Title: SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR COLLABORATION AND SYNCHRONIZATION OF MEDIA CONTENT ON A PLURALITY OF MEDIA PLAYERS

Abstract: Source: US2006161621A [EN] A system, method and computer program product is provided which facilitates the collaborative selection and synchronous playing of digital media on a plurality of **networked** media players. Various embodiments of the invention provides for a plurality of media players in processing communications which enables individual users of the media players to form a collaborative group; whereby the collaborative group of users may jointly suggest, approve, reject, vote, or otherwise select the media item to be synchronously played upon their individual media players. In some embodiments of the present invention, at least one of the media players is assigned a role of designated media coordinator. Each of the plurality of media players includes a processor, a communications infrastructure coupled to the processor, a secondary memory coupled to the communications infrastructure having retrievably stored therein one or more media items playable by the processor, a transceiver coupled to the communications infrastructure, a main memory coupled to the processor and at least one collaboration program stored in at least a portion of the memory. The collaboration program having instructions executable by the processor to exchange parameters among the individual media players to enable the collaborative selection and synchronous playing selected media items.

Title: EMERGENCY SUPPLIES PRE-POSITIONING AND ACCESS CONTROL METHOD

Abstract: Source: US2007203727A [EN] One provides (101) a plurality of carriable containers having emergency supplies contained therein wherein each of these carriable containers is readily carriable by an average adult human. These carriable containers are then placed (103) within one or more corresponding controlled access containers as are provided at one or more publicly accessible locations (102). Prior to a triggering catastrophic event, one or more specific authorized beneficiaries are then preauthorized (104) to have catastrophic event-based access to one or more of these carriable containers. So configured, the authorized beneficiary(s) will in turn have access to the corresponding emergency supplies that are contained within the carriable container when a triggering catastrophic event occurs.

Title: SECURITY SYSTEMS FOR PROTECTING AN ASSET

Abstract: Source: US2007250920A [EN] Security systems for protecting assets are described, including password-based security systems that can provide different levels of access responsive to entry of a primary or secondary password. In some versions, user-configurable security rules can provide customized responses to entry of primary or secondary passwords, including feigned or limited access, security alerts, etc. Passwords comprising overt and covert components can be used to provide enhanced security and improved user control over system response. Improved security systems involving transactions between multiple parties are also considered, with options for user-customized security rules including primary and secondary passwords, and reverse challenge and response methods. Systems for Limited Use Credentials are also disclosed to reduce the risk of identity theft.

Title: CREDENTIAL CATEGORIZATION

Abstract: Source: US2008229383A [EN] The user can associate metadata with information cards. The metadata can include, among other possibilities, string names, icons, user policies, containers, and hierarchies. The metadata is stored by the computer system. The metadata can then be used to filter the set of information cards that can satisfy a **security** policy from a relying party.

Title: COMPUTING INFRASTRUCTURE

Abstract: Source: US2009216910A [EN] An affordable, highly trustworthy, survivable and available, operationally efficient distributed supercomputing infrastructure for processing, **sharing** and protecting both structured and unstructured information. A primary objective of the SHADOWS infrastructure is to establish a highly survivable, essentially maintenance-free **shared** platform for extremely high-performance computing (i.e., supercomputing)-with "high performance" defined both in terms of total throughput, but also in terms of very low-latency (although not every problem or customer necessarily requires very low latency)-while achieving unprecedented levels of affordability at its simplest, the idea is to use distributed "teams" of nodes in a self-healing **network** as the basis for managing and coordinating both the work to be accomplished and the resources available to do the work. The SHADOWS concept of "teams" is responsible for its ability to "self-heal" and "adapt" its distributed resources in an "organic" manner. Furthermore, the "teams" themselves are at the heart of decision-making, processing, and storage in the SHADOWS infrastructure. Everything that's important is handled under the auspices and stewardship of a team.

Title: MAGNETIC EMISSIVE USE OF PRELOADED **SECRET**-KEY ENCRYPTED USE-ONCE PAYMENT CARD ACCOUNT NUMBERS

Abstract: Source: US2011240745A [EN] A thin-client access card has a card body with partial or fully emissive magnetic data tracks. An emissive element is disposed in the card body under the location of the legacy magnetic data tracks. An electronic signal conditioner converts audio signals from a mobile device into magnetic data applied to the emissive element. A swipe sensor detects when the thin-client access card is being swiped by a legacy card reader, and triggers an output of magnetic data from the emissive element while proximal to the POS reader head. A cable attaches the thin-client access card as a peripheral to the mobile device with an audio output jack.

Title: COMPUTER IMPLEMENTED METHOD TO PREVENT ATTACKS AGAINST AUTHORIZATION SYSTEMS AND COMPUTER PROGRAMS PRODUCTS THEREOF

Abstract: Source: US2014380431A [EN] A computer implemented method and computer program products to prevent attacks against authorization systems The computer implemented method comprising controlling the access to different resources and actions defined for a user by a first server, reducing the exposure time at which such operations are available and establishing a dual channel verification through the use of a second server. The computer programs implement the method.
