

Search query (3): [SP]: cross-reference to prior applicationthis application is a 371 national stage application of pct/se2014/050588 filed may 15, 2014, which is incorporated herein in its entirety.technical fieldthe present disclosure relates to an absorbent core intended for use in an absorbent product such as a panty liner. the core includes an absorbent material with absorbent characteristics and a superabsorbent material. the core has a first extension in a longitudinal direction and a second extension in a transverse direction. the core has a longitudinal central line extending through the core, located between a first longitudinal portion and a second longitudinal portion. the first and second longitudinal portions are symmetric about the longitudinal central line. the core has a head portion, an intermediate portion and a rear portion extending in a longitudinal direction of the core. the disclosure also relates to a process for the production of the absorbent core.backgroundpanty liners are absorbent products that are used to absorb small amounts of bodily fluids such as urine and blood. panty liners are smaller in size than sanitary towels or incontinence pads and are intended to be used for everyday freshness and to protect lingerie, i.e. panties or briefs. there are several kind of briefs on the market today: traditional briefs that have a crotch portion that is relatively broad, hipster-type of briefs that have a relatively narrow crotch portion and thong-type briefs that have a very narrow crotch portion followed by an even narrower rear portion so as to expose all or a significant portion of the buttocks of the user. due to many different brief models it has been difficult in the prior art to optimize the shape and size of the panty liners such that a reliable protection is obtained while the panty liner is comfortable to wear and discreet. the optimization of the shape and size of the core of a panty liner follows with the problem to optimize the shape and size of the panty liners.there have been several attempts in the prior art to solve problems with adapting the absorbent products to thong-type briefs. for example, ep 1757257 a2 and/or ep 1138294, respectively, disclose panty liners including a core which is adaptable to thong-type briefs. however, while these products may be adaptable to thong-type briefs, they do not provide an optimal comfort and feeling of secure protection when used with traditional briefs or with hipster-type briefs, since the core does not have a shape that conforms to the anatomy of the user or a shape to be adapted to that kind of underwear. thus, there is a need for an absorbent core intended for use in an absorbent product such as a panty liner that can be worn with different types of underwear while optimal comfortability, adaptation to the anatomy of the wearer and protection can be provided.summaryit is desired to provide an absorbent core intended for use in an absorbent product such as a panty liner, which provides for optimal comfort, adaptation to the anatomy of the wearer and protection while it can be used with different kinds of briefs or underwear. thus, it is possible to avoid the previously mentioned problems.also disclosed is an absorbent core, intended for use in an absorbent product such as a panty liner. the core includes an absorbent material with absorbent characteristics and a superabsorbent material. the core has a first extension in a longitudinal direction and a second extension in a transverse direction. the core has a longitudinal central line extending through the core and located between a first longitudinal portion and a second longitudinal portion. the first and second longitudinal portions are symmetric about the longitudinal central line. the core has a head portion, an intermediate portion and a rear portion extending in a longitudinal direction of the core. the head portion includes, in the respective first and second longitudinal portions, mirror imaged first circular segment portions extending in a longitudinally forward direction of the core from a first transition point, located on the central line between the circular segment portions, in an acute angle beta between the central line and a tangent at a point of transition point in respect of the circular segment portion, andmirror imaged first edge lines, to which the circular segment portions transition, tapering towards the intermediate portion and towards the central line of the core in an angle alpha being from 15-45 degrees, and wherein the first edge lines taper to a second transition point located between the head portion and the intermediate portion.the intermediate portion includes, in the respective first and second longitudinal portions, mirror imaged first convex edge portions extending between the second transition points and third transition points which third transition points are located between the intermediate portion and the rear portion. the lengths of the convex edge portions in respect to the central line is from 50-60 percent of the total length of the central line of the core and have a maximum height of the arch in the transverse direction of the core of from 1-10 mm. the rear portion includes second edge lines tapering towards a rear end and the central line of the core in an angle delta being from 3-20 degrees. the second edge lines taper to a fourth transition point from which the second edge lines transition to a rear end portion that joins the edge lines together. in particular embodiments, the rear end portion is semi-circular or has a shape of circular segment, thus providing a comfortable shape in use.one advantage with the desired absorbent core is that the core is suitable for use in absorbent products such as a panty liner which can be used with many types of briefs, for instance thong-type briefs, traditional briefs and hipster-type briefs. thus, the core can be a panty liner core. as used herein, the term "panty liner" means an absorbent product which is used for feminine hygiene and which is thinner and narrower than sanitary napkins. panty liners absorb less liquid than sanitary napkins and are thus aimed for light bodily discharge and for everyday cleanliness. the shape of the absorbent core has been found to fit the various widths of the crotch portions of for instance thong-type briefs, traditional briefs and hipster-type briefs when used in an absorbent article while still providing a good absorption capacity, adaptation to anatomy of the wearer and consequently very good comfort.the absorbent core can be of a unitary construction. as used herein, the term "unitary construction" means that the absorbent core is constructed from essentially one type of material, this being essentially the same material, or essentially the same combination of two or more materials throughout the absorbent core. variations in density and concentration of the material may occur, but these are limited to those which may be obtained without incorporation of regions which have been formed separately and then physically joined to each other. for example, when the absorbent core includes a matrix of an absorbent material with absorbent characteristics, e.g. hydrophilic fibres, and superabsorbent material, the relative concentrations of superabsorbent material and fibres may be different in different parts of the core. the absorbent material could also be a hydrophobic material that has the capability to keep liquid within the structure of the material. however, when the construction is unitary, the absorbent core does not, for instance, include layers or laminates of different composition. likewise, variations in the density or concentration of various components across the longitudinal direction, the transverse direction or the thickness direction of the absorbent core may occur, yet the core should not include areas or layers of different composition which are formed separately and later joined together.the total length of the core between the first transition point and the rear end of the core may be from 100 to 150 mm, from 120 to 135 mm, or from 126 to 131 mm. this core length has been found to be optimal for use in panty liners, such that maximal protection can be provided while the core is invisible in most briefs.the first maximum width of the core in the head portion before transition to the first tapering edge lines may be from 35-50 mm, or from 36 to 40 mm. this width provides for maximal protection and adaptation to anatomy of the wearer while the core does not extend outside the edges of the underwear.the width of the core between the second transition points may be from 20-34 mm, or from 24 to 28 mm. in this way, a narrower portion is provided in the core which improves the adaptation to the wearer, e.g. to the thighs of the wearer. also, the core is easier to fold in transverse direction in this narrower portion making the core easier to handle. also, in this way the core follows the underwear behaviour when the underwear is pulled up.the second maximum width of the core in the intermediate portion at the point of maximum height may be from 25 to 45 mm, or from 27 to 31 mm, the second maximum width being at least 1 mm broader than the width of the core between the second transition points. this wider portion increases the absorption capacity of the product while further improving the adaptation to the anatomy of the wearer.the dimensions and the geometrical design of the core that follows with the dimensions have been found to advantageously ensure that the core can be placed in a desired location and cover the crotch portion of the briefs where discharge of for instance menstrual fluid or urine occurs regardless of the type of briefs worn by the user. the core according to

