Title: METHODS AND SYSTEMS FOR CONTENT PROCESSING

Abstract: Source: US2010046842A Cell phones and other portable devices are equipped with a variety of technologies by which existing functionality can be improved, and new functionality can be provided. Some relate to visual search capabilities, and determining appropriate actions responsive to different image inputs. Others relate to processing of image data. Still others concern metadata generation, processing, and representation. Yet others relate to coping with fixed focus limitations of cell phone cameras, e.g., in reading digital watermark data. Still others concern user interface improvements. A great number of other features and arrangements are also detailed.

Title: SYSTEM AND METHOD FOR GESTURE BASED CONTROL SYSTEM

Abstract: Source: US2006187196A The system provides a gestural interface to various visually presented elements, presented on a **display** screen or screens. A gestural vocabulary includes 'instantaneous' commands, in which forming one or both hands into the appropriate 'pose' results in an immediate, one-time action; and 'spatial' commands, in which the operator either refers directly to elements on the screen by way of literal 'pointing' gestures or performs navigational maneuvers by way of relative or "offset" gestures. The system contemplates the ability to identify the users hands in the form of a glove or gloves with certain indicia provided thereon, or any suitable means for providing recognizable indicia on a user's hands or body parts. A system of **cameras** can detect the position, orientation, and movement of the user's hands and translate that information into executable commands.

Title: SYSTEMS AND METHODS FOR PROCESSING INFRARED IMAGES

Abstract: Source: US2010220193A One or more embodiments of the invention provide a system and method for processing an infrared image to receive infrared image data of a non-uniform scene, apply column noise filter correction to the infrared image data, and/or apply row noise filter correction to the infrared image data, and provide corrected infrared image data based on the column and/or row noise filter correction as infrared output image data.

Title: ENTERTAINMENT SERVER AND ASSOCIATED SOCIAL NETWORKING SERVICES

Abstract: Source: US2012158531A Certain exemplary embodiments relate to entertainment systems that interact with users so as to provide for social networking and/or other services. In certain exemplary embodiments, an entertainment system is configured to provide jukebox-related and entertainment system mediated services that are accessible from within and from the outside of the location, coordinating social networking services among and between patrons within and outside of the location and also providing for advertisement opportunities. In certain exemplary embodiments, the entertainment system within a location may serve as and/or be connected to a jukebox. The entertainment system within the location may be connected to one or more client devices, one or more **displays**, one or more bar-top or hand-held gaming devices, etc., in certain exemplary embodiments. The jukebox-related and entertainment system mediated services may provide mechanisms for enhancing patrons' experiences, creating a sense of ownership and/or belongingness to a connected community of entertainment system users.

Title: REALITY ALTERNATE

Abstract: Source: US2012069131A Among other things, we describe a reality alternative to our physical reality, named the Expandaverse, that includes multiple digital realities that may be continuously created, broadcast, accessed, and used interactively. In what we call an Alternate Reality Teleportal Machine (ARTPM), some elements of the digital reality(ies) can be implemented using and providing functions that include: devices, architectures, processing, **sensors**, translation, speech recognition, remote controls, subsidiary devices usage, virtual Teleportals on alternate devices, presence, shared planetary life spaces, constructed digital realities, reality replacements, filtered views, data retrieval in constructed views, alternate realities machine(s), multiple identities, directories, controlled boundaries, life space metrics, boundaries switching, property protection, publishing/broadcasting, digital events, events location/joining, revenues, utility(ies), infrastructure, services, devices management, business systems, applications, consistent customizable user interface, active knowledge, optimizations, alerts, reporting, dashboards, switching to "best", marketing and sales systems, improvement systems, user chosen goals, user management, governances, digital freedom from dictatorships, photography, and entertainment.

Title: SYSTEM AND METHOD FOR DYNAMIC STAND-OFF BIOMETRIC VERIFICATION

Abstract: Source: US2005055582A A system for providing stand-off biometric verification of a driver of a vehicle at a control gate while the vehicle is moving, including an RFID vehicle tag reader, an RFID personal tag reader and a facial detection and recognition (verification) system. The RFID vehicle tag reader scans and reads data from an RFID vehicle tag of the vehicle that is trying to pass through the gate. The RFID personal tag reader reads data from an RFID personal tag carried by personnel who are driving in the vehicle. The facial detection and verification system scans and reads facial images for the driver. All the data and facial images detected by the reader are sent to a computer for further processing (final face verification).

Title: IMAGE MAKING MEDIUM

Abstract: Source: US2003035917A The invention relates to an image support medium for creation of an aesthetic image that is an work or object for **display**. This support medium includes a polymer in an amount sufficient to enable the image to have at least one aesthetic element. In different embodiments, the image support medium is an image support stabilizer, the polymer is a synthetic absorbent or conductive polymer, or the polymer is a transparent or synthetic translucent polymer and a property of this transparent or translucent polymer is enhanced to facilitate the creation or preservation of the image by at least one stabilizer. The invention also relates to a method for preparing this image support medium. The method includes forming a reaction mixture comprising a monomer in an amount sufficient to provide or enable the image to have an aesthetic element, and processing the reaction mixture into a 2- or 3-dimensional shape.

