SOPORTE MAGNETICO PARA ELEMENTOS DE ESCRITURA, TAL Y COMO BOLIGRAFOS O SIMILARES.

Abstract: Source: ES1011035U SOPORTE MAGNETICO PARA ELEMENTOS DE ESCRITURA, TAL Y COMO BOLIGRAFOS O SIMILARES, CARACTERIZADO PORQUE COMPRENDE UN ELEMENTO DE ESCRITURA Y UN ELEMENTO DE BASE SOPORTE, TENIENDO DICHO ELEMENTO SOPORTE UNA CAVIDAD INTERIOR U ORIFICIO PARA LA INTRODUCCION A TRAVES DEL MISMO DE LA PUNTA O BORDE EXTREMO DEL ELEMENTO DE ESCRITURA, RODEANDOSE DICHA CAVIDAD POR MEDIO DE UN IMAN DE FORMA ANULAR EN EL QUE SUS CARAS SUPERIOR E INFERIOR DEFINEN AMBOS POLOS DEL MISMO DEL QUE EMERGEN LA LINEAS DE FUERZA ACTUANTES SOBRE EL ELEMENTO DE ESCRITURA, EL CUAL DISPONE DE UN SEGUNDO IMAN DE POLARIDADES OPUESTAS CON EL PRIMERO PARA QUE ENTRE AMBOS ACTUEN LAS FUERZAS REPULSIVAS ENTRE LOS MISMOS CON EL FIN DE MANTENER EL ELEMENTO DE ESCRITURA ERECTO SIN TOCAR CON LOS BORDES LATERALES DEL SOPORTE. Magnetic support for writing elements, such as pens or the like, characterized in that it comprises a writing ELEMENT AND A SUPPORT ELEMENT OF SUPPORT BASE, said element having an inner cavity or HOLE FOR THE INTRODUCTION THROUGH THE SAME OF THE TIP OR END EDGE OF THE WRITING ELEMENT, RODEANDOSE SAID CAVITY BY MEANS OF A magnet of an annular shape IN WHICH ITS UPPER AND LOWER FACES define both poles OF THE SAME FROM WHICH EMERGE THE LINES OF FORCE ACTING ON THE WRITING element, which has a second magnet of opposite polarity TO THE FIRST SO THAT BETWEEN BOTH act the repulsive forces BETWEEN THEM IN ORDER TO KEEP THE ELEMENT OF Writing without touching WITH THE SIDE EDGES OF THE SUPPORT erect.

ADAPTER APPARATUS MOUNTED ON A MARKING INSTRUMENT TO ACHIEVE MOVEMENT IN A STRAIGHT LINE

Abstract: Source: US5309643A An adapter apparatus mounted on a marking instrument to achieve movement in a straight line for marking through a pen/pencil member; highlighting with use of a highlighter pen member; magnifying fine print for ease of reading; and cutting a a support surface with movement in a straight line. The pen/pencil adapter assembly includes 1) a main support member connected to the marking instrument; 2) an alignment and ruler member connected to the main support member for measuring and movement in a straight line; and 3) a support wheel assembly connected to the alignment and ruler member to achieve movement in a straight line on the support surface. Other embodiments include a magnifying adapter assembly having a magnifying member to magnify fine print; a pen/pencil adapter assembly having a projection support assembly; a highlighter adapter assembly for highlighting; and a cutter adapter assembly for cutting a surface in a straight line.

MULTIBIT HAND TOOL WITH IMPROVED CHUCK ARRANGEMENT.

Abstract: Source: EP0185468A1 A multibit hand tool has a plurality of bits (20) provided in a circular pattern within a handle (12). A rotatable selector cup (18) at the end of the handle permits selection of a desired bit (20) and its placement in a chuck (116) in the handle. An elongate slot is provided in the cup to permit manipulation of the bit. The improvement in this hand tool arrangement comprises an adaptation to the chuck (116) and bit ends so that the selected bit end is readily placed within the chuck. This feature is accomplished by providing a number of operative faces (172) on the bit end equal to or a multiple of the number of bits (20) provided in the handle. Similarly, the chuck has a bore presenting a corresponding plurality of internal operative faces for engaging the bit end.

SCHREIBGERAET MIT FINGERRING WRITING INSTRUMENT E.G. PENCIL HAS INSTRUMENT MAIN PORTION WHICH IS PROVIDED WITH PENETRATION ELEMENT AND RING THAT ARE CONNECTED WITH LOCKABLE CONNECTOR THAT IS FREELY POSITIONED ALONG CENTRAL AXIS CORRESPONDING TO LONGITUDINAL AXIS

Abstract: Source: DE102012020118A1 Schreibgeraet, dadurch gekennzeichnet, dass an dem Schreibgeraet ein Durchgriffselement oder ein Ring mit einem Verbindungselement beweglich, frei positionierbar, feststellbar und mit seiner Mittelachse ausserhalb der Laengsachse des Schreibgeraetes angeordnet ist The writing instrument (1) has an instrument main portion which is provided with a penetration element and a ring (2) that are connected with a lockable connector movably. The lockable connector is freely positioned, and is arranged with along the central axis corresponding to the longitudinal axis of the writing instrument main portion. The ring is fastened as a separate element to the writing instrument main portion. A magnet (5) and ferrous metal portion are arranged on the ring corresponding to the position of the ring on instrument main portion.
