Title: ALL-IN-ONE UNDERWEAR

Abstract: There is provided an all-in-one underwear having a brassiere portion, a waist slimming portion, and a girdle portion which are integrated with each other. The girdle portion includes an integrated leg insertion portion extended by a predetermined length from a lower portion of the groin toward a knee, a lower zipper openably/closably provided from a navel region to a coccyx region of the hips in the middle of the leg insertion portion, thus solving physiological phenomena of excretion, and a pad having a predetermined length and width and provided on an inner surface of a lower zipper region in such a way as to be secured at a surface in a longitudinal direction thereof, thus preventing damage to the skin when a slider of the lower zipper is opened or closed.

Title: FOUNDATION GARMENT

Abstract: (Claim 1) 1. A foundation garment, such as a girdle, panty-girdle, or the like, comprising, in combination a torso-encircling assembly for enveloping and slimming the torso of a wearer; a generally frontal disposed restricting assembly for introducing figure controlling pressures with respect to a portion of a wearer's body, said restricting assembly comprising a generally centrally disposed distensible panel having a generally vertical stretch characteristic secured only to said torso-encircling assembly along edge portions of said restricting assembly; and at least one laterally disposed restricting assembly for introducing figure controlling pressures with respect to portions of the torso of a wearer's body disposed adjacent said first men-tioned portion, said lateral restricting assembly being disposed in partially overlapping relationship with respect to said frontally disposed restricting assembly, said lateral restricting assembly comprising at least one side panel extending outwardly of the centrally disposed panel toward the hipline and being secured to said frontal restricting assembly and to said torso-encircling assembly only along the edge portions of said lateral restricting assembly, en-abling said lateral restricting assembly to coact with said frontal restricting assembly and said torso-encircling assembly without being restrained by the securement of the frontal restricting assembly.

Title: Girdle (Machine translation)

Abstract: Source: JP1410248 S **Machine translation:** According to the present design is carried out in a girdle liposuction and slimming cosmetic surgery after treatment to use for free the affected area compression a fence girdle, on its front face,

removably attached waist nipper. Waist nipper or the deviation of the up, while eliminating the shortage and reliable long period of time of continuous compression, the affected area. Medical personnel, nurses and of patients after surgery is worn as the center of the likely to increase, girdles can be opened and closed. According to the present design of the west girdle nipper, attached to the front, can be removed, and the front center portion can be opened and closed. According to the present girdle. Design a state of mounting the reference perspective view showing the use state shown in. According to the present design by mounting the nippers girdle. West the use state, a state in which remove the 2 reference perspective view showing. Further, in the present application by mounting the design according to the girdle (free portion when viewed from below), bifurcated reference perspective view showing a use state of 3. Further, in the present application according to disconnect from the west design girdle nippers or the reference front a front view of a state as shown in FIG. 1. Further, in the present application the front portion of the design according to the girdle open (the state at the time of attachment and detachment of the front shown in FIG. 2) as a reference. Remove the waist nipper, a view seen from the front, only the nippers to a front view shown.

Title: GIRDLE AND 2-WAY RAISING GIRDLE

Abstract: PROBLEM TO BE SOLVED: To provide a girdle capable of raising the hip and at the same time slimming the inner side of the thigh. SOLUTION: This girdle is obtained by setting a belt-like side tension belt which extends from a back central upper part through an ilium upper part to a femoral region outside, as a belt-like tension part allowing to get pressure stronger than the surroundings when wearing, and setting a hip and femoral region back tension belt whose upper rim and external rim extend from a sacrum lower part through an upper place of a hip groove to the femoral region outside and which covers an area which extends from a leg base to a femoral region inside lower end, and setting a tension belt cross part as a strong tension part through overlapping the lower ends of both the tension parts on the femoral region outside.

Title: JUMPSUIT

Abstract: The utility model discloses a jumpsuit. The jumpsuit comprises a bra body, a waist wrapping body and an underwear body, wherein the bra body is arranged at the upper end of the waist wrapping body, and comprises a first cup and a second cup; the first cup is connected with the second cup; a steel ring is arranged in each of the lower edge of the first cup and the lower edge of the second cup body; a shoulder girdle is connected between the first cup and the lower edge of the second cup as well as between the second cup and the lower edge of the first cup; the underwear body is provided with a back panel which is of a double-layer structure; a hip-shaped all-cotton composite bamboo fiber pad is arranged in the back panel; a reinforcing rid is arranged on the back panel and is arranged along the edge of the all-cotton composite bamboo fiber pad. Each shoulder girdle is connected between the corresponding steel ring and the corresponding cup, and each steel ring is subjected to the downward pulling force of the corresponding shoulder girdle, so that the steel rings are prevented from moving upwards to oppress the chest; by the arrangement of the all-cotton composite bamboo fiber pad in the underwear body, a person who wears the jumpsuit can have a good hip shape; the breathability is high; the integrating degree is high; the comfort degree is improved; an effect of slimming is achieved.

