(54) Title: APPARATUS FOR FLY MANAGEMENT

Fig. 5b

(57) Abstract: The present invention relates to an apparatus (10) for fly management. It is described to provide (310) a processing unit with at least one image of an agricultural environment, wherein the agricultural environment contains a plurality of bovine animals. The at least one image comprises image data of at least a part of at least one bovine animal of the plurality of bovine animals. The processing unit determines (320) a number of flies in the image data of the at least a part of at least one bovine animal. The processing unit determines (330) information relating to fly infestation of the plurality of bovine animals. The determination comprises utilisation of the determined number of flies. An output unit outputs (340) an indication relating to a treatment for fly infestation of the plurality of bovine animals based on the determined information relating to fly infestation of the plurality of bovine animals.
