

Señores:

**Dirección de Nuevas Creaciones**

Superintendencia de Industria y Comercio

E. S. D.

**REFERENCIA:** Expediente NC2024/0017930 PATENTE INVENCION

**ASUNTO:** Respuesta a Requerimiento de Forma.

FELIPE EDUARDO FIGUEROA CARDOZO, identificado como aparece al pie de mi firma, abogado en ejercicio, portador de la Tarjeta Profesional No. 140.243 expedida por el Consejo Superior de la Judicatura, actuando en nombre y representación de la UNIVERSIDAD DEL VALLE, solicitante de la patente de invención tramitada en el expediente de la referencia, procedo a dar respuesta al Oficio No. 111 de 7 de enero de 2025 en los términos que se exponen a continuación:

**1. Respecto al certificado de depósito de material biológico.**

Se anexa al presente escrito de respuesta la información suministrada por el proveedor internacional del material, esto es, la Colección Alemana de microorganismos y Cultivos Celulares (DSMZ), en relación con la cepa *Cupriavidus necator* DSM 428, objeto de cultivo en la modalidad particular de realización del procedimiento objeto de reclamación. A su vez, se anexa copia de la factura de compra realizada por la entidad solicitante a la DSMZ como proveedor internacional del material. De igual forma, se anexa el Certificado de origen y análisis de dicha cepa.

En estas condiciones, la entidad solicitante da cumplimiento a lo establecido en el literal j) del artículo 26 de la Decisión 486 de la Comisión de la Comunidad Andina y el numeral 1.2.2.1. del Capítulo Primero del Título X de la Circular Única de la Superintendencia de Industria y Comercio.

En virtud de lo anteriormente expuesto, de manera respetuosa solicito al Despacho tener por cumplidos los requisitos de forma de la solicitud y ordenar su publicación en la Gaceta de Propiedad Industrial.

Atentamente,

FELIPE EDUARDO FIGUEROA CARDOZO

C.C. 16.940.582

Summary and  
additional  
information:  
<- IMG (*Alcaligenes eutrophus*) <- E. Wilde, H 16. . . Sludge.

Germany (216), Göttingen, Weende-Quelle. Sequence accession no. chromosome 1, complete sequence: CP039287, chromosome 2, complete sequence: CP039288, chromosome 1, complete sequence: AM260479, chromosome 2, complete sequence: AM260480. Plasmid megaplasmid, pHG1. Harbours a well-studied megaplasmid, pHG1. Produces PHB - poly( $\beta$ -hydroxybutyrate) (2040). Extensively used in studies on chemolithotrophic growth and hydrogenase activity (159, 160, 214, 217, 1570). Chemolithotrophic growth with hydrogen. Key enzymes (1571). See Plasmid section. Phenylalanine hydroxylation (2042). (Medium 1, incubation time: 2-3 days, 30°C, aerobic)

## Certificate of Origin and Analysis and Import Statement

We declare that the DSMZ culture(s) within this delivery no. A2300357-1, (invoice no. 02300705-1) to Universidad del Valle, VALLE DEL CAUCA, COLOMBIA, dated 20.01.2023:

| DSM-No. Strain                  | Lot.-No.           | Risk Group |
|---------------------------------|--------------------|------------|
| 428 Cupriavidus necator         | DSM 428-1221-001   | 1          |
| 41826 Streptomyces clavuligerus | DSM 41826-0807-001 | 1          |

- ✓ have been produced in DSMZ laboratories at the address given below
- ✓ are of German preferential origin
- ✓ are biological material
- ✓ do not contain animal derived additives
- ✓ are for laboratory, civil scientific or research and development use only
- ✓ are not for use in humans or animals
- ✓ are free of tissues, serum and plasma of domestic and wild ruminants, swine and equines
- ✓ are not pathogenic
- ✓ are not genetically modified

