(54) Title: SHAPEWEAR GARMENT

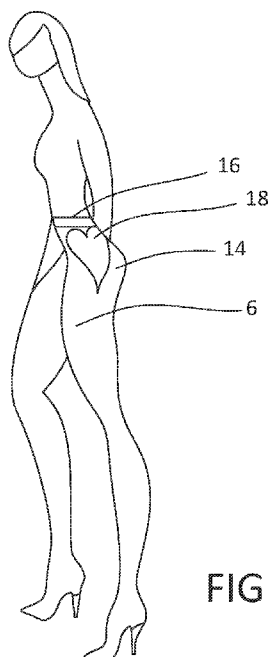

FIG. 3

(57) Abstract: A garment constructed in accordance with the present disclosure provides support to a wearer, while still contouring to the wearer's body. Preferably, the garment is made from a disclosed combination of rigid panels and more elastic panels, with more support on the wearer's front and more elasticity for contouring to the wearer's back and sides. The mesh panels take the natural shape of the wearer's hips and buttocks, supporting the form rather than trying to force the wearer's body into a particular shape.