Title: SYSTEM AND METHOD FOR PERFORMING SPATIO-TEMPORAL ANALYSIS OF SPORTING EVENTS

Abstract: Source: US2015248917A Methods and systems are provided to enable the exploration of event data captured from video feeds, such as from sporting event venues, the discovery of relevant events (such as within a video feed of a sporting event), and the presentation of novel insights, analytic results, and visual **displays** that enhance decision-making, provide improved entertainment and provide other benefits.

Title: SOLAR-POWERED LIGHT POLE AND LED LIGHT FIXTURE

Abstract: Source: US2009040750A A solar-powered lighting system includes a flexible, wrap-around, preferably self-stick panel of photovoltaic laminate applied to the outside surface of a light pole. An LED light fixture is connected preferably at or near the top of the pole and has the same or similar diameter as the pole. The LED light fixture has multiple columns and rows of LEDs and an interior axial space for air flow to cool the LEDs. The pole preferably also has vents and axial passage(s) for creating a natural updraft through at least a portion of the pole and the light fixture, for cooling of the photovoltaic panel interior surface, the LEDs, and/or other equipment inside the fixture or pole, and batteries that may be provided inside the pole or pole base. A purely or mainly decorative additional fixture, which emulates conventional outdoor light fixtures, may be provided on the lighting system, wherein the decorative additional fixture includes no, or only a minimal, light source. The lighting system has a sleek profile with few or no protrusions from the sides of the pole and from the LED light fixture, except for the optional decorative fixture that provides a conventional street light appearance even though the main light source is the LED fixture.

Title: DIALYSIS TREATMENT INSTRUMENT MONITORING SYSTEM AND DIALYSIS TREATMENT INSTRUMENT MONITORING METHOD

Abstract: Source: US2013270160A Provided is a dialysis treatment instrument monitoring system capable of communicating with an extrahospital terminal via the Internet without affecting an intrahospital network. In the hospital equipped with a dialysis treatment instrument monitoring system monitoring dialysis treatment instruments including a dialysate feeding device, a bulk powder dissolving device, and a RO device, while a staff is absent in the hospital, the dialysate feeding device and the bulk powder dissolving device perform a dialysis preparation processing of cleaning and sterilizing inside the devices, and stop if an error occurs during execution of the dialysis preparation processing. If an error occurs in any of the dialysis treatment instruments, a network camera takes an image of a display of the dialysis treatment instrument in which the error occurred, and transmits image data to the terminal on the Internet via a mobile router dedicated to the dialysis treatment instrument monitoring system.

Title: PARKING INFORMATION COLLECTION SYSTEM AND METHOD

Abstract: Source: US2012062395A An integrated parking information system is disclosed. The system includes a collection system and a means for collection of parking data, and an information provision system and a method for the provision of parking information, for instance, enabling a driver to know exactly which city parking rules and fines apply for any given street parking space, as well as other associated information. The system can notify members about available parking spots through a GPS application that is integrated with phones and in dash Navigation Systems. The system can provide alerts to protect members against parking violations.

Title: METHODS AND SYSTEMS FOR CAPTURING, MEASURING, SHARING AND INFLUENCING THE BEHAVIOURAL QUALITIES OF A SERVICE PERFORMANCE

Abstract: Source: US2013204675A Systems and methods for iteratively obtaining and sharing a review of a service performance, the performance being carried out by at least one performer. A user interface is provided for playback of the performance to a reviewer. The review is carried out using at least one integrated option in the user interface for carrying out the review of the performance during the playback of the performance. At least one portion of the review is directly related to a time point in the playback. The entire review process has at least one iteration. Each iteration provides the same or a different user interface for playback and review of at least one of the performance and a previous review by the same or another reviewer.

Title: SESSION AUTOMATED RECORDING TOGETHER WITH RULES BASED INDEXING, ANALYSIS AND EXPRESSION OF CONTENT

Abstract: Source: US2011173235A A system for contextualizing disorganized content (2a) captured from any live session (1) using external devices 30-xd to first detect and record 30-1 session activities (1d) being conducted by session attendees (1c). Activities (1d) become normalized tracked object data 2-otd for differentiation 30-2 into normalized session marks 3-pm denoting thresholded activity (1d) changes. Normalized marks 3-pm are integrated 30-3 into normalized events 4-pe using a "mark creates, start or stops event" model. Events 4-pe may be synthesized 30-4 via waveform convolution forming new combined events 40se, or used as containers to summarize the occurrences of marks 3-pm or other events 4-pe, the results of which create new summary marks 3-sm. Calculation marks 3-tm may also be synthesized 30-4 for sampling various session data at various session times. During content expression 30-5 events 4-pe and 4-se can be automatically named and foldered creating index (2i) and organized content (2b).