### For microorganisms:

- ✓ are authentic DSMZ cultures derived directly from microorganisms held in the DSMZ
- ✓ have been tested by DSMZ control procedures with respect to purity and identity

### For bacteriophages only:

- ✓ are authentic DSMZ preparations derived directly from above bacteriophage preparations held in the DSMZ
- ✓ have been tested by DSMZ control procedures with respect to viability and purity according to appropriate bacteriophage methodology
- ✓ are not pathogenic
- ✓ are not genetically modified

### **Viability**

#### For microorganisms:

From all microorganisms provided for deposit, viability and purity are tested by subculturing. Each batch produced is again checked for viability after preservation, and after intervals scheduled for the different taxa.

#### For bacteriophages only:

For all bacteriophages, viability is tested by applying bacteriophage propagation and titer control. Each batch produced is checked for viability and after intervals scheduled for bacteriophages.

### **Purity**

Purity of each batch preserved is checked after production.

#### For microorganisms:

This check may include microscopical and macroscopical observations or selected physiological, chemosystematic or molecular based tests.

#### For bacteriophages only:

This check includes analysis of plaque production and plaque morphology on the intended bacterial host and may be supported, if required, by bacteriophage host spectrum, electron microscopical morphology observations or genome sequencing.

The DSMZ is not in a position to verify specific properties or applications claimed for a bacteriophage in the literature. The DSMZ is not responsible for differences between the properties of the bacteriophage deposited in the DSMZ and properties given in the literature/databases.

The DSMZ does not guarantee that bacteriophage preparations are free of prophages that may have been induced from the bacterial hosts during bacteriophage propagation.

#### **Authenticity (for microorganisms only)**

Each microorganism is checked by the most significant techniques available for this purpose and the taxon in question. The following options are available for identity checks:

- morphology and growth behaviour
- physiological properties including API<sup>®</sup> kits or BIOLOG<sup>™</sup> substrate plates
- selected microorganisms-specific phenotypic/genotypic markers, e.g. resistances, sensitivities, plasmid-encoded properties
- chemotaxonomic markers such as whole cell fatty acid patterns
- molecular based techniques such as gene sequencing (16S rRNA, house keeping genes), automated RiboPrinting<sup>®</sup>
- MALDI-TOF MS

#### **Storage of ampoules**

##### For microorganisms:

We recommend cold, dry storage in the dark. Freeze-dried cultures should be stored between 4- 8°C. According to our Terms & Conditions, the material is to be used immediately upon receipt.

##### For bacteriophages only:

Storage of vacuum-dried bacteriophages in glass ampoules:

We recommend dry storage at 4-8°C in the dark.

Interim storage of active preparations of bacteriophages in liquid:

We recommend storage at 4-8°C; cannot be frozen without cryoprotectant.

Our recommended host microorganisms as mentioned in the bacteriophage catalogue information must be used.

#### **General information**

All microorganisms and/or bacteriophages are supplied for laboratory use only. According to our Terms & Conditions, the material is to be used immediately upon receipt.

The batches indicated above passed our quality control system.

Date: 19.01.2023

## Material Safety Data Sheet

We herewith confirm for the following strains

|                  |                                  |                       |
|------------------|----------------------------------|-----------------------|
| <b>DSM 428</b>   | <b>Cupriavidus necator</b>       | <b>(Risk Group1*)</b> |
| <b>DSM 41826</b> | <b>Streptomyces clavuligerus</b> | <b>(Risk Group1*)</b> |

Risk Group 1 strains are not known or suspected to contain an etiologic agent, host or vector of human disease.

Risk Group 2 strains can be pathogenic to humans and/or animals.

**\* Classification according to German national regulations**

The above material will be packaged, labelled and transported in accordance with regulations that are applicable for DSMZ.

