Title: Compression Garments And A Method Of Manufacture

Abstract: Abstract The invention provides a compression garment (50) for clothing a body part, such as a lower torso and the legs. The body part includes a muscle ridge, such as a lateral edge of the gluteus maximus (49). 5 Compression gannent (50) has first and second panels of stretchable material joined by a seam (32). At least part of the seam (32) is adapted to correspond to at least part of the muscle ridge, being at the edge of the gluteus maximus (49). The invention also provides a method of manufacturing a compression garment, using an algorithm to calculate size changes to produce desired compression. Title: UNDERGARMENT WITH SUPPORT STRUCTURE

Abstract: An undergarment is provided having a support system configured to comfortably support a male wearer's genitalia throughout aggressive athletic movements. Inside of the undergarment, an internal pocket is formed by a generally H-shaped insert that holds the male wearer's genitalia in a forward position and keeps the wearer's genitalia aligned with the internal portion of the athletic cup positioned at the front of the undergarment. Additionally, the H-shaped insert positions the male wearer's genitalia away from their legs, providing increased support and comfort for the wearer. A cross-wall defining the back of the internal pocket holds the wearer's genitalia to prevent it from dropping backward or downward, and presses against the wearer's perineum at its top edge to further aid in creation of a barrier that even further reduces the risk of chaffing. The side panels of the H-shaped insert are so positioned with respect to the wearer's anatomy so as to pull the back portion of the undergarment forward against the wearer's buttocks, and the bottom portion of the undergarment upward against the bottom of the wearer's torso (and particularly against the wearer's perineum), when worn.

Title: PANTS GARMENT

Abstract: A pants garment has a pair of thigh leg members for covering the thigh area of a wearer. A front thigh elastic band member is provided substantially at a front side of each of the thigh leg members and extends obliquely from an upper front portion to a lower front portion of each thigh leg member. A back thigh elastic band member is provided substantially at a back side of each of the thigh leg members and extends obliquely from an upper back portion to a lower back portion of each thigh leg member. The garment also has a front and back crus elastic band members extending obliquely on crus leg members, which cover the crus areas of the wearer.

Title: SPORTS UNDERGARMENT INCLUDING A RESILIENT FABRIC CONTRIBUTING LEVELS OF COMPRESSION ADAPTED TO THE MUSCLE TISSUES

Abstract: Undergarment provided for sports practice, which includes a resilient fabric which is fit on the body while exerting compression in order to limit the oscillations of the muscle tissues during the practice of the sport, characterized in that it has areas (**102, 104, 106, 112, 114, 116, 132, 134, 142a, 142b, 144**) having different levels of resilience, each of these areas contributing levels of compression adapted to the muscle tissues that they cover, including higher compression when these muscle tissues present greater oscillations from the outset.

Title: INTEGRATED SUPPORTIVE DEVICE IN GARMENTS

Abstract: Disclosed herein is a device integrated in a piece of garment for providing abdominal support to a user comprising: an elastic band configured to wrap around a waist of the user and provide upward and inward physical support to an abdominal region of the user upon wearing; an interface configured to attach the elastic band to the piece of garment; at least one mechanically adjustable connection, wherein the mechanical adjustable connection is configured to adjust a length of the elastic band upon wearing; and an integration of the elastic band to the piece of garment, wherein the integration is configured to prevent at least a portion of the elastic band from directly contacting a body of the user upon wearing.
