Search [SP]: 1. a method of compiling one or more advertisement, the method comprising: receiving via one or more communications network one or more request from one or more advertiser to place one or more advertisementallowing one or more advertiser to select one or more product and/or service category in respect of which he or she wishes to advertiseprompting one or more advertiser via one or more communications network to compile information regarding one or more product and/or service to be advertisedreceiving via one or more communications network information regarding one or more product and/or service to be advertisedcollating the information to define a primary advertisement, comprising one or more of the following: the date, the advertiser's location, the advertiser's contact details and the product and/or service being advertisedextracting from one or more database a secondary advertisementappending the secondary advertisement to the primary advertisement, so as to define a combined advertisement andtransmitting one or more combined advertisement to one or more device. 2. a method according to claim 1 wherein the step of allowing the one or more advertiser to select one or more product and/or service category in respect of which he or she wishes to advertise comprises presenting the one or more advertiser with a multi-level set of categories for selection by the one or more advertiser. 3. a method according to claim 1 wherein the step of prompting the one or more advertiser to compile information regarding the one or more product and/or service to be advertised comprises the steps of prompting the one or more advertiser to provide the one or more body and/or title of the one or more advertisement. 4. a method according to claim 1 wherein the secondary advertisement is related or connected to the product and/or service category, and/or the product and/or service being advertised. 5. a method according to claim 1 wherein the step of appending the secondary advertisement to the primary advertisement includes the step of appending the secondary advertisement to the header, footer or middle or any suitable place of the primary advertisement. 6. a method according to claim 1 wherein the method comprises sending one or more primary advertisement to one or more advertiser for approval, and upon receiving approval, the method comprises storing the one or more advertisement in one or more database for subsequent retrieval. 7. a method according to claim 1 wherein after appending the secondary advertisement to the one or more primary advertisement, the method comprises sending the one or more combined advertisement to the one or more advertiser for approval, and upon receiving approval, the method comprises storing the one or more combined advertisement in the one or more database for subsequent retrieval. 8. a method according to claim 1 wherein the method comprises allowing the one or more advertiser to request further information regarding the secondary advertisement, and sending one or more message with further details and/or contact details that the one or more advertiser may use and/or one or more url link to one or more web site with further details. 9. a method according to claim 1 wherein the method comprises the step of determining whether the one or more advertiser is registered with a host running the method, and if the one or more advertiser is not registered, the method comprises registering the one or more advertiser, which in turn comprises any one or more of the following steps: presenting one or more introductory message and/or related terms and conditions, and prompting the one or more advertiser to accept the terms and conditionsdetermining the advertiser's locationprompting the one or more advertiser to set one or more pin, for subsequent use to ensure that one or more operator of one or more device is authorized to place advertisements, andcapturing the one or more advertiser's payment information which can then be used automatically in future to place adverts. 10. a method according to claim 9 wherein the one or more pin is a biometric of the one or more advertiser. 11. a method according to claim 1 wherein the method includes automatically suggesting one or more improvement to the one or more advert 12. a method according to claim 1 wherein if the one or more primary advertisement is shorter than an allowed length, automatically increasing the size of the secondary advertisement. 13. a method according to claim 1 further including allocating one or more reference code to the one or more advert by which the one or more advertiser can quickly locate their one or more advert in the system. 14. a method according to claim 1 wherein the method is implemented using mobile technology which comprises any one or a combination of ussd (unstructured supplementary service data), sms (short message service) and mms (multimedia message service). 15. a method of searching for one or more advertised product and/or service, the method comprising: receiving via one or more communications network one or more request from one or more device associated with one or more user to search for one or more advertisementallowing one or more user to select at least one or more product and/or service category in respect of which he or she wishes to searchprompting one or more user via one or more communications network to submit information regarding the one or more product and/or service to be searchedreceiving information via the one or more communications network regarding the one or more product and/or service to be searchedsearching one or more databases for matching products and/or servicescollating the information to define one or more primary advertisement, comprising of one or more matching product and/or serviceextracting from one or more databases a secondary advertisementappending the secondary advertisement to one or more primary advertisement, so as to define one or more combined advertisement andtransmitting one or more primary and secondary advertisement to one or more device. 16. a method according to claim 15 wherein the step of appending the secondary advertisement to one or more primary advertisement includes the step of appending the secondary advertisement to the header, footer or middle or any suitable place of the one or more primary advertisement. 17. a method according to claim 15 comprising sending the one or more combined advertisement to the one or more user, and prompting the one or more user to select one or more matching product and/or service in respect of which he or she is particularly interested in. 18. a method according to claim 15 wherein for the selected one of the one or more matching product and/or service, the method further comprises extracting from the database further information regarding the selected product and/or service, including one or more of the following: the date of advertisement, the advertiser's location, the advertiser's contact details and/or the product and/or service being advertised. 19. a method according to claim 15 wherein the method further comprises: collating the information extracted from the one or more database to define one or more primary advertisementappending the secondary advertisement to the one or more primary advertisement, so as to define one or more combined advertisement andsending the one or more combined advertisement to the one or more user. 20-33. (canceled) 34. a system for compiling one or more advertisement, the system comprising: one or more database to store a plurality of secondary advertisements andone or more processor to access one or more database, and which is arranged to:receive via one or more communications network one or more request from one or more device associated with one or more advertiser to place one or more advertisementallow the one or more advertiser to select via the one or more communications network one or more product and/or service category in respect of which he or she wishes to advertiseprompt the one or more advertiser via the one or more communications network to compile information regarding the one or more product and/or service to be advertisedreceive via the one or more communications network information regarding the one or more product and/or service to be advertisedcollate the information to define a primary advertisement, comprising of one or more of the following: the date, the advertiser's location, an advertiser's contact details and/or the product and/or service being advertisedextract from the one or more database a secondary advertisement andappend the secondary advertisement to the one or more primary advertisement, so as to define one or more combined advertisement. 35. Title: METHOD OF AND SYSTEM FOR CREATING AND MANAGING A COMBINED ADVERTISEMENT USING A MOBILE DEVICE

Abstract: Source: US2017193565A A method and system of compiling one or more advertisements is provided. The method includes receiving via a communications network a request from an advertiser to place an advertisement. The advertiser selects one or more product and/or service category in respect of which he or she wishes to advertise and then compiles information regarding one or more product and/or service to be advertised. The information is collated to define a primary advertisement. A secondary advertisement is then extracted from a database and appended to the primary advertisement, so as to define a combined advertisement which is transmitted to a device of a user, typically a mobile communications device.

Title: SYSTEM AND METHOD FOR DISTRIBUTING ADVERTISEMENTS TO THIRD-PARTY **SMS** CONTENT PROVIDERS

Abstract: Source: US2009011781A Methods, apparatuses and systems enabling delivery of advertising to third-party short message service (**SMS**) content providers. An **SMS** content provider sends a request to an ad server for an advertisement to append to an outgoing mobile terminated message. The ad server retrieves an advertisement from the ad database that meets available character constraints as well as targeting parameters based on user area code, time, content-channel, and content of the message. If targeting parameters are satisfied, the ad server sends advertisement to **SMS** content provider to append to outgoing message. The ad server sends receipt of delivery to reporting database. The present invention provides methods, apparatuses and systems for third-party **SMS** content providers to retrieve advertisements for delivery to their mobile users, track retrieval of advertisements, and receive compensation in exchange for advertisement distribution. The present invention provides methods, apparatuses and systems for advertisers to create text-based advertisements, set targeting parameters, and view ad delivery reports across all third-party **SMS** content affiliates.

Title: VENDING STORE INVENTORY MANAGEMENT AND REPORTING SYSTEM

Abstract: Source: US2010138037A A data center supporting a network system for vending products to customers and associated vending methods are provided. The network system includes a data center and a plurality of vending stores remotely located from the data center and connected to the data center through a network interface. The vending stores also include an automated dispensing mechanism for immediate dispensing of purchased products to the customers. The data center may include an enterprise resource planning module and the vending stores may contain user interfaces for collecting inventory and maintenance data during stocking and maintenance.

Title: **Transmitting** and receiving devices and methods for **transmitting** data to and receiving data from a communication system

Abstract: Source: US2001020892A A pager transceiver and method for selectively paging provides a page to a paging transceiver but does not automatically provide associated information. The paging transceiver **receives** the page and alerts the user that information is waiting and preferably provides a short description of the information. The user can then download or otherwise act on the information at a time and at a place convenient to the user. The user can therefore place the paging transceiver in a location where it can easily **receive** and reply to the message. The paging system conserves air time and the paging transceiver conserves memory by not automatically receiving the associated messages. The messages stored by the systems and delivered to the paging transceiver may be of different types, such as voice, text, audio, or even video. In addition to messages, the paging system can store other information for the user, such as songs or video clips that the user can sample or updates on weather or stock rates. The paging transceiver includes a timer so that the desired action taken on the information may be performed at a desired time. The timer may be set so that the action may occur at a certain time, for instance at an off-peak hour to lower costs to the user. The timer may be programmed by the user so that messages are delivered after a certain time delay or at any other desired time.