Title: ABSORBENT CORE

Abstract: Source: US2017071798A [EN] An absorbent core, intended for use in an absorbent product such as a panty liner, is disclosed, comprising an absorbent material and a superabsorbent material. The core has a first extension in a longitudinal direction and a second extension in a transverse direction, and a longitudinal central line extending through the core, located between a first longitudinal portion and a second longitudinal portion. The first and second longitudinal portions are symmetric about the longitudinal central line. The core has a head portion, an intermediate portion and a rear portion extending in a longitudinal direction of the core. The head portion includes mirror imaged first circular segment portions and first edge lines to which the circular segment portions transition. The intermediate portion includes mirror imaged first convex edge portions. The rear portion includes second edge lines tapering towards a rear end and the central line of the core in an angle.

Title: ABSORBENT PRODUCT

Abstract: Source: US2017071799A [EN] An absorbent product including a liquid-permeable top layer, a liquid-impermeable bottom layer and an absorbent core arranged between the top layer and the bottom layer is disclosed. The absorbent product has a head product portion, an intermediate product portion and a rear product portion extending in a longitudinal direction of the absorbent product. The absorbent product has an outer contour having a shape resembling an hourglass, wherein the intermediate product portion includes an area with a smaller width than any area in the head product portion and rear product portion, respectively, and wherein the core extends in the longitudinal direction and transverse direction of the absorbent product and has an outer contour that is asymmetrical with the outer contour of the absorbent product.

Title: Absorbent article with main absorbing part in front portion

Abstract: Source: US6908456B [EN] The invention relates to an absorbent product with a longitudinal direction and a transverse direction, two side edges extending essentially in the longitudinal direction, a front portion, a rear portion, a first surface and a second surface, and an absorption body arranged between the first surface and the second surface. The absorbent product is essentially triangular in shape, the front portion being wider than the rear portion. The absorption body also has a main absorption part which is shaped and positioned in such a manner in the plane of the product that at least 85 percent of the total absorption capacity of the product is in the front three quarters of the length of the product and at least 70 percent of the absorption capacity is found in the front half of the product.

