(54) Title: MULTI-BEAM RANDOM ACCESS PROCEDURE IN HANDOVER EXECUTION

FIGURE 5

(57) Abstract: A method in a UE comprises: receiving (501) a message from a network node (160) comprising information about one or more sets of dedicated random access channel (RACH) resources, each set of dedicated RACH resources associated with a beam associated with a target cell; obtaining (502) an estimate of beam quality for each beam associated with the sets of dedicated RACH resources; determining (503), based on the obtained estimate of beam quality, whether any beam associated with the one or more sets of dedicated RACH resources meets one or more criteria of a first set of criteria for performing random access; and performing (504) random access based on whether any beam associated with the one or more sets of dedicated RACH resources meets the one or more criteria of the first set of criteria for performing random access.