Title: ENERGY-EFFICIENT UTILITY SYSTEM UTILIZING SOLAR-POWER

Abstract: One or more utility units each have a pole, a solar engine, lighting or other loads, and a controller. The controller provides sensing and control processes mainly on-pole, but a unit/pole may additionally communicate and/or receive/send control signals from/to poles with which they are networked and/or from a control station. The pole/network provides energy-efficient lighting, security, **displays**, environmental data gathering, or other services based on the loads installed on the pole(s). Each pole/network may be adapted for energy-efficiency; energy-metering; grid-cooperation; self-diagnostics; overriding of errors/signals to prevent abnormal operation; and/or coordinated activities between poles. Networks may be wireless or wired, or a portable temporary device may monitor pole(s). Active control includes detection of **sensor** signals or other operational data, which detection triggers the controller to take action that modifies operation of one or more devices/systems on the pole in order to maintain energy efficiency and operability in spite of malfunctions, abnormal signals or environments, cloudy/diffuse- light weather, or other non-standard conditions.

Title: METHOD AND APPARATUS FOR IMAGING

Abstract: Source: US2012218376A Embodiments of the invention relate to a method and apparatus for imaging. Specific embodiments can incorporate an imaging module having at least one first imager, where each first imager images a corresponding at least one first portion of a ? degrees field of view about a reference point, such that the at least one first imager images the ? degrees field of view. In a specific embodiment ? is at least 90 degrees. The imaging module can also incorporate at least one second imager, where each second imager images a corresponding at least one second portion of the ? degrees field of view about the reference point, and one or more of the at least one first imager has a different magnification than one or more of the at least one second imager. Embodiments can allow imaging of a 0 degrees field of view about a reference point with imagers having at least two different magnifications.

Title: SYSTEM, METHOD AND APPARATUS FOR PROVIDING SECURITY SYSTEMS INTEGRATED WITH SOLID STATE LIGHTING SYSTEMS

Abstract: Source: US2014167912A A security system including a plurality of LED lights with **sensors** operatively connected to a computer. The computer is also operatively connected to a plurality of other security system components, including, but not limited to, a facial recognition system, a license plate recognition system, an RFID system, a micro-cell which may be operatively connected to an IP telephony network, at least one Bluetooth wireless access point, a Wi-Fi wireless access point, and a communication system, wherein the computer aggregates data and sends commands based on the data.

Title: MULTI-SENSOR SYSTEM FOR HIGH PERFORMANCE AND RECONFIGURABLE OUTDOOR SURVEILLANCE

Abstract: A high performance and reconfigurable surveillance platform for outdoor surveillance is provided. It incorporates multiple high-resolution color cameras that ensure sufficient resolution on a target of interest. Video streams are stitched into a single panoramic video. A pan/tilt/zoom (PTZ) camera is accurately registered to the panoramic view. An even higher resolution of a target of interest can be acquired using the PTZ camera using optical zoom. Cameras are synchronized with high accuracy in order to capture registered video streams. The system configuration, including camera type, desired resolution, is defined by an XML file without changing the code. The surveillance system provides multi-threaded applications through specified thread pools.

Title: SECURITY AND PUBLIC SAFETY APPLICATION FOR A MOBILE DEVICE

Abstract: Source: US2016027292A In a plurality of described embodiments, various modules of an application for a client device may operate to enhance personal security for an individual user, as well as public safety in general. A Blue-Phone-in-Pocket (bPip) module operates comparable to, but more effectively than, the traditional college campus blue light phone. When the user of the module toggles a button on the GUI of his/her smartphone, the App may instantly record and transmit key information to a command center, which operates to provide assistance to the student, at their current location, without requiring the student to relocate to one of the tradition blue light phone fixtures. A tracking module permits the student or other user to be tracked by his/her device until safely reaching a travel destination. The person may trigger an alarm if endangered during the trip, which may prompt a respond from local law enforcement, and other assigned individuals.

Title: RISK ASSESSMENT AND CONTROL, INSURANCE PREMIUM DETERMINATIONS, AND OTHER APPLICATIONS USING BUSYNESS

Abstract: Source: US2011161119A A "busyess" metric is determined for various different objects, such as businesses, roads, vehicles, buildings, locations, transportation systems, communication systems, devices, equipment, and/or systems, using various sensing and/or other technologies. The busyess metric may be used for a broad range of applications, such as assessing and controlling insurance risk, determining insurance premiums, prioritizing tasks, travel, navigation, advertising, and other purposes.

Title: SYSTEMS AND METHODS FOR CERTIFIED LOCATION DATA COLLECTION, MANAGEMENT, AND UTILIZATION

Abstract: Source: US2013262152A Location information may be gathered, managed, stored, and/or otherwise utilized to determine unique geo-referenced locations. The geo-referenced locations may be utilized to inform various processes and decisions such as insurance underwriting, risk assessment, pricing, and risk/loss control.