Title: Sanitary napkin

Abstract: Source: US5792129A [EN] PCT No. PCT/SE94/00933 Sec. 371 Date Mar. 20, 1996 Sec. 102(e) Date Mar. 20, 1996 PCT Filed Oct. 6, 1994 PCT Pub. No. WO95/09592 PCT Pub. Date Apr. 13, 1995 The present invention relates to a sanitary napkin or like absorbent article, such as a sanitary pantie or incontinence guard, comprising an absorbent body (8) which is enclosed between a fluid-permeable (15) and a fluid-impermeable casing sheet (17). According to the invention, the absorbent body (8) comprises a primary absorbent body (9) having the capacity to absorb all fluid discharged from a user over an intended article use period, and a secondary absorbent body (10) whose area is at least 50 percent larger than the area of the primary absorbent body.

Title: Sanitary napkin shaped for use with a thong garment

Abstract: Source: US5683373A [EN] A sanitary napkin shaped to fit the contours of a thong garment from the front of the wearer to the crotch of the wearer. The napkin is generally "V" shaped, so that the vertex of the "V" can be positioned below the vagina of the wearer. The napkin is generally V-shaped with a bulb-shaped top end and an elongated lower portion, so that the vertex of the "v" can be positioned below the vagina of the wearer.

Title: Absorbent article with high stiffness

Abstract: Source: US6350257B [EN] The invention relates to an absorbent article such as a sanitary napkin, an incontinence guard, or a panty-liner, which article has a generally elongated shape with a longitudinal direction and a transverse direction and exhibits two side edges (9, 10), two end portions (6, 7), and a crotch portion (8) located between the end portions (6, 7), which article further exhibits a liquid-pervious cover layer (2), intended to be facing the user during use, and a liquid-impervious cover layer (3), intended to be facing away from the user during use. The article comprises at least within the crotch portion (8) a stiffening element (15) of a material with a very high intrinsic stiffness, whereby the article in the crotch portion (8) has an extension in the transverse direction which during use of the article is between 40 mm and 15 mm and preferably is between 20 mm and 35 mm.

Title: NONCHAFING CATAMENIAL PAD

Abstract: Source: US2408508A [EN] 1 A catamenial device comprising' a pad f _ . o predetermined shape including a body of absorbent material of substantially uniform thickness having a narrow rear end region, a relatively wider front end region, and an intermediate region of non-uniform width connecting said front and rear regions and providing converging side edges between said front and rear regions, said intermediate and rear end regions being sized and shaped to it against and conform to the anatomical contour of the external genitalia and the adjacent parts of the inner thighs of the wearer Without any substantial lateral compression of said absorbent pad, the over-all length of said absorbent pad being such as to extend from the anus to a point slightly beyond the nicks Veneris; and an open mesh gauze sheet of substantially greater length than said absorbent pad enclosing said pad and providing extensions extending rearwardly and forwardly of the ends of said pad adapted to be secured to a suitable sanitary belt, one thickness of said gauze sheet overlying the upper surface of said absorbent pad," the side edges of said sheet being folded in overlapping relation along the lower surface of said pad to provide more than two thicknesses of fabric, said overlapped portions being of a Width approximately equal to the narrow rear end region of said' absorbent pad and serving as a band-like support underlying the major portion of the area of said pad to prevent roping and twisting of said pad in use and to further provide a rearward gauze extension which will not' rope and produce a cutting effect in the gluteal fold, said pad being adapted to be worn with the narrow rear end region terminating at the anus, whereby the usual bunching and packing rearwardly of the anus is' eliminated and the discomfort to thewearer incident thereto is avoided,

Title: Adaptable absorbent articles

Abstract: Source: US2002177830A [EN] A user adaptable absorbent article having a symmetrical silhouette with a first end and a second end, wherein the second end being in opposite relation to the first end, and a first longitudinally extending edge opposed to a second longitudinally extending edge, the longitudinally extending edges connecting the first end and the second end; a layered portion having an absorbent core with an asymmetric shape and a backsheet; and means for folding a portion of the absorbent article located either from or between at least one of the longitudinally extending edges and at least one of the ends, wherein the fold avoids the absorbent core.

Title: ABSORBENT ARTICLE

Abstract: Source: US6965058B [EN] Described is an absorbent article comprising a liquid-permeable layer (18) disposed towards the wearer's body when the said article is in use; a liquid-impermeable layer (20) disposed away from the wearer's body when the said article is in use; as well as an absorbent body arranged between the liquid-permeable layer (18) and the liquid-impermeable layer (20). The absorbent body comprises an absorbent material (32) which remains able to flow even after contact with a liquid. In addition, the invention discloses an absorbent article which comprises a liquid-impermeable layer disposed away from the wearer's body when the article is in use, as well as an absorbent body covered by a liquid-permeable layer; with the said absorbent body containing an absorbent material which remains able to flow even after contact with a liquid. In this, the absorbent body is connected to the liquid-impermeable layer in a central area of the said absorbent body.

