Title: Closed circuit anaesthesia **device**.

Abstract: Source: EP0121255A2 The closed circuit anesthesia method and **device** provides for a casing including a separation between a primary side and a secondary side in the form of a volume-displacement detector (1) which preferably is a dry spirometer. Means (13) are provided for detecting the composition and the volume of the respiratory air and connections (19, 20) for supply of required gases. The secondary side is connected to a **patient** circuit via two branches (8, 9) containing a carbonic acid absorber (10). The output information of the volume-displacement detector (1) is supplied to a control unit (13) for communication with the gas supplies (19, 20). The system comprises an oxygen analyzer (15) and may additionally contain further analyzers (16) for other gas components. The closed anesthesia system of the invention has the advantages of considerably lowering the total consumption of highly cleaned gases like oxygen and narcotics in comparison to open and semi-open systems. Also the narcotic gases stay warmer and more humid and the oxygen consumption as well as the amount of narcotic taken up by the **patient** can be determined equally allowing a better control of the depth of anesthesia.

Title: Antenna array for smart RFID tags

Abstract: Source: US2002044096A An antenna array comprises a plurality of antenna loops disposed to define a portal or passageway or other detection region in which the plural antenna loops transmit and/or receive electromagnetic signals. A processor coupled to the plural antenna loops processes at least the received signals and/or transmitted signals. The plural antennas may be arrayed in a rectangular array, on hanging flexible substrates or other suitable arrangement, and may be coupled to the processor by a filter or selective switch. The processor may be coupled to a utilization system for cooperating therewith for performing a desired function.

Title: INTELLECTUAL PROPERTY (IP) BROKERING SYSTEM AND METHOD

Abstract: Source: US2003126059A An intellectual property (IP) brokering system and method (0110) incorporating an expert system permitting a customer (0120) to automate and optimize the use of IP agents (0130) to affect customer product realization (0140) is disclosed. The present invention in some preferred embodiments permits a customer to define a knowledge database with background and customer sensitivities as well as a requirements database for a given product to be created. This information is then mapped to available technical resources and design architectures by the expert system that then generates an optimized execution plan based on available resources. The disclosed invention permits global optimization of the customer requirements by coordinating disparate IP agents in a unified fashion to achieve an optimal utility function with respect to the desired customer product. The system as disclosed may include a wide variety of optimization algorithms and additionally may permit feedback to the customer to allow recursive optimization to occur. The methods as disclosed herein within a variety of preferred systems contexts permit IP to be brokered and granularized by allowing projects to be fractured according to system functionality and subsequently brokered out for optimal cost realization via a globally-connected IP resource acquisition and coordination system. The present invention is particularly well suited for application as a management element in a counter terrorism information technology system to minimize the impact and social disruption associated with terrorist events.

Title: PATIENT DIRECTED SYSTEM AND METHOD FOR MANAGING MEDICAL INFORMATION

Abstract: Source: US2003140044A A system and method is provided for the management of a patient's medical records by a central data repository under the direction of the patient and enabled by an entity managing records on behalf of the patient. Medical records from a plurality of the patient's healthcare providers, including past and present healthcare providers, are maintained in this central repository in a way that provides a centralized, comprehensive, and accessible medical history of the patient, as well as a comprehensive organizational structure across all records. An embodiment has the patient directed central repository as the hub in a hub-and-spoke arrangement, where each spoke goes to one of the patient's healthcare providers, both past and present. The patient's medical records are collected from all the patient's healthcare providers, then classified, stored, and organized for use by the patient, healthcare providers, and any other authorized individuals. The records in the repository can be sorted and/or selected in several different ways and displayed to the patient or to his designated medical

care providers, and to certain patient designated third parties.

Title: DIALECT INDEPENDENT MULTI-DIMENSIONAL INTEGRATOR USING A NORMALIZED LANGUAGE PLATFORM AND SECURE CONTROLLED ACCESS

Abstract: Source: US2003200172A A system and method of aggregating and integrating authentication and/or authorization protocols of a user or a user's information across a wide range of related or nonrelated channels and exchange services. An interface is provided that allows multi-credential, multi-service, multi-role, and multi-channel based routing to multiple authorization and authentication providers in a secure system. Using a standardized language, the system creates a framework to enable entities to communicate and perform transactions instantly or nearly instantly, and seamlessly. The systems supports trusted and untrusted connections as well as multiple levels of encryption.

Title: SMART MEDICINE CONTAINER

Abstract: Source: US2006124655A A medicine dispensing system is provided that comprises of a medicine container with an inbuilt pill dispensing assembly which automatically dispenses a prescribed dose of medicine at prescribed times. It alerts the **patient** when a dose of medicine has been dispensed. The alert signal is a local audio or visual alarm or a remote reminder by phone, wireless network or internet. A modem and communication ports are provided which enable the said medicine container to communicate with remote parties like health **care** professionals and medical **devices** such as glucose meter. This feature allows remote medicine management, disease management and health education. An internal microprocessor and a memory chip control and execute electronic functions of the said medicine container. Sensors are provided to detect whether a dose has been dispensed and whether it is consumed. The said medicine container is able to record, analyze and report **patient's** compliance with a medicine regimen.

Title: ENHANCED SYNDICATION

Abstract: Source: US2006173985A A variety of tools and techniques are disclosed for managing, viewing, publishing, searching, clustering, and otherwise manipulating data streams. Data streams such as RSS data feeds may be searched, aggregated, and filtered into a processed feed. The processed feed, along with rules used to process the feed may be shared in a number of ways. A data feed management system may provide an integrated user interface through which a user may manage feeds, including searching for new feeds, managing and filtering current feeds, modifying a user profile, and sharing feeds and feed configuration data with other users. A server may provide a complementary search engine to locate new feeds and to store and/or index items or posts in known feeds. Together, these technologies may provide a richly-functioned feed management system and greater ease of use for individuals in managing large numbers of feeds and large amounts of data in feeds. Additional functional layers may provide for authentication, security, and privacy, metadata creation and management, and social networking features. Using the management tools and additional functionality, a syndicated data stream system may provide a platform for a wide array of useful consumer and business applications.

Title: SELECTION SYSTEM, DISPENSING SYSTEM AND TREATMENT WITH A ONE-A-DAY COMBINATION PILL FOR HYPERTENSION, HYPERCHOLESTEROLEMIA, HYPERTRIGLYCERIDEMIA AND ANTI-PLATELET TREATMENT

Abstract: Source: US2007112593A The present invention relates to a selection system, a dispensing system and a process using a matrix enabling a physician to select one of the plurality of one-a-day combinatory pills. The system and method uses matrices of a plurality of one-a-day pill formulations (a total of 144-177 combinatory pill formulas, or representative indicia thereof). The matrices enable the physician to pick one selected combinatory pill from the 177 formulations, adjust (titrate) dosages over time and use the matrices as an educational tool to motivate the **patient**. The use of a single daily pill with various commonly prescribed dosages of preventive medications greatly enhances compliance. The information processing system employs a computer or other electronic **device** or the physician may use printed substrates showing the matrices. The dispensing system includes a dispensing interface.

Title: DRUG STORAGE AND DISPENSING **DEVICES** AND SYSTEMS COMPRISING THE SAME

Abstract: Source: US2007186923A Drug storage and dispensing **devices** for dispensing a drug dosage form to a **patient** are disclosed. The dispensing **device** has a programmable lock-out feature for locking the dispensing **device** and is capable of detecting the identity of a user. The invention further provides a method for the treatment of subject, by administering to the subject a drug dosage form using a dispensing **device** of the invention.