Title: METHOD AND APPARATUS FOR COMPLETING A TRANSACTION USING A WIRELESS MOBILE COMMUNICATION CHANNEL AND ANOTHER COMMUNICATION CHANNEL

Abstract: Source: US2007156436A The present invention provides a method and apparatus for completing a transaction using a wireless mobile communication channel and another communication channel, particularly another communication channel that provides for near field radio channels (NFC), as well as other communication channels, such as Bluetooth or WIFI. The present invention also provides a method of completing a transaction in which a management **server** assists a transaction **server** and a point of sale terminal in forwarding transaction information to a hand-held mobile device, with the transaction having originated from the hand-held mobile device. There is also provided a hand-held mobile device that wirelessly communicates between a secure element and a radio element that are associated with the hand-held mobile device.

Title: FACILITATING MOBILE DEVICE PAYMENTS USING PRODUCT CODE SCANNING

Abstract: Source: US2012006891A Provided are computer implemented methods and systems for facilitating mobile device payments using barcodes displayed on mobile devices and scanned by merchants at checkout counters. When a customer is ready to tender a payment to a merchant, instead of using a credit card, cash, or check, the customer activates an application on his mobile device. The mobile device includes or obtains information about the payment system of this merchant. Furthermore, the mobile device includes or obtains information about the customer/mobile device user and then uses these two pieces of information to generate and display a barcode that encodes customer payment information specific to this merchant. The barcode is scanned at the checkout counter and processed to retrieve customer records from a database of the payment processing system. These records are then used to transfer funds between the merchant and customer, obtain discounts, and/or perform other retail transactions.

Title: METHOD AND SYSTEM FOR ENCRYPTED NETWORK MANAGEMENT AND INTRUSION DETECTION

Abstract: Source: US2003217283A A network security system includes a system data store capable of storing a variety of data associated with an encrypted computer network and communications **transmitted** thereon, a communication interface supporting communication over a communication channel and a system processor. Data corresponding to communications **transmitted** over the encrypted communication network are **received**. One or more tests are applied to the **received** data to determine whether a particular communication represents a potential security violation. An alarm may be generated based upon the results of the applied test or tests.

Title: SYSTEM AND METHOD FOR ATTACK AND MALWARE PREVENTION

Abstract: Source: US2010100963A The present invention is a system and method for detecting and preventing attacks and malware on mobile devices such as a cell phones, smartphones or PDAs, which are significantly limited in power consumption, computational power, and memory. The invention enables mobile devices to analyze network data, executable data files, and non-executable data files in order to detect and prevent both known and unknown attacks and malware over vectors that are not typically protected by desktop and **server** security systems. Security analysis is performed by a combination of "known good," "known bad," and decision components. The invention identifies known good executables and/or known characteristics of network data or data files that must be present in order for the data to be considered good. Furthermore, known good and known bad identifier databases may be stored on a **server** which may be queried by a mobile device.

Title: Method and apparatus for selectively discarding packets for blocked output queues in the network switch

Abstract: Source: US5953335A An apparatus and method of controlling the transmission of copies of a frame of data from a multiport device, such as a multiport network switch, determines which ones of the ports are designated to **transmit** a copy of a multicopy frame **received** at the switch. The switch then determines which of these designated ports are not available to **transmit** a copy of the frame. The copies are **transmitted** from those designated ports that are available to **transmit** a copy of the multicopy frame, while the copies are discarded for those designated ports that are not available to **transmit** a copy of that multicopy frame.

Title: CELLULAR PHONE/PDA COMMUNICATION SYSTEM

Abstract: Source: US2006063539A A cellular PDA communication system for allowing a plurality of cellular phone users to monitor each others' location and status, to initiate cellular phone calls by touching a symbol on the display screen with a stylus or finger which can also include conferencing calling. The system also provides for remote activation of a cellular phone by an initiator causing the remote cellular phone to announce audio announcements, to call another phone number, to increase the volume of the speaker, to vibrate or to display images or videos. All this is accomplished with a conventional cellular phone PDA that includes GPS navigation with an enhanced improved software program.

Title: TECHNIQUES FOR RETRIEVING DOCUMENTS USING AN IMAGE CAPTURE DEVICE

Abstract: Source: US2006085477A Embodiments of the present invention provide techniques for retrieving electronic documents based upon images captured using an image capture device. One or more images captured by a user using an image capture device are used to search a set of documents to retrieve one or more documents that match the search query. The one or more documents retrieved by the search may then be provided to the user or some other recipient.

Title: UNIVERSAL VALUE EXCHANGE APPARATUSES, METHODS AND SYSTEMS

Abstract: Source: US2012233073A The UNIVERSAL VALUE EXCHANGE APPARATUSES, METHODS AND SYSTEMS ("UVE") transform cross-ecosystem currency exchange instructions via UVE components into cross-ecosystem currency exchanges. In one embodiment, the UVE may obtain a cross-ecosystem currency exchange instruction and determine one or more sources and destinations based on parsing the cross-ecosystem currency exchange instruction. The UVE may identify currency types associated with the sources and the destinations and determine exchange rates of the currency types relative to a standard currency. In one implementation, the UVE may obtain currency exchange restrictions and conditions associated with the sources and the destinations and generate a currency exchange flow path for currency transfer from the sources to the destinations. The UVE may also issue currency transfer requests to the sources and the destinations, determine that the cross-ecosystem currency exchange has been completed and provide a notification of completion of the cross-ecosystem currency exchange.

Title: CONNECTION ARCHITECTURE FOR A MOBILE NETWORK

Abstract: Source: US2003157947A A real-time communication architecture establishes a continuous connection between an enterprise network and a communication management system. The connection is continuously held open allowing mobile devices real-time access to enterprise email systems. The real-time communication architecture can support an entire enterprise email system or individual email users. The foregoing and other objects, features and advantages of the invention will become more readily apparent from the following detailed description of a preferred embodiment of the invention which proceeds with reference to the accompanying drawings.

Title: AUDIO AND VIDEO PROGRAM RECORDING, EDITING AND PLAYBACK SYSTEMS USING METADATA

Abstract: Source: US2002120925A A system for utilizing metadata created either at a central location for shared use by connected users, or at each individual user's location, to enhance user's enjoyment of available broadcast programming content. A variety of mechanisms are employed for automatically and manually identifying and designating programming segments, associating descriptive metadata which the identified segments, distributing the metadata for use at client locations, and using the supplied metadata to selectively record and playback desired programming.

Abstract: Source: US2006161621A A system, method and computer program product is provided which facilitates the collaborative selection and synchronous playing of digital media on a plurality of networked media players. Various embodiments of the invention provides for a plurality of media players in processing communications which enables individual users of the media players to form a collaborative group; whereby the collaborative group of users may jointly suggest, approve, reject, vote, or otherwise select the media item to be synchronously played upon their individual media players. In some embodiments of the present invention, at least one of the media players is assigned a role of designated media coordinator. Each of the plurality of media players includes a processor, a communications infrastructure coupled to the processor, a secondary memory coupled to the communications infrastructure having retrievably stored therein one or more media items playable by the processor, a transceiver coupled to the communications infrastructure, a main memory coupled to the processor and at least one collaboration program stored in at least a portion of the memory. The collaboration program having instructions executable by the processor to exchange parameters among the individual media players to enable the collaborative selection and synchronous playing selected media items.

Title: INTERFACE FOR EXTENDING FUNCTIONALITY OF MEMORY CARDS

Abstract: Source: US2008195797A An enhanced flash memory card, including a flash memory card, including a wireless modem for downloading remote directory listings, and media files and streams over the Internet, and a memory partitioned into physical data storage clusters, and a driver for the flash memory card (i) for managing a file allocation table (FAT) that stores information about physical and virtual data storage clusters, the FAT including stub files for remote directory listings and remote media files and streams, wherein the stub files link to virtual data clusters, (ii) for managing a download conversion map from virtual cluster numbers to pointers of remote media files and streams, and (iii) for storing downloaded directory listings and media files and streams in the physical data storage clusters. A method is also described and claimed.

Title: ELECTRONIC PEN HELP FEEDBACK AND INFORMATION RETRIEVAL

Abstract: Source: US2001033293A A method and system for displaying feedback in an electronic reading device system. An electronic reading device is used to detect portions of an address pattern on a formatted surface. The detected portions are converted into feedback that is then displayed on an electronic display device. The feedback can include a textual representation of information written with the electronic reading device, help information for an application associated with the address pattern, or a retrieval of other stored information.