Title: JEANS GARMENT HAVING BODY CONTOURING AND SHAPE-ENHANCING FUNCTIONS

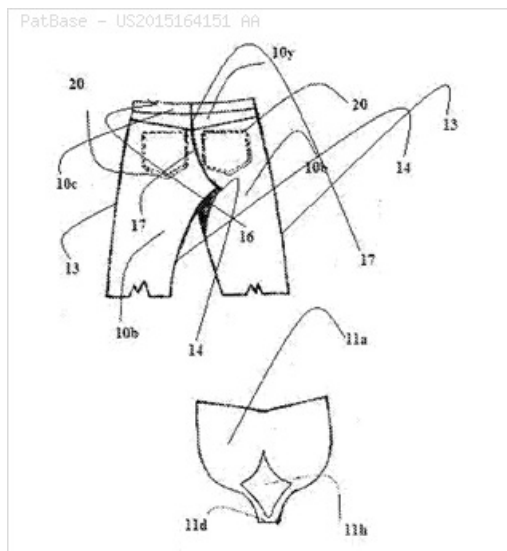

Abstract: This invention discloses contoured, shape-enhancing jeans garments having permanent inner structures of a buttocks enhancing contoured form system at the posterior waistband portion and torso region; and, an anterior tummy slimming and smoothing pocket system, eliminating the need for additional or separate buttocks expanding, or shaping devices, or girdle type undergarments. The buttocks system is affixed at strategic points to the posterior of jeans garments; and the tummy system is similarly incorporated at the anterior of the garments. The buttocks system is comprised of a tapered open-cell foam pad with a stretchable posterior casing and anterior minimal stretch lining allowing for flexibility, comfort and conformity to the individual's physique with a free floating lower edge. The tummy system is specifically positioned to slim and smooth by covering and containing the tummy of the wearer. The wearer garners and aesthetically improves shaping of the buttocks, hips and flattened tummy for a more sexy, natural and sophisticated buttocks appearance while maintaining freedom of movement.

Title: Warm waist belt inner bag) (Machine translation)

Abstract: Source: CN305267287 S **Machine translation:** 1. The design product name: Warm waist belt inside the bag). 2. The product design uses: This design product for use as a warm waist belt; Warm girdle inside the inner bag can be used to store slimming stickers; 3. The design product design points are: The shape of the product. 4. The best indicator of the design elements of the picture or photo: Use state with reference to FIG. 1; 5. omitted view: The bottom view, top view, left view, right view no design elements, omitting the view.

Title: CONTOURED BUTTOCKS ENHANCING AND TUMMY SLIMMING HOSIERY AND FOUNDATION GARMENT

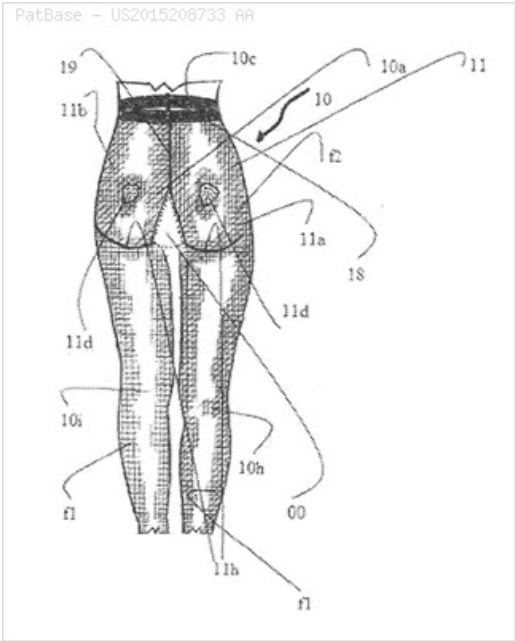

Abstract: This invention discloses contoured, buttocks enhancing hosiery type undergarments and foundation garments having permanent inner structures of a buttocks enhancing contoured and tapered form system comprising of an open-cell foam pad or shaped silicone gel casing in its rear panel portion fabricated and housed within two-ply fabric portions of highly stretchable yarn, with a further tummy slimming and smoothing function, which eliminates the need for additional or separate buttocks expanding or shaping devices, or girdle type supplemental undergarments. The buttocks enhancing contoured and tapered system is sandwiched and laminated within the two-ply fabric yarn of which the panty portion of the foundation garment is fabricated. The tapered and feathered edges of the contoured buttocks enhancing system allows for a seamless and virtually invisible transition to the single-ply leg portions of the undergarment. Further, the contoured buttocks enhancing and tummy smoothing undergarment allows for great flexibility and comfort regardless of the positioning or movements of the wearer, due in great part to the uniquely designed panty portion, which has coupled with its shape enhancing function a Marque diamond shape two-way highly stretchable and oversized gusset system to allow for ultimate flexibility of movement. The novelty to the invention is the wearer's opportunity to aesthetically improve the lower profile form for a more sexy, natural and sophisticated buttocks appearance while maintaining complete freedom of movement regardless of assumed positions.

