TI - Fingertip and appliance group for clean oral cavity

AB - A fingerstall and a tool group are used to clean oral cavity, wherein the fingerstall comprises a fingerstall body whose inner portion is provided with a connecting space, a **permeable** formation for coating the elastic body which comprises oral health solution, and a moisture paper **towel** which is permeated with oral health solution and is used to coat on the outer side of the fingerstall body. The fingerstall can be directly put on to clean oral cavity when in use. The tool group for cleaning oral cavity comprises a **container** which comprises at least one interlayer and a plurality of capacity chambers, oral health solution which is held in the capacity chamber, at least one fingerstall which is arranged in the other chamber whose inner portion is provided with an elastic body with a connecting space and a **permeable** formation which is coated on the elastic body, and a sealing film which is arranged on the **container** to **seal** the oral health solution and the fingerstall in the **container**. The fingerstall is put on and the oral health solution is dropped on the fingerstall to clean oral cavity when in use. The fingerstall and the tool group of the utility model can be carried conveniently and is freely used to clean oral cavity.