Title: DIGITAL DOWNLOADING JUKEBOX SYSTEM WITH CENTRAL AND LOCAL MUSIC **SERVERS**

Abstract: Source: US2005060405A A digital downloading jukebox system including a central **server** and a plurality of remote jukebox devices each provided with a local **server** that preferably mirrors the central **server** and enables selected songs to be immediately downloaded to the jukebox for reproduction. The local **server** and jukebox may also provide, through control of the central **server**, song download services to other jukebox devices, such as residential jukeboxes. The jukebox system may also act as a monitoring/management device for other coin operated equipment present in a location where the jukebox is located, thereby enabling the jukebox device to perform updates on other equipment under control of the central **server**.

Title: **SMS**+4D: SHORT MESSAGE SERVICE PLUS 4-DIMENSIONAL CONTEXT

Abstract: Source: US2007066327A A Short Message Service (**SMS**) enables a **sender** to **send** an asynchronous short text message from his source device to one or more receiving devices specified by the **sender** that represent one or more recipients. **SMS**+4D embeds, and allows the recipient to elicit contextual and explanatory information concerning the meaning of the short text message from the **SMS**, thus creating 'sideband' capability for text messages analogous to the visual and aural cues from accompanying facial and body expressiveness and the tone, timbre, pitch, and timing of a spoken message. **SMS**+4D may also learn, through embedded formal analysis and pattern comprehension, to associate specific contextual information to support the **sender**'s original meaning, thereby clarifying surficially indefinite text words, phrases, or structures.

Title: VOICEMAIL SHORT MESSAGE SERVICE METHOD AND MEANS AND A SUBSCRIBER TERMINAL

Abstract: Source: US2004005877A A voicemail short messaging method (10, 20, 30) and unit and a subscriber terminal for instantaneous packet switched voicemail between Internet compatible computers, personal digital assistants, telephones and mobile stations. In particular the subscriber terminal (500) concerns a hardware and a software setup that allows the combined use of audio and/or video devices (550) with both the normal cellular or fixed telephony network (520) and with an Internet connection (510). The subscriber terminal (500) allows the flexible use of both the Internet and telephony network with numerous advantages, one of which is the inventive voicemail short messaging method under study. The voicemail messaging method (10), comprising at least one subscriber terminal is characterised by server independence.

Title: CALL INTERCEPT METHODS, SUCH AS FOR CUSTOMER SELF-SUPPORT ON A MOBILE DEVICE

Abstract: Source: US2005233733A A method for intercepting calls from a remote or mobile device for customer self-support detects when users or subscribers dial one or more predetermined numbers. If the number corresponds to one of the predetermined numbers (such as a customer support number), the phone may intercept the call and display a list of potential solutions to the subscriber's problems. Various other features and embodiments are disclosed.

Title: FEMTO CELL SIGNALING GATING

Abstract: Source: US2009280819A System(s) and method(s) are provided to manage signaling in a femto cell access point. A pilot signal power profile, or pilot signal gating, determines **transmitted** a time-dependent pilot signal power. The power profile displays a duty cycle well below 100 percent and a power depth, which is the amplitude between maximum and minimum pilot signal power, determined partially upon radio link conditions. The time-dependent power profile can be established through a schedule based at least in part on attachment data or subscriber input; machine-learning method facilitate inferring the schedule. Pilot signal gating profile can be reused in a femto cell deployment to broaden femto cell identification and thus facilitate macro-to-femto handover. Activating/deactivating pilot signal in a femto cell in the scheduled and synchronized manner provided herein leads to macro-femto interference mitigation and mobility improvement(s), and improved battery life of wireless devices that operate in a wireless environment that includes femto cells.

Title: PRINTHEAD SUPPORT ASSEMBLY

Abstract: Source: US2003090538A An inkjet printhead assembly includes a hollow elongate member defining ink supply channels. The ink supply channels are in fluid communication with an elongate slot in and extending at least partly along the elongate member. A plurality of printhead segment carriers is **received** and secured in neighbouring arrangement within the slot, and at least one printhead segment is mounted to each printhead segment carrier.

Title: METHODS AND SYSTEMS TO ADVERTISE AND SELL PRODUCTS OR SERVICES VIA CLOUD GAMING ENVIRONMENTS

Abstract: Source: US2012059699A Provided is a method for advertising and retailing products and services in cloud gaming environments. A game provider may configure its cloud gaming environment to display third party **advertisement** before, during, or after the game. The **advertisement** may be in the form of timeout screens, banners, gaming objects, prizes, and other forms associated with typical cloud gaming environments. Third party advertisers benefit from additional **advertisement** exposure in these cloud gaming environments, which tend to be dynamic and interactive, and target new audience. **Advertisement** interaction levels may be measure to determine effectiveness and, for example, to collect certain fees from advertisers. An interaction level of interaction may be determined based on a number of clicks on **advertisement** objects, duration of exposure to the **advertisement**, a number of players, and various other factors. Game providers may modify their cloud gaming environments to improve these interaction levels and, as a result, collect more.

Title: METHOD AND ARRANGEMENT FOR PROVIDING AUTOMATED SEARCHING SERVICE ON THE REAL ESTATE MARKET

Abstract: Source: US2007106566A The invention relates to a method and a system for providing an automated searching service operating in a data network on a real estate market. A potential buyer looking for a suitable object is represented by a purchase **advertisement** provided with certain constraint requirements. A potential seller selling a certain object is represented by a sales **advertisement** provided with the distinguishing features of the object on sale. The purchase **advertisement** and the sales **advertisement** are stored in a **data base**. The automated searching service is symmetrical such that the potential seller is offered an opportunity to **receive** a report presenting the purchase **advertisements** selected on the basis of predefined requirements and, correspondingly, the potential buyer is offered an opportunity to **receive** a report presenting the sales **advertisements** selected on the basis of predefined requirements.

Title: METHOD AND SYSTEM FOR ESTABLISHING A SERVICE-APPLICATION EXECUTION ENVIRONMENT IN A HETEROGONEOUS, DISTRIBUTED COMPUTING SYSTEM AND A USER-FRIENDLY DATA-TRANSFER SERVICE APPLICATION EXECUTING WITHIN THE SERVICE-APPLICATION EXECUTION ENVIRONMENT

Abstract: Source: US2007112944A Various embodiments of the present invention are directed to methods and systems for data transfer between electronic, hand-held devices, including cell phones, and computer systems, including servers and PCs, as well as component methods and systems of these data-transfer methods and systems. Component methods and systems of the present invention include secure links between various devices, enhancements to electronic hand-held devices that enable service applications to run continuously or intermittently on the devices, deployment of dynamically created service applications to electronic, hand-held devices, and various additional component methods and systems that facilitate the above-mentioned component methods and systems. One embodiment of the present invention is a robust, efficient, secure, and user-friendly method and system for transferring data between cell phones and personal computers.

Title: METHOD AND APPARATUS FOR CORDLESS PHONE AND OTHER TELECOMMUNICATIONS SERVICES

Abstract: Source: US2006015556A Systems, methods and apparatus are provided that **combines** a software application framework within a variety of consumer communication devices to provide enhanced functionality. The enhanced functionality devices can then be controlled and integrated into an Internet based application and delivery service, connected by various networking technologies including, e.g., broadband communication systems. Centralized and distributed services allow a user to modify a variety of parameters that will ultimately control how information is delivered. The solution can also be controlled by service providers as a method for integrating their existing application infrastructure and potentially new applications within an overall broadband communication service.

Title: COMMUNICATION SYSTEMS AND METHODS WITH SOCIAL NETWORK FILTERING

Abstract: Source: US2011040844A A method for a computer system include determining a first social distance for a first user with respect to a second user, determining a second social distance for a third user with respect to the second user, determining a first trust-metric for the first user in response to the first social distance, determining a second trust-metric for the third user in response to the second social distance, and prioritizing a first communication from the first user over a second communication from the third user, in response to the first trust-metric and the second trust-metric.

Title: ENTERTAINMENT **SERVER** AND ASSOCIATED SOCIAL NETWORKING SERVICES

Abstract: Source: US2012158531A Certain exemplary embodiments relate to entertainment systems that interact with users so as to provide for social networking and/or other services. In certain exemplary embodiments, an entertainment system is configured to provide jukebox-related and entertainment system mediated services that are accessible from within and from the outside of the location, coordinating social networking services among and between patrons within and outside of the location and also providing for **advertisement** opportunities. In certain exemplary embodiments, the entertainment system within a location may serve as and/or be connected to a jukebox. The entertainment system within the location may be connected to one or more client devices, one or more displays, one or more bar-top or hand-held gaming devices, etc., in certain exemplary embodiments. The jukebox-related and entertainment system mediated services may provide mechanisms for enhancing patrons' experiences, creating a sense of ownership and/or belongingness to a connected community of entertainment system users.

