Title: **SYSTEM** FOR CONTROLLING THE DISTRIBUTION AND USE OF DIGITAL WORKS USING DIGITAL TICKETS

Abstract: Source: US2001010045A A **system** for controlling the distribution and use of digital works using digital tickets. In the present invention, a "digital ticket" is used to entitle the ticket holder to exercise some usage right with respect to a digital work. Usage rights are used to define how a digital work may be used or distributed. Each usage right may specify a digital ticket which must be present before the right may be exercised. Digital works are stored in repositories which enforce a digital works usage rights. Each repository has a "generic ticket agent" which punches tickets. In some instances only the generic ticket agent is necessary. In other instances, punching by a "special ticket agent" residing on another repository may be needed.

Title: **System**, method and article of manufacture for tournament play in a **network** gaming **system**

Abstract: Source: US2002010025A The present invention provides a **system**, method and article of manufacture for determining payment for participating in a **network** gaming tournament. First, a plurality of **networked** game apparatuses are provided for allowing games to be played by a plurality of players in a tournament. An indication of an outcome of at least one game played by each of the players is then received. Based on a sum of the outcomes of the games of all of the players, a total amount of prize credits or prizes is determined. Subsequently, a first portion of the total amount of prize credits or prizes is partitioned for payment for participation in the tournament, and a second portion of the total amount of prize credits or prizes is awarded to at least one winning player based on the outcome of the at least one game thereof.

Title: INTEGRATED **SYSTEM** FOR PROVIDING FINANCIAL SERVICES INCLUDING INTERNET TV CAPABILITIES

Abstract: Source: US2001056401A The methods and **systems** of the present invention allow for the integration of different electronic commerce ("e-commerce") and electronic banking ("e-banking") technologies to advantageously provide an increased level of services to banking customers including consumers and merchants. A particular feature of the present invention is the integration of a television interface with e-commerce, home banking and credit/debit card processing services and internet technologies to provide a single conduit for merchants and consumers to financial services **networks**.

Title: TABLE LOOK-UP FOR CONTROL OF INSTRUCTION EXECUTION

Abstract: Source: US2005086451A A microprocessor chip has instruction pipeline circuitry, and instruction classification circuitry that classifies instructions as they are executed into a small number of classes and records a classification code value. An on-chip table has entries corresponding to a range of addresses of a memory and designed to hold a statistical assessment of a value of consulting an off-chip table in a memory of the **computer**. Lookup circuitry is designed to fetch an entry from the on-chip table as part of the basic instruction processing cycle of the microprocessor. A mask has a value set at least in part by a timer. The instruction pipeline circuitry is controlled based on the value of the on-chip table entry corresponding to the address of instructions processed, the current value of the mask, the recorded classification code, and the off-chip table.

Classifications:

Title: **SYSTEM** AND METHOD FOR IDENTIFYING AND ESTABLISHING PREFERRED MODALITIES OR CHANNELS FOR COMMUNICATIONS BASED ON PARTICIPANTS' PREFERENCES AND CONTEXTS

Abstract: Source: US2002161862A A **system** and method for identifying and establishing preferred modalities or channels for communications based on participants' preferences and capabilities is provided. In one approach, the **system** attempts to optimize the inferred or directly accessed preferences of a contactee given the accessed or inferred preferences, capabilities and goals of the contactor while keeping the rationale and context of the contactee private. Such optimization can be achieved using preferences and policies concerning handling the attempted contact based on a deterministic specification or through inferring context, content and task under uncertainty by employing decision-theoretic inferences to attempt to maximize the expected utility of the communication to the contactee. The methods may include a consideration of metadata within a standard schema that is transmitted along with a communication attempt, representing information about such attributes as the identity of the contactor, the task at hand, the overall context of the contactor, and the communication capabilities available to the contactor. The invocation of the communication service may be performed in a variety of ways, including single button invocations, and via a communication service that is more deeply integrated with other applications and functionalities. The service can also include automated rescheduling of communications based on a consideration of forecasts of availability of both the contactor and contactee.

Title: XML-BASED TEMPLATE LANGUAGE FOR **DEVICES** AND SERVICES

Abstract: Source: US2002029256A A universal plug and play (UPnP) **device** makes itself known through a set of processes—discovery, description, control, **eventing**, and presentation. Following discovery of a UPnP **device**, an entity can learn more about the **device** and its capabilities by retrieving the **device**'s description. The description includes vendor-specific manufacturer information like the model name and number, serial number, manufacturer name, URLs to vendor-specific Web sites, etc. The description also includes a list of any embedded **devices** or services, as well as URLs for control, **eventing**, and presentation. The description is written by a vendor, and is usually based on a **device** template produced by a UPnP forum working committee. The template is derived from a template language that is used to define elements to describe the **device** and any services supported by the **device**. The template language is written using an XML-based syntax that organizes and structures the elements.

Abstract: Source: US2002097277A Methods and **systems** for managing user information using a customized **computer** interface which is user centric and geared toward creating and managing a personal information portal. In one aspect, the invention provides computerized methods for organizing a representation of user activities and information and navigating through an information management **system** that utilizes the representation.

Title: Graphics **system** interface

Abstract: Source: US2001040578A An interface for a graphics **system** includes simple yet powerful constructs that are easy for an application programmer to use and learn. Features include a unique vertex representation allowing the graphics pipeline to retain vertex state information and to mix indexed and direct vertex values and attributes; a projection matrix value set command; a display list call object command; and an embedded frame buffer clear/set command.

