Title: Buttocks support device

Abstract: A Buttocks Support Device is disclosed. Also disclosed is a support device that comprises an abdominal element and a pair of thigh support elements each of which can be but is not limited to be formed as a ring shaped element. Each thigh support element has a buttock section and a midriff or abdominal section, the buttock section being configured to lift and restrain the wearer's buttock. The preferred device includes a sleeve there over for permitting the "rings" to be tightened without pulling on the wearer's skin. It is a further aspect that the device anchor about the wearer's midriff from below the chest to the widest part of the hips or at either the waist or the hips, depending upon the wishes of the wearer. Still further, the thigh support element include adjustment means for adjusting the length of the thigh rings. Furthermore, the preferred abdominal element includes means for attaching and detaching the device from around the wearer's waist as well as adjustment means. Alternatively, the device may be custom fitted to the size of the wearer.

Title: COMPRESSION CLOTHING

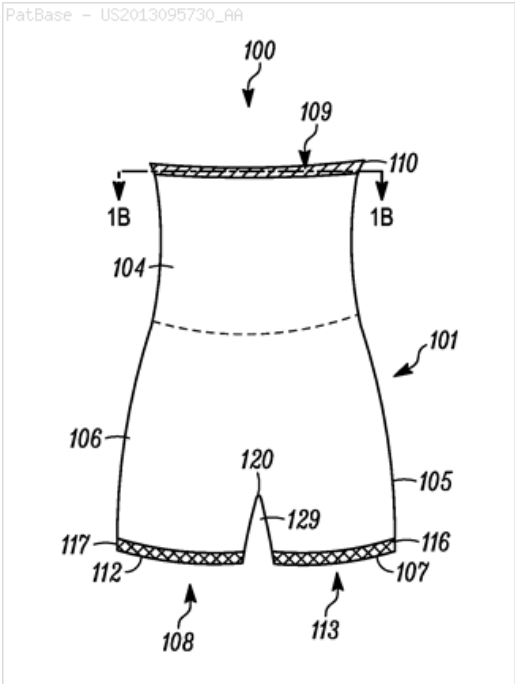

Abstract: The invention provides a control garment having an outer garment component attached to a compression component. The compression component can be adapted to shape the midsection of a wearer to create the appearance of a smaller or shapelier midsection. The invention further provides a body-shaping garment comprising an outer garment attached to a compression component.

Title: CLOTHING FOR COMBATING LOSS OF MUSCLE TONE

Abstract: The present invention pertains to the technological sector of clothing and is more specifically related to clothing for combating loss of muscle tone, with the object of containing the weight of subcutaneous body fat on the skin, delaying and preventing loss of muscle tone in the more susceptible regions of the human body. The clothing prevents loss of muscle tone on the internal face of the legs and arms and abdomen, which are areas fairly frequently affected by this condition, and it is made from thin stretch fabrics that adhere to the skin so that the user can wear it on a daily basis like a "second skin", appreciating it for its comfort properties. The fabrics contain the weight of the subcutaneous structures by exerting pressures ranging from 10 to 20 mmHg, with greater pressure being exerted on the skin in the target areas, thereby minimizing the distension of body tissues and preventing constriction points. By way of example, the clothing may be composed of polyamide and elastane, but fabrics having similar properties may be used. The clothing developed for the legs may be Bermuda shorts, stockings or socks, and for the arms it has the format of sleeves that may be joined by coats or T-shirts. In addition, both types may be joined into a single item of clothing, containing the skin at specific points of loss of muscle tone.

Title: WIDE WAISTBAND AND PANT SUPPORTING UNDERGARMENT

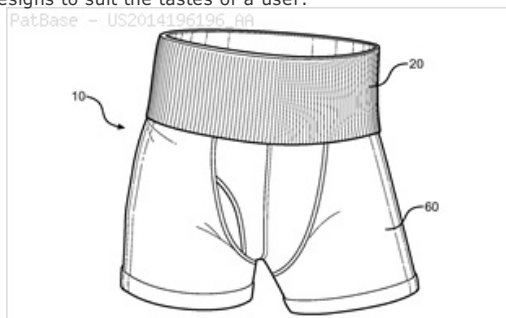

Abstract: The present invention provides underwear that are configured for use with pants that are worn below the waistline of a user. The underwear may comprise a wide waistband that is configured to cover from one-third to one-half the total length of the underwear, whereby the waistband occupies an area from just above to just below the waistline of a user. Alternatively, the underwear may comprise hooks that are adapted to hold and maintain a pair of pants at a fixed distance from the waistline, and pockets for holding a user's belongings. The underwear may be made of an elastic material, such as nylon, and may be decorated with a variety of aesthetic colors and designs to suit the tastes of a user.

Title: SHAPEWEAR GARMENT

Abstract: A shape enhancing garment includes a garment shell and a garment lining permanently affixed to the shell to form a garment. The garment lining is stretchable 40-100 percent along the wale and 50-100 percent along the course, and the garment lining is sized to apply compression to a body of a wearer of the garment. Preferably, the garment lining is made of one or more of a circular knit fabric consisting essentially of spandex and polyester, which stretches 40-100 percent along the wale and 50-100 percent along the course; and a stretch powernet fabric consisting essentially of spandex and nylon, which stretches 50-100 percent along the wale and 50-100 along the course.

