Title: DATABASE DRIVEN ONLINE DISTRIBUTED TOURNAMENT SYSTEM

Abstract: A method and a system for a distributed electronic tournament system in which many remotely located players participate in a tournament through input/output devices connected to a central controller which manages the tournament. The method includes the steps of (a) uniquely identifying a player communicating with the central controller via an associated input/output device; (b) responding to payment of an entry fee by the player for allowing the player to participate in a tournament occurring within a fixed time window via an associated input/output device; (c) accessing a database to store in the database player information that is generated as the player participates in the tournament, such information being available for use in a subsequent tournament, which is administered by said controller and in which the player participates; and (d) awarding the player a prize for achieving a pre-established performance level in the tournament. In another preferred embodiment, the method further includes the steps of determining whether the player has been qualified to advance to a subsequent game session, in which at least one player is eliminated from the previous game session; and permitting each player qualified to a subsequent game session to participate in that game session. The system includes software and hardware to implement the method steps.

Title: ELECTRIC VEHICLE (EV) RANGE EXTENDING CHARGE SYSTEMS, DISTRIBUTED NETWORKS OF CHARGE KIOSKS, AND CHARGE LOCATING MOBILE APPS

Abstract: Systems and method are provided for providing auxiliary charge to a main battery of an electric vehicle. One system includes an auxiliary battery for holding a plurality of charge units, the auxiliary battery being connectable to the main battery of the electric vehicle, the plurality of charge units being rechargeable and being replaceable from within the auxiliary battery, such that replacing particular ones of the plurality of charge units with charge units with more charge increases a total charge of the auxiliary battery. Kiosks for storing a plurality of charge units. A display in the kiosk for an interface for enabling transactions to provide or receive charge units to customers, and a central processing center that communicates with a plurality of said kiosk over a network and a plurality of vehicles, The plurality of vehicles are provided with access to availability information of charge units at each of said kiosks.

Title: METHOD AND APPARATUS FOR DEVELOPMENT, DEPLOYMENT, AND MAINTENANCE OF A VOICE SOFTWARE APPLICATION FOR DISTRIBUTION TO ONE OR MORE CONSUMERS

Abstract: A system for developing, deploying and maintaining a voice application over a communications network to one or more recipients has a voice application server connected to a data network for storing and serving voice applications, a network communications server connected to the data network and to the communications network for routing the voice applications to their intended recipients, a computer station connected to the data network having control access to at least the voice application server, and a software application running on the computer station for creating applications and managing their states. The system is characterized in that a developer operating the software application from the computer station creates voice applications through object **modeling** and linking, stores them for deployment in the application server, and manages deployment and state of deployed applications including scheduled deployment and repeat deployments in terms of intended recipients.

Title: DETECTING EMOTIONS USING VOICE SIGNAL ANALYSIS

Abstract: A system and method are provided for detecting emotional states using statistics. First, a speech signal is received. At least one acoustic parameter is extracted from the speech signal. Then statistics or features from samples of the voice are calculated from extracted speech parameters. The features serve as inputs to a **classifier**, which can be a computer program, a device or both. The **classifier** assigns at least one emotional state from a finite number of possible emotional states to the speech signal. The **classifier** also estimates the confidence of its decision. Features that are calculated may include a maximum value of a fundamental frequency, a standard deviation of the fundamental frequency, a range of the fundamental frequency, a mean of the fundamental frequency, and a variety of other statistics.

Title: UNIVERSAL CONSOLE CHASSIS FOR THE CAR

Abstract: Methods and systems for a complete vehicle ecosystem are provided. Specifically, systems that when taken alone, or together, provide an individual or group of individuals with an intuitive and comfortable vehicular environment. The present disclosure includes a universal chassis that may be mounted in the head unit of a vehicle. The chassis may accept one or more modules that each have common dimensions. With a common form factor, the universal chassis is configurable as different modules with different functionality may be inserted into the chassis with ease.

Title: GENIUS ADAPTIVE DESIGN

Abstract: Explore interesting inventions inside, conceived by our genius idea generator. Discover history's most effective method in conceiving novel uses for existing electronic technology. License huge domains of intellectual property from the invention directory our system helped develop. The searcher can find one of our interesting inventions in this patent application via our LicenseItToday.com, etc. Call our California Headquarters 1-707-428-5000. View invention ideas, plus 100+ variations adapted for end user target markets. LicenseItToday.com fills out exclusive international license agreements valid up to December 2026. It saves time and money creative LP. over any other documented creative thinking process. Licensees seek outputted patents using our or their pat attorneys. Royalties can start when profits begin. Or you can buy the affordable I.P. rights. Proof is in trying it out. Discover amazing inventions inside today.

