Title: SYSTEM AND METHOD FOR CHANGING SECURITY BEHAVIOR OF A DEVICE BASED ON PROXIMITY TO ANOTHER DEVICE

Abstract: The security and convenience of a mobile communication device is enhanced based on a separate key device. If the key device is near the mobile communication device, the mobile communication device may be automatically unlocked without the user having to input an unlock code. The mobile communication device may be automatically unlocked into a first mode having a first level of functionality. If the user inputs a correct unlock code, the mobile communication device may be unlocked into a second mode having a second level of functionality, greater than the first level of functionality.
