos cosechadora con audio compuesto/corregido/sintetizado); cp; 2date; 2display; distancer 2 (activa/desactiva la cámara/el sistema); entretener; 2 "C"; flotador 123; trabajos de 1 cámara (debajo del agua 5000 metros debajo del nivel del mar, y en condiciones para cualquier estación); 2fs (del fs imágenes hacia fuera hechas); %game; satélite 7; 2gps (el sistema indicar/demostración que la localización en la cual la visión fue hecha, ayuda a analizar correlaciones entre la localización y/visuales para recogido los datos audios/de tales localizaciones); las imágenes de los controles w5 del satélite se tiran/"tr registrado"; interactivo (lanzamientos de la cámara en ciertos casos: cuando 3 el " analizador visual" se acciona de cualquier manera como un movimiento que es detectado, el tipo de imagen hecho es automáticamente 3routed/edited según cómo imagen analizada del "analizador visual"); 2 " localizador" busca desearon el objeto/la situación que necesitan ser tiro, y dirige la cámara; md; 7 M; 2microphone; 2mouse (que corrige A/V); 2mp; 2mq; 7notifier; oscilador 7; portable; 2pp; impresora 7 (las imágenes de impresiones copiaron; 2remote; analizador 2sound; altavoz; estereofonia del 7% (disfrutar de las imágenes hechas con el sistema de tv/vcr/vtr/stereo; 1tilt; 2uk; 2uq; 2vc; analizador 2visual; %vr; %wa.

. Existe: R27 localiza y sigue objetos. Analiza los movimientos. Sigue los movimientos vía: detección del brillo de la imagen. Usos: sigue actividades de los clientes, pacientes, atletas.

- Donante menos o una dirección más preferencial: 1] la presencia de cierto disparador del can= del wa N el "notificador". 2] en ciertas circunstancias del development= uip-DB se pueden pesar según lo "señalado" por el tipo "etiqueta". 3] "etiqueta" = tipo "cuenta" para se marca con etiqueta qué.

- La etiqueta se pudo encubrir (de usuario), especialmente para ("access') "que sigue" propósitos.

. Construcción (interruptor) de la "etiqueta":

- puede incluir uno o variables/las instrucciones múltiples de las cuentas/interruptor para a cómo el sistema si "reaccionar" a la etiqueta/qué etiqueta se ata.

- La etiqueta hace que la "búsqueda" y "reaccione" piezas: Una porción está en el material que es marcado con etiqueta, el otro que "reacciona" a la "etiqueta". Eg.: las funciones también tienen gusto de un presente humano de la "etiqueta" del triggering= las "del anti-body= reacciones" según el tipo.

. OTD D: U = "marcando" el ~ con etiqueta (W5) C

EXTREMO DE ESTA SECCIÓN DE LA PISTA, PARA ESTE USO DE LA PALMADITA
LADRÓN SUB-FEATURE DE S DE LA PISTA'

INTRODUCCIÓN: Los sistemas que tratan de los ladrones (del ser humano), y que no pertenecen exactamente en la pista archivan. Ver relacionado: Clase de USPTO/subclase recientes 348/169 TV: Seguimiento de objeto. Piezas:

RETÉN =

Las ayudas cogen a gente ilícita. También ver la pista.

-

1C252 bandido Pinpointer: Punta del protector de las ayudas donde está el bandido.

+ dirección de las demostraciones del 'images= sano vía el goniómetro

. --D: persona = mic/analizador de la cámara = de sonidos/analizador visual = c ['pista/ladrón/vagos] = nr.

- los sistemas son controlables completamente por la persona en ("R") la localización alejada/en las premisas/C.

. - pasado de las puntas/ocurrencias posibles de la presencia %future.

. - fue cortado de, no convertido después de 1C250.

+ espectador de la seguridad de o: Mientras que mira la televisión, notifican al vigilante humano siempre que ocurra un cambio en la escena del espectador de la cámara.

las pantallas múltiples o las ventanas de +-if están siendo vistas simultáneamente por el guard= que (porción de) "s" ese necesita la atención se marca/se corrige.

--qué necesita la atención: movimiento; o los vagos (analizador del comportamiento del `[para adaptarse]) determinan el tipo de cambio pueden ser indicativos de actividad ilícita o el otro sistema señalado de la actividad es coger programada/pista.

. - programado para alertar a vigilante cuando cierto porcentaje de la pantalla cambia, evita el problema de alertar el espectador cuando un pájaro vuela en la visión.

. - los cambios en "lente" "'analizaban" vía cambios en sus pixeles.

. - en esta etapa, la visión se representa sobre parte (el usuario puede todavía mirar la demostración) o toda la pantalla.

- puede tomar cuadros en la dirección de la fuente sana: el sonido - > analizador de sonidos - > C (computadora y software del `) - > mueve mecánicamente ""/"de la cámara lente" enfoca o ajusta electrónicamente a la localización deseada (w o la cámara externa móvil del wo (fuera) (en la atención de dibujo de la golondrina de mar a sí mismo - > notificando a bandido)

--la lente o el microscopio de zumbido puede afilar con piedra más en ocurrencias señaladas.

. - aplicaciones las muchas patentes usadas intrusos para marcar o de la pista u objetos móviles.

NOTIFICADOR =

estado de cuaesquiera ladrones dados al inquilino

3A632 movimiento "sensor": una persona mayor sabrá si cualquier persona está caminando alrededor del cuarto. Compensa propios movimientos del usuario.

- los alertan vía las señales sonoras [etc] en auricular; pequeños altavoces situados en áreas señaladas

¡- para el uso de interior, siempre que una persona camine en un cuarto, una señal sonora [etc] suena cuando se dispara una luz laser (existe con todo grande para el uso de interior del consumidor para este tipo de mercado mayor! La gente no tiene gusto de la sensación de no saber qué está sucediendo alrededor de él)

COLECTOR PÚBLICO del VÁNDALO de la MÁQUINA 5A600: alarma a policía si cualquier dispositivo se está tratando de forzar con. Para los teléfonos, máquinas expendedoras, [máquinas del boleto, luces de calle, elevadores, (existe?: cabinas de peaje, máquinas de efectivo)], transporte público, salones que esperan

- sentidos del receptor para: vibración excesiva, actividad inusual en el cojín dominante, calor excesivo (que detecta vandalismo del fuego)

- (este elemento pudo ser único: los receptores falsos de la alarma pueden también ayudar a frustrar de vándalos)

OBRAR RECÍPROCAMENTE =

El sistema reacciona obrando recíprocamente con el intruso cuando analiza su presencia. Formas de interacción:

- Dispara para arriba a ladrón: traba para arriba sistemas, eg.: los requisitos del acceso llegan a ser más apretados; cerradura de puertas; los protectores notificaron.

--Interactivo audio.

SISTEMA de ALARMA de la PARANOIA 3A180:

envía la risa cínica de un "payaso listo" sobre entrada ilegal. Otros mensajes: las sirenas entonces "salen con sus manos en la cabeza"; fractura del vidrio como si haya otra tuerca en premisas; perros; "hey usted viene aquí", las "manos encima de usted está bajo detención"; sonidos no verbales extraños; perros cósmicos extraños; cualquier cosa (sonidos, etc) engranada especialmente psicologicamente a asustar el semi-paranoico y o ésos en las drogas durante el robo con allanamiento de morada; etc. Efectos audios/visuales demostrados disuadir a ladrones: exhibiciones del laser, declaraciones en la luz que aparece en las paredes, televisiones que se giran con una película/un vídeo.

- la exhibición puede seleccionar para demostrar al ladrón: el sistema de información ha cogido el Info en ladrón eg.: su altura, peso, raza, cuadro de la cara, el ladrón del etc. dijo la información se almacena en distante, irrecuperable, o fuente secreta, o policía "C". Ladrón mayo o mayo no ver su propia cara. Quizá cámara/sensores ocultados en cualquie número de maneras. La salida a audio selecto/a la representación visual del ladrón demostrados asustar a menudo psicologicamente/disuade o reduce a ladrón del tiempo vaga en premisas.

SIRENA 3A115 y ALARMA FALSAS:

si el intruso entra, oyen vía la sirena distante del oscilador que consigue más ruidosamente (como si de afuera, o quizá de ventana del exterior de los altavoces de la prueba del agua apenas).

Mientras tanto la policía verdadera pudo ser llamada adentro.

PERRO del DESCORTEZAMIENTO 3A370:

sonido [oscilador] del perro del descortezamiento sobre el sonido o de la persona que camina encima de la calzada (cuando se cruza la línea del laser). El sonido realista consigue en los segundos que significan el perro está más ruidosamente más cercano a puerta principal.

- mientras que la persona camina alrededor fuera de la estancia el perro que el descortezamiento los sigue por los sonidos que emiten de diversos altavoces.