Title: ENHANCED SYNDICATION

Abstract: Source: US2006173985A A variety of tools and techniques are disclosed for managing, viewing, publishing, searching, clustering, and otherwise manipulating data streams. Data streams such as RSS data feeds may be searched, aggregated, and filtered into a processed feed. The processed feed, along with rules used to process the feed may be shared in a number of ways. A data feed management system may provide an integrated user interface through which a user may manage feeds, including searching for new feeds, managing and filtering current feeds, modifying a user profile, and sharing feeds and feed configuration data with other users. A **server** may provide a complementary search engine to locate new feeds and to store and/or index items or posts in known feeds. Together, these technologies may provide a richly-functioned feed management system and greater ease of use for individuals in managing large numbers of feeds and large amounts of data in feeds. Additional functional layers may provide for authentication, security, and privacy, metadata creation and management, and social networking features. Using the management tools and additional functionality, a syndicated data stream system may provide a platform for a wide array of useful consumer and business applications.

Title: METHOD AND SYSTEM FOR ENHANCING VIDEO GAMES AND VIDEO GAME SYSTEMS

Abstract: Source: US2006287105A A system making use of video games and data communications external to video games is used to provide **advertisements**, prizes and other benefits to gamers. The prizes relate to either of real world products and services as well as content for use within the video game environment. During a video game session an **advertisement** is provided to the gamer. When the gamer interacts with the **advertisement** the video game software acts to facilitate a transaction between the gamer and the advertiser.

Title: CONTENT CLUSTERING SYSTEM AND METHOD

Abstract: Source: US2014280122A A computerized system and method are presented that creates implicit content on a mobile device by monitoring and recording input from sensors on the device. Metadata from the implicit content and from user-created content is then analyzed the purpose of event identification. Using the metadata and event identification, the content is created into clusters, which can be confirmed by the user as actual events. Events can then be grouped according to metadata and event information into a presentation grouping.

Title: SEARCH ENGINE PROVIDING PERSISTENT SEARCH FUNCTIONALITY OVER MULTIPLE SEARCH QUERIES AND METHOD FOR OPERATING THE SAME

Abstract: Source: US2007112741A In one embodiment, a method of operating a search engine comprises: initiating a continuous search state from a user; receiving multiple search queries during the continuous search state; and providing search results to the user, wherein the providing filters search results previously presented to the user in response to prior search queries during the continuous search state.

Title: APPARATUS AND METHOD FOR TARGETED **ADVERTISEMENT**

Abstract: Source: US2011106618A A system and method for targeted **advertisement** that includes embedding the content of the **advertisement** with the existing displayed content, which is optionally and more preferably broadcast video content. For example, the present invention relates to embedding advertising content within broadcast video content displayed on television screens. The system features a **receiver** that is connected to the video input and video output of the television set and can inject **advertisements** to the display. The **advertisements** are optionally selected according to a bidding algorithm that is preferably performed by an external **server** or other remote device; however, it is also possible that they are selected according to a different, non-bidding mechanism. The advertiser and/or the owner of the resource displaying the **advertisement** may optionally select or request the **advertisement** for display.

Abstract: Source: US2003166398A A wireless telephone and messaging system provides Secure Immediate Wireless Access (SIWA) to wireless telephones onto existing wireless networks, such as GSM, CDMA, TDMA, and analog (AMPS). The SIWA protocol uses existing wireless network messaging to exchange information between wireless devices and a network server, referred to herein as an Intelligent Service Manager (ISM). The ISM acts as a gateway between wireless devices and wireless service provider, and provides the wireless devices with an immediate limited or unlimited access to the wireless network. The ISM can also deny access to the wireless network from unauthorized wireless devices.

Title: INTEGRATED PRESCRIPTION MANAGEMENT AND COMPLIANCE SYSTEM

Abstract: Source: US2007168228A A system and method for prescription therapy management and compliance are provided. The system framework integrates primary databases from pharmacies, pharmacy benefit managers (PBMs), health plans, and EHR providers with a secondary database system, user interface, and wireless messaging platform, in order to extract and aggregate user-specific prescription data and make it available to users through a personalized account and as a part of a wireless prescription reminder service. The system helps users access, aggregate, manage, update, automate, and schedule the prescriptions they are currently taking. Users **receive** real-time wireless prescription dosing reminders based on their prescribed drug, dosage, and other indications, tailored to each individual's daily schedule. These wireless dosing reminders (i) include additional instructional content such as pill images, compliance tools, and Web or WAP drug links, (ii) are automatically scheduled and **transmitted** based on the user's prescription source data, in conjunction with selections indicated on their personal account, and (iii) are **transmitted** via **SMS**, EMS, **MMS**, WAP, email, and other formats to the user's mobile phone, PDA, or other wireless device. The integrated interface and secondary database system enable a number of additional system features which focus on compliance and management of the underlying source prescription data.

Title: MESSAGE TRANSMISSION SYSTEM AND METHOD

Abstract: Source: US2004259531A A method and system for routing a message to an application via a mobile telecommunications network in which mobile devices are assigned globally unique identifiers. At least one globally unique virtual mobile identifier is assigned to the application. A request for location information for the virtual mobile identifier is **received** from a component in the mobile telecommunications network. Routing information corresponding to a predefined static connection point to the application is supplied in response to the request to allow the message to be delivered to the application.

Title: RING-FUSED BICYCLIC PYRIDYL DERIVATIVES AS FGFR4 INHIBITORS

Abstract: Source: US2015119385A The present invention provides a compound of formula (I) or a pharmaceutically acceptable salt thereof; a method for manufacturing said compound, and its therapeutic uses. The present invention further provides a combination of pharmacologically active agents and a pharmaceutical composition comprising said compound.

Title: PERSONALIZED CONTENT PROCESSING AND DELIVERY SYSTEM AND MEDIA

Abstract: Source: US2006123053A A personalized content system enables a user with a communications device to convert and/or passively **receive** pre-selected content from multiple resources. A communications device has hardware and software to provide input and transmission to convert content from any form of media. The converted content is created by retrieving a digital copy of a digital record associated with it, and processing the digital copy for at least a web-based personalized application. Conversion is based on input of a code such as a telephone number, **server** program address, and a set of and/or range of characters. The transmission is communicated to at least one **server** that recognizes the code, the originating telephone number associated with the communications device, the device identifier associated with the communications device, and combinations thereof. The **server** retrieves a digital record and processes content and outputs based on user input, a user and/or program profile, and combinations thereof.

Title: METHOD AND SYSTEM FOR EMBEDDING INFORMATION INTO STREAMING MEDIA

Abstract: Source: US2003030752A A method and system for embedding information into streaming media is disclosed. In order to avoid a prolonged waiting period between the time a video stream is selected for viewing and the time it actually begins to play, information relevant to the content of the video stream is independently obtained and locally stored. This information may be advertising, text, games or any other media which may be of interest to the user. The information is embedded into the video or other media stream to be presented to the viewer and played immediately, so that the user avoids any wait time in viewing the selected stream that may occur due to bandwidth shortages or other system considerations.

Title: PYRAZOLOPYRROLIDINE DERIVATIVES AND THEIR USE IN THE TREATMENT OF DISEASE

Abstract: Source: US2014349990A The present invention provides a compound of formula (I) or a pharmaceutically acceptable salt thereof; a method for manufacturing the compounds of the invention, and its therapeutic uses. The present invention further provides a combination of pharmacologically active agents and a pharmaceutical composition.

Title: LIVE UPLINK TRANSMISSIONS AND BROADCASTING MANAGEMENT SYSTEM AND METHOD

Abstract: Source: US2010299703A A live uplink transmission and broadcasting management system and method for managing a plurality of live uplink transmissions and broadcasting events, the system comprising: (i) a publication portal for publishing transmissions of live events; (ii) a database for storing metadata, system data, broadcast data and user data; (iii) a broadcast manager adapted for receiving and processing in real-time metadata information related to a plurality of live uplink transmission events wherein each live uplink transmission event **transmits** in a plurality of uplink channels, wherein processed metadata information generate data elements adapted for being used in telecom and datacom real time management applications, said broadcast manager also adapted for updating the publication portal with live event information and (iv) a set of Quality of Service (QoS) management methods to coordinate the usage of Uplink transmissions based on the **received** metadata and their processing in the broadcast manager

Title: APPARATUS AND METHOD FOR COMMUNICATING MULTIMEDIA DOCUMENTS OR CONTENT OVER A WIRELESS NETWORK TO A DIGITAL PERIODICAL OR ADVERTISING DEVICE

Abstract: Source: US2010029335A An apparatus and method for delivering mass media and multimedia information to a digital periodical or advertising device preferably using multimedia messaging service (MMS) and having an electronic flexible screen or display is disclosed. A multimedia document, part of a multimedia document, web page, multimedia advertisement, or any other multimedia content on a server or a computer is extracted, parsed, and/or segmented into a plurality of video, audio, image, or text elements. The plurality of elements are each converted to an MMS message and transmitted optionally with an MMS assembler message or embedded information in each MMS message for proper reassembly of the original multimedia document or content. The MMS messages are received and reassembled back into the original multimedia document or content at a digital periodical or advertising device.

