Title: METHOD TO ENABLE HEARTBEAT 911

Abstract: Source: US2005060339A Data elements denoting military and federal systems, platforms and units symbolically as derived from structured military message codes (field unit identifiers, field unit designators) that correlate directly to geospatial symbology as processed by commercial forms engines with underlying message parsing processes provide the capability to display situational understanding information/symbols (1) vice a geographic area of interest shown as basic geometric shapes as in the Common Alert Protocol CAP final release dated 1 Apr. 2004. TCP/IP's universally available heartbeat mechanisms provide a common and consistent send to/get from plus timing/trigger functions for data harvesting and distribution (2). Modifying the CAP or creating child domain specific schemas provide the basis of a international 911 service available on a subscription basis say to neighborhood watch programs and the like that are equipped with GPS smart phones, handhelds, laptops and like devices (3). See attached diagram depicting as a whole, SAW Concepts previous two method patent applications (1), (2) with this application (3) entitled Heartbeat 911.

Title: TECHNIQUES FOR RETRIEVING DOCUMENTS USING AN IMAGE CAPTURE DEVICE

Abstract: Source: US2006085477A Embodiments of the present invention provide techniques for retrieving electronic documents based upon images captured using an image capture device. One or more images captured by a user using an image capture device are used to search a set of documents to retrieve one or more documents that match the search query. The one or more documents retrieved by the search may then be provided to the user or some other recipient.

Title: SYSTEM AND METHOD FOR DISCOUNTING OF HISTORICAL CLICK THROUGH DATA FOR MULTIPLE VERSIONS OF AN ADVERTISEMENT

Abstract: Source: US2007027743A The present invention is directed towards systems and methods for determining the performance of a plurality of versions of a given advertisement. The method of the present invention comprises retrieving a first version of an advertisement and associated click through data, and retrieving a second version of the advertisement and associated click through data. A clickability score is calculated for the first version of the advertisement using the click through data associated with the first version, and a clickability score is calculated for the second version of the advertisement using the click through data associated with the second version. A difference in clickability scores is determined between the first and second advertisement. The clickability score associated with the first version of the advertisement is modified based upon the difference in clickability scores.

Title: UNIVERSAL KNOWLEDGE MANAGEMENT AND DESKTOP SEARCH SYSTEM

Abstract: Source: US2010030734A A system for transmission, reception and accumulation of the knowledge packets to plurality of channel nodes in the network operating distributedly in a peer to peer environment via installable one or more role active Human Operating System (HOS) applications in a digital devise of each of channel node, a network controller registering and providing desired HOS applications and multiple developers developing advance communication and knowledge management applications and each of subscribers exploiting the said network resources by leveraging and augmenting taxonomically and ontologically classified knowledge classes expressed via plurality search macros and UKID structures facilitating said expert human agents for knowledge invocation and support services and service providers providing information services in the preidentified taxonomical classes, wherein each of channel nodes communicating with the unknown via domain specific supernodes each facilitating social networking and relationships development leading to human grid which is searchable via Universal Desktop Search by black box search module.

Title: INFORMATION OF PROXIMATE PROPERTIES THROUGH GEOGRAPHIC POSITIONING

Abstract: Source: US2007156758A Information of proximate properties through geographic positioning is disclosed. In one aspect, a method of a server module includes determining a route of a user to arrive at a set of properties that are indicated of interest to the user based on a geographical location of the user communicated by way of a client module indicating a present location of the user; optimally adjusting the route of the user to drive by the set of properties computed through a mathematical algorithm having a parameter related to the geographical location of the user communicated via a client module indicating a present location of the user; and automatically identifying at least one other marketed property proximal to the geographical location of the user communicated via the client module to the server module indicating the present location of the user in addition to the set of marketed properties based on property databases.

Title: MAP BASED NEIGHBORHOOD SEARCH AND COMMUNITY CONTRIBUTION

Abstract: Source: US2007218900A A method, apparatus and system of map based community search and neighborhood contribution are disclosed. In one embodiment, a method includes associating a verified registered user with a user profile, associating the user profile with a specific geographic location, generating a map concurrently displaying the user profile and the specific geographic location and simultaneously generating, in the map, wiki profiles associated with different geographic locations surrounding the specific geographic location associated with the user profile.

Title: PROCESS AND SYSTEM FOR GATHERING, STORING, SCORING, UPDATING, SHARING, HANDLING, AND DISTRIBUTING DATA AND CALCULATING FEES FOR REPORTS OF THE DATA

Abstract: Source: US2008015962A A business method that manages the accumulation of data and calculates a price and obtains approval for delivery of a customized report, multiple reports, or subsets of reports drawn from a database and delivered to a user or surrogates identified by the user. More particularly, a user accesses a device with a GUI such as a web based server or a local network; defines, configures, and tags data fields to be captured and accumulated within a database; defines access and entry rights into the database; and defines a reports or set of reports which specify the fields from the database to be placed into a report or set of reports. The price or fee is calculated based upon the number of fields per report and the cumulative number of fields reported out in specified periods of time for multiple reports or subsets of reports in accordance with instructions of the user for distribution of the reports to the user and his surrogates.

Title: APPARATUS AND METHOD FOR AUTOMATED AND ASSISTED PATENT CLAIM MAPPING AND EXPENSE PLANNING

Abstract: Source: US2012284199A An apparatus and computer implemented method that include obtaining, into a computer, text of a patent, automatically finding and extracting, using the computer, a set of claim text from the patent text, identifying, using the computer, text of independent claims from the set of claim text, displaying in a first row on a computer monitor the text of the independent claims, automatically determining a plurality of preliminary scope-concept phrases from the text of the independent claims, displaying in a second row on the computer monitor the text of the plurality of preliminary scope-concept phrases, eliciting and receiving user input to specify a first one of the plurality of preliminary scope-concepts phrases, and highlighting each occurrence of the specified first one of the plurality of preliminary scope-concept phrases in a plurality of the independent claims displayed in the first row. A scope concept builder tool is also provided.

Title: ON-DEMAND CREATION OF REPORTS

Abstract: Source: US2014049651A An intelligent television is provided. One aspect of the intelligent television is the ability to preserve status information across power cycles. Once a report is generated, the intelligent television may then transmit the report to a recipient, such as a server. If any one or more reports are successfully sent, they may then be deleted from a memory, storage device, or other non-volatile memory associated with the intelligent television.
