**Abstract**

(GB275414)

275,414. Walker, E. Aug. 7, 1926. Last supports for hand work.-A base B, adapted to be secured to a **bench**, carries an upper portion A on which is mounted the usual tongue A<3> adapted to fit a cobbler's last L. The part A can be rotated to set the last in any desired position, and clamped in adjusted position, a socket on the base engaging the shank A<1> of the part A, and a screwed clamping handle H engaging a shaped clamping block H'. The upper part A carries gearing for tightening a strap C over the last. The strap C is detachably secured at its ends to a cross-piece raised and lowered by a screw S<4> operated by bevel gearing and a handwheel S<1>. A wedge W may be inserted in a slot A<4> to eject the tongue A<3> should this jam. An adapter D, Fig. 5, may be inserted between the parts A, B when it is desired to work on a shoe with its sole in a vertical position.