Title: USER INTERFACE FOR DISPLAYING SELECTABLE SOFTWARE FUNCTIONALITY CONTROLS THAT ARE CONTEXTUALLY RELEVANT TO A SELECTED OBJECT

Abstract: Source: US2006036945A An improved user interface is provided for displaying selectable functionality controls that identifies the context of the object to which the user interface is relevant, which contains rich functionality controls for applying contextually relevant functionality to a selected object, and which may be efficiently switched to a different context for applying a different set of functionalities to a different or neighboring editable object. A context menu of functionalities is displayed adjacent to a selected object where the menu of functionalities includes functionalities associated with editing the selected object. The context menu includes an identification of the object context and a control for selectively changing the context and associated functionalities of the menu to a different object context for displaying a different set of functionalities associated with the different context.

Title: AUTHENTICATION AND HUMAN RECOGNITION TRANSACTION USING A MOBILE DEVICE WITH AN ACCELEROMETER

Abstract: Source: US2011159850A Methods, devices, and systems are presented for screen locking or delaying the screen locking of mobile devices, such as smart phones, based on whether the gait of the current user match that of its true, authorized owner. A user's gait can be measured using accelerometers embedded in the device. Other movements, such as where a user normally goes to work, can be measured using GPS or other positional location data and used to lock or delay locking of the screen.

Title: METHOD FOR **SENDING** A MESSAGE TO A SPECIFIC ANONYMOUS PERSON, WHEREIN THE ANONYMITY OF THAT PERSON IS MAINTAINED

Abstract: The present invention relates to a method for **sending** a message from a **sender** to an anonymous **receiver**, wherein the anonymity of the **receiver** is maintained and wherein the **sender** is a person or an automated system like a computer or another electronic, electric, mechanical, or electromechanical system capable of **sending** a message and wherein the **receiver** is a specific anonymous individual, comprising several steps. To enable the **sender** to **send** a message to a specific anonymous **receiver**, in a first step a uniquely distinguishing anonymous characteristic of that **receiver** is determined, preferably by the **receiver** him/herself, or by the **sender**, or by another party on behalf of either **receiver** or **sender** and wherein the values of the one or more parameters defining the characteristic are measured. After the values of said parameters are established, they are used in a following step to produce an encrypted anonymous numerical or alphanumerical code, which is uniquely distinguishing the anonymous **receiver** as well, in order to advance maintaining the anonymity of the **receiver**.

Title: DISTRIBUTED TELEMEDICINE SYSTEM AND METHOD

Abstract: Source: US2017193182A A vital-signs enhanced telemedicine system and method allowing a plurality of medical teams assisting a plurality of patients to interact with and get assistance from a plurality of remote physicians via a plurality of audio, video, and vital signs transmissions and interactive remoting sessions including alarms, analysis, recording, and live playback capabilities. According to some embodiments, the system includes patient monitoring devices generating streaming vital signs, alarms and alerts (monitoring); aggregators generating streaming audio, video, and GPS for transmission in combination with monitoring received (session) and receiving session and instructional from gateways for local display; gateways maintaining concurrent sessions between aggregators and dashboards, receiving session from aggregators for transmission to dashboards, and simultaneously receiving session from dashboards for transmission, with instructional, to aggregators and to other session dashboards; and dashboards generating and streaming session to gateways while displaying received session data.

Title: SYSTEMS AND METHODS FOR ADVANCED GRAMMAR CHECKING

Abstract: Source: US2011313757A In embodiments of the present invention improved capabilities are described for a method of grammar checking, comprising providing a first level of grammar checking through a computer-based grammar checking facility to grammar check a body of text provided by a source in order to improve the grammatical correctness of the text; providing an excerpt of the body of text containing an identified grammatical error as a result of the first level of automated grammar checking to a second level of human augmented grammar checking consisting of at least one human proofreader for review; incorporating the results of the human proofreader review to contribute to an at least one corrected version of the provided body of text; and **sending** the at least one corrected version back the source. The method of grammar checking may provide for automatic grammar correction and text enrichment, such as when text is entered via a computer device with input limitations.

Title: IDENTIFICATION AND AUTHENTICATION USING LIQUID CRYSTAL MATERIAL MARKINGS

Abstract: Source: US2011101088A The present invention relates to a marking of polymeric liquid crystal material having determined optical characteristics allowing its authentication and reading by a machine and its authentication by the human eye. The marking is applied onto an item, good or article by a variable information printing process. The marking is in the form of indicia representing a unique code which allows for an easy authentication by the human eye and a secure tracking and tracing of the marked item, good or article throughout its life cycle.

Title: SYSTEM AND METHOD FOR A GATEKEEPER IN A COMMUNICATIONS NETWORK

Abstract: Source: US2007104186A In accordance with embodiments, there are provided mechanisms and methods for managing services in a communications network. These mechanisms and methods can enable embodiments to manage services provided by third party service providers, for example, to callers establishing communications sessions in a network. The ability of embodiments to control access to, and manage, third party services associated with communications sessions can enable embodiments to provide improved security and enhanced features to callers.

Title: EVENT TRACKING AND MESSAGING SYSTEM AND METHOD

Abstract: Source: US2013024492A The various implementations of the present invention are provided as a network computer system configured to allow for the tracking and reporting of user-specified events, including but not limited to, performance metrics and attendance data. This network computer system provides a user interface that allows a user to create metrics to be monitored, view and update event-related information, and to configure and review various pre-programmed and ad hoc reports so the users can monitor and evaluate performance metrics over time. Further, a wide variety of user and system generated alerts and messages or message events can be configured, allowing for automated and manual messaging related to the attendance or performance metrics that are being monitored. Alerts can be provided via email, non-electronic mail, telephone, SMS, facsimile, social networking sites and services (such as tweets), etc. In at least one implementation of the present invention, a computer-implemented method of tracking and reporting student performance and attendance-related events for an educational environment is provided.

Title: MOBILE DEVICE CONTENT SERVER METHOD AND SYSTEM

Abstract: Source: US2012278142A Systems and Methods to deliver mobile content to consumers' mobile phone initiated by a Call-To-Action statement placed in non-interactive content or by a Call-To-Action at events or promotion campaigns. The system delivers requested content using one or more mobile communication channels. The exchange system selects additional **ad** content that may be of interest to consumers based on attributes of the requested content. The additional content is presented in titles form or links to mobile web pages. Tags are added to the content link and are used to trace content viewed by consumers resulting from response to the titles or links. The system provides closed-loop redemption for mobile content that may contain coupons, promotions, event tickets, membership, and others. The redemption process serves as a method for collecting marketing data.

Title: AUTOMATED INTERACTIVE HEALTH CARE APPLICATION FOR PATIENT CARE

Abstract: Source: US2014257836A Various health care services may be provided to a patient via a virtual nurse or interactive user application operating on a user computing device. One example method may include receiving user input selections from inquiries generated to **receive** user input, generating a numerical score corresponding to each user input selection and incorporating the numerical scores with a user's primary health score. The method may also include determining whether the user's primary health score is above or below a predetermined health threshold, and creating a notification alert invoking a health care action if the user's primary health score exceeds or undercuts the health threshold.