- tipo de cambios del descortezamiento del perro (eg.: consigue más enojado, con o sin el volumen de sonidos consiguiendo más ruidosamente)

- grande para la gente que quiere la protección de hogares, pero sin los problemas de cuidar para el animal.
- el usuario puede tener pequeña casa de perro vacía adentro detrás de la yarda americana grande, al lateral (tan posiblemente visible de puerta de entrada lateral del jardín)

REFLECTOR de los SONIDOS 5A220: cada uno de los sonidos del intruso (eg.: pasos, apertura de armarios, fractura del vidrio...) se registran y se juegan de nuevo a espectro y ayudan a disuadir a ladrón.
- tener el convertido de la opción del Karaoke sus sonidos en otros

NOTIFICADOR DE TAMPERER =

PARTE POSTERIOR DEL JUEGO =
los juegos del sistema de seguridad 1C251 mueven hacia atrás últimos incidentes: Si el usuario oyó un sonido extraño en otra parte de la vivienda, el sistema jugará ocurrencia trasera. "mic" y o foco de la cámara en la dirección de la fuente sana.
Usos: para los ancianos; reduce el número de protectores que patrullan necesarios; etc. El área patentable aparece ser la alarma del analizador de sonidos. La buena posibilidad un cierto tipo visual analizador existe.
. - fue cortado de, no convertido después de 1C250.
el sonido extraño de +-a en una cierta región de hogar, almacén (en la noche), entonces usuario puede solicitar el "mic" y o la cámara (aún o cuadro móvil) coger y o jugar de nuevo los sonidos traseros (que dejan a usuario mejor juzgar qué sucedió) de la localización general del sonido original que hizo a usuario ser alertada. + ver la pista.

Info general en nuestros sistemas del ladrón:

+ verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias
- Los 'sistemas del ladrón muy se atan a la pista de la pieza.

MEMORIZER de la HUELLA DIGITAL 3A206: electrónicamente o químicamente recuerda la huella digital. El coto de las ayudas imprime si la parte externa de objeto tocado consigue cambiada suavemente. Eg.: dar una pluma/un vidrio alguien y su más fácil embolsar el artículo tocado en un bolso sin el miedo de perder sus impresiones.

+ <3, 3, 3, IDENTIFICADOR del BANDIDO de 3> 1C250: El analizador utiliza la amplia gama de sensores conjuntamente con el analizador del comportamiento, para establecer presencia de cualquier bandido.

+ las búsquedas del sistema entonces "analizan" uno o más ocurrencias (sonido, cambios visuales) entonces reaccionan.

. - El sistema puede mejor tomar decisiones teniendo una gama más amplia de señales de analizar de, eg.: la fractura del vidrio siguió por alguien que caminaba en área prohibida.

+ sensores de KN (invención): cualesquiera de ellos se utilizan para supervisar ocurrencias.

+ el área patentable aparece ser la alarma del analizador de sonidos.

. - Modelos más baratos "notifican simplemente" (wo que analiza) sobre la audición de cualquier ocurrencia dentro de ciertas gamas de frecuencia (vidrio que se rompe).

. - Interventor de A/V. Permite que el usuario siga a ladrón

-

Misceláneo:

- también alarmas si algu□n movimiento (o solamente extraños) ocurre vía cambios en el espectador de la cámara; de tal modo también para el uso científico también, eg.: cambios de la tranquilidad en un experimento del laboratorio.

. - las cámaras de vídeo se pueden también activar en similar y o modos simultáneos como con el "mic". Cuando está jugada de nuevo, la pantalla también ha exhibido "respuesta".

. - Siempre que las señales se envíen al dispositivo, el "mic" para la localización apropiada transmite y o registra los sonidos para señalar los plazos

. - sobre el sonido del timbre, el usuario dentro del altavoz los deja oír qué ocurre fuera de puerta hasta que se abra y o los primeros 2-8 minutos, cualquiera viene primero.

. - ap: almacenes, oficinas (durante día y o noche); bancos; cuartos electrónicos de la máquina de efectivo del banco; otras áreas donde esta información puede utilizar para coger a criminales...; para las situaciones donde hay un presupuesto bajo para el personal de seguridad (hace a gente más dispuesta a trabajar para menos dinero teniendo la TV a mirar, etc; menos caminando en frío; etc.). Sostiene seguridad, eg.: una capa secundaria de la seguridad (una capa, alrededor que camina/segunda de la persona viva capa, EL (individuo vivo del monitor de w). uip para la investigación general (el convertirse/extensión de la base de datos para el uip)

-

O-Incorpora partes de 1C251. Era el No. 1C330: Registrador de cinta rotatorio:

[esto se relaciona con otro producto # que también incluyó uso de este sistema con las cámaras de seguridad video] - por lo tanto no abierto para el público todavía

. - Slogans publicitarios de consumidor: ¿Oír nunca un sonido y no seguro qué usted oyó? Publicidad apuntada a cierta gente, tal como ancianos, madre levemente paranoica en leyes, etc.

. - la subsistencia del =c de la cinta del microchips~) (vídeo)) (memoria) suena por cierto tiempo, el "sistema de lazo" puede continuar registrando y borrando más viejos sonidos

. - repetirlo en un volumen más alto si está deseado; los que quieren sistemas más elaborados pueden volver más adelante al almacén y comprar los micrófonos adicionales u otras opciones que pueden registrar de diversas

localizaciones para conseguir un mejor sonido. Durante/después de la ocurrencia, sys/u puede también disecar/en golondrina de mar "analiza" ocurrencias del pasado.

Misceláneo:

- las variaciones modelo complejas han memorizado (analizador de sonidos) el sonido comúnmente generado en el ambiente = (vía el uip/el carro/aprende vía m) = y no hace caso de ellos completamente/parcialmente.

. --Eg.: se cifran los sonidos poco importantes = c (sistema de la seguridad). Cuando ocurren los sonidos poco importantes - > analizador de sonido convierte sonidos entrantes a las señales que representan el tipo sonido - > analizador de sonidos - > los descartes/no hacen caso (a menos que hay un compuesto del múltiplo tales sonidos poco importantes por la banda en este caso protector del nr del sistema (sistema electrónico) (notifica cuando está señalado).

- Muchos 1occurrences/elements adicionales pueden accionar (audio/la representación visual/la otra" grabación el "del "sensor analizar" funciona:

. --sobre uno o más situaciones limitadas/occurrences1 - > se crea una señal. - > este interno de la señal puede: activar lo más cerca posible ""/"de la lente mic" (para el analizador de tr/replay (protector de servicio) /sound/analyzer/m/c/etc. visual.

---Eg.: abertura 1 = 2 de cualquie/4 caja fuerte puerta/3 ventanas/5 [entrada en cierta zona (vía detector de movimiento/el sensor de la luz laser que dispara/del calor)] /6 productos químicos accidente (sensor (interacción química en el sensor) - > señales c (analizador) - >"/"de la lente de nr/"mic" (la lente/mic puede ayudar: "analizan"/protector, comprueban qué es sucediendo (llano/tipo de peligro, cómo manejar emergencia)/7 terremoto/8 (EL) apagón/9 vibración (fractura y entrada sonido/12 llamadas verbales)/10 timbres/11 teléfonos de ayuda (de cualquier persona w/in descortezamiento del perro gama/13 de los "ratones" (véase la seguridad KN del descortezamiento del perro del EL)/sonidos (incorrectos/que funcionan incorrectamente)/función/operación del EL de la actividad (electrónica) inusual del equipo

+ UIP: memoriza gamas/ocurrencias poco importantes de la señal = así que el sistema (sistema electrónico) las puentea en futuro:

--eg.: el sonido y el ambiente estándar, pudiendo distinguir al posible llano, qué aparece extraño). Los estímulos poco importantes que pueden ser no hechos caso pueden cubrir millares de tipos de ocurrencias, eg.: cualesquiera enumeraron adjunto. Los usos de muestra, no hacen caso: los 50% de ciertos sonidos o representaciones visuales/de entradas humanas si durante horas de trabajo, estos 50% son resueltos vía la banda y la probabilidad de la ocurrencia/de la distracción para la seguridad contra riesgos relativos (para la organización, eg. hurto/daño).

--eg.: las últimas ocurrencias determinadas analizador que pensamiento requirió la notificación no eran realmente importantes (según lo determinado por el protector) = en futuro tal juego de las ocurrencias de la vida real poco o nada de importancia en la determinación de si la notificación para guardar se autoriza.

. - multiusos: el sistema puede reaccionar diferentemente a diversa gente (que camina alrededor), según el uip/el acceso de la persona = del sistema (sistema electrónico) no hace caso/busca de ciertas ocurrencias = en analizar

de la golondrina de mar (vía la banda que empareja el uip de la persona). Dos diversas personas pueden hacer las mismas acciones, con todo: el sistema busca las ocurrencias de diferenciación/incluso si el sistema busca las mismas ocurrencias para ambos = el "análisis" de sus ocurrencias = se podría procesar diferentemente. . --el sistema desarrolla el uip encendido: u (gente,)/laboratorio de los extranjeros experimenta o el su equipo/"análisis ambiental"/la otra reunión de la investigación necesita.

