Title: **VEHICLE DOOR** AND FENDER **PROTECTOR**

**Abstract:** Source: US2007158963A **Magnets** attach a resilient material **protector** to the sides of a **vehicle**. The **protector** also includes a hook that fits between the **vehicle door** and the **door** post to prevent the **protector** from being removed from the **vehicle** when the **door** is locked. The **protector** has two portions that fold over each other such that the **magnets** on the respective portions align with each other and secure the portions together in a stowed position. The hook embeds in one portion of the **protector** and can extend between the **vehicle door** and its post to secure the **protector** to the **vehicle**. A recess opposite the hook in the other portion of the **protector** receives the hook's free end. The **magnets** have soft material on their outside to prevent the **magnets** from scratching the **vehicle**.
