(54) Title: A CABLE LOCK AND SEAL DEVICE

FIGURE 4

(57) Abstract: A cable lock and seal device comprising a body (10) and a cover (20) with which complementarily forms a block enclosing there within a passage (30) and a chamber (50). The body (10) is integral with a base (12) in which one end of a cable (14) may be secured. The other free end of the cable (14) may be inserted into the passage (30) which is preferably curved and traverses the assembled body-and-cover block. The chamber (50) is adapted with a ramp (52) rising towards the passage (30), a slot (54) for retaining a spring (56) which second end is disposed to urge a locking wheel (53) up the ramp (52) against said passage (30). The urging of the locking wheel (53) by the biasing means (56 or 58) up the ramp (52) is restrained when the locking wheel's axle (55) engages a rib (51) on the chamber wall to limit the wheel (53)'s further entry into the passage (30) upon sufficiently engaging said cable (14) and preventing its withdrawal by reversing its insertion.
