(54) Title: WRAP AROUND BED FRAME

FIG. 1

(57) Abstract: A wrap around bed frame for use in supporting a box spring and mattress having side rails and cross members and a foot member that is affixed to the foot ends of the side rails to provide support for the foot end of the bedding. The entire bed frame can be assembled with fittings that do not require tools for assembly and thus, the bed frame can be assembled easily by the user by simply sliding or snapping the components together. Protective shields cover the bed frame so as to minimize harm to a person inadvertently striking one of the bed frame components. The foot member is comprised of an upper and lower member affixed together. There are also center wedges on the cross members where a foot can be affixed to the center wedge to facilitate assembly of the bed frame.