-

OTD:

exhibición ("S"): u (usuario o concesionario anticipado) puede analizar la situación; pp; P.M.; fecha (los estados la hora y la fecha algo ocurrieron): las sincronizaciones dentro de ciertos parámetros pueden ser más/factor menos crucial, eg.: después de 5pm; trabajos como parte de otros sistemas de la seguridad ("analizando"/"que censura"); todos; "mic"; mfh; punto de ebullición (fuente eléctrica de reserva); alerter; uip; distancer (cuando cualquier artículo específico se ha movido más allá del número de la banda de metros); acceso (la entrada ilegal causa la señal al sistema); básico; carro (tipo banda de la seguridad a ser en funcionamiento, eg.: mecanografiar las señales de buscar/no hacer caso, [cómo el "analizador" debe funcionar (en la determinación/el reaccionar al apuro, y el sistema de las sugerencias puede dar a (el dispositivo de u/guard/el) para ayudar a la situación del remedio)]; Sistema del =security de "C "; % interactivo (existencia analyzer->determined del bandido de los trouble->fools (véase que KN (invención) que asustan a bandidos después del sistema de la seguridad los nota que)/comunica a protector de w (con) (el protector puede pedir "Q" acerca de la situación); "M" = uip: aprender/identificar cuál es y no es un sonido normal y o visión/ayudas "analizador"; "/"del mic del c= " lente"; seguridad o policía de los contactos vía el teléfono ("T"), tr, MES, m (m=t/mo/tr=police/guard); %morning (despierta a protector (si (w5) "detecta"/"analiza" a protector no está haciendo sus redondos (fecha/cuenta); ¿receptor acústico del movimiento? reflector cerrado granangular del detector de movimiento 5432597 5418368 w (con)

EXTREMO DE ESTA CARPETA DE LA SECCIÓN Y DEL PERSEGUIDOR DEL LADRÓN

Archivo: Introducción/usuario de la característica

USUARIO - entidad usando nuestro sistema

+ representan todas las invenciones y a sus usuarios importantemente también en software y o forma de la realidad virtual. El software simula TODAS LAS ocurrencias al grado posible en mímico el ejemplo (idealizado) de la vida real. Cuando representan a un ser humano o a un usuario en la invención: Ésta puede ser una persona verdadera, o la pintura de la realidad virtual del usuario.

- Versión de la realidad virtual del usuario. Cuando representan a un ser humano o a un usuario: Representa organismo humano u otro vivo verdadero. También representa la realidad virtual o la función más simple del software que representa tantas funciones del usuario como sea posible. Interno (pensamientos y sensaciones) se representan. Las maneras puede ser demostrado:

--Uno puede chascar encendido un icono para ver cuáles son las funciones internas.

--El texto y o el milímetro se utiliza para describir.

--Uno puede ponerse en el juego de la realidad virtual o el otro efecto ambiental con todos o algunos de los sentidos y del milímetro humanos de modo que uno pueda experimentar de cerca lo que experimentaría el usuario representado.

. (Ser humano) quién están interconectando con el producto/el sistema. La persona o el otro partido autorizó para utilizar las características. Usuario que genera a derechos facturables. De los usuarios includes^ también: gente múltiple, "accessors" (véase el "acceso"). Raramente %animals o temas del laboratorio/del estudio científico (animales, plantas, microorganismos). La máquina del usuario que es servida/asistida por el sistema

principal, eg.: usuario (c=modem) = Internet; en la mayoría de los casos una persona puede ser el co-usuario y o substituir la máquina. El Client%, ser humano el observers%, % espera. el usuario puede requerir el "acceso" a "obra recíprocamente" con el producto. "Mandando la cuenta": El usuario puede elegir diversos planes del pago/de la tasación de la forma.

. El usuario puede hacer preguntas de la invención. Ejemplos: el dispositivo ofrece la demostración del sistema de ayuda cómo utilizar características de producto específicas; cómo reprogramar las características, la hora actual y o la fecha de producto; la otra información necesaria; etc.

- Dibujo: Reino Unido (llaves del usuario adentro) = tr (transmisión) = "C" = exhibición/printer/M

. - matriz contenta de la fecha 4E020: Los registros y organizan ocurrencias anteriores.

- Ver el "cerebro": la característica del system se adapta según circunstancias.

- Un código (acceso, "marca de agua electrónica ") codificado en límites de sw/data cómo + la característica/el sistema/el programa pueden ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

- "Facturación": cargas por la pregunta o por minuto.

CARACTERÍSTICA VISUAL DEL ANALIZADOR

Sistemas de reconocimiento visual. Muy relacionado al analizador, VAGOS, analizador contento, perseguidor, analizador de sonidos.

CÁMARA del HORNO 3C-140: El cocinero puede disfrutar de la compañía de su marido o amigos en o fuera de la cocina sin tener que ir mirar la ventana del horno. La cámara demuestra el estado del artículo adentro. Otros ojos de la cámara pueden también ver la estufa de cocina.

- D: cámara = analizador visual (para cuando los elementos han cambiado según lo señalado (vía la banda)) = c = nr.

- Notas al pie de la página: "R"; "S"; pp; P.M.; Reino Unido; fecha; todos; "mic"; alerter; cuenta; "T"; tr; uq; mq.

+ INVESTIGADOR del MICROSCOPIO 2D-270: Hacer que el microscopio localice el elemento o la actividad deseado en muestra. Búsquedas visuales de un analizador para los objetos particulares. El sistema también supervisa el tipo actividad visual en un cierto plazo automáticamente, almacenando la información en base de datos.

. - ahorra el tiempo del científico que mira alrededor

- Artículo de la exhibición que es visto sobre la pantalla ("S").

- D: el uip de la c busca estímulos particulares = C (computadora y analizador del `) = el manipulante 2D-260's = el microscopio 2D-260's
- compila la base de datos del uip en objetos/estudios deseados.

Explorador médico -2D-200

+ INVESTIGADOR de la IMAGEN 2E210: Búsquedas señaladas imágenes en base de datos o mundo real del interruptor (programas informáticos del `[el `analiza]). Usos: "Siguiendo"; Diagnosis médica; Colección de la base de datos para el UIP; Dirige los movimientos de la robusteza/del vr. Muchas patentes relacionadas existen.
- El seguimiento de imágenes visuales de objetos es campo bien documentado. Eg.: Aparato del seguimiento de objeto de la palmadita 5473369 de los E.E.U.U.
- funciones como búsquedas de la palabra del software. A menos que, las peticiones de usuario mecanografíen la imagen deseada, dentro de ciertos parámetros, eg.: colores, formas.
- Organizador del "artista": "tener acceso" a todas las imágenes con ("uip") el estilo/el tipo señalados ("score').
- C (interruptor): data=analyzer=output (s/printer)
- Elementos buscados o emparejados: está reconociendo caras (ahora en la investigación por algunas otras compañías); colores; geografía; palmadita 5457639 de los E.E.U.U. del terreno; cómo los elementos se mueven/cambio (la velocidad, crece, degenerado); patrones de (comportamiento, movimiento, cambio, uso, "pista"); ondas (acústica - palmadita 5479375 de los E.E.U.U.); medicina: las imágenes/los síntomas de los fósforos cogidos por el sistema con DB (base de datos Info del `a ayudar a adaptarse a las necesidades asociadas) - > determinan el nombre posible de la enfermedad, ayudas que el doctor determina las naturalezas posibles de la enfermedad estudiando síntomas, ve KN relacionado, palmadita 5417210 de los E.E.U.U.; proyección de imagen de 3 dimensiones, palmadita 5390112 de los E.E.U.U.; texture la palmadita 5230039 de los E.E.U.U. del "análisis" (las telas, los materiales naturales)

- Usos: DB (base de datos Info del `a ayudar a adaptarse a las necesidades asociadas) para el uip o el "analizador"; "pista"; movimiento del vehículo/aterrizaje (palmadita 5235513 de los E.E.U.U.); fusión con la otra imagen que genera el sistema, eg.: Radiografías, Sonograms, imágenes numeradas o cámaras, sistema de la "pista" (sistema electrónico) (bandidos/características de las búsquedas asociadas a comportamiento del bandido).

. Técnico:

--no patentable: chascar encendido el cuadro de la pantalla del sol de levantamiento, después la base de datos de las búsquedas del sistema para el sol de levantamiento. Si factores múltiples: ¿la parte A y la parte B en cada cuadro emparejan o no?

--quizá patentable: escogiendo cualidades múltiples, el cuadrado, círculo, sol de levantamiento, entonces busca la base de datos. Requiere algoritmo.

--el sistema identifica cuál es un ojo, compara después ojos.

--el campo del investigador de la imagen es viejo y apretado

--¿existe? La oficina de patentes de los E.E.U.U. está trabajando probablemente en desarrollar esta N (invención) para su uso.

- Comparación de las formas de la imagen basadas en datos vecinos cercanos. Palmadita 5255354 de los E.E.U.U.