Title: AUDIO AND VIDEO PROGRAM RECORDING, EDITING AND PLAYBACK SYSTEMS USING METADATA

Abstract: A system for utilizing metadata created either at a central location for shared use by connected users, or at each individual user's location, to enhance user's enjoyment of available broadcast programming content. A variety of mechanisms are employed for automatically and manually identifying and designating programming segments, associating descriptive metadata which the identified segments, distributing the metadata for use at client locations, and using the supplied metadata to selectively record and playback desired programming.

Title: A VOICE RECOGNITION SYSTEM FOR NAVIGATING ON THE INTERNET

Abstract: A system, method and article of manufacture are provided for recognizing voice commands for manipulating data on the Internet. Data is provided on a website. Voice signals are received from a user who is accessing the website, which are interpreted to determine navigation commands. Selected data of the website is output based on the navigation commands. In one embodiment of the present invention, the data includes a voice-activated application. The user may be allowed to access the website from either a computer or a telephone, or both. A language may be determined from the voice signals and the voice signals interpreted in the language being spoken by the user.

Title: System, method and article of manufacture for detecting emotion in voice signals through analysis of a plurality of voice signal parameters

Abstract: A method and system for monitoring a conversation between a pair of speakers for detecting an emotion of at least one of the speakers is provided. First, a voice signal is received after which a particular feature is extracted from the voice signal. Next, an emotion associated with the voice signal is determined based on the extracted feature. The emotion is screened and feedback is provided only if the emotion is determined to be a negative emotion selected from the group of negative emotions consisting of anger, sadness, and fear. Such determined negative emotion is then outputted to a third party during the conversation.

Title: COMPUTER ASSISTED TEXT INPUT SYSTEM

Abstract: The disclosure includes five different display presentations, two for Handheld computers and three for Laptops or Desktops, for the word start inputs with a Stylus, Mouse or other type Pointer. Pointer selects displayed items and executes strokes to input text to computers. Displayed items include starting letters, or SLs, very frequent words, or VFWs, Digits, and 2nd, 3rd, and 4th letters of SLSs. Strokes and "Sections" diagrams and tables show assignments obtained. Six SL and SLS obtained word set presentations enable further word inputs with a Pointer. Pointer strokes from Digits input members shown in table. Strokes following VFW and other word selections obtain "Associated Inputs" of tables as specified by Codes with words. Strokes following SL and SLS inputs add letters to extend SLSs for smaller word sets from vocabulary holding strings of the word stems of an abridged dictionary. Special "Letter Groups" effectively extend SLSs with eight strokes. A 1st Handheld **model** has SL and VFW displayed items. SL inputs single letter to access word sets from a Vocabulary, VFWs input VFWs. Strokes with SLs obtain various letter inputs and change vocabularies. Strokes with VFWs obtain "Associated Inputs", which include inflected forms, in place of VFWs. A 1st Laptop and Desktop **model** functions like the Handheld **model** with larger word sets. A 2nd Laptop and Desktop **model** assigns both a VFW and an SLS to each displayed item. Mouse buttons select VFWs or SLSs. Universal **model** for Handheld, Laptop and Desktop employs Vocabulary with strings of the word stems of an abridged dictionary and has displayed items consisting of Digits, SL and 2nd, 3rd and 4th letters of SLSs. SL and letter displayed items have both VFW and SLS assignments, the VFW being most frequent words with the respective SLS. Word sets obtained display on Desktop but not Handheld computers. Strokes extend SLSs for word sets displayable on Handheld computers.

Title: SYSTEM AND METHOD FOR A TELEPHONIC EMOTION DETECTION THAT PROVIDES OPERATOR FEEDBACK

Abstract: A system, method and article of manufacture are provided for monitoring emotions in voice signals and providing feedback thereon. First, a voice signal is received representative of a component of a conversation between at least two subjects. Thereafter, an emotion associated with the voice signal is determined. Feedback then provided to a third party based on the determined emotion.

Title: 69VOICE AUTHENTICATION SYSTEM AND METHOD FOR REGULATING BORDER CROSSING

Abstract: A system, method and article of manufacture are provided for regulating border crossing based on voice signals. First, voice signals are received from a person attempting to cross a border. The voice signals of the person are analyzed to determine whether the person meets predetermined criteria to cross the border. Then, an indication is output as to whether the person meets the predetermined criteria to cross the border. In one embodiment of the present invention, an identity of the person is determined from the voice signals. In another embodiment of the present invention, emotion is detected in the voice signals of the person.