Title: APPARATUS AND SYSTEM TO MANAGE MONITORED VEHICULAR FLOW RATE

Abstract: Source: US2016379486A An apparatus and system to manage monitored traffic density in relationship to spatial locational flow rates. The system includes a variety of mobile and/or stationary **transmitting** and receiving comm-devices utilizing certified comm-devices equipped Avics iChipset arranged in a polarity of vehicles, in communication with stationary and/or mobile hub comm-devices and/or other certified comm-devices, strategically arranged within and/or along one or more roadways and in communication with a **server** channel networked to a central **server**. Configured to **receive** and/or **transmit** encrypted traffic data from the diversity of stationary and/or mobile **transmitting** and receiving comm-devices over the network, update traffic data in the non shared database, continuously calculate optimal traffic density flow for one or more of vehicles traveling along the one or more roadways based on the updated vehicular transit data, **transmitting** variations in speed adjustments in a network infrastructure to one or more vehicles; adjusting traffic light intersections based on traffic density traversing such roadways based on the optimal traffic flow suggestions **combined** with Predicated Traffic Artifacts **transmitted** via system generated encrypted digital comm-advice directives; and in turn share extracted and/or **transmitted** data with each state an federal DOT departments and other stack holders, including insurance companies and vehicle manufacturers and dealers with information to assist with making the traffic network safer. The present invention presents an Intuitive ITS engaged in Channeled Vehicular Telematics conveying statistical data, from an plurality of network devices, providing informational services forecasting safety-critical features and more, in return gathering and disseminating connected channelled intelligence between vehicles from within and surrounding infrastructures and other shareholders. Such data includes vehicle Phase-Change Spatial analytics from traffic congestion artifacts, along with Consumption Variable Analysis that provides real-time Energy Summation Data from **combined** vehicle exhausted energy by adjusting traffic flow based on traffic density in relationship with the human factor, vehicle capacity to navigate and topography and climatic variations in relationship with any area being traversed, and most importantly the use of the unique string identification. USIN acknowledged as 'tMarker Audit Trail' or simply tMarker Trail as to data inception creation point. Managed within a secure private network infrastructure, each comm-device is synchronized with localized cloud **servers** in communication will a central **server**. This invention embarks on a new era in vehicle management, further enhancing time sensitive movements, leaving no doubt as to Vehicle Symmetry Orientation, especially once you move your vehicle and additional particulars currently not beyond the scope of this art presented herein. ITTS will throughly reduce the worlds fossil fuel supply consumption rate and on many other fronts availed by extracted data, **transmitted** from each vehicles onboard vehicle processor equipped with Avics iChipSet on certified comm-devices, reducing navigational concerns to elementary variables creating a safe traffic network.

Title: METHOD AND SYSTEM FOR IMPLEMENTING AND BILLING WAP AND INTERNET SERVICES

Abstract: The invention relates to a method in a telecommunications system, in which at least one service provider provides services for at least one customer, in which method the customer is provided with both: 1) "Main services", in other words such services that the customer wishes to use, such as a banking service, e-mail service, etc., the scope of the main service also including a service subject to a charge, such as data transmission and calls; 2) "Side services", such as **advertisements**, that the customer does not actually select for use or even want to use, but by means of which the service provider gains some kind of benefit for itself, for example, through additional information or advertising. According to one preferred embodiment of the invention, when the customer activates a code/name, such as URL1, relating to a specific main service, such as a banking service, from a menu displayed on the terminal device (1), the terminal device (1) **receives** and displays to the user data, such as an **advertisement**/announcement/menu etc. of a side service, in such a way that the use of the main service dependent on reception of the side service and the customer is made to follow/read/**receive** side-service data. In return, the customer is provided with a free main service or one with a reduced charge. In a second embodiment of the invention, the customer should react, within a page/card/service-specific time-window, to data presented by the main service or side service, such as a selection, menus, etc., otherwise the call or data transmission is limited or terminated.

Title: PREDICTIVE ANALYTICS AND MACROECONOMIC TREND REPORTING BASED ON TOLL-FREE NUMBER UTILIZATION

Abstract: Source: US2016127539A A predictive analytics model, that provides for overlaying indexing techniques and enriching the data with public domain and customer sentiment data to provide customer metrics. Analysis of toll-free telecommunications data, such as call volume data to toll-free numbers owned by key federal agencies, month over month, may be used to develop an indicator of economic events, trends and correlates.

Title: APPLICATION RIGHTS MANAGEMENT IN A MOBILE ENVIRONMENT

Abstract: Source: US2005021995A The present invention provides a technique for implementing digital rights management for digital content that can be used on Java enabled mobile devices. It enables the controlled usage of the digital content on the mobile device after it is downloaded from a content provider. This is achieved by a mobile service provider that generates a license based on a rights workflow and applies charging policies to prevent the downloaded digital content from being forwarded to other users. The digital content cannot be used without the license. The digital content can be delivered to the user either through **combined** or separate delivery, depending on whether the license is sent along with the digital content or not. On expiry of the license, the user is prompted for updating the license. The user can then use the digital content once the license is updated.

Title: TRIPLE DISPLAY DEVICE, AND COMPUTER EMPLOYING SAME

Abstract: Source: US2012176295A Disclosed are a triple display device and a computer employing same. The triple display device of the present invention comprises a main display, a first auxiliary display, and a second auxiliary display. The main display has a first input port connected, via a first cable, to a first output port of a dual graphic card installed on a main board of a computer, to display status information of the program being run on the computer. The first auxiliary display has a second input port connected, via a second cable, to a second output port of the dual graphic card, to display data (for example, **advertisement** content or company intranet information) automatically executed on the computer and provided by a specific site connected via the Internet. The second auxiliary display has a USB video module which has a USB output port connected, via a third cable, to a USB output port of the main board, to display data being executed in the main board in accordance with the command inputted by a user. According to the present invention, an increased number of workspaces can be ensured without additional costs, and the first auxiliary display is employed to enable the dedicated display of specific information, and also to enable the constant display of **advertisement** content to achieve **advertisement** effects.

Title: MULTIMEDIA (VO) IP SOLUTION FOR MOBILE TELEPHONES

Abstract: Source: US2010042546A The invention relates to a novel mobile hotspot value-added service VAS (telephony, internet, IP-TV, M-Payment etc) solution using W-Lan, WiMAX, Bluetooth, DMV, DVB-H, NFC or any other known GSM and UMTS mobile radio technology, with a ticketing system on a handset (mobile, PDA, laptop), said solution being operated as a club system such as Skype for VoIP. In addition to the ticketing system, other rights, duties, or services are carried out/offered/operated or managed, and the operator of the hotspot can make their own profits on the value-added services when they sell the same individually, especially when the handset already contains an electronic ticket (**MMS** etc). According to the invention, a mobile VAS telephony solution (telephone exchange/platform) is operated as a club system by means of W-Lan, Bluetooth or any other mobile radio technology, such as is known for Skype with VoIP, but not as is claimed in the present invention with mobile telephones, by means of hotspots (with a proprietary software) simultaneously together with and against other rights, duties and inter alia commercial models etc. (such as ticketing systems, payment or controlling in stadiums or trains).

Title: DISPOSABLE DIAPER

Abstract: Source: US2010063471A A disposable diaper[[1]] is provided with a skin-contactable sheet piece[[33b]] above a liquid-pervious topsheet[[32]]. The skin-contactable sheet piece[[33b]] is formed with openings extending in a back-and-forth direction through which body waste is guided toward the topsheet[[32]] and both lateral zones[[40]] of the sheet piece[[33b]] on both sides of these openings as viewed in a transverse direction B are provided with elastic members[[37]] attached under tension. Outside the skin-contactable sheet piece[[33b]] as viewed in the transverse direction B, leak-barriers[[58]] are provided and the lateral zones [[40]] of the skin-contactable sheet piece[[33b]] are bonded to the leak-barriers[[58]] along regions defined between proximal edges and free edges of the respective leak-barriers[[58]].

Title: SELECTIVE AD METHOD THROUGH SENDER INTERFACE AND WIRED/WIRELESS COMMUNICATION MEDIUM COMBINED WITH AD

Abstract: Source: KR20040110451A PURPOSE: A selective AD(Advertisement) method through a sender interface and a wired/wireless communication medium combined with an AD is provided to intend development of an AD industry through sure AD exposure and offer a favor to an AD receiver by relaying the sender interface enabling the sender to selectively send the AD to at least one receiver and the wired/wireless communication medium linked with the AD. CONSTITUTION: The AD is sent to an AD server of an AD system by an AD contract between an advertiser system and the AD system(S103). A server side program of the AD system posts up the AD on the wired/wireless communication medium by combining the AD with the sender interface(S105). The communication medium is sent to a client communication terminal through one from an AD server, an e-mail server, an SMS(Short Message Service) server, and a database server of the AD system(S108). In a state that the sender selects load of the AD through the sender information of the communication medium, the communication medium is sent to other users.

Title: POCKET BROADCASTING FOR MOBILE MEDIA CONTENT

Abstract: Source: US2009156181A Storing and providing access to media content such as pictures, video, or audio at an accessible service, that can be accessed by mobile devices and wired devices using any appropriate communication protocol including message services such as **SMS**, **MMS**, IM, CHAT, and the like. Users can upload content from a mobile device or a wired device, can specify or select access and payment/monetization options that are to apply to the uploaded content, and can download content that was provided by other users and subject to various download/payment terms. Free access can be accompanied or followed by advertising. Content can be converted into and/or provided in different formats and resolutions. In addition, key words and optionally short codes can be associated with specific content examples to improve ease and accuracy of upload and download.