Title: ARTICLE OF CLOTHING WITH A CROTCH PORTION POSITIONABLE BETWEEN OPEN AND CLOSED POSITIONS

Abstract: An article of clothing (30) includes a body-encircling portion (32) having right and left leg portions (34 and 36), and a crotch portion (38). The crotch portion includes a first flap (40) and a second flap (42). Each flap has a free edge (44 and 46) distal from the corresponding right and left leg portions. The crotch portion is positionable between open and closed positions by opening and closing the first and second flaps. When the crotch portion is in an open position, a gap is created in the crotch area between the free edges of the flaps. When the crotch portion is in the closed position, the first and second flaps overlap to form a covering (54) for an external vaginal area of the user. This covering for the external vaginal area of the user is anatomically-compatible.

Title: SEPARATING LINED TIGHTS/THIGH-HIGH LEGWARMERS

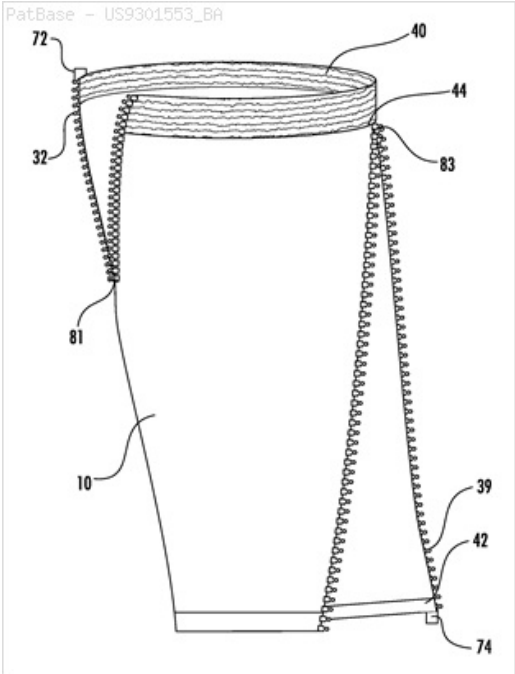

Abstract: A composite leg-covering garment comprising exterior fabric and interior insulative fabric. Opposed peripheral edges can be fastened to form a tubular configuration wrapping tightly around the leg to provide the look of tights, the warmth of leggings and, yet, the ease of donning and removal of breakaway pants. The opposed edges are joinable by a single zipper running either the entire length or substantially the entire length of the garment. Preferably an elastic thigh cuff is located along the upper edge of the garment and an elastic ankle cuff provided at the bottom. Alternatively, two zippers are provided, one from the ankle up to almost the thigh cuff and the other from the thigh cuff down, the zippers being on opposite sides of the garment. The extension of the two zippers overlaps along the length of the garment. The leg-coverings can attach to a pair of shorts.

Title: Post-pregnancy compression garment

Abstract: A post-pregnancy compression garment that provides abdominal support to facilitate a faster return to the individual's pre-pregnancy figure. The garment consists of a tubular body encompassing an anatomical region from the thighs to beneath the chest. Compression material or strips are constructed from an elastic memory fabric positioned so as to cause compression to the abdomen area. Maximum compression may be provided to the waist section with the remaining portion of the garment providing support with minimum compression.

Title: APPARATUS FOR PROVIDING TENSION IN GARMENTS AND METHOD OF USE

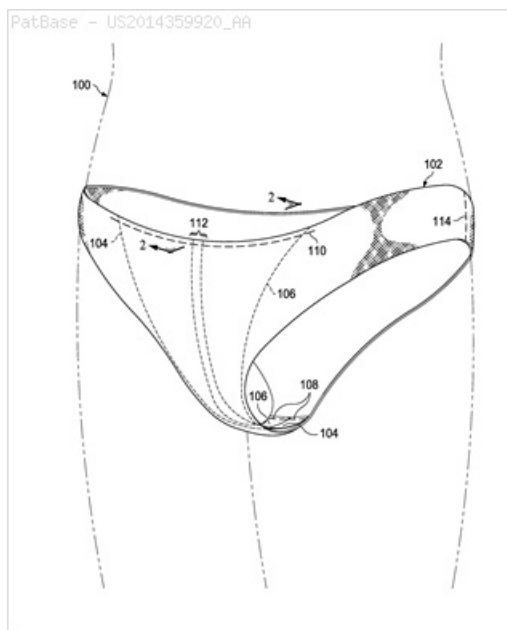

Abstract: An apparatus, system and method for providing tension in garments for improving privacy control by the wearer. The apparatus incorporates materials having elastomeric properties which may be placed in proximity to a wearer's crotch during operation. The tension is directed to preventing, concealing and/or obfuscating the curvature or shape of private features of the wearer, such as a woman's labia, from visibility through the garment. The apparatus may include one or more components providing tension for privacy control. The apparatus may include angled seams to obfuscate a woman's private features.