Title: MULTIPLAYER PARTICIPATION TYPE GAMING SYSTEM HAVING WALLS FOR LIMITING DIALOGUE VOICES OUTPUTTED FROM GAMING MACHINE

Abstract: A multiplayer participation type gaming system, comprising: a plurality of gaming machines arranged on a predetermined play area; and a sound insulating wall disposed between adjacent gaming machines among the gaming machines, each of the gaming machines carries out the processing of: performing an arithmetic operation, in response to a play of the player, on a value indicative of the game result, and storing after updating the play history data stored in the memory by using the result of the arithmetic operation; comparing the updated play history data with the predetermined threshold value data; generating, when it is determined that the play history data exceeds the threshold value data, sound data based on the play history data by using the plurality of voice generating original data stored in the memory; and outputting a sound from the speaker based on the sound data thus generated.

Title: MULTIPLAYER GAMING MACHINE CAPABLE OF CHANGING VOICE PATTERN

Abstract: Herein disclosed is a gaming machine executing a game and paying out a predetermined amount of credits according to a game result; generating voice data based on a player's voice; identifying a voice pattern corresponding to the voice data by retrieving the dialogue voice database and identifying a type of voice corresponding to the voice data, so as to store the voice data along with the voice pattern into the memory; calculating a value indicative of a game result, and updating the play history data stored in the memory using the result of the calculation; comparing the play history data thus updated with a predetermined threshold value data; generating voice data according to the voice pattern based on the play history data if the play history data thus updated exceeds the predetermined threshold value data; and outputting voices from the speaker.

Title: APPARATUS AND METHOD FOR PROVIDING A VIRTUAL ASSISTANT

Abstract: A system that incorporates the subject disclosure may include, for example, receiving an information request from an end user device, obtaining feedback information associated with a group of content service modules where the feedback information includes accuracy ratings for data provided by the group of content service modules responsive to past information requests of other communication sessions, selecting a subset of content service modules from among the group of content service modules based on the feedback information, receiving a group of responses from the subset of content service modules responsive to the invite messages by way of the application programming interface, and selecting a subset of responses from among the group of responses based on the feedback information. Other embodiments are disclosed.

Title: SYSTEM, METHOD, AND ARTICLE OF MANUFACTURE FOR A VOICE RECOGNITION SYSTEM FOR IDENTITY AUTHENTICATION IN ORDER TO GAIN ACCESS TO DATA ON THE INTERNET

Abstract: A system, method and article of manufacture are provided for identifying a user through voice verification to allow the user to access data on a network. When the user requests access to data, such as a website, the user is prompted for a voice sample. Registration information about a user including a voice scan of the voice of the user is retrieved. The voice sample is received over the network and compared with the voice scan to verify an identity of the user. If the identity of the user is verified, data access is granted to the user. If the identity of the user is not verified, data access is denied.

Title: TELECOMMUNICATIONS SERVICES APPARATUS AND METHODS

Abstract: A mobile telephone terminal includes means responsive to alphanumeric dialling to transmit information representative of a desired connection to a mobile telephone network. Upon entry of an alphanumeric string followed by a confirmatory action by the user, the alphanumeric string is sent to the network so as to automatically initiate a connection to a service platform.

Title: MULTIPLAYER PARTICIPATION TYPE GAMING SYSTEM LIMITING DIALOGUE VOICES OUTPUTTED FROM GAMING MACHINE

Abstract: A multiplayer participation type gaming system 1, comprising: a plurality of gaming machines 30 arranged on a predetermined play area, each of the gaming machines carries out the following processing of: (a) causing the memory to store a numeral value calculated based on a player's play history and in accordance with at least one of an input credit amount, an accumulated input credit amount, a payout amount, an accumulated payout amount, a payout rate, an accumulated play time and an accumulated number of plays; (b) comparing a numerical value calculated based on the play history with a threshold value indicated by the predetermined threshold value data; and (c) outputting voices from the directional speaker based on the voice generation original data stored in the memory when it is judged that the numeral value calculated based on the play history exceeds the threshold value.

Title: MULTI-PLAYER GAMING SYSTEM WHICH ENHANCES SECURITY WHEN PLAYER LEAVES SEAT

Abstract: Herein disclosed is a multiplayer participation type gaming system, comprising: a plurality of gaming machines arranged on a predetermined play area, each of the gaming machines comprising: a memory for storing a plurality of voice generation original data for generating a sound message based on play history data generated in response to a play of a player, and predetermined threshold value data related to the play history data; a speaker; a microphone; a display section; a sensor for detecting presence and absence of a player; an input section through which a player inputs an instruction; and a controller programmed to carry out the following processing of: setting the gaming machine to be locked if the player's absence is sensed by the sensor; and setting the gaming machine to be released from being locked if the player utters the lock-release voice previously set.
