Title: TECHNIQUES FOR RETRIEVING DOCUMENTS USING AN IMAGE CAPTURE DEVICE

Abstract: Source: US2006085477A Embodiments of the present invention provide techniques for retrieving electronic documents based upon images captured using an image capture device. One or more images captured by a user using an image capture device are used to search a set of documents to retrieve one or more documents that match the search query. The one or more documents retrieved by the search may then be provided to the user or some other recipient.

Title: SYSTEM AND METHOD FOR AUTHENTICATION AND IDENTIFICATION

Abstract: A computer-implemented method, system, apparatus, or media for electronic identification and/or authentication of a user based on a plurality of inputs, including biometric data and imaged data. The apparatus can have a plurality of components for receiving different types of data from a plurality of data sources, including biometric data, imaged data, electronic identification cards, or the like. The plurality of data can be used to confirm, verify, or otherwise authenticate the identity of the user based on various comparisons of the data. The authenticated user can use or have access to a service, device, or the like. The method, system, apparatus, or media can be used to authenticate voters based on voting data such as eligibility, appropriate polling places for a voter, party affiliation, or the like.

Title: PRINTING AND VALIDATION OF SELF VALIDATING SECURITY DOCUMENTS

Abstract: Security documents which have multiple fields or areas each of which contains information that is perceptible in more than one way: One field can contain a visually perceptible image and a digital watermark that can be detected when the image is scanned and processed, another field can contain machine readable OCR text that can be read by both a human and by a programmed computer, and still another field can contain watermark data which can be correlated to the output of a fingerprint reader or apparatus which scans a user's iris. Documents are produced by beginning with a template which defines the placements of elements on the document and the interrelationships between hidden and visual information on the document. The template specifies the placement of elements such as images, photographs, and text and it also specifies the interrelationship between information that is visually perceptible to a user of the document and information that is hidden by means of digital watermarks. Different hidden digital watermark data is included in multiple elements of the document. The watermarks in the different graphic elements of the document are correlated to each other and correlated to the visual material on the document. Thus, the document cannot be forged by replacing one element (such as a picture) with a similar element from another document. In order to produce a document defined by a particular template, appropriate pictures, graphics and digital data are extracted from a data bank, and watermark data is embedded in the pictures and graphics as appropriate. The merged digital data is then sent to a printing engine and the final document is produced. An automatic validation system of the present invention reads multiple fields on the document, and it also automatically detects information about the user. The various information is correlated to validate the document.

Title: INTERACTIVE GAME PLAYING PREFERENCES

Abstract: Source: US2002142825A A disclosed gaming machine may be customized for game play according to one or more preferences using preference information that is not correlated to an identity of a player. Therefore, the gaming machine may be configured to one or more player preferences without requiring the player to reveal their identity. The gaming machine may receive the preference information from at least one of a configuration instrument designed to store preference information, such as a cashless ticket voucher, ii) a display interface on the gaming machine, iii) a remote server, iv) a speech recognition interface on the gaming machine and v) combinations thereof. The preference information used to configure the gaming machine may be selected by the player, selected by a gaming establishment, generated by the gaming machine and combinations thereof.

Title: SECURITY APPARATUS

Abstract: Security apparatus (10) is provided for monitoring and/or controlling the access of personnel to a defined location. The apparatus (10) includes detector means (11) which are arranged to provide a first signal (34) to a controller (22), the first signal (34) being associated with a person being detected at a detection location, and validation means (17) which are arranged to provide a second signal (36) to the controller (22), the second signal (36) being associated with a person being present at the detection location. The controller (22) includes comparison means (80) for comparing the first signal (34) with the second signal (36) and is arranged to provide an output signal (38) which is dependent on the comparison.

Title: REMOTE PHYSIOLOGIC PARAMETER DETERMINATION METHODS AND PLATFORM APPARATUSES

Abstract: Source: US2017143266A Certain aspects of the disclosure are directed to an apparatus including a scale and external circuitry. The scale includes a platform for a user to stand on, and data-procurement circuitry for collecting signals indicative of the user's identity and cardio-physiological measurements while the user is standing on the platform. The scale includes processing circuitry to process data obtained by the data-procurement circuitry and therefrom generate cardio-related physiologic data, and an output circuit to send user data from the scale for reception at a remote location. The external circuitry receives and validates the user data as concerning a specific user associated with a user ID and determine at least one physiologic parameter of the user using the user data. Further, the external circuitry derives additional health information corresponding to the user data based on categories of interest and outputs the additional health information to the scale for display.

Title: PROVISIONING AND CONTROLLING MEDICAL INSTRUMENTS USING WIRELESS DATA COMMUNICATION

Abstract: Source: US2005102167A This invention teaches a method of automating some of the tasks requiring continuous data collection at the patient bedside in a hospital in a manner which significantly reduces the chances of error in providing treatment. These tasks include provisioning of the IV pumps or other fluid infusion pumps, feed pumps, oxygen delivery systems, gathering, recording, storing, and analyzing signals from ECG machine or pulse oxymeter or any other medical device. This invention teaches the use of wireless transceiver modules which are connected to the data ports on the medical instrument to gather the data and transmit the data to a wireless access point. Protocols to identify the patient, care provider, medicine, equipment, and treatment are described. Use of an external means for verifying the identity of the medical device and the medicine is also described.