- Str 12.95 de la búsqueda de la palmadita:

- (imagen o proyección de imagen o diagrama) y (búsqueda o locat o hallazgo) y (computadora o software)

- (imagen o proyección de imagen o diagrama) y analyz y (comparar o comparación)

- (imagen o proyección de imagen o diagrama) y pista: tener muchas invenciones relacionadas.

. OTD D: u (usuario como un cliente) = este ~ C del sistema de N (invención) () (computadora y analizador del `) = ACCESO (señalado (cadena de) las imágenes necesitó antes de tener acceso); ANALIZADOR (w5 de la imagen; aplicabilidad para el uip); CUENTA (); CARRO (); EDIT (); EDUC (utiliza imágenes necesarias y el texto asociado; enseña a u (usuario como un cliente) cómo moverse (para los deportes, la palmadita 5390927 de los E.E.U.U.); MULTIUSOS (); Banda (tipo imágenes deseadas); CUENTA (valor de imágenes); ESTADO (de la imagen (recogida, disponibilidad)); TDS (w5 de imágenes); T (); PISTA (el sistema sabe mejor seguir el elemento/la ocurrencia señalados = porque el sistema da más pistas en cuanto a qué necesidades de ser seguido como elemento designado cambia (localización, las características), eg.: después de señora principal roja con cierto monedero del estilo como ella viaja de aeropuerto al aeropuerto, o de toda la gente con los perros alemanes de Shepard de la gama señalada del tamaño en alamedas de compras de la zona metropolitana durante enero); UIP (); ANALIZADOR VISUAL (); VR (el sistema encuentra elementos en el ambiente verdadero (sitio, al aire libre) esa reunión los criterios para crear el efecto/la situación/la ocurrencia/la presencia (y el sistema deseados dirige u allí), eg.: lugar de las necesidades de u (usuario como un cliente) a sentarse, reclinarse, comer, hacer llamada de t, parar el vehículo con seguridad, parar en la posición geográfica para mejorar (comunicar vía el t basado en los satélites/celular evitan gotas de lluvia/evitan o consiguen rayos del sol); WA (guías del vr u).

-2E240

- El seguimiento de imágenes visuales de objetos es campo bien documentado. Eg.: Aparato del seguimiento de objeto de la palmadita 5473369 de los E.E.U.U.

¿Los artículos [equivocadamente] fueron insertados adjunto para un "analizador de la voz"? ¿El tal pertenecer también/más en "analizador de sonidos"?

MISCELÁNEO:

- Ver: 4E-030 acceso KN.

+ "pista": Analizador visual descrito bien en "pista" (monitor inteligente 2E251).

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.

. - 2D-050 localiza la dirección del objeto vía: Sonido/cámara.

. - Código (acceso, marca de agua del EL (electrónico) "") codificado en sw/data límite cómo + parte/sistema (electrónico)/programa del sistema puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

Investigador de la imagen -2E210

- Patente no 4875432 de los E.E.U.U.: el color en tablero de la "cuenta" cambia cuando la cuenta se ata en (voleibol) "juego". (El "analizador visual" busca tales cambios en color y "los analiza" por consiguiente. Nivel de "cuenta"/"estado" efectúa tipo de color cambio encontrado en s (pantalla interactiva del `con) adaptado/nr del menú (notifica cuando está señalado) de cualquie producto/sistema; eg.: 7G).

- Tecnología existente llamada "Vitale": Combina marcos estrechamente vinculados del vídeo pidiendo prestados elementos minuciosos a partir de una imagen para realzar las segundas imágenes. El resultado es un aumento en el número de pixeles, que mejora claridad. Las aplicaciones automatizaron la inspección visual con los semiconductores también. "Vitale" permite a una computadora comparar para comparar imágenes múltiples. Ver las "ciencias populares" compartimiento edición la página 53 de mayo de 1999.

investigador de la imagen 2E210: Funciones como búsquedas de la palabra del software. A menos que, las peticiones de usuario mecanografien la imagen deseada, dentro de ciertos parámetros, eg.: colores, formas, ajustes (eg.: sol del levantamiento/de ajuste).

- el reconocimiento de caras se está convirtiendo en un campo apretado.

--aspecto no patentable: chascar encendido el cuadro de la pantalla del sol de levantamiento, después la base de datos de las búsquedas del sistema para el sol de levantamiento. Si factores múltiples: ¿la parte A y la parte B en cada cuadro emparejan o no?

--quizá patentable: escogiendo cualidades múltiples, el cuadrado, círculo, sol de levantamiento, entonces busca la base de datos. Requiere algoritmo.

---el sistema identifica cuál es un ojo, compara después ojos.

- el campo del investigador de la imagen es viejo y apretado

- <3, 2.5, $, $, $-3> apretó el campo (muchas invenciones relacionadas).

Otros detalles de Techie:

- Ediciones de la patentabilidad: cuando el color basado o las imágenes de C (computadora y analizador del `) representa algo en = el VA (las "búsquedas visuales del analizador y reaccionan a las imágenes señaladas) es otra (sin embargo) manera menos eficiente el saber/que tabula del sistema" (las "generaciones del artista) el wo (fuera) los códigos. [Copiado del "artista " = de " VA" 8.96].

. Ver: "access=ba"

- Cómo analiza: vía los diversos pixeles que representan forma, tamaño, color, distancia, tipo de movimiento si cualquiera.

- D: elemento visto - > la cámara = crea la imagen w (con) sus pixeles = analiza las características de la imagen contra una base de datos de otras imágenes o las piezas o las características = el VA de la imagen (las búsquedas visuales del analizador del `y reaccionan a las imágenes señaladas) concluye en la naturaleza del elemento = de los controles vistos cualquier función señalada en la reacción a la interpretación del va de la imagen vista.

- Qué puede analizar: los dos o los objetos tridimensionales en mundo real o tales objetos en el Cyberspace [DB, interruptor, Internet, siguiendo el DB]

. Puede ser el "analizador visual" o el "analizador de la voz". Si no sure, es "analizador visual". "Analiza" imágenes. El sistema determina qué imágenes están presentes, después "reaccionar" (a las imágenes) según lo programado (pr).

- D: cámara/scanner/s (pantalla táctil interactiva) = convertidor de datos = c ("analizador") = tr (transmisor) = función

- + No. de la palmadita de los E.E.U.U.: str de la búsqueda: (representación visual o imagen) analyz del ajuste - muchos relacionaron N (invención) en esta búsqueda. Control de producción de la imagen del color 5194891; Detecta el sello imperfecto 5260766; Detección 5140988 de estructura anormal del hueso en animales y reses muertas con (ultrasonido); Sistema del reconocimiento de cara 5164992.

- "Corregir": Determina cómo/cuál las imágenes (w5) son ~ "analizado" procesado.

. - Alarmas cuando la cámara ve un cambio en su opinión. Trabajos vía el pixel que analiza el sistema. Diferencias en señales de los disparadores de los pixeles. El sistema puede tener un almacenaje de todos los efectos visuales que está comparando contra.

. - las imágenes del papel/escritas sobre la tableta (pantalla táctil "interactiva")/imágenes almacenaron electrónicamente (memoria de cart/c) = convertidor de imagen = c ("analizador").

. OTD D: ~ C del "analizador visual" (computadora y analizador del `) =

ACCESO (utilizar el sistema); ANALIZADOR (); %ARTIST (); %BA (); CEREBRO (); C (computadora y analizador del `) (); CÁMARA (imagen/objeto apuntado, "lente" de las "pistas"); CARRO (cómo imágenes de las búsquedas/de los procesos del sistema (sistema electrónico)); M (DB de imágenes); %MULTI-USER (cada usuario puede tener aplicaciones de diferenciación para el "analizador visual"); NR (cuando (grupo de) imágenes particulares encontradas); Banda ("analizador visual que controla"); Q (); R (); RANURADOR (búsquedas del sistema y (uip-adaptar, "analizador visual") imágenes señaladas tr); CUENTA (cómo cada imagen (el sistema puede "analizar") viene de cerca dentro del paradigma de la imagen deseada); % del ANALIZADOR de SONIDOS (el analizador visual integra con el analizador de sonidos: mejores "analizar" qué está ocurriendo (en programas de las situaciones de la vida real, de los programas de a/v, de la "hospitalidad")); SONAR EL ANALIZADOR VISUAL (); ESTADO (las "pistas" cómo las imágenes están cambiando y dan "estado" para (cómo es importante) los cambios (ser)); SYNTH (); TDS (registros cada (archivo de) sonido); T (imágenes convertidas a digital tr (después de la alteración "que corrige"/"que analiza")); TR (t, MES, fax); +TRACK (); U (persona que controla cómo el analizador visual trabaja; persona que es vista/estudiada); UIP

(uip-adaptar: las búsquedas señaladas las imágenes, y los alteran vía uip-adaptan); VR (imágenes de los convertidos según lo programado).