Title: PERFECTED STRIP FOR FEMALE USE. (MACHINE-TRANSLATION BY GOOGLE TRANSLATE, NOT LEGALLY BINDING)

Abstract: Girdle perfected for feminine use, characterized essentially by the fact of comprising a strip of elastic fabric that presents areas of reinforced elastic waterproof fabric, fixed by zigzag seams to the body of the belt and operatively arranged so that the face of the fabric waterproofing based on textile material is in contact with the skin, while the opposite side, waterproofed by rubber-based coating, is facing the body tissue of the belt, these reinforcements acting as slimming elements that perform a reducing function of fats during the normal use of the garment, by causing exudation in the places covered, these reinforcements being constituted by a polygonal surface centered on the abdomen and by symmetrical surfaces that encompass the sides of the garment and legs. (Machine-translation by Google Translate, not legally binding)

Title: Girdle (Machine translation)

Abstract: Source: JP1311043 S **Machine translation:** The present article according to the girdle design "west" is a region centered on the abdomen of the semi-elliptical shape of the opposed to the concentric pattern is formed, this concentric pattern continuous to the semi-elliptical shape of the substantially V-shaped pattern is formed in a region back side together with the bottom of the stomach, triple of the substantially trapezoidal shape of the pattern is formed, and the center of the buttocks buttocks of substantially heart-shaped pattern and the lower pattern substantially is formed. The semi-elliptical shape substantially V-shaped pattern, the pattern of the pattern and the pattern of substantially trapezoidal shape substantially shaped in each region of the back surface of the uneven shape of the three-dimensional waveform repeating pattern is formed. The three-dimensional pattern of the waveform corresponds to the adherend, the pressure-stimulated for each site, and the massage effect of substantially heart-shaped pattern and the pattern substantially by the synergistic action of the hip-up effect it can be generated. In addition, each of the waveform of the massage effect by the solid pattern is, it is possible to slimming action. In particular, the semi-elliptical shape of the left and right pattern in the central portion of the abdomen from the west so as to face the center of the ellipse close to the structure, and to the outside from the degree of shrinkage of the elliptical strong, medium, weak so as to be three stages of knitting, it is possible strong waist from the side to the center of the tightening, it is possible to suppress together with the abdomen of the body pressure, will be correction effect and improvement of the wearing feeling kyoritsu Left side view is a right side view and symmetry appears in the description It omitted for. As represented by a solid line in the design portion and the design it is a part.

Title: Girdle structure

Abstract: Source: TWM312905 Y **Machine translation:** One kind binds the abdomen the joint in belting construction, is refers to packing, the gable human body ties the belly-band, this bunch of belly-bands mainly in waist thin body, or lacing of use post-natal assistance womb contraction, but ties the belly-band both sides to contain has extends unfolds duplicate, unfolds duplicate to be equipped with buckles the body, among, should bind the abdomen the joint in belting to gather has the plural number to magnetize the part, also magnetization part itself namely has the magnetic line of force, the magnetic

line of force has field of force of the flowing, this field of force has certain activation potency to the human body cell, because of has magnetization part union the field of force in to bind the abdomen takes to bring with, the command ties the belly-band except outside the thin body, the lacing function, also has both has the human body health to promoteFunction.

Title: MULTIFUNCTIONAL BODY-BEAUTIFYING UNDERWEAR

Abstract: The invention provides multifunctional body-beautifying underwear, and belongs to the field of clothes. The multifunctional body-beautifying underwear comprises a splicing structure for promoting hips; the splicing structure comprises a stereoscopic area; the stereoscopic area is combined through fabric to form an area of a stereoscopic structure formed by bulged towards the outside of the hips; the shape and size of the stereoscopic area can approximately surround the hip on the left side or the right side; the stereoscopic area comprises a bulged area and hip supporting areas, the bulged area is positioned at the main part of the stereoscopic area and is an area where bulges are, the hip supporting areas are positioned at the outer side part and the lower side part of the bulged area, and the hip supporting areas are relatively smooth areas on the stereoscopic area. The invention also provides a belly covering and waist restricting structure, a chest supporting structure and the body-beautifying underwear based on the functional structure. When the body-beautifying underwear is worn, the occurrence of fat posture can be effectively controlled, and after long-time wearing, the body can be shaped, and the underwear also has the effects of nourishing skin, preventing skin laxity, delaying skin aging, slimming and the like.