Title: VOLLSTAENDIGES FAHRZUEGOEKOSYSTEM Full FAHRZUEGOEKOSYSTEM (Machine translation)

Abstract: Source: DE112012004767T5 Verfahren und Systeme fuer ein vollstaendiges Fahrzeugoekosystem werden bereitgestellt. Insbesondere liefern Systeme, wenn alleine oder zusammengenommen, einer Person oder einer Gruppe von Personen eine intuitive und komfortable Fahrzeugumgebung. Die vorliegende Offenbarung baut darauf auf, existierende Technologie mit neuen Einrichtungen, Verfahren und Systemen zu integrieren, um ein vollstaendiges Fahrzeugoekosystem bereitzustellen. Methods and systems for a complete Fahrzeugoekosystem be provided. In particular, deliver systems when alone or taken together, a person or a group of people an intuitive and comfortable vehicle environment. The present disclosure builds on this existing technology to integrate with new facilities, processes and systems to provide a complete Fahrzeugoekosystem.

Title: METHODS AND APPARATUS FOR PACKETIZED CONTENT DELIVERY OVER A CONTENT DELIVERY NETWORK

Abstract: Source: US2011103374A Methods and apparatus for delivery of packetized content (e.g., video, audio, data, etc.) over a content delivery network. In one embodiment, the content is packetized using an Internet Protocol (IP), and delivered by a service provider over both managed and unmanaged networks to subscribers of the provider, so as to provide delivery at any time, at any location, and via any designated user device. The delivered content may originate from the service provider, third-party content sources (e.g., networks or studios), the subscriber(s) themselves, or other sources including the Internet. Use of a common control and service functions within the network afford the ability to integrate or blend services together, thereby affording the service provider and subscriber new service and economic opportunities. Content delivery sessions may also be migrated from one device to another. A network-based user interface infrastructure, and gateway-based client-side architecture, are also disclosed.

Title: A METHOD OF AND APPARATUS FOR COMMUNICATION OF ADVERTISEMENTS

Abstract: A method of and apparatus for including advertising content in a message sent from a **sender** to a recipient is disclosed in which the **sender** selects an **advertisement** to be included with the message and **sends** the message together with the **advertisement** or an indication thereof to the recipient. The message may be size-limited with the **advertisement** reducing the available message size to that remaining within the size limit and the **sender** composing the message within the available message size. The **sender** is preferably rewarded in accordance with the **advertisements** selected.

Title: SYSTEM AND METHOD FOR CONDUCTING SURVEYS AND PROVIDING ALERT AND RELATED SERVICES

Abstract: Source: US2008270219A Preferred embodiments of the present invention are directed to electronic methods and a systems for providing a simple, reliable and secure means for conducting surveys of movie patrons interested in unreleased movies and alerting the patrons when these movies are about to be released. Embodiments of the invention include enrollment, survey and alerting systems and methods using a variety of means and identifying data such as patron fingerprints, ID cards, bar codes and bar code readers. In preferred embodiments, the enrollment step includes having a patron **transmit** personal information to a central **server** which stores information on patron preferences. Exemplary embodiments of the survey step include requesting that the enrolled patron input to the **server** the patron's identifying data and select at least one of the unreleased movie. The alerting step includes notifying the patron of the movie release based on information gathered during the survey process.

Title: GRINDING CONTAINER FOR THE SELECTIVE COLLECTION OF SOLID URBAN WASTE AND VARIOUS SPECIAL ADAPTATIONS FOR EACH TYPE OF WASTE, INCLUDING A DOMESTIC GRINDING CONTAINER

Abstract: Source: US2010282885A This specialized domestic grinding containers system, the manual version of which is completely environmentally friendly, allows us to reduce the excessive amount of varied urban waste generated by daily consumption, using a system of piercing/crushing blades which are set transversely on their supporting shafts and which, when sufficiently locked together, enable waste to be reduced to one-fifth of the initial volume thereof by specially arranging the shafts and using different types of blades and hammers for each type of waste (plastic, cans, tetra bricks, paper, glass, organic material and another **combined** blade system for reject waste). The system is essentially characterized in that the movement of the blades is produced by a particular system of gearwheels which, in the manual version, are actuated by opening the upper lid which, facilitated by a simple pedal which assists in opening said lid, actuates the lateral toothed cylinders located inside the container which in turn actuate the gearwheels located inside each of the lateral cylinders which, located at each of the ends of the four blade shafts thereof, rotate the shafts in a special manner in order to actuate a grinding function and to draw waste into the container, greatly reducing the volume thereof. The specialized manual and electric grinding containers and the different stationary and mobile embodiments intended for domestic use reduce the significant time and monetary costs involved in transporting said waste both from homes to containers on public roads and from such public containers to the respective recycling plants thereof. Waste recycling plays a role in preventing the transformation of more natural resources and reducing the abuse of more scarce natural resources and is facilitated through the use of these specific types of grinding containers having the aforementioned specialized blade systems. Thanks to the dual function comprising the lateral oblique torsion and elastic rotation of each blade independently of one another, said containers can help to achieve the recycling objectives imposed by Directive 2004/12/Econ the member states of the European Union, in its second transposition phase, and all that is needed is the will to grind waste (FIGS. 2.2 and 23).

Title: LET ME PAY: SYSTEM OF SPONSORSHIP THROUGH TARGETED **ADVERTISEMENT**

Abstract: Source: US2012029989A Let Me Pay is a system invented to help users find sponsors that would pay their bills. In exchange, the sponsors can **send** targeted **advertisements** to the users receiving their sponsorship. Sponsored amounts for goods or services desired by the users would usually be of small value. To **receive** sponsorship, the user needs to register on users' portal and provide their demographic data. They can **send** a sponsorship request from a remote terminal, e.g., computer, mobile phone or any other network-capable device with a unique user id, digital certificate or phone number. The user's request can have a form of a phone call, missed call, instant message, email, click on a web link or any other type of message or communication sent to the system. The system's response to the request carries a targeted **advertisement** from the sponsor, along with information on the sponsorship terms and conditions. The information is sent to the user's terminal (e.g., computer, mobile phone, PDA). Content of the targeted **advertisement** can be generated on the basis of the user's profile, the sponsorship rules, and marketing strategy defined by the sponsor. The sponsored amount is added to the user's virtual account maintained by the system. It can be transferred to the user's bank account, e-wallet or pre-paid bank card, and spent as real money.

Title: SYSTEM AND METHOD FOR COLLECTING **ADVERTISEMENT** INFORMATION AND FOR REAL-TIME ANALYZING

Abstract: Source: US2008103850A The present invention discloses a system for collecting **advertisement** information and for analyzing, the system comprising: an information carrier for carrying advertising information, for example, advertising media, advertising territory, advertiser, related contents or index of the advertising and the like; a writing apparatus for performing information compiling and generating of the information carrier; a reading apparatus for reading the information on the information carrier; a mobile terminal for receiving and **transmitting** information through a network, the mobile terminal having the reading apparatus, an apparatus for acquiring location information of the mobile terminal, and an apparatus for acquiring the time when the mobile terminal **sends** the advertising information. The information carrier in this invention can be compiled and generated according to different media, regions, **advertisement** contents and advertisers, and can be conditionally **combined** with the location information of the mobile phone and the time information of **sending**, and therefore makes the advertising monitoring and analyzing more real-time, comprehensive and accurate.

Title: APPARATUS OF TRANSMITTING ADVERTISEMENT-ATTACHED-MESSAGE AND METHOD THEREOF

Abstract: Source: KR20090026969A An apparatus of transmitting a text message by using mobile advertisement and a method thereof are provided to reduce advertisement costs by transmitting a text message combined with an advertisement image. An SMS (Short Message Service) center(300) receives a text message from a caller mobile communication unit(100). The SMS center transmits the text message through an advertisement message subscriber confirming procedure. If the SMS center demands subscription confirmation of an advertisement message transmission service about a corresponding caller mobile communications terminal, an advertising message server(400) confirms whether the caller is subscribed. The confirmation result is reported to the SMS center. If a text message of the advertisement message transmission service subscriber is received from the SMS center, an SMS application server combines the corresponding advertisement image with the text message. The combined text message is transmitted to a receiver mobile communications terminal(200) through an MMS center.

Title: IDENTIFICATION AND AUTHENTICATION USING POLYMERIC LIQUID CRYSTAL MATERIAL MARKINGS

Abstract: Source: US2012061470A The present invention relates to a marking of polymeric liquid crystal material having determined optical characteristics allowing its authentication and reading by a machine and its authentication by the human eye. The marking is applied onto an item, good or article by a variable information printing process. The marking is in the form of indicia representing a unique code which allows for an easy authentication by the human eye and a secure tracking and tracing of the marked item, good or article throughout its life cycle.