- D: cámara/scanner/s (pantalla táctil interactiva) = convertidor de datos = c ("analizador") = tr (transmisor) = función

- Investigador del DB de la imagen (base de datos Info del `a ayudar a adaptarse a las necesidades asociadas): VA (las búsquedas visuales del analizador del `y reaccionan a las imágenes señaladas) exploración DB (base de datos Info del `a ayudar a adaptarse al) asociado/World Wide Web de las necesidades para "señaló el archivo "señalado" del to=" de las imágenes ("rutas" él y cualquie texto/página/texto atado de la vista de la tela/otras imágenes).

. Patentes de los E.E.U.U. Parámetros boleanos de la búsqueda:

- str: (representación visual o imagen o cuadro) adj9 (analys o analyz).

- Patentes de los E.E.U.U.: 5471252 campos de vector de cálculo del movimiento.

. Interruptor de caracteres ópticos del reconocimiento: "analiza" el texto/% manuscritos otras "imágenes" (vía el interruptor realzado del VA (las búsquedas visuales del analizador del `y reaccionan a las imágenes señaladas)).

- "Facturación": las cuentas por tiempo utilizaron/"tenido acceso".

EXTREMO DE ESTE ARCHIVO VISUAL DEL ANALIZADOR, PARA ESTE USO DE LA PALMADITA

Archivo: Introducción/VR de las características

CARACTERÍSTICA DE LA REALIDAD VIRTUAL:

viajero de la realidad virtual 6B630: El niño experimenta sus movimientos de nuevas maneras. Los movimientos del cuerpo se convierten en efectos audio-visuales creativos. Ejemplo: el movimiento de cada pierna suena como los pasos hechos en el bosque, mientras que el paisaje en la pantalla cambia según cómo él camina.

- Cosa de la caminata: amplificar y alterar los sonidos creados por su dar une vuelta.

+-sound como usted están caminando: en una playa; a través de bosque; en la pila de latas de lata (para el humor); a través del agua; etc.

83

- usted puede caminar alrededor del cuarto, con todo suena como usted puede ser que camine encendido: arena, nieve, hojas de otoño, chapoteando en agua poco profunda por la costa o el lago...

- cada movimiento de la pierna acciona el mecanismo de fabricación sano

- los altavoces pueden estar para el aire, o vía los auriculares estéreos portables

- hace caminar a trabajar, el etc más interesante
- el usuario puede crear diversos efectos sonoros de muchas de las opciones enumeradas adjunto
- aplicaciones la tecnología existente del podómetro como parte del sistema (el podómetro cuenta el número de pasos que una persona hace al caminar), más tecnología adicional
- éste es un de tipo precoz del producto de la "realidad virtual"
- otros títulos para el producto: Caminata de la realidad virtual, caminata del cielo, sonidos que caminan, fabricante de la caminata, compañero del basculador
- aplicaciones adicionales: para activar (lo hace más interesante)
- aplicaciones el caleidoscopio electrónico (explicado en otro de nuestro No. del producto)
. - los movimientos para cualquier otra parte del cuerpo pueden hacer sonidos correspondientes del "synth", eg. de los movimientos de: brazos (manos, dedos, antebrazo, bíceps, cabeza, parte superior y o piernas más bajas, etc.)
- OTD:
- diversos cartuchos permiten diversas opciones de fabricación sanas; todos; "C"; pp (tipo de efecto sonoro deseado); P.M.; Reino Unido; interactivo; juguete; juego; hospitalidad; "mic" (determina el tipo sonido hecho por el usuario, después sintetiza el sonido por consiguiente); ejercicio; portable; sst; correa inútil; punto de ebullición; oscilador; vc; cuenta; actúa como podómetro también; carro; RPC; cp.
- "Inclinación": controla las funciones del sistema: los objetos del u son R
- copiado a 5E020 en 8.95.

realidad virtual mágica 3C-230: Mirar alrededor del cuarto y experimentar todas las visiones y suena diferentemente. La cámara cambia las imágenes como un caleidoscopio. Sus auriculares alteran los sonidos del cuarto según el programa usted selecto o la visión que usted está experimentando. Formar de realidad virtual.
- Caleidoscopio interactivo:

Generar diversos efectos visuales mientras que mira el mundo exterior.

. - puede hacer todas las cosas estándar pueden los caleidoscopios no que electrónicos: mirar hacia fuera en el mundo real y verlo cortar en pedazos y movido alrededor (como con el vidrio); desarrolla sus propios gráficos sin la mirada en el mundo exterior; etc
. - Color selecto u opciones negras y blancas. (Los fotógrafos famosos prefieren admitir del cuadro negro y blanco porque induce mayor creatividad del espectador - él pueden tener un efecto tan interesante para algunos usuarios del caleidoscopio también).
. - hacer las alteraciones en efectos visuales cerca: botones o diales giratorios, presionando los botones, pequeñas palancas de mudanza...
- insertar los cuadros (cartuchos, diapositivas, etc) de gráficos interesantes (eg.: arte abstracto), o cuadros de la vida real. Éstos se pueden cambiar para parecer interesantes.

Un caleidoscopio interactivo más multidimensional: Activar las imágenes cambiantes en caleidoscopio por el sonido externo, movimiento, temperatura

- puede ser visto a través del pedazo del ojo, pantalla de la CRT, proyectada sobre la pared
- si está proyectado sobre la pared, entonces unidad actúa como dispositivo para crear una atmósfera interesante en el cuarto
- complejo: todavía los trabajos del caleidoscopio encendido y las imágenes móviles (vídeo, cine), y pueden almacenar ambos tipos de imágenes; puede ser corregido y ser programado para crear todos los tipos de efectos, eg.: la inserción de los clips visuales en el otro "S visual" demuestra
- puede generar sonidos según las imágenes que crea
- AP: gente de todas las edades; puede acompañar sistemas de la música;

OTD: "S"; "C"; pp; P.M.; Reino Unido; ratón; interactivo; educ; juguete; todos; juego; hospitalidad; "mic"; sintetiza sonidos entrantes; portable; sst; imprime los gráficos creados; "M"; punto de ebullición; oscilador; vc; egh; cuenta; tgh; md; carro; cp; uq; mq; uip; carácter.

. PATENTES: no hizo búsqueda.

- iguales según lo hecho quizá para la "realidad virtual".

OTD (otros detalles de Techie): software del almacén de la invención 5A-610; laboratorio de la invención de la realidad virtual 5A-620.

- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- % de no de la palmadita de los E.E.U.U.: 5310349 5227985 5214615 5185561 5172313 5130794.
- "Corregir": Determina cómo u (el usuario tiene gusto de un cliente) experimenta VR.

. - Código (acceso, marca de agua del EL (electrónico) "") codificado en sw/data límite cómo + parte/sistema (electrónico)/programa del sistema puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

- "Facturación": cuentas para cómo el sistema utilizó; el tiempo utilizó/"tenido acceso".

Lugar de reunión del EL:

Mejora en la patente 5347306 de los E.E.U.U.: Lugar de reunión electrónica Animated del ~ de "C" para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" = TENER ACCESO (necesitado para cada participante (u) ensamblar) AL ANALIZADOR de // (/w5 sistema cómo (sistema electrónico) funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la banda de // del OSCILADOR de // NR (cuando u se pide para responder o debe notar ocurrencias señaladas) // (comunicación verbal) (cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) el RANURADOR de // R (`teledirigido vía la interacción accesible) (el dispositivo del control/de comunicación del u) // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (u) el envío/que recibe están/w5 de u (usuario como un cliente) de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus

acciones) // TDS () // T (cómo "obra recíprocamente" cada u w: otro u (usuario como) del cliente/m) PISTA de 2419 // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada u = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

realidad virtual 5E130 con música:

- El sistema aumenta su creatividad
- La música hecha por el usuario se puede incorporar en los sistemas de la realidad virtual adaptados para los clientes específicos.
- Danza a sus artistas preferidos de la música. En golondrina de mar verlos bailar en ritmo/estilo a su danza y a la música.
- Seleccionar el tipo fondo y otros elementos para acompañar a los artistas famosos de la música. Eg.: escenas, instrumentos (y cómo los juegan)
- El usuario del instrumento de música es tenencia/cerca sonará según la música del artista famoso.
- VR: El obrar recíprocamente con los artistas famosos de la música (FMA)
- FMA son vídeo grabado y repetido para cada uno que ramifica en el programa interactivo de la computadora ("C"). Bajan al usuario la ramificación vía: su selección del menú/de su comportamiento y o de la respuesta es analizada por el sistema y por lo tanto lo mueve abajo de la ramificación.
- D: vr/osc = composer/k

vídeo del Karaoke 5A240: altera el audio y o señales visuales según lo programado por el usuario. Hace mirada de la pintura diferente del auténtico. Hacer que la gente aparece como si ella sea: en otra tierra; de otra tribu, país, cultura; en una venda musical (quizá incluso con los miembros de la banda en la parte posterior); en naturaleza, selva, playa, globo grande, espacio, spacesuit; con el cuerpo de la actriz hermosa del modelo o de la estrella/del agente en ropa o el bañador (el cuerpo puede ser móvil o inmóvil); con otros amigos en la barra, la casa, etc y ellos ser toda feliz o prancing alrededor.