**Use is for research purposes only.**

**The exporter of the products covered by this document declares that they are of german preferential origin.**

### Handling and Safety Instructions

All consignments containing microorganisms must be unpacked in an appropriately equipped laboratory. Cultivation and handling is restricted to laboratories meeting the containment requirements laid down by the responsible authorities. Microorganisms, including genetically engineered strains, may be pathogenic to humans, animals or plants. Therefore, cultures must be handled on one's own authority according to appropriate regulations and by, or under the supervision of persons trained and competent in microbiological techniques.

Please see detailed information below:

### 1. Identification of the Biological Agent

- Microbial culture, inoculum for preparing cultures, for laboratory use only!
- Species name and strain number as given on delivery note

#### Überweisung an / assignment to:

Germany

- Form of supplied material: freeze-dried or active or frozen culture

## **2. Hazards Identification: RiskAssessment and Laboratory Containment Level**

- Each microorganism delivered with this consignment is classified according to German legislation (Biostoff-Verordnung). If a strain is allocated to Risk Group 2 (equivalent terms are Hazard Group or Biological Safety Level), this information is given on the DSMZ homepage under the respective species information and on the delivery note.
- Required laboratory containment level: corresponds to the Risk Group of the microorganism. Consult applicable regulations.
- Apart from infectivity/pathogenicity, genetically modified microorganisms are to be handled according to relevant national legislation and under contained use only.
- Toxin production, if known: see 7.
- Avoid all direct physical contact with the organism, e.g. dust (aerosols), skin and eye contact.

## **3. First Aid Measures**

In case of contact, wash contaminated skin thoroughly with antiseptic soap and water. If wound contamination is suspected and in case of ingestion/inhalation, seek immediate medical attention. Inform medical practitioner of name of the microorganism.

## **4. Accidental Release Measures and Spillage/Environmental Precautions**

- Decontaminate/sterilize/autoclave all material which might be in contact with the culture.
- Keep culture material away from drains, surface-and ground-water and soil.
- If culture vial is accidentally broken, soak contaminated area with appropriate disinfectant.
- Broken glass has to be picked up with forceps.

## **5. Handling and Storage**

### **Überweisung an / assignment to:**

Germany

- Ampoules/cultures must be opened and used by trained persons in a laboratory of appropriate containment level.
- All cultures delivered by DSMZ are for immediate use (see our conditions of delivery). Before use, store cultures in a cool, dark place.
- Instructions for opening of ampoules with dried cultures are provided with the shipment.

## **6. Exposure Controls/Personal Protection**

Depends upon the Risk Group of delivered culture and is described in the respective containment level instructions (in Germany, see the Biostoff-Verordnung). Precautionary measures such as lab coat and, if required, protective gloves and glasses minimise worker's exposure.

## **7. Toxicological Information**

See strain information as given in the DSMZ catalogue of strains (online catalogue: [www.dsmz.de](http://www.dsmz.de)). Possible restrictions on handling and distribution of certain toxin producers are given in the catalogue. Information given by DSMZ on possible or known toxin production of any strain is not exhaustive! DSMZ does not perform toxicity tests with cultures.

## **8. Disposal**

Sterilize all cultures before disposal.

Leibniz-Institut DSMZ GmbH · Inhoffenstraße 7 B · 38124 Braunschweig · GERMANY

\* have been produced in DSMZ laboratories at the address below,

\* have been tested by DSMZ control procedures with respect to their purity and identity.

Origin of the culture(s), the corresponding registration numbers of other collections, cultivation conditions, literature, and risk group classification are documented in the DSMZ Catalogue of strains.

Our General Terms & Conditions apply on all deliveries and services(<https://www.dsmz.de/terms>).

Please take notice of our accompanying instruction leaflet.

#### Storage of ampoules

We recommend cold, dry storage in the dark. Freeze-dried cultures should be stored between 4- 8°C. According to our Terms & Conditions, the material is to be used immediately upon receipt.

In case of problems with delivery acceptance by the receiving laboratory, we recommend short-time storage for freeze-dried cultures within the covering box at ambient temperature of 20 - 25°C for a time period of 4 – 6 weeks.
