Title: EFFICIENT TRANSACTIONAL MESSAGING BETWEEN LOOSELY COUPLED CLIENT AND SERVER OVER MULTIPLE INTERMITTENT NETWORKS WITH POLICY BASED ROUTING

Abstract: Source: US2014098758A A system includes a server; a plurality of wireless networks coupled to the server; and one or more **mobile** devices coupled to the wireless networks with intermittent access to the wireless networks, the plurality of wireless networks providing data communication between client and server applications over multiple intermittent connections.

Title: FACILITATING **MOBILE** DEVICE PAYMENTS USING PRODUCT CODE SCANNING

Abstract: Source: US2012006891A Provided are computer implemented methods and systems for facilitating **mobile** device payments using barcodes displayed on **mobile** devices and scanned by merchants at checkout counters. When a customer is ready to tender a payment to a merchant, instead of using a credit card, cash, or check, the customer activates an application on his **mobile** device. The **mobile** device includes or obtains information about the payment system of this merchant. Furthermore, the **mobile** device includes or obtains information about the customer/**mobile** device user and then uses these two pieces of information to generate and display a barcode that encodes customer payment information specific to this merchant. The barcode is scanned at the checkout counter and processed to retrieve customer records from a database of the payment processing system. These records are then used to transfer funds between the merchant and customer, obtain discounts, and/or perform other retail transactions.

Title: METHOD AND SYSTEM FOR AUTOMATED DETECTION OF **MOBILE** TELEPHONE USAGE BY DRIVERS OF VEHICLES

Abstract: Source: US2008036623A A method and apparatus for automated detection of **mobile** telephone usage by drivers of vehicles is provided. The apparatus may include a detection system comprising at least one **mobile phone** signal receiving device, at least one image capturing device, and at least one computer. The **mobile phone** signal receiving device is operative to detect a **mobile phone** signal transmitted from a vehicle. The at least one image capturing device is operative to capture at least one image of the vehicle. The at least one computer is operative to store in a storage device, information associated with at least one of the **mobile phone** signal transmitted from the vehicle; and the at least one image of the vehicle. The information stored in the storage device may be used to determine if a person associated with the vehicle should be prosecuted for illegal use of a **mobile phone** while driving the vehicle.

Title: METHODS AND SYSTEMS TO ADVERTISE AND SELL PRODUCTS OR SERVICES VIA CLOUD GAMING ENVIRONMENTS

Abstract: Source: US2012059699A Provided is a method for advertising and retailing products and services in cloud gaming environments. A game provider may configure its cloud gaming environment to display third party advertisement before, during, or after the game. The advertisement may be in the form of timeout screens, banners, gaming objects, prizes, and other forms associated with typical cloud gaming environments. Third party advertisers benefit from additional advertisement exposure in these cloud gaming environments, which tend to be dynamic and interactive, and target new audience. Advertisement interaction levels may be measure to determine effectiveness and, for example, to collect certain fees from advertisers. An interaction level of interaction may be determined based on a number of clicks on advertisement objects, duration of exposure to the advertisement, a number of players, and various other factors. Game providers may modify their cloud gaming environments to improve these interaction levels and, as a result, collect more.

Title: GSM **MOBILE** WATCH **PHONE**

Abstract: Source: US2009231960A The present invention relates generally to a wrist watch **phone** adapted to be worn by a person. The watch (10) comprises a communication module (20) adapted to operate under Global System of **Mobile** (GSM) telephone networks, to work with quad frequency bands, and to send audio data across said GSM telephone networks. It also has a display adapted to display time, and to provide a graphic interface for showing a status of said communication module. The watch shell encloses the display, and the communication module. The watch has strips for fastening around the wrist of the person.

Title: RECEIVERS FOR WIRELESS POWER TRANSMISSION

Abstract: Source: US2014008992A The present invention may provide various electric receiver arrangements which may be used to provide wireless power transmission using suitable power transmission techniques such as pocket-forming. In some embodiments, receivers may include at least one antenna connected to at least one rectifier and one power converter. In other embodiments, receivers including a plurality of antennas, a plurality of rectifiers or a plurality of power converters may be provided. In addition, receivers may include communications components which may allow for communication to various electronic equipment including transmitters, phones, computers and others. Lastly, various implementation arrangements may be provided for including receivers in electronic devices.

Title: ADDITIVE EQUIPMENT TO MULTIMEDIAL, HEALTH AND SPORT EQUIPMENT

Abstract: Source: US2015358452A An addition of auxiliary functions to the multimedia equipment not included inside. These functions can be function of physiological data processing, extended and/or uninterrupted operations with regard to monitored and processed data. Auxiliary functions are implemented by the auxiliary equipment and circuits solutions physically placed in the original equipment or out of it but mechanically and electrically connected by it, whereas can it formed one compact unit. The parts, which are necessary to be dining operation changed to get uninterrupted functions, are user friendly and simply exchangeable from the aspects of users

Title: ANTENNA DIVERSITY SYSTEM AND SLOT ANTENNA COMPONENT

Abstract: Source: US2008198082A The present invention refers to an antenna diversity system comprising at least a first antenna and a second antenna wherein the first antenna substantially behaves as an electric current source or as a magnetic current source, and the second antenna substantially behaves as an electric current source or as a magnetic current source and a corresponding wireless device. Further the invention relates to an SMT-type slot-antenna component comprising at least one conductive surface or sheet of metal in which the pattern of a slot is created, at least one contact terminal accessible from the exterior of said component to electrically connect the conductive surface included in the slot-antenna component with the ground plane of a circuit board such as a printed circuit board and a corresponding wireless device.

Title: WEARABLE BAND WITH EASE OF ADJUSTMENT

Abstract: Source: US2013326790A An impact resistant wearable band assembly 10 which is particularly usefully and durable during physical exercise, fitness activities, sports, blood pressure measurements, and health care monitoring, can have a matrix, series or array of interlocking magnetic mechanisms 114 with matingly engageable portions 115 and 117 comprising magnets 116 and magnetically attractable portions 118 for detachably and magnetically securing end portions of a user friendly wearable band. In use, the versatile wearable band can be easily adjusted in a one handed movement from a locked position to a released position and vice versa. Advantageously, the wearable band assembly includes an electronic device 122 secured to an electronic device-supporting portion 120 of the wearable band.

Title: SLOTTED GROUND-PLANE USED AS A SLOT ANTENNA OR USED FOR A PIFA ANTENNA

Abstract: Source: US2008316118A The invention refers to a member (1) for a wireless device, wherein that member (1) is or comprises a ground-plane (2, 3) with at least two portions (2, 3), wherein on each of said portions (2, 3) at least one connecting means such as a pad (4, 5) is provided, wherein the two connecting means (4, 5) can be connected with an electric component (10) for connecting said two portions (2, 3) of said ground plane. The invention further refers to a wireless device with such a member and to a wireless device including a ground plane (2, 3) with at least two portions (2, 3) wherein said two portions (2, 3) are connected by an electric component (10), wherein the connection is preferably made between two portions of the ground-plane which are separated by a gap or a slot in the conducting surface of said ground-plane.