- La característica adicional para la corriente canta a lo largo de sistema. La cámara coge la imagen del usuario y la altera.
- Usos: la hospitalidad, crea alcohol del grupo, demuestra a gente como cuál sería adquirir nuevo trabajo - eg.: el director de película demuestra cómo ella quisiera que el agente actuara en escritura de la película, danza, escuela sucesiva del ins, la graduación, el éxito en negocio, el etc que ayuda con la aplicación del comportamiento positiva.

selector de la escena 5A250: tomar los tiros de la gente, de animales, de plantas, del etc y cambiar la escena a lo que, eg.: la selva, el país extranjero, el usuario del etc. selecciona simplemente de escena deseada antes o después de tomar el tiro o durante el desarrollo de la película.

- Hecho todo electrónicamente. La selección de paisaje momentos antes del tiro está de mayor interés de la comercialización.

laboratorio de la invención de la realidad virtual 5A620: Descubrir las nuevas maneras de usar y de diseñar invenciones. Programable por el fabricante y el usuario. Los estudios prueban que éste alza resultados de la investigación y desarrollo. Las versiones del programa de "C" tienen costes de desarrollo mucho más bajos.

Versión del programa: seleccionar el tipo producto y ver con cómo puede ser jugado, eg. - "robusteza" para: caminando encima de las escaleras, cortando el alimento, el etc; "máquina del masaje" para: masaje de los futons (lecho japonés que necesita ser batido para ser plano guardado), de gente del masaje, de animales domésticos, del etc.

- Versión de la realidad virtual más adelante
- OTD: "R"; "S"; "C"; pp; P.M.; Reino Unido; ratón; interactivo; educ; juguete; básico; juego; entrar; el portable%; impresora; "M"; oscilador; vc; egh; cuenta; el tgh%; md; carro; tr; MES; cm; uq; mq; uip; carácter; palmada.
. - verificador del contenido 4E020 y de la fecha: (cualquie dicho) de ocurrencias, eg.: "sigue" ocurrencias; "analiza" ocurrencias (para el uip).

¡Utilizar nuestra solicitud de patente Masterminded de mejorar sus ideas de la invención! Aprender sobre nuestras licencias rápidas y fáciles (+1) 707-428-5000 www.LicenseItToday.com

SECCIÓN de VR - leer quizá más adelante:

- OTD: software del almacén de la invención 5A-610; laboratorio de la invención de la realidad virtual 5A-620.
- Ver el "cerebro": la pieza del sistema se adapta según circunstancias.
- % de no de la palmadita de los E.E.U.U.: 5310349 5227985 5214615 5185561 5172313 5130794.
- "Corregir": Determina cómo u (el usuario tiene gusto de un cliente) experimenta VR.
. - Código (acceso, marca de agua del EL "") codificado en sw/data límite cómo + parte/sistema (electrónico)/programa del sistema puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".
- "Facturación": cuentas para cómo el sistema utilizó; el tiempo utilizó/"tenido acceso".
- Lugar de reunión del EL:

Mejora en la patente 5347306 de los E.E.U.U.: Lugar de reunión electrónica Animated del ~ de "C" para: "/"del negocio/"de la educación" reuniones interactivas/""/"de los juegos hospitalidad" = TENER ACCESO (necesitado para cada participante (u) ensamblar) AL ANALIZADOR de // (sistema cómo/w5 funciona como (según el uip-tailor/pr/k)) // deseado EDIT (acciones/declaraciones/respuestas u) de la

banda de // del OSCILADOR de // NR (cuando u se pide para responder o debe notar ocurrencias señaladas) // (comunicación verbal) (cómo cada u "obra recíprocamente" con uno a/sistema) // Q (contestado diferentemente según u) el RANURADOR de // R (el dispositivo del control/de comunicación del u) // (cada participante/sus comunicaciones, encaminadas diferentemente a otras = según: quién (u) el envío/que recibe están/w5 de u de CUENTA de // de la situación) (de cada u) ESTADO de // (de: cada u/sus acciones) // TDS () // T (cómo "obra recíprocamente" cada u w: el otro u/m) PISTA de // (progreso/cambios de cada u) // [UIP/"multiusos" = (cada u = sistema de las experiencias/de las manijas (sistema electrónico) diferentemente = según el interruptor uip-adaptado único del u)] // "artista" // "composición" // "educ": cada u (usuario como un cliente) = "obra recíprocamente" = aprende de o enseña a otro = u (de diversos manera = uip) // "carro" // "M".

- + representan todas las invenciones y a sus usuarios importantemente también en software y o forma de la realidad virtual. El software simula TODAS LAS ocurrencias al grado posible en mímico el ejemplo (idealizado) de la vida real.

--Cuando representan a un ser humano o a un usuario en la invención: Ésta puede ser una persona verdadera, o la pintura de la realidad virtual del usuario. Ver a usuario.

EXTREMO DEL ☺ DE ESTE ☺ CENTRAL DEL ARCHIVO DE LA DESCRIPCIÓN DE LA REALIDAD VIRTUAL

Archivo: Introducción/W5 de la característica

W5 - Los CINCO w ELEMENTALES

Los cinco w: Porqué/cuando/cómo/qué/%Where. Dos o más de los cinco W5 (qué, de donde, porqué, cuando y cómo) se aplican. (Información de) cada uno de los cinco puede influenciar uno a cuatro de los otros.

. - Algo del ways^ en el cual el producto electrónico puede determinar cada uno de los cinco para que el sistema entonces procese la información.

. PORQUÉ: "Reino Unido"; el sistema analiza cómo se está utilizando; datos recuperados de "M"; MQ; ADAPTARSE (el sistema puede saber/conjetura de la experiencia anterior en situaciones relacionadas); cuenta

Porqué] adaptarse: para porqué los usuarios utilizaron influencias/efectos del sistema: la tasación/las ofertas libres a los usuarios en el futuro para las utilizaciones de ensayo así que ellos utiliza otra vez y paga el dinero.

- ADAPTARSE: recoge el from= de los datos qué "se busca " = por medio (qué, donde, porqué, cuando y cómo) de los criterios W5. Usos: adaptar-adaptar; "pista"; "tuvieron acceso a los vagos (analizador del comportamiento)".

Archivo: Introducción/WA de las características

CARACTERÍSTICA DE WA (CAMINATA ALREDEDOR)

EN GENERAL: Transmitir y recibir los datos (hospitalidad, información útil) vía la radio.

D: 1 base (salida) = 2 [transmisor/receptor] = 3base ()/4 M/5 de la salida hacer salir/función

Notas sobre D (dibujo de una variación) (diagrama): 1/3/4: puede haber uno, dos, tres o más de cada uno

- OTD: acceso; cojín del aire 13; artista; balance 35; básico; carro 1345; cc; carácter 135; palmada 1235; cm; color 1234; composición (su salida está en 35); cp; fecha 1345; exhibición 1345 ("S"); distancer (1 obra recíprocamente con 3, 1 y 3 w interactivo (con) 4; salida en 135; el satélite pudo ser 134); educ; educ; entretener; 1345 "C"; 1-5 flotador; juego (3 es unidad portable; 3 w interactivo (con) uno o más 1, 3; carro para 1/3); 1-4 interactivo (salida útil para el usuario humano 135); localizador (1 obra recíprocamente con 3, 1 y 3 w interactivo (con) 4; salida en 135; el satélite pudo ser 134); md; M 135 w interactivo (con) 4 vía 2 (el 5 de mayo da la regeneración y requiere datos a partir de la 4); 135 "mic"; 2 MESes; mañana 35; receptor acústico de 3 movimientos; ratón 12345; P.M. 1345; mq 1345; 134 multiusos; notificador 12345; oscilador 135; 134 uip; portable 123 4 5; 1345 pp; impresora 135; RCP; telecontrol 135 ("R"); cuenta 1345; 34 sanos (haciendo salir resultados: 12345); discurso 1345; teléfono del SP 13 4 5; estereofonia 3 5; synth 134; 134 tds; teléfono 13 4 ("T"); tgh; inclinación 13; juguete; 134 tr; 1345 Reino Unido; uq 1345; 135 vc; analizador de 135 representaciones visuales; vr.

Características adicionales

- Teléfono: auricular/micrófono (sacar/tirar hacia abajo) para el teléfono de radio/celular ("T")
- Sistemas de la hospitalidad: estéreo

horno de %-Controlling: el sistema puede decirle que el alimento/el horno estará listos en minutos del _ del _, [y qué más necesita ser preparada/ser hecha]

- Juegos interactivos (juegos video)
- Despertador/organizador (tiene cualesquiera de las funciones) del organizador de Casio (estados (oír su/la voz del sistema) /displays qué necesita ser w5 hecho.
- Paginador: (la mamá habla en el intercomunicador que dice a hijo: viene a casa/cena está listo)

<>- "telecontrol"

. - Usar Distancer: saber donde está el usuario de WA; el sistema dice automáticamente a usuario no ir más allá de límite/cortó funciones si salen de límites.

