(54) Title: SYSTEMS AND METHODS FOR PROVIDING A MULTIPLE SECURE LINK ARCHITECTURE

FIG. 1

(57) Abstract: Some embodiments disclosed herein include a MSL twin net-  
work address translator (NAT) that includes logic that, when executed by a  
processor, causes the MSL twin NAT to receive inbound datagram from  
MSL VPN and record a new VPN owner private IP address from a source IP  
address in the inbound datagram. In some embodiments the logic causes the  
MSL twin NAT to assign a new UPIP for the inbound datagram and client  
workstation and facilitate sending the inbound datagram to the client work-  
station.
