(54) Title: GLAZING COMPRISING A STACK OF THIN LAYERS HAVING ABSORBER LAYER FOR LOW INTERNAL REFLECTION AND VARIED EXTERNAL REFLECTION COLORS

FIG. 1

(57) Abstract: A stack of thin layers on a transparent substrate includes first and second silver functional layers having reflection properties in the infrared and/or solar radiation range that are spaced apart by first, second and third dielectric coatings such that each functional layer is sandwiched between two dielectric coatings. A thin absorber layer is inserted in the second dielectric coating separating the first and second silver functional layers to realize internal reflection less than 17%, external reflection less than 24%, desirable visible transmission between 45% and 60%, good selectivity and a wide range of external reflective coloration ranging from blue to neutral.