%-any la otra función en "telecontrol"

- MK: el sistema de una pieza fácil le deja conseguir absorbido en lo que usted está haciendo sin el olvido de qué más necesita importar. Nunca faltar el oír del teléfono ("T"), campana de puerta, alarma del horno... otra vez. El sistema es tan simple o complejo como usted quiere hacerlo, con 1 a las características 1.000.000+.

- OTD 1: El sistema tiene uno o más de estas características mencionadas. Las instrucciones/las advertencias/las alarmas dadas en audio/la exhibición imprimen hacia fuera/las luces [el otro modo del notificador]. Programar simplemente que las funciones usted quieren dirigir/ayuda de WA.

MISCELÁNEO: Mini disco: Sony, agudo. DAT. Proyector agudo. Fax portable - memoriza - teléfono celular ("T") de Sony. Hombre del disco de los datos. Jugador electrónico del libro. Diccionario eléctrico: el tigre de la impresión y hace el sonido de animal, de Sony.

- TV impermeable portable:

D: 1 Reino Unido = base 2 = función 3 display/4

OTD: cojín del aire 2; básico; carro 2; cc; color 2 (los cambios del color según la temperatura del agua, eg.: una parte de la base, o base entera; la porción que cambia color puede ser cambiada si los productos químicos sueltan su eficacia más adelante); cp; cr; educ; entretener; 2 "C"; flotador 123; juego 4 (juegos del juego en tina o ducha de baño!); interactivo; md; 2 "mic"; mañana 2; 1 ratón; P.M. 2; oscilador 2; 123portable; 2pp; 2speech; 2speaker; teléfono 2sp; 4stereo (estereofonia "británica" de los controles que es sistema separado o atado); 2synth; 2 tds; tgh; juguete; Reino Unido; wa.

O-Mirar ("R") el control alejado

- demostraciones de la exhibición del reloj ("S"): programa disponible en TV/Cable/Radio

- los datos adicionales están disponibles usando tecnología celular del teléfono ("T"). [hasta 3.95 aquí movidos]

>>

>>

- "Facturación"

- Ver a profesor particular del movimiento 3E061: Dirige a usuarios para mejorar sus movimientos. Dispositivo usado como teledirigido.

Existe: Tipo portable cuadernos. El teclado se ata con correa sobre la cintura y aproximadamente el nivel puesto del botón de vientre. Tener auriculares y micrófono para [la 'telecomunicación/osc/nr].

- No sabido para existir con todo: adjuntar los impresos creativos de teledirigido.

--Eg. como la danza Miburi de Yamaha, por el que el cuerpo señalado indique comandos correspondientes del disparador. Esto puede ayudar a reducir la necesidad de golpes de teclado, especialmente donde está un obstáculo tener un teclado abultado. Mientras que un teclado llega a ser menos integral a la operación diaria puede ser colocado a otra parte en cuerpo en menos localización obstructora.

Otros detalles de Techie:

- Las transmisiones/las recepciones del "telecontrol" pueden estar to/from casi dondequiera en mundo. Si la transmisión inicial no puede viajar suficientemente lejos, después se retransmite: transmisión = recepción = retransmisión = recepción = "C" = función.

- D1: Auriculares sin cuerda/transmisiones del micrófono = del sonido (con referencia a) - - > [auricular/altavoz/memoria] gestionar encendido el sistema similar. Puede caminar alrededor dondequiera y oír/hacer o recoger y transmitir sonidos. - D2: exhibición de los auriculares (anteojos del ojo) = "C"

- OTD #1: - General: La retransmisión es solamente una opción: la transmisión puede estar sin la retransmisión, por lo tanto no hay o límites, o hay una distancia limitada. Un tipo de retransmisión es el sistema existente de la reflexión que permite la transmisión de la luz infrarroja alrededor de esquinas. WA puede utilizó este el "telecontrol" y o funciones audios. El "telecontrol" y el audio se pueden conectar por el alambre y o la radio/la transmisión ligera/la recepción.

Las instrucciones/las advertencias/las alarmas dadas en audio/la exhibición imprimen hacia fuera/las luces [el otro modo del notificador]

- Audio: El interruptor permite el modo audio jugado en: auriculares; altavoces; %re-transmitted a otro sistema audio/partición vc - el auricular puede utilizar uno o más auriculares para uno o más gente simultáneamente o para la difusión iguales/de diversos sonidos en diversas horas. El micrófono puede sacar del auricular (sacar puede ser sólido/solamente o sobre todo alambre con el micrófono ("mic") en el extremo); o mover de un tirón el auricular abajo de la tapa de la cabeza (los teléfonos del oído permanecen sobre los oídos y el micrófono está cerca de la barbilla [en vez de estar en la corona de la cabeza en otras veces]. Sistema de equilibrio 8B-140 del altavoz automático: el "telecontrol" dice el sistema de sonido vía su transmisión (tr), la localización del "telecontrol", en balance de los altavoces de la golondrina de mar su sonido así que la persona con el "telecontrol" oye sonidos de todas las direcciones en cercano-balance.

- "Corregir": Determina cómo u experimenta WA.

. - Código (acceso, marca de agua del EL "") codificado en sw/data límite cómo + parte/sistema (electrónico)/programa del sistema puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

. - OTD D: U = este ~ C del sistema de N (invención) (WA) (computadora y analizador del `) = ACCESO (); ANALIZADOR (); CARRO (); K (); M (); %MIC (el nr u si hay peligroso/ruidosamente suena en el ambiente, eg.: u oye todo el sonido sobre o más allá de ciertas frecuencias sanas - kn); MULTIUSOS (); NR (); OSCILADOR (U puede cambiar de lo que hacía el wa anterior temporalmente para disfrutar de la música (estérea)); %PS (WA puede conocer su localización, y o dar hacia fuera su to= de la localización M); R (`teledirigido vía la interacción accesible) (); TDS (registros cada ocurrencia); T (tiene características móviles del teléfono); %TRACK (el sistema sigue u/wa).

- "Facturación": cuentas para cómo el sistema utilizó; el tiempo utilizó/"tenido acceso".

% existe: El podómetro combinó con el tipo walkman de Sony. Vendido vía una imagen más aguda 94-95.

. Ver: "acceso = vagos" = WA.

. Walkman del control R120 vía teledirigido. Sony WMWX88 modelo: 7.91 FRECUENCIA INTERMEDIA. ¡Controlar muchos otros productos y de otras maneras! Si pocos botones están en este dispositivo de control entonces puede haber pocas funciones controladas.

. Características adicionales:

- Teléfono: auricular/micrófono (sacar/tirar hacia abajo) para el teléfono de radio/celular ("T")
- Sistemas de la hospitalidad: estéreo.

horno de %-Controlling: el sistema puede decirle que el alimento/el horno estará listos en minutos del _ del _, [y qué más necesita ser preparada/ser hecha]

- juegos interactivos (juegos video)
- despertador/organizador (tiene cualesquiera de las funciones) del organizador de Casio (estados (oír su/la voz del sistema) /displays qué necesita ser w5 hecho.
- paginador: (la mamá habla en el intercomunicador que dice a hijo: viene a casa/cena está listo)

<>- "telecontrol"

Leer la sección posterior:

. - Usar Distancer: saber donde está el usuario de WA; el sistema dice automáticamente a usuario no ir más allá de límite/cortó funciones si salen de límites.

%-any la otra función en "telecontrol"

- MK: el sistema de una pieza fácil le deja conseguir absorbido en lo que usted está haciendo sin el olvido de qué más necesita importar. Nunca faltar el oír del teléfono ("T"), timbre, alarma del horno... otra vez. El sistema es tan simple o complejo como usted quiere hacerlo, con 1 a las características 1.000.000+.

- OTD 1: El sistema tiene uno o más de estas características mencionadas. Las instrucciones/las advertencias/las alarmas dadas en audio/la exhibición imprimen hacia fuera/las luces [el otro modo del notificador]. El programa, que funciona usted, quiere simplemente dirigir/ayuda de WA.

. El Info dentro << >> se movió desde E \ 2E en 3.95:

<< MISCELÁNEO: Mini disco: Sony, agudo. DAT. Proyector agudo. Fax portable - memoriza - teléfono celular ("T") de Sony. Hombre del disco de los datos. Jugador electrónico del libro. Diccionario eléctrico: el tigre de la impresión y hace el sonido de animal, de Sony.

- TV impermeable portable:

D: 1 Reino Unido = base 2 = función 3 display/4

OTD: cojín del aire 2; básico; carro 2; cc; color 2 (los cambios del color según la temperatura del agua, eg.: una parte de la base, o base entera; la porción que cambia color puede ser cambiada si los productos químicos sueltan su eficacia más adelante); cp; cr; educ; entretener; 2 "C"; flotador 123; juego 4 (juegos del juego en tina o ducha de baño!); interactivo; md; 2 "mic"; mañana 2; 1 ratón; P.M. 2; oscilador 2; 123portable; 2pp; 2speech; 2speaker; teléfono 2sp; 4stereo (estereofonia "británica" de los controles que es sistema separado o atado); 2synth; 2 tds; tgh; juguete; Reino Unido; wa.

