Title: SELECTIVE THERMAL TREATMENT OF MEDICAL INSTRUMENT PORTIONS WITH THERMAL TREATMENT SYSTEM INSTRUMENT HOLDER

Abstract: A thermal treatment system for thermally treating objects includes a housing including a top surface, a basin recessed into the top surface and configured to contain a liquid medium, where the liquid medium thermally treats objects placed within the liquid medium, and a ramp structure disposed on the top surface of the housing. The ramp structure is configured to support at least one object such that a first end portion of the object is disposed within the liquid medium while a second end portion of the object is supported by the ramp structure outside of the liquid medium.

Title: APPARATUS FOR RETAINING MEDICAL INSTRUMENTS AND RELATED METHODS

Abstract: An apparatus and method for retaining medical instruments is disclosed. The apparatus includes a medical instrument tray having a substantially planar, rigid interior section, wherein the interior section has a plurality of holes formed therein. A flexible grommet sheet is positioned abutting a first side of the medical instrument tray, the flexible grommet sheet having a plurality of openings therein, wherein at least a portion of the plurality of openings are substantially

axially aligned with the plurality of holes formed within the interior section. A substantially rigid back plate is removably attached to the medical instrument tray, wherein the flexible grommet sheet is positioned between the first side of the interior section and the back plate, and wherein the back plate has a plurality of holes positioned therein, wherein the plurality of holes are substantially axially aligned with the plurality of holes formed within the interior section.

Title: CASSETTE FOR STORAGE OF MEDICAL INSTRUMENTS

Abstract: A cassette for storage of at least one medical instrument, the cassette including at least one spring sheet, the spring sheet including at least one holding means for retaining the medical instrument therein, the holding means including an aperture forming a passage through the spring sheet for receiving the medical instrument and at least one spring element provided adjacent to the passage for exerting a biasing spring force to retain the medical instrument within the passage, and wherein the spring sheet, including the holding means, is made of a metal or a metal alloy.

Title: MODULAR STERILIZATION TRAY SYSTEM FOR MEDICAL INSTRUMENTS

Abstract: A modular sterilization tray system for medical instruments comprises a rigid, substantially rectangular case having a pair of opposite side walls, a pair of opposite end walls and a bottom wall. A plurality of vertical columns of vertically spaced apart uniform size holes are formed in the case side walls and end walls. Also, one or more substantially rectangular instrument trays are provided for placement in the case, the length and width dimensions of each of the trays being directly related to the spacing of the columns of holes in the case side and end walls such that one or more trays may be positioned within the case so as to be bracketed by selected columns of holes. The system also includes fixtures for positioning in selected holes of the bracketing columns of holes for fixing the position of one or more trays at a selected elevation in the case.

Title: ORTHOPEDICS POSITIONING PUNCHING TOOL

Abstract: The utility model discloses an orthopedics positioning punching tool mainly relates to the medical instrument field. Comprising a base plate, the articulated first baffle in bottom plate one side, establish the spout in the bottom plate, establish the slider in the spout, establish the back -moving spring between slider and the spout, establish the connecting block on the slider, establish the second baffle on the connecting block, establish the sliding tray on the lateral wall of bottom plate, establish the connecting rod in the sliding tray, establish first horizontal pole and second horizontal pole between the connecting rod, first horizontal pole, establish the locating hole on the second horizontal pole, the cabinet also comprises a cover plate, the locating lever is established to the apron bottom, establish the through -hole on the apron, wear to establish the movable block in the through -hole, the perforating needle is established to the bottom of movable block, establish the barrier plate on the movable block, the diameter of barrier plate is greater than the diameter of through -hole, establish the pole on the apron, the gasket is established to the cover in the pole setting, the gasket rotational energy blocks that the barrier plate continues to move down. The utility model discloses beneficial effect: it is comparatively accurate to fix a position need punch -position, is convenient for control the degree of depth of punching, reduces the deviation, and convenient to use is safe high -efficient, has alleviated medical staff's the work degree of difficulty.

Title: One kind of medical surgical instrument cleaning device (Machine translation)

Abstract: Source: CN208991346U **Machine translation:** The utility model relates to the field of medical technology equipment, in particular to a medical surgical instrument cleaning means includes a cleaning basket, the support base and the cages, the cages rotation provided in the cleaning tank, the cleaning tank inner wall of the left side plate holder is provided on the disc tray, hairdryer blowing jet mouth toward the cages provided; And said cleaning tank outer wall of the left side plate fixedly mounted with hot air, hot air blower connected to the outlet end of the disc; The right side plate of the cleaning tank top by a hinge pivotally connected to the right end of the cover plate, said cover plate also provided with a exhaust hole, said cover plate the lower surface provided with a plurality of equally spaced ultraviolet lamp; The left side of the cleaning tank bottom plate is also provided with a sewage pipe. The utility model has simple structure, reasonable design, capable of medical surgical instruments, surgical instruments for effective cleaning and easy drying, easy to use, suitable for promotion use.
