**Abstract**

(CN109363260)

The invention relates to the technical field of **adjustable** bras with chest enlarging effects, in particular to an **adjustable bra** with a chest enlarging effect. The **adjustable bra** with the chest enlarging effect comprises cups, side wings, connectors and a connecting buckle, strip-shaped through holes are formed in the connectors, one ends of the connectors are connected with the cups, the other opposite ends of the connectors are connected with the side wings, each cup comprises an outer lining, a cup cushion and an **adjustable** strap sequentially from outside to inside, and the overhanging ends of the **adjustable** straps penetrate through the strip-shaped through holes and are movably connected with the overhanging ends of the side wings for adjusting the **size** of spaces defined by the cup cushions and the **adjustable** straps. According to the **adjustable bra** with the chest enlarging effect, the **size** of the cups can be adjusted according to the **size** and shape of individual breasts so as to meet the demands of different crowds at different growth stages.

Abstract

(WO2020/074966)

A **bra** comprises of a pair (two) of **bra** cups to hold the breasts and a band reaching around the torso to secure the **bra** in place. The band comprises of a front under bust band attached to and underlying the **bra** cups, with a front enclosure or not, a back band comprising of two bands that meet at the centre with a buckle and fold out with hooks (or buckles & tunnels) on each side, right and left, a length adjustment feature for independently adjusting the length of the band

conducive to the need of the wearer. Or this may be a band in the middle of the back with two buckles, one on each side. The adjustment allows for the band to be bigger or smaller according to the wearers needs.

**Abstract**

(US20110269375)

A wide chest band extends horizontally outward from each cup of a **bra**. The connecting end of each of the single chest bands splits into multiple connecting fingers to adjustably connect with mating multiple connecting fingers extending from the connecting end of the other single breast band. Each of the pairs of mating fingers has **adjustable** connectors so that each of the pairs of mating fingers is adjusted independently to allow the **bra** to attach firmly and comfortably around a tapered torso of a wearer taking into account the varying girth at different heights on the tapered body.

**Abstract**

(CN105146784)

The invention discloses a left-and-right cup adjustable bra. The left-and-right cup adjustable bra comprises a first cup, a second cup, a connector link, a front material, a first strap, a second strap, a first shoulder strap, a second shoulder strap and a connecting strap, wherein the first shoulder strap and the second shoulder strap are respectively connected with the first cup and the second cup through connector links; the first strap and the second strap are respectively connected with the bottoms of the first cup and the second cup; the front material is connected to the bottoms of the first cup and the second cup; the front material is connected with the approaching parts of the first cup and the second cup through the connector link; the connecting strap is connected with the first strap and the second strap. According to the left-and-right adjustable bra, as the connector link is arranged between the first cup and the second cup and can be connected with cups of different sizes, the problem that the breasts of several women are different in size, and the bra in the prior art, of which the left cup and the right cup are consistent in size, cannot meet the demand of the women is solved.

**Abstract**

(CN102028312)

The patent refers to the field of 'corsets; brassi§§res'. The invention involves a cultivating chest modelling health care bra, ask by outside (1), the modelling eliminate the toxic materials from the body with drugs of strengthening the vital energy and blood (2) prepared of the magnetic fibre cloth makes up, the magnetic fibre cloth is in the quad cave (3), the Ruzhong cave (4) seat studs with, holds 1 centimeter size planchet made of the Marlene stone. The invention studies the principle in conjunction with the human collateral channels of Chinese medicine on the basis of bra of the body shaping, adopt the modern health care material to hold Marlene's magic power stone and magnetic fibre cloth, through anion, freeboard shaking frequently, far infrared, magnetic force, etc. energy that he releases, act on the main point around the breast, promote the microcirculation around of breast, promote blood flow, protect and activate organism cells, promote the development of lactiferous ducts, adjust metabolism, improve the organism physiological function, play the full and round breast making, raise thoracic function, prevent and lighten the emergence of many kinds of mammary gland diseases and develop.?
