ITEM V

The present subject matter is directed towards a compound of formula:

as SMAC mimetic or IAP inhibitor (for use e.g. as anti-cancer)

Novelty (Art. 33(2) PCT)

The present definition of R⁴ (5-6 heteroaryl substituted by C1-C3 alkyl or -O-C1-C3 alkyl) establishes novelty over WO 2013/127729 (D1 - see definition of R⁴ and R⁷ in D1)

Inventive step (Art. 33(3) PCT):

The application provides inhibition data against five P450 isoenzymes for the present compound (cf page 63) and for the closest compound from the prior art - differing from the present in that "R⁴" is unsubstituted (cf pages 5-6, table 1). The comparison of these data shows that the present compound provide a (much) lower inhibition of said P450 isoenzymes - while maintaining high inhibition of IAP/SMAC. As this appears to be a highly desired selectivity (cf page 4, lines 5-10) the present compound of formula (I) solves the technical problem of providing IAP inhibitors having low affinity for the P450 isoenzymes. As nothing in D1 suggests that the present specific definition of R⁴ would lead to such improved selectivity, the solution proposed is not-obvious vis-à-vis D1.