O-Mirar ("R") el control alejado

- demostraciones de la exhibición del reloj ("S"): programa disponible en TV/Cable/Radio

- los datos adicionales están disponibles usando tecnología celular del teléfono ("T"). [hasta 3.95 aquí movidos] >>

- "Facturación".

SECCIÓN de WA - leída quizá más adelante:

- Las transmisiones/las recepciones del "telecontrol" pueden estar to/from casi dondequiera en mundo. Si la transmisión inicial no puede viajar suficientemente lejos, después se retransmite: transmisión = recepción = retransmisión = recepción = "C" = función.

- D1: Auriculares sin cuerda/transmisiones del micrófono = del sonido (con referencia a) - - > [auricular/altavoz/memoria] gestionar encendido el sistema similar. Puede caminar alrededor dondequiera y oír/hacer o recoger y transmitir sonidos. - D2: exhibición de los auriculares (anteojos del ojo) = "C"

- OTD #1: - General: La retransmisión es solamente una opción: la transmisión puede estar sin la retransmisión, por lo tanto no hay o límites, o hay una distancia limitada. Un tipo de retransmisión es el sistema existente de la reflexión que permite la transmisión de la luz infrarroja alrededor de esquinas. WA puede utilizó este el "telecontrol" y o funciones audios. El "telecontrol" y el audio se pueden conectar por el alambre y o la radio/la transmisión ligera/la recepción.

Las instrucciones/las advertencias/las alarmas dadas en audio/la exhibición imprimen hacia fuera/las luces [el otro modo del notificador]

- Audio: El interruptor permite el modo audio jugado en: auriculares; altavoces; %re-transmitted a otro sistema audio/partición vc - el auricular puede utilizar uno o más auriculares para uno o más gente simultáneamente o para la difusión iguales/de diversos sonidos en diversas horas. El micrófono puede sacar del auricular (sacar puede ser sólido/solamente o sobre todo alambre con el micrófono ("mic") en el extremo); o mover de un tirón el auricular abajo de la tapa de la cabeza (los teléfonos del oído permanecen sobre los oídos y el micrófono está cerca de la barbilla [en vez de estar en la corona de la cabeza en otras veces]. Sistema de equilibrio 8B-140 del altavoz automático: el "telecontrol" dice el sistema de sonido vía su transmisión (tr), la localización del "telecontrol", en balance de los altavoces de la golondrina de mar su sonido así que la persona con el "telecontrol" oye sonidos de todas las direcciones en cercano-balance.

- "Corregir": Determina cómo u experimenta WA.

. - Código (acceso, marca de agua del EL (electrónico) "") codificado en sw/data límite cómo + parte/sistema (electrónico)/programa del sistema puede ser: utilizado (funcionar)/"de los dispositivos (otro) corrigió"/copiado. Ver: "Tener acceso", "corrigen".

. - OTD D: U = este ~ del sistema de N (invención) (WA) C = ACCESO (); ANALIZADOR (); CARRO (); K (); M (); %MIC (el nr u (el usuario tiene gusto de un cliente) si hay peligroso/ruidosamente suena en el ambiente, eg.: u oye todo el sonido sobre o más allá de ciertas frecuencias sanas - kn); MULTIUSOS (); NR (); OSCILADOR (U puede cambiar de lo que hacía el wa anterior temporalmente para disfrutar de la música (estérea)); %PS (WA puede conocer su localización, y o dar hacia fuera su to= de la localización M); R (`teledirigido vía la interacción accesible) (); TDS (registros cada ocurrencia); T (tiene características móviles del teléfono); %TRACK (el sistema sigue u/wa).

- "Facturación": cuentas para cómo el sistema utilizó; el tiempo utilizó/"tenido acceso".

% existe: El podómetro combinó con el tipo walkman de Sony. Vendido vía una imagen más aguda 94-95.

. Ver: "acceso = vagos" = WA.

ARCHIVO 3E

SUPLEMENTO DE INTERIOR de 3E210 GPS:

<4, 3.5, 2, 1 - sabe poco de GPS>

Compensador basado en los satélites de la obstrucción del GPS. Un sistema de interior del GPS. Conocer la localización cuando la transmisión al satélite se bloquea. Localización entre las piezas de tierra múltiples determinadas vía "distancer". Distancer es el sistema de tres transmisores que determina la localización del transmisor específico bajo obstrucción del GPS, en relación a los tres puntos. La computadora central de este tres puntos determina la colocación global vía la comunicación basada en los satélites, y la comunicación con las unidades móviles.

Usos: 1] Funciones dentro, puesto que las señales del GPS no viajan a través de las paredes. 2] Las unidades múltiples usadas cerca de los tres transmisores pueden ser manufacturadas sin los receptores basados en los satélites, ahorrando costes de fabricación. El sistema entero se puede mover con la computadora central móvil. 3] Interferencia de la manija de las ayudas de diversos tipos: cubierta de nube, dentro de una montaña. 4] Artículos que falta de la pista. Precios que caen, tamaños del producto de todos los productos que caen, por lo tanto más usos del GPS para seguir. 5] Animales de la pista y del monitor (vía los "sensores"), gente.

Dice a sistema donde está, en golondrina de mar, sistema el usuario responde o encamina señales por consiguiente:

- Persona de las páginas (KN (invención)) sin la necesidad disturbar el edificio entero.
- Juegos: localizar a jugadores.
- El teléfono suena solamente en sitio o el edificio donde está el usuario. No requiere a la expedición de llamada o a recepcionistas que remiten llamadas. (Véase: KN (invención)).

Sistemas de seguimiento localizados. Esta invención combina con uno o más del siguiente:

1] Sensores del calor. 2] Sistema de Loran: cuadruplicar (más) el sistema para el envío. Con todo este sistema es más amplio scoped. 3] Pseudo luces: los transmisores identifican la localización dentro con el uso del crujido de número. Como un sistema de seguimiento basado en los satélites de interior. 4] "Distancer" que alerta a madre cuando se va el niño. 5] Qué demostraciones de computadora para la localización de la unidad, y o el tipo de la actividad.

Problemas: El GPS es campo apretado. El satélite móvil del GPS es todavía abultado. Si al aire libre, el GPS necesita ser señalado hacia arriba, deteriorando ciertos usos. ¿Piezas costosas, pero disponibles?

Misceláneo:

- Dice la unidad de sistema está en qué edificio; entonces donde dentro de ese edificio, eg.: piso; número de habitación; quién lo está utilizando cómo (vía: "tener acceso", uip; w5).
- Navegación de Trimble en el CA: no sabe de cualquier persona capaz de seguir dentro. (408) 481-8000.

Comenta de:

. Saunders: no ve necesidad; mercado limitado; costoso.

. Bob Asher: él hizo mucho trabajo en el GPS, tendría dificultad el permanecer delante de mercado puesto que muy apretado ya.

. Conrado: cada edificio tiene tipos de transmisores, por lo tanto u (usuario) sabe qué edificios son adentro sin la necesidad de un GPS.

- Patentabilidad: combinando el GPS con los localizadores localizados, puesto que existe cada uno por separado.
- tr en la construcción en el mismo fq (frecuencia) que con los satélites. Demostraciones adicionales de una señal en las cuales el edificio u (usuario) está. El receptor del u hace la triangulación para determinar donde está (en relación al tr del edificio).

--La versión de interior es igual que el sistema del GPS del exterior, por lo tanto este no patentable solo. Sin embargo, cuando dentro, no saber dónde en lo referente al resto del globo. El edificio no se mueve, así que el edificio transmite constantemente su localización al receptor (u) - el edificio no necesita comunicar con el satélite.

¿- FCC?

- El sistema también transmite donde se localiza u (usuario) (rc). Rc codifica su localización y tr él.
- MK: sistema de la paginación; el recepcionista sabe a si deben paginar o accionar el beeper.
- LoJack: el localizador del coche, ayudas identifica donde robado. A mediados de los años ochenta quizá construidos.
- El conjeturar existe probablemente: u (usuario) tr su localización.

- Los retrasos del satélite (artificial) son duplicados por el sistema (sistema) (vía el tr del edificio) al receptor portable (gps). Rc cree que las transmisiones están viniendo del satélite.

- El usuario pudo ir dentro y fuera de varios edificios, por lo tanto de valor en el lazo al GPS global.
- Este sistema (sistema) se puede utilizar al aire libre. Propósito: mejorar la exactitud de localizar la posición. Aunque muchas compañías están intentando calcular cómo conseguir alrededor del bloque del militar ya.

- Utilizar para conseguir los coches robados mantenidos garages (públicos). el coche de los estados del sistema (sistema) es in/somewhere en garage. Con todo, la señal del momento era sistema perdido (sistema) sabe donde está el coche.

Pandescio:
- Mecanografiar el localizador localizado depende del tipo uso.
- Seguimiento de la persona.