Abstract: Source: US2002007225A Computerized method and **system** for graphically identifying replacement parts for selected equipment and a selected **system** thereof is provided. The method allows to provide a database comprising detailed parts **data** about the replacement parts for each assembly of the selected equipment, with the detailed **data** identifying each part in a selected assembly by providing a series of linked schematic representations of the selected assembly and any subassemblies thereof and respective parts. The method further allows to provide a respective identifier for uniquely identifying the selected equipment. An input/output **device** for communicating with the database is provided. The method allows to access the database to interface with the detailed parts **data**, and retrieve from the database detailed **data** about the selected equipment using the respective identifier for the equipment, wherein service personnel graphically progresses from the selected assembly to any relevant subassembly and replacement parts by following any appropriate links.

Title: **SYSTEM** AND METHOD FOR MONITORING A PHYSIOLOGICAL CONDITION

Abstract: Source: US2006234202A The invention describes a **system** and method for allowing an individual to view an educational program remotely. In the preferred embodiment, the invention is used as a healthcare education **system**. The **system** comprises a file server which is connected to a database holding the educational programs. A remote interface connected to the file server allows an administrator to assign educational programs to an individual. The remote interface also includes a memory card writer which records the individual's identification code and the address of the file server on a memory card. The individual is given the memory card to take home. When the individual places the memory card in the memory card reader of a multimedia processor, the processor uses the file server address to automatically connect to the file server. The file server receives the individual's identification code from the processor, retrieves the corresponding educational program from the database, and sends the program to the processor to be displayed. After the individual has watched the educational program, completion **data** in the form of the date and time the program was watched, or the individual's response, is sent from the multimedia processor to the file server. The completion **data** can then be viewed by the administrator on a report screen.

Title: **COMPUTER** ASSISTED TEXT INPUT **SYSTEM**

Abstract: Source: US2002049795A The disclosure includes five different display presentations, two for Handheld **computers** and three for Laptops or Desktops, for the word start inputs with a Stylus, Mouse or other type Pointer. Pointer selects displayed items and executes strokes to input text to **computers**. Displayed items include starting letters, or SLs, very frequent words, or VFWs, Digits, and 2nd, 3rd, and 4th letters of SLSs. Strokes and "Sections' diagrams and tables show assignments obtained. Six SL and SLS obtained word set presentations enable further word inputs with a Pointer. Pointer strokes from Digits input members shown in table. Strokes following VFW and other word selections obtain "Associated Inputs' of tables as specified by Codes with words. Strokes following SL and SLS inputs add letters to extend SLSs for smaller word sets from vocabulary holding strings of the word stems of an abridged dictionary. Special "Letter Groups' effectively extend SLSs with eight strokes. A 1st Handheld model has SL and VFW displayed items. SL inputs single letter to access word sets from a Vocabulary, VFWs input VFWs. Strokes with SLs obtain various letter inputs and change vocabularies. Strokes with VFWs obtain "Associated Inputs', which include inflected forms, in place of VFWs. A 1st Laptop and Desktop model functions like the Handheld model with larger word sets. A 2nd Laptop and Desktop model assigns both a VFW and an SLS to each displayed item. Mouse buttons select VFWs or SLSs. Universal model for Handheld, Laptop and Desktop employs Vocabulary with strings of the word stems of an abridged dictionary and has displayed items consisting of Digits, SL and 2nd, 3rd and 4th letters of SLSs. SL and letter displayed items have both VFW and SLS assignments, the VFW being most frequent words with the respective SLS. Word sets obtained display on Desktop but not Handheld **computers**. Strokes extend SLSs for word sets displayable on Handheld **computers**.

Title: **COMPUTER** WITH SPECIAL-PURPOSE SUBSYSTEMS

Abstract: Source: US2002169998A A method or **system** for supporting a **computer systems** self repair, including the **computer** executed steps for booting from a first boot **device**, and booting from a second boot **device** in response to a signal indicating a need for repair. While booted from the second boot **device** the **computer system** is capable of repairing software on the first boot **device**. The signal may effect a logical or physical switch. Repairing software may be performed in part by copying, template, backup or archive software from a **device** other than the first boot **device**. Repairing software may be performed automatically without direction by a user or according to preset preferences.

Abstract: Source: US2003172166A The present invention is directed to **systems** and methods for enhancing electronic communication security. An electronic communication related to an application is received and stored. One or more risk assessments are made with respect to the received communication thereby generating a risk profile associated with the communication. The risk profile is analyzed with respect to **data** associated with previously received communications to determine if the received communication is anomalous. If the received communication is determined to be anomalous, an anomaly indicator signal is output.

Title: EXTENSIBLE FRAMEWORK FOR CODE GENERATION FROM XML TAGS

Abstract: Source: US2003181196A A **computing** application for a **mobile** information **device** is generated from An extensible markup language, MIDML, in which different types of tags correspond to different application functions. An library infrastructure parses the MIDML specification, reading the tags in specialized readers, and generating specialized objects for an object model using different generators for each type. A predefined set of tags is extendible by the application developer. The generation process results in Java source code, which is then compiled and packaged into a JAR file and a JAD file. An applications layer includes a servlet, which processes user requests for the **computing** application, and causes an appropriate version to be downloaded over a **data network**.