Title: SYSTEM FOR HANDLING MESSAGES AND DISTRIBUTING INFORMATION

Abstract: Source: US8817959B System for handling messages and distributing information between subscribers and their customers and contact. Each system subscriber can generate customized landing and flyer web pages called flyer pages for each of the subscriber's products, services, and/or listings. Landing and flyer pages can contain multiple links to other flyer pages. When a subscriber's customer or contact views a landing or flyer page and clicks on a link presented on that page, the system provides subscriber's information to a customer or contact immediately after the information is requested. The system can also make a lead, including a record of that event, and present the record to the subscriber who owns the landing or flyer page, allowing a subscriber to view a report with a history of who has viewed which page for all leads generated for their pages. Leads are tracked through a process that includes steps of lead generation and lead propagation. Embodiments of the system include a system for tracking sales leads, an internet-based wagering system, and an emergency response system.

Title: PRODUCT QUALITY ENHANCEMENT IN MAMMALIAN CELL CULTURE PROCESSES FOR PROTEIN PRODUCTION

Abstract: Source: US2005084933A The present invention describes methods and processes for the production of proteins, particularly glycoproteins, by animal cell or mammalian cell culture, illustratively, but not limited to, fed-batch cell cultures. The methods comprise feeding the cells with D-galactose, preferably with feed medium containing D-galactose, preferably daily, to sustain a sialylation effective level of D-galactose in the culture for its duration, thus increasing sialylation of the produced proteins. The methods can also comprise at least two temperature shifts performed during the culturing period, in which the temperature is lower at the end of the culturing period than at the time of initial cell culture. The cell culture processes of the invention involving two or more temperature shifts sustain a high cell viability, and can allow for an extended protein production phase. The methods can also comprise the delayed addition of polyanionic compound at a time after inoculation. Supplementation of the cultures with D-galactose, preferably in a feed medium, to sustain galactose at sialylation effective levels in the cultures until the end of a culture run reverses a decline in sialylation that accompanies culture scale up, and is advantageous for large scale culturing processes.

Title: 5-lipoxygenase inhibitors

Abstract: Source: US5883106A Novel compounds having the ability to inhibit 5-lipoxygenase enzyme and having the following formula I: I and the pharmaceutically acceptable salts thereof, wherein Ar¹ is a heterocyclic moiety which is selected from imidazolyl, pyrrolyl, pyrazolyl, 1,2,3-triazolyl, 1,2,4-triazolyl, indolyl, indazolyl and benzimidazolyl, which is bonded to X¹ through a ring nitrogen atom, and which may be optionally substituted with one or two substituents selected from halo, hydroxy, cyano, amino, and C1-4 alkyl; X¹ is a direct bond or C1-4 alkylene; Ar² is phenylene optionally substituted with halo, hydroxy, cyano, and amino X² is -A-X- or -X-A- wherein A is a direct bond or C1-4 alkylene and X is oxy, thio, sulfinyl or sulfonyl; Ar³ is phenylene, pyridylene, thienylene, furylene, oxazolylene or thiazolylene optionally substituted with one or two substituents selected from halo, hydroxy, cyano, amino and C1-4 alkyl; R¹ and R² are each C1-4 alkyl, or together they form a group of formula -D1-Z-D2- which together with the carbon atom to which it is attached defines a ring having 3 to 8 atoms, wherein D1 and D2 are C1-4 alkylene and Z is a direct bond or oxy, thio, sulfinyl, sulfonyl, or vinylene, and D1 and D2 may be substituted by C1-3 alkyl; and Y is CONR³R⁴, CN, C(R³)=N-OR⁴, COOR³, COR³ or CSNR³R⁴, wherein R³ and R⁴ are each H or C1-4 alkyl. These compounds are useful in the treatment or alleviation of inflammatory diseases, allergy and cardiovascular diseases in mammals and as the active ingredient in pharmaceutical compositions for treating such conditions.

Title: NOVEL ANTITUMORAL USE OF CABAZITAXEL

Abstract: Source: US2012301425A The invention relates to a compound of formula: which may be in base form or in the form of a hydrate or a solvate, in combination with prednisone or prednisolone, for its use as a medicament in the treatment of prostate cancer, particularly metastatic prostate cancer, especially for patients who are not catered for by a taxane-based treatment.

Title: A METHOD OF MAPPING A FIRST INTERFACE TO A SECOND INTERFACE, AND PEOPLE PRESENCE ESTIMATION METHOD

Abstract: A method of mapping a first interface to a second interface both of an electronic data communication device (16), which first interface enables exchange of data with a first electronic data communication network (13) and which second interface enables exchange of data with a second electronic data communication network (12), the method comprising the steps of: (1) obtaining an address representative of said first interface; (2) generating an identifier; (3) storing said identifier and said address representative of said first interface in a memory with a mapping therebetween; (4) outputting said identifier; (5) awaiting receipt of data comprising said identifier and an address representative of said second interface from said electronic data communication device (16) via said second electronic data communication network (12); and (6) if said data is **received**, said identifier can be used to map said address representative of said first interface to said address representative of said second interface. A method of estimating the number of people within a predetermined range of a particular location, which method comprises the steps of: - (a) using an antenna to listen for electromagnetic communication signals indicative of the presence of one or more remote electronic data communication device likely to be carried about the person of one or more of said people; and (b) providing an electronic output signal from said antenna representative of said presence; which electronic output signal facilitates estimation of the number of people within said predetermined range.

Title: ANTI-COCAINE COMPOSITIONS AND TREATMENT

Abstract: Source: US2010034799A Embodiments of the invention disclosed herein generally relate to anti-cocaine therapeutics. Specifically, some embodiments of the invention relate to highly efficient, thermostable, and long-lasting cocaine esterase (CocE) mutants that can protect against the toxic and reinforcing effects of cocaine in subjects. Provided herein are mutant CocE polypeptides displaying thermostable esterase activity. Also provided are methods of treating cocaine-induced conditions in a subject in need via administration of mutant CocE as well as methods for high-throughput screening of candidate esterase polypeptides.

Title: Tape printing device with display

Abstract: Source: US5651619A The present invention provides an improved tape printing device for printing a desirable series of characters in a preferable balance on a tape through a simple operation. The tape printing device of the invention is used for printing text data in a plurality of lines along a width of the tape and in a plurality of 'paragraphs' along a predetermined length of the tape. The 'paragraph' in the tape printing device is different from a paragraph in a word processor and includes a fixed number of lines. Even when text data in a certain line of a paragraph is deleted, the certain line is kept in the paragraph as a vacant line. In another application, the tape printing device of the invention includes a predetermined menu for printing text data in a plurality of lines. The plurality of lines are arranged in a good balance when the user selects one of possible choices for each required information in the predetermined menu. Since these possible choices are automatically varied according to the width of the tape, the user can obtain a label with rows of characters printed in a preferable balance, without setting required information according to each tape width. The invention also provides a novel technique for displaying a distinct printing image and improves printing with a shade pattern and creation of a foreign character.

Abstract: Source: US2013054260A The business performance management platform system and method enables the capture, extraction, data auditing and data validation processes, combined cost accounting and analytical reporting of data required for certain combined financial, clinical operations, physician encounter, patient encounter, electronic health record, and quality of patient care measures; provides close to real-time data access and performance results; provides financial, operational, clinical, physician encounter, patient encounter, electronic health record, and quality performance dashboards and scorecards, summary level reports, Ad hoc reporting, alerting, emailing, and automated reporting and email distribution, alerting, and modeling functions. The results generated from the business performance management platform provide users of the system critical understanding of detailed and summary level data and information, such as: profit/loss characteristics across the longitudinal data elements associated with patient and physician level detail; cost at patient and physician level; expected revenues; payer performance from payer sources and clinical operations performance.

Title: HETEROCYCLIC AMIDE COMPOUND

Abstract: Source: US2016108037A The present invention provides a heterocyclic amide compound of Formula (1), and an agricultural chemical containing it, particularly a herbicide: in which Q is an aromatic heterocycle of any one of Q-1 to Q-5, W is an aromatic heterocycle of W-1, W-2, or W-3, X is an oxygen atom, etc., R^{1a} is a hydrogen atom, a halogen atom, or C1-6 alkyl, etc., R^{1b} is a hydrogen atom, R^{1c} is C1-6 alkyl, R^{2a} is a halogen atom, or C1-6 alkyl, etc., R^{2c} is C1-6 haloalkyl, R³ is a hydrogen atom, etc., R^{4a}, R^{4b}, R^{4c} and R^{4d} are each independently a hydrogen atom, or C1-6 alkyl, etc., R^{5a}, R^{5b} and R^{5c} are each independently a hydrogen atom, or C1-6 alkyl, etc., and n is an integer of 0, 1, 2 or 3.

Title: Intermediary technology service, system and method

Abstract: Source: AU2011211392A Abstract The present invention relates to an intermediary technology service between financial institutions, non-institutional lenders and borrowers. It is a web-based interface where member lenders and borrowers can connect and interact online. Lenders and financial service providers 'bid' for borrower members using filters to set the rate, terms and parameters of the loan/service offering required. It is not a reverse loan auction site, nor does it rank bids for the loan lodged by lenders.
