Patent Information for CN203851522U

Bibli

- PN - CN203851522U U 20141001
- TI - Fruit tree girdling knife
- AB - The utility model discloses a fruit tree girdling knife which comprises a knife shell, wherein the knife shell is of an annular hollow shape; an opening is formed in one end of the knife shell; two layers of cutting blades are arranged on the inner side of the knife shell; a clearance is formed between the two blades; a first groove is formed in one side surface of the knife shell and is a square groove; a connection column is arranged in the first groove; the upper end and the lower end of the connection column are fixedly connected with the knife shell; a first shearing sheet and a second shearing sheet are sleeved in the connection column; a second groove is formed in one side of the first groove; the first groove is communicated with the second groove. During use, the fruit tree girdling knife sleeves a grape strut, and then the whole knife shell is clenched and is rotated for one circle to cut a fruit tree skin; the depth is adjustable; furthermore, the fruit tree girdling knife is also provided with the two shearing sheets, so that some branches can be sheared during girdling, and the tool is not required to be replaced; moreover, a worker can finish the whole operation with one hand; the working efficiency is greatly improved.

Patent Information for CN201278700Y

Bibli

- PN - CN201278700Y Y 20090729
- TI - Fruit tree girdling knife
- AB - The utility model discloses a fruit three band girdling knife which comprises a main body of the fruit three band girdling knife, a blade, a roller wheel, a fastening belt, a rotating press block, a control lever and a torsional spring; wherein, the blade is fixedly installed at the front end of the main body; the roller wheel is installed above the blade; the fastening belt which can be bended is arranged at the bottom of the main body and can be used for surrounding and fixing the limb of a fruit tree together with the roller wheel and the blade when winding above the main body; the rotating press block is installed above the main body and closely presses the fastening belt on the top surface of the main body; the control lever is arranged on the rotating press block in an extending way, and the torsional spring is connected between the rotating press block and the main body. When the fruit three band girdling knife is in use, the limb of the fruit tree to be processed is placed between the roller wheel and the blade and fixed by the fastening belt; then, the main body of the fruit three band girdling knife is turned, and band girdling treatment can be carried out on the surface of the limb of the fruit tree, so that the fruit three band girdling knife is convenient for operation, can be beneficial to lightening the labor intensity and improving the labor efficiency.
