(54) **Title:** TRANSMISSION POWER CONTROL

FIG. 2

(57) **Abstract:** A method is disclosed for a wireless communication node configured for operation in accordance with a listen-before-talk (LBT) procedure. The method comprises – for an upcoming transmission – performing channel sensing to determine an interference level experienced by the wireless communication node, determining a maximum transmission power level for the upcoming transmission responsive to the determined interference level, and selecting at least one of a coding rate and a modulation to be used for the upcoming transmission responsive to the determined maximum transmission power level. According to some embodiments, the method further comprises preparing a plurality of transmission packet variants before performing the channel sensing, wherein each transmission packet variant is associated with a respective transmission power level. Then, selecting at least one of the coding rate and the modulation may comprise selecting one transmission packet variant of the plurality of transmission packet variants responsive to