Title: SANITARY NAPKIN WITH INTERGLUTEAL STRIP

Abstract: Source: US2004002686A [EN] A sanitary napkin has a strip that extends rearwardly to reside in the intergluteal crevice. The pad fits snugly against the body without penetrating. Because the strip provides improved body contact, similar protection is achieved with a smaller pad, thus providing a discretion benefit to the wearer.

Title: ABSORBENT ARTICLE WITH IMPROVED FIT AND LEAKAGE SECURITY

Abstract: Source: US2009292268A [EN] An absorbent article having front, crotch and rear portions and an absorbent core of unitary construction. The core has a first region with two legs extending in the longitudinal direction of the article through at least parts of the crotch portion towards endings in the rear portion. A maximum distance between facing sides of the legs in the transverse direction is, in the crotch portion, located at a position in the longitudinal direction corresponding to a crotch point. Furthermore, the facing sides of the legs converge backwards such that a distance between them is reduced from the maximum distance to a minimum distance in the rear portion. In addition, the core has a second region surrounding the first region and the average density of the core is lower in the second region than in the first region.

Title: ABSORBENT ARTICLE HAVING IMPROVED FIT

Abstract: Source: US2008103468A [EN] An absorbent article 10 has front 12, crotch 14 and rear 16 portions. The article has an absorbent core 18 of unitary construction and of uniform density, which is defined by a pair of opposing longitudinal edges 20;22 and a pair of opposing transverse edges 24;26. The absorbent core 18 has at least a first 28 and a second 30 region, the average thickness of the absorbent core 18 in these first and second regions 28, 30 being lower than the average thickness of the absorbent core 18 surrounding the first and second regions 28;30, the first and second lower thickness regions 28;30 being arranged symmetrically about the longitudinal center line A of the article such that each of the first and second lower thickness regions 28;30 extends to the respective longitudinal edge 20;22 of the absorbent core. The distance a_x between the first and second lower thickness regions 28;30 in the transverse direction varying along the longitudinal direction of the article. A minimum distance a_1 between the first and second lower thickness regions 28;30 in the transverse direction is located at least in the transition 32 between the crotch portion 14 and the front portion 12. The article provides good, secure fit and high comfort to the wearer.

Title: ABSORBENT ARTICLE

Abstract: Source: US2011178491A [EN] An absorbent article, especially an incontinence pad, having a length and a width extension, the length being greater than the width, and having absorbent core material, wherein the outer longitudinal edges of the absorbent material form three convex lobes (2, 3, 4), wherein a pair of folding lines (5) extend between the longitudinal ends of the middle one (3) of the three lobes (2, 3, 4), so as to divide the absorbent core material into a central portion (6) and a pair of longitudinal side portions (7), such that, when the article (1) is in use, the folding lines (5) are generally positioned so as to extend along the crotch area of the user, starting from the gracilis tendons and ending in the region of the perineum, whereby the side portions (7) may extend from the central portion (6) towards the user so as to form an arc shape as seen in a transversal direction of the article (1).

Title: FEMININE HYGIENE ARTICLE WITH PRINTED PATTERN AND EMBOSSED PATTERN

Abstract: Source: US2008294140A [EN] A feminine hygiene article such as pantliner having a topsheet and a backsheet. The article further includes a printed pattern and an embossed pattern. The embossed pattern has at least one embossed decorative element and the printed pattern has a printed decorative element which is substantially similar to the embossed decorative element.

Title: FEMININE UNDERGARMENT

Abstract: Source: US2010152687A [EN] An undergarment comprises a strapless, coreless web sized and configured between an anterior end and a posterior end to cover, in use, at least the vulva of an adult female wearer. The undergarment is pre-adherent to the wearer, e.g., having pre-applied adhesive or pre-applied suction material on the body side of the web, suitable for contact with human skin and sufficiently adherent to removably hold the undergarment in place during use. In another aspect, a feminine undergarment comprises such pre-adherent strapless, coreless web with a removable protective cover over at least the adhesive. In another aspect, a package of feminine undergarments comprises outer packaging containing at least multiple of such feminine undergarments and optionally inner packaging for each of the undergarments individually.

Title: METHODS AND APPARATUS FOR MAKING MULTI-LAYER ABSORBENT PRODUCTS

Abstract: Source: US5562793A [EN] Improved methods and apparatus for forming absorbent products and the improved absorbent products formed thereby are disclosed. In a first embodiment of the present invention, a rotary die is used to cut ellipsoidal and hyperbolic-shaped from a single sheet of material and these shapes are overlaid to form an absorbent structure. The shapes are chosen such that there is no waste of the material and yet the resulting absorbent structure is of a useful shape. Methods are also disclosed whereby two sets of rotary dies are used to simultaneously cut two sheets of material into an arcuate segment and the arcuate segments are overlaid atop each other to form useful absorbent structures. In either embodiment, powders such as superabsorbents may be added to one or more of the surfaces of the components used to construct the absorbent structures.
